The first and third fatwas are clearly fatwas that seek to define the status of the combatants in the armies of the two sides. The first fatwa, whose content regarding the Mongols is not as virulent as that of the second, may well have been issued after the Mamluk defeat at Wādī al-Khaznadār, at the time of the occupation of Damascus by the Ilkhanid troops, when Ibn Taymīyah was acting as an intermediary between the local population and the Mongol authorities. This fatwa takes a more conciliatory tone towards the Mongols soldiers. Ibn Taymīyah recognizes that the fact that they are Muslims must be taken into account. While they must be fought, they first must be called to respect the prescriptions of Islam; the *kuffār* who are amongst their ranks must be invited to convert.[151] The third fatwa is dedicated to considering the status of the Mamluks who fought, under duress or willingly, in the Mongol armies. It may have been issued at the time of the battle of Wādī al-Khaznadār which was won partly due to their presence in the Mongol ranks.

The "second" fatwa, on the other hand, unusually long, is an outright condemnation of the Ilkhanid regime and Shiʿism. It addresses the problem posed by the Mongols and their conversion to Islam, but goes far beyond this topic since Ibn Taymīyah also brings up many religious sects in Bilād al-Shām, such as the Ismāʿīlīyah, the Nuṣayrīyah, and Ibn ʿArabī's followers, religious tendencies against which Ibn Taymīyah fought incessantly throughout his life.

Nevertheless, this criticism of the Mongol regime, accused of being under the influence of major Shiʿite figures, is the essential topic of the fatwa. Thomas Raff cites the absence of any reference to Ghāzān Khān's third invasion of Syria, on 12 Rajab 702/2 March 1303, or to the Mamluk victory at Marj al-Ṣuffār on 2 Ramaḍān 702/20 April 1303, and on this basis concludes that the fatwa was undoubtedly proclaimed in Rajab or Shaʿbān 702/1303, just before that battle. However, as Jean Michot points out in his translation of Ibn Taymīyah's *Lettre à un roi croisé,*[152] Thomas Raff missed a clear allusion in the fatwa to Öljeitü's conversion from Sunni Islam to Twelver Shiʿism. The king of these Tatars has now been won over to Rāfiḍism, writes Ibn Taymīyah; the Hijaz, if they capture it, will be "entirely corrupted."[153] Öljeitü's conversion to Shiʿism probably took

[151] *Majmūʿ Fatāwá,* 28:404.

[152] Michot, *Lettre à un roi croisé,* 74, n. 125.

[153] *Majmūʿ Fatāwá,* 28:533.

place at the end of 708/1308 or the beginning of 709/1309.[154] The fatwa cannot, therefore, have been written before this date. It may have been written in Cairo, where Ibn Taymīyah was staying, just before the new Mongol threat on Bilād al-Shām in 1312 led by the Ilkhan Öljeitü. At that point Ibn Taymīyah left Cairo to support the jihad in Syria.[155]

Troubled by the establishment of a new political system in a large part of the Muslim world, Ibn Taymīyah denounces the theocratic conception of power based on a law created through the reason of one man, Chinggis Khan. According to the Hanbali scholar, Ghāzān Khān, despite his conversion to Islam, had remained faithful to the Mongol *yāsā,* raising the danger that malign innovations could be introduced into legalistic, shariʿah-based Islam. The Mongols of Iran, even after their conversion to Islam, had not perpetrated any religious persecutions. They had not made their Islam a "state religion." Ibn Taymīyah, as a militant Hanbali scholar, was deeply convinced that religion and state were inextricably linked; without the discipline imposed by revealed law, the state would become tyrannical. Ghāzān Khān's form of Islam, based on the rational *(ʿaqlī),* risked competing with the true religion *(dīn al-ḥaqq),*[156] which was based on the legal *(sharīʿah)*. Viewed in this light, Ilkhanid Islam was the bearer of a conception of power that did not accept the Quran and the interpretation thereof as its sole source of political legitimacy.

However, Ibn Taymīyah's "second fatwa" can only be understood in the historical context in which it was written. This was the time of Öljeitü's conversion from Sunni Islam to Shiʿism in 709/1309 and his moves to gain control over the Hijaz and the holy places of Islam. For Ibn Taymīyah, the Ilkhanid regime was perverted by Shiʿite tendencies from the time of its establishment. These began after the fall of Baghdad with the intrigues of Muʾayyad al-Dīn ibn al-ʿAlqamī (d. 656/1258), minister of the last Abbasid caliph, al-Mustaʿṣim.[157] As far as Ibn

[154]The Ilkhan's conversion to Shiʿism was followed by the mass conversion of his amirs, with the exception of the two most powerful, Saʿīd Chūpān and Isen Quṭlugh. From this date forward, the *khuṭbah* was given in the name of the Shiʿite imams, and coins struck in their name. See Judith Pfeiffer, "Conversion Versions: Sultan Öljeytü's Conversion to Shiʿism (709/1309) in Muslim Narrative Sources," *Mongolian Studies* 22 (1999): 41. As Jean Calmard ("Le chiisme imamite sous les Ilkhans," 283) points out, the proclamation of Shiʿism aroused violent opposition in Sunni strongholds in Iran (Iṣfahān, Qazwīn, and Shīrāz), despite the fact that the *khuṭbah* did not include any execration of the Sunnism of the first caliphs.

[155]He returned to Damascus on 1 Dhū al-Qaʿdah 712/28 February 1313, after a brief stay in Jerusalem; see Henri Laoust, "Ibn Taymiyya," *Encyclopédie de l'Islam,* 2nd ed., 3:977.

[156]Quran 9:59.

[157]*Majmūʿ Fatāwá,* 28:528. He corresponded with the Mongols prior to their attack on Baghdad and contributed to Hülegü's victory over the caliph's army; see John A. Boyle, "Ibn al-ʿAlqamī," *Encyclopédie de l'Islam,* 2nd ed., 3:724.

Taymīyah was concerned, this Shiʿite perversion could only lead to a complete Shiʿite takeover of the Ilkhanid regime, a takeover that was consummated with the conversion of the "king of the Tatars to Rāfiḍism." Although he is not named, this assertion relates to Öljeitü. Ilkhanid Rāfiḍism was for Ibn Taymīyah an even greater danger than the Chinggiskhanian rationalism of Ghāzān Khān, for it could spread throughout *Dār al-Islām*, and most of all to the Hijaz. The Mamluk regime was the only bastion against this menace. The situation in Mecca provided the Ilkhan with the opportunity to intervene and to widen the influence of Ilkhanid Shiʿite Islam. Since the death of Abū Numayy, head of the Zaydī Shiʿite Banū Qatādah family, in 701/1302, the struggle for power between his four sons had affected the stability of the holy city.[158] As a result, the Mamluks had considerable difficulty in retaining their influence there. In 705/1306, Öljeitü sent an Iraqi caravan with a *maḥmal*[159] to Mecca, just as Ghāzān Khān had tried to do in 702/1303 shortly before his death. In 710/1310, Öljeitü proclaimed his Shiʿite profession of faith on his future mausoleum at Sulṭānīyah, then capital of the Persian Ilkhanate.[160] In the foundation inscription on the mausoleum, he styles himself "*sharīf al-islām wa-al-muslimīn*," a play on words alluding to his control of the Hijaz through his domination of the *sharīf*s of Mecca.[161] A number of inscriptions engraved on this Sulṭānīyah mausoleum, such as "may God give him victory" and "may God spread his shadow and glorify his lands"[162] clearly refer to the Ilkhan's desire to extend his domain, and by implication to dominate Bilād al-Shām. In Ibn Taymīyah's view, Shiʿism was once again a real danger in the region, all the more so as there were already present numerous Shiʿite sects who were ready to strike deals with the enemy. In this "second fatwa," the virulence of his attacks against the Ilkhanid regime is a response to the Ilkhans' attempts, since their conversion to Islam, to present themselves as leaders of the Muslim world. Öljeitü's future mausoleum in Sulṭānīyah—built with certain parallels with the Kaʿbah in Mecca—and its epigraphic program symbolized the Shiʿite Ilkhan's desire to occupy the position of protector of the holy places of Islam, hitherto held by the Mamluks.

In drawing up this fatwa, Ibn Taymīyah was highly conscious of the danger that the Ilkhans' Shiʿite Islam represented for the Sunni Muslim *ummah*. Öljeitü's claims to Syria were to bear no fruit, however: his campaign, launched in 712/1312, would spend a month besieging Raḥbah and never crossed the Euphrates.[163] His

claims to the holy places also came to nothing. His great amir Ḥājjī al-Dilqandī was sent at the head of a thousand troops to the aid of Ḥumayḍah ibn Abī Numayy, who had come to the Ilkhan's court in 716/1316 requesting military assistance against his brother so as to establish his authority in Mecca. News reached Ḥājjī al-Dilqandī on the road that on 30 Ramaḍān 706/16 December 1316 the Ilkhan had departed from this world.[164] As Jean Calmard emphasizes, Öljeitü's religious policy had aroused considerable fears in the Sunni world Ibn Taymīyah so fervently defended. It is in this context that this long fatwa must be read. It is one of the numerous texts that the Hanbali polemicist drew up at the request of the Mamluk authorities, notably in opposition to the great Shiʿite *ʿālim* Ibn al-Muṭahhar al-Ḥillī, to whom the Shiʿite sources attribute the credit for Öljeitü's conversion to Twelver Shiʿism.[165] Finally, while the first and third fatwas are clearly juridical texts, the "second fatwa" is a text that, taking into account the other sources and its markedly polemical character, we might describe as being of a historical nature.

[164]Ibid., 200. It was reported that Ḥājjī al-Dilqandī had been given orders by Öljeitü to exhume the bodies of the first caliphs Abū Bakr and ʿUmar from their place alongside the Prophet Muḥammad; see ibid. Moreover, Öljeitü had in mind to transfer the mortal remains of ʿAlī and al-Ḥusayn to his future mausoleum at Sulṭānīyah; see Calmard, "Le chiisme imamite sous les Ilkhans," 284.

Some Remarks on Ibn Ṭawq's (d. 915/1509) Journal *Al-Taʿlīq*, vol. 1 (885/1480 to 890/1485)

I

On our table lies the first volume of a four-volume journal or diary *(Al-Taʿlīq)* that Ibn Ṭawq, a native of Jarūd (near Damascus, today Jayrūd), wrote some five hundred years ago. With its customary thoroughness and high quality, the Institut Français d'Études Arabes de Damas (IFEAD) has published the first 555 pages of a work in which one finds the everyday notes of a little-known Damascene court clerk covering the years from 885/1480 up to 908/1502. The edition is based on the autograph manuscript held by the Maktabat al-Ẓāhirīyah (Asad National Library Ms. 4533).

The story of how this text was published is just as remarkable as the manuscript itself: The Shiʿite qadi of Baalbek, al-Shaykh Jaʿfar al-Muhājir, who is known as the author of several historical works on the Shiʿites in Bilād al-Shām,[1] came to IFEAD with the manuscript in 1996. He had worked intensively on the text from 1977 to 1982. When he decided to leave Beirut with his family and settle in Baalbek because of the Lebanese civil war, his attention was directed to the *Taʿlīq* by Thurayyā Kurd ʿAlī, who was in charge of the manuscripts of the Ẓāhirīyah library at that time. During the war, he spent several hours every day at his desk deciphering the difficult script. In this way, little by little, a bundle of papers with the transcription of the whole text emerged, around 1,800 pages all together. Sarab Atassi, the secrétaire scientifique at IFEAD, took care of the manuscript and promised to publish it in the following years. Jaʿfar al-Muhājir had done excellent work, considering that Ibn Ṭawq frequently uses the vernacular to express himself and it is well known that there are only a few preliminary studies in this field.[2]

Edited by Jaʿfar al-Muhājir (Damascus: Institut Français d'Études Arabes de Damas, 2000). Pp. 555. This is an extended review of the first volume. The second and third volumes have now also been published. We would like to express our thanks for useful hints and help to Frédéric Bauden, Lutz Berger, Tarif Khalidi, Hilary Kilpatrick, Bernadette Martel-Thoumian, Florian Schwarz, and Dana Sajdi.

[1] See, for example, his *Al-Hijrah al-ʿĀmilīyah ilá Īrān fī al-ʿAṣr al-Ṣafawī* (Beirut, 1989), *Sittat Fuqahāʾ Abṭāl* (Beirut, 1994), and *Jabal ʿĀmil taḥta al-Iḥtilāl al-Ṣalībī* (Beirut, 2001).

[2] Cf. the bibliography in Joshua Blau's excellent *Handbook of Early Middle Arabic* (Jerusalem, 2002). Information on the spoken Arabic of the Mamluk period can be found in Clifford Edmund

Furthermore the author's handwriting is extremely difficult to read, particularly since the diacritics are almost completely missing (as is shown by the facsimile printed at the end of volume 1). In the printed version, the original text is left almost unchanged. To make it more understandable, minor modifications were made in some places which are always marked and in many cases commented upon.

The journal itself is quite unusual. It contains much information about all strata of society, i.e., about the different circles of ulama, the professors of the madrasahs, the shopkeepers, rural society, and the local population. Ibn Ṭawq primarily focuses on the groups at the fringe of urban society who usually are not the main subjects of Arabic historical literature. He writes about the business of the simple man, everyday economic life, public festivals, protests against the encroachments of the authorities, and about organized gangs who made the streets insecure. Ibn Ṭawq describes things in his *Taʿlīq* which he has witnessed or about which he has been informed firsthand. He himself was from a rural family and earned his living as a minor court clerk *(shāhid-kātib)*. He had a special relationship with the Shafiʿi qadi and *shaykh al-islām* Qāḍī ʿAjlūn (Taqī al-Dīn Abū Bakr ibn ʿAbd Allāh, d. 928/1521), and whenever he was off duty, Ibn Ṭawq joined the sessions of this scholar. In the shade of the Qāḍī ʿAjlūn, he wrote his own work that was actually intended as a sort of local chronicle but also was meant to contain some of the author's personal experiences (*baʿḍ mā yataʿallaqu bi-kātibihi,* as is expressly stated in the second sentence of the chapter devoted to the year 888).

II

One could end the review of the first volume of Ibn Ṭawq's *Taʿlīq* with that. But perhaps it makes sense to put the text in a broader context by suggesting at least one path for further research. We would like to draw attention to a group of texts which can to varying degrees be called "diaries" or "journals" as well. What they have in common is that they convey information about events which happened during the authors' lifetime in chronological order, i.e., proceeding from day to day, from month to month, and from year to year. This is, of course, something they have in common with many works belonging to the annalistic branch of Arabic historical writing. But they differ in that they do not focus only on political events and the lives and deaths of prominent personalities but also provide details and commentary on mundane topics of everyday occurrences and on personal matters, or both. Even so, a clear demarcation of what can be called

Bosworth, *The Medieval Islamic Underworld: The Banū Sāsān in Arabic Society and Literature* (Leiden, 1976); Paul Kahle, "Eine Zunftsprache der ägyptischen Schattenspieler," *Islamica* 2 (1926): 313–22; and Karl Vilhelm Zetterstéen, *Beiträge zur Geschichte der Mamlukensultane in den Jahren 690–741 der Higra nach arabischen Handschriften* (Leiden, 1919), 1–33.

a diary and what should rather be considered a political journal remains a matter of opinion.

Furthermore, one can ask whether or not certain parts of voluminous works such as *Badāʾiʿ al-Zuhūr* by Ibn Iyās (d. ca. 930/1524)[3] should be included in the group of diaries in this sense as well. Ibn Iyās also describes many events of his own era in a diary-like style, where festivities, scandals, petty crimes, and the gossip of the day figure prominently. And one last point: even though our scope goes beyond the Mamluk area and time, dynastic changes cannot divide a literary genre that develops and flourishes over the centuries.

The year 1985 may be considered as signaling a new interest in the history of everyday life, at least in Germany, manifesting itself in universities as well as in exhibitions. In that year, but probably completely independent of that fashionable novelty, Annemarie Schimmel's book *Alltagsnotizen eines ägyptischen Bürgers* (An Egyptian citizen's notes on everyday life) was published,[4] being an extract from volumes 4 and 5 of Ibn Iyās' above-mentioned work *Badāʾiʿ al-Zuhūr*. And even decades before Schimmel's work appeared, everyday life in the medieval Islamic world was considered an interesting topic, a prominent example being Adam Mez' *Die Renaissance des Islams,* which was published in 1922.[5] Since then, many publications have in passing made some contribution to the history of everyday life in medieval Islam,[6] but an attempt to give an encyclopaedic survey has, to our knowledge, not so far been made.

III

Some works will probably be familiar already. The first chronicle which, without too much discussion, can be included within the genre of Arabic diaries is al-Musabbiḥī's (d. 420/1029) *Akhbār Miṣr wa-Faḍāʾiluhā,* of which only the last of its forty volumes has been preserved.[7] This volume treats parts of the years 414 and 415 Hijrah which correspond to the years 1023 to 1024 A.D., that is, some years after al-Ḥākim's reign (r. 386–411/996–1021). Some of the first volumes seem to

[7]Ed. Ayman Fuʾād Sayyid and Thierry Bianquis, *Tome quarantième de la Chronique de l'Égypte de Musabbiḥī* (Cairo, 1987). This edition is based on the unique manuscript preserved in the Escorial. 80 pages of poetry are not included in the printed text but have been published separately: *Al-Juzʾ al-Arbaʿīn min Akhbār Miṣr,* ed. Ḥusayn Naṣṣār (Cairo, 1984). Al-Musabbiḥī is said to have written 28 books, which, with two exceptions, are all devoted to *adab.* See Thierry Bianquis, "Al-Musabbiḥī," *The Encyclopaedia of Islam,* 2nd ed., 7:650–52.

have dealt with periods long before the author's own lifetime. The preserved last part, which quotes from official documents, is an important source for political history and court intrigues, but also is a gold mine for facts about everyday life. We hear about a dog who enters a mosque and is killed as a consequence, a boy drowning in the Nile, a hippopotamus which found its way to Cairo, three "yellow" Indians curing eye diseases, a bear causing panic, a convert to Islam who had only pretended to undergo circumcision (which becomes obvious only after his death), about people recovering the corpses of persons drowned in the Nile and demanding money from the relatives, and much more. As with many of the diarists, al-Musabbiḥī had a peculiar thematic preoccupation: he was especially interested in crimes in his native quarter al-Fusṭāṭ, and it seems that he had access to the log of the local police station. His reports are useful for gaining a picture of the *practice* of law enforcement, which is much less well known than the rules of *fiqh* manuals, handbooks for judges, and fatwa collections.[8] He writes about his own activities in several instances, for example when he had participated in audiences at the caliph's court or in one of the caliph's public appearances. Once he tells us that he was unable to attend a festivity due to severe pains. Among the many obituaries, there are several persons mentioned from his own circle of friends or acquaintances without any political significance. A slave girl with whom al-Musabbiḥī has a child suddenly dies, and he expresses his deep grief in moving words which sound much more authentic than most of the many elegies we know from Arabic poetry.[9]

Then we have the autograph diary of Ibn al-Bannāʾ, an eleventh-century Hanbali doctor of Baghdad. His text deals with the period from 1 Shawwāl 461/3 August 1068 until 14 Dhū al-Qaʿdah 461/4 September 1069, but originally his notes seem to have been continued for nine more years.[10] Like al-Musabbiḥī, he is said to have been a prolific author, but his diary, unlike his Egyptian colleague's work, seems not to have been meant for the eyes of the public. Its main topics are the social, political, and religious affairs in Baghdad in which Ibn al-Bannāʾ took part. He records his own activities in this sphere, for example, his delivery of the Friday *khuṭbah* in the palace mosque or cathedral mosque, or a funeral oration, or

[8]Al-Musabbiḥī was the main source for Yaacov Lev, "The Suppression of Crime, the Supervision of Markets, and Urban Society in the Egyptian Capital during the Tenth and Eleventh Centuries," *Mediterranean Historical Review* 3 (1988): 71–95. For some more aspects of criminal justice drawn from al-Musabbiḥī, see Tilman Seidensticker, *On Crucification in Medieval Islam* (forthcoming).

[9]Al-Musabbiḥī, *Akhbār*, 16, lines 9–10 (*wa-nālanī ʿalayhā min al-wajdi mā lā ajidu lahu kāshifan illā Allāh*).

[10]George Makdisi, "Autograph Diary of an Eleventh-Century Historian of Baghdad," *Bulletin of the School of Oriental and African Studies* 18 (1956): 9–31 (= part 1), 239–60 (= part 2); 19 (1957): 13–48 (= part 3), 281–303 (= part 4), 426–43 (= part 5).

his visit to an ill colleague. All in all, he includes himself and his own activities in his book much more than al-Musabbiḥī, but everyday life is seldom mentioned, with the exception of some miraculous incidents and the information that he had his blood drawn together with a number of others from his family on 17 Rajab 461/11 May 1069.[11] Instead of al-Musabbiḥī's passion for crime, Ibn al-Bannāʾ devotes special attention to dreams, both his own and those which were reported to him by others. This happened many times because he was considered an expert in the interpretation of dreams. During the 13 months which are covered by the fragment, 26 dreams are reported, the length of which are between a few lines and a whole page. Some are just recorded, others briefly commented upon, and still others are subject to extensive interpretation. The author's own dreams give, voluntarily or involuntarily, some insight into his ambitions and longings. Besides the dreams, there are about half a dozen remarks of a personal character. To give just one example: "A woman with a baby girl came to my door. The family and a maid-servant of ours saw her. They said, 'She has two heads.' But I could not bear to look at her *(mā ṭāba qalbī anẓur ilayhā)*. We gave her mother something, and she went away."[12]

Like his forerunners al-Musabbiḥī and Ibn al-Bannāʾ, Ibn Ṭawq has a particular interest: he is obsessed with weather. With the help of his *Taʿlīq,* we are able to write a nearly uninterrupted history of the meteorologic phenomena in Damascus for more than two decades. This fact can best be explained by his rural background, because he shares this predilection with two authors of another diary who were farmers: the father and son al-Rukaynī from the Jabal ʿĀmil in the eighteenth/nineteenth centuries (see below). He tells us about the direction of the wind, changes in the weather, differences in the appearance of clouds, about cold, heat, frost, and snow. Typical of the almost affectionate manner in which the topic is treated is what he says about 18 Muḥarram 888: *wa-fī laylatihi ʿinda al-tasbīḥi ḥaṣala bakhākhu maṭarin wa-istamarra ilá ākhirihi lam tura al-shamsu wa-al-maṭaru ʿammālun bi-sukūnin wa-ḥaṣala bi-hi khayrun kathīrun wa-lillāhi al-ḥamd* ("in the night, at the time we said *subḥāna Allāh,* a drizzle began and continued until the end of that day; the sun was not seen all day long, and the rain did its work quite calmly, and caused much benefit, praised be the Lord!").[13] In comparison to his two forerunners, Ibn Ṭawq devotes even more attention to everyday life than al-Musabbiḥī; the *Taʿlīq* allows a reconstruction of all aspects of life in Damascus in the last decades of the Mamluk period.

To give just a few examples from a random selection of about 60 pages (*Al-Taʿlīq*

[11] Ibid., part 4, 290 § 143 (Arabic text) = 302 (English translation).

[12] Ibid., Part 2, 246 § 34 (Arabic text) = 258 (English translation).

[13] Ibn Ṭawq, *Al-Taʿlīq,* 1:232, ll. 9–10.

23–63 and 224–41): his master Qāḍī ʿAjlūn has a severe marital row *(ghayẓ kabīr jiddan)* with his Egyptian wife (25, lines 11–12); a farmer's wife and a stranger are struck dead by a dilapidated wall somewhere in the gardens and the wife is not buried properly due to the dubious circumstances of her death (29, ll. 9–12); in a garden, two men are caught together with a strange woman; their wine is poured out, and one of the men manages to flee, while the other one is punished with 40 lashes, and the woman is imprisoned (58, ll. 2–6); the caretaker of the al-Saqīfah mosque does illicit things *(al-makrūh)* in the mosque with the slave girl of a shaykh's wife, and after they are caught, he flees by throwing himself in the river, while the girl is struck with a sword and wounded (61, ll. 15–18); a tavern is closed (29, l. 2); wine is poured out (36, ll. 14–15; 233, l. 13; 236, l. 19–237, l. 2); two Muslims drink wine, and someone informs Qāḍī ʿAjlūn (239, ll. 6–9); some poor people force their way into a Christian's house where some Muslims are drinking wine together with beardless boys (240, ll. 11–13); the collapse of a ceiling of a building kills six persons, two survive (36, ll. 5–7); forty poor farmers attack three shops owned by Christians (48, ll. 4–10).

Ibn Ṭawq devotes even more space to his personal life than Ibn al-Bannāʾ. On a Monday, his wife and children visit the Turkish bath, and the sums of money given to the staff are enumerated in detail: *lil-dāyah hibat ashrafī, lil-ḥammāmīyah 20, al-nāṭūrah wa-ummuhā 12, al-waqqād 2* (35, ll. 2–3). On the occasion of the pilgrims' return, the author buys two sheep and has them cooked (45, ll. 7–8). When Ibn Jumʿah's wife gives birth to a dead girl, he sends her three chickens (233, ll. 17–18). He mentions that he caught a cold accompanied by a shivering fit and fever (29, ll. 7–8), and he tells us that a room called *al-murabbaʿ* is covered (with mattresses) and that the family sleeps in this room on the next night (35, ll. 16–17). A visit to the flowering gardens of Zamlakā and Daqqānīyah with five friends is reported (36, ll. 8–9); several days later Ibn Ṭawq notes that the flowers and blossoms are extremely beautiful (*fī ghāyat al-ḥusn,* 39, l. 14), and even the picking of some flowers is considered worth mentioning (*qaṭaftu min saṭrā baʿḍ ward,* 235, l. 2). The author's wife has, on 15 Rabīʿ I 888/23 April 1483, her brother sell a brooch made of gold to buy a copy of the Quran with the money (237, ll. 8–9). Value judgements are not very frequent, but they exist: a book written by Shihāb al-Dīn al-Iʿzāzī is generously assessed as "not bad, for him" (*wa-hiya kitābah bi-al-nisbah ilayhi lā baʾsah bihā,* 32, ll. 13–14), and the transfer of the *muqaddam Dimashq* to Ṭarṭūs is warmly welcomed (*wa-hādhihī nafyah wa-lillāh al-ḥamd,* 43, ll. 3–4).

IV

After this comparison between Ibn Ṭawq and his two predecessors, we would like to conclude our contribution with a list of later works that have some affinity with

the "diary" genre. In some cases we can only adduce the authors, titles, and dates, while in other instances we give some additional information. There is a certain overlap with the authors treated by Dana Sajdi in her doctoral dissertation on contemporary chronicles written by commoners in the eighteenth-century Levant.[14] Our list does not, of course, claim to be exhaustive. We did not include authors who died after the year 1800 A.D., with the exception of the Rukaynīs' chronicle, because al-Rukaynī senior wrote his part prior to 1778.[15]

1. About one generation after Ibn Ṭawq, Muḥammad Ibn Ṭūlūn (d. 953/1546) wrote his *Mufākahat al-Khillān fī Ḥawādith al-Zamān,* which treats Damascus up to 951/1544; for the years before the author's adulthood, Ibn Ṭawq and other historians such as al-Buṣrawī (see below) are used as sources.[16] "The importance of Ibn Ṭūlūn's history—which is a contemporary chronicle written as *dhayl* to the contemporary chronicle of Ibn Ṭūlūn's teacher, ʿAbd al-Qādir al-Nuʿaymī (d. 1521)—may be seen in the fact that it was among the most widely circulated history books in Damascus during the two centuries after his death. . . . Ibn Ṭūlūn, an *ʿālim par excellence,* was acutely conscious of being a member of a scholarly community . . . [but:] In other words, Ibn Ṭūlūn's chronicle is less about the *ʿulamāʾ* and more about the suffering of 'the people.'"[17]

2. In 1099/1687, Yaḥyá Ibn al-Ḥusayn ibn al-Qāsim, author of the *Bahjat al-Zaman fī Ḥawādith al-Yaman,* died.[18] This work, devoted to the history of the Yemen, and above all of Ṣanʿāʾ, is also mainly restricted to the five decades which the author himself witnessed. The author turns out to be especially fond of repeating second-hand horror stories and fairy tales.

3. Ismāʿīl ibn Tāj al-Dīn al-Maḥāsinī (d. 1102/1691), preacher of the Umayyad

[14]Dana Sajdi, "Peripheral Visions: The World and Worldviews of Commoner Chroniclers in the 18th Century Ottoman Levant" (Ph.D. diss., Columbia University, 2002).

[15]Ibid., 126–28.

[16]Ed. Muḥammad Muṣṭafá (Cairo, 1962–64) and Aḥmad Aybash (Damascus, 2002, under the title *Ḥawādith Dimashq al-Yawmīyah Ghadāt al-Ghazw al-ʿUthmānī lil-Shām 926–951: Ṣafaḥāt Mafqūdah Tunsharu lil-Marrah al-Ūlá min Kitāb "Mufākahat al-Khillān ilkh."*). The Cairo edition contains the preserved parts of the first volume, covering roughly the years from 884/1479 to 926/1519, based on the unique manuscript (autograph) of the Tübingen University Library. The Damascus edition is a reconstruction of the second volume with the help of quotations in later works.

[17]Sajdi, "Peripheral Visions," 479–80.

[18]Ed. ʿAbd Allāh ibn Muḥammad al-Ḥabashī as *Yawmīyāt Ṣanʿāʾ* (Abu Dhabi, 1996). This text is based on the author's *musawwadah* from the library of the Friday mosque in Ṣanʿāʾ. It is not a complete edition but a selection of parts considered important for social history. The manuscript has three volumes with altogether 1,459 pages of 20 to 22 lines. This means that the edition is shortened to a third of the size of the manuscript. On Yaḥyá ibn al-Ḥusayn ibn al-Qāsim, see ʿAbd Allāh ibn Muḥammad al-Ḥabashī's introduction, containing a long list of his works (5–16, 122 titles).

mosque in Damascus, wrote his account of the time between Ṣafar 1077/August–September 1666 and Jumādá I 1100/February–March 1689 on the empty space in a volume of Arabic poetry. These notes, spread throughout all 325 pages, were extracted from that scrapbook *(kunnāsh)* by Ṣalāḥ al-Dīn al-Munajjid.[19] There are many remarks on everyday matters and the author's personal life.[20]

4. Muḥammad al-Makkī, author of a *Tārīkh Ḥimṣ,*[21] died in 1135/1722 and also concentrates on the three decades before his own death, mainly in the region of Hims and its environs. "All of the above factors lead us to conclude that al-Makkī must have had an intimate professional involvement with the *maḥkamah* of Ḥimṣ, similar in function to that of a court clerk; what exactly that function was, however, we are unable to identify. . . . The fact of al-Makkī's occupation is reflected in the writing and content of his chronicle. Just like a court *sijill,* his chronicle records deeds and transactions in summary form, with a minimum of narrative, external context, and authorial interjection. . . . Al-Makkī is remarkably eclectic about who or what he reports: his news ranges from the comings and goings of the town notables, to the death of a garbage collector, to the marriage of a barber, to a water-bearer's murder of his mother-in-law, to the death of the neighbor of the author's daughter. . . . Muḥammad al-Makkī was a court clerk with more than a touch of opportunism."[22] Al-Makkī does not talk too much about himself, but everyday life is one of his favorite topics. His style shows a peculiar fondness for nominal expressions instead of verbs, a sort of "officialese" *(nuzūl al-bard, islām dhimmī, majīʾ fulān, wuqūʿ fulān fī al-ʿĀṣī).*

5. Another author from the Bilād al-Shām is Muḥammad ibn Kannān (d. 1153/1740) who, in his *Al-Ḥawādith al-Yawmīyah min Tārīkh ʿAsharah Alf wa-Miʾah,* covers the time from 1111 to 1153 (1699 to 1740), all of which he witnessed himself.[23] The autograph is preserved in two manuscripts in the Staatsbibliothek zu Berlin (nos. 9479 and 9480 Ahlwardt). On him and his work, Dana Sajdi writes: "Perhaps unexpectedly of a bookish man, Ibn Kannān was also a socially active fellow. He spent much [of] his time paying social visits and going to engagement

[19] "Ṣafaḥāt fī Tārīkh Dimashq fī al-Qarn al-Ḥādiyah ʿAsharah al-Hijrī Mustakhrajah min Kunnāsh Ismāʿīl al-Maḥāsinī," *Majallat Maʿhad al-Makhṭūṭāt al-ʿArabīyah* 6 (1960): 77–160.

[20] Sajdi, "Peripheral Visions," 28, n. 82, states that al-Maḥāsinī is dealt with by Naila Takieddine Kaidbey, "Historiography in Bilad al-Sham: the Sixteenth and Seventeenth Centuries" (Ph.D. diss., American University of Beirut, 1995), 387–96.

[21] Ed. ʿUmar Najīb al-ʿUmar (Damascus, 1987). Al-Makkī is one of the seven chroniclers dealt with in Sajdi, "Peripheral Visions"; on his biography, cf. the section "Muhammad Ibn Kannān: Struggling for Tenure in the Damascene Academy," 91–113.

[22] Sajdi, "Peripheral Visions," 85–86, 91.

[23] Ed. Akram Ḥasan al-ʿUlabī under the title *Yawmīyāt Shāmīyah* (Damascus, 1994). The author is another one of the seven chroniclers dealt with in Sajdi, "Peripheral Visions."

parties, weddings, and circumcision celebrations. His favorite pastime, however, was picnicking. Ibn Kannān loved the gardens and parks of Damascus, and it was there that he spent most of his springs and summers, particularly toward the end of his life. . . . Ibn Kannān's enchantment with nature is not only illustrated by his interest in botany (reflected in a very large section of *Al-Mawākib al-Islāmīyah*) but also in the fact that he marked time according to the seasonal fruits and flowers: 'in the days of the apple,' 'in the days of the attack of the roses *(fī hujūm al-ward),*' 'in the days of the apricot,' and 'in the days of grapes and figs.' Often, these picnics functioned as scholarly salons. It was in the fresh air, surrounded by flowers, and sitting by the water, that Ibn Kannān and his fellow teachers exchanged knowledge and discussed topics outside their teaching curricula."[24]

6. Thirty years later, another Syrian author, Aḥmad al-Budayrī al-Ḥallāq (d. 1175/1762), wrote his *Ḥawādith Dimashq al-Yawmīyah,* treating the years 1154–75/1741–62, again as an eyewitness. Al-Budayrī's "Daily Events of Damascus" is surely one of the most fascinating documents of eighteenth-century Bilād al-Shām. This collection of current events, observations, and comments, arranged in the form of annals written by an obscure Damascene barber, provides a much-needed corrective and supplement to the indispensable but often dry and monotonous biographical and historical works of the time. Al-Budayrī's precious text, which is remarkably close to the vernacular, has a complex history. It is even possible that the folios of the original manuscript had been used as wrapping paper in the *sūq.* But somehow the importance of the work had ever been forgotten. The man who used al-Budayrī's diary as a historical source was in any case Muḥammad Saʿīd al-Qāsimī (d. 1317/1900), who is justly famous for his work on the crafts and guilds of Damascus.[25] He changed the wording of the original text by rewriting it. Al-Budayrī had written his diary in a language which al-Qāsimī found too close to the colloquial and therefore repulsive, so he changed the wording wherever he deemed necessary, and in an unspecified number of places omitted passages which he found long-winded or otherwise superfluous. The revised form of the diary in the redaction of al-Qāsimī is preserved in the family library of the Qāsimīs in Damascus under the title *Tanqīḥ al-Shaykh Muḥammad Saʿīd al-Qāsimī li-Ḥawādith Dimashq al-Yawmīyah.* The book was edited in 1959 by Aḥmad ʿIzz al-Dīn in Cairo.[26] The barber's original work is preserved in a unique manuscript in the Chester Beatty Library in Dublin (no. 3551/2, autograph?). Dana Sajdi is currently editing this manuscript. The original version omits the *nisbah* al-Budayrī

[24] Sajdi, "Peripheral Visions," 99.

[25] *Qāmūs al-Ṣināʿāt al-Shāmīyah,* ed. Ẓāfir al-Qāsimī (Paris, 1960).

[26] Muḥammad Jamīl Sulṭān published a second edition together with a short study on the author and his work (Damascus, 1997).

for which reason Sajdi refers to him as Ibn Budayr.[27] Ibn Budayr's diary faithfully reflects the shop-talk of his time. He has a lot to say on this subject, especially, for example, on prostitutes. In a barber's talk with his customers, conversation would naturally also turn to gossip and scandals involving "honor," mistreatment or unacceptable behavior of women, and the like. The author writes about the everyday problems of people of his class and social standing, elucidating many details. He was not in anyone's service and was therefore in a position to praise and criticise freely whatever he felt merited praise or criticism.

7. Ḥaydar Riḍā al-Rukaynī and his unnamed son left a diary which was first published in an incomplete edition of the subsequently lost unique manuscript in the Shiᶜite journal *Al-ᶜIrfān* in 1938–39.[28] "The chronicle begun by the Shīᶜī farmer Ḥaydar Riḍā al-Rukaynī (henceforth al-Rukaynī Sr.) and completed by his unnamed son (henceforth al-Rukaynī Jr.) records events in rural Jabal ᶜĀmil in the years 1163/1749 to 1247/1832. While neither father nor son informs us exactly where they live in southern Lebanon, the events of the chronicle take place overwhelmingly in that region, and end with al-Rukaynī Jr.'s migration to Damascus. . . . This is the first contemporary chronicle in the Shīᶜī tradition of Jabal ᶜĀmil, and the only chronicle in Arabic-Islamic history known to have been written by farmers. . . . These novel spheres are reflected in the content of the Rukaynīs' chronicle: for example, the agriculturalists' overriding concern with the weather, on the one hand; and the ᶜĀmilī Shīᶜī's iteration of a strong sense of regional and communal identity on the other."[29]

V

As stated above, our knowledge of the history of everyday life in medieval Muslim times is still in its beginnings, and this is even more evident if we widen the somewhat vague notion of "everyday life" to include mentality, "Lebensgefühl," perceptions and emotions of the individual. It is true that some promising beginnings have been made, e.g., the study of Thomas Bauer on love (especially

[27] On Ibn Budayr, another one of the chroniclers treated by Sajdi, cf. "Peripheral Visions," 66–80, and idem, "A Room of His Own: the 'History' of the Barber of Damascus," *MIT Electronic Journal of Middle East Studies* 3 (2003): 19–35. See also George Haddad, "The Interests of an Eighteenth Century Chronicler of Damascus," *Der Islam* 38 (1963): 258–73, and Antonino Pellitteri, "Imagine Donna in *Hawadith Dimashq al-Yawmiyya* (1741–1762) di Ahmad al-Budayri al-Hallaq," in *Verse and the Fair Sex: Studies in Arabic Poetry and in the Representations of Women in Arabic Literature,* ed. Frederick de Jong (Utrecht, 1993), 153–70.

[28] More recent editions based in part on the *ᶜIrfān* printing, entitled *Jabal ᶜĀmil fī Qarn, 1163–1274 H/1749–1832 M,* have been published by Aḥmad Ḥuṭayṭ (Beirut, 1997) and Ḥasan Muḥammad Ṣāliḥ (Beirut, 1998).

[29] Sajdi, "Peripheral Visions," 40–41, 505. The Rukaynīs' book is again one of the chronicles dealt with by Sajdi, ibid., where the authors and their diary are introduced on pp. 125–39.

homosexual and homoerotic, and concentrating mainly—but not exclusively—on early Abbasid times)[30] and three articles by Bernadette Martel-Thoumian on crime, suicide, illicit pleasure, and punishment in Mamluk times.[31] For all these questions our diaries are one important source, but of course ample information can be found in other types of documentary evidence. Within the last few years historians with a focus on Europe have been occupied with similar sources and invented the technical term "ego documents."[32] Originally, this phrase was coined by the Dutch historians Jacques Presser and Rudolph Dekker in the 1950s. Their main field was the analysis of memoirs, travel stories, letters, and diaries. All of them had one thing in common: an author who reports in the first person "about his own behavior and feeling and about topics and events that concern him personally." This approach was then picked up and developed further at a workshop organized by Winfried Schulze in 1992.[33] The participants came to a comprehensive definition:

> All texts which can be typified as ego documents should have one thing in common: you should find in them rudimentary or explicit statements made by an individual about his perception of social phenomena like family, community, country, group or tribe or about his reflection on his relations with these societal systems and their changes. These statements should justify individual behavior, reveal fears, manifest values and norms, and reflect a personal conception of and an outlook upon life.[34]

This definition significantly broadens the scope of our sources. Now we have to

[34] Ibid., 28.

take into consideration not only the above-mentioned autobiographical or semi-autobiographical works but all texts in which information about an individual are given indirectly, i.e., non-intentionally and non-purposefully: wills, tax records, criminal case files, merchant and invoice books, interrogation protocols, photographs, or other documents of a non-literary character.

For the first corpus, the so-called autobiographical genre, the term "Selbstzeugnisse" has been established.[35] In a pathbreaking essay, Benigna von Krusenstjern comes to the conclusion that, on the one hand, "Selbstzeugnisse" include a "Selbstthematisierung durch ein explizites Selbst" and, on the other hand, they are "selbst verfaßt, in der Regel auch selbst geschrieben (zumindest diktiert) sowie aus eigenem Antrieb, also 'von sich aus,' 'von selbst' entstanden."[36] Furthermore, she distinguishes four categories of "Selbstzeugnisse":[37] (1) "egocentric" reports in which the reference to the speaker is central and forms the greater part of the work; (2) texts, in which the speaker speaks about himself but also about his interests, emotions, and concerns. In the third category, material things ("die Anteile von Welt") are the main theme of the narration. The world of the speaker has to stay in the background. The fourth variant hardly refers to the "Selbstzeugnisse" since there is no explicit individual speaking. Instead of a speaker we hear an implicit narrator, for example in the form of a chronicler.

Today, ego documents, "Selbstzeugnisse," and their categorization are well known among historians. They are a fertile field of research so that within the last fifteen years numerous monographs, collective volumes, and articles have been published.[38] This phenomenon is closely connected with the historical-anthropological turn within the humanities which itself has been initiated by a concentration on micro-historical and "alltagsgeschichtliche" approaches.[39] What

---

[35]Benigna von Krusenstjern, "Was sind Selbstzeugnisse? Begriffskritische und quellenkundliche Überlegungen anhand von Beispielen aus dem 17. Jahrhundert," *Historische Anthropologie* 2 (1994): 462–71.

[36]Ibid., 463.

[37]Ibid., 470.

[38]Up to now, research on ego documents seems to have been a European field of study. By far the greater part of the literature is in German. Cf., for example, Benigna von Krusenstjern, *Selbstzeugnisse der Zeit des Dreißigjährigen Krieges: Beschreibendes Verzeichnis* (Berlin, 1997); Harald Tersch, *Österreichische Selbstzeugnisse des Spätmittelalters und der Frühen Neuzeit (1400–1650)* (Vienna, 1998); *Das dargestellte Ich: Studien zu Selbstzeugnissen des späteren Mittelalters und der frühen Neuzeit,* ed. Kaspar von Greyerz, Hans Medick, and Patrice Veit (Cologne, 2001).

[39]See Dirk van Laak, "Alltagsgeschichte," in *Neue Themen und Methoden der Geschichtswissenschaft,*

we can see is a reconsideration of the (historical) individual and the epistemological circumstances of his socialization.[40] The central questions can be: What did a pre-modern person think of faith, religion, sexuality, power, society? How did he experience war, violence, childhood, aging? What was his relationship to his own body? What can we say about his feelings and emotions?[41]

If Mamlukologists are going to work with categories like ego documents and "Selbstzeugnisse," we obviously have to find new material. A number of different kinds of sources can be added to our diaries. By way of example, some works from the Mamluk era can be listed, such as memoirs: Ibn Iyās' *Badāʾiʿ al-Zuhūr;* reports of diplomatic missions: Ibn Ājā's (d. 881/1476) *Tārīkh al-Amīr Yashbak al-Ẓāhirī;*[42] autobiographies: Ibn Khaldūn's (d. 808/1406) *Kitāb al-Taʿrīf bi-Ibn Khaldūn wa-Riḥlatuhu Gharban wa-Sharqan,*[43] Ibn Ṭūlūn's *Al-Fulk al-Mashḥūn fī Aḥwāl Muḥammad Ibn Ṭūlūn,*[44] al-Suyūṭī's (d. 911/1505) *Al-Taḥadduth bi-Niʿmat*

ed. Michael Maurer (Stuttgart, 2003), 14–78; Hans Medick, "Quo vadis Historische Anthropologie? Allāh;[45] private letters;[46] travel literature;[47] *bidʿah* works;[48] *waqfīyāt;*[49] and last but not least, chronicles.[50]

It is no easy task for Mamlukologists to identify the world view, experiences, and emotions of individuals, because our sources are much scantier than their European counterparts. Nevertheless, we are convinced that we are in a good position for further studies in this field. To track down the independent and creative element of men and women during the Mamluk era seems to be a promising task. It would help to understand power as a form of social practice, and the constructed experience of the self, as well as the outlines of a self-image, can be one way to

[45]Ed. Elizabeth M. Sartain (Cambridge, 1975).

In Search of "Post-Classical Literature": A Review Article

Readers interested in Arabic history have waited a long time for a history of Arabic literature during the Mamluk and Ottoman periods that would provide an outline, both comprehensive and concise, of this much-neglected field. Finally, a volume of the Cambridge History of Arabic Literature has appeared that promises to fill the gap. All too soon, however, the reader interested in Mamluk and Ottoman literature will realize that the wait is not over. Whereas some of the articles are of high quality (others are of much lower quality), the volume as a whole does not give an overall impression of the period in question, because its concept is marred by a highly Eurocentric approach. First of all, it treats Mamluk and Ottoman literature under the heading "post-classical." Second, it is divided into the categories poetry-prose-drama; and third, poetry and prose are each subdivided according to a characterization as elite or popular. In the following, I will address these three major points as they relate to the book in general without treating each article individually. In a last section I will deal especially with Salma Jayyusi's opening article on Mamluk poetry. As is often the case with reviews, aspects that discomfited and even angered the reviewer are dealt with in more detail than those that satisfied him. Therefore I found it more useful to focus on the problematic points of the book than to praise individual authors for their new insights, of which there are many. Further, I will focus on the topics especially relevant to the present journal and treat articles on the Ottoman period rather briefly.

1. "Post-Classical"

The term "postclassical" is a relative one. In order to define the postclassical, it is necessary to know what the classical is. The term "classical," however, has no indigenous counterpart, and its meaning is not given *a priori*. Since the editors do not even touch the issue, it has to be dealt with here in more detail because it is the central issue in the perception of Arabic literature and culture as a whole, as we shall see.

As for the term "classical literature," it is a European term coined to designate the literature of classical antiquity. Subsequently, literature that shared certain

A review of *Arabic Literature in the Post-Classical Period,* edited by Roger Allen and D. S. Richards (Cambridge, 2006). Pp 481.

characteristics with the literature of Greece and Rome was also termed "classical." These characteristics may have been of either form or content, such as harmony, clarity, and simplicity. In another respect, just as Greek and Latin literatures were considered models for several periods of European literature, a literary corpus that was considered a model for future generations was called classical. In this last respect, "classical" has always been a stamp of quality implying that the "classical" is something exemplary, good, and excellent, whereas the non-classical is not.

Since the reference to classical antiquity cannot possibly be a major point for defining Arabic "classical" literature, what else can?

There exists a sense of "antique, old" when, during most of pre-modern Arabic literature, authors used to distinguish between the *mutaqaddimūn* and the *mutaʾakhkhirūn.* But this distinction between "the ancients and the moderns" is too vague and varies too much over the centuries to be of great help. In most periods of Arabic-Islamic culture, continuity was considered a major virtue. It is no wonder, then, that many a litterateur paid lip-service to the achievements of the ancients, though considering contemporary authors more captivating and interesting than the old stuff, as countless anthologies of the Mamluk period clearly demonstrate. Even Ibn Ḥijjah does not hesitate to pronounce proudly the superiority in the field of the *tawriyah* in his own time.[1] However, he would never have gone as far as to denounce the older literature as outdated and worthless and to consider it as something against which one has to rebel, as was often the case in European literary history. Instead, a statement like that of al-Shawkānī (d. 1250/1832), who wrote that Ibn Nubātah was an "excellent and creative poet, who, in all kinds of poetry, surpassed his contemporaries, all those who came after them, and even most of those who lived before him,"[2] not only proves the high esteem in which Ibn Nubātah was held (see below), but articulates a strong perception of literary continuity that makes it rather improbable that "classical" and "postclassical" are adequate equivalents of *mutaqaddimūn* and *mutaʾakhkhirūn.*

A similar problem with the use of the term "classical" becomes obvious when we observe the fate of the term "neoclassical" in the scholarship of Arabic literary history. The term was coined in Western scholarship to designate poets of the third/ninth century such as Abū Tammām and al-Buḥturī[3] since their *qaṣāʾid* seemed to follow the model of the pre- and early Islamic *qaṣīdah,* the most obvious equivalent to the "classical" (in the sense of "antique") literature of the West. As it became clear, however, that the poets of the "neoclassical" *qaṣīdah* did not aim at imitating

[2] Al-Shawkānī, *Al-Badr al-Ṭāliʿ bi-Maḥāsin Man baʿda al-Qarn al-Sābiʿ* (Beirut, 1418/1998), 2:131.

[3] See, e.g., Charles Pellat, "Al-Buḥturī," *The Encyclopaedia of Islam,* 2nd. ed., 1:1289–90.

the pre-Islamic *qaṣīdah,* the term was rendered inappropriate in the view of most contemporary scholars. But it may still serve as an illustration of the confusion that can be caused by the terms "classic" and "classical." For if we accept the term "neoclassical" in this sense, we can hardly accept the existence of a "postclassical" literature *after* the "neoclassical" because the "neo" has to come *after* the "post." According to that logic, Mamluk poetry should be labeled "postneoclassical," and consequently, the poets of the nineteenth century who continued in the vein of Ibn Nubātah, such as Nāṣīf al-Yāzijī, should be termed neopostneoclassical poets, and Aḥmad Shawqī, rather than simply calling him neoclassical, as is generally done, should therefore be called a neoneopostneoclassical poet!

Since the reference to an allegedly "classical" (in the sense of antique) period leads us nowhere, let us try the criterion of "noble simplicity and quiet grandeur."[4] Arabists tried to apply this notion by contrasting "mannerism" and "classicism" in the tradition of Curtius.[5] But whereas one may differentiate between a classical and a mannerist *style,* the dichotomy does not yield a period. There is no classical *period* as opposed to a period of mannerism. Instead, both styles coexist during nearly all periods of Arabic literature. There were mannerist poets already in the Umayyad period (to mention only al-Ṭirimmāḥ, d. 110/728) and the style of Abbasid poets ranged from the simple and unsophisticated to the highly stylized and contrived, changing often from poem to poem.[6] This plurality of style is also obvious in the Mamluk period, to mention only Ibn Nubātah's poems to ʿAlāʾ al-Dīn ibn Faḍl Allāh as an example for the *maṣnūʿ* style and his hunting *urjūzah* as an example of the *maṭbūʿ* style, considered a model for unmannered poetry by Mamluk critics.[7] Given this permanent stylistic plurality, the criterion of "classical" style is unsuitable for periodization and does not provide us with a classical or a post-classical period.

So the last possibility to find a classical period is to look for what has been considered as exemplary and taken as a model. Again, the result varies a great deal over the centuries. Whereas it may be possible to speak of a "canonization

---

[4] Winckelmann's characterization of Greek sculpture, which became a guiding principle of German classical literature: "Kennzeichen der griechischen Meisterstücke ist endlich eine edle Einfalt und eine stille Größe so wohl in der Stellung als im Ausdruck," first in *Gedanken über die Nachahmung der griechischen Werke in der Malerei und Bildhauerkunst* (Dresden, 1755).

[6] See Thomas Bauer, *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts* (Wiesbaden, 1998), 106–49.

[7] See Geert Jan van Gelder, "Poetry for Easy Listening: *Insijām* and Related Concepts in Ibn Ḥijjah's *Khizānat al-Adab,*" *Mamlūk Studies Review* 7, [no. 1] (2003): 31–48.

of the *jāhiliyyah*,"[8] this does not constitute a classical period, since it soon lost its function as a model. For Mamluk poets, *jāhilī* poetry was something old and distant, a noble heritage learned at school and alluded to from time to time, but not considered as *the* classical period of Arabic literature, just as Beowulf and contemporary Old English poetry can hardly be said to constitute the classical period of English literature.

In any case, the editors of the book under review who use the term "postclassical Arabic literature" seem to have something else in mind. To call a period "from approximately 1150 till 1850" (p. 8) a postclassical period implies that Arabic literature had a classical period from approximately 500 to 1150, i.e., for six and a half centuries! This stands in marked contrast to the few decades of classical French, German, or English literature! Is there any sound argument that can justify the existence of a classical period of 650 years? And is there any sound argument that can explain why an author of the eleventh century should be in any way more classical than an author of the thirteenth?

The notion "classical" in the sense "exemplary, providing the standards" cannot be applied to more than half a millennium. It makes sense, however, in respect to singling out authors or works. Certainly Abū Tammām and al-Buḥturī were "classical" authors of *madīḥ* poems (rather than "neoclassical") in providing models much admired and followed for centuries. In the same sense, it is justified to speak about the "classical *maqāma*" as Steward does on p. 148, having in mind the *maqāmāt* of al-Hamadhānī and al-Ḥarīrī. In the same sense it is an undeniable fact that the letters of al-Qāḍī al-Fāḍil (d. 596/1200), "mannered" as they may be, are a most "classical" work, admired and emulated far into the Ottoman period. In the same sense, Ṣafī al-Dīn al-Ḥillī (d. 750/1350) is the author of the classical *badīʿīyah* and Ibn Dāniyāl (d. 710/1310) the author of the classical shadow play. For al-Shawkānī (d. 1250/1832) Ibn Nubātah (d. 768/1366) was a classical author par excellence, as we have seen above.

This might be one possibility for the use of the word "classic" in the context of Arabic literature in a meaningful way. But to try to construct monstrous periods of "classical" and "postclassical" literature leads to the most ridiculous results. So Rosella Dorigo Ceccato, forced to adhere to the senseless terminology of the volume, divides her (excellent) article on drama into two parts: "Origins" (pp. 348–56) and "Post-Classical Drama" (pp. 356–68). Shouldn't there be something "classical" in between? Did the Arabs really tumble immediately from "semi-dramatic texts" (p. 356) into the "postclassical"?

It becomes clear, therefore, that the word "classical" can only by applied to Arabic literature in two ways. First, it has become customary to differentiate

[8] See Heinrichs, *Manierismus,* 121.

between "classical Arabic literature" as opposed to "modern Arabic literature." I can see no reason to object to this usage, since "classical Arabic literature" in this sense does not refer to a certain period, but to a continuous though manifold and heterogeneous literary tradition based on the classical Arabic language (though not exclusively composed in it). Second, it can be applied to certain authors or works that gained "classical" status in the course of literary history. This, however, happened repeatedly and at any time, and what was "classical" in one time was not necessarily so in another. Only this notion can do justice to the dynamic nature of the history of Arabic literature.

The way the terms "classical" and "postclassical Arabic literature" are used in the present volume has the opposite effect: It *denies* this very dynamic nature of Arabic literature, *denigrates* its history of one and a half millennia, *disregards* its manifold developments, and *squeezes* it into the corset of the imperialist "decline and fall" model. Since none of the meanings of "classical" discussed above can be reconciled with the assumption of the existence of a postclassical period between 1150 and 1850, it becomes obvious that the designation "postclassical" is nothing but a euphemism for "decadence," and the title of the book nothing but a polite English version of *ʿaṣr al-inḥiṭāṭ*. In the introduction it is further suggested that one should distinguish a postclassical period from a premodern period (esp. p. 21). But a foolish idea does not become better when it is elaborated. Just the opposite. It is not only illogical in itself, since every period that was before the modern period is a premodern period, but displays even more clearly the teleological concept that is behind a terminology of this kind.

The idea of a "postclassical" period is a concept heavily dependent on the philosophical ideas of Hegel, who presupposed that the whole of human history is a process of steady progress of mankind that gradually advances to self-knowledge. In this process, the different cultures of mankind contribute their own share and thus help to attain the overall progress of the human race. But as soon as they have done their bit, they have fulfilled their purpose and are prone to vanish in the general stream of progress, which, destined to reach a single goal, cannot be a manifold one. Though there may be a little disagreement about the telos of mankind (the Prussian monarchy, Victorian civilization, communist society, or Western democracy), Hegelian teleological thinking is the background as well of the idea of the "white man's burden," of Fukuyama's "end of history," of the current extinction of the cultural plurality of the world in the wake of "globalization"—and also of a concept like "postclassical literature" or the thoughtless application of the notion "Middle Ages" to the world of Islam.

Terms like "Islamic Middle Ages" and "Arabic postclassical literature" are not as harmless as they seem, but inevitably carry a strong political connotation.

According to the Hegelian teleological worldview that is behind them, Islamic culture has to fulfill one single important task, that is, to bring classical thinking (here: science and philosophy of antiquity) to the West during the "dark" Middle Ages. A nice formulation of this task is given by Léon Gauthier, who wrote in 1948:

> Dès la fin de ce XIIe siècle, le [sic] tâche principale, bien qu'inconsciente, de l'Islâm est accomplie, qui était de transmettre à l'Europe . . . l'inestimable trésor de la science et de la philosophie grecque. Désormais, la pensée arabe ne produit plus dans l'ordre des sciences physiques ou métaphysiques un seul ouvrage vraiment digne d'attention, Ibn Rochd avait été, pour la pensée spéculative gréco-arabe, comme le bouquet final d'un brillant feu d'artifice.[9]

Salma Jayyusi's introductory remarks to her article, in which she strives to expose the decadence and worthlessness of "postclassical" poetry, are an echo of this world view: "The history of the Arab world in medieval times was one of great effervescence; a truly brilliant civilization was forged and served as a link between the older Mediterranean cultures and the European Renaissance" (pp. 25–26)—but then things went wrong.

In the world of the eastern Mediterrenean, the urban culture of the (Eastern) Roman Empire was not destroyed, but gradually transformed. The cultural milieu of Aleppo at the time of al-Mutanabbī was not essentially different from that of the Roman Empire, whereas those of Rome, Cologne, and Paris were. Recently, Gotthard Strohmaier again stressed that one cannot speak of a "reception" of antiquity in Islam, because there was no crossing of boundaries and the creation of something completely new, which is the essence of reception, but rather the continuation of something given, adapted to new circumstances, i.e., as Rosenthal has called it, a "Fortleben der Antike im Islam."[10] In the absence of a cultural break between antiquity and the Middle Ages as in the West, it makes no sense to speak about the "Islamic Middle Ages." Nevertheless, the expression is still current and repeatedly used in the volume under review. The expression "Islamic Middle Ages," however, clearly reflects the teleological, Eurocentric view exposed above, since it makes no sense to speak about Middle Ages when Europe is not the reference. There was obviously no "medieval culture of the Pueblo Indians" and there were no "Aztec Middle Ages." Islam, instead, had to fulfill its single task in

[9] Léon Gauthier, *Ibn Rochd (Averroès)* (Paris, 1948), 11; see also Anna Akasoy, "A Baghdad Court in Constantinople/Istanbul," *Das Mittelalter* 10 (2005): 136–47, here 138.

[10] See Gotthard Strohmaier, "Das Bild und die Funktion vorchristlicher griechischer Religion bei arabischen Autoren des Mittelalters," in *Reflections on Reflections: Near Eastern Writers Reading Literature,* ed. Angelika Neuwirth and Andreas Christian Islebe (Wiesbaden, 2006), 181–90.

the history of human progress, i.e., to enlighten the dark Middle Ages. According to this ideology, Islamic culture must necessarily be a phenomenon of the Middle Ages, since it was in the Middle Ages when it had to fulfill its duty for the human race. Because this notion posits a single history of the Weltgeist, the entire human race lived in the Middle Ages at this time. Therefore, only a few scholars (most prominently Mez and Hodgson) came to doubt the very existence of an Islamic Middle Ages. As has been realized repeatedly, the mentality of the people of these "Middle Ages" was anything but "medieval," rather more akin to the mentality of Renaissance and baroque Europe.[11] The inevitable connotation of the construction of "Islamic Middle Ages" is to deny Islam's own history, and to derive its history exclusively from a European point of view.

For reasons probably better sought in European history than in the history of Islam, the second half of the twelfth century seems to be a key date in the Hegelian historiography of Islam: note the exact coincidence of Gauthier's date for the accomplishment of Islam's principal task for world (i.e., Western) history and the onset of Allen's period of "postclassical" literature! At that time Islam had fulfilled its duty, and, consequently, lost the right to exist as a culture in its own right. From then on, only Europe (and later North America) had a history, whereas the Orient lay in a deep motionless sleep awaiting the moment to be awakened by well-meaning European imperialists, whose mission it was "den Neuaraber . . . in die Hallen moderner europäischer Gesittung einzuführen," as Alfred von Kremer put it in 1871.[12] Having fulfilled its task for the Middle Ages, Islam had nothing to do other than await the onset of modernity, generously brought to the Orient by the colonial powers. According to this imperialist ideology, Islamic history of the period after the fulfillment of Islam's task to the Weltgeist can only be "post-" and "pre-," since Islam has no right to persist as a culture of its own, a culture that has the right to set its own "post-s" and "pre-s." The echoes of this kind of thought can be heard clearly enough in contemporary political discourse, and even, I would dare to say, in the sound of the bombs exploding at this very moment in Iraq and other Islamic countries.

I have not the slightest doubt that Roger Allen, the co-editor and writer of the introduction, had no thought in mind of subscribing to this ideology. Nevertheless, "bien qu'inconsciente," to use Gauthier's words, he contributed to it with all his "pre-s" and "post-s." His introduction to the volume ("The Post-Classical Period:

---

[11] See Adam Mez, *Die Renaissance des Islam* (Heidelberg, 1922), English transl. *The Renaissance of Islam* (London, 1937), and Bauer, *Liebe*, 93–98.

[12] Alfred von Kremer, "Nâṣîf aljâziǧî," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 25 (1871): 243–47, here 245; see also Thomas Bauer, "Die *badīʿiyya* des Nāṣīf al-Yāziǧī und das Problem der spätosmanischen arabischen Literatur," in *Reflections on Reflections,* ed. Neuwirth and Islebe, 49–118.

Parameters and Preliminaries," pp. 1–21) is puzzling enough, since beside his "pre-" and "post-" ideas, Allen severely criticizes the notion of "decadence," subscribes to Hodgson's critique of the notion "Islamic Middle Ages," and encourages efforts to achieve a new perspective on the period in question. Reading these lines, one cannot help but feel that the editor is criticizing the foundational concept of his own volume rather than justifying it. Unfortunately, the fact remains that the volume *is* called *Arabic Literature in the Post-Classical Period,* and that the series title "Cambridge History of . . ." ascribes authority to a designation which does not designate anything but a colonialist Western concept that denies more than half a millennium of Arabic literature its own right. As Samir Kassir has recently pointed out, the concept of "Golden Age" and subsequent "decadence" has done much harm to the Arabs and still prevents them from rethinking their own history.[13] It goes without saying that an editor of a volume in such a prestigious series as the Cambridge History has a responsibility not to use terms that do more harm than good. The present editors, though obviously not unaware of the problematic, failed to assume this responsibility. In the introduction, the reader comes across a quotation of Abdelfattah Kilito that says (p. 20):

> To us it seems more appropriate to regard Arabic poetics on its own terms and to avoid treating the subject as a kind of deviation from a model realized in other times and under other skies. The governing principles should be derived from characteristics that are intrinsic to it, not those of works from some other poetics. . . . To be sure, the negative approach can also be fruitful, but only when, in studying what a culture has not done, it manages to identify what it has done and not what it ought to have done.

How true this is, but how strange it is to find this quote in a book whose title conveys a notion that is nothing but a derogatory term for six hundred years of Arabic literature that failed to live up to Western standards!

Previous volumes of CHAL that dealt with the centuries prior to 1150 were named after the ruling dynasties ("Umayyad" and "ʿAbbasid"). While it is true, as Allen complains, that a periodization along dynastic lines means "to categorize the literary output from without rather than within" (p. 5), it has the great advantage that, after all, the dynasties *existed,* whereas a phantom such as a "postclassical period" did not. A term used for periodization has no other task than to delimit a certain time span. It is futile to search for a term that can sufficiently characterize a literary epoch. A single term can never do justice to a whole period, and interpretations of literary periods vary greatly. Therefore, instead of interpreting

[13] Samir Kassir, *Considérations sur le malheur arabe* (Paris, 2004).

a period in order to label it, the procedure should be the opposite, i.e., to delimit the period by some external feature and only then to interpret it. Italians are completely satisfied with sorting their literature according to centuries. After all, the *cinquecento* is as undeniable a fact as is the Mamluk period. The image of the period may change, and it may turn out that the turn of centuries or the change of dynasties did not correspond to literary changes. To find this out is the task of the literary historian, who has to give his own interpretations but must not be hampered by senseless concepts such as "medieval" or "postclassical." Since it is a Herculean task to fight against such concepts once they are established, their creation is not a contribution to the progress of scholarship. Therefore I strongly advocate "Saljuq," "Ayyubid," "Mamluk," and "Ottoman" as terms for the periodization of Arabic literature. It is true that they do not say much about the literature of the time. But this is an advantage rather than a handicap because it provides for the possibility of changing interpretations without being burdened with a prejudicial terminology. Further, dynastic terms are quite precise. Whether to ascribe the years of Shajar al-Durr's reign to the Ayyubid or Mamluk dynasty is a very minor problem compared to the task of delimiting the Islamic "Middle Ages" or the phantom of a "postclassical" period. And, of course, there are a number of dynasties that can serve for periodization rather than only a single "postclassical" period, and a period that bears the name of a dynasty will not be mistaken for a given reality of literary history.

Several contributions to the book do in fact take periods as a given reality and do not shrink from a plain reification, if not personification, of "the period." The article on "Criticism in the Post-Classical Period: A Survey" by William Smyth (chapter 19, pp. 387–417) may serve as an example. Smyth's article is especially strong on Ibn al-Athīr, but a bit cursory on other authors and fields. Yet it may pass as a good article, though I cannot help the impression that it would have been a better article if the author were less infected with the idea of a postclassical period. Smyth uses formulations according to which the period becomes an actor in itself, as when he says that "the post-classical period is mainly concerned with organizing the heritage of the classical" (p. 417). Besides the fact that the statement is patently incorrect, it displays a view according to which a period is not a tentative abstraction derived from a careful examination of the works created during a certain span of time, but rather an entity that has a character in itself, which is imprinted on everything created during this period just as the genetic code is imprinted on one's offspring. According to this concept, which again owes much to German idealism, Smyth can say that Ibn Maʿṣūm's *Anwār al-Rabīʿ* "demonstrates the level of artificiality and elaboration that scholars and poets regarded as aesthetically satisfying in the post-classical period." The text is taken as an offspring of its period, the existence of which is

simply taken for granted. The geographical background of its author (India and the Yemen), his social position, his interesting biography, his particular character, the target audience of the work—all this seems to be irrelevant to understanding the text, since it was shaped by the character of the *period*. The text is believed to necessarily embody the "genetic code" of the mother period. Therefore, its characteristics can be generalized without hesitation, since the text cannot do other than display the characteristics of the period, and since all texts bear the stamp of the mother period, they can hardly display different characteristics. This procedure, however, does not do justice to the plurality of a period, which in this case is not acknowledged at all. As for Ibn Maʿṣūm's *Anwār,* it is one of only four large *badīʿīyah*-cum-commentary-cum-anthology works that were composed between Ibn Ḥijjah (d. 837/1434) and Muṣṭafá al-Ṣalāḥī (d. 1265/1849).[14] With an average of one per century, one may ask how characteristic these works actually are. On the other hand, we have the genre of the hunting *urjūzah,* which displays a very low level of "artificiality and elaboration," written, however, by authors who were also producers of highly artificial prose.[15] Given Smyth's statement, one wonders if these texts were either not conceived as "aesthetically satisfying," or if the mother period gave birth to monsters.

One of the consequences of this approach is the obsession with the question of what is *new* in this period. According to Smyth, everything that has any sort of predecessor is not new. Therefore, neither al-Sakkākī nor Ibn al-Athīr nor al-Qarṭājannī produced anything really new, because they had predecessors. "In the post-classical period, the disciplines that deal with criticism are largely a continuation of the subjects and methods established in the previous five centuries" (p. 387). Well, this is the nature of scholarship. What would be the benefit of disregarding everything that had been written in the previous five centuries simply to produce something completely new? Smyth's article itself presents hardly anything that is new. This does not diminish its value. Smyth's obsession with innovation, however, prevents him from recognizing what really was new. To take one example, he writes in quite a deprecating way about al-Ṣafadī's book on the *tawriyah* ("There was very little by way of real analysis," p. 407). He forgets, however, that this was the first treatise ever written about the subject, and that it was considerably improved upon by Ibn Ḥijjah's treatment of the same subject. He is also unaware of the simple fact that there is no theory of double entendre in modern Western stylistics whatsoever. Ibn Ḥijjah's book, therefore, is not only the best book ever written on the double entendre, but is still *state of the art!* But for Smyth, for whom periods are closed entities, it is perhaps inconceivable that

[14] See Bauer, "Die *badīʿiyya* des Nāṣīf al-Yāziǧī."

[15] See Bauer, "The Dawādār's Hunting Party: A Mamluk *Muzdawija Ṭardiyya*, probably by Shihāb al-Dīn Ibn Faḍlallāh," forthcoming in *Festschrift Remke Kruk*.

a work written more than five hundred years ago in another culture can have any immediate relevance for the present.

It is quite obvious that the volume was not a labor of love for the editors. As Allen realizes quite clearly, the Ayyubid and Mamluk periods on the one hand, and the Ottoman period on the other hand, are periods quite different in nature and character, and each of them would have deserved a volume of its own. But the deprecatory nature of the whole enterprise becomes clear already in the first line of the introduction, which says that the present volume is "probably the last" of the CHAL. We thus learn that the Mamluk and Ottoman periods are not deemed worthy of two volumes, while the Abbasid period was granted a volume dedicated to literature and another one dedicated to "religion, learning and science" (Cambridge, 1990). Obviously the publishers think that there was no "religion, learning and science" during this time about which a Western public needs to be informed. Could there be a clearer expression of the Hegelian worldview described above?

Not only will there be no volume on Mamluk and Ottoman learning and science, but the volume under review is also marred by several disturbing lacunae. The volume is not called "Arabic literature of the Mamluk and Ottoman *empires,*" but "Arabic literature in the post-classical *period.*" Therefore it should cover the whole of the literature written in the Arabic language irrespective of the country in which it was written. But this is not the case. The chapter on Mamluk historiography is limited exactly to the historiography of the Mamluk empire. Lisān al-Dīn Ibn al-Khaṭīb is not mentioned, and the author even apologizes for mentioning the Tūnis-born Ibn Khaldūn (p. 166). In the whole volume, the name al-Maqqarī does not appear once. Despite its title, the chapter on historiography of the Ottoman period is not limited to the Ottoman *period,* but to the Ottoman *empire*. Consequently, ʿAbd al-Qādir al-ʿAydarūs and his *Nūr al-Sāfir* are not mentioned (despite its importance for our knowledge of the history of Egypt and Syria in the tenth/sixteenth century), nor is any other of the many Yemeni historiographic works. In the entire volume, the Yemen is only mentioned in Larkin's article on popular poetry, while the extremely rich *fuṣḥá* literature of this important part of the Arabic world is completely disregarded in all other chapters. The quite remarkable bloom of Arabic literature in India during the eighteenth century is either completely unknown to the editors or deemed, for whatever reason, unworthy of mention. Its most famous protagonist, Āzād al-Bilgrāmī (1116–99/1704–84), however, is still today venerated and studied intensively in Pakistan and India. By neglecting authors like him—not to mention those of Oman or sub-Saharan Africa—an important aspect of the later Ottoman period is obscured, i.e., its tendency to a specific form of cultural "globalization" of the Islamic world.

Two further general critical remarks may be allowed here. First, the nearly complete disregard of French, German, and Italian scholarship in many articles is a sad sign of the increasing provincialism of Arabic studies. This provincialism is further manifested in several contributions due to their being, as a Mamluk author would have put it, "bare of the clothes of literary theory." Only if terms and concepts are applied with the same diligence and theoretical knowledge as is the practice in fields dealing with Western literatures will Arabic studies become a discipline on an equal footing with its more progressive neighbors and, due to the wealth of its material, be able to inspire these disciplines instead of stumbling on mired in the prejudices and ill-defined concepts of the nineteenth century.

2. Poetry–Prose–Drama

As we have already seen in the case of the term "postclassical," the editors scarcely discuss the central notions of the book and its basic principles of organization. The first of these principles was to organize the articles in sections on poetry, prose, and drama, and to add an article on criticism. Poetry and prose (but not drama) are again split into two parts, one dedicated to elite poetry/prose, the other to popular poetry/prose. Is this organization, which is not explained with a single word, really as plausible as the editors obviously assume? The three categories "poetry," "prose," and "drama" obviously were applied because the editors wanted to avoid the more usual Western classification "epic/narrative," "lyric," and "drama," and they were right to do so since this partition is no longer the state of the art of literary scholarship, and it obviously does not fit Arabic literature at all. For example, *inshāʾ* is not epic and a lot of Arabic poetry is not really lyrical. Nevertheless, to substitute "prose" for "epic" and "poetry" for "lyric" does not make things any better. First, the three notions are now no longer on the same level, for what else could a drama be than either poetry or prose? And second, even these notions cannot deny their Western origin and they prevent the reader from conceiving of Mamluk and Ottoman literature under categories other than established Western ones. Inconsistencies resulting from this classification become obvious all too soon. The *maqāmah* is discussed at length both in the prose section and in the drama section. The fact that *maqāmāt,* shadow plays, chancellery letters, the *Sīrat ʿAntar,* and the *Thousand and One Nights* consist of a mixture of poetry and prose is obscured by this division, and so is the fact that poetry and prose so often interacted in a single act of communication. A letter of praise, congratulation, or condolence often comprised both a *qaṣīdah* and a prose text referring to it. Still, in the case of Ibn Nubātah, we find the *qaṣīdah* in the *Dīwān* and the corresponding letter in one of his prose collections. But later Mamluk authors gave up this formal division between poetry and prose. The *Dīwān* of al-Qīrāṭī, to take only one example, comprises both prose and poetry

and no longer separates the *qaṣīdah* and its accompanying prose letter.[16] These developments are necessarily obscured by the division into prose, poetry, and drama, a concept that runs contrary to the indigenous development. This becomes very clear in the instructive article "The Role of the Pre-Modern: the Generic Characteristics of the *Band*" by ʿAbdallah[17] Ibrahim (chapter 4, pp. 87–98), where Ibrahim argues convincingly that the *band,* despite its rhythmic structure, is rather to be considered prose. But the editors found it not prosaic enough and put the article in the poetry section.

The concept of dividing the book into chapters dedicated to prose, poetry, and drama meets its final collapse in the section "popular prose." Here we find all the chapters dealing with the popular epics. It is only reasonable to unite these chapters under a common heading, but the heading cannot be "prose," since the *Sīrat Banī Hilāl* is a work of oral poetry, its formal aspects being so excellently presented in Reynolds' article (see pp. 314–18) that the editors should have understood that this *sīrah* is not a work of prose, and therefore does not belong in the "popular prose" section. It would have belonged in an "epic" section, but most of the other prose chapters would not. Therefore we see, as so often, that the application of modern Western categories and the disregard of indigenous categories can never do justice to any other culture than the Western. Ibn Sūdūn was wiser in not separating prose and poetry in his *Muḍḥik al-ʿAbūs.* Instead of separating prose and poetry, he separates *jidd* and *hazl,* which, by the way, would have been an indigenous concept that could have been of more use for a volume of this kind (it is only touched upon accidentally on p. 138). The same is true for many other indigenous concepts. But there are no chapters on anthologies, epigrams, chronograms, *badīʿīyāt,* travelogues, *muṭāraḥāt, taqārīẓ,* and so on; all these are forms or genres that were of exceeding importance for Ayyubid, Mamluk, and Ottoman authors and readers, but of no importance to the editors of this book, who prefer to apply modern (though partially dated) Western concepts instead. This does not mean that there are no Western terms and concepts that do fit. A particularly fitting one is the term *prosimetrum,* a Latin term for a literary piece that is made up of alternating passages of prose and poetry. It is only too obvious that many literary genres of Arabic literature such as the *maqāmah* are far more adequately described as *prosimetrum* than as prose or poetry. The term *prosimetrum* has already been applied successfully to Arabic literature and other Near Eastern literatures, but is not taken into account in the volume under review.[18]

Instead, we get a whole section on "drama," comprising an article by Rosella Dorigo Ceccato (chapter 17, "Drama in the Post-Classical Period: a Survey," pp. 347–68) and a second one by Philip Sadgrove (chapter 18, "Pre-Modern Drama," pp. 369–83). These two articles complement each other. While Ceccato focuses on the *maqāmah* genre and the traditional ("classical"?) shadow play, Sadgrove treats forms of drama attested mainly in a later period such as the Karagöz, the marionette theater, masquerades, burlesques, and other forms of popular entertainment. Both articles are highly informative. Nevertheless they raise doubts as to whether it is really justified to devote a separate section to "drama." *Maqāmāt* are "semi-dramatic texts" (p. 356) and not drama, and the early shadow plays are still very close to the vulgar *maqāmah*. The performative aspect of these genres—all of them *prosimetric* genres—is high, just as is that of the recitation of the *sīrahs* (mentioned p. 367), but a performative aspect does not make a text a drama in the Western sense of the word (and there is no other sense). Sadgrove's article is, to my knowledge, the best existing summary of popular dramatic enterprises in the Arabic world, though I hesitate to accept the heading "pre-modern drama" since the main part of his article talks about the nineteenth and even the twentieth century. The heading thus creates the impression (certainly unintended by Sadgrove, who is probably not responsible for the title) that "modernity" is a property of enlightened intellectual (i.e., Western) culture, and the popular is a residuum of the unenlightened past. Further, problematic as the category "popular" is, it cannot be justified that the dramatic or semi-dramatic texts dealt with in Sadgrove's article do not bear the word "popular" in their heading and are treated separately from popular poetry and prose, though they are nothing other than popular poetry and prose and do not even differ in their performative character from most of the other popular poetic, prosaic, and prosimetric genres.

Despite the quality of these articles, the expectations of a reader not familiar with Arabic literary history will be rather disappointed by the drama section. Instead of finding something like Euripides, Molière, and Shakespeare, he is confronted with semi-dramatic forms such as the *maqāmah* on the one hand and popular dramatic representations that were not regarded as high literature on the other. This will not convince the reader that there was a "real" dramatic culture in the Arabic world. But what else could one expect? In most cases when a non-Western phenomenon is measured against a Western concept, the difference comes out as a deficit, even if this is not the aim of the author. Drama is a good example. Since Shmuel Moreh tried to refute the common prejudice according to which pre-modern Arabic literature did not know drama, it has become *en vogue* to argue the opposite. However, the two chapters on drama in this volume,

---

Nineteeth- and Twentieth-Century Arabic Literature," pp. 277–94).

good as they are, rather corroborate the prejudice than correct it. But why do we have to prove that there was "real" pre-modern drama in the Arabic world? Has anybody ever questioned the value of English literature on account of its failure to develop the genres of *maqāmah* and *badīʿīyah*? Why then do we have a separate section on drama, separating texts from the genres and forms to which they were felt to belong when they were created, and crowd them together under a concept that did not play a decisive role in the minds of the creaters of these texts and their audiences? In pre-modern Arabic literature, the property of being dramatic did not necessarily create a different genre. Just as there were *muwashshaḥāt* that were composed as song texts and others that were never sung nor intended to be, there were texts with a minimal performative potential and others with a great one. Some of these texts could be performed by more than one person, and some implied the use of masks or puppets. Thus they are drama in the full sense of the word, but this did not set them apart from related non-dramatic genres in a way similar to the way "drama" is separated from "lyric" and "epic" in the traditional Western conception. Though there was drama, for pre-modern Arabic literature the notion of "drama" can only be of heuristic value, since it was hardly perceived as a separate category of texts. The structure of the book, dividing Arabic literature into the three categories poetry, prose, and drama, therefore means nothing but to squeeze Arabic literature into the Procrustean bed of a Western concept that can only present Arabic literary history in a distorted form.

A further shortcoming of the book is the fact that there are no articles on the indigenous conceptions mentioned above with the exception of the *band,* certainly not the most important of them. And while there are no separate chapters on the different poetic genres like love, praise, description, or satire (and some of the more important ones such as hunting and chronograms do not receive a single word), there is again one exception, Emil Homerin's article on "Arabic Religious Poetry, 1200–1800" (chapter 3, pp. 74–86). It is, of course, a futile attempt to exhaust six hundred years of flourishing religious poetry (both Muslim and Christian) in a mere thirteen pages. But thanks to Homerin's gift as a translator these pages are among the most enjoyable in the volume.

3. Elite versus Popular

What is true for the genre division is also true for the division into the parameters "elite" vs. "popular." As usual, the editors have little to say about it. Allen at first seems to be aware of the problem and quotes Heath's all too true statement that "warns the researcher against establishing the concepts of elite and popular as static monoliths" (p. 19). But this did not prevent Allen from making this dichotomy one of the guiding principles of the volume. His own expositions are not very helpful. They focus on the equation standard language = elite vs.

vernacular = popular, which is very problematic, as we will see. In any case, the authors of the individual contributions must have felt abandoned by the editors and left to escape as best they could. Let us take the section "popular prose," which comprises six contributions, all of them good, some of them excellent.

Dwight F. Reynolds opens this part with a summary article (chapter 11, "Popular Prose in the Post-Classical Period," pp. 245–69). The same author tells the story of "*A Thousand and One Nights*," especially the story of its reception, which, in this case, is to a certain extent also the story of its genesis (chapter 12, pp. 270–91). A lively picture of the "*Sīrat ʿAntar ibn Shaddād*" is drawn by Remke Kruk (chapter 13, pp. 292–306). Especially remarkable is her elaboration of the "feminist" aspect of the epic. Equally informative is the article on "*Sīrat Banī Hilāl*," again by Reynolds (chapter 14, pp. 307–18). Peter Heath's "Other Sīras and Popular Narratives," especially strong on bringing out a typology of the different epics, could well have served as an introduction to the whole *sīrah* section. Some overlapping could have been avoided, but the principle of editorial minimalism proved stronger (chapter 15, pp. 319–29). Though one would miss Kamal Abdel-Malek's chapter on "Popular Religious Narratives," its connection to the period in question and the section "popular prose" remains somewhat vague (chapter 16, pp. 330–44). A chapter on the popular anthology, important as it is for an understanding of the intellectual world of the middle classes, is missing.[19]

Six good articles, but the whole is not more than the sum of its parts, because no conclusive picture about the social place of a distinct literary phenomenon emerges. This is mainly due to the lack of a consistent concept of "popular" and "elite" that could serve as a basis for all the articles. Let us see how the authors tried to help themselves out of the dilemma.

At first, one would assume that "popular literature" should be "popular" in a certain way. However, in Reynolds' article on the *Nights* we read that "the *Nights* was neither a highly regarded nor even a particularly popular work during these centuries." Given the small number of manuscripts and references to it, Reynolds is certainly right. But this confronts us with the remarkable phenomenon of "unpopular popular literature." Obviously, the term "popular" is not as self-evident as the editors seem to suppose. Similar to Allen's introductory remarks, Reynolds tries a definition according to linguistic criteria. According to him, popular texts of the pre-modern period are those "that preserve or imitate to varying degrees a colloquial aesthetic" (p. 246)—"colloquial" in the sense of "colloquial Arabic" (ibid.).

[19] See Thomas Bauer, "Literarische Anthologien der Mamlukenzeit," *Die Mamluken: Studien zu ihrer Geschichte und Kultur: Zum Gedenken an Ulrich Haarmann (1942–1999),* ed. Stephan Conermann and Anja Pistor-Hatam (Hamburg, 2003), 71–122, esp. 98–106, and Giovanni Canova, "Una pagina di *al-Kanz al-madfūn* sugli uomini più illustri," *Ultra mare: Mélanges de langue arabe et d'islamologie offerts à Aubert Martin,* ed. Frédéric Bauden (Louvain, 2004), 93–107.

Though the point is important, it is not enough for a definition of the "popular." If it were, Abdel-Malek's contribution would have no place in this section because none of the texts treated by him display any elements of colloquial language. On the other hand, the historiographic writings of Ibn Duqmāq (d. 809/1496), one of the *awlād al-nās* and certainly a member of the social elite, display a reasonable amount of colloquial influence. Ibn Ḥajar, who drew heavily on Ibn Duqmāq's writings, cannot help stating that Ibn Duqmāq, "despite his passion for literature and history, was bare of the clothes of the Arabic language, and his speech was vulgar (*ʿāmmī al-ʿibārah*)."[20] Should one, then, establish a new category "popular historiography"? (Note that the name of Ibn Duqmāq is not mentioned in the book under review).

The colloquial element is central in the poetry of the *zajal*. In the east, the *zajal* first flourished at the turn of the seventh–eighth/thirteenth–fourteenth centuries. Its most important early representative was al-Maḥḥār (d. 711/1311). His *dīwān* contains the remarkable number of 37 *azjāl*, which represent a major corpus of the eastern *zajal* in its earlier period. Of middle class origin, he soon became the court poet of the Ayyubid branch that still reigned in the province of Ḥamāh in the Mamluk era. Some of his *azjāl* display a definite middle-class flavor,[21] but he used this form also to praise ulama and members of the ruling dynasty (note that the name of al-Maḥḥār is not mentioned in the book under review). It is obvious that the *zajal* tradition became firmly rooted in the courtly milieu of Ḥamāh, which is not a "popular" milieu at all. Still Ibn Nubātah, the most elite poet of the period, found it inevitable to compose—however reluctantly—a panegyric *zajal* on Abū al-Fidāʾ, then ruler of Ḥamāh known by his regnal title al-Malik al-Muʾayyad.[22] An elite poet, addressing a panegyric poem to an author of several scholarly books who happens to be at the same time a most distinguished governor of a province, bearing the title of a sultan—if this is not elite, what is? It is only too obvious, therefore, that the linguistic form of a work of literature is not enough to serve as a shibboleth between elite and popular literature.

Obviously, the social background of Mamluk literature is different from the expectations of the editors. Allen's statement that "we have a . . . representative sample of the literary productions of the elite, often centered around the court" (p. 19) reflects the idea of a modern Western intellectual about how "medieval" literature should be. But it has little to do with reality. Instead, the court (which court?) did not play a major role in Mamluk literature any more, since there were

[20] See *MSR* 7, [no. 1] (2003): 257–62.

[21] See *MSR* 10, no. 1 (2006): 211–13.

[22] Ibn Nubātah published it in his *Muntakhab al-Hadīyah;* and it is quoted in nearly all manuscripts of his *Dīwān*, but not in the printed version; see my "The Works of Ibn Nubātah," forthcoming in this journal.

few courts left in which Arabic poetry played a role. The major exceptions were courts in areas not addressed in this volume (Maghrib, Yemen), and the short-lived court of the Ayyubids in Ḥamāh, mentioned above. But precisely this court was a center of vernacular poetry! Allen fails to notice that Mamluk literature (and probably Ottoman literature as well), as it has come down to us, is mainly a bourgeois phenomenon. The ulama did not compose poetry for a court, but for other members of their own social group, and the standards of ulama poetry were adopted to a large extent even by members of the artisan middle class, as the poetry of al-Miʿmār and other craftsmen shows.[23] The ulama elite was not in principle against "popular" literature, but since mastery of flawless classical Arabic was one of their main means of distinction, they hesitated to produce texts in the vernacular. Yet there are some, and, more important, elite ulama were among the readers and admirers of vernacular poetry. Thus it is no wonder that a secretary of the chancellery and elite poet like ʿIzz al-Dīn al-Mawṣilī (d. 789/1387) "adorned," as he says, the *dīwān* of the popular poet al-Miʿmār with a pompous preface.[24] The contrast between ʿIzz al-Dīn's sophisticated rhymed prose and the vernacular *azjāl* on sex and drugs in the later part of al-Miʿmār's *dīwān* could hardly be greater, nor could there be any more instructive proof that there was no clear-cut boundary between the popular and the elite in Mamluk times. Instead, there was a continuum that reached from the *mawwāl* of the illiterate, the poetry—partly in the vernacular, partly in often deviant standard language—of the artisans, the *muṭāraḥāt* of ulama who cultivated poetry as a pastime and a means of presenting themselves as a perfect "gentilhuomo," to the extreme end of the highly sophisticated creations of the professional *udabāʾ*. All these creations, however, belonged to a single poetic world, that was governed by a set of similar aesthetic norms and subtle social mechanisms that determined which sort of literary text was to be produced or read/heard at which social occasion and in which linguistic form. This issue, which is not only central to the history of Mamluk literature, but also essential for the understanding of Mamluk society as a whole, has hardly been touched upon in scholarship so far. The arrangement of the book under review even fosters the notion of a dichotomy between "elite" and "popular" and thus impedes scholarly progress rather than encouraging it.

While "popular prose" received six chapters, the section "popular poetry" has only one, albeit long and important: "Popular Poetry in the Post-Classical Period, 1150–1850" by Margaret Larkin (chapter 10, pp. 191–242). In her article, Larkin discusses many of the features mentioned above. She is well aware of

[23] See Thomas Bauer, "Ibrāhīm al-Miʿmār: Ein dichtender Handwerker aus Ägyptens Mamlukenzeit," *ZDMG* 152 (2002): 63–93. There is a strange preoccupation with courts in this volume. On p. 83 even the stonecutter and architect al-Miʿmār is labelled a "court poet."

[24] See "Dīwān al-Miʿmār," Dār al-Kutub MS 673 Shiʿr Taymūr, fols. 1v–2r.

the difficulties in defining the popular and the elite and stresses several times that there is no clear-cut division between them. She is right in emphasizing the fact that members of different social layers "shared much in the way of cultural paradigms and life experience, including the use of colloquial language in their everyday lives" and that members of the elite often enjoyed popular poetry in non-standard form (p. 193). As one of the reasons for the fact that the Mamluk era was "the heyday of popular Arabic literature" she identifies a "blossoming of the middle strata of society, including craftsmen and shopkeepers" (p. 220). For this group, in which literacy must have been quite widespread (p. 220), she uses the felicitous term "petite bourgeoisie" (pp. 194, 219, 222). While I completely agree with her sociological analysis, Larkin perhaps overestimates the role of patronage for Mamluk literature. There were hardly any professional poets in this period, who depended entirely on poetry for their livelihood. Most poetry was composed by persons who made their living mainly as secretaries, religious scholars, traders, or craftsmen. On the other hand, one must not overlook the fact that there was a flourishing book market in the Mamluk period, which provided a more secure income than patronage for an *adīb*. The poet al-Bashtakī derived his entire income working as a scribe and "editor" of books,[25] and with his many popular anthologies, the *adīb* al-Nawājī achieved financial success in the book market.

After general considerations about the nature and background of "popular" poetry, Larkin gives a profound survey of the history and the different forms of strophic poetry in which she happily also includes the Maghrib, Sudan, and the Yemen. Two subsections are dedicated to a more detailed presentation of Mamluk and Ottoman popular poetry. Since her article will become a standard text on its subject, some additions and corrections may be in place here: the poet mentioned on p. 211, line 6, is known as al-Shihāb al-Ḥijāzī rather than as al-Ḥijāzī al-Anṣārī. Ibrāhīm al-Miʿmār "the architect" (mentioned pp. 211, 212) was also known as al-Ḥajjār, "the stone-cutter." Probably he started as a stone-cutter and acquired more sophisticated skills in the building crafts later. He was never a weaver. Instead, al-Ṣafadī mixed him up with a different person named Ibrāhīm ibn ʿAlī al-Ḥāʾik in his *Wāfī*, but corrected his error later in his *Alḥān al-Sawājiʿ*.[26] Unfortunately,

[25] See Bauer, "The Works of Ibn Nubātah, Part 2," forthcoming in *MSR*.

[26] See Bauer, "Ibrāhīm al-Miʿmār," 63–93; see also idem, "Die Leiden eines ägyptischen Müllers: Die Mühlen-Maqāme des Ibrāhīm al-Miʿmār (st. 749/1348)," *Ägypten–Münster: Kulturwissenschaftliche Studien zu Ägypten, dem Vorderen Orient und verwandten Gebieten (Festschrift Erhart Graefe),* ed. Anke Ilona Blöbaum et al. (Wiesbaden, 2003), 1–16; and idem, "Das Nilzağal des Ibrāhīm al-Miʿmār: Ein Lied zur Feier des Nilschwellenfestes," in *Alltagsleben und materielle Kultur in der arabischen Sprache und Literatur (Festschrift Heinz Grotzfeld),* ed. Ulrike Stehli-Werbeck and Th. Bauer (Wiesbaden, 2004), 69–88.

Brockelmann chose al-Ḥāʾik as the main part of the poet's name. Nevertheless, he should not be called something other than al-Miʿmār, a name he repeatedly uses himself in his poetry. His *dīwān* does not contain a *kān wa-kān* poem (p. 212), but rather thirty-four *mawwāliyā* and twelve *azjāl* and *balālīq*, in addition to about five hundred epigrams in *fuṣḥá* (or what al-Miʿmār considered to be *fuṣḥá*). This case shows clearly that the epigram, which is completely ignored in the volume under review, was also an important form of popular literature. Ibn Nubātah composed at least eighteen *muwashshaḥāt*, but was not a "*zajal* specialist" (p. 217). There is only the one above-mentioned *zajal* on Abū al-Fidāʾ and a *bullayq* in the autograph manuscript of Ibn Ḥajar al-ʿAsqalānīʾs additions to Ibn Nubātah's *dīwān,*[27] which nicely corroborates the interest of the elite in vernacular poetry. The bowdlerized edition of al-Nawājī's *ʿUqūd al-Laʾālī* (p. 218) is superseded now by the much better edition by Aḥmad Muḥammad ʿAṭā (Cairo, 1999). Ibn Sūdūn did not acquire sufficient religious education to "equip him for a life as . . . [a] religious scholar" (p. 227).[28] Instead, we must reckon the lower-level personnel of madrasahs and mosques such as lamp-lighters, muezzins, and imams as part of the petite bourgeoisie. Many of them may not have had any more religious knowledge than the butcher next door. The existence of this group again demonstrates the continuum between middle class and high-brow ulama. At the present, it is still difficult to assess how much popular poetry has been preserved (p. 231). There may be more than expected. I refer only to the still unpublished text presented by Madeleine Voegeli: "*Manṣūbat Ṣafā l-ʿaiš*–ein volkstümliches, ägyptisch-arabisches Zağal aus dem 17. Jahrhundert," *Asiatische Studien* 50 (1996): 463–78.

A few words on the five chapters dealing with "elite prose" shall conclude this section.

Muhsin al-Musawi's survey article on "Pre-Modern Belletristic Prose" (chapter 5, pp. 101–33) is certainly one of the best contributions in this volume. The author is familiar with the enormous output of the prose literature of the Ayyubid, Mamluk, and Ottoman period and its multifariousness, which does not fail to impress him: "The sheer variety of prose-writing surveyed in this chapter attests to the existence of a dynamic culture characterized by the active involvement of littérateurs, widespread networks and a magnanimous devotion to the world of writing" (p. 132). More than most other contributors he succeeds in putting the literary works into their proper social context. He does not look for nonexistent courts, but points to the overwhelming importance of the chancellery and other learned milieus for the literature of the period. These findings enable him to

[27] Göttingen, 8o Cod. Ms. arab. 179, fols. 59r–v.

[28] See *MSR* 7, [no. 1] (2003): 267–72.

explain the stylistic properties of different genres in an unprejudiced way. Contrary to Salma Jayyusi, who complains about a "lack of virility" (see below), al-Musawi appreciates the stylist's "quest for elegance" (p. 109) and notices the broad stylistic range of the texts of this period. This literature's "variety, richness and energy defy sweeping generalizations. Indeed it calls for a more serious and careful analysis. . . ." (p. 133). Would that all editors and contributors had followed this maxim!

The chapters on "The Essay and Debate (*al-Risāla and al-Munāẓara*)" by Jaakko Hämeen-Anttila (chapter 6, pp. 134–44) and on "The *Maqāma*" by Devin Stewart (chapter 7, pp. 145–58) are too short to give a comprehensive idea of the rich output in these fields. It turns out further that it is hard to distinguish between *risālah*, *maqāmah*, and *munāẓarah* without doing injustice to the autochthonous understanding of these notions. Stewart's concept of the *maqāmah* is focused too strongly on the Ḥarīrian *maqāmah*. The wealth of forms and subjects of the latter *maqāmāt* appears as a deviation from the classical model rather than as an enrichment. Both contributions are hampered by the fact that the contributors do not treat texts that are still in manuscript, which, however, is the case for the majority of the texts relevant to these chapters.

The inadequate short chapter on "Mamluk History and Historians" (chapter 8, pp. 159–70) by Robert Irwin can hardly be called a scholarly contribution. Its last sentence, according to which the "Mamluk age was obsessed by the past and we cannot mention here all who ventured to write history" (p. 170), true as it may be, is a weak excuse for the lack of any discernable concept. Sometimes one cannot help but feel that Irwin followed the method of one of the historiographers which he, for whatever reason, chose to mention at the expense of more important ones. "When Qirṭāy was bored or short of information, he made things up and his chronicle contains the most fantastic misinformation" (p. 164). Let us take a paragraph from page 162. Here we read the following sentences, none of which can go unchallenged: "Al-Kutubī . . . and Ibn Kathīr . . . were the last prominent representatives of the Syrian *ʿulamāʾ* school of historiography." What about Ibn Ḥabīb and Ibn Qāḍī Shuhbah? "Al-Ṣafadī . . . believed in history as a vehicle for moral uplift." What gave Irwin that idea? ". . . [Y]et he wrote no chronicle. Instead he produced . . . the *Wāfī*. . . . He also produced two smaller biographical compendia, on blind persons and on contemporaries." There is another one on one-eyed persons and another on the rulers and governors of Damascus. Irwin continues by saying that al-Ṣafadī "produced, among other things, a *maqāma* on wine." I know of no such *maqāmah*; perhaps he misunderstood the title *Rashf al-Raḥīq fī Waṣf al-Ḥarīq*—"a quantity of pederastic verse"; perhaps he means the *Lawʿat al-Shākī*, which is a *maqāmah* and, in any case, quite mislabeled as being

"pederastic verse,"[29] ". . . and a famous poem on the beauty spot (*khāl*)." Famous the text is indeed, but not to Irwin who otherwise would have realized that it is an anthology of epigrams written by many different authors. Irwin goes on: "He also interested himself in occult matters and wrote on alchemy as well as on *malāḥim* (disasters prefiguring the end of the world)." As a matter of fact, al-Ṣafadī never wrote on *malāḥim* or any related subject, and he was an outspoken opponent of alchemy. In his *Al-Ghayth al-Musajjam*, which is an anthology ordered in the form of a commentary on al-Ṭughrāʾī's *Lāmīyat al-ʿAjam*, al-Ṣafadī starts with a biography of al-Ṭughrāʾī. Since al-Ṭughrāʾī was an alchemist, al-Ṣafadī takes up the subject, discusses the pros and cons, and comes to reject it vehemently. But since alchemy provides a lot of nice concepts for love poetry, the literary side of alchemy becomes the main aspect of al-Ṣafadī's chapter.[30] This grave misunderstanding of al-Ṣafadī would have been reason enough for the editors to intervene, as is also the strange fact that, of all articles, an article on history and historiography does not give the hijrah dates.

More carefully written is Michael Winter's contribution on "Historiography in Arabic during the Ottoman period" (chapter 9, pp. 171–88). It is a detailed presentation of Ottoman period historiography in the central Arab lands (Egypt, Syria, Lebanon, Iraq). In a volume on literature, more information about the literary aspects of the chronicles mentioned would have been desirable. The diaries, such as the sensational *Al-Taʿlīq* by Ibn Ṭawq (874–915/1430–1509), are not mentioned. The original version of the chronicle written by the barber Ibn Budayr is not lost (p. 182), but preserved in a Chester Beatty manuscript.[31]

The lack of a uniform system of dating is symptomatic of the carelessness with which the book as a whole was produced. To give but two more examples: on p. 123, Ibn Ḥabīb is mentioned for the first time. The dates of his birth and death are given correctly. For whatever reason, the index refers to this page calling him Ibn Ḥabīb al-Dimashqī (p. 123). On pp. 144 and 158 he is called by his more common *nisbah* Ibn Ḥabīb al-Ḥalabī. Though on p. 144 the date of his death (but not of his birth) is given, we are surprised to read on p. 158 "death date unknown." In the index, Ibn Ḥabīb is split into two persons, a Dimashqī and a Ḥalabī. Al-Khafājī is subjected to a similar schizophrenization (p. 469).

4. Mamluk Poetry: Forgotten by the Universal Spirit?

The article by Salma Jayyusi prompts two questions: First, why does a scholar who has earned indubitable merit in several fields of Arabic literary history choose to write about one on which she is poorly informed and for which she displays a disquieting lack of empathy? And second, why do the editors publish an article that falls far short of scholarly standards?

We have to deal with this article in more detail for several reasons. First, its position as the first chapter of the book and its title "Arabic Poetry in the Post-Classical Age" (pp. 25–59) suggest that it is meant to be one of the central articles of the volume. Second, it is an aggregation of virtually all common prejudices against Mamluk and Ottoman literature.[32]

The first phenomenon that strikes the reader is Jayyusi's concept of literature, which is completely ahistoric. It is inconceivable to her that the perception of a literary period is necessarily shaped by the literary background and the value system of the critic. These factors are subject to change and therefore the perception of whole periods of art are constantly undergoing change. One need only point to the term "gothic," which was coined as a derogatory term, while the Gothic period is considered nowadays one of the greatest periods of European art history. In a similar way, the term "baroque" was created to denounce the art of a whole period, and not too much time has elapsed since the time when baroque literature (quite similar to much of Arabic poetry) had been considered a senseless aggregation of silly word-play, and baroque opera as the most idle thing that has ever appeared on the stage. In the meantime, Gryphius, Marino, and Donne have taken their proper places in the history of literature again, and many opera lovers are of the not-entirely-unjustified opinion that the revival of baroque opera was one of the most exciting occurrences on the stage during the last fifty years. For any historian of art and literature who deserves this name, it has become commonplace not to rely blindly on personal taste, but to critically question the standards she/he is applying to the object of research. Not so for Salma Jayyusi. While the Arab critics of the period in question were quite aware of the fact that the taste of the audience changes through the centuries and that to appeal to a certain taste is not yet enough to qualify a text as good or bad, Jayyusi does not consider such changes significant, and thus neglects a significant aspect of the way modern scholarship has come to consider literary history. Instead, literature is the manifestation of an essence that is not subject to historic change. Jayyusi does not ask about the background of a poetic text. Her only concern is if the text is part of "the poetic"—Jayyusi uses the word with the definite article—or rather,

[32] It is amazing how exactly Jayyusi's article corroborates the list of prejudices against Mamluk poetry that I drew up in my article "Mamluk Literature: Misunderstandings and New Approaches," *MSR* 9, no. 2 (2005): 105–32.

"the genuinely poetic" (p. 57). In her essentialist conception, it is "the essence of poetry" (p. 29) or the "poetic essence" (p. 41), imbued with "the essence of a free Arab spirit" (p. 38) to capture the "human essence" (p. 29), "the essence of life" (p. 29).

According to this conception, the history of poetry is simply the history of the realization of the immutable "poetic essence." Consequently, the expectations and reactions of contemporary audiences are of no importance whatsoever. Thus Jayyusi can say in her critique of Ibn ʿUnayn's style with its alleged "use of new and still unidiomatic words and the coining of new derivatives" that "such a technique manages only to shock the reader's sensibility with its alien effect, stunting any possible achievement of emotional and rhythmic fulfillment in the poem" (p. 44). But what if Ibn ʿUnayn's readers were not shocked? What if they considered the poem perfectly emotionally and rhythmically fulfilled (whatever "rhythmic fulfillment" may mean exactly)? For Jayyusi this would make no difference at all, because the audience of this decadent age, estranged as it was from "the poetic essence," had no ability to judge what is shocking and what is not. Even worse, this very audience prevented the "poetic essence" from coming to light. Unnoticed by this audience, however, there was something great and unchangeable in the background, something like "the broad, ever living memory of Arabic poetry" (p. 51). "Ever living"? Obviously not, since the sentence in which this phrase occurs deals with poems by al-Shābb al-Ẓarīf that even Jayyusi finds "gentle and musical." However, she asks, "one wonders why the poems in question failed to enter the broad, ever living memory of Arabic poetry" (p. 51). But how can she know how actively al-Shābb al-Ẓarīf's poems were memorized during the Mamluk period? Judging by the many quotations of his poems in anthologies, I would guess that they were memorized for well over several centuries. Even though it may have been memorized by thousands of people over several centuries, all this is of no relevance whatsoever to the author, who evaluates the poetry of this period against the standard of an unchanging "poetic essence." Stating that there was "no single poetic genius" during the period in question, Jayyusi then proceeds to modify this statement in a most revealing way: "Many such were surely born, and yet the development of their talents was hampered by the standards and expectations in vogue during their lifetime" (p. 39). Poetry, in this conception, has nothing to do with its time and audience, but is an unchangeable entity that incarnates itself in poetic geniuses. Society's only role in this model is to help or to hinder the poetic essence in its natural growth in its genius.

Jayyusi arrogates for herself the competence to define the aesthetic criteria according to which all poetry of all periods must be measured. This is not only contrary to the established premises and methods of literary scholarship, but, even more, the criteria applied by Jayyusi sometimes seem bizarre. So we read in

a short passage on p. 27, headlined "An unstable world," that pre-Islamic Arabia was a stable world, whereas the advent of Islam with its "unique capacity to maintain an a-racial attitude" shattered this very stability and planted the seeds of instability. "Once converted, a new Muslim was accepted into the community of believers without undue regard for origin, race or color. But while this may be regarded as a superior quality in Islam, it was not conducive to a continuation of the old stability." (p. 27) Re-reading the passage time after time, I cannot help but read as its central message that in principle, it is the racial egalitarianism of Islam that brought about the mess of the "period of decadence." This basis of Jayyusi's conception of literature helps us to find the place where, according to this conception, the "poetic essence" and the "ever living memory" of Arabic poetry has been situated all this time, concealed, but still present: it is in the Arab race itself, in which there has always been the "enduring latent power of a once great poetry" (p. 59), though this could not manifest itself in times of "extraneous linguistic intrusions" (p. 37), and therefore "its vigour diminished . . . hemmed in by the circumstances of Arab life" (ibid.). Little surprise then that it is the pre-Islamic period against which the Mamluk and Ottoman poets have to be measured, because this was the only period in which "a free Arab spirit, linking creative expression to the roots of the soul and imbuing it with the vision and meaning of life and living" (p. 38) could unfold. The author goes on to portray a picture of the pre-Islamic Arabs that is similar to the way the pure and heroic ancestors were portrayed during the many outbreaks of ideological madness during the European twentieth century: "How estranged had the Arabs of the urban centuries become from the values of the Arabs . . . who had aestheticized their contradictions through the eloquent sayings of the poets . . . tenderness, devotion and selflessness towards women and love, but also a defiant and boastful self-centredness in tribal hostilities . . ., generosity and hospitality, but also a relentless aggression bent on plunder and the use of force for survival? This was the law of the desert, of scarcity and aridity, and it organized their life, gave it shape and challenge, and filled it with nostalgia, a constant sense of loss, a perennial craving for the impossible, for a constantly receding point of anchor, for a love that will be never requited . . ." (p. 38).

So there we are, with the pure Arab spirit of the *jāhilīyah,* which was revived to a certain degree by al-Mutanabbī to yield a second climax of Arabic literature (p. 27), and to be destroyed by the foreign intruders of the period of decadence. But the "true poetic spirit" lived on in the Arab race. Blinded by her nationalist ideology, Jayyusi claims in an amazingly anachronistic way that even in the dark times of decadence there "was a basic concept of Arab literary identity . . ., and it made poetry and literature not a regional but rather a national cultural output" (p. 39). Thanks to this everlasting Arab spirit, poetry could be revived by "the great

neoclassicist" "Aḥmad Shawqī . . . and the poetry of some leading modernists such as Adūnīs . . ." (p. 38), totally irrelevant as all this is to a history of the literature between the Abbasid and the modern period. In her article on poetry of the Mamluk and Ottoman period, Jayyusi mentions more poets from the periods before and after than from the period in question itself. She praises al-Akhṭal, Abū Tammām, al-Buḥturī, al-Mutanabbī, al-Sharīf al-Raḍī (p. 33); she hails Shawqī, Gibrān Khalīl Gibrān, Badawī al-Jabal, Adūnīs, Badr Shākir al-Sayyāb, Maḥmūd Darwīsh (p. 38), but does not mention al-Maḥḥār, al-Shihāb al-Ḥijāzī, al-Āthārī, al-Damāmīnī, al-Ḥājirī, Nāṣir al-Dīn al-Ḥammāmī, al-Qīrāṭī, al-Tallaʿfarī, al-ʿAzāzī, Ibn Maṭrūḥ, Ibn Qurnāṣ, ʿIzz al-Dīn al-Mawṣilī, or Ibn ʿAṭāʾ Allāh al-Iskandarī, to mention only a few major Mamluk poets that are treated nowhere in the volume.

Instead we learn that the "universal poetic spirit" is embodied in the Arab race and manifested itself in the poetry of the *jāhilīyah* and the few centuries during which its "power" still lasted. But already the Umayyad period (on which Jayyusi has made some lucid notes in her contribution in the Cambridge History of Arabic Literature *'Abbasid Belles-Lettres* volume) is marred by the "ʿUmar ibn Abī Rabīʿah . . . syndrome" (p. 49), an abominable degeneration that consists of enjoying one's life without feeling guilt. In the typical schizophrenia that characterizes many pro-Western intellectuals of the Arab world, who hail Western liberal modernity and at the same time are stuck in puritan Victorian morality, she complains: ". . . rarely do we encounter a genuine spiritual conflict in poems where the poet describes wine drinking and frolicking. On the contrary, the treatment of the subject is often lighthearted, and the notion of sin and punishment is not usually a disturbing, heart-wrenching experience" (p. 29). Again and again she laments the "failure of the era to uphold moral ideals" (p. 43) and grumbles about the "poets of decadent morality *(mujūn)* with whom the age abounded" (p. 47). And indeed, a period during which people enjoyed life, sex without guilt, and racial harmony—what a horrible world this must have been!

This urban, tolerant, and cosmopolitan culture, a culture of refinement, sophistication, and elegance, a culture of friendship, love of beauty, and wit, is not Jayyusi's world. She yearns for a culture of primitive heroism ("poems pulsating with life and pregnant with the vision of glory and infallibility," p. 27), of puritanism and sexual guilt, in which a fascination with beauty has to be rejected for not being "a decisive avowal of an exclusive emotion" (p. 51). Love is a "universal experience" (pp. 48, 51) the true nature of which is as unchangeable as the "poetic essence." For all times and cultures it is true that it "is always the particularity and exclusivity of love, its transcendence of beauty and physical qualities, that really matters. The whole period, it must be said, exhibits this deficit, the love it offers being more dependent on physical passion and desire than on any absorbing and abiding attachment" (p. 51). Throughout the article,

Jayyusi displays a strange obsession with the subject of sexuality, which is raised in half of the pages of the chapter; see pp. 29 ("sex"), 35 ("homosexuality," "promiscuity," "sexual satiety"), 38 ("perverse and graphic sexual depictions"), 39 ("homosexual poetry"), 41 ("heterosexual and homosexual"), 42 ("homosexual," "sexual promiscuity"), 43 ("sexual imagery of a graphic and repellent quality"), 44 ("reckless sexual escapades"), 47 ("decadent morality"), 48 ("erotic encounters," "addiction to pleasure"), 51 ("physical passion and desire"), 53 ("homosexuality," "polygamous outlook on love and sexuality"), 54 ("homosexual and heterosexual"). Jayyusi does not consider the social and mental history of love and sexuality, and ignores studies that have been written on this subject in recent years. Instead, the subject of sexuality is raised mainly to defame the period as morally decadent and to contrast it with her prudish concept of heroism. This heroism is "virile" but asexual. It is revealing that whereas sexuality is only mentioned in a degrading way, "virility" is seen as the main quality of poetry. The words "virility" and "virile" occur five times throughout the article (pp. 26, 29, 31, 40, 41). "Virility," however, was not a goal sought by Mamluk and Ottoman Arabic authors, whereas "elegance" was. However, the word "elegance" does not appear even once in Jayyusi's article.

Given this attitude towards her subject, an impartial scholarly treatment of any of its aspects cannot be expected. Her only concern is to draw as negative a picture of the period in question as possible. Therefore, there is little point in trying to refute her attacks against Ibn Sanāʾ al-Mulk (too much "sexual promiscuity" and therefore—?—too many "intricate figures of speech," p. 42), Ibn ʿUnayn ("reckless sexual escapades," p. 44), al-Bahāʾ Zuhayr ("lacks a vision of life or of the future," p. 48), al-Shābb al-Ẓarīf ("lacks the necessary immediacy," p. 51), al-Ḥillī (considers "wine drinking and homosexuality . . . a source of amazement," p. 53), and Ibn Nubātah ("senses little depth or philosophy of life," p. 56). For every one of them Jayyusi manages to find a criterion according to which the poet in question cuts a poor figure. Further, to depreciate the later Mamluk and Ottoman poets, she states that "ʿUmar Mūsā Bāshā, the scholar best known for his specialization on the Syrian poets of this era, closes his study with al-Shābb al-Ẓarīf." Did this great scholar, the indefatigable fighter against prejudice and the protagonist of a revaluation of the Mamluk and Ottoman period, deserve this treatment? Did he deserve to be mentioned as a crown-witness for the feeble state of Ottoman literature while his pioneering work on ʿUmar al-Yāfī[33] is not mentioned a single time in the whole volume? His is, by the way, the only book-length study known to me that is dedicated to an Arabic poet of the Ottoman period, and since it is furthermore a good study, it should be a central point in

[33] ʿUmar Mūsá Bāshā, *Quṭb al-ʿAṣr ʿUmar al-Yāfī* (Damascus, 1996).

every discussion of Ottoman Arabic poetry. In the entire volume under review, however, ***neither*** al-Yāfī ***nor*** ʿUmar Mūsá's study on him are mentioned even once! And what is true for ʿUmar Mūsá's study on al-Yāfī is also true for his groundbreaking study on Ibn Nubātah, [34] perhaps the best contribution to the history of Mamluk literature in the Arabic language, which Jayyusi ignores. Since I cannot believe that a person writing about Mamluk literature who knows the name of ʿUmar Mūsá has never heard of this scholar's principal work, which first appeared in 1963 and is available now in a third edition, I can only conclude that she does not mention it on purpose because it contradicts her thesis. Thus, the most important monograph ever written on a poet of the Mamluk period is in all probability *purposely omitted* from this volume, which claims to be a standard work on this period!

It is quite clear by now that Jayyusi tries to portray everything in the darkest possible colors, and everything that cannot be portrayed in an outright negative fashion is nevertheless seen against a negative background. So nature poetry is not a sign of the love of nature or a new, individualistic, and completely non-medieval perspective on nature, but only an "escape . . . from tiresome external demands" (p. 36), "a refuge from the burden of eulogy" (p. 37), and we learn that flower poems (p. 36: read *zahrīyāt* instead of *zuhrīyāt*) "lacked any active communication with the human condition" (p. 37). Though I do not know exactly what "to actively communicate with the human condition" means, it is clear enough to me that it probably cannot be accomplished by flower poems or Chopin waltzes. But I cannot see how this speaks against them. I, for my part, do not play Chopin waltzes in order to communicate with the human condition but to find a charming entertainment, and I read flower poems to enjoy poetic imagination and to be surprised by a pointed literary conceit. It is, after all, not the task of a work of art to communicate with the human condition or the world spirit, but with the audience.

It is Jayyusi's practice to prescribe for every theme, form, and genre what it *should* do in order to be able to criticize the poets for not having done exactly that. Jayyusi never asks what the poets themselves wanted to accomplish, which, of course, is the only standard according to which they can be measured. For just as one cannot blame Chopin for not having composed Beethoven's ninth symphony, one cannot blame Ibn Qurnāṣ for not having composed al-Mutanabbī's ode on al-Ḥadath. Ibn Qurnāṣ, by the way, is the author of some of the most charming nature epigrams of the period. His name does not appear anywhere in the volume under review. His *Dīwān* is unpublished, but al-Ṣafadī, who held him in great esteem, quotes him quite often in his *Al-Kashf wa-al-Tanbīh ʿalá Waṣf al-Tashbīh,* ed. Hilāl

[34] ʿUmar Mūsá Bāshā, *Ibn Nubātah al-Miṣrī: Amīr Shuʿarāʾ al-Mashriq* (Cairo, 1963, 3rd ed. 1992).

Nājī (Leeds, 1420/1999), which is a rich source of Mamluk nature poetry, and is not mentioned by Jayyusi.

Let us have a brief look at what Jayyusi has to say about nature poetry. In her enthusiasm for *jāhilī* virility, Jayyusi cannot find much worth in Abbasid descriptive poetry. Though "fully artistic, fully inventive," it was nothing but "a solution for poets who had reached the end of their tolerance of the age of poetic utilitarianism" (p. 37). It is not easy to make sense out of this utterance. At least it is clear that, according to its author, descriptive poetry of the Abbasid period is not of great value. But if it is so in Abbasid times, it must be even worse in Mamluk times. Therefore Jayyusi continues: "During the period under study, poets continued to compose such miniatures with inventive, though often dispassionate, skill." What makes her assume that Ibn Qurnāṣ felt less passion towards dewdrops than al-Ṣanawbarī did? Jayyusi continues: "Yet the search for novelty did not abate, as these purely descriptive examples were independent of other themes." On p. 30, this literature is disparaged for its "repetition," and now it is faulted for its "search for novelty"—what could these poets have done to satisfy Salma Jayyusi? What, after all, is wrong with descriptive poetry that is descriptive? And the rest of the sentence is simply wrong, for among the most impressive longer nature descriptions of the Mamluk period were the introductory parts of hunting poems and letters. Different from Abbasid hunting literature, a Mamluk hunting *urjūzah* or a *risālah ṭardīyah* inevitably started with a long description of the breaking of dawn and the awaking of nature, until the hunting party set forth on their hunt. Here description is not at all "independent of other themes." Jayyusi, however, does not treat Mamluk hunting literature. And so she continues: "As greater affectation seeped in and the impact of external forces became overriding, poets became increasingly preoccupied with linguistic devices applicable to all themes. Gradually a greater artificiality can be seen in the use of poetic conceits and the vast array of figures of speech fashionable at the time" (p. 37). Even granted that by "linguistic devices" she means "stylistic devices," the sentence does not become much clearer. As we have known since antiquity, stylistic devises are used to bring about a certain effect on the audience. The theory of rhetoric, however, has no "overriding external forces" or "inseeping affectations" on its agenda. But even if the reader tries to make some sense out of this statement, it is still wrong, since al-Ṣafadī's, Ibn Nubātah's, and Ibn Qurnāṣ's descriptive poetry is by no means more mannered and loaded with stylistic devices than that of the Abbasid period. On the contrary, while young Ibn Ḥabīb tried to show off by imitating the Abbasid metaphor-based concetto (simply to demonstrate that he could do this as well),[35] most other authors used a simpler style or used *tawriyah*

[35] See Thomas Bauer, "'Was kann aus dem Jungen noch werden!' Das poetische Erstlingswerk des Historikers Ibn Ḥabīb im Spiegel seiner Zeitgenossen," in *Festschrift Hartmut Bobzin,* forthcoming.

to please the audience with the intelligent use of *double entendre,* which, by the way, was not an idle play on words unrelated to the "human condition," but in very direct and immediate relation to the world view of the time.[36]

In the course of her discussion of descriptive poetry Jayyusi gives a fragmentary and wrong (*uqḥuwān* does not mean "daisies") translation of a poem ascribed to Ibn al-Muʿtazz (p. 36). It is surprising that Jayyusi, who mostly quotes Mamluk poetry second hand on the basis of al-Farrūkh's *Tārīkh al-Adab al-ʿArabī,* fails here also to check this Abbasid poem in the *Dīwān* of Ibn al-Muʿtazz. Had she done this, she would have noticed that the lines quoted start with a motif of love poetry (and therefore are not independent of other themes), and that the lines occur there in a different order.[37]

So we see that all the reader of the chapter on "descriptive poetry" in the article on "postclassical poetry" gains is some pseudo-psychological considerations about descriptive poetry as a means to escape a (nonexistent) constraint on panegyric poetry, two mistranslated lines taken randomly from a poem by an author who does not belong to the period in question, and a lot of erroneous and disparaging remarks about a form of poetry of which the author is clearly not well informed. But a reader of the volume, who wants to learn more about Mamluk and Ottoman Arabic literature, has a right to get an answer to questions like: Who were the protagonists of descriptive poetry during the period in question? What themes and motifs did they use? What did they describe? Is there a difference between the role of nature poetry in Syria and in Egypt (indeed there is)? Was there a continuation of the flourishing nature poetry of the Mamluk period in the Ottoman period? As to the last question, Jayyusi has not the slightest idea. Neither do I, having read nothing but a few nature poems by ʿAbd al-Raḥmān al-ʿAydarūs (1135–93/1722–78), another poet, well known and highly regarded in his time, who goes completely unmentioned in the volume under review.[38] But instead of telling the readers that Ottoman descriptive poetry, which seems to have produced some interesting specimens in the field of nature poetry, has not yet been studied enough to allow further judgment, Jayyusi announces her verdict that all of this literature is worthless.

It seems obvious by now that Jayyusi has never read the most important texts of the period and does not value the secondary literature about it in whatever language. Since she clearly does not know much about Mamluk and Ottoman

[36] I attempted some preliminary considerations in my article "Ibn Ḥajar and the Arabic Ghazal of the Mamluk Age," in *Ghazal as World Literature I: Transformations of a Literary Genre,* ed. Thomas Bauer and Angelika Neuwirth (Beirut, 2005), 35–55, esp. 44–48, but the whole topic needs more study.

[37] See *Dīwān Shiʿr Ibn al-Muʿtazz,* ed. Yūnus A. al-Sāmarrāʾī (Beirut, 1997), 2:594–95.

[38] *Dīwān al-ʿAydarūs al-Musammá Tarwīḥ al-Bāl wa-Tahyīj al-Balbāl* (Cairo, 1418/1998).

society, her chapter on eulogy (pp. 32–34) lacks substance, and to declare that the "postclassical" poet was "a mere pawn at the mercy of princes and leaders who controlled his livelihood" (p. 36) reveals her lack of knowledge about the social role of poetry during these periods. Surprisingly, she considers Ibn Ḥijjah's *Khizānat* (sic, instead of *Khazānat*) *al-Adab* "a study of the poetic art of al-Sharaf al-Anṣārī" (p. 50). Her translations are at best whimsical, sometimes wrong. The only poem she quotes in the section on Ibn Nubātah is an epigram in which the poet asks for a pair of earrings. The epigram is quoted for no other reason than to disparage Ibn Nubātah and to show that he "was dedicated to the act of asking, sometimes shedding part of his dignity" (p. 56). But here she is quoting a poem she does not understand. Every experienced reader of Mamluk poetry will realize immediately that this two-line epigram has a point at the end of the second line that consists of a double entendre. Clear as this is, the point of the epigram is not easy to understand in this case. There may be an obscenity behind it. In any case, the humorous nature of the epigram is corroborated by the fact that the poem is the first poem of the section *al-mudāʿabah wa-al-mujūn* in Ibn Nubātah's collection of epigrams entitled *Al-Qaṭr al-Nubātī.*[39] The whole poem, therefore, is nothing but a joke. Whereas I am ignorant of the double meaning of the last words, Jayyusi is even ignorant of her ignorance.

Jayyusi opines that her "study has been primarily devoted to a process of degeneration" (p. 59), but her contribution, with its arguably racist and homophobic overtones, is an example of the degeneration of Arabic studies. The same is true for Muhammad Lutfi al-Yousfi's article on "Poetic Creativity in the Sixteenth to Eighteenth Centuries" (chapter 2, pp. 60–73), which I will pass over in silence not only because it treats the Ottoman period, but also because to claim that the process of decadence started with the advent of Islam is simply absurd, and to publish this rubbish is an academic scandal. These two articles are a slap in the face of every serious scholar in the field of Mamluk and Ottoman poetry. In the blurb (p. i) we read that this book will be "a unique resource for students and scholars of Arabic literature for many years to come." Let us hope that this threat will not come true!

Book Reviews

Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār li-Taqī al-Dīn Aḥmad ibn ʿAlī ibn ʿAbd al-Qādir al-Maqrīzī. Edited by Ayman Fuʾād Sayyid. Vols. 1–2 (London: Al-Furqān Islamic Heritage Foundation, 1422/2002).

Reviewed by Frédéric Bauden, Université de Liège

In the field of historiography, the Egyptian scholar al-Maqrīzī (d. 845/1442) is one of the most renowned and esteemed representatives together with his master and friend, Ibn Khaldūn (d. 808/1406). Despite the charges of plagiarism often leveled against him and the assertion that he was a mere compiler, his works are considered to be invaluable for the history of Egypt from the beginning of the Islamic conquest until his time. The most frequently advanced reason for this appraisal lies in the numerous sources, most of which are now considered lost, that were summarized and abridged by al-Maqrīzī in his works. His masterpiece *Al-Mawāʿiẓ wa-al-Iʿtibār fī Dhikr al-Khiṭaṭ wa-al-Āthār,* truly original in its conception and plan, the main subject of which is the topographical history of the city of Cairo, remains the unequalled source for historians dealing with Egypt and more particularly Cairo. Acclaimed by his contemporaries, its importance was quickly recognized and it is for this reason that it was among the early texts printed by the nascent Bulāq press. This edition, published in 1853 in 2 volumes, has remained for more than 150 years the standard text, despite its defects and shortcomings. Reprinted several times and the basis of new editions (!)[1] that multiplied its mistakes, the Bulāq version was obviously unsatisfactory and several scholars of the early twentieth century called for a critical edition of this fundamental text. One of them, Gaston Wiet, answered the call and tried to produce a text meeting the standards of critical editing prevailing at that time (i.e., derived from those long established in the field of Classical studies). He produced an edition (Cairo: Institut français d'archéologie orientale, 1911–27), praised not only for its scientific method (several manuscripts were collected and collated, the result of which was conscientiously indicated in footnotes) but also as a technical achievement. Five volumes, covering pages 1–322 of the Bulāq edition, were issued. However, this edition, although representing an improvement in comparison to the Bulāq edition, still contained many mistakes (which is confirmed by the numerous *errata* added at the end of each volume) and Wiet decided to put an abrupt end to his

[1]See, for the last of these (ed. Muḥammad Zaynuhum and Madīḥah al-Sharqāwī, Cairo, 1998, 3 vols.), my review in *Mamlūk Studies Review* 8, no. 1 (2004): 299.

project once he discovered that more than 170 manuscripts of this work were preserved in libraries around the world. He claimed that it was impossible for a single man to proceed further and that this should be a collective work involving specialists for the various periods covered by the book. This was in 1927 and for the last 75 years nobody has taken up such a project, although similar enterprises were launched (for instance al-Ṣafadī's *Al-Wāfī bi-al-Wafāyāt,* now coming to an end after more than 60 years, al-Balādhurī's *Ansāb al-Ashrāf,* and Ibn ʿAsākir's *Tārīkh Madīnat Dimashq*).

Finally, Ayman Fuʾād Sayyid decided to make that effort alone. Sayyid opines (vol. 1, introduction p. 4) that, although he is aware of the difficulties one would encounter working alone on such a text, projects involving several scholars, all the more so in the Orient, rarely succeed in producing anything good,[2] and suggests moreover that in his mind this kind of text must be edited by a single individual having a clear and harmonized idea of the whole.[3] But if it is true that collective projects require more time than individual ones, they generally produce an excellent result because of the involvement of several specialists with the same text. Furthermore, the second argument could be valid if the edited text would have represented the expression of the author's reflection on a particular subject (philosophical, juridical, or scientific), requiring from the editor an understanding of the author's overall concept. This is not the case with the *Khiṭaṭ,* which has always been defined as an accumulation of facts compiled by the author from various sources and organized in a very lucid way. In some ways, it is comparable to the work required in the edition of a biographical dictionary or a chronicle. Clearly, some collaboration would have benefitted the final result, as we shall see.

Sayyid is probably the best specialist on Muslim Egypt, especially of the Fatimid period. His many studies and critical editions of important historical sources plainly show that his interests focus on this subject. No one in the Orient was better prepared to undertake such a project. During the past twenty years, he has mainly published sources which were used by al-Maqrīzī in his numerous works and this has placed him in a good position to undertake a critical edition of the *Khiṭaṭ*. He planned to publish the whole text in four volumes together with a final volume consisting of various indexes. At the time we are writing this review, volumes 3 (788 pages) and 4 (1,089 pages in two parts) have already been published, which means that in the space of two years 3,263 pages of critical text have been produced. This implies that the text has not only been published,

[2] ". . . fa-istaqarra fī yaqīnī anna al-aʿmāl al-jamāʿīyah—wa-ʿalá al-akhaṣṣ fī al-sharq—nādiran mā yuktab la-hā al-najāḥ."

[3] ". . . amā anna taḥqīq kitāb mithla al-mawāʿiẓ wa-al-iʿtibār yajib an yatimma min qibali shakhṣ wāḥid ḥattá yasūda ḍabṭihi [sic] wa-ikhrājihi [sic] fikr muwaḥḥad munsajim dūna tanāquḍāt."

but also critically edited, as it clearly appears that the editor has been working on each volume in succession, and that while he was preparing the next volume for publication he was reading at the same time the proofs of the preceding one. In conclusion, each volume was produced in six months, probably a world record in the discipline! We could legitimately fear that the editor has botched his work, but this is definitely not the case. However, it is clear that mistakes, omissions, and shortcomings still exist and that a careful proofreading would have avoided[4] most of them. Nevertheless, the whole is nicely produced and will remain for years the standard edition for this text.

The question that immediately arises in the reader's mind is whether or not this edition may be considered to be a critical and definitive edition of this important work. Before stating our opinion, we would like to describe Sayyid's working method. The editor had at his disposal two volumes of the draft *(musawwadah)*—the second and fourth part of it—covering respectively the contents of volume 2 and the beginning of volume 3, and of the end of volume 3 and volume 4. He had already prepared a critical edition of the second part of the draft, but not of the fourth, which, he says (vol. 1, introduction p. 109), he discovered *(ʿathartu ʿalayhā)* during a visit to Istanbul in 2001.[5] In addition, he collected copies of several manuscripts containing various parts of the text. According to him, the number of these manuscripts exceeds 180. Wiet had already gathered information about 170 manuscripts at the beginning of the twentieth century and the number must have increased since then, with the discovery of new holdings and the publication of catalogues that has known an extraordinary development in the past decades. Unfortunately, the author gives no list of these manuscripts, declaring that this is useless for the reader *(lā yufīd minhā al-qāriʾ)*. The reader would probably have preferred to decide whether it was useful or not. That is a pity, since this would have been the very first census of all the manuscripts of the *Khiṭaṭ* in the world! Sayyid surely did not have adequate information about all of them and this is clear in the introduction to volume 2, where new manuscripts are mentioned. In fact, they are all to be found in Brockelmann's *Geschichte der Arabischen Litteratur* and reference is made to old catalogues, so that one wonders why they were not described in the first volume, and why these and not others. During several stays in Istanbul, Paris, and Leiden, Sayyid was able to consult a great number of these manuscripts and was able to identify several copies made

[4]For instance, we could give the following omission: on page 124 of the introduction of volume 1, the number of folios of a manuscript is not given and the space is occupied by several dots, indicating that the editor was supposed to fill this space with the information.

[5]Although this same manuscript, as well as the other part of the draft, is mentioned in F. E. Karatay, *Topkapı Sarayı Müzesi Kütüphanesi Arapça Yazmalar Kataloğu* (Istanbul, 1962–69). See 3:588.

from a copy in the author's own handwriting. To these, another one must be added: preserved in the Maktabat al-Asad (MS 3437) in Damascus, it represents a copy of a part of the draft and must be placed together with the two parts of the autograph draft preserved in Istanbul (TK Hazine 1472 and TK Emane 1405). Unfortunately, no stemma, which would have helped the reader to understand the choices made by the editor and the relationships of the different manuscripts, is provided.

Among these manuscripts, Sayyid decided to use a group of five manuscripts based on al-Maqrīzī's copy, prefering Aya Sofya MS 3475 (refered to as *al-aṣl*) for volume 1 and another group of five manuscripts, with a preference for Aya Sofya MS 3483 (refered to as *al-aṣl*) for volume 2, together with part 2 of the draft (TK Hazine 1472) and Maktabat al-Asad MS 3437 copied on the draft. As he acknowledges himself (vol. 1, introduction p. 8), the only acceptable way to prepare a critical edition of the *Khiṭaṭ* presupposes publication of the draft, a task he himself performed. But why then did he not follow the same method with the fourth part of the draft he consulted in 2001? We know that al-Maqrīzī's preserved drafts represent an early stage of his writing, that he modified the plan, and that at that time he recorded a lot of data which do not appear in the final version. Due to the subsequent disappearance of most of his sources, these are the only accounts we have of these lost texts and the data, in many cases, cannot be found elsewhere. The best way would have been to publish first this new part of the draft, completing the edition he gave of the second part. One must keep in mind, however, that this version does not really reflect the image of the author's conception of the book. It can help in reading some words difficult to identify in copies of the final version, but parts of the drafts can surely not be integrated into the edition of the final version, because the author chose not to include them after careful consideration. At least, discrepancies, additions, or corrections offered by the draft can be added in footnotes to enlighten the reader. Nevertheless, Sayyid sometimes adds sentences, words taken from the draft (e.g., vol. 2, p. 245) not appearing in the manuscripts of the final version. More serious is the following dealing with al-Maqrīzī's notebook which the present writer discovered and identified among the holdings of the University of Liège (Belgium).[6] We responded to Sayyid's request for a copy of some folios which allowed him to ascertain exactly the contents of some of the abstracts it contains. One can see that he decided to add, from these fragmentary folios, passages not found in the final version of the *Khiṭaṭ* just on the basis that it was the source of al-Maqrīzī for

[6]A critical edition of this notebook is in preparation by the present writer. See Frédéric Bauden, "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of his Working Method—Description: Section 1," *Mamlūk Studies Review* 7, no. 2 (2003): 21-68.

that given passage.[7] Here and there, he also refers to the Liège manuscript, saying that a summary of al-Maqrīzī's source for a given passage is to be found in it, without refering to the folio numbers. The question is why Sayyid decided to refer to this particular manuscript and to use some fragmentary parts without having a complete knowledge of its contents and a precise description of it.

The *apparatus criticus* is limited to the discrepancies noticed between the Bulāq edition and the manuscript used as a basis. The editor explains this decision by the fact that given the existence of two parts of the draft and several manuscripts copied on the basis of al-Maqrīzī's manuscript of the final version in his own handwriting, it is useless to indicate the various readings offered by these manuscripts. If there are discrepancies, they are due to the copyists. Once again, this is a strange bias that deprives the reader of the possibility to freely choose what he might consider a better reading. The result is that we only have in the footnotes the result of the collation with the Bulāq printed text, although this collation is not always properly done. A comparison of the first pages of volume 1 has produced the following results: p. 7, l. 8 (*mimmā allafahu wa-jamaʿahu*. Bulāq: the two verbs are inverted, not indicated); l. 10 (*anbiyāʾ Allāh wa-rusulihi*. According to Sayyid, the word *Allāh* does not appear in Bulāq. Bulāq reads: *anbiyāʾihi wa-rusulihi*); ibid. (*Allāh taʿalá*. The second word appears in Bulāq); l. 15 (*akhbār maʿrūfah ʿindahum*. Bulāq has: *akhbār ʿindahum maʿrūfah*. Not indicated); l. 18 (*al-qudrah al-basharīyah*. The last word is in Bulāq contrary to what Sayyid says); p. 8, l. 10 (*mashyakhah*. Bulāq has *shaykhah* [sic]. Not indicated); l. 22 (*maqnaʿ*. According to Sayyid, Bulāq has *matāʿ,* but one reads *qanaʿ*). Of course, these mistakes have no importance for the edited text, since they refer to the Bulāq edition, but since the editor went to great pains to collate both and to indicate in the footnotes the result of this, one should expect it to be accurate.

Sometimes, he also indicates in the footnotes the different readings of the Maktabat al-Asad manuscript and the draft. Notes that were found in the margin in the author's hand by the copyists who used al-Maqrīzī's manuscript of the final version were copied in the same way (i.e., in the margin with the letter *ḥāʾ* used as a symbol over the note to indicate *ḥāshiyah* [commentary], sometimes with the words *bi-khaṭṭihi* [in his handwriting]). The editor decided to place them in the critical apparatus. We know that al-Maqrīzī added notes to his works almost until the last days of his life. Therefore, the marginal notes that were found by the copyists in his final version were meant to be placed in the text itself. Al-Maqrīzī did not do it because it was too difficult to make a new clean copy *(mubayyaḍah)* just for small additions. Thus Sayyid should have integrated them where indicated

[7]For instance, vol. 1, p. 756, where he relies on the beginning of a resumé dealing with Ibn al-Maʾmūn's history. No reference to the folio in the Liège manuscript is given. A copy of only the recto of this folio was communicated to Sayyid, who thus did not see the end of this resumé.

by al-Maqrīzī. However, the editor must be commended for having collated, when it was possible, the text with the sources al-Maqrīzī exploited. He indicates in the footnotes where a passage is to be found if the original text has been preserved and printed and he gives the result of the collation in the critical apparatus. Here again, unfortunately, he could not refrain from adding or correcting words on the basis of what is to be found in the original source (e.g., vol. 2. p. 151, from Ibn Ḥawqal). It would be strange that all the five different manuscripts based on the author's final copy would have discrepancies of this sort. Moreover it is not even certain that the edition of the source used by al-Maqrīzī is to be trusted. For instance, in vol. 1, p. 179 (l. 4), the text reads: *nafaʿa min wajaʿ al-qalb wa-al-kulyatayn,* while the manuscript of reference *(aṣl)* and the Bulāq text give *al-ṣulb* instead of *al-qalb*. The correction is made on the basis of the source, Ibn al-Bayṭār, and in spite of the manuscripts used. The reading they provide, however, is confirmed by Ibn Abī al-Ḥawāfir, "Badāʾiʿ al-Akwān fī Manāfiʿ al-Ḥayawān" (Dublin, Chester Beatty MS 4352, fol. 38r): *fa-yanfaʿu min wajaʿ al-kulá wa-al-ṣulb!* It is clear that it designates the region situated between the kidneys *(kulyah)* and the spinal column *(ṣulb)*.

The text is also abundantly vocalized, which helps in the reading of some difficult words. Nevertheless, the vocalization is sometimes not strictly necessary (*fatḥah* over the letter preceeding a *tāʾ marbūṭah,* for instance), or superfluous (words easy to read are fully provided with vowels while other more difficult ones are not), or even inaccurate (p. 7, l. 9: *ʿurifata;* p. 8, l. 1: *jumalin akhbār;* p. 8, l. 5: *adraktu,* read *adrakat*, . . .).

A positive point regards the annotation, profusely provided and always accurate with its context, which enlightens the reader on the subject touched upon in the text. A clear identification of most of the individuals, place names, technical words, etc., appearing in the text is supplied and is very helpful. It is a pity that the references to publications in Latin characters are often misspelled. Both volumes contain several plates illustrating the manuscripts used, buildings preserved in Cairo, or plans proposing a reconstruction of lost structures on the basis of the description given by al-Maqrīzī, the quality of which is unfortunately not always of the required standard.

The first volume is preceded by a long introduction, most of it taken, almost word for word, from the introduction published with the edition of the draft in 1995. In it, Sayyid comments on the book itself and its subject with a detailed survey of the books written on the same theme by previous and subsequent authors up until the nineteenth century (introduction pp. 8–30). He then places al-Maqrīzī in the historical context in which he lived, providing a detailed biography (pp. 30–39, entitled *tarjamah jadīdah lil-Maqrīzī* as in the 1995 edition of the draft) and bibliography (pp. 40–53). This latter is, however, incomplete and sometimes

inaccurate.[8] Undoubtedly, we are still lacking a thorough analysis of al-Maqrīzī's life and a detailed enumeration of all his works citing the manuscripts and the editions.

Sayyid proceeds on pages 53–68 with an analysis of the writing process of the *Khiṭaṭ*. Many interesting conclusions may be drawn from this part of the introduction. The editor clarifies the problem of the charge of plagiarism made by al-Sakhāwī against al-Maqrīzī. According to al-Sakhāwī's master, Ibn Ḥajar, al-Maqrīzī plagiarized al-Awḥadī's book on the *Khiṭaṭ* of Cairo in a major way. This al-Awḥadī, who died in 811/1408, was al-Maqrīzī's neighbor and colleague and he used to allow him to consult his library as well as his own writings. At his death, al-Maqrīzī inherited his book on the *Khiṭaṭ,* which was not finished and was mostly still in draft form. Although he made great use of this draft, al-Maqrīzī never mentions al-Awḥadī in his own book, but he acknowledges him in his biographical dictionary of his contemporaries *(Durar al-ʿUqūd al-Farīdah)*. For Sayyid (p. 64), this suffices to exonerate al-Maqrīzī from the charge of plagiarism. The present writer has recently identified part of al-Awḥadī's draft and will be able to prove that al-Maqrīzī was not so innocent. The most useful part of this introduction (pp. 69–98) deals with the sources of al-Maqrīzī in the first volume. Since R. Guest, no attempt has been made to study this aspect of the book, which is not unimportant as we have already noted. Not only based on the authors and titles given by al-Maqrīzī, the study also supplies a list of sources identified thanks to the original texts through which it can be deduced what part was taken from it by the author. We now have a detailed account for almost every passage of the text which will open possibilities for further research in this field. This introduction concludes with a description of the most important editions of the book, the most useful studies of it, and finally of the manuscripts (unfortunately not complete) and the technique used to critically edit this text.

The introduction in volume 2 is almost as long as the one in the first volume. Here again, the most interesting part of it deals with the sources used by the author in this second volume (pp. 19–49). The remaining part is filled with a description of al-Maqrīzī's autographs of his other works. We learn that the editor, during a stay in Paris, had the opportunity to visit Leiden where he was able to consult al-Maqrīzī's autographs. On this basis, he provides us with a complete and accurate description of them, even if the link with the *Khiṭaṭ* is not immediately

[8]For example, the short treatise entitled *Al-Bayān al-Mufīd fī al-Farq bayna al-Tawḥīd wa-al-Talḥīd* is not a work composed by al-Maqrīzī. It was copied by him from a manuscript he found in Damascus in 813. This false attribution goes back to G. C. Anawati, who published it in 1969. See G. C. Anawati, "Un aspect de la lutte contre l'hérésie au XVème siècle d'après un inédit attribué à Maqrīzī (le *Kitāb al-bayān al-mufīd fī al-farq bayn al-tawḥīd wa-al-talḥīd*)," in *Colloque international sur l'histoire du Caire (27 mars-5 avril 1969)* (Cairo, n.d.), 23–36.

obvious. In any case, the Leiden MS Or. 14533 (part of *al-Muqaffá*) had already been described by J. J. Witkam and the same can also be said of MS Or. 560 which, as early as 1851, was very precisely analyzed by de Goeje (the latter not cited).

To conclude, Sayyid must be commended for having undertaken the task of editing the *Khiṭaṭ,* a task that nobody else felt up to until now. In achieving it, he managed to collect the best manuscripts, and to produce a readable text, full of scientific annotations and illustrations which help the reader to better understand al-Maqrīzī's text, probably better than ever. However, for the reasons I have given, we clearly cannot consider his work a critical edition, as it is defined nowadays, or a definitive one. It is to be hoped that in the near future he will be able to produce a second edition closer to the version of the *Khiṭaṭ* as al-Maqrīzī wrote it and giving full satisfaction to the reader from a critical point of view.

ʿAlī ibn Dāwūd al-Jawharī al-Ṣayrafī, *Inbāʾ al-Ḥasr bi-Abnāʾ al-ʿAṣr,* 2nd ed. Edited by Ḥasan Ḥabashī (Cairo: al-Ḥayʾah al-Miṣrīyah al-ʿĀmmah lil-Kitāb, 2002). Pp. 22, 562.

Reviewed by Stephan Conermann, *Universität Bonn*

This printed version of the *Inbāʾ al-Ḥasr bi-Abnāʾ al-ʿAṣr* is a so-called second edition of a text which was first published in 1970. In fact, it is simply a reprint of the first edition. The chronicle was written by a certain Nūr al-Dīn ʿAlī ibn Dāwūd al-Jawharī al-Ṣayrafī (819–900/1416–95). This man was the son of a money-changer in the *dīwān* of the sultan in Cairo, who supplemented his meagre income by trading in the jewellers' market. Although al-Ṣayrafī enjoyed quite a good education, he could never get rid of a strong awareness of his father's low social standing.

After a while al-Ṣayrafī attracted the attention of Ibn Ḥajar al-ʿAsqalānī (d. 852/1449). This eminent and influential scholar encouraged his promising disciple to try his luck as an historian. At the same time, al-Ṣayrafī applied for a position as a Hanafi qadi in the capital. But all his endeavours to find good employment failed. Only once, in 871/1466, was he granted the opportunity to stand in for the Hanafi *qāḍī al-quḍāh* Ibn al-Shihnah (d. 890/1485). For some time, al-Ṣayrafī worked as imam at the Ẓāhirīyah mosque. To earn his living, he

had to make copies of all sorts of manuscripts. His favorite texts were the works of his teachers Ibn Ḥajar al-ʿAsqalānī, Ibn Taghrībirdī (d. 874/1470), and al-Kāfiyajī (d. 879/1474) to which he usually added his own remarks and commentaries. Unfortunately, fame and glory were denied him, as he was overshadowed by such erudite contemporaries as al-Maqrīzī (d. 845/1442), al-ʿAynī (d. 855/1451), al-Suyūṭī (d. 911/1505), and Ibn Iyās (d. ca. 930/1524).

It is said that al-Ṣayrafī's efforts to become a professional historian produced nothing but scornful laughter among his colleagues. They reproached him for having a very boring and long-winded style and for writing unfounded works by ignoring the known sources. Al-Sakhāwī, whom our author obviously knew personally, complains in a spiteful biography in his *Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* that he had absolutely no understanding of the historical sciences. These defamatory remarks by a well-known and highly respected alim show the arrogance and the conceit of Mamluk scholarly circles. Perhaps they are also a sign of uncertainty among the established historians about their social status faced with a substantial growth of historical writing among the lower classes during the fifteenth and sixteenth centuries. A great number of people from society's lower strata joined the traditional circles of theologians, *muḥaddithūn,* and *munshī*s who normally held a monopoly on historiography. Examples of this development include the anonymous soldier who wrote the first volume of the chronicle that has been published by Zetterstéen, the humble Turkish army officer Ibn al-Dawādārī (d. after 736/1335), who struggled all his life to establish his reputation as a scholar, Abū Ḥāmid al-Qudsī (d. 888/1483), a reader of hadith works who was always looking for a better job, or, of course, our al-Ṣayrafī.[1]

The *Inbāʾ al-Ḥasr bi-Abnāʾ al-ʿAṣr* treats in a panegyrical way the reign of Qāytbāy during the years 873–86/1468–81. The work represents a typical "Widmungsschrift" (eulogy). Al-Ṣayrafī wanted to present the sultan his small text in the hope of being rewarded with a position at court. Unfortunately, his desires were not fulfilled. Al-Ṣayrafī's *Inbāʾ al-Ḥasr bi-Abnāʾ al-ʿAṣr* may be grouped with similar "opportunistic texts" ("Zweckschriften") in which a high representative of the ruling class is praised to the skies.[2] For example, one could cite Ibn Abī

This edition of the *Inbāʾ al-Ḥasr bi-Abnāʾ al-ʿAṣr* is based on the only known manuscript, located in the Czech National Library in Prague. Ḥasan Ḥabashī has done a very good job. The printed text is nearly flawless and provides helpful commentaries. But we should keep in mind that the merits of the editor have been well-known for twenty years. Instead of going into that in more detail it seems more worthwhile to say something about al-Ṣayrafī's two other preserved chronicles.

His *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān* covers the years from 784/1382 to 842/1438.[8] It is a normal dynastic history in which Mamluk politics are analyzed by analogy to the hagiographical description of the Prophet's acting as a statesman in Medina. Al-Ṣayrafī uses an annalistic approach that was common practice in his time: he subdivides his text into days, months, and years. At the end of every year, one finds necrologies not only of Egyptians but also of prominent figures from all Islamic countries. Al-Ṣayrafī's style has a closeness to spoken Arabic and on some occasions the grammar is not congruent with *fuṣḥá*. Although it is focused on a chronologically fixed period, the *Nuzhat al-Nufūs wa-al-Abdān fī Tawārīkh al-Zamān* is an Islamic universal history which starts with the creation of the world and with the prophet Adam and ends in the lifetime of the author. The first part of the chronicle which bears a special title ("*al-Jawharīyah*") is dedicated to the history and genealogies of God's messengers up to Muḥammad. With Abū Ḥāmid al-Qudsī, al-Ṣayrafī shares the bad habit of copying unscrupulously from al-Maqrīzī's *Al-Sulūk*.

A third work by al-Ṣayrafī is called *Al-Durr (al-Thāmin) al-Manẓūm fīmā Warada fī Miṣr wa-Ahluhā (wa-ʿAmaluhā) min Mawjūd wa-Maʿdūm bi-al-Khuṣūṣ wa-al-ʿUmūm* ("The string of precious pearls: the traditional general and specific knowledge on Egypt and her provinces").[9] This is a typical *faḍāʾil* work. The author tells us that his *Al-Durr (al-Thāmin) al-Manẓūm* contains a description of all the beauties,

merits, and miracles that can be found in Egypt. The reader learns everything that the Quran, the Sunnah, and the Muslim scholars, historians, and philosophers have to say on this topic. It seems to be more than a remarkable coincidence that we can, in this respect, draw a parallel to Abū Ḥāmid al-Qudsī, whom the guild of Mamluk ulama discredited as being as lousy as al-Ṣayrafī. Like our chronicler, he tried his hand at writing panegyrical prose about his native country. But his *Al-Faḍāʾil al-Bāhirah fī Maḥāsin Miṣr wa-al-Qāhirah*[10] was not much of a success. Nevertheless, a comparison of both scholars would be just as worthwhile as a detailed analysis of the three works we have received from al-Ṣayrafī.

ROBERT IRWIN, *For Lust of Knowing: The Orientalists and Their Enemies* (London: Allen Lane, 2006). Pp. 376 + index.

REVIEWED BY JOHN RODENBECK

Robert Irwin remarks in his introduction that the subject of his latest book "is neither very important nor very glamorous—still less actually sinister" and observes that he would never have written it except for Edward W. Said's *Orientalism* (1978), to which it is a rejoinder. Orientalists in general, he points out, have had very few readers and little influence. One might observe here that the current celebrity in the White House of an Orientalist academic like Bernard Lewis is unprecedented in Orientalism since its beginnings 450 years ago and is in any case due not to his scholarship, but to his elaboration from 1990 onward of a myth that has been found useful by the engineers of the Bush regime's Middle Eastern policies.

Irwin need hardly point out that the title Said chose for *Orientalism* is a misnomer or that the polemic for which Said is famous is directed not against Orientalists in general, but almost exclusively against Western Arabists, all of whom Said blames for perennially sustaining, inculcating, and encouraging innumerable prejudices in Europe and America, which have somehow led in turn to imperialism and a host of other wicked follies. It is thanks to Said, in fact, that since 1978 the word *orientalist* has come colloquially to function chiefly as a code word for "anti-Arab."

[10]Unedited. However, for this text consult Stephan Conermann, "Lebensspender, Stätte der Erinnerung, Gedächtnisort: Der Nil während der Mamlukenzeit (1250-1517)," in *Wasser—Lebensmittel, Kulturgut, politische Waffe,* ed. Ulrich Hübner and Antje Richter (Schenefeld, 2004), 15–60, esp. 48–50.

"I have no significant disagreement," Irwin says, "with what Said has written about Palestine, Israel, Kipling's *Kim,* or Glenn Gould's piano playing." Said's *Orientalism,* however, Irwin sees as an ignorant, irrational, and frequently dishonest polemic based upon a radical over-estimation of the power of literature. While adhering to the Marxist-Foucaultian notion that any verbal representation of something is inevitably skewed by the cultural matrix from which it comes, Said makes no distinction between the literal and the figurative or between what is physical and what is verbal and appears to believe that mere discourse about something actually has at least the weight, value, and ultimate import, for good or ill, of the real thing to which it refers.

One upshot of such curious attitudes is to deny all the past and much of the present their own reality. Said's blanket condemnation of all past or present Western scholarship, moreover, which he condemns for its ineluctable Westernness, leads to the conclusion that the only significant qualification for doing research on the Arabic language or literature or the Arab world is a genetic one: no non-Arab, dead or alive, need ever apply. Taken together, these convictions amount to a declaration that history (as well as, say, archaeology, linguistics, cultural anthropology, or travel-writing) is really impossible, a conclusion that might explain why a sense of history—except as fiction or myth—is so absent from everything Said himself ever wrote.

Whatever its original value as an alarum, Irwin observes, the long-term influence of Said's polemic has been largely malign. And the present situation, when an entire tradition of scholarship has been discredited and a whole generation of Arabists have been not only dispirited, but placed under multiple suspicion, cries out for redress. As Irwin has seen it, the publication of a true history of Orientalism—as true as one could make it—was a moral necessity.

Mamlukologists may recognize his title as an allusion to *The Golden Journey to Samarkand* (1913), lines that took the following form in the last act of Flecker's posthumously produced play *Hassan* (1922):

> We travel not for trafficking alone;
> By hotter winds our fiery hearts are fanned:
> For lust of knowing what should not be known.

(These same lines also supplied the title for the memoirs [1988] of a charming polyglot American spy who worked in the Middle East, Archie Roosevelt [1918–1990]—by no means to be confused with another American spy who worked in the Middle East, his first cousin Kermit [1916–2000], mastermind of the coup that in August 1953 felled Iran's first democratically elected government.)

Irwin's first chapter deals with Said's claim that what he monolithically styles "The West" has been perennially and viscerally anti-Middle-Eastern since classical

times, the days of Herodotus or of Sophocles, Aeschylus, and especially Euripides. Irwin looks at the actual texts of the *Histories* and *The Bacchae,* however, and points to a plentiful scholarly literature that settled this question some time ago. To demonstrate the baselessness of charges that in Rome under the empire Arabs were regarded as Alien Others, Irwin reminds us that Septimius Severus married an Arab lady, Julia Domna, who became not only the mother of Caracalla, but also in her own right the most powerful politician in Rome. Meanwhile her elder sister Julia Maesa, married to a Syrian noble, had two daughters, Julia Soaemias and Julia Mamaea, who became respectively the mothers of the emperors Heliogabalus and Alexander Severus. Irwin also draws our attention to yet a fourth Roman emperor, Philip, who was known as "Philip the Arab" (244–49).

The next chapter takes up the period from the foundation of Islam to the beginning of the fourteenth century, an era in Europe illuminated much less by "ancient Greek science and technology transmitted via Arabic renditions translated into bad Latin" than by the direct acquisition of techniques, knowledge, and skills developed more recently among the Persians and Arabs themselves. Irwin here points to the likes of Ibn al-Haytham (Alhazen), al-Khwārizmī (Algoritmi), Ibn Rushd (Averroes), and Ibn Sīnā (Avicenna). Capable European Arabists included William of Tripoli, Ricoldo da Monte Croce, and, of course, Raymond Lull, all of whom were Christian missionaries. The Councils of Vienne (1311–12) and Basel (1341) decreed that chairs of Arabic should be established at Avignon, Bologna, Oxford, Paris, and Salamanca, but by that time the medieval vogue for Arabic had passed and in fact these decrees came to nothing.

In the third chapter, "Renaissance Orientalism," Irwin deals first with the term *Renaissance,* which he understands in the ordinary sense recognized as primary by the OED: "The great revival of art and letters under the influence of classical models which began in Italy in the 14th century and continued during the 15th and 16th." Since the Arabs demonstrably had no positive interest in Greek art, architecture, poetry, or drama and not even a negative interest in Latin, the suggestion that they were somehow responsible for the European Renaissance is absurd. In fact, as Irwin demonstrates, there was a general flight from Arabic and Arabic learning during this period, exemplified first in Petrarch (1304–74), who may justly be said to have founded the Renaissance, and his attack on Averroism, which signalized a reaction against earlier Arab intellectual influence and the Aristotelian attitudes to which it was linked.

Irwin ascribes the beginnings of Orientalism to a much later early-modern figure, the mad Guillaume Postel (1510–81), who held the first chair of Arabic at what became the Collège de France (1539) and whose career coincided not only with the rise of travel and travel literature, but also with much diplomatic activity surrounding the long-enduring naval and military alliance between France and the

Ottoman Empire. Said mentions Postel twice in *Orientalism,* but not his peculiar and entertaining beliefs, among which was the attractive idea that "almost everything in Asia was superior to almost everything in Christendom." The great Huguenot scholars Julius Caesar Scaliger (1540–1609) and Isaac Casaubon (1559–1614) were interested in Arabic, but never achieved Postel's mastery of the language. Irwin notes (p. 110) that the lack of Orientalists specialized in Turkish studies has persisted into the twentieth century.

The next three chapters provide a meticulous history of Orientalism as it arose out of sixteenth-century France to reach full maturity in the *Encyclopaedia of Islam,* the first volume of which, in English, French, and German, was completed in 1913. All the great figures, including the elder Pococke—whose name Said misspells even in the indexes of both editions of *Orientalism*—are treated at fair length; and for most Mamlukologists a rehearsal here would be superfluous. Apart from the men—with the possible exceptions of Gertrude Bell and Annemarie Schimmel, there appears never to have been any outstanding lady Orientalists, a fact that some might construe as a tribute to the level-headedness of the fair sex—institutions and major projects are also discussed. In each chapter Irwin makes the necessary corrections to Said's narrative, which tends to elevate the unimportant or the irrelevant (e.g., Flaubert) to prime status while ignoring the greatest schools of Orientalist learning. Most notably excluded by Said, as he himself vaguely acknowledges in his introduction to *Orientalism,* are the Germans, who dominated the field for a century and a half. But Said also omits any mention of the Italians, who have had an important Orientalist tradition from Marracci onward, and the Russians, whose Kazan University was the backbone of an ambitious and successful imperialist agenda and actually employed Arabs, Turks, Persians, and Afghans as professors. Irwin, by contrast, gives us the full story.

Chapter Seven is devoted to giants—Goldziher (designated by Irwin "the greatest of the Orientalists"), Nöldeke, Snouck Hurgronje, Caetani, E. G. Browne, Margoliouth, Massignon, Kratchkovsky, Brockelmann, and others—and describes the beginnings of SOAS. Chapter Eight treats the rise, thanks largely to the destruction of German institutions in two world wars and the flight of German intellect in between, of British Orientalism and the beginnings of Orientalism in the U.S. A concluding paragraph here reflects on problems peculiar to British academia, which are in some ways the reverse of difficulties in the U.S. and elsewhere. Chapter Nine, titled "An Enquiry into the Nature of a Certain Twentieth-Century Polemic," confronts Said head-on, concluding that "on the whole . . . the good qualities of *Orientalism* are those of a good novel. It is exciting, it is packed with lots of sinister villains, as well as an outnumbered band of goodies, and the picture that it presents to the world is richly imagined, but essentially fictional."

The last chapter considers various Muslim attacks on Orientalism, including

those of Kurd ʿAli and A. L. Tibawi, the secular critiques of Abdallah Laroui and Anouar Abdel-Malek, and finally the just resentment of certain attitudes apt to appear in Western Orientalist works—arrogance in particular—expressed by two distinguished Oriental scholars, Fazlur Rahman and my friend and neighbor in Languedoc, Muhsin Mahdi. The fact that he gives them the last word indicates the degree to which Irwin has sought to remain scrupulously just and honest, as well as deeply informed. This book is not a defense of Orientalism, but something much better: a conscientiously straightforward history of the subject.

Sīrat al-Malik al-Ẓāhir Baybarṣ ḥasb al-Riwāyah al-Shāmīyah. Edited by Jūrj Būhās and Kātyā Zakharīyā (Damascus: al-Maʿhad al-Fransī lil-Dirāsāt al-ʿArabīyah bi-Dimashq, 2000–4). 5 vols.

REVIEWED BY LI GUO, University of Notre Dame

Yes, you read it right: that *is* the way the protagonist's name is spelled—with a *ṣād,* instead of a *sīn*—a literary device used by the anonymous authors apparently aimed at distancing themselves from the risky business of art imitating life. Hereby hangs the tale of the Syrian version of the *Romance of Baybars,* one of the few surviving pre-modern Arabic popular tales. Riding on the tide of the hugely successful 10- volume French translation, *Roman de Baïbars* (1986–98), by Georges Bohas, the coeditor of the volumes under review, and Jean-Patrick Guillaume, the state of the study of this monumental work has never been in better shape. The publication of the "Syrian" text, as opposed to the more familiar Egyptian versions, should thus be considered a milestone in this collective enterprise.[1]

Like other Arab folktales, such as the *Arabian Nights* and the *Sīrat ʿAntarah,* the history of the manuscripts of the *Sīrat Baybars* has its share of twists and surprises. The oldest manuscript, the Vatican MS, goes back as far as the sixteenth century, and the subsequent modern prints one finds everywhere in street bookstalls all over the Arab world today are mostly cut-and-paste renditions of the manuscripts

[1]On the French translation and the related publishing activity around it, see Robert Irwin's review of *Lectures du Roman de Baybars,* ed. Jean-Claude Garcin (Marseille: Editions Parenthèses, 2003), in *Bulletin of the School of Oriental and African Studies* 67, no. 3 (2004): 395–96; also see the three special issues of *Arabica,* 51, nos. 1–2, 3 (2004), guest edited by Jean-Claude Garcin, dedicated to this subject.

now housed in various libraries, mostly in Europe. Thomas Herzog discovered a manuscript in the possession of a storyteller *(ḥikawātī)* in Aleppo. Through the teamwork by mostly Arab scholars, a hand copy was made in 1949 under the auspices of the French Institute. Actually originating in Damascus, this "Aleppo codex" is very close to the version handed down through another Damascene *ḥikawātī*. The merit of the Aleppo codex, in the coeditors' own words, is the fact that it is "complete," in the sense that the original quires are intact and the imagined life and career of Baybars/Baybarṣ is brought to a grand finale. Given the remarkable fact that the uncut, un-sanitized edition is being published in Damascus, of all places, in the present day, the editors seem to have been compelled, in the Introduction, to bring up two rather sensitive issues, in addition to the usual information about the manuscripts and the editorial policies: first, that the Baybars dealt with here is a fictionalized figure (as in "any resemblances to the actual person are purely coincidental"); second, the retaining of the "dirty" stuff, namely sexually explicit material, contained in the original text is justified on the grounds of "legitimate academic reasons" (vol. 1, pp. 13–16).

This is a long text. The part published so far covers only half of it. To facilitate the reading, each volume begins with an Introduction (repeated), and, starting from Volume Two, a cumulative synopsis of the story line and plots covered in the previous volume(s).

Volume One (pp. 334) starts off with a dream al-Malik al-Ṣāliḥ Ayyūb had: that a wonder boy will eventually rise to lead the Mamluks to eternal triumph. A Damascene merchant is sent to marketplaces, in Syria, to purchase young boys to be brought up as soldiers. Among them is a sick orphan named Maḥmūd and two boys who would eventually become "big shots" themselves: Qalāwūn and Aydamur. Out of jealousy, Qalāwūn bullies the orphan while Aydamur acts as his protector. On their way back to Cairo via Aleppo, the boy, in fact the scion of a king, is abandoned in a hospital, thanks to a trap set by Qalāwūn. After some more twists, he is adopted by a Syrian woman, Sitt al-Shām, under whose care he learns, and perfects, the arts of *furūsīyah*. Sitt al-Shām names the boy Baybarṣ, after her deceased son.

The boy is then brought to Cairo to be presented to al-Malik al-Ṣāliḥ and his wife Shajarat al-Durr. On his way, he saves the life of a lad who was about to be buried alive by his own father, a member of the Ismāʿīlī militia who had known, all along, the future of the wonder boy through the divination *(jafr)* of their imam. At Baybarṣ' urging, Ibrāhīm, the lad, pledges to sever his ties with his family and gives up his name to become Ḍāʾiʿ al-Ism, or Nameless. He is to become Baybarṣ' confidant and right-hand man. Villains do their best to battle the hero along the way: in addition to the arch rival Qalāwūn, there is an even more dangerous enemy, a Christian named John, disguised as a Muslim qadi, who

had assassinated al-Ṣāliḥ's chief judge in order to become his replacement. His goal is to thwart Baybarṣ, whom he saw in an epiphany as the ultimate threat to Christendom. Minor villains consist of a legion of the "evil vizier" type, those who work for, or are associated with, the establishment; and all of them hold some grudge against the hero. Good Muslims they are not: chief among them are a "sissy" pedophile *(al-shaykh al-mukhannath),* a homosexual *(lūṭī),* and a gangster *(qāʾid ʿayyārīn)*. And then there is a Jewish *kātib,* who steals money from Baybarṣ' estate. (By the way, he also runs a successful real-estate business on the side.) The stage is set for high drama, with a full cast, historical and fictional.

Volume Two (pp. 340) follows up Baybarṣ' quick rise to power: from a low ranking officer *(shāwīsh al-dīwān),* to the governor of Egypt, then Commander of the Left Wing Brigade *(silāḥ-dār muyassarah),* and finally the most important post, Commander of the Right Wing Brigade *(silāḥ-dār muyammanah),* replacing Qalāwūn, further fueling the latter's resentment and jealousy. Baybarṣ' triumphs over the Franks and the Mongols are described with great fanfare. Battlefield scenes, in Antioch, Jerusalem, Constantinople, the Bilād al-Shām, and Alexandria, are interwoven with garden variety cloak-and-dagger sabotage attempts staged by the hero's inner-circle enemies to do him in. Diplomatic negotiations between Baybarṣ and the Franks in Alexandria and Genoa show his savvy. And his solicitation of aid—from the Ismāʿīlī *Fidāʾiyīn* militia (through the connection of Nameless), the sympathetic Mamluk rank-and-file, and the civic elite—to form a loose alliance, demonstrates his maturity and readiness for bigger things. Here the plot involving the clandestine Christian qadi as the main villain gets even more tricky: al-Malik al-Ṣāliḥ designates Baybarṣ to succeed him, a development that further enrages John, who in turn incites the rebellion of the governor of Syria, ʿĪsá al-Nāṣir, and secretly invites the Frankish army to occupy the Syrian lands. Al-Malik al-Ṣāliḥ thus leads his last, and fatal, expedition to Syria, over the course of which he dies suddenly. Some have suspected Baybarṣ' involvement in the sultan's death.

Volume Three (pp. 379) begins with the ensuing power struggle after al-Malik al-Ṣāliḥ's death. His son ʿĪsá, who is "fond of drinking and pretty boys," is named al-Malik al-Ghāzī and has an immediate clash with Baybarṣ, who declines to take over despite al-Malik al-Ṣāliḥ's will. A series of bloody court intrigues take place and Baybarṣ is stripped of power. And then, under mysterious circumstances, al-Malik al-Ghāzī, "the queer and alcoholic" *(lūṭī wa-sikkīr)* boy king is found dead, wine cup in hand. His brother Khalīl, the son of Shajarat al-Durr, is enthroned with the regnal title al-Malik al-Ashraf. Accompanied by Baybarṣ, who has since been brought back on account of the pressing Frankish threat on the border, the young sultan dies on an expedition to Syria. Again, Baybarṣ is accused by his enemies, among them Aybak, an ambitious general, and the disgruntled Kurds.

Aybak marries Shajarat al-Durr and is made the sultan, with the title al-Malik al-Muʿizz. Fearing for his safety and avoiding the potential *fitnah,* Baybarṣ goes East again, to Syria, where he prospers and overcomes a series of attempts on his life and finally confronts Aybak in battle and wins.

In Syria, Baybarṣ is approached by Berke-Khan, the brother of Hülegü, who claims that he and his daughter Tāj Bakht have converted to Islam. Berke-Khan and his troops are killed by heavy snows in Syria. Baybarṣ brings the surviving Tāj Bakht back to Damascus, and, with the blessing of his adoptive Syrian mother, marries the Mongolian princess. He declares himself to be the ruler of Syria, with the title al-Malik al-ʿĀdil. Defeated and a political lame duck, Aybak returns to Cairo and is soon assassinated, in the bath, by a jealous Shajarat al-Durr, who then jumps from the balcony to her own death. Once again, Baybarṣ declines the throne, and Uṭuz is elected, only to be immediately killed by his own Mamluks. With the repeated urgings by the power brokers (*al-aʿyān*), Baybarṣ is finally declared the sultan, with the regnal title al-Malik al-Ẓāhir.

The new sultan immediately faces a new round of sabotage, set up by John the Christian, who has poisoned the water sources in Jerusalem and nearly kills Baybarṣ, who has come to safeguard Muslims in the city. Baybarṣ is helped by Nameless, by now known as Siyāj al-ʿAdhārá, or Virgins' Keeper, a nickname bestowed upon him by Tāj Bakht, for having rescued her and her young son Saʿīd during a raid in al-ʿArīsh on their way from Syria to Egypt. The Queen has also adopted the young man as her brother. Baybarṣ appoints his old friend, and new brother-in-law, Commander of the Right Wing Brigade. The volume ends with the sultan's conquest of Antioch and his negotiations with the dissenting Ismāʿīlīs in the Syrian highlands.

After this, the narrative gets fuzzy. Volume Four (pp. 332) and Volume Five (pp. 368) read like an epic in its true sense: a combination of a road map, of the hero's endless military victories, and a thriller, full of suspense and over-the-top plot developments. This is by far, for better or worse, the most entertaining and fantastic portion of the tale. Some of the highlights include a spy operation in Constantinople to win the release of some 800 Muslim prisoners of war, the capture of Baybarṣ in al-Shaqīf castle and his miraculous rescue by Ibrāhīm/Nameless/Siyāj al-ʿAdhārá, and another assassination attempt plotted by Hülegü's men in Damascus. Topping this all off is an episode of conspiracy with seduction wrought, again, by John the Christian, who has tricked Marina, the beautiful daughter of a Frankish general in Macedonia, to send an invitation to Baybarṣ to witness her conversion to Islam with the help of a beautiful Muslim woman, Sharīfah al-Maghribīyah. Off the hero goes, but manages to escape again, and brings the two women back to Muslim territory. Marina is to marry Saʿīd, Baybarṣ' son, and the Maghribī girl is to become the wife of Qalāwūn. The sultan finally has made

it back to Cairo, along with the entire entourage and the newlyweds, including Ibrāhīm, who is also given a royal lineage by marrying the daughter of the Persian Shah, whom he has convinced to convert to Islam.

The hero's next triumphal act is on the international stage. Baybarṣ first successfully defends Tripoli against the Franks and then, in a swirl of seemingly ridiculous plots, negotiates a truce with the Mongols led by Timur, the uncle of his wife, who has come to Cairo to pay tribute. This part of the text is the stuff of pulp-fiction, with a story line that goes like this: Timur has conspired to kidnap Baybarṣ and gain control through manipulating the young and naïve al-Saʿīd; Ibrāhīm, the unsung hero, discovers the plot but becomes caught in a rivalry with al-Saʿīd and his mother, Tāj Bakht, Timur's niece. Timur then dispatches the captured Baybarṣ and his son, in a trunk, to Aleppo, in the hope that by this gesture he would win the favor of his brother Hülegü to give him the land of Syria as a gift. With the help of Ibrāhīm and the Ismāʿīlī *Fidāʾī* militia, Baybarṣ manages to escape and returns to Cairo.

There are more battles for the hero to win against the enemies: the plotters and conspirators, the Franks, and the Mongols. Fights have broken out in Tripoli and then extended to Europe. The Mamluk army, led by Ibrāhīm, wins decisively near Lombardi (Arabic: *jisr al-inkibār,* "Bridge of Defeat"), in northern Italy. Replete with panegyrics, which come in handy for storytelling performance, Volume Five ends with the Mamluk victory over Genoa.

So far as storytelling goes, the historicity of such a tall tale can easily be challenged. The text is known to have been produced at a much later time, in the sixteenth century, to be precise, and the "red flag" is all over the place: people's habit of sipping coffee (which would have been unheard of in Baybars' time) being one, and the Mamluk army's use of the cannons *(al-midfaʿīyah)* by Baybars' troops another. (The editors state that cannons were not introduced to the Mamluks until the early sixteenth century [vol. 4, p. 32, n. 46]; however, based on a description in Ibn Menglī's *Al-Aḥkām al-Mulūkīyah,* a *furūsīyah* treatise, the use of cannons by the Mamluks can be dated at least as early as the reign of al-Ashraf Shaʿbān [1363–76], which was, of course, still nearly a century later than Baybars' time.) In essence, what we have here is an Ottoman text telling a Mamluk tale. Going through the text, one cannot help but marvel at the rich details of the hitherto little known aspects of *mamlūkīyāt:* how boys were purchased and trained to be Mamluks, what soldiers wore on the battlefield, what they ate, how they entertained themselves in leisure times, and the frequent references to homosexual activities, and tendencies, among them. Whether these descriptions reflect historical reality or educated imagination is a matter for further exploration. I, for one, would like to think that the truth lies somewhere in between. There is no denial that the documentation is rooted in the traditional narrative repertoire and collective

memory, which are worthy of serious study in their own right. Aside from the genre-related paradigm—that of good vs. evil, good Muslims beating up the bad guys, and the royal lineages, and intrinsic virtues, of all the heroes involved—there is a striking dimension of this particular version: the Syrian context of the hero's background and success it duly adds to the commonplace narrative. In this representation, Baybars is not only portrayed as the adopted son of Lady Syria, Sitt al-Shām, but is also being helped along the way by an alter ego, Ibrāhīm, with strong ties to the Ismāʿīlīs. Equally fascinating for me is the way the Syrian storytellers take sides in the Qalāwūnids vs. Ẓāhirids scheme, which was long a bone of contention in Mamluk historiography. This text is full of such intrigues, both in the materials it presents and in the way they are presented.

And then there are other materials that any student of pre-modern Arab culture would savor: the language (a blend of the classical and "Middle Arabic," proverbs and jokes, idioms and slang, multilingual—Arabic, Persian, Turkish, and Frankish—features), food and drink (preparation, descriptions, recipes), scenes of daily life (marketplace, wedding, health care, housekeeping, hygiene and beautification, attire, dream interpretation), entertainment (music, dance, games), and much, much more.

The editors are to be commended for providing us with a well-executed edition. It is based on the Damascene manuscript, and collated with the "Aleppo codex" for missing folios and variants. The reader is thankful for the profuse footnotes that tackle a wide range of problems—historical, lexicographical, linguistic, and literary. For me, especially useful are the notes on the Syrian vernacular as well as the Persian and Turkish loanwords that pepper the text. (Which raises another issue for today's Mamluk scholars: the importance of acquiring a working proficiency of Persian and Turkish.) Some footnotes are repeated, perhaps for the convenience of the reader, so he/she needs not go back to Volume One for an explanation of a rare word in Volume Five. For a text so long, some inconsistencies in execution are unavoidable. There are some redundancies: on "Christian" (vol. 4, p. 214, n. 33) and on al-Mutanabbī (vol. 4, p. 246, n. 45), for example. Some notes fail to catch the words in their first appearance: the word *kindī/jundī*, for example, is seen in Volume One, but is only footnoted in Volume Two (p. 33); *al-jarīd,* a sort of fencing game, appears in Volume One, but waits till Volume Three to be explained (p. 95). The typography is adequate, with very few errors. Speaking of which, I do have one quibble, with the editors' tendency to alter the text in order to "correct" its Middle Arabic features, by adding the *nūn* suffix to the imperfect plural, and the *alif al-wiqāyah* to the perfect plural. Insofar as the characteristics of the Middle Arabic are valuable for scholastic purposes in their own right, this kind of scrupulous editorial touch seems to me to be unnecessary, and impossible: while some of the "irregular" features are being corrected, many, many others are

not. (There is a long list of them; I will not dwell on them in detail due to space concerns.) In any case, the "fuṣḥáfication" of a profusely Middle Arabic oriented text simply does not work. That said, the achievement of the editors is enormous and the completion of the full text is eagerly awaited. A volume of index and glossary would be icing on the cake.

ṢĀʾIB ʿABD AL-ḤAMĪD, *ʿIlm al-Tārīkh wa-Manāhij al-Muʾarrikhīn: fī ʿIlm al-Tārīkh Nashʾatan wa-Tadwīnan wa-Naqdan wa-Falsafatan wa-Manāhij Kibār Muʾarrikhī al-Islām* (Beirut: al-Ghadīr, 2001). Pp. 312.

REVIEWED BY JUNE DAHY, University of Copenhagen

This historiographical work seeks to introduce classical and modern approaches to the writing of history, as well as the main classical Arabic historians. It is written as a manual for students and introduces them to the critical reading of history. The content is organized systematically, divided into three main sections, each of which is divided into smaller chapters. The first section is entitled "The Science of History and Historical Research." The second is devoted to "Historical Schools and Philosophy of History." The third, and longest, section is reserved for the book's main focus, the presentation of classical Islamic historical writings, and simply called "The Discourses of the Historians."

In the first section history as a science and the job of the historian are defined. It also contains the genesis of historical writing in ancient Europe, and history writing in Europe of the Middle Ages and in modern Europe until 1955. A short, but very informative chapter on modern Islamic historians is also included, illustrating how national historical writing overtook historiography in its Islamic framework. The central chapter of the introductory section deals with methods of historical criticism, and stresses the importance for students to question the motives, goals, and biases of the historian, as well as the political context in which the text was written.

In the second section, the importance of historical criticism amongst the historians of the classical Islamic era is addressed. In the Islamic era, historical criticism went beyond simply testing the *isnād,* which had been dispensed with by historians as early as al-Yaʿqūbī (d. after 292/905) and al-Masʿūdī (346/956). *ʿAql,* or reason, was also a very early criterion for the selection of material. Even a

sound *isnād* was not enough to ensure the inclusion of fantastic or "untrustworthy" material in historical writing. In addition, ʿAbd al-Ḥamīd illustrates the ways in which early Islamic historians, including al-Masʿūdī, Ibn Miskawayh (d. 421/1030), and Ibn al-Ṭiqṭaqā (d. 701/1302), expressed their own vision of the proper aims and scope of historical writing.

Philosophy of the science of history is the topic of the second section. The student is introduced to the classical European philosophers such as Machiavelli, Rousseau, and Voltaire, as well as later modern philosophers such as Hegel. In addition, the classical Arabic and Islamic theorists are introduced. These include of course Ibn Khaldūn and several modern theorists. The chapter on the theory of history is primarily concerned with defining the elements that create complex civilizations and cultures. Both Ibn Khaldūn and the modern religious philosophers are presented as "Islamic"; however, a more nuanced discussion taking into account the differences in their presuppositions and historical contexts would have been appropriate here. It seems that Ibn Khaldūn is labelled "Islamic" because he flourished in classical Islamic times, whereas the modern Islamic theorist ʿImād al-Dīn Khalīl is called so because he takes the Quran as his point of departure for understanding history.

The presentation of this section only aims at presenting the individual philosopher, and ignores the historical currents or trends that impacted the philosophers as a group, be they European or Islamic. The absence of historiographical perspective also characterizes the presentation of the historians and their works. Although this has been accomplished by historians such as ʿAbd al-ʿAzīz Dūrī and Tarif Khalidi, their works are not included in the references of this book.

The book's third section, entitled "The Discourses of the Historians" *(Manāhij al-Muʾarrikhīn),* is devoted to the introduction of several classical historians. It begins with a survey of the different genres within Islamic historical writing, including local histories, annals, universal histories, etc. Artistic or poetic exposition of historical matter is also included, though characterized as unfit for serious history writing.

Following this are systematic introductions to individual historians, divided into three groups, listing several historians in each, but giving special attention to the most important:

1. The *sīrah-maghāzī* literature: Ibn Isḥāq, Aban Ibn ʿUmar al-Aḥmar, and al-Wāqidī (d. 207/822)

2. Early universal history writing comprising al-Yaʿqūbī (d. after 292/905), al-Ṭabarī (d. 310/923), and al-Masʿūdī (d. 346/956).

3. Discourses of the later universal historians: Ibn al-Athīr (d. 630/1233), Ibn Kathīr (d. 774/1373), and Ibn Khaldūn (d. 808/1406).

A general point of ʿAbd al-Ḥamīd's investigation is how individual historians

treated the early Islamic era and the emergence of the Shiʿi schism. Generally, he also focuses on the historian's personal relationship with Shiʿism. This could be understood as a reflection of ʿAbd al-Ḥamīd's own sectarian sympathies, and might lead the reader to question his criticism of both Shiʿi and Sunni sources. On the other hand, this does not undermine his analysis, which is an excellent point of departure for further reading of the sources.

The presentation of the historians follows a rough scheme, where each historian is examined with respect to the conditions in which he wrote, use of sources, use of Isrāʾīlīyāt, and an evaluation of his importance for later historians.

The second chapter of this section on the exposure of historians is occupied by introductions to al-Yaʿqūbī, al-Ṭabarī, and al-Masʿūdī. Al-Yaʿqūbī (d. 292/905) and al-Masʿūdī (d. 346/956) are clearly the favorites of the author. Al-Yaʿqūbī is presented as a scientific historian, who leaves out all kinds of myths and fabulous material. He could do this because of his own wide knowledge of other nations, acquired during his own travels. Al-Yaʿqūbī was also the first to recognize the relation between geography and history, a discourse developed by al-Masʿūdī, who explicitly stipulates the importance of travelling and collection of information about peoples where they live. Al-Masʿūdī's travels served as a supplement to his written sources and he is often seen as a geographer as well as a historian. Al-Yaʿqūbī is also distinguished for being the first historian to record the years of the deaths of the members of the House of the Prophet, thereby introducing the new discipline of obituaries, or *wafayāt*.

The author's main objection to al-Ṭabarī's method is that al-Ṭabarī chooses the sources he prefers before choosing the accounts of events. Al-Ṭabarī then registers all accounts available in the chosen sources and presents them uncritically and as having the same value. Al-Ṭabarī is also criticized for not leaving out mythical and fabulous material, a step al-Yaʿqūbī was able to take, and for concentrating exclusively on political history. ʿAbd al-Ḥamīd is also critical of al-Ṭabarī for limiting himself to a single source—Sayf ibn ʿUmar al-Tamīmī—for the period of the Shiʿi schism in Islam, and for leaving out Muʿāwiyah's correspondence with Muḥammad ibn Abī Bakr. Drawing attention to these observations is of great importance because of al-Ṭabarī's overwhelming influence. Al-Ṭabarī is still the main source for early Islamic history. In fact, al-Ṭabarī's influence and popularity were so great that his own sources were not preserved, since they were no longer needed after al-Ṭabarī. This in particular led to an uncritical reading of al-Ṭabarī, since later historians did not research his sources, and thus failed to fulfil their obligations as professional historians.

The chapter "The Later Universal Historians" gives special attention to the three best-known historians of the later Islamic era: Ibn al-Athīr, Ibn Kathīr, and Ibn Khaldūn. The historian of the Crusades, Ibn al-Athīr, is examined in terms

of his sources and methods. Once rid of al-Ṭabarī as his main source, he shows more independence and often tends to combine his sources into one narrative. Ibn al-Athīr's critical attitude toward Ṣalāḥ al-Dīn, different from other historians, is examined and examples of this are thoroughly presented. Ibn al-Athīr also introduced a system of references that serves to avoid repetition of *akhbār*. Ibn al-Athīr is further distinguished as a historian who linked the history of various Islamic lands, thus incorporating the sources for the history of the Maghrib or the western part of the Islamic world. In doing this he succeeds in presenting the beginning of the Reconquista and the Crusades as one historical movement.

Ibn Kathīr (700–74/1300–73), described as "the historian of the Mamluks," was heavily influenced by his contemporary, the Hanbali Ibn Taymīyah, leading him to write in a way that revealed his ideology or *madhhab*. No doubt ʿAbd al-Ḥamīd finds this approach unsuitable for history writing. Ibn Kathīr's work *Al-Bidāyah wa-al-Nihāyah* is also shown to be rather uneven. The end of the Buwayhid era, the Seljuks, the Fatimids, and the Ayyubids are treated together in one of the work's fourteen volumes, whereas the Mamluk era, up until the year 767, of which Ibn Kathīr was a contemporary, takes up one whole volume, sometimes taking the shape of a diary. This way of reading Ibn Kathīr, however, fails to see his value as a source for his own age. The observation that he was influenced by his *madhhab,* which though originally Shafiʿi is often labelled neo-Hanbali, could have been further elaborated. In the context of Mamluk religious policy this *madhhab* was strongly ideological and reflects the first Mamluks' anti-Mongol and anti-Shiʿi mobilization. This in fact makes Ibn Kathīr an excellent source for the early Mamluk period.

The last historian to be examined is Ibn Khaldūn, best known for his sociological theories about the nature of human society. ʿAbd al-Ḥamīd shows how Ibn Khaldūn used this theory of *ʿaṣabīyah,* or tribal solidarity, to explain how Muʿāwiyah became powerful within the Quraysh and thus was able to seize power in the early Islamic community. ʿAbd al-Ḥamīd also observes that Ibn Khaldūn mentions al-Masʿūdī several times and even calls him the imam of the historians. This has led ʿAbd al-Ḥamīd to a most interesting examination of al-Masʿūdī as a source for Ibn Khaldūn. He has actually found several instances of nearly identical headings concerning government and leadership of the state, and the role played by religion in state building. Obviously Ibn Khaldūn was inspired by al-Masʿūdī, who lived more than 450 years before him. But it is the accomplishment of Ibn Khaldūn that he voiced his theory for the benefit of generations.

In his concluding chapter, ʿAbd al-Ḥamīd acquaints the reader with three interesting Shiʿi historians who represent special points of departure for historical investigations. The first of these three is Ibn Miskawayh (d. 421/1030), who developed a method he called *tajārib*, or experience, by which he singled out only

those events from which mankind is supposed to gain knowledge and wisdom. Events over which mankind has no control, such as divine or prophetic actions, are left out. Ibn Miskawayh is very precise in describing his method but too harsh, in ʿAbd al-Ḥamīd's view, on the prophet's *sīrah,* leaving out too many events important to Islam. ʿAbd al-Ḥamīd next treats the lesser known historian al-Ṭabarsī, who specialized in the *siyar* of the twelve Shiʿi imams, and finally Ibn al-Ṭiqṭaqā and his fourteenth-century work *Kitāb al-Fakhrī.*

Stiftungen in Christentum, Judentum und Islam vor der Moderne: Auf der Suche nach ihren Gemeinsamkeiten und Unterschieden in religiösen Grundlagen, praktischen Zwecken und historischen Transformationen. Edited by Michael Borgolte (Berlin: Akademie Verlag, 2005). Pp 297.

REVIEWED BY ALBRECHT FUESS, Universität Erfurt

Universal history is certainly in vogue these days and "foundations are a phenomenon of Universal history," as Borgolte emphasizes in his introduction. Therefore one wonders why a comparative conference on foundations has not taken place earlier. Prof. Dr. Michael Borgolte (Medieval History at the Humboldt University, Berlin) and Dr. Johannes Pahlitzsch (Seminar for Arabic and Semitics, Freie Universität Berlin) therefore deserve much credit for organizing such a worthwhile inquiry.

This edited volume is the fruit of the conference: "Foundations in the Great Cultures of Old Europe," which took place in June of 2003 at the Humboldt University in Berlin. Now one could argue whether the term "great" is really appropriate in this context, but maybe this was meant as a response to Rumsfeld's definition of "old" and "new" in the European context at that time. However, the actual title of the proceedings, which translates as: "Foundations in Christianity, Judaism and Islam before modernity: Searching for commonalities and differences in religious principles, practical aims and historical transformations," describes more precisely the intention of the editor, i.e., to present a comparative point of view on the history of foundations with a special stress on the ways they were used to raise revenue according to the principles of the three Abrahamic religions.

This collected volume contains eight English and six German articles. Out of the fourteen contributions, two are on Mamluk history, while two others speak about foundations in other periods of Islamic history. Five focus on foundations

in Christianity, with the Byzantine era well represented in three articles. Two discuss Jewish practice (with strong references to Islamic practice), while two more synthesize the themes at the beginning and the end of the volume. Another contribution stands somewhat apart as it addresses pious foundations during the time of the Roman Emperor Augustus.

The book is divided into the three thematic fields: "*memoria* as motive," "*charity* as duty," and "state and society as field of operation." In his German introduction Borgolte broadly examines foundations and their founders. Foundations, he says, serve a higher purpose than to preserve a good memory *(memoria)* of the founder. Often the founder would like to see his endowment be given as charity *(caritas)* which serves the society through feeding the poor, student scholarships, and the like. In other cases the founder acts as patron for science and art (Einleitung, p. 12). Not all foundations are completely altruistic though, since foundations may serve as well to preserve private money from being taken by the tax collector, as happens for example in the case of the Islamic pious foundation, the *waqf*. Although Borgolte elaborates his initial thoughts on the role of foundations in society, this section of the introduction remains rather short and one would have liked him to link the chapters more systematically under thematic headings, maybe by providing a bit more of an analytical hypothesis about what he sees as commonalities and differences, instead of merely describing the contents of the following chapters.

The book then continues with the contribution of Susanne Pickert, who argues that in ancient Rome foundations were quite often used by former slaves and social climbers *(homines novi)* to ensure they were remembered, while the members of the old nobility used other ways to preserve their legacy. Ralf Lusiardi opens the door to the medieval period with his overview of foundations in the monotheistic religions of medieval Europe. Giving to charity in medieval Europe was apparently always linked to receiving a positive or negative reward in the afterlife, especially in Christianity, which has been characterized in this context by experts as "Religion der Angst" (p. 67). The concept of purgatory, which was introduced by the Catholic church around the thirteenth century, then further enhanced the importance of the practice of *memoria* and foundations. One of the shortcomings of this article is that while the Christian practice of endowment is well described, the discussion concerning the other two monotheistic religions, especially Islam, remains rather shallow, thereby devaluing the insights in the rest of the paper.

The "Islamic" part of the book begins with a German introduction by Johannes Pahlitzsch on the aspect of *memoria* in Islamic foundations from the early times until the Mamluk period. Actually, it is this kind of introductory and comprehensive survey that the reviewer would have liked to read for the Christian and the

Jewish side as well. Pahlitzsch explains how the idea of *memoria* in the Islamic realm overcame the early Islamic theological objection against tomb cults until it became an integral part of Islam, culminating in the emergence of the institution of the *turbah-madrasah* from the eleventh century onwards. With the *turbah-madrasah* the Islamic pious foundation *(waqf)* witnessed a remarkable increase of popularity. *Waqf* played a key role from then on in Muslim memorial culture and it became a common concept that the memory of the founder lived on through his pious deeds. A *waqf* document which was issued for the foundation of the grave of the Prophet Moses by the Mamluk Sultan Baybars in 1270 reads as follows: "it [the foundation] keeps alive the memory of the founder, . . . whereby he receives a second life" (p. 92). Adam Sabra then elaborates the ambivalent character of Islamic foundations between private charity and public policy in the Mamluk period. He especially draws attention to the fact that the land which the Mamluk military elite used to establish foundations was quite often initially *iqṭāʿ* (fief)-land, which should have theoretically paid the armies and should not have been used by pious foundations; moreover, in many cases they contributed more to the relatives of the founder than to the general public. However, attempts to abolish the *awqāf,* as happened in 1378 when Sultan Barqūq attempted to convert it back into public land to benefit the army, were unsuccessful, as this practice had been too widespread among the Mamluk elite. Sabra further advocates reconsidering the classical dichotomy of *waqf khayrī* (charitable foundation) and *waqf ahlī* (family foundation), because "historians of Islamic foundations now realize that many *awqāf* served both groups" (p. 101). Ana Maria Carbeilleira-Debasa in her chapter describes the positive effects of the institution of foundations in Islamic Spain, which is called *ḥubs* in the Maghrebi context. This is followed by three articles on endowment practices in Christian Byzantium (John Thomas on aspirations of Byzantine founders, Peregrine Horden on motives of Byzantine philanthropists, and Dionysios Ch. Stathkopoulos on foundations of hospitals in the late Byzantine period). Ludwig Steindorf then presents a valuable introduction to the system of foundations in the period of the Kievan Rus' in Ukraine and Russia.

Of more direct interest for the Mamluk scholar might be Mark Cohen's study on foundations and charity among Jews in medieval Egypt. The study makes explicit use of the Geniza documents of medieval Cairo and states that only 10% of the revenue from Jewish foundations (sing. *heqdesh*) went to direct charity, i.e., feeding the poor, whereas 76.3% was given as salaries to Jewish scholars and officials and about 14% went to the maintenance of synagogues. In the contemporary European Jewish *heqdesh* system it was apparently the opposite; most of the proceeds from foundations went directly to the poor. Cohen explains this on one hand by the fact that in Egypt Jews were very much influenced by the Islamic *waqf* system, which also contained many aspects of indirect charity

distribution, and that on the other hand in Egypt there were more direct charities available for Jews, which could be financed, for example, by intercommunity taxes, than in the more restricted life in the European ghettoes.

Judah Galinsky discerns differences in foundation practices in the Jewish community of Germany and Spain in the fifteenth century, whereby the Islamic example in Spain apparently had a decisive impact in creating such distinctions. Benjamin Scheller then applies a modified Weberian approach to the connection between foundations and political power in the Occident and how studying this question can help us to understand the history of nation building in pre-modern Europe. This is followed by Suraiya Faroqhi's description of the state of the art of modern scholarship concerning pious foundations of the Ottoman Empire in the seventeenth and eighteenth centuries. The final contribution of the volume is reserved for the late doyen of *waqf* studies, Gabriel Baer. The article, which is here printed posthumously, was first delivered as a lecture in 1981 and is published in this book with the help of Miriam Hoexter, another very important and influential scholar of Muslim *waqf* studies. The paper is titled "The Muslim *waqf* and similar institutions in other civilizations." Baer's intention was "to find out the particular characteristics of the Muslim *waqf,* and to derive from these findings some more general conclusions" (p. 258), but it seems to me he has not succeeded. He correctly describes the success story of the *waqf;* how it became one of the most long-lasting foundations in the history of mankind and how it developed into the principle way to circumvent the rules of succession and inheritance in the Quran, while still being considered religiously acceptable. Nevertheless, there are some shortcomings in the argumentation once Baer leaves the Judeo-Islamic aspects of his analysis. To be honest, I did not really understand the relevance of comparing *waqf* to Hindu religious and charitable trust and endowment practices in early modern Nepal. Such comparisons are bound to be lopsided, simply because the scholar draws on one side (here from the side of Islam) from primary sources and on the other side only relies on secondary sources.

My main critique of this volume would follow the same direction. If you really want a comparative work, then you have to make it more comparative. First of all, a glossary containing all technical terms used in the volume and their detailed explanation could be a start. The outer framework of the topic could be outlined more stringently, so that contributions might be more intertwined or focused on the same questions. For any comparative chapters my suggestions would be to bring scholars from different fields together to write such papers. There are very good articles in this book but as they stand now, they lack an inner cohesion.

Having said all this, I am well aware that these points are easier to posit than to fulfill. In any case, one has to acknowledge that a very important step in universal foundation studies has been achieved by the participating scholars and especially

the organizers of the conference, and that there are certainly more exciting studies in this field to come.

Noble Ideals and Bloody Realities: Warfare in the Middle Ages. Edited by Niall Christie and Maya Yazigi. History of Warfare, vol. 37 (Leiden, New York: Brill, 2006). Pp. 269.

REVIEWED BY WALTER E. KAEGI, The University of Chicago

This collective volume is, on balance, a useful contribution to the understanding of medieval warfare even though the papers are disconnected and of uneven quality. Overall quality, despite some lapses, is good. These are materials or explorations of topics towards writing a history of medieval warfare, without any comprehensive synthesis. Most of these diverse papers were originally part of a program of a medieval workshop at the University of British Columbia in late 2003.

The papers fall into three explicit categories: (1) Noble Ideals: Perceptions of Warfare, (2) Bloody Realities: War In Practice, and (3) Unto the Breach: Re-examining Issues in Medieval and Modern Military Historiography.

The Crusades are prominent within this collection of essays even though the Crusades are not the subject of every contribution. But there are unexplicable and major gaps. For the readers of this journal conspicuously absent are the Mamluks, who appear only briefly in an allusion on page 93. The very regrettable omission of the Mamluks is even more striking because many of the actual papers discuss thirteenth- and fourteenth-century military topics. Although the fate of Crusading states is interlinked with their warfare and diplomacy with the Mamluks, none of that is found in this volume. The best Islamic history paper is that of Hugh Kennedy on "The Military Revolution and the Early Islamic State," pp. 197–208. It is a valuable contribution with many insights concerning Turkish soldiers in ninth- and tenth-century Iraq. Likewise of special interest is the essay by Niall Christie, "'Religious Campaign or War of Conquest? Muslim Views of the Motives of the First Crusade," pp. 57–72, who wisely consulted with Paul M. Cobb of the University of Notre Dame concerning particulars of the Arabic texts. Christie explores fragmented Muslim reactions and notes the relatively modest claim, within Muslim sources, for Frankish motivations for holy war. A third essay of special interest is Piers D. Mitchell, "The Torture of Military Captives in the

Crusades to the Medieval Middle East," pp 97–118. He does not discuss any cases of torture in Mamluk-Crusader warfare.

Treadgold's essay "Byzantium, the Reluctant Warrior," pp. 209–34, rightly rejects, as I have, the concept of holy war for Byzantium (pp. 210–12), but with qualifications. He then discusses what he calls Byzantine "civil wars," on pp. 224 ff. He criticizes the coverage of civil wars in my *Byzantine Military Unrest* (1981); however, its subject was never intended to be what he calls "civil wars." Instead its explicit subject was military seditions, conspiracies, intrigues, rivalries, and expressions of grievances between 471 and 843 C. E. These are not synonymous with civil wars. This is a false categorization. His critique of my work is erroneous. There is nothing wrong with Treadgold's listing, cataloging, and commenting on Byzantine civil wars, but civil wars were not my chosen subject. Treadgold omits citation and use of the important and lengthy monograph by Catherine Holmes on the civil war-ridden reign of Basil II: *Basil II and the Governance of Empire* (Oxford, 2005). Readers should exercise caution with respect to Treadgold's numbers for Byzantine armies and his criticisms of John Haldon; among others, see the English-language review by Wolfram Brandes, *Byzantinische Zeitschrift* 95 (2002): 716–25, and the review by J.-M. Carrié and S. Janniard, "L'Armée romaine tardive dans quelques travaux récents: 1ere partie: L'Institution militaire et les modes de combat," *Antiquité Tardive* 8 (2000): 321–41.

David J. Hay offers a useful collection and review of instances of civilian casualties and suffering in his paper "'Collateral Damage?' Civilian Casualties in the Early Ideologies of Chivalry and Crusade," pp. 3–25. He concentrates on the period of the earliest Crusades.

John France, "Thinking about Crusader Strategy," pp. 75–96, revisits some of his previous conclusions about the Crusades, most notably the First Crusade. In his words, it was "a papal strategy to achieve survival and perhaps dominance in a changing Europe" (p. 93). He stresses the papal and Crusaders' need for a Byzantine alliance and of course the importance of Jerusalem.

What readers will not find are histories of operational warfare, with the possible exception of Milwright's essay. Fascinating but undocumented speculations abound in his paper, "Reynaud of Châtillon and the Red Sea Expedition of 1182–83," pp. 235–60, concerning possible objectives in this failed raid. According to him, the objectives of the expedition may have included seizure and removal of physical remains of Muhammad and other eminent Muslims from Medina.

Kelly DeVries, "Medieval Warfare and the Value of a Human Life," pp. 27–55, argues provocatively that changes in later medieval warfare resulted in the reduction of the value of human life from that of the early and high middle ages. He challenges some generalizations about the history of warfare that appear in recent surveys.

Deborah Gerish, "Holy War, Royal Wives, and Equivocation in Twelfth-Century Jerusalem," pp. 119–44, explores aspects of gender theory and royal identity. Her essay would have profited from consulting the valuable art historical dissertation of Cecily J. Hilsdale, "Diplomacy by Design: Rhetorical Strategies of the Byzantine Gift" (University of Chicago, 2003), and especially her important article on twelfth-century royal identity in the eastern Mediterranean: "Constructing a Byzantine Augusta: A Greek Book for a French Bride," *Art Bulletin* 87 (2005): 458–83.

Papers do not concentrate exclusively on the eastern Mediterranean. One investigates conditions in Spain: Paula D. Stiles, "Arming the Enemy: Non-Christians' Roles in the Military Culture of the Crown of Aragon during the *Reconquista*," pp. 145–61. She investigates the policies towards Muslims and Jews in recently conquered regions in the twelfth through fourteenth centuries, especially in the Ebro valley. Two papers refer to aspects of warfare in medieval England: David G. Sylvester, "Communal Piracy in Medieval England's Cinque Ports," pp. 163–76, and Ilana Krug, "Wartime Corruption and Complaints of the English Peasantry," pp. 177–93, an instructive, acute, and revealing investigation of military finance and grievances with special attention to the reigns of Edward I and Edward III.

These are essays worth reading and absorbing. Some are stimulating as well as informative. No coherent picture emerges, but the collective volume has a place in any bibliography on medieval and Crusading warfare. There is a short index, but it lacks maps or figures or a comprehensive bibliography. It belongs in libraries on the history of warfare, medieval military history, medieval history, Byzantium, medieval Islam, and the medieval eastern Mediterranean.

Mamluks and Ottomans: Studies in Honour of Michael Winter. Edited by David J. Wasserstein and Ami Ayalon. Routledge Studies in Middle Eastern History, vol. 5 (London and New York: Routledge, 2006). Pp. 258, figures, tables, and a list of publications.

REVIEWED BY W. W. CLIFFORD, The University of Chicago

This volume, in English, is one of two published simultaneously to commemorate the retirement of Professor Michael Winter from the department of Middle Eastern and African History at Tel Aviv University after more than three decades

of distinguished academic service. The second volume, in Hebrew, is said by the editors to be concerned with religious and educational matters less historically embedded, presumably, than the present collection of articles. Dr. Winter, it should be noted, was for some years before taking up his post at Tel Aviv University an inspector in the Arab section of the Israeli Ministry of Education.

The "leitmotif" of this volume, as of Dr. Winter's scholarship generally, is the mutual historical interdependence of Mamluk and Ottoman Egypt, and the editors are quite unapologetic in their rejection of "that epochal date of 1516/1517" with its anachronistic "implications of closure and rupture" as a watershed in Egyptian history. Indeed, these contributions have been groomed to reflect this "crossover" in the "historical experience of Arabic-speaking societies in Egypt and the Fertile Crescent during the period from the fourteenth to the seventeenth centuries."

As with many *Festschriften,* however, some contributions are more germane to the editors' purposes than others. Particularly apposite is Daniel Crecelius's study of the financial administration of Damietta's *zāwiyah*s, mosques, and madrasahs during the last half of the eighteenth century, which provides an overview of the gradual impoverishment of religious institutions in the Delta following their heyday in the late Mamluk period. The *sijillāt* reveal clearly that many of these smaller religious centers "could barely sustain their function" over time, and while some larger ones enjoyed relatively greater and more stable incomes—the result of more numerous and profitable, long-term, commercial leaseholds—they too were steadily falling prey to inflation and physical decay. Even the once illustrious Muʾayyadīyah mosque, one of many tributes to Sultan Qāytbāy's pious profligacy, was barely a going concern on the eve of Napoleon's invasion.

Miri Shefer of Tel Aviv University has profiled continuities and changes in the profession of court medicine between the late Mamluk and early Ottoman periods. Ottoman sultans had long been interested in acquiring Mamluk medical experts for their relatively unsophisticated courts and the conquest gave them an unqualified opportunity to gratify this cultural desire. A case in point, the Qaysunizades, a family of Cairene physicians who had served the late Mamluk court, were recruited to tend not only Yavuz Selim, but a whole succession of Ottoman sultans down to the early seventeenth century. Yet, in spite of the dramatic medical brain-drain from Cairo to Istanbul in the aftermath of the conquest, the post of court physician in the Ottoman period was generally more likely to be filled by Anatolian than Egyptian medical experts. Increasingly absent, too, by the seventeenth century, Shefer contends, were court physicians of *dhimmī* origin. This was so, despite the fact that the medical profession under the Ottomans remained an open occupation circumscribed only by the acquisition of medical *ʿilm* and remained still one of the few paths to great wealth and position open to non-Muslims, unlike in the Mamluk period.

Rachel Milstein of Hebrew University, through a close comparison of illustrated hajj certificates with the illuminated *Fuṭūh al-Ḥaramayn* of Muḥyī al-Dīn Lārī, has detected in their stylized representations certain actual changes in the urban landscape of Mecca and Medina from the Mamluk through the early Ottoman periods. These include such things as modifications to the archways and roofs of the Haram, the fountains by the Maʾlah cemetery, even the novel erection of coffeehouses near the Jabal ʿArafat. Her research has not only revealed Mecca as an "intense" center of book production but suggested the evolution from the thirteenth to the sixteenth centuries of a discernible "Meccan school" of manuscript illumination among the *mujāwirūn* in the Holy City.

Amnon Cohen, also of Hebrew University, has seen equally no "watershed in the popular customs and habits" of Palestinians relative to the annual religious festival centered around the Maqām Nabī Mūsá in the Judean Desert near Jericho. A walled complex of some note by the end of the Mamluk epoch, the *maqām* continued to thrive during the early Ottoman period, supported both by private endowment and public monies commensurate with its increasingly blended role as a shrine, rest stop, and security post for travelers diverting to Jerusalem off the main Damascus–Mecca Pilgrimage route. Coincidentally, in this same volume, Reuven Amitai has shed new light on the foundation of the Nabī Mūsá complex in the early Mamluk period through his analysis of an inscription of al-Malik al-Ẓāhir Baybars on the mosque. In this volume, too, Hanna Taragan has further embedded these observations on Maqām Nabī Mūsá and other Mamluk religious sites in a general consideration of the psychology of Baybars' architectural usages. Whether through the incorporation of the cushion voussoir in portal arches, the revival of the hypostyle mosque, or even just the salvage of historic building materials, Baybars sought to "visually reflect the power struggle between the two religions [Islam and Christianity]" in medieval Syro-Egypt.

Boaz Shoshan of Ben Gurion University has drawn attention to a clutch of instructional Sufi sermons, *Al-Rawḍ al-Fāʾiq fī al-Mawāʿiẓ wa-al-Raqāʾiq,* to contemplate the increasing integration of Sufic knowledge into mainstream Islamic culture during this Mamluk-Ottoman "crossover." Though little known and of uncertain authorship, such scarce examples of *mawāʿiẓ* literature, Shoshan believes, are vitally important in shedding light not on the organizational but rather ideational structure of late medieval Egyptian culture.

Daphna Efrat of Open University has reiterated that theme in her contribution, noting that the ostensible divide between popular and elite religious practices was visibly "bridgeable" in late medieval Syria as well. This is particularly noticeable in the social consolidation of public veneration of the *walī Allāh* in Mamluk Jerusalem and Hebron, both already prolific centers of pilgrimage, saintly tombs, and lodges.

A few contributions are perhaps inevitably wide of the mark paced off by the editors. Some are temporally displaced. Articles, for instance, by Ursula Wokoeck of Tel Aviv University on the expropriation of the Egyptian peasantry and Gabriel Warburg of the University of Haifa concerning the role of the Sufi *tarīqah* in the Islamization of the Sudan are considerations of chiefly nineteenth-century history. Other contributions are geographically displaced. The joint study by Minna Rozen and Benjamin Arbel of the University of Haifa and Tel Aviv University, respectively, concerning the Istanbul fire of 1569, based principally on the letters of the Venetian *bailo* Marcantonio Barbaro, certainly sheds new light on the problems of urban renewal in Istanbul, but not Cairo. The survey by Amy Singer, also of Tel Aviv University, of the Ottoman *ʿimaret* institution in the early seventeenth century, derived from Evliya Çelebi's *Seyahatname,* is similarly devoid of any references to Egypt, despite the fact that Çelebi not only took in the sights but resided there some years writing up his travel notes.

Singer's conclusion that the *ʿimaret* system, geared especially for the needs of travelers, "established a shared culture across the Ottoman Empire" is nevertheless insightful. Puzzling, though, is her contention that the "genesis of the ʿimaret is as yet untraced" and without any "parallel in Middle Eastern . . . history in the pre-modern period." If there is no antecedent in the Mamluk period, there is one certainly in the Byzantine. With its roots in classical antiquity, the *xenon* (hospice) emerged in the early medieval period as part of an administrative effort, both public and private, to dispense *philanthropia* at the diocesan and eparchic level. *Xenones* served travelers of every description, especially indigent pilgrims and refugees. Primarily centers of food distribution, they sometimes also provided temporary housing, quartermaster, medical, and even burial services. While often annexed to churches, monasteries, and shrines, there were numerous independent urban *xenones* as well as those posted out along the highways that crisscrossed the Byzantine Empire. Indeed, many of the cities listed by Singer as possessing *ʿimaret*s in the Ottoman period correspond to already well-known centers of industrialized philanthropy in the Byzantine period. Though likely in decline during the last century and a half of its existence, the Byzantine *evage systemata* surely informed the inception of the Ottoman *ʿimaret* system.

Even a contribution with seemingly greater temporal and geographic relevance such as Jane Hathaway's observations on the "prelude" to Ottoman rule in the Yemen touches on Egypt only tangentially. Moreover, her contention that the acquisition of the Yemen "loomed large" in Ottoman strategic thinking as a means of forestalling a "Portuguese . . . reconquest of Jerusalem" seems far-fetched. At the turn of the sixteenth century, the Ottomans were far more absorbed by the strategic problem of protecting Anatolia from Safavid Iran than Palestine from Portugal.

In sum, scholars generally will find much of interest in this *Festschrift*. Mamlukists in particular will discover a bonus in three additional contributions to fourteenth-century Syro-Egyptian history. Donald P. Little has reproduced and interpreted yet another important Haram collection document concerning a divorce proceeding in Jerusalem; Carl F. Petry has brought to light a bizarre criminal incident in Cairo replete with interesting sociological implications; and Amalia Levanoni has tied the increasing military employment of the *awlād al-nās* to a revolutionary attempt by the Qalawunids to establish "a new political nobility in the Mamluk army," to offset the declining importation of *mamālīk* of Turkish origin over the course of that century. Finally, the *Festschrift* provides an interesting cross-section of current, younger Israeli scholarship, particularly at Tel Aviv University, centered around Winter's unitary vision of late medieval/early modern Near Eastern history.

NICHOLAS WARNER, *The True Description of Cairo: A Sixteenth-Century Venetian View* (London: The Arcadian Library; Oxford: Oxford University Press, 2006). Vol. I, pp. 216; vol. II, pp. 237 + topographic key; vol. III, 1 map.

REVIEWED BY JOHN RODENBECK

These days it is probably Nicholas Warner who knows more about the physical fabric of Mamluk Cairo than anyone else alive. He has done restoration and conservation in the city's historic zone, and his stunning *Monuments of Historic Cairo: A Map and Descriptive Catalogue,* published in 2005, is as complete a survey of what is known about its monuments and their current state as we are ever likely to have. His elegant three-volume *True Description of Cairo* succeeds in a complementary task, evoking with unparalleled thoroughness the physical reality of the city as it was near the end of the Mamluk era. It rests on the story of one particular Venetian map of Cairo, which Warner describes as "the first great surviving representation of the city of Cairo in the Renaissance tradition of the aerial oblique view": *La Vera Descritione de la Gran Cità del Caiero* [sic], which was drawn on wood blocks by the Greek artist Giovanni Domenico Zorzi of Malvasia and printed with an accompanying commentary in booklet form by Matteo Pagano of Venice. Both map and commentary were published in or before 1549, but obviously drew upon material dating back as far as the 1490s.

The chief subject of the legends and vignettes printed on the map is the capture of the city by Selim the Grim in 1517. The legends, which are in Venetian, are the basis of the commentary, which is in Latin. The most probable author of the commentary, Guillaume Postel (1510–81), identified by Robert Irwin as the first Orientalist, probably never visited Cairo and thus likewise drew upon earlier material. This view/map survives in only two impressions (one in the Arcadian Library, the other in the Kupferstichkabinett und Sammlung der Zeichnungen in Berlin), the commentary in only three known copies (in the British Library, the Bibliothèque Nationale, and the Kunstbibliothek in Berlin).

The first volume of Warner's trilogy begins with a consideration of medieval and early modern European visions of al-Maḥrūsah—sometimes quite fanciful—then moves on to an analysis that contains the following: (1) A chapter surveying all the surviving and known images of Cairo from the early fourteenth century to the mid- or late-seventeenth, with an illustration of each. Of special interest here are a sketch (held in the Biblioteca Apostolica Vaticana) and a watercolor map or view (held in the Archivio di Stato di Torino) of Cairo as seen and rendered at first hand from the height of the Muqaṭṭam by Pellegrino Brocardo of Liguria. Painter, musician, traveller, pilgrim, and priest, Brocardo visited the city in 1556. Like most of the other materials in this chapter, neither the sketch nor the map has been published before. (2) A chapter on Pagano, Zorzi, and Postel, their sources and aims, and the techniques involved in producing such an enormous piece of work. (3) A chapter on the cultural and economic context of sixteenth-century Venice, which enjoyed both commercial and cultural ties with Egypt stretching back over several centuries. (4) An appendix demonstrating the subsequent persistence of Pagano's image of Cairo throughout the following century and a half. (5) A second appendix consisting of extracts from the well-known letter addressed by Brocardo to Antonio Gigante da Fossombone, secretary to Ludovico Beccadelli, bishop of Ragusa, who became Brocardo's patron. Dated 1557 and first published in 1803, it describes what Brocardo had seen in Cairo the previous summer, including such major public events as the opening of the dam at the head of the Khalīj al-Miṣrī during the annual flood of the Nile and the departure of the caravan bearing the *maḥmal* to Mecca, with its enormous escort of Ottoman troops. Of all important travelers' accounts surviving from this period Brocardo's is the only one composed so shortly after the events it describes. (6) A bibliography of relevant works in English, French, Italian, German, and Latin. (7) An index to volumes I and II.

The second volume consists of (1) A facsimile of *Descriptio Alcahirae,* Postel's three-chapter Latin commentary on the map, followed by (2) Warner's own detailed commentary on Postel and (3) A series of 32 addenda in which Warner takes up items in the map that range from Pagano's business address to the depiction of monuments and several unlabeled vignettes ignored by Postel.

Of the three chapters in Postel's *Descriptio,* the first and second are generally deluded, wrong, or negligible, and serve chiefly to remind us that Postel came to entertain ideas that were very bizarre even by the standards of his own era and, indeed, spent the last 19 years of his life in a madhouse. Postel's third chapter, however, containing his commentary on the 34 legends printed on the map, owes a great deal to sound earlier sources, such as Leo Africanus. Here Warner brings to bear on Postel the results of an enormous amount of research among primary and secondary sources, providing a kind of compendium of available scholarship. Continuing in this same vein with 32 addenda of his own, independent of Postel, Warner then offers a wonderful collection of accurate and detailed historical insights drawn from secondary sources, much of which has the additional virtue of being attached to real physical objects—the buildings of Mamluk al-Maḥrūsah—most of them still extant. Others of Warner's addenda consider in detail some of the unlabeled vignettes printed on the map. Many of them are amusing; and they range in subject matter from palm trees and camels to a stout citizen defecating into the Nile, a vision that suggests someone's first-hand observation.

The map itself, finally, on heavy paper and measuring more than two meters long and a meter and a quarter wide, constitutes the third volume. It comes folded and slip-cased to match the first two volumes and does somehow succeed in giving an impression of the majesty of the Mamluks' imperial capital. Though there are many obvious omissions and errors, there are also many touches of authenticity.

As Warner observes, for example, not one Christian church is shown, though there were—and are—many. The aqueduct is placed south of Old Cairo, a major error copied repeatedly by subsequent plagiarists and thence mistakenly taken as a valid clue by archaeologists, who have looked in vain for physical evidence of an aqueduct in that location. What the absence thereof shows instead is the degree to which European depictions of al-Maḥrūsah became traditional, rather than being based on observation. Unlike earlier images, on the other hand, Pagano's map shows Cairene houses correctly as flat-roofed; and the city's mosques, which are identified as Cairene even down to this day by their characteristic pairing of dome and minaret, have all been supplied both with domes of various kinds and recognizably Mamluk minarets. Pagano's map thus has an overall flavor that is familiar and curiously right.

These three volumes have already been described by Robert Irwin in a review in *Times Literary Supplement* as "fit for the shelves of scholar princes." They are a triumph of modern book design and printing and binding technology. I have suggested elsewhere that Nicholas Warner and the Arcadian Library should be celebrated, Mamluk-style, with lights, music, acrobatics, and feats of horsemanship.

Jalāl al-Dīn al-Suyūṭī, *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah.* Edited by Muḥammad al-Shishtāwī (Cairo: Dār al-Āfāq al-ʿArabīyah, 2002). Pp. 620.

Reviewed by Stephan Conermann, Universität Bonn

For this recently published edition of the work *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah* from the pen of the well known Muslim scholar, Jalāl al-Dīn al-Suyūṭī (d. 911/1505), the editor Muḥammad al-Shishtāwī has collated seven manuscripts. Six of them are preserved in the Dār al-Kutub al-Miṣrīyah and the last one in al-Azhar. As al-Shishtāwī himself admits, none of these manuscripts are the best ones available. They are neither very reliable nor of good quality. Apparently, the selection principle was more due to the location of the holding libraries than to research criteria. In any case, in his preface to the text, al-Shishtāwī gives us no further editorial principles. But faced with the fact that we have knowledge of a large number of accessible manuscripts of al-Suyūṭī's text, this seems to be a rather unsatisfactory way of proceeding. So while we are pleased to have a printed version of this remarkable text, strictly speaking this is no feat of scholarship. At best it is a good *editio princeps*.

And yet the contents of the work are quite interesting. It is part of the Mamluk literature about the Nile which, up to now, has only been partly analyzed by Mamlukologists. From a comparatist's point of view, various questions might suggest themselves. One could, for example, ask what genre the *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah* represents? How can we categorize pre-modern Arabic texts that focus more or less exclusively on the Nile and its island al-Rawḍah? What are the specific literary characteristics of these works? In a pioneering article, Thomas Bauer has edited, translated, and interpreted a *zajal* on the Nile written by Ibrāhīm al-Miʿmār (d. 749/1348).[1] Thomas Bauer points out that it is surprisingly rare for Egyptian Mamluk poets to write about the great river and its life-giving floods. Besides the above-mentioned *zajal,* there also exists an epigram of Ibn Nubātah (d. 768/1366) and some verses from Ibn Sūdūn's (d. 868/1464) *Dīwān*—but what else do we have? Fortunately, you find more when you look at the *maqāmah* literature. Even our author, Jalāl al-Dīn al-Suyūṭī, composed a *maqāmah* dedicated entirely to the Nile flood: *Al-Maqāmah al-Baḥrīyah (aw al-Nīlīyah) fī al-Rakhāʾ*

[1] See Thomas Bauer, "Das Nilzağal des Ibrāhīm al-Miʿmār: Ein Lied zur Feier des Nilschwellenfestes," in *Alltagsleben und materielle Kultur in der arabischen Sprache und Literatur: Festschrift für Heinz Grotzfeld zum 70. Geburtstag,* ed. Thomas Bauer and Ulrike Stehli-Werbeck (Wiesbaden, 2005), 69–88.

wa-al-Ghalāʾ.[2] Another epos which bears the title *Bulbul al-Rawḍah* deals only with the famous island, on which al-Suyūṭī lived and worked for many years.[3] This work contains the same verses we find included in his *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah* (pp. 344–50).

Al-Suyūṭī says that he took the first part of the title, which means "The star (i.e., the abundance of flowers) of the island Rawḍah," from the *Ṣiḥāḥ* of the lexicographer al-Jawharī (d. ca. 397/1006–7).[4] He wants, al-Suyūṭī continues, to present the reader with a beautiful and edifying book about "the history of the Nile and the island al-Rawḍah." Concerning the genre, one could probably say that his work is representative of the so-called *faḍāʾil*-literature[5] which was very popular during the time of Mamluk rule in Egypt and Syria. A characteristic trait of these texts is the compilation of known and unknown historical events, occurrences, legends, poems, marvels, wonders *(ʿajāʾib)* and traditions in praise of persons, locations, books, tribes, and other things. This genre is linked with geographic descriptions as well as with pure *ʿajāʾib* works in which the producer of the texts tells about marvellous things as they exist in reality or fantasy. The narration is meant to evoke general astonishment in the recipient's mind at the wonder of God's creation. So, if we find in many treatises implausible and dubious as well as realistic and scientifically accepted *ʿajāʾib* side by side, the authors actually are aware of the difference between the two categories.[6] A good example is Ibn Iyās' (d. 930/1524) "Nashq al-Azhār fī ʿAjāʾib al-Aqṭār" (MS Gotha 1518), which is about the description of the Wonders of the World with the focus on Egypt and the Nile.

Additional books from the Mamluk epoch in which the Nile is praised are Jalāl al-Dīn Maḥallī's (d. 864/1459) "Al-Qawl al-Mufīd fī al-Nīl al-Saʿīd" (MSS Paris 2259 and 2260) and al-Aqfahsī ibn al-ʿImād's (d. 808/1405) "Risalah fī al-Nīl wa-Ahrāmihā" (MS Berlin 6115). Neither of them has hitherto been the subject of scholarly analysis. Al-Suyūṭī's *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah* is just another typical *faḍāʾil* work. We should read it as a supplement

Ulrich Hübner and Antje Richter (Schenefeld, 2004), 15–60, esp. 46–53.

[6]On this topic, see Syrinx von Hees, "The Astonishing: A Critique and Re-reading of ʿAǧāʾib Literature," *Middle East Literatures* 8, no. 2 (2005): 101–20.

to his *Ḥusn al-Muḥāḍarah fī Tārīkh Miṣr wa-al-Qāhirah*[7] which, like Abū Ḥāmid al-Qudsī's (d. 888/1438) *Al-Faḍāʾil al-Bāhirah fī Maḥāsin Miṣr wa-al-Qāhirah,*[8] puts the main emphasis on the description of Cairo and the Nile.

Another quite remarkable text is a sermon on the Nile *(khuṭbah fī al-Nīl)* which can be found in ʿAbd al-Raḥīm Ibn Nubātah's (d. 374/984–85) *Dīwān al-Khuṭab al-Minbarīyah*. But serious doubts have been raised as to whether these pages are really from his hand or whether someone else incorporated them into this collection much later.[9]

How is a representative *faḍāʾil* work structured? What can be said about its constituent elements? Let's take al-Suyūṭī's *Kawkab al-Rawḍah fī Tārīkh al-Nīl wa-Jazīrat al-Rawḍah* as an example: after having quoted the related verses from the Quran and the traditions, the author explains the word "Rawḍah." Then he continues with a description of the island's fortifications, buildings, palaces, mosques, and bridges. Then follows a survey of the Nile and the wonders connected with it like the rising and falling of the floods and the Nilometer. The next things al-Suyūṭī finds interesting enough to speak of are the flowers, plants, and fruits on al-Rawḍah. After a detailed analysis of these things he quite suddenly turns to the history of his subject: all rulers who did something for the glory and reputation of the island are mentioned. Poems and verses, including his own, are added to the facts. Finally he gives the reader a list of all the sultans who visited al-Rawḍah.

By and large, this kind of *faḍāʾil* literature can be seen as a very clever and skillful compilation of sayings, myths, verses, and historical information about the Nile taken from the works of many Muslim scholars and writers. Against this backdrop, it is quite normal that al-Suyūṭī quotes extensively from the books of Ibn Bayṭār (d. 646/1248), Ibn ʿAbd al-Ḥakam (d. 257/871), Ibn Ḥajar al-ʿAsqalānī (d. 852/1449), Ibn Ḥawqal (d. after 378/988), Ibn Wardī (d. 749/1349), al-Masʿūdī (d. 345/956), al-Ṣafadī (d. 764/1363), and above all from al-Maqrīzī (d. 845/1442). In addition to this, he includes numerous passages from his own treatises in his new work. For a modern scholar this whole procedure seems to be neither honest nor creative, but we should keep in mind that the technique of compilation which we can find in many pre-modern literatures should not be mentioned in connection with what is nowadays called plagiarism. A compilation is an innovative and original work which in general belongs to a different genre than source materials.[10] We should direct our thoughts about al-Suyūṭī's *Kawkab*

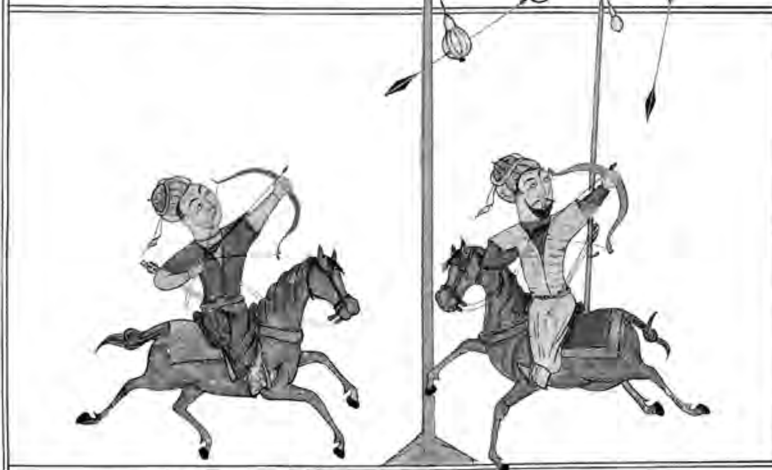
Arabic Transliteration System



Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	ʼ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʻ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ـُو	ū	ـِي	ī
ـَا	ā	ـُوّ	ūw	ـِيّ	īy (medial), ī (final)
ى	á	ـَو	aw	ـَي	ay
				ـَيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES REVIEW

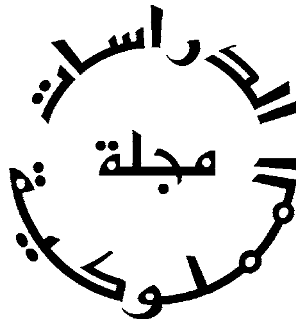
PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO



Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2008 Prize, dissertations must be defended by December 31, 2008, and submitted to the Prize Committee by January 31, 2009. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:
2004: Tamer el-Leithy, Princeton University, "Coptic Culture and Conversion in Medieval Cairo: 1293-1524."

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries."

2006: Nahyan A. G. Fancy, University of Notre Dame, "Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)"

Ibn Nubātah al-Miṣrī (686–768/1287–1366): Life and Works Part I: The Life of Ibn Nubātah

1. "The Solitaire of the Age"

"If anyone in our century tried to equal Ibn Nubātah in poetry, prose, or handwriting, he would attempt something impossible and aspire to something that will in no way occur."[1] These are the words of the scholar Tāj al-Dīn al-Subkī, who was well acquainted with Ibn Nubātah. The historian Ibn Ḥabīb, another acquaintance of his, sums up Ibn Nubātah's accomplishments as follows: *wa-bi-al-jumlah fa-kāna uʿjūbat al-zamān wa-nādirat al-waqt wa-farīd al-awān* "On the whole, he was the wonder of the era, the prodigy of this time, the solitaire of the age."[2] The hadith scholar Walī al-Dīn Ibn al-ʿIrāqī boasted of Ibn Nubātah a generation later: "Ibn Nubātah distinguished himself in the field of *adab* and reached in it everything that can be desired; he surpassed his contemporaries, transcended the people of his epoch, and ended up peerless and as the solitary leader in the field. His poetry reached the acme of perfection, and I do not think that the whole eighth century produced sweeter poetry than his."[3]

For al-Ṣafadī, however, Ṣafī al-Dīn al-Ḥillī was the greatest poet of the age for perhaps two reasons. First, al-Ṣafadī's style, characterized by his love for *jinās,* was more akin to that of al-Ḥillī than to that of Ibn Nubātah. Second, al-Ṣafadī's relationship with Ibn Nubātah was a troubled one. On the one hand, al-Ṣafadī struggled throughout his life to escape the shadow of his master, Ibn Nubātah, who doubtlessly was the greater poet; on the other hand, al-Ṣafadī was a much more outgoing personality than the rather taciturn Ibn Nubātah and therefore gained more worldly success. In their relationship, periods of friendship alternated with periods of animosity. Nevertheless, al-Ṣafadī finds enthusiastic words for Ibn Nubātah. As a poet, al-Ṣafadī remarks, Ibn Nubātah "is unique in the elegance of his verse-making, the sweetness of his expressions, the excellence of his poetic compositions, the astonishing quality of his topics, the clarity of his language, and

[2] Badr al-Dīn Ibn Ḥabīb, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh,* ed. Muḥammad M. Amīn (Cairo, 1976–86), 3:305.

[3] Aḥmad ibn ʿAbd al-Raḥīm ibn al-ʿIrāqī, *Al-Dhayl ʿalá al-ʿIbar fī Khabar Man ʿAbar,* ed. Ṣāliḥ Mahdī ʿAbbās (Beirut, 1409/1989), 1:221.

the fluency in his writing."[4] But al-Ṣafadī is even more impressed by Ibn Nubātah as a prose author: "But his prose constitutes the summit of eloquence. He followed the manner of [al-Qāḍī] al-Fāḍil and adopted his style, and he extinguished the light of Ibn ʿAbd al-Ẓāhir and left no favored position for him in the hearts of the people."[5]

In al-Nawājī's anthology *Taʾhīl al-Gharīb,* only two poets are granted honorific titles. Whereas Ibn al-Fāriḍ is the *Imām al-ʿUshshāq,* Ibn Nubātah is called the *Malik al-Shuʿarāʾ,* the *Malik al-Mutaʾaddibīn,* and the *Imām al-Udabāʾ,* at the same time being an *ʿAllāmah.*[6]

These are only five of many examples that attest to the fame that Ibn Nubātah enjoyed among his contemporaries and in following generations. Apart from the famous Sufi poets (Ibn al-Fāriḍ, Ibn ʿArabī, ʿAbd al-Ghanī al-Nābulusī) there was no other Arabic poet between the time of al-Mutanabbī and the modern period who enjoyed a greater reputation than Ibn Nubātah. Even at the beginning of the nineteenth century, al-Shawkānī (1173–1250/1760–1832) characterized Ibn Nubātah as "the famous, excellent, and creative poet, who in all kinds of poetry surpassed his contemporaries, all those who came after them, and even most of those who lived before him."[7]

It becomes quite clear that it is impossible to understand the literature and the culture of the Mamluk and the Ottoman periods without a thorough knowledge of the works of Ibn Nubātah. Unfortunately, however, Ibn Nubātah has fared worse than other Mamluk authors among twentieth-century scholars. During the whole of that century, only a single monograph that can claim scholarly standing was published.[8] Even now, most of Ibn Nubātah's works remain in manuscript.

There are several reasons for this deplorable state of affairs. The most important is the wide-spread negative attitude towards Mamluk literature in the still mentally colonialized Arab world.[9] Another reason is the fact that Ibn Nubātah is generally perceived exclusively as a poet. His achievements as a prose writer are largely either neglected or unknown. Many contemporary scholars are unable to appreciate the aesthetic qualities of the sophisticated prose style of *inshāʾ,* of which Ibn Nubātah was an acclaimed master. Some of Ibn Nubātah's prose works

are among the most important *inshāʾ* works of pre-modern Islam, but they have yet to be edited.

For an appreciation of Ibn Nubātah as a poet, the edition of his *Dīwān*[10] has done as much harm as good. The *Dīwān Ibn Nubātah,* edited by a certain Muḥammad al-Qalqīlī, was published in Cairo in 1323/1905. From then on, readers took it for granted that this book represented the *Dīwān* of Ibn Nubātah and contained all his poetry in its original form. Nobody, including myself, ever questioned the philological basis of this "edition." A closer examination, however, reveals that this *Dīwān* is only a distorted version of a questionable collection of Ibn Nubātah's poetry made by his pupil al-Bashtakī. All studies of Ibn Nubātah's poetry are based on this source, and the confidence that was placed in this "edition" made it seem superfluous to direct any efforts towards an edition of the poetic collections assembled by Ibn Nubātah himself. Thus, we must realize that we still lack a proper foundation for the study of Ibn Nubātah's poetry.

The purpose of this article is to provide a basis for further research about Ibn Nubātah and the literary culture of the Mamluk period. It will list all the works of Ibn Nubātah known so far and try to elucidate their purpose, their biographical context, and their place in the literary culture of the epoch. Though I have used a fair number of manuscripts and library catalogues for this study, it cannot claim to be exhaustive. I will start with a chart that gives preliminary information on the titles of Ibn Nubātah's works, their character, and the date of their composition. A survey of the main sources for Ibn Nubātah's life is then given in the same section. A rather detailed chronology of Ibn Nubātah's life follows. Section 4 presents Ibn Nubātah's known autograph manuscripts. Section 5 will demonstrate the way Ibn Nubātah constantly revised his own works. As a consequence of Ibn Nubātah's consideration of his own œuvre as a "work in progress," the necessity for establishing a sound philological basis becomes even more obvious. A reconstruction of the history of Ibn Nubātah's *Dīwān* will be the subject of the following section. Section 7 deals with all known works of Ibn Nubātah and those erroneously ascribed to him. They will be treated in the sequence given in the chart below. Due to its length, this article will appear in three parts over subsequent issues of *Mamlūk Studies Review*.

2. Sources

The main sources for Ibn Nubātah's life are his own works. They reveal his social relationships and his place in the network of *udabāʾ* and ulama (and, to a lesser extent, *umarāʾ*) that shaped intellectual life in Syria and Cairo during the greater part of the eighth/fourteenth century. The known works of Ibn Nubātah are listed

[10] I use the word *Dīwān,* starting with a capital letter, if the word refers to a "collection of poetry," in contrast to *dīwān* (= *dīwān al-inshāʾ*) in the sense of "state chancellery."

in the following chart. For easier reference, I assign a number to each. This number is also used throughout the article, where it is added in square brackets whenever one of these titles is mentioned (with the exception of the *Dīwān*).

In the chart, titles that are lost (or not yet found) are marked with an asterisk. If the content of the book can be reconstructed more or less by means of other sources, the asterisk is put in brackets. The chart demonstrates that it is not sufficient to characterize Ibn Nubātah only as a poet, since a great part of his oeuvre consists of prose. His own compilations of poetry and prose anthologies of past and contemporary authors make up another important part of his oeuvre. Ibn Nubātah wrote in several genres, covering the wide spectrum of *adab* literature. The only exception is theory, a field that seems not to have aroused his interest.

The Works of Ibn Nubātah

34	(*) *Ṭāliʿ al-Sanah* (?)	?				

Corresponding to his importance and popularity, Ibn Nubātah is treated in a great number of bio-bibliographical works. These sources are of uneven value. Therefore it is useful to briefly comment on the more important of them. The texts are mentioned in chronological order.

(1) The *Ijāzah*. In the year 729 al-Ṣafadī asked Ibn Nubātah to grant him an *ijāzah* to transmit his writings and to give him information about his life and works. Ibn Nubātah's answer probably dates from the following year. It is the most important autobiographical document of Ibn Nubātah, who otherwise was more reluctant to talk about himself and his motives than most of his contemporaries. Of special relevance for this study is the list of works Ibn Nubātah had composed to that point, which is, of course, the most reliable list of Ibn Nubātah's works. It is also important for establishing a chronology of Ibn Nubātah's works since all works mentioned in it can be dated to, or before, 730. The text was considered important enough to be included in several sources. It can be found in al-Ṣafadī's *Wāfī* and in his *Alḥān,* in Ibn Ḥijjah al-Ḥamawī's *Khizānat al-Adab,* and in Ibn Taghrībirdī's *Manhal*. In the following, I will quote the *Ijāzah* according to the text in al-Ṣafadī's notice on Ibn Nubātah in his *Wāfī.*[11]

(2) Al-Ṣafadī, *Wāfī.* After quoting the *Ijāzah,* al-Ṣafadī mentions several other

[11] Al-Ṣafadī, *Wāfī,* 1:311–31; the *Ijāzah* is on pages 314–19.

titles of works by Ibn Nubātah, some of which he had heard from Ibn Nubātah himself. The notice on Ibn Nubātah in al-Ṣafadī's *Wāfī* is the basis for most later sources.

(3) *Alḥān al-Sawājiʿ*. For whatever reason, there is no notice on Ibn Nubātah in al-Ṣafadī's *Aʿyān al-ʿAṣr,*[12] though other ulama still alive during the composition of the book are included. Perhaps the book was written during one of the periods in which their personal relationship had cooled. At the time of al-Ṣafadī's last biographical enterprise, *Alḥān al-Sawājiʿ bayna al-Bādiʾ wa-al-Murājiʿ,* their relationship must have improved again somewhat. This collection of letters and poems exchanged between al-Ṣafadī and his famous contemporaries not only follows a model created by Ibn Nubātah *(Sajʿ al-Muṭawwaq),* but Ibn Nubātah is also granted by far the longest entry of all. There is no list of works in the text, but the documents published by al-Ṣafadī provide much valuable information. In the following, I will quote the edition by Ibrāhīm Ṣāliḥ,[13] though it is marred by the fact that the editor failed to use al-Ṣafadī's autograph manuscript, Berlin MS 8631.

(4) Ibn Ḥabīb: The *adīb* and historian Badr al-Dīn al-Ḥasan ibn ʿUmar Ibn Ḥabīb (710–79/1310–77) was a great admirer of Ibn Nubātah. In his youth he composed a *dīwān* of epigrams modeled after Ibn Nubātah's *Al-Qaṭr al-Nubātī*. The young Ibn Ḥabīb even dared to ask the most famous poets of his time, Ibn Nubātah and Ṣafī al-Dīn al-Ḥillī, to write words of praise in the form of a *taqrīẓ* in his book, and both complied with his request.[14] Ibn Ḥabīb immortalized this most memorable event of his life in his *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh,* in which we find an excerpt of Ibn Nubātah's *taqrīẓ* among the memorable events of the year 730 and a biography of Ibn Nubātah, including a short list of his works, among the *wafayāt* of the year 768.[15] The information given by Ibn Ḥabīb can claim utmost authenticity, since he met his role model Ibn Nubātah several times during his life and the two men enjoyed an untroubled friendship.

(5) Another personal acquaintance of Ibn Nubātah's was Tāj al-Dīn al-Subkī (728–71/1327–70), to whom Ibn Nubātah dedicated a few *qasīdahs* and a number of seven-liners. Al-Subkī in turn mentioned Ibn Nubātah in his biography of Shafiʿi scholars,[16] and we also find an entry for him in the dictionary of al-Subkī's

[12] Al-Ṣafadī, *Aʿyān al-ʿAṣr wa-Aʿwān al-Nāṣr,* ed. ʿAlī Abū Zayd et al. (Damascus, 1418–19/1998).

[13] Al-Ṣafadī, *Alḥān al-Sawājiʿ bayna al-Bādiʾ wa-al-Murājiʿ,* ed. Ibrāhīm Ṣāliḥ (Damascus, 1425/2004), 2:180–268; the text of Ibn Nubātah's *Ijāzah* is on pages 186–90.

[14] See Thomas Bauer, "'Was kann aus dem Jungen noch werden!' Das poetische Erstlingswerk des Historikers Ibn Ḥabīb im Spiegel seiner Zeitgenossen," in *Festschrift Hartmut Bobzin* (forthcoming, 2007).

[15] See Ibn Ḥabīb, *Tadhkirat al-Nabīh,* 2:203–4 and 3:304–9, resp.

[16] Al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* 5:153 (= ed. ʿAbd al-Fattāḥ al-Ḥulw and Maḥmūd al-

teachers.[17] Both entries are short and do not contain a list of works. Instead, they reveal some details of Ibn Nubātah's activities in the field of hadith. Other hadith scholars mention Ibn Nubātah as well, but these entries only confirm Ibn Nubātah's role as a hadith transmitter and have little to add to our knowledge of Ibn Nubātah's life.[18]

(6) Ibn Qāḍī Shuhbah (751–79/1377–1448) does not add substantially to the other sources. His *Tārīkh* contains a comparatively short article on Ibn Nubātah, in which he lists only the most popular of Ibn Nubātah's works.[19] Instead, Ibn Qāḍī Shuhbah is often the most important source for all those to whom Ibn Nubātah addressed his poems and letters. His detailed and sometimes tedious habit of registering all the holders of administrative offices and madrasah professorships helps considerably in dating Ibn Nubātah's poems and reconstructing his social relationships, especially after the year 741.

(7) The longest notice in *Al-Dhayl ʿalā al-ʿIbar* by Ibn al-ʿIrāqī (762–826/1360–1423) is the article on Ibn Nubātah.[20] His father had known Ibn Nubātah in person. Thanks to this association, Ibn al-ʿIrāqī is able to provide some information absent in other sources.

(8) Ibn Ḥijjah al-Ḥamawī (767–837/1336–1434), who saw himself as an *adīb* in the mold of Ibn Nubātah, quotes Ibn Nubātah prominently in his *Khizānat al-Adab*.[21] This book is also the only source for Ibn Nubātah's *Khubz al-Shaʿīr* [30].

(9) Ibn Ḥajar al-ʿAsqalānī (773–852/1372–1449) treats Ibn Nubātah in his *Al-Durar al-Kāminah,*[22] but this notice, which contains hardly any new information, does not reflect at all the importance of Ibn Nubātah for the *shaykh al-islām* Ibn Ḥajar, whose father had been an acquaintance of Ibn Nubātah.[23] We will deal with this relationship later in the section on the *Dīwān Ibn Nubātah*.

(10) Ibn Taghrībirdī (b. ca. 812/1409–10, d. 874/1470) was an ardent admirer

Ṭanāḥī, 2nd ed. [Cairo, 1413/1992], 9:273).

[21]Ibn Ḥijjah al-Ḥamawī, *Khizānat al-Adab wa-Ghāyat al-Arab*, ed. Kawkab Diyāb (Beirut, 2001/1421). Ibn Nubātah's *Ijāzah* is quoted in 3:326–34. For further quotations see index, 5:296.

[22]Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah* (Hyderabad, 1929–31), 5:485–91.

[23]See Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Abnāʾ al-ʿUmr*, ed. Muḥammad ʿAbd al-Muʿīd Khān et al. (Hyderabad, 1387–96/1967–76), 1:174.

of the poetry of Ibn Nubātah. This is reflected in the length of the notices in which he treats Ibn Nubātah, though he does not offer much information not already given in earlier sources. Ibn Taghrībirdī devoted a long notice to Ibn Nubātah in his *Al-Manhal al-Ṣāfī,* in which he cites Ibn Nubātah's *Farāʾid al-Sulūk* [7] and other poems.[24] Ibn Taghrībirdī's notice on al-Ṣafadī in the same work contains more information about Ibn Nubātah than about al-Ṣafadī, since the aforementioned *Ijāzah* is quoted in its entirety in this entry.[25] The notice on Ibn Nubātah in *Al-Nujūm al-Zāhirah* is shorter and can be ignored.[26]

(11) Despite its late date, the chronicle of Ibn Iyās has some additional details, not so much in the obituary,[27] but scattered throughout the first volume.

(12) The entry on Ibn Nubātah in al-Shawkānī's *Al-Badr al-Ṭāliʿ* is important for an understanding of the reputation of Ibn Nubātah immediately before the onset of colonialism, but does not provide us with any otherwise unknown facts about the life and work of our author. The same is true for many other sources, both from contemporaries of Ibn Nubātah as well as from authors in later times.[28]

(13) ʿUmar Mūsá Bāshā's study *Ibn Nubātah al-Miṣrī* from 1963 is the only book-length scholarly monograph on Ibn Nubātah to date.[29] It is especially valuable for

[29]The book by Maḥmūd Sālim Muḥammad, *Ibn Nubātah*: *Shāʿir al-ʿAṣr al-Mamlūkī* (Damascus, 1420/1999), is worthless and cannot be considered a serious scholarly contribution. See my review in *MSR* 6 (2002): 219–24. J. Rikabi's entry in *The Encyclopaedia of Islam*, 2nd. ed., 3:900–1 is marred by many mistakes and a complete misjudgment of Ibn Nubātah's poetry. Julie Scott

its unprejudiced approach towards Ibn Nubātah's poetry. ʿUmar Mūsá's book is a pioneering work and shows all the strengths and weaknesses of a work of this kind. It is high time for an update.

3. The Life of Ibn Nubātah

It is obvious that the works of Ibn Nubātah, both his poems as well as his letters and other prose texts, cannot be adequately understood if we ignore their historic and biographical context. In the following section I organize the main facts of Ibn Nubātah by year.[30] Due to the nature of the sources, the story of Ibn Nubātah's life appears mainly as the story of his social relations.

Amirs of the highest rank play a role twice in his life. In his first Syrian period, the princes of Ḥamāh, al-Malik al-Muʾayyad and his son al-Afḍal, act as his patrons, and towards the end of his life the sultan al-Nāṣir Ḥasan would become the only sultan of immediate importance to him. But despite the enormous influence of al-Muʾayyad on Ibn Nubātah's work, the main focus of Ibn Nubātah's life is the chancellery. Both the *dīwān al-inshāʾ* in Damascus as well as that in Cairo receive his attention from the very beginning of his literary activity. Even the chancellery of Aleppo is of some significance for him. Besides al-Malik al-Muʾayyad, Ibn Nubātah's most important acquaintances are the *kuttāb al-sirr* of Damascus and Cairo, especially al-Shihāb Maḥmūd and the Ibn Faḍl Allāh brothers. Next in importance to the *kuttāb* are religious scholars with a more than passing interest in poetry, such as Ibn Ṣaṣrā at the beginning, and Nūr al-Dīn Ibn Ḥajar at the end of Ibn Nubātah's career. Another group, which was mainly the object of his epigrams, are higher officials connected with the chancelleries, such as viziers and *dawādār*s.

Personal relationships were often part of an association with a whole family. It seems as if the powerful families of the Mamluk empire took the place of caliphs, princes, and governors as patrons of literature. Therefore, a poet could give attention to even less important members of a family. The best examples are the

---

Meisami's entry in the *Encyclopedia of Arabic Literature*, ed. J. S. Meisami and Paul Starkey (London, New York, 1998), 1:357–58, is also not free from errors. It was not Ibn Nubātah who "developed an interest in mysticism," but his patron al-Malik al-Afḍal. Both articles claim that Ibn Nubātah led an itinerant life during his second Syrian period. This is also not true. Three studies that appeared in the year 2003 and treat different aspects of the works of Ibn Nubātah deserve to be mentioned: ʿAwaḍ al-Ghubārī, "Al-Tanāṣṣ fī Shiʿr Ibn Nubātah al-Miṣrī," in idem, *Dirāsah fī Adab Miṣr al-Islāmīyah* (Cairo, 2003), 149–230; Thomas Bauer, "Communication and Emotion: The Case of Ibn Nubātah's *Kindertotenlieder*," *MSR* 7, no. 1 (2003): 49–95; Everett K. Rowson, "An Alexandrian Age in Fourteenth-Century Damascus: Twin Commentaries on Two Celebrated Arabic Epistles," in ibid., 97–110.

[30] A more narrative summary of Ibn Nubātah's life will be given in *Dictionary of Literary Biography*: *Arabic Literary Culture* 1350–1830 *C.E.*, ed. Joseph Lowry and Devin Steward (forthcoming).

Banū Faḍl Allāh. Ibn Nubātah had a close personal relationship with Shihāb al-Dīn and ʿAlāʾ al-Dīn Ibn Faḍl Allāh. Yet Ibn Nubātah did not limit himself to addressing these two, but also eulogized other members of the family and congratulated them on diverse occasions of minor importance. Other families, of which several members became the object of Ibn Nubātah's attention, were the offspring of Shihāb al-Dīn Maḥmūd, the Banū al-Athīr, the Ibn Shaykh al-Salāmīyah family, Sharaf al-Dīn Yaʿqūb and his family, the Subkīs, and the Ibn Qarawīnah brothers. Next to the Banū Faḍl Allāh, the Subkīs were the most important of them. Their patronage even survived Ibn Nubātah. His pupil al-Qīrāṭī seems to have been a kind of house poet to the Subkīs.[31]

Ibn Nubātah's relationship to contemporary poets may have been more extensive than the following section suggests. There are a few of them among his teachers (al-Ḥammāmī, al-Warrāq) and a few more among his colleagues or rivals (Ibn al-Wardī, al-Ḥillī, al-Ḍifdiʿ, Ibn Abī Ḥajalah; al-Ṣafadī may be included rather among the *kuttāb*). Among his disciples, al-Qīrāṭī gained greatest fame. In sum, Ibn Nubātah's life is part of a network that is representative of the culture of the *kuttāb* of the Bahri Mamluk period.

I. First Cairene Period (686–716/1287–1316)

686 *(0)*[32]

Rabīʿ I/April 1287: Muḥammad ibn Muḥammad ibn Muḥammad ibn al-Ḥasan al-Fāriqī al-Miṣrī is born in Cairo in the Zuqāq al-Qanādīl, the son of a hadith scholar and author of a history of the caliphs. He is a direct, tenth-generation descendant of ʿAbd al-Raḥīm Ibn Nubātah (d. 374/984–85), Sayf al-Dawlah's famous preacher. The *nisbah* al-Fāriqī refers to this famous ancestor, who was born in Mayyāfāriqīn, the ancestral home of the Ibn Nubātah family. The *nisbah* al-Miṣrī helps to distinguish him from the preacher and from another famous, more distant relative, the poet Ibn Nubātah al-Saʿdī (327–405/939–1014).[33] Some sources also mention the *nisbah* al-Ḥudhāqī, which refers to a branch of the tribe Iyād, to which the Ibn Nubātah family traced its origin. Jamāl al-Dīn had inherited this *nisbah* from his ancestor, but made hardly any use of it.[34] Of the several

[31] Ibn al-ʿIrāqī, *Dhayl al-ʿIbar*, 490; Ibn Qāḍī Shuhbah, *Tārīkh*, 1:12.

[32] Numbers in parentheses indicate Ibn Nubātah's age at the time.

[33] *Dīwān Ibn Nubātah al-Saʿdī*, ed. ʿAbd al-Amīr Mahdī Ḥabīb al-Ṭāʾī (Baghdad, 1397/1977).

[34] See Ibn Rāfiʿ, *Wafayāt*, 2:312 and the explanation of the editor in footnote 2, and Ibn al-ʿIrāqī, *Dhayl al-ʿIbar*, 220, with footnote 1. The correct form is also given in al-Ṣafadī, *Wāfī*, 1:311; idem, *Alḥān al-Sawājiʿ*, 2:180; Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 3:304. "Al-Judhāmī" (see al-Suyūṭī, *Ḥusn al-Muḥāḍarah*, 1:571; Rikabi, *EI2*, 3:900, with additional inappropriate explanations; and several other late sources) and "al-Ḥamdānī," (Ibn Taghrībirdī, *Manhal*, 11:94) are obvious mistakes. The explicit testimony of those who knew Ibn Nubātah is more convincing than the geographical

kunyahs Ibn Nubātah used during his life,[35] Abū Bakr became the most famous.

689 *(3)*
The small child is brought by his father to attend hadith sessions. Though he did not become a professional hadith scholar, he never ceased to occupy himself with hadith and to attend hadith sessions. Consequently, his name is recorded in several dictionaries of hadith transmitters.

690 *(4)*
Ghāzī al-Ḥalāwī, Ibn Nubātah's first hadith teacher, dies at the age of about 95.[36] Ibn Nubātah had heard from him two parts of the *Ghaylānīyāt* and was eventually to become the sole transmitter of the work in al-Ḥalāwī's *riwāyah*.

692 *(6)*
Death of Muḥyī al-Dīn Ibn ʿAbd al-Ẓāhir, the famous *kātib al-sirr* of the chancellery in Cairo and the most accomplished prose stylist of the age.[37] Ibn Nubātah mentions him among his teachers in his *Ijāzah,* but he cannot have learned much from him, given his young age. However, he did meet Ibn ʿAbd al-Ẓāhir, who became a model as a prose stylist for Ibn Nubātah. According to al-Ṣafadī, Ibn Nubātah "extinguished the light of Ibn ʿAbd al-Ẓāhir and left no favored position for him in the hearts of the people."[38]

695 *(9)*
Death of Sirāj al-Dīn ʿUmar al-Warrāq, an extraordinarily productive poet. He is considered the greatest Egyptian poet of his time and a master of the *tawriyah*. Al-Ṣafadī produces an anthology of the seven volumes of al-Warrāq's *Dīwān*.[39] Ibn Nubātah had met him and heard him recite an epigram.[40]

[40] Al-Ṣafadī, *Wāfī*, 1:318.

698 *(12)*
Death of Egypt's leading grammarian of the time, Bahāʾ al-Dīn Ibn al-Naḥḥās, "who never married . . . and never ate grapes,"[41] and whom Ibn Nubātah mentions among his teachers.[42]

700 *(14)*
Ibn Nubātah started to compose poetry before the turn of the century.[43] However, the only poems that can be dated with certainty to the first Cairene period are a two-line epigram on the Nile flood and a few epigrams on his early teachers and a few other celebrities.[44]

701 *(15)*
The famous hadith scholar and teacher of al-Dhahabī, Shihāb al-Dīn al-Abarqūhī[45] (b. 615), dies while on pilgrimage in Mecca. In his old age, Ibn Nubātah was sought after as the sole transmitter of the *Sīrah* of Ibn Isḥāq/Ibn Hishām in the *riwāyah* of al-Abarqūhī.

702 *(16)*
Death of Ibn Daqīq al-ʿĪd (625–702/1228–1302), one of the most renowned religious scholars of the time, considered by many as the *mujaddid* of the eighth century. As with many religious scholars, he was also an *adīb* and poet. Al-Ṣafadī compiled a short selection of his poetry.[46] Ibn Daqīq al-ʿĪd was an acquaintance of Ibn Nubātah's father, and he must have exerted considerable influence on his son. However, the person whom Ibn Nubātah mentions as his main teacher in *adab,* a certain ʿAlam al-Dīn Qays ibn Sulṭān al-Ḍarīr from Munyat Banī Khaṣīb,[47] is an otherwise unknown person.

704 *(18)*
Ibn al-Tītī, former *nāʾib dār al-ʿadl,* falls from his horse and dies.[48] He was a man with scholarly and literary interests and obviously an acquaintance of the Ibn Nubātah family. At a time when Ibn Nubātah had not yet reached puberty, Ibn al-Tītī suggested that he compose an epigram on the Nile flood. Ibn Nubātah records

[41] Ibid., 2:12.
[42] Ibid., 1:318, 2:10–15; *GAL*, S1:527.
[43] Ibn al-ʿIrāqī, *Dhayl al-ʿIbar*, 221.
[44] Al-Ṣafadī, *Wāfī*, 1:318–19.
[45] Ibid., 6:242 f.; idem, *Aʿyān*, 1:171 f.
[46] ʿAlī Ṣāfī Ḥusayn, *Ibn Daqīq al-ʿĪd*: *Ḥayātuhū wa-Dīwānuhū* (Cairo, 1960).
[47] Al-Ṣafadī, *Wāfī*, 1:318.
[48] Al-Ṣafadī, *Aʿyān*, 4:330–32.

this event in his *Ijāzah*[49] and includes the epigram in his own poetic collections.[50] Like other poets, Ibn Nubātah was obviously proud of his early achievements. Since there is not a single longer *qasīdah* that can be assigned to these years, there is no reason to assume that Ibn Nubātah was already a prolific poet in his first Cairene period, as ʿUmar Mūsá does.[51] Had Ibn Nubātah ever considered one of his early long poems (if there were any) worthy of preservation, he would have spared no effort to publish it and to note the occasion of its composition.

705 *(19)*
Trial of Ibn Taymīyah in Damascus. Ibn Nubātah would become an acquaintance of two of the four judges, Najm al-Dīn Ibn Ṣaṣrā and Kamāl al-Dīn Ibn al-Zamlakānī. The other two judges were already dead when Ibn Nubātah arrived in Damascus.[52]

707 *(21)*
Besides the names of his teachers there is not much recorded for Ibn Nubātah's early Cairene years. ʿUmar Mūsá, however, makes the year 707 the starting point of a second period in the life of Ibn Nubātah without presenting any compelling reason for this. According to him, this period is marked by Ibn Nubātah's first panegyric poems, addressed, above all, to Badr al-Dīn and Sharaf al-Dīn Ibn Faḍl Allāh, as well as to ʿAlāʾ al-Dīn Ibn al-Athīr. Contrary to ʿUmar Mūsá's contention, however, we have no indication whatsoever that Ibn Nubātah ever tried to make a living as a panegyrist in Cairo. Though he may have composed poems in praise of Cairene scholars, none has been preserved. The fact that Ibn Nubātah composed an elegy on the death of Sharaf al-Dīn Ibn Faḍl Allāh in 717, when he was already in Damascus, does not preclude the possibility that he had composed panegyrics for him while still in Egypt.[53] Elegies are not composed for the sake of the deceased, but for the bereaved. This elegy has to be seen in the context of Ibn Nubātah's attempt to establish relations with the Banū Faḍl Allāh *after* his arrival in Syria in 716. The same is true for Ibn Nubātah's poems on Badr al-Dīn Ibn Faḍl Allāh, who

[49]Al-Ṣafadī, *Wāfī*, 1:318.

[50]In the *Proto-Dīwān*, see Ibn Faḍl Allāh, *Masālik*, 19:614; on the epigram see also Th. Bauer, "Das Nilzağal des Ibrāhīm al-Miʿmār," in *Alltagsleben und materielle Kultur in der arabischen Sprache und Literatur*: *Festschrift für Heinz Grotzfeld*, ed. Th. Bauer and U. Stehli-Werbeck (Wiesbaden, 2005), 73.

[51]ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 137–49.

[52]See Sherman A. Jackson, "Ibn Taymiyyah on Trial in Damascus," *Journal of Semitic Studies* 39 (1994): 41–85.

[53]ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 144–45; neither the *Dīwān* nor any other source contains a poem or document that was addressed to Sharaf al-Dīn during his lifetime.

is not, as ʿUmar Mūsá believes, Sharaf al-Dīn's brother Badr al-Dīn the Elder, but the son of Sharaf al-Dīn's brother Muḥyī al-Dīn, Badr al-Dīn the Younger, brother of Shihāb al-Dīn and ʿAlāʾ al-Dīn. The third person mentioned by ʿUmar Mūsá as an addressee of Ibn Nubātah's poems written in Cairo is ʿAlāʾ al-Dīn Ibn al-Athīr.[54] He lived from 680 to 730 and was *kātib al-sirr* in Cairo between 709 and 729. We have several odes and epigrams that Ibn Nubātah composed for ʿAlāʾ al-Dīn ibn al-Athīr, as well as a letter he wrote to him. Again, this is a family story. The Banū al-Athīr and the Banū Faḍl Allāh alternated in holding the leading positions in the *dīwān al-inshāʾ* in Cairo and in Damascus. From his Damascene home Ibn Nubātah remained in contact not only with the members of these families who stayed in Syria, but also those who were in Cairo. A letter to ʿAlāʾ al-Dīn that is preserved in *Zahr al-Manthūr* [12] and in El Escorial MS árabe 584 (fols. 106v–107r), and the rather small number of only three (albeit important) poems speak in favor of a relationship that consisted of the exchange of letters while Ibn Nubātah was in Syria. In sum, there is no justification for establishing a second Cairene period of the years 707–16. We can only assume that during these years Ibn Nubātah perfected his knowledge and his literary skill and composed his first poetry.

708 *(22)*

Possible date of the death of Naṣīr al-Dīn al-Ḥammāmī (b. 669),[55] although 704 and 712 are also given.[56] He exchanged poems with Ibn Nubātah. The bath attendant al-Ḥammāmī was a popular poet, composing mainly strophic poetry and riddles, which he exchanged with Sirāj al-Dīn al-Warrāq. The three poets (and friends) al-Jazzār (601–79), al-Ḥammāmī, and al-Warrāq are the main representatives of Egyptian poetry in the generation before Ibn Nubātah. By mentioning two of them in his *Ijāzah,*[57] Ibn Nubātah places himself in this tradition, but at the same time strives to transcend it by composing denser and more sophisticated verses.

710 *(24)*

The Ayyubid dynasty of Ḥamāh had come to an end with the death of the unloved Sultan al-Malik al-Muẓaffar III, patron of the *washshāḥ* al-Maḥḥār, in 698. For the next twelve years, Ḥamāh was ruled by Mamluk governors. Dissatisfied with their conduct, Sultan al-Nāṣir Muḥammad appoints his friend Abū al-Fidāʾ ʿImād al-Dīn Ismāʿīl governor of Ḥamāh and awards him the honorific title al-Malik al-Ṣāliḥ.

[54] ʿUmar Mūsá Bāshā, *Ibn Nubātah,* 145–49.

[55] Ibn Ḥajar, *Durar,* 6:159–61.

[56] Al-Ṣafadī, *Aʿyān,* 5:503–20; Otfried Weintritt, "An-Nāṣir al-Ḥammāmī (gest. 712/1312): Dichter und Bademeister in Kairo," in Bauer and Stehli-Werbeck, eds., *Alltagsleben und materielle Kultur,* 381–90.

[57] Al-Ṣafadī, *Wāfī,* 1:318–19.

In 720, he would be renamed al-Malik al-Muʾayyad. He was the cousin of the last Ayyubid ruler of Ḥamāh. Abū al-Fidāʾ was a man of learning and literature, a poet and patron of poets and scholars. Today he is mainly known for his geographical work, *Taqwīm al-Buldān,* and his history, *Al-Mukhtaṣar fī Tārīkh al-Bashar,* which Ibn Nubātah praised with an epigram.[58]

714 *(28)*
The sultan appoints Karīm al-Dīn Ibn al-Sadīd (d. 724) as the first *nāẓir al-khāṣṣ*. An epigram written to him by Ibn Nubātah may have been composed on this occasion.[59] When Ibn al-Sadīd became ill, many poets composed poems wishing him well and were each rewarded with two hundred dirhams. Among them was Ibn Nubātah, who contributed an epigram.[60] This is one of the few poems that can be dated to his Cairene period.

715 *(29)*
Thirty years was the appropriate age to venture onto the public stage as an *adīb.*[61] Ibn Nubātah prepared for this step carefully. He collected material to be included in an anthology that, at the same time, was a manifesto of the importance of the *adīb* for contemporary scholarly society. In this book, the *Maṭlaʿ al-Fawāʾid* [1], Ibn Nubātah presented himself both as a scholarly expert on language and *adab,* as well as a legitimate heir to the grand tradition of Arabic poetry and prose. But was Cairo the right place to publish this book? The master of prose style, Ibn ʿAbd al-Ẓāhir, was dead, and his successor as master *munshiʾ,* Shihāb al-Dīn Maḥmūd, directed the chancellery in Damascus. In Cairo, popular poetry flourished, but if Ibn Nubātah wanted to realize his project of a literature of sophistication and refinement, he had to address all those people who happened to live in Damascus or in other places in Syria at that time. Though deeply in love with his hometown and always proud to present himself as Ibn Nubātah "the Egyptian," there was little that could hold him in Cairo. Contrary to ʿUmar Mūsá, I do not believe that the reason for Ibn Nubātah's departure from Cairo was economic failure as a panegyrist (for which there is no evidence), but rather his aspiration to join the ranks of the greatest *udabāʾ* of the time. He could find them in the chancelleries

[58]*Dīwān*, 171 (in general, I will only note the page on which the poem begins). On Abū al-Fidāʾ see H. A. R. Gibb, "Abū ʿl Fidā," *EI*2, 1:118–19; Robert Irwin, "Abū al-Fidā," *EAL*, 1:32; Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 2:321–25; Ibn Taghrībirdī, *Manhal*, 2:399–408.

[59]*Dīwān*, 478; Ibn Iyās, *Badāʾiʿ al-Zuhūr,* 1:1:444–45, 453–54; see also W. M. Brinner, "Ibn al-Sadīd," *EI*2, 3:923–24; al-Ṣafadī, *Aʿyān*, 3:142–54.

[60]*Dīwān*, 546; Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:1:454; both epigrams also appear in *Al-Qaṭr al-Nubātī* (nos. 22, 173).

[61]See Bauer, "Ibn Ḥabīb."

of Damascus and Aleppo, in their madrasahs and the Umayyad mosque, or in al-Muʾayyad's palace in Ḥamāh. Besides, his father had already left Cairo some time before to occupy a professorship in hadith at Damascus.

II. First Syrian Period (716–42/1316–41)

716 *(30)*

In the heat of summer, Ibn Nubātah travels from Cairo to Damascus, only to find himself trapped in snow and ice the following winter. These meteorological annoyances are among the subjects of his extensive correspondence with the leading ulama of Syria, among them al-Shihāb Maḥmūd and his son Jamāl al-Dīn, Jalāl al-Dīn al-Qazwīnī, and the other ulama, who appear in *Sajʿ al-Muṭawwaq* [3]. He also directs poems and letters to Abū al-Fidāʾ, the ruler of Ḥamāh, then still bearing the title al-Malik al-Ṣāliḥ. Death of the poet al-Wadāʿī. Ibn Nubātah copied many of his ideas, especially in the field of *tawriyah.*[62]

717 *(31)*

Ibn Nubātah publishes his programmatic work *Maṭlaʿ al-Fawāʾid* [1]. He dedicates the book to the prince of Ḥamāh and sends copies of it to the leading ulama, asking for a *taqrīẓ* to be published in a second book. After the death of Sharaf al-Dīn Ibn Faḍl Allāh, whom Ibn Nubātah commemorates with a dirge,[63] Shihāb al-Dīn Maḥmūd (often referred to as Ibn Fahd in Western literature) is appointed *kātib al-sirr* in Damascus. This celebrated *munshiʾ* was the venerated model for a whole generation of prose stylists.[64] His proficiency in poetry and prose and his influence as head of the chancellery made him Ibn Nubātah's most important acquaintance during his first years in Damascus. He contributed to Ibn Nubātah's *Sajʿ al-Muṭawwaq* [3] and defended him when the *kuttāb* of the *dīwān* plotted against him, whereupon Ibn Nubātah directed a long letter of examination to him and his clerks [9]. At least five long odes in the *Dīwān* are addressed to him, and a letter to him is preserved in Ibn Nubātah's own hand.[65] ʿAlāʾ al-Dīn Ibn ʿAbd al-Ẓāhir, grandson of the legendary Muḥyī al-Dīn and himself a *munshiʾ* of rank, dies in Cairo. His death is commemorated by Ibn Nubātah, who had previously addressed several artful letters to him.[66]

---

[62] *GAL*, 2:9, S2:2 (wrong date of death); al-Ṣafadī, *Wāfī*, 22:199–213; Ibn Ḥijjah, *Khizānat al-Adab*, 3:291-310; Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:1:447–48.

[64] See Ibn Faḍl Allāh al-ʿUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār*, vol. 12, *Kuttāb al-Inshāʾ Sharqan*, ed. Ibrāhīm Ṣāliḥ (Abu Dhabi, 1423/2002), 397–447.

[65] See *Dīwān*, 152, 153, 284, 363, 438; El Escorial MS árabe 567, fol. 160r.

[66] The *marthiyah* is in Ibn Ḥajar's additions to the *Dīwān*, Göttingen MS arab. 179, fols. 43v–44r; the letters are in El Escorial MS árabe 548. On ʿAlāʾ al-Dīn see al-Ṣafadī, *Aʿyān*, 3:487–96.

718 *(32)*
Ibn Nubātah writes two letters to Amīn al-Dīn al-Qibṭī Ibn Tāj al-Riʾāsah on the occasion of the latter's appointment as *nāẓir* of Ṭarābulus.[67] This is the first recorded contact between Ibn Nubātah and the vizier Amīn al-Dīn.[68] Ibn Nubātah congratulates ʿAlāʾ al-Dīn Ibn Shaykh al-Salāmīyah (d. 730) on his marriage to the daughter of the vizier Shams al-Dīn Ghibriyāl.[69] The *nāẓir al-jaysh* of Aleppo, Jamāl al-Dīn Ibn Rayyān (663–749), is transferred to a post in Ṣafad. He will hold his former office and several other similar offices in Aleppo and other places in Syria several times. Ibn Nubātah addresses a number of long odes and epigrams to him, most (or all) of them during Ibn Rayyān's years in Aleppo.[70]

719 *(33)*
Ibn Nubātah is able to assemble *taqārīẓ* from twelve leading ulama and *kuttāb* on his *Maṭlaʿ al-Fawāʾid*. Together with some additional texts, they come to form *Sajʿ al-Muṭawwaq* [3], one of Ibn al-Nubātah's most successful books and one of the most characteristic documents for the culture of the Mamluk *kuttāb*. Ibn Nubātah congratulates Fakhr al-Dīn Ibn Shaykh al-Salāmīyah on his appointment as *muḥtasib* of Damascus.[71]

720 *(34)*
The Sultan awards the title al-Malik al-Muʾayyad to Abū al-Fidāʾ of Ḥamāh. During this period, Ibn Nubātah visits Ḥamāh regularly at least once a year. He is granted a pension of 600 dirhams per year, but receives additional presents on different occasions. The court of Ḥamāh offers Ibn Nubātah the opportunity to meet other poets such as Ṣafī al-Dīn al-Ḥillī. Several of his works are dedicated to the prince, among them *Sarḥ al-ʿUyūn* [4] and a selection of passages from letters and documents written by al-Qāḍī al-Fāḍil, Ibn Nubātah's model for prose style. Above all, Ibn Nubātah assembles *qasīdahs*, *muwashshaḥāt,* a *zajal,* and epigrams addressed to al-Muʾayyad and publishes them under the title *Muntakhab al-Hadīyah* [5]. Ibn Nubātah's nearly forty *qasīdahs* in praise of Abū al-Fidāʾ are the most important examples of panegyric poetry addressed to a ruler in post-Ayyubid, pre-modern Arabic literature. Ibn Nubātah writes a *taqrīẓ* on a *jīmīyah* by the poet

[67] El Escorial MS árabe 548, fols. 105r, 119r.

[69] *Dīwān*, 112; a dirge on his death, ibid., 112; on ʿAlāʾ al-Dīn see al-Ṣafadī, *Aʿyān*, 5:670.

[70] *Dīwān*, 112, 269, 394, 398, 401, 530; on Ibn Rayyān see al-Ṣafadī, *Aʿyān*, 2:426–33. An epigram by Ibn Nubātah that is dedicated to Jamāl al-Dīn's son Bahāʾ al-Dīn is quoted in Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:2:61.

[71] *Dīwān*, 47 = *Al-Qaṭr al-Nubātī*, no. 31.

Shams al-Dīn Muḥammad al-Khayyāṭ, known as al-Ḍifdiʿ, "the Frog"[72] (693–756). He was a prolific poet who left a *Dīwān* of six volumes. His relationship to Ibn Nubātah, which is only attested by a few texts, may have been a troubled one, since al-Ḍifdiʿ was prone to satire and nobody escaped his sharp tongue. According to al-Ṣafadī, who seems to be quite amused by their quarrels, Ibn Nubātah and al-Ḍifdiʿ "were the Farazdaq and Jarīr of their age."[73] Death of Kamāl al-Dīn Ibn al-ʿAdīm, the first Hanafi qadi of Aleppo. An important *madīḥ* poem on him by Ibn Nubātah is preserved in different versions.[74]

721 *(35)*
Rithāʾ on the Cairene *munshiʾ* Kamāl al-Dīn Ibn al-Athīr,[75] to whom Ibn Nubātah had already directed several epigrams preserved in *Al-Qaṭr al-Nubātī* [6].

722 *(36)*
Death of the goldsmith Shams al-Dīn al-Ṣāʾigh, a leading *adīb* and specialist in metrics. His connection to Ibn Nubātah is attested by a long *qasīdah.*[76] Further, al-Ṣāʾigh was a protege of Quṭb al-Dīn Ibn Shaykh al-Salāmīyah (661–732), who was also an acquaintance of Ibn Nubātah.[77]

723 *(37)*
Rithāʾ on Najm al-Dīn Ibn Ṣaṣrā, who had been chief Shafiʿi qadi of Damascus for 21 years. He was one of the contributors to *Sajʿ al-Muṭawwaq* [3] and an important acquaintance of Ibn Nubātah during his early Damascene years. This is reflected in many poems and epigrams in the *Dīwān* and in *Al-Qaṭr al-Nubātī* [6], among them an *urjūzah* of 169 rajaz verses.[78] For his first meeting with Ibn Ṣaṣrā, Ibn Nubātah had prepared not only a *madīḥ,* but also a satire in case Ibn Ṣaṣrā did not

[75] Al-Ṣafadī, *Aʿyān*, 4:333–37.

[76] *Dīwān*, 340; al-Ṣafadī, *Wāfī*, 2:361–63; al-Maqrīzī, *Sulūk*, 2:239. Al-Ṣafadī, *Aʿyān*, 4:397–400, dates his death to the year 720; still another date is given in *GAL*, 2:9.

[77] See *Dīwān*, 330, perhaps also p. 40; a dirge on his son ʿAlāʾ al-Dīn p. 112. On Quṭb al-Dīn see al-Ṣafadī, *Aʿyān*, 5:469–72.

[78] *Dīwān*, 508–11; see also *Dīwān*, 80, 168, 173, 270, 367 (*rithāʾ*), 370, 431, 439, 444, 454, 459, 540, and *Sajʿ al-Muṭawwaq* [3]; see also ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 175–78; Muḥammad ibn Shākir al-Kutubī, *Fawāt al-Wafayāt*, ed. Iḥsān ʿAbbās (Beirut, 1973–74), 1:125–27; W. M. Brinner, "Ibn Ṣaṣrā," *EI*2, 3:931b.

welcome him properly. When he entered, Ibn Nubātah mistakenly handed him the satire. Ibn Ṣaṣrā not only forgave Ibn Nubātah this faux pas, but even kept it a secret.[79] At the request of Sultan al-Nāṣir Muḥammad ibn Qalāwūn, Ṣafī al-Dīn al-Ḥillī collects his poetry into a thematically arranged *Dīwān.*[80] It documents part of the poetic exchange between him and Ibn Nubātah.[81] Additional poems and epigrams addressed to al-Ḥillī are preserved.[82] The two poets met several times in Ḥamāh, and despite their very different stylistic approach, Ibn Nubātah held al-Ḥillī in great esteem and called him "the best poet of his time."[83] Whereas al-Ḥillī inspired Ibn Nubātah to write *Muntakhab al-Hadīyah* [3], Ibn Nubātah inspired al-Ḥillī to collect his epigrams in a separate *Dīwān* [see 5].

724 *(38)*
Jalāl al-Dīn al-Qazwīnī is called to Cairo, honored by the sultan, and appointed chief Shafiʿi judge of Damascus.[84] Ibn Nubātah congratulates him with a *qasīdah.*[85] Al-Qazwīnī (666–739) is known as Khaṭīb Dimashq because he was chief preacher of the Umayyad mosque. He was one of the contributors to *Sajʿ al-Muṭawwaq* and one of Ibn Nubātah's first acquaintances in Damascus. Several letters to him are preserved, as are a number of *qasīdahs* and epigrams written for him.[86] Al-Qazwīnī's fame rests mainly on his *Talkhīṣ al-Miftāḥ,* a handbook of Arabic rhetoric. There is hardly a more frequently cited book in all of Arabic literature. Kamāl al-Dīn Ibn al-Zamlakānī is appointed chief qadi of Aleppo. He takes up his new office reluctantly. Ibn Nubātah congratulates him with an epigram.[87]

725 *(39)*
The death of three celebrities of Damascus induces Ibn Nubātah to compose three elegies. At the beginning of the year, the Sufi Ibn al-Ṣayyāḥ is mourned by an

elegy, which is quoted in its entirety by al-Ṣafadī.[88] A death of more consequence for Ibn Nubātah occurs in Shaʿbān, when Shihāb al-Dīn Maḥmūd dies. Ibn Nubātah writes a dirge.[89] As head of the chancellery, Shihāb al-Dīn's successor is his son Shams al-Dīn, who had already assisted his father in this office in previous years. Badr al-Dīn Ibn al-ʿAṭṭār, son of the famous *munshiʾ* Kamāl al-Dīn (d. 702), *adīb* and holder of several administrative offices, dies in Dhū al-Qaʿdah.[90] Ibn Nubātah composes another elegy. Badr al-Dīn was one of the contributors to *Sajʿ al-Muṭawwaq* [3], where Ibn Nubātah also quotes a long ode and several shorter poems he had addressed to him.[91]

726 *(40)*
During his first fifteen years in Damascus, Ibn Nubātah visits the court of Ḥamāh every year, but—contrary to ʿUmar Mūsá's assumption—keeps Damascus as his main residence. Ibn Nubātah writes quite a number of works, each of them a milestone of its kind, to prove himself a universal master of *adab*. Most of his works in this period are dedicated to the prince of Ḥamāh, but meant to be read and appreciated by all of the *udabāʾ* and *kuttāb,* especially those of Syria. Among the works that appear before 730, but cannot be dated more precisely, is *Sarḥ al-ʿUyūn fī Sharḥ Risālat Ibn Zaydūn* [4], a pioneering work that combined the form of a commentary with that of an anthology.[92] Besides Damascus and Ḥamāh, Aleppo is the third important place for Ibn Nubātah in Syria. The *nāẓir al-awqāf* Ibn Ṣaqr, who dies in this year, is one of the prominent men of Aleppo to whom Ibn Nubātah dedicates his poems.[93]

727 *(41)*
Rithāʾ on the death of Kamāl al-Dīn Ibn al-Zamlakānī, famous scholar and influential office holder in Damascus and Aleppo, one of the dignitaries who contributed a *taqrīẓ* to *Sajʿ al-Muṭawwaq* [3]. Additional poems about him are to be found in the *Dīwān* and in *Al-Qaṭr al-Nubātī* [5]. Ibn Nubātah recites his *rithāʾ* on Kamāl al-Dīn to al-Ṣafadī, who is highly impressed.[94] After only two years in office, Shams al-

Dīn ibn Shihāb al-Dīn Maḥmūd dies. Ibn Nubātah's dirge for him is quoted by al-Ṣafadī.[95] He is replaced as *kātib al-sirr* by Muḥyī al-Dīn ibn Faḍl Allāh (645–738), the father of Shihāb al-Dīn, Badr al-Dīn, and ʿAlāʾ al-Dīn.

728 *(42)*
The son of al-Muʾayyad, who still bears the title al-Malik al-Manṣūr, was fond of hunting, a passion he shared with the governor of Syria, Tankiz. One of these hunting parties, which must have taken place around this year, is made the subject of Ibn Nubātah's *Farāʾid al-Sulūk fī Maṣāʾid al-Mulūk* [7]. With 193 *rajaz* couplets, it is the longest hunting *urjūzah* in Arabic literature and the most important contribution to hunting poetry after Abū Firās.

729 *(43)*
Al-Ṣafadī writes from Cairo via Shihāb al-Dīn Ibn Faḍl Allāh asking Ibn Nubātah for an *ijāzah* to transmit his works. Ibn Nubātah's answer probably dates from the following year. This *Ijāzah* is the most important source for Ibn Nubātah's early years and the chronology of his works. Still in 729, al-Ṣafadī and Ibn Nubātah meet in Damascus and Ibn Nubātah transmits to al-Ṣafadī some of his works in the Umayyad Mosque (*Al-Qaṭr al-Nubātī* [6], *Muntakhab al-Hadīyah* [5], *Farāʾid al-Sulūk* [7], *Al-Mufākharah bayna al-Sayf wa-al-Qalam* [10]).[96] Ibn Nubātah sends his *Mufākharah bayna al-Sayf wa-al-Qalam* to the *dawādār* Nāṣir al-Dīn (see the year 734). The head of the chancellery of Cairo, ʿAlāʾ al-Dīn Ibn al-Athīr, falls ill. Muḥyī al-Dīn Ibn Faḍl Allāh is transferred to Cairo to replace him. His place in Damascus is taken by Sharaf al-Dīn ibn Shams al-Dīn ibn al-Shihāb Maḥmūd,[97] who will change places with Muḥyī al-Dīn for eight months in 732–33 and return for a second term in office for one and a half years in the beginning of 733. While Ibn Nubātah's connection to Muḥyī al-Dīn is well established,[98] so far no text addressed to al-Shihāb Maḥmūd's grandson has been found.

730 *(44)*
Ibn Nubātah publishes *Zahr al-Manthūr* [12], a collection of epistolary excerpts. With this book Ibn Nubātah establishes himself as the leading prose stylist of his time. Since he did not hold a position in the *dīwān al-inshāʾ* (and probably did not yet aspire to one), he had to draw largely on his private correspondence. A large

but several epigrams from *Sajʿ al-Muṭawwaq* are missing in the printed *Dīwān*.

[95] *Dīwān*, 221; al-Ṣafadī, *Wāfī*, 5:13–14; idem, *Aʿyān*, 5:255–56.

[96] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:180–92; idem, *Wāfī*, 1:312–19.

[97] See al-Ṣafadī, *Wāfī*, 10:259–64; idem, *Aʿyān*, 2:12–25.

[98] Two long odes in the *Dīwān*, 100, 564, and a few shorter poems.

number of letters and gifts are exchanged between al-Ṣafadī, who is in al-Raḥbah, and Ibn Nubātah.[99] ʿAlāʾ al-Dīn Ibn al-Athīr dies and Ibn Nubātah "laments his death with a celebrated elegy."[100] During his lifetime, Ibn Nubātah had written poems and letters to him. They show that Ibn Nubātah kept in contact not only with the chancellery of Damascus, but also with that of Cairo. Ibn Nubātah spends time in Aleppo. The young *adīb* and later historian Ibn Ḥabīb presents to him a newly-written collection of epigrams, in which he emulated Ibn Nubātah's *Al-Qaṭr al-Nubātī*. Ibn Nubātah praises the work of the young aspirant with a rhetorically brilliant *taqrīẓ*. In the following year, Ibn Ḥabīb is able to obtain a *taqrīẓ* by Ṣafī al-Dīn al-Ḥillī. He will never cease to be proud of this achievement at such an early age.[101] Ibn Nubātah writes a *rithāʾ* on the death of the young Ṣalāḥ al-Dīn Ibn Shaykh al-Salāmīyah, who was a member of the family to whom Ibn Nubātah dedicated poems.[102]

731 *(45)*
On 8 Rabīʿ I, al-Ṣafadī enters the *dīwān al-inshāʾ* in Damascus.[103] On his arrival in Damascus he receives a present from Ibn Nubātah and thanks him with an epigram.[104] The *adīb* and historian Tāj al-Dīn al-Makhzūmī spends time in Damascus and meets al-Ṣafadī. His visit to Ibn Nubātah may have occurred in the same year. On this occasion, he composed an epigram on the many ants that he saw in Ibn Nubātah's house.[105]

732 *(46)*
Death of al-Malik al-Muʾayyad of Ḥamāh. With the help of Tankiz, the mighty governor of Syria, his son al-Malik al-Manṣūr Nāṣir al-Dīn Muḥammad is nominated as his successor and awarded the title al-Malik al-Afḍal.[106] The poem in which Ibn Nubātah comforts al-Afḍal on the death of his father and simultaneously congratulates him on his nomination as the new sultan of Ḥamāh is praised

[99] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:192–224.

[100] Ibn Ḥajar, *Durar*, 4:15–18; further texts in *Dīwān*, 83, 107, 212, El Escorial MS árabe 548, fol. 106v (also in *Zahr al-Manthūr* [12]). See also ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 145–49; al-Ṣafadī, *Aʿyān*, 3:264–70.

[101] Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 2:203–4; see also Bauer, "Ibn Ḥabīb."

[102] *Dīwān*, 112, the poems p. 40 and p. 330 probably to his father, Quṭb al-Dīn Mūsá (see al-Ṣafadī, *Aʿyān*, 5:469–72), two poems p. 46 probably to ʿIzz al-Dīn ibn Mūsá (see Ibn al-ʿIrāqī, *Dhayl al-ʿIbar*, 267–68).

[103] Al-Ṣafadī, *Aʿyān*, 4:257.

[104] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:225.

[105] Al-Ṣafadī, *Wāfī*, 18:26–27. On al-Makhzūmī see also *GAL*, S2:220.

[106] Al-Ṣafadī, *Wāfī*, 2:224–27; idem, *Aʿyān*, 4:322–30; Ibn Taghrībirdī, *Manhal*, 9:322–24.

as an outstanding example of *iftinān,* the combination of different genres in a single text.[107] On 9 Rabīʿ II, the *adīb* Taqī al-Dīn Ibn Nāhiḍ (d. 761), imam of the madrasah and mosque al-Firdaws in Aleppo, finishes a copy of *Al-Qaṭr al-Nubātī* [6]. Ibn Nubātah knew Ibn Nāhiḍ personally and had visited him in al-Firdaws.[108] Ibn Nubātah writes a letter to al-Ṣafadī, who is in Cairo.[109]

733 *(47)*

Al-Ṣafadī answers Ibn Nubātah's letter.[110] Amīn al-Dīn Ibn Tāj al-Riʾāsah is appointed to his last vizierate of Damascus (733–40). This is the most probable occasion for a long congratulatory poem.[111] During this year and the following years, Ibn Nubātah regularly visits Ḥamāh and composes poems on al-Afḍal. For several years, al-Afḍal is still interested in literature and acts as a patron to poets. After some more years in office—the exact date cannot be fixed—al-Afḍal starts to retreat from worldly affairs and becomes a pious *zāhid*. Ibn Nubātah first reacts by no longer beginning his *qasīdah*s with love poetry, but with ascetic themes instead.[112] But after a while, al-Afḍal comes to loathe even this sort of poetry and stops the regular stipends paid to Ibn Nubātah. He also neglects his administrative duties, which leads to a bedouinization of the vicinities of Ḥamāh and to al-Afḍal's deposition in 742. In all, Ibn Nubātah composes more than twenty poems, most of them long *qasīdah*s, to eulogize al-Afḍal.

734 *(48)*

Death of Ibn Nubātah's son ʿAbd al-Raḥīm.[113] Ibn Nubātah's private life was overshadowed by the death of most of his children. Though infant death was a common experience in those times, Ibn Nubātah lost many children who were older, after having developed an intense emotional relationship with them. According to al-Ṣafadī, Ibn Nubātah had to bury about sixteen sons, all aged between five and seven.[114] Ibn Nubātah confronted his pain by composing poetry. Just like Friedrich Rückert, Ibn Nubātah composed a series of "Kindertotenlieder" on the death of his children, most of them on the death of ʿAbd al-Raḥīm,[115] who may have been Ibn Nubātah's favorite son. Note that he bore the name of his

[107] *Dīwān*, 429; Ibn Ḥijjah, *Khizānat al-Adab*, 2:43–45.

[109] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:230–32.

[110] Ibid., 232–37.

[111] *Dīwān*, 502 (27 lines; the poem has 53 lines in Ibn Duqmāq's manuscript of the *Dīwān*).

[112] See for example *Dīwān*, 139.

[113] See *Ḥaẓīrat al-Uns* [16].

[114] Al-Ṣafadī, *Wāfī*, 1:312.

[115] See Bauer, "Communication and Emotion."

famous ancestor, the preacher of Sayf al-Dawlah. The career of the *dawādār* Nāṣir al-Dīn Muḥammad ibn Kawandak came to a tragic end. Since 712, Nāṣir al-Dīn had been the dearest friend of the governor Tankiz and the most powerful man in the office of the *dawādār*. "People never saw a *dawādār* like him."[116] Ibn Nubātah dedicated to him his "Debate between Sword and Pen," [10] after he had already dedicated it to al-Malik al-Muʾayyad. The subject was most suitable for a man in a position between the civil and military elite.

735 *(49)*
Ibn Nubātah accompanies Amīn al-Dīn Ibn Tāj al-Riʾāsah on his journey to Jerusalem and al-Khalīl. Ibn Nubātah describes this journey in his *Ḥaẓīrat al-Uns ilō Ḥaḍrat al-Quds* [16]. Perhaps there was a connection between this journey and Ibn Nubātah's appointment to the office of the *nāẓir al-qumāmah,* the keeper of the key of the Church of the Holy Sepulcher.[117]

736 *(50)*
The Syrian governor Tankiz is so enamored of ʿAlam al-Dīn Ibn al-Quṭb that he appoints him *kātib al-sirr* of Damascus, much to the disappointment of al-Shihāb Ibn Faḍl Allāh, who had expected to get the post himself.[118] Ibn Nubātah was a close friend of Shihāb al-Dīn and the Faḍl Allāh family. Therefore he did not dare to extend his contacts with Ibn al-Quṭb, and his relations with the *dīwān al-inshāʾ* declined. This may have occurred at a time in which Ibn Nubātah needed employment in the *dīwān* more urgently than before, since the patronage of the prince of Ḥamāh had become more and more uncertain.

737 *(51)*
ʿAlāʾ al-Dīn Ibn Faḍl Allāh takes up his duties in the chancellery of Cairo, first as deputy for his sick father, and then, after his death in the following year, as *kātib al-sirr* himself. He would hold this office for 33 (lunar) years, longer than anybody else, until his death in Ramaḍān 769/1368. More than forty poems addressed to him are preserved in Ibn Nubātah's *Dīwān,* among them a number of seven-liners [31]. ʿAlāʾ al-Dīn was a man of literary taste and great stylistic competence. He was also an active and engaged patron of poets, among them al-Qīrāṭī and the popular poet al-Miʿmār. In Ibn Nubātah's later years, ʿAlāʾ al-Dīn played a role similar to that of al-Muʾayyad during his early years. There is no other person to whom Ibn Nubātah ever dedicated as many poems as he did to these two. In

[116] Al-Ṣafadī, *Aʿyān*, 5:105.
[117] See *Dīwān,* 465; see also ʿUmar Mūsá Bāshā, *Ibn Nubātah,* 198–202, and al-Ṣafadī, *Wāfī*, 1:212.
[118] Al-Ṣafadī, *Aʿyān*, 4:304–10.

his poems to ʿAlāʾ al-Dīn, Ibn Nubātah perfected his *tawriyah* style. These poems differ remarkably from his earlier poems and represent the main achievement of his later work. Most of Ibn Nubātah's poems to him date from his second Syrian and second Cairene period. Death of the prominent *kātib* ʿAlāʾ al-Dīn Ibn Ghānim, who had contributed to *Sajʿ al-Muṭawwaq* [3].[119] Ibn Nubātah also knew his son Jamāl al-Dīn ʿAbd Allāh (721–44), whose promising career was ended by his premature death.[120]

738 *(52)*
After a year and eight months in office, the *kātib al-sirr* Ibn al-Quṭb is arrested, his property is confiscated, and he is put under house arrest until Tankiz's removal from office. His successor is Shihāb al-Dīn Yaḥyá ibn Ismāʿīlī Ibn al-Qaysarānī,[121] Tankiz's new favorite. Al-Ṣafadī congratulates him immediately,[122] but Ibn Nubātah, who once had praised Yaḥyá's father,[123] was in a worse situation. Perhaps the poem *Dīwān,* 400 was an attempt to ingratiate himself with the chancellery again. It obviously was not successful. He may have been too closely associated with al-Shihāb Ibn Faḍl Allāh. Shihāb al-Dīn, however, often criticized the state of the chancellery of Damascus. This angered the sultan, who imprisoned him.

739 *(53)*
Tāj al-Dīn Ibn al-Zayn Khaḍir, *kātib al-sirr* of Aleppo since 733, is deposed and retreats to Cairo.[124] He would return to Syria as successor to Badr al-Dīn Ibn Faḍl Allāh as *kātib al-sirr* of Damascus in 746, eight months before his own death. Ibn Nubātah dedicates several long odes to him, perhaps most of them during Tāj al-Dīn's Aleppo period.[125] Aleppo obviously was always an important place for Ibn Nubātah. Ibn Nubātah laments the death of al-Qazwīnī with a *marthiyah.*[126]

740 *(54)*
Tankiz, the mighty governor of Syria, had aroused the suspicion of Sultan al-Nāṣir

[119] *Dīwān*, 235, 320, 448, further texts in *Sajʿ al-Muṭawwaq* [3]; see also al-Ṣafadī, *Wāfī*, 22:33–38; idem, *Aʿyān*, 3:496–502; al-Kutubī, *Fawāt al-Wafayāt*, 3:78–84.

[120] Al-Ṣafadī, *Wāfī*, 17:351–62.

[121] Al-Ṣafadī, *Aʿyān*, 5:550–60.

[122] Ibid., 557–58.

[123] *Dīwān*, 463.

[124] Al-Ṣafadī, *Aʿyān*, 4:420–21; Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 3:96; Ibn Qāḍī Shuhbah, *Tārīkh*, 2:498–99.

[125] *Dīwān*, 87, 110, 154, 223 (*rithāʾ*), 366; it is not always possible to decide if a *Tājīyah* was directed to him or to Tāj al-Dīn al-Subkī.

[126] Ibid., 404.

and he is arrested, taken to Alexandria, and executed.[127] With the death of Tankiz, many of his favorites are dismissed from office. Ibn Nubātah had fared well with the Tankiz administration, though he had not been employed by the *dīwān al-inshā*ʾ during the last years. He might have viewed this development with mixed feelings.

741 *(55)*
After his imprisonment in the Cairene Citadel (Shaʿbān 739 to Rabīʿ I 740), al-Shihāb Ibn Faḍl Allāh regains favor and is finally appointed *kātib al-sirr* of Damascus.[128] Shihāb al-Dīn, a good poet and extraordinary prose stylist, is the most important person in Ibn Nubātah's life besides Abū al-Fidāʾ and al-Shihāb's brother ʿAlāʾ al-Dīn. The dozen *Shihābīyāt* in Ibn Nubātah's *Dīwān* give an imperfect picture of the importance of this relationship, as do the few preserved prose texts, such as Ibn Nubātah's *taqrīẓ* on Shihāb al-Dīn's extract of *Qalāʾid al-ʿIqyān* included in *Zahr al-Manthūr* [12]. Ibn Nubātah also dedicates his *Al-Qaṭr al-Nubātī* [6] to Shihāb al-Dīn. Amīn al-Dīn Ibn Tāj al-Riʾāsah is executed in Cairo after he had been dismissed from the vizierate the year before.[129]

742 *(56)*
In Rabīʿ II, al-Afḍal is deposed as governor of Ḥamāh and transferred to Damascus as an *amīr miʾah,* but he dies in the same month. Ibn Nubātah composes an elegy, which laments his death, the end of the Ayyubid dynasty, and the closing of an important chapter in his own life.[130] Sultan al-Nāṣir Aḥmad appoints Ṣalāḥ al-Dīn Ibn Faḍl Allāh (710–60) to the rank of an *amīr ʿasharah.* This Ṣalāḥ al-Dīn, brother of Shihāb al-Dīn and ʿAlāʾ al-Dīn, is the rare case of an offspring of a family of ulama who went to Cairo in Turkish attire to make a career among the *umarāʾ*.[131] The seven-liner *Dīwān,* 117, may have been dedicated to him. Death of Badr al-Dīn Ibn Makkī, *kātib* and holder of several offices in Tripoli. He and Ibn Nubātah had been on good terms, but their friendship suffered a crisis that resulted in an exchange of epigrams.[132]

III. Second Syrian Period (743–61/1342–60)
743 *(57)*

[127] See S. Conermann, "Tankiz," *EI*2, 10:185–86.
[128] Ibn Qāḍī Shuhbah, *Tārīkh*, 2:571.
[129] Ibid., 163.
[130] *Dīwān*, 99.
[131] Al-Ṣafadī, *Aʿyān*, 5:491–92. Another amir of this family is Nāṣir al-Dīn; see the year 764.
[132] *Dīwān*, 333, also in *Al-Qaṭr al-Nubātī* [6] and Ibn Ḥajar, *Durar*, 6:17–18.

Ibn Nubātah enters the *dīwān al-inshāʾ*. His financial situation had become increasingly difficult, especially after the loss of his Ḥamāh stipend. It seems that at this time he relied to a degree on the support of his father.[133] Therefore, to seek a position in the *dīwān* was the most obvious thing for him to do. He had established close contact with the chancellery since coming to Syria, but the last years were not favorable for Ibn Nubātah, who was a partisan of Ibn Faḍl Allāh. His friend Shihāb al-Dīn Ibn Faḍl Allāh had finally become the head of the *dīwān,* and it was he who took Ibn Nubātah with him into the chancellery. Ibn Nubātah started to work immediately, but it was only after some time had elapsed that he received his appointment decree, which was drawn up by al-Ṣafadī.[134] Advanced in age as he was, and having acquired the reputation of a great stylist, his situation as a "beginner" in the *dīwān* must not have been easy for him. He met the pressure to succeed by publishing a collection of documents and official letters produced in his first year under the title *Taʿlīq al-Dīwān* [26]. Still in the same year, Shihāb al-Dīn is dismissed and replaced by his brother Badr al-Dīn. Shihāb al-Dīn spends his time in the following years writing his encyclopedia *Masālik al-Abṣār,* which contains an early version of the *Dīwān Ibn Nubātah.*

744 *(58)*
Ibn al-Quṭb's star is rising again. After two unsuccessful years as vizier in Damascus, he is appointed inspector of the army of Damascus. He would hold this office for sixteen years. It is only now that Ibn Nubātah addresses a few lines to him.[135] Ibn Nubātah publishes this year's output as a *muwaqqiʿ* in the chancellery as a sequel to his *Taʿlīq al-Dīwān* [27].

745 *(59)*
The new vizier (=*nāẓir al-dawāwīn*) Taqī al-Dīn Ibn Marājil arrives in Dhū al-Ḥijjah.[136] If I understand al-Maqrīzī correctly, he cut the wages of many secretaries of the Damascene chancellery, among them prominent members, including Ibn Nubātah.[137] On the other hand, Ibn Nubātah welcomed Ibn Marājil with an epigram, and hailed the vizier with two long *qasīdah*s, in which he thanks him for the many favors he had bestowed on him.[138]

---

[133] Al-Ṣafadī, *Aʿyān*, 5:192; Ibn Ḥajar, *Durar*, 5:437.

[134] Al-Ṣafadī, *Wāfī*, 1:330–31.

[135] *Dīwān*, 470.

[136] Ibn Qāḍī Shuhbah, *Tārīkh*, 2:414–16, 449–50, 3:230.

[137] Al-Maqrīzī, *Sulūk*, 2:671. Contrary to ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 207, I do not think that *qaṭaʿa* in this context means "remove from office."

[138] *Dīwān*, 147, 208; Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 3:260.

746 *(60)*
Death of Badr al-Dīn Ibn Faḍl Allāh. Ibn Nubātah writes a dirge and transforms a poem intended to be addressed to Badr al-Dīn into a poem on his brother Shihāb al-Dīn.[139] Due to his early death at the age of 36, Badr al-Dīn left a smaller trace than his brothers in the œuvre of Ibn Nubātah. There is only a single long ode to him in Ibn Nubātah's *Dīwān,* but Ibn Nubātah was also the author of Badr al-Dīn's marriage contract.[140]

747 *(61)*
For a few months the vizierate of Damascus is held by the 24-year-old Taqī al-Dīn Ibn Hilāl. Ibn Nubātah congratulates him with an epigram that he recited to al-Ṣafadī, who criticized it.[141] Ibn Nubātah composes a dirge on the death of Tāj al-Dīn Ibn al-Zayn Khaḍir, Badr al-Dīn Ibn Faḍl Allāh's short-term successor as *kātib al-sirr* of Damascus.[142] Tāj al-Dīn's successor Nāṣir al-Dīn Ibn al-Ṣāḥib Yaʿqūb would enjoy a longer period in office (until 763). Jamāl al-Dīn Ibn al-Shihāb Maḥmūd (676–760) is appointed *kātib al-sirr* of Aleppo, an office he had already held for sixteen years until 733. He would be dismissed two years later, but would return for a third term from 752 to 759. His successor is al-Ṣafadī.[143] Besides his father, Jamāl al-Dīn was the most important member of the family for Ibn Nubātah, who addresses letters and a large number of poems to him. At least two odes composed for him are missing in the printed *Dīwān.*[144]

748 *(62)*
From Jumādá I to the beginning of the following year, Shams al-Dīn Ibn al-Tāj Isḥāq (d. 771) is appointed to the vizierate of Damascus for the first time. Ibn Nubātah dedicates to him at least two long *qasīdah*s (one on this occasion) and an epigram.[145] The Marinid ruler Abū al-Ḥasan ʿAlī establishes a *waqf* in Damascus for which Ibn Nubātah writes the *tawqīʿ*.[146] Execution of the amir al-Ḥājj Baydamur

---

[139]*Dīwān*, 460, 211; ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 139–44, confuses this Badr al-Dīn with his uncle, the brother of his father Muḥyī al-Dīn.

[140]Included in *Zahr al-Manthūr* [12]. The ode is in *Dīwān*, 365, shorter poems ibid., 56, 78, 234.

[141]*Dīwān*, 414; al-Ṣafadī, *Wāfī*, 6:406; idem, *Aʿyān*, 1:219; al-Maqrīzī, *Muqaffá*, 1:391.

[142]*Dīwān*, 223.

[143]Al-Ṣafadī, *Wāfī*, 6:143–45; idem, *Aʿyān*, 1:127–32; idem, *Alḥān al-Sawājiʿ*, 1:47–51.

[144]*Dīwān*, 11, 108, 109, 216, 396, 399, 438, 466, 554; see also Berlin MS 7861, fol. 129r and "the famous *qasīdah*» mentioned by Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah*, 5:171 f; letters in El Escorial MS árabe 548.

[145]*Dīwān*, 260, 269, 302; on Ibn al-Tāj see Ibn Qāḍī Shuhbah, *Tārīkh*, 2:504, 541, 3:378–79.

[146]Ibn al-Wardī, *Tārīkh* (Beirut, 1417/1996), 2:336–37. See also ʿUmar Mūsá Bāshā, *Ibn Nubātah*, 207–8.

al-Badrī, the former governor of Aleppo, to whom Ibn Nubātah had dedicated one of his few long odes addressed to an amir.[147] Death of the *muḥaddith al-ʿaṣr,* al-Dhahabī, who reckoned Ibn Nubātah among his *shuyūkh.*[148]

749 *(63)*
Year of the Black Death. Many friends and colleagues of Ibn Nubātah die, including the poets Zayn al-Dīn Ibn al-Wardī (who calls Ibn Nubātah *ṣāḥibunā*)[149] and al-Miʿmār. For Ibn Nubātah, the heaviest loss may have been Shihāb al-Dīn Ibn Faḍl Allāh. Jamāl al-Dīn Ibn Jumlah is appointed preacher at the Umayyad Mosque in Damascus. He will hold this office until his death in 764. He was the successor of Tāj al-Dīn al-Qazwīnī, to whose father Ibn Nubātah had turned when he came to Damascus. Ibn Nubātah's connection to Ibn Jumlah is attested by at least two long odes.[150] It seems as if the Great Mosque of Damascus was the most important religious institution with which Ibn Nubātah maintained close contact. Some documents even suggest that he held some sort of position in its *dīwān* for a while.

750 *(64)*
Ibn Nubātah's father Shams al-Dīn dies in Damascus at the age of 84 (lunar) years and is buried at the foot of Jabal Qāsiyūn.[151] He had reached the pinnacle of his career only the year before, when he had been appointed shaykh of the Nūrīyah madrasah in Damascus as successor to Zayn al-Dīn al-Mizzī, the son of the famous hadith scholar and previous shaykh of the Nūrīyah, Jamāl al-Dīn al-Mizzī (654–742).[152] Ibn Nubātah is appointed successor to his father as notary *(shāhid al-qasam)* of Dārayyā and Dūmah, two places in the Ghūṭah. Again he asks al-Ṣafadī to issue his appointment decree.[153] Ṣafī al-Dīn al-Ḥillī dies in Baghdad.[154]

---

[147] *Dīwān*, 362; see al-Ṣafadī, *Aʿyān*, 2:98 f.

[148] Al-Dhahabī, *Muʿjam Shuyūkh al-Dhahabī*, ed. Rūḥīyah ʿAbd al-Raḥmān al-Suyūfī (Beirut, 1410/1990): 567–68.

[149] Ibn al-Wardī, *Tārīkh*, 2:336.

[150] *Dīwān*, 304, 403; on Ibn Jumlah see *GAL*, S2:77; Ibn Qāḍī Shuhbah, *Tārīkh*, 2:553, 3:221, 240–41.

[151] Ibn Qāḍī Shuhbah, *Tārīkh*, 2:705–6.

[152] Ibn Taghrībirdī, *Manhal*, 11:83; on al-Mizzī see G. H. A. Juynboll, "Al-Mizzī," *EI*2, 7:212–13.

[153] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:254–56.

[154] The date 749 is given by al-Ṣafadī, *Wāfī*, 18:482, but since al-Ṣafadī corrected this date later in his *Aʿyān*, 3:70, it is likely incorrect. The date 752 given in the *Aʿyān*, however, is most certainly too late. Therefore, the date 750 is the most probable. It is given by Ibn Ḥabīb, *Tadhkirat al-Nabīh*, 3:138, who was a close acquaintance and great admirer of al-Ḥillī. It is corroborated by al-Kutubī, *Fawāt al-Wafayāt*, 2:350; see also Ibn Qāḍī Shuhbah, *Tārīkh*, 2:595: "Baghdad, end of 750."

751 *(65)*
Bahā᾽ al-Dīn Abū al-Baqā᾽ al-Subkī is given a professorship at the Madrasah al-Rawāḥīyah in Damascus.[155] Ibn Nubātah had dedicated a poem to him already in his *Dīwān al-Aṣl,*[156] which indicates his early and strong connection to the Subkī family. Another Bahā᾽ al-Dīn al-Subkī, Aḥmad ibn ʿAlī, the son of Taqī al-Dīn and author of *ʿArūs al-Afrāḥ,* an ingenious manual on rhetoric, may also have been the object of poems by Ibn Nubātah. It is not always possible to determine which of them is the addressee.[157]

752 *(66)*
ʿIzz al-Dīn Ṭuqṭāy (d. 760) is appointed *dawādār* and is at the height of his power, which lasts until 758. At least two epigrams attest to Ibn Nubātah's (if only marginal) relationship to this amir.[158]

753 *(67)*
At the beginning of the year, prices for foodstuffs in Damascus rise considerably.[159] We do not know if this caused problems for Ibn Nubātah and his family, but a review of Ibn Nubātah's life must note his repeated complaints about his miserable financial situation.[160] The sources agree that Ibn Nubātah never achieved worldly riches. Not every complaint should be taken as a sign of extreme poverty, though. To ask other people for gifts was also a way to make contact with them and to honor them. Further, I cannot help but feel that wealth was not a major ambition of Ibn Nubātah. Rather than risk exaggerating Ibn Nubātah's poverty, one should carefully study the attitudes towards money and wealth in this period and the role of gifts in the establishment and preservation of social relationships.

754 *(68)*
Ibn Nubātah produces a selection of the poetry of Sharaf al-Dīn al-Anṣārī [25]. This is one of four selections of poetry he made that have survived. The others are dedicated to the poems of Ibn al-Rūmī [21], Ibn Qalāqis [22], and Ibn al-Ḥajjāj

[155]Ibn Qāḍī Shuhbah, *Tārīkh*, 3:10; on Bahā᾽ al-Dīn see ibid., 3:499–501, and al-Ṣafadī, *Wāfī*, 3:310–14.

[156]*Dīwān*, 288 (see Ayasofya MS 3891, fols. 22v–23r), 343, 446, and see *Dīwān*, 50 and Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:2:12.

[157]The seven-liner, *Dīwān*, 159 is probably addressed to Aḥmad ibn ʿAlī.

[158]*Dīwān*, 261–62; see the headlines in Ayasofya MS 2352, fol. 94r.

[159]Ibn Qāḍī Shuhbah, *Tārīkh*, 3:33.

[160]For example, al-Ṣafadī, *Wāfī*, 1:330; ʿUmar Mūsá Bāshā, *Ibn Nubātah*, records many instances of this kind throughout his book.

[23]. His selection of the poetry of Ibn Sanāʾ al-Mulk [24] seems to have been lost.

755 *(69)*
Beginning of the second reign of Sultan al-Nāṣir Ḥasan, who was interested in Ibn Nubātah's poetry. He ordered production of a copy of Ibn Nubātah's *Dīwān* and eventually invited him to Egypt. If Ibn Iyās is right, Ibn Nubātah congratulated the sultan on this occasion with an epigram that is only a slight revision of an epigram he had composed on a different occasion many years before and included in his *Al-Qaṭr al-Nubātī* [6].[161]

756 *(70)*
Death of Taqī al-Dīn al-Subkī, the prolific scholar, qadi, and preacher. Ibn Nubātah dedicated to him at least three *qasīdah*s and several shorter poems. A first-rank literary joke is Ibn Nubātah's transformation of al-Ḥarīrī's didactic poem on syntax, the *Mulḥat al-Iʿrāb*, into a panegyric *urjūzah*. Ibn Nubātah composes a long elegy on his death, as did al-Ṣafadī, al-Qīrāṭī, and others, and sends it from Damascus to Taqī al-Dīn's son Tāj al-Dīn in Cairo.[162]

757 *(71)*
Ibn Nubātah exchanges letters with the poet and prolific writer Ibn Abī Ḥajalah (725–76), who is also the addressee of at least one of Ibn Nubātah's seven-liners.[163]

758 *(72)*
In all probability, Ibn Nubātah's *Sūq al-Raqīq* [29] was written during the late fifties, though no exact date can be given. In this book, the poet collected the *nasīb* of many of his *qasīdah*s to create a book of love poetry. The text, which is preserved in Ibn Nubātah's own hand, shows that the poet had thoroughly revised many poems since their creation.

[161] See *Dīwān*, 531, and Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:1:553.

[162] The *qasīdahs Dīwān*, 8, 264, 273, the shorter poems ibid., 94, 237, 241, 349, 415, Cairo, Dār al-Kutub MS adab Ṭalʿat 4658, fols. 22r–v; the r*ajaz* poem *Dīwān*, 582; the *rithāʾ* ibid., 41; see also Tāj al-Dīn al-Subkī, *Ṭabaqāt al-Shāfiʿīyah*, 5:305–407, esp. 397–400, and Ibn Iyās, *Badāʾiʿ al-Zuhūr*, 1:1:556–57. See also *GAL*, 2:86–88, S2:102–4; al-Ṣafadī, *Aʿyān*, 3:417–55.

[163] Ibn Abī Ḥajalah, *Sukkardān al-Sulṭān*, ed. ʿAlī Muḥammad ʿUmar (Cairo, 2000), 10–11; on Ibn Abī Ḥajalah see *GAL*, 2:12–13, S2:5–6; J. Robson, U. Rizzitano, "Ibn Abī Ḥadjala," *EI*2, 3:686; T. Seidensticker, "Ibn Abī Ḥajala," *EAL*, 1:305. Ibn Nubātah's seven-liner, *Dīwān*, 227.

759 *(73)*
The famous scholar Tāj al-Dīn al-Subkī,[164] son of the aforementioned Taqī al-Dīn, is dismissed from office as chief Shafiʿi qadi of Damascus in Shaʿbān but reinstated a month later. On this latter occasion, al-Ṣafadī congratulates him with a long poem,[165] and in all probability Ibn Nubātah's poem *Dīwān,* 141–43, was composed on the same occasion. Tāj al-Dīn was one of the closest acquaintances of Ibn Nubātah during his last years. They exchanged many poems and shared (together with al-Ṣafadī) a passion for riddles. A few more long *qasīdah*s and about a dozen of Ibn Nubātah's seven-liners are addressed to Tāj al-Dīn.[166]

760 *(74)*
The *kātib al-sirr* Nāṣir al-Dīn Ibn Yaʿqūb is transferred to Aleppo as the successor to al-Ṣafadī, who, in turn, becomes Nāṣir al-Dīn's successor as *wakīl bayt al-māl* and *muwaqqiʿ al-dast* in Damascus. The new head of the chancellery is Amīn al-Dīn Ibn al-Qalānisī,[167] to whom Ibn Nubātah seems to have had no close ties and in whose biographies epithets or praise are conspicuously missing. He will be dismissed two years later, and Nāṣir al-Dīn returns for a few months. It must remain speculation whether these developments contributed to Ibn Nubātah's decision to go to Egypt despite his advanced age.

IV. Second Cairene Period (761–68/1360–66)
761 *(75)*
At the invitation of Sultan al-Nāṣir Ḥasan, Ibn Nubātah returns to Cairo in Rabīʿ I, 44 years after he had left. He is appointed *muwaqqiʿ al-dast* in the Cairene chancellery. Due to his poor health, he cannot work regularly, but is paid his wages nonetheless. This office may have been meant as a sinecure for the renowned aging *adīb* rather than a real job. Ibn Nubātah stays in a house that is lent to him by the merchant Nūr al-Dīn ʿAlī Ibn Ḥajar (d. 777/1375), a legal scholar and man of letters, to whom Ibn Nubātah addresses many of his seven-liners. Some of them mention a quarrel about the house, which would end their friendship. Nūr al-Dīn's son, Ibn Ḥajar al-ʿAsqalānī, would profit from Ibn Nubātah's manuscripts which he inherited from his father.[168]

762 *(76)*
Sultan al-Nāṣir Ḥasan is put to death on 9 Jumādá I.[169] Most contemporaries and historians do not say much in favor of this sultan, besides his building the beautiful madrasah-mosque that bears his name. As is easily understandable, Ibn Nubātah saw things differently. He praised the sultan with four *qasīdah*s, a *takhmīṣ,* and several seven-liners.[170] Al-Nāṣir Ḥasan was the only sultan eulogized by Ibn Nubātah. We do not know anything about the relationship between Ibn Nubātah and al-Ḥasan's successors al-Manṣūr Muḥammad (762–64) and al-Ashraf Shaʿbān (764–78). Fakhr al-Dīn Mājid Ibn Khaṭīb is dismissed from office as vizier in Cairo.[171] After ten months in office as vizier in Damascus, the recently converted Copt Fakhr al-Dīn Mājid Ibn Qarawīnah is transferred to Cairo to replace his namesake as vizier and *nāẓir al-khāṣṣ*.[172] He administers his offices very successfully, but judgments of his personality are controversial.[173] After the overthrow of Yalbughā in 768, he was tortured to death three months after Ibn Nubātah's death. He was one of three brothers (the others were ʿAlam al-Dīn Ibrāhīm and Saʿd al-Dīn),[174] to whom Ibn Nubātah addressed several of his seven-liners. The Ibn Qarawīnah family was probably the last family that came to play a role in Ibn Nubātah's life. Since Ibn Nubātah had already dedicated poems to Fakhr al-Dīn Ibn Khaṭīb, it is not always easy to avoid confusion over who is addressed.[175]

763 *(77)*
Death of Nāṣir al-Dīn Ibn Yaʿqūb, *kātib al-sirr* of Damascus since 747, with the exception of two years in Aleppo (760–62). He is praised as a pious man, well versed in the religious sciences, and a bibliophile, who was interested in literature and composed poetry himself. Ibn Nubātah had addressed many poems to him, among them a dirge on the death of his mother.[176] He had already addressed his father Sharaf al-Dīn Yaʿqūb (d. 729), who had been *nāẓir* of Aleppo for many

years, and written a poem of condolence when he lost his uncle.[177]

764 *(78)*
Al-Ṣafadī dies. His relationship to Ibn Nubātah began as that of a pupil, after which they became friends and exchanged poems and presents. In the *dīwān al-inshāʾ* in Damascus they were colleagues and al-Ṣafadī issued several documents for Ibn Nubātah. But their friendship was not untroubled. Al-Ṣafadī emulated Ibn Nubātah's work to a degree that Ibn Nubātah regarded as plagiarism. Their quarrels culminated with Ibn Nubātah's *Khubz al-Shaʿīr* [30]. This may have been a reason for al-Ṣafadī to concentrate more on the theoretical side of *adab,* which was not Ibn Nubātah's domain. Later, there seems to have been a reconciliation. In al-Ṣafadī's *Alḥān al-Sawājiʿ,* Ibn Nubātah is granted by far the longest chapter. It comprises almost a hundred pages and contains poems and letters exchanged between them.[178] Al-Ṣafadī opines that Ibn Nubātah never reached the rank among the *kuttāb* that he deserved.[179] This was probably due to Ibn Nubātah's very late decision to enter the *dīwān al-inshāʾ*. In addition, his character seems not to have been without a certain stubbornness, which made it difficult for him to navigate the intrigues of the chancellery. But even the more amiable and successful al-Ṣafadī did not reach the highest possible positions. In his case, it was his increasing deafness that got in the way.[180] Nāṣir al-Dīn Ibn Faḍl Allāh, the grandson of Sharaf al-Dīn, dies in Adana. He and his father are two more examples of members of the Faḍl Allāh family who pursued a military career. Ibn Nubātah had addressed poems to him.[181] Death of al-Kutubī, who had known Ibn Nubātah.[182]

765 *(79)*
Perhaps as his last work, Ibn Nubātah assembles his miniature *qasīdah*s of seven lines in a separate *Dīwān* entitled *Al-Sabʿah al-Sayyārah* [31]. An exact date cannot be given, but the book cannot have been finished earlier than during the Cairene years (if it was ever finished at all).

766 *(80)*
The poet and prose stylist Burhān al-Dīn al-Qīrāṭī (726–81) returns to Cairo.[183] He

---

[180]Ibn Qāḍī Shuhbah, *Tārīkh*, 3:228.

[181]*Dīwān*, 237 (= Ibn Ḥijjah, *Khizānat al-Adab*, 3:353), 242; see Ibn Qāḍī Shuhbah, *Tārīkh*, 3:239; Ibn Ḥajar, *Durar*, 5:222.

[182]See al-Kutubī, *Fawāt al-Wafayāt*, 3:159.

[183]The date 766 is given by Brockelmann, *GAL*, 1:14, but I could not find it in the sources accessible

and Ibn Nubātah enjoy boat trips on the Nile. Several of Ibn Nubātah's seven-liners directed to al-Qīrāṭī date from these years. When Ibn Nubātah was still in Damascus, al-Qīrāṭī had written a letter of praise of "extreme length and beauty" to Ibn Nubātah, which is counted among al-Qīrāṭī's major works.[184] Ibn Nubātah was al-Qīrāṭī's model, and, according to Ibn Taghrībirdī, al-Qīrāṭī is the best poet of the age next to Ibn Nubātah, and the poet who comes closest to him.[185]

767 *(81)*
Birth of the poet, prose stylist, and literary critic Ibn Ḥijjah al-Ḥamawī (d. 837), a great admirer of Ibn Nubātah, who lauded Ibn Nubātah's achievements, especially in the field of the *tawriyah,* in his *Kashf al-Lithām ʿan Wajh al-Tawriyah wa-al-Istikhdām* and in his *Khizānat al-Adab,* in which several otherwise lost texts by Ibn Nubātah are preserved. Death of Burhān al-Dīn al-Zuraʿī, the son of Ibn Qayyim al-Jawzīyah. He had once been Ibn Nubātah's travelling companion and gave Ibn Nubātah reason to compose a humorous epigram.[186]

768 *(82)*
7 Ṣafar (13 October 1366): At the age of 82 lunar (79 solar) years, Ibn Nubātah dies in the hospital that had been built by al-Manṣūr Qalāwūn. He is buried at the so-called Cemetery of the Sufis north of Bāb al-Naṣr. He leaves behind a son named Muḥyī al-Dīn Muḥammad (d. after 790), a mediocre *adīb,* who earned his living as copyist.[187] This is one of the many parallels between Ibn Nubātah and Ibn Ḥajar. Both hoped for a son who would continue their enterprises. When, after many setbacks, they became fathers to sons who survived infancy, the sons proved unable to meet the expectations of their fathers. Ibn Ḥajar had his pupil al-Sakhāwī to step in. Ibn Nubātah's "Sakhāwī" was al-Bashtakī, who re-edited Ibn Nubātah's *Dīwān* in the year 773, though in a rather questionable way. But Ibn Nubātah's poems and prose texts survived and helped to shape Arabic literature for centuries to come.

ROBERT IRWIN

The Political Thinking of the "Virtuous Ruler," Qānṣūh al-Ghawrī

What follows is an essay on the politics of high culture. Historians have tended to present the politics of the Mamluk Sultanate and in particular its factional fighting, as ideology free. Apart from a commitment to Islam and the jihad, the Mamluks seem curiously bereft of any form of idealism, role models, or political programs. Modern historians often portray the political strategies and goals of the Mamluk sultans as being almost invariably driven by hunger for power, greed, arrogance, and, in some cases, fear. They have been encouraged in such cynical readings of Mamluk politics by the way in which the medieval ulama, who were effectively the custodians of Mamluk historiography, wrote about the sultans and amirs. Generalizing very broadly, their narratives tended towards the positivist and uninterpretative. But it seems worth considering whether there was at least the pretence of ideology and idealism on the part of the ruling elite.

Most of the ulama did not frequent the court, and consequently they were not party to the way decisions were made and the reasons for those decisions. Shihāb al-Dīn Muḥammad ibn Aḥmad Ibn Iyās (1448–ca. 1524) is a case in point. Despite being the grandson of a mamluk, his chronicle, the *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* is effectively an outsider's chronicle, based on public proclamations, gossip, and personal sightings of processions and departing military expeditions. While he is prepared to concede that the Mamluk sultan Qānṣūh al-Ghawrī had some good qualities, nevertheless his account of that sultan's reign (906–22/1501–16) is a hostile one and, in his obituary of the sultan, he condemns him for his injustice, confiscations, and greed.[1] Obviously the *Badāʾiʿ* is not a neutral source. Ibn Iyās, a student of al-Suyūṭī's, was an Egyptian *ʿālim* who shared the hostility of the ulama toward the favor shown by Qānṣūh to immigrant Persian and Turkish scholars. (Prominent amongst the incoming Turks was the heterodox Khalwatī Sufi, Shaykh Ibrāhīm Gulshanī.) Ibn Iyās disapproved of the favor shown by the sultan to certain Sufis and the sultan's alleged sympathy for the ideas of the Ḥurūfī poet, Nasīmī, who had been flayed alive for heresy in 820/1417.[2] When the Ottoman prince Qorqud turned up as a refugee at the Mamluk court, Ibn Iyās also seems to have regarded the honor with which that prince was treated as excessive.

As the grandson of a mamluk and son of a member of the *awlād al-nās,* Ibn Iyās resented Qānṣūh's contempt for this increasingly redundant and notional military

[1] Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden-Cairo, 1961–75), 5:85–93.

[2] Ibid., 86.

group. Qānṣūh treated them merely as a fiscal resource.[3] Though no soldier, Ibn Iyās had inherited an *iqṭāʿ* from his father, and when the sultan confiscated this *iqṭāʿ,* Ibn Iyās had a long fight in the courts to reclaim it.[4] And, despite his Mamluk descent, Ibn Iyās shared the fairly general ulama prejudice against the Mamluks. With his traditional cast of mind he disapproved also of Qānṣūh's raising of the Fifth Regiment of musketeers. Moreover, it seems that as a civilian, Ibn Iyās was not fully aware of the growing military threats posed to the Mamluk regime by the Portuguese, Safavids, and Ottomans, and consequently he regarded all the sultan's emergency exactions as being driven by personal greed, rather than by harsh military necessity. Furthermore, it is plausible that his account of Qānṣūh's reign is colored by hindsight and Ibn Iyās's knowledge that that sultan had led the Mamluks to defeat at the hands of the Ottomans at Marj Dābiq.[5]

Though Ibn Iyās was not a neutral observer and his deficiencies as a historian are clear, it must be admitted that we have scarcely any other sources on what was going on in Egypt during the reign of Qānṣūh. However, two literary sources from the time have survived that shed some light, however dim, flickering, and partial, on the culture and thinking of the sultan. The first of these is the *Nafāʾis al-Majālis al-Sulṭānīyah.* This is a record of the sultan's *majlis*es or soirees during 910/1505. It was compiled by the Iranian Turkophone Ḥusayn ibn Muḥammad al-Ḥusaynī, also known as Sharīf. In the *Nafāʾis* he logs some of the people who attended and gives an account of the highlights of the evening's debate, which was usually opened by the sultan posing a question. The matters debated included religious, literary, political, and social issues and there were also riddles, jokes, and mathematical problems. The debates, which took place several evenings a week, were normally held in the Duhayshah, a hall within the Cairo Citadel. Quite a few of the ulama seem to have attended.

The second source, the *Kawkab al-Durrī,* completed in 919/1513–14 by an unknown hand, is similar but different, in that it is record of what was said at various *majlis*es of the sultan, but it is organized according to subject matter, rather than chronologically. Qorqud, an Ottoman prince in exile, attended several

of these sessions. Here are some of the topics covered in both these sources, to give a sense of their diversity: Was Adam the first man to speak Arabic? How can prayers and fasting be managed in the land of the Bulgars where there is no sunset or sunrise? Can one recite the *fātiḥah* in Persian? Why do people avoid wearing red or yellow? Who built the pyramids? Why do people beat on cups when there is an eclipse? What is the function of the *maṣdar* in grammar? How old is the world? And there are also chess anecdotes, mathematical problems, jokes about Kurds, a joke featuring Naṣr al-Dīn Khwājah, stories about thieves, the beauty of Joseph, the death of the poet Mutanabbī, praise for the narcissus, and the story of the commissioning of the *Shāhnāmah* and how Firdawsī was rewarded.[6]

Qānṣūh was famous (or notorious) for the favor he showed to Persian and Persian-speaking religious figures and literati.[7] Ḥusayn ibn Muḥammad al-Ḥusaynī was only one of several Persians who received patronage from him. Moreover, Persian was one of the several languages in which Qānṣūh was fluent.[8] In 906/1500–1 he commissioned a translation of Firdawsī's *Shāhnāmah* into Turkish, not for his own benefit, as he could read the original, but for his Turkish-speaking amirs. The manuscript was illustrated in the Turkman style of the courts of Baghdad and Shiraz. (The vast project took ten years.)[9] Qānṣūh himself composed poetry in Persian as well as Turkish.[10] The early Mamluk sultans did not compose poetry (and very likely they would have thought the practice sissy), but Qāytbāy, Yashbak min Mahdī, and Qānṣūh did, as did several of the Ottoman sultans as well as the Timurid princes Bāysunghur and Iskandar in Fars. By the fifteenth

century the composition of poetry was seen as a desirable accomplishment for a prince. Incidentally Ḥusayn ibn Muḥammad al-Ḥusaynī had previously been in the entourage of the fugitive Ottoman prince Jem.[11] It is possible that, during his time at the Mamluk court in the reign of the sultan Qāytbāy, Jem had been instrumental in introducing various Turkish and Persian cultural activities.[12]

There is little precedent for the holding of soirees in Mamluk cultural history, though in the early fifteenth century Nāṣir al-Dīn Muḥammad, the son of the Sultan Jaqmaq, presided over soirees.[13] It seems likely that in holding such cultural soirees, Qānṣūh was inspired not by the past practice of earlier Mamluk sultans, but by literary and philosophical sessions presided over by the Timurids and by the various successor regimes that were established as the Timurid empire fell apart.

Qānṣūh's court culture was a Persianate one, and it looked East for most of its role models—to Shiraz, Baghdad, Tabriz, Samarkand, and Herat. The court of Sulṭān-Ḥusayn Bāyqarā (r. 873/1469–70, 875–911/1470–1506) had enormous prestige. The sultan presided over *majlis*es in a garden pavilion outside Herat, where courtiers mingled with singers, poets, and musicians.[14] Subsequently Sulṭān-Ḥusayn Bāyqarā's rule and patronage were idealized and taken as models by the Uzbeks. Sulṭān-Ḥusayn Bāyqarā was fond of the *muʿammah,* those who posed riddles, and, to judge by his sessions, Qānṣūh was similarly fond of riddling. Sulṭān-Ḥusayn Bāyqarā also held *majlis*es in Herat and a record of these, the *Badāyiʿ al-Vaqāyiʿ,* was made by Zayn al-Dīn Vāṣifī. When the Uzbek Muḥammad Shībānī Khan took over Herat, he presided over *majlis*es, which were mostly devoted to poetry, though the riddling craze continued. Later the Persian writer Vāṣifī gave the Uzbek Kildī Muḥammad tutorials on the model rulers of past centuries. These included Sulṭān-Ḥusayn Bāyqarā, Bāysunghur, Anūshirvān, Ulugh Beg, Sultan Maḥmūd of Ghazna, and Sultan Ismāʿīl Sāmānī. Like Qānṣūh, Muḥammad Shībānī Khan commissioned a translation of the *Shāhnāmah* into Turkish.[15] In Muzaffarid Shiraz, the prince posed questions such as whether *ʿaql* or *ʿishq* came first? Or who was Burāq? His scholars wrote letters giving their replies.[16]

Qānṣūh's preoccupation with his magnificent garden also had Timurid, Aqqoyunlu, and Ottoman precedents. Timur had held court in a series of elaborately planned gardens in Samarkand and these gardens were later rivalled by those established by Shāhrukh in Herat. Later in 1470 Sulṭān-Ḥusayn Bāyqarā began laying out the Bāgh-i Jahān-Ārā, "the World-Adorning Garden," also in Herat. Mehmed II's "paradise-like" gardens and Chinli Kiosk were derived from Timurid prototypes.[17] Josafo Barbaro has described Uzun Ḥasan's garden, the Hasht Bihisht ("Eight Paradises") outside Tabriz.[18] As Doris Behrens-Abouseif has observed, Qānṣūh "worked carefully at constructing his image as poet and scholar and a patron of the secular arts, pursuing the kind of princely image that was cultivated by the Timurid, Safavid, and Ottoman princes, but was unfamiliar in the culture of the Mamluk court. Moreover, there is an undeniable Iranian flair to al-Ghawrī's cultural life, which is evident in his entourage of *aʿjam* and his preoccupation with the *Shāhnāmah*."[19]

Qānṣūh, like Qāytbāy and Yashbak min Mahdī before him, wrote poetry and he presided over a literary court culture. At some of his soirees young mamluks were brought before the sultan so that they could be tested on their reading.[20] On another occasion young mamluks were brought in to be taught singing and poetry by a certain Ibn Ifrīt.[21] There is evidence from elsewhere that young mamluks were also assigned exercises in copying manuscripts.[22]

Apart from commissioning a Turkish version of the *Shāhnāmah,* Qānṣūh had several Persian versions of it in his library. The *Shāhnāmah* was an epic romance celebrating the ancient Persian kings and heroes, but it "was also a political treatise, as it addressed deeply rooted conceptions of honor, morality and legitimacy." It "reflected the attempts of various dynasties to assimilate themselves into the Iranian monarchical tradition."[23] Qānṣūh was no exception and the translated version of the *Shāhnāmah* that he commissioned was given an extended addendum with a discussion of important later sultans, beginning with Sultan Maḥmūd of Ghazna and ending with Qānṣūh, whose court, soirees, palaces, and madrasahs

were all lavishly praised.[24]

Political theory produced by the ulama in the Mamluk period was sparse, sententious, and uninspiring. It was also somewhat pusillanimous. Badr al-Dīn Muḥammad ibn Jamāʿah (639–733/1241–1333) has been described by Henri Laoust as "the theoretician of the Mamluk state."[25] According to Ibn Jamāʿah, "the tyranny of a sultan is preferable to the flock being left without a master for a single hour." Ibn Jamāʿah adjusted the preoccupations and vocabulary of earlier political thinkers who had flourished under the Abbasid Caliphate to fit the realities of the early Mamluk regime. He stressed the role of the ulama in advising the sultan and the sultan's duty to protect the ulama. The Muslim people must be led by an imam, but the imamate could be acquired by force (implicitly therefore by a Mamluk sultan). Such an imamate, acquired by force, could obviously be lost by force. Even if the imam was a sinful man, it was generally preferable to obey him, for fear of the anarchy that might ensue if obedience was withdrawn.[26] Ibn Taymīyah (661–728/1262–1328) echoed Ibn Jamāʿah when he stated that "Sixty years with an unjust imam is better than one night without a sultan." He denied that it was necessary for a Muslim community to be governed by a caliph, and he rejected the idea that the imam must be of Qurayshī lineage.[27] According to Ibn Taymīyah, people are enjoined to "patient endurance of the injustice and tyranny of leaders."[28] He accepted the de facto situation in which the military authority had usurped for its own jurisdiction a large number of criminal cases.[29]

In contrast, as we shall see, the kind of material produced by and for the sultan at his soirees belongs in the category of what Patricia Crone has termed *naṣīḥah,* or advice literature.[30] Much of it can also be categorized as mirrors-for-princes. The advice offered was essentially secular, and expedient justice took precedence over the shariʿah. The literature focused on kings and how they could maintain their rule and administer justice, and was Persian in origin (where it went under the name of *andarz*).[31] Often the precepts were delivered in the guise of a last will and testament, a *waṣīyah,* which offered guidance to the succeeding son. A manuscript full of *naṣīḥāt* entitled *A Book Containing Wise Sayings and Literary*

Anecdotes has survived in a copy made for Qānṣūh's library.[32]

So now to the actual content of the *Nafāʾis* and *Kawkab*. Right at the beginning of the *Nafāʾis* in the *muqaddimah,* or introduction to the records of the soirees, a political question is posed and answered in various ways: "Alexander was asked, 'What man is fit to be king?' 'Either a wise man *(ḥakīm)* who is king of wisdom, or a king seeking wisdom,' he replied." Then other ruler-sages, the Faghfur of China, the Caesar of Rome, the Fur of India, and so on, give their pronouncements on the importance of wisdom and the disgrace of ignorance and so on, ending up with Sultan Maḥmūd of Ghazna and Qānṣūh, who pronounces that "there is nothing better in the world than *adab* [which I take in this context to mean literature], as *adab* adorns wealthy men and conceals the poverty of the poor."[33] Recurrent reference throughout the *Nafāʾis* and the *Kawkab* is made to the gnomic sayings of the wise rulers of past centuries. Alexander is a favorite source of sagacious advice, but Anūshirvān (Chosroes) and Sultan Maḥmūd of Ghazna also feature frequently.

The Alexander who features in Qānṣūh's soirees is not the Macedonian world conqueror familiar to modern historians, but rather a half-Persian legendary seeker of knowledge and eternal life as portrayed in the *Shāhnāmah*. According to the *Nafāʾis,* "Alexander was asked, 'What is the best state of the people?' He said, 'When their king has a brilliant mind, sound judgement, and is knowledgeable about government.' He was asked, 'And the worst?' 'When their king lacks all these things.'" And al-Ḥusaynī goes on, of course, to add that, thank God, all these qualities are found in the sultan Qānṣūh.[34] Again, "Alexander said, 'The best of kings is he who keeps justice in his mind and whose excellent qualities inspire those who come after him,'" and once again al-Ḥusaynī is swift to point out that this characterization fits Qānṣūh perfectly.[35] There are many more (not particularly interesting) examples of Alexander's wisdom.

Perhaps such precepts derive from the *Naṣāʾiḥ-i Iskandar,* or "Counsels of Alexander," a manuscript of which had been copied for Bāysunghur. Or perhaps they come from Niẓāmī's treatment of the Alexander romance. Although Alexander features prominently in Firdawsī's *Shāhnāmah,* the *Shāhnāmah* does not seem to be the source for the precepts of Alexander as relayed in the soirees. For example, Firdawsī included a version in verse of the letter that Alexander wrote to his mother on his deathbed. The *Nafāʾis* also quotes a deathbed letter from Alexander to his mother in prose, but it is full of pietistic platitudes about the acceptance

[34] Ibid., 30.

[35] Ibid., 55.

of death that are not found in Firdawsī.[36] Or, to take another example, according to the *Nafāʾis,* "Alexander was told that there were 300,000 men in the army of King Dārāb, but Alexander replied, 'So many sheep do not frighten the butchers.'"[37] Dārāb, Alexander's great foe, does feature prominently in the *Shāhnāmah,* but this particular exchange is not found in Firdawsī's poem.

Farīdūn, a king in ancient Persia who features in the *Shāhnāmah,* is quoted in the *Nafāʾis* to the effect that besides having all the virtues, the ideal ruler must have perfect physiognomy, great strength, and a loud voice. Happily again, Qānṣūh happened to have all these characteristics.[38] And here al-Ḥusaynī adds that Persians paint images of their kings and their battles on the walls of their houses so as to perpetuate the memory of those kings, before he goes on to lay out the shariʿah's stipulations for an imam. According to the shariʿah, it is preferable that the ideal imam should be of the Banū Ismāʿīl, or, if not from the Banū Ismāʿīl, then from the Persians or the Banū Isḥāq. Again it is fortunate that the Circassians are descended from the Banū Isḥāq.[39] Qānṣūh and his panegyrist subscribed to the legend that the Circassians descended from the Arab Ghassanids.[40] Incidentally the more orthodox Sunni position is narrower than that suggested by al-Ḥusaynī, as most medieval Sunnis held that the imam should be of Qurayshī descent.[41]

There are fewer allusions to previous Mamluk sultans, though al-Ḥusaynī records that at one *majlis* Shaykh Ibn ʿAmm Abī al-Ḥasan arrived with two books, one of which was the *Sīrah* of al-Malik al-Ẓāhir Baybars and the story of his invasion of the land of the Franks, which he proposed to read in its entirety, but al-Ḥusaynī argued against this, saying that if Baybars were alive today he would want to hear the story of the *majlis* of our Lord the Sultan.[42] Presumably the *Sīrah* in question was the history by Muḥyī al-Dīn ibn ʿAbd al-Ẓāhir, rather than the anonymous folk epic.

Later, when Qānṣūh was preoccupied with preparations for the hajj, the dispatch of an army down to the Hijaz, and the fortification of Jedda, he asked if the hajj was ever suspended. In answer a fairly lengthy account is given of the rivalry between Baybars and Hulagu for the control of Mecca and the hajj.[43]

At one point Qānṣūh tells a most curious story of Muḥammad Qalāwūn (*sic,* but presumably Nāṣir al-Dīn Muḥammad ibn Qalāwūn is meant) summoning a group

of his beloved and telling them that if they loved him they would throw themselves out of the palace, whereupon they said "*bismillāh*" and threw themselves from the first floor to the ground. As they lay there they shouted up to the sultan, "Our love for you extends this far, and he who can go further, let him be the favored one."[44]

Another story not featured in conventional history books is the story of the fate of an Ottoman fleet sent against the Mamluks during the reign of Qāytbāy. The *amīr kabīr* had advanced out of Egypt to counter the threat. He proposed to some of his retinue they recite the *fātiḥah*. They recited it that afternoon and all of the enemy were drowned by the decree of fate that night. In the morning the Mamluks sent out small ships to seek out those who had tried to save themselves by clinging to bits of wood and cut off their hands. This happy event was all due to the *fātiḥah.*[45] The reference here would be to the Ottoman fleet under the command of Hersek-oğlu Ahmed Pasha, many of whose ships were indeed sunk in a great storm in 893/1488. The *amīr kabīr* in question was the Atabeg Uzbek.[46]

On the one hand, secular and legendary Persian figures are used both to denounce tyranny and to justify kingship. For example, Bahrām ibn Bahrām said, "A lion that crushes everything he devours is better than an unjust king, and he in turn is better than persistent disorder."[47] But on the other hand, Qānṣūh's rule is also justified on religious grounds, for, according to a hadith, "The sultan is the shadow of God upon earth and he who is sincere before him is rightly guided, but he who deceives him errs."[48] The sultan's rule is preordained by fate and sanctioned by God. In one *majlis,* Shihāb al-Dīn al-Maḥallī relates a dream he has had in which a band of armored men looking like Turkmans advanced to invade Egypt, but the Prophet appeared flanked by Abū Bakr, ʿUmar, ʿUthmān and ʿAlī, and the Prophet declared himself the protector of Egypt. Al-Maḥallī's dream prompts the sultan to recall how thirty years previously, when he was just an amir, he entered the house of Yashbak the *dawādār,* where he encountered an amir who hailed him and told him that he had had a dream in which Qānṣūh had appeared with a ring of iron round his neck. He had taken this dream to Yashbak. They interpreted it as meaning that great power would come to Qānṣūh, and that it was inevitable that he should become sultan.[49] (This, in turn, leads to a silly story about a man who dreamt that Shāhrukh was wearing a pearl the size of a watermelon in his ear.)

The sultan should be generous. The story is told that Jahānshāh, the Qaraqoyunlu ruler of Tabriz, had very poor-quality black bread distributed at his madrasah, but when threatened by a *faqīr* with retribution in the afterlife, he repented. Qānṣūh claimed that he had resolved to be as generous as the repentant Jahānshāh.[50] The sultan should avoid behaving tyrannically and should offer redress to those who had suffered tyranny. The tale is told of a king of Hind who, when he became deaf, gave orders that plaintiffs who appeared before him who were victims of tyranny should wear red, so that he would not miss their complaints.[51]

At one point the legitimacy of a Mamluk regime is raised. In 890/1485 Qāytbāy had sent one of his closest associates, the amir Jānībak Ḥabīb al-ʿAlay al-Īnālī, on a placatory but ultimately unsuccessful mission to the Ottoman sultan Bayezid II.[52] According to the *Nafāʾis,* when Jānībak entered the Ottoman lands, the Ottomans tauntingly demanded to know by what right the Mamluks, who were sons of infidels, should govern the Bayt Allāh and the Ḥaram (in Mecca). That prerogative should surely belong to the Ottoman sultan, who is the son of a sultan, grandson of a sultan, and great-grandson of a sultan. But Jānībak retorted by pointing out that the father of Ibrāhīm was an infidel and so was the father of Muḥammad. Moreover, the nobility of a person depends upon knowledge and comportment *(adab),* not lineage and descent. Shaykh Kurānī (who was presumably in Jānībak's retinue) added that those present should not even discuss the legitimacy of the sultans of Egypt as they covered themselves with disgrace. Bayezid marvelled at this and he bestowed many precious gifts upon him.[53] Elsewhere in the *Nafāʾis,* ʿAlī ibn Abī Ṭālib is quoted to the effect that a man's nobility, knowledge, and decorum are more important than his lineage and tribe, and it is soon after that the origins of the Circassians are discussed.[54]

In the *Kawkab al-Durrī* another, more minor clash with Bayezid II is mentioned, when Bayezid allegedly wrote to Qāytbāy wanting to know why the latter prefaced his decrees with the words *bismillāh al-raḥmān al-raḥīm.* Qāytbāy replied that he did so because any important enterprise was defective without the *basmalah*. Why did Bayezid not preface his decrees with a *basmalah*?[55]

In one *majlis* the sultan asked whether the sultan or the caliph took precedence in a funeral procession. Doubtless he was gratified to be told that the sultan did. This in turn led to reminiscences about the dispatch of robes of honor by the caliph

in Egypt to Jahānshāh ibn Qarā Yūsuf, the Qaraqoyunlu ruler from 837/1434 until 872/1467, and to the Ottoman sultan Mehmed, presumably Mehmed II. In Jahānshāh's case, when the caliph's emissary explained the gift, Jahānshāh said: "If you were not a stranger, I would have cut out your tongue." Then he made the emissary wear the robe and gave him three hundred dinars for having entered the royal presence. In Mehmed's case, after the emissary had explained the robe in the sultan's council, Mehmed declared that he was himself the Caliph of the World and that every sultan in the world should don the robe. Then he gave orders for it to be cut to pieces.[56]

On a separate occasion another aspect of the caliphate was debated. Did the glory of the sultan of Egypt derive from the fact the he was deputy of the caliph? Al-Ḥusaynī argued that this was not the case, since, if the sultan of the Yemen was independent and his status did not depend on his being the deputy of the caliph, *a fortiori* this must be true also of the sultan of Egypt and the two Holy Places. He was really only the deputy of the shariʿah law. Then al-Ḥusaynī was asked what was said about Baybars when he donned the caliph's robe. Al-Ḥusaynī replied that the caliph's glory derived from the sultan and not vice versa, whereupon one of al-Ḥusaynī's rivals and debating foils in the *majlis* observed that if al-Ḥusaynī had made such a remark in the days of Qāytbāy he would have had his head cut off. This talk of cutting off people's heads made the sultan angry.[57]

The *Kawkab* includes yet another debate on the question of the caliphate. This arose when the Safavid Shāh Ismāʿīl had sent Qānṣūh a book of Mongol history and in it there was an obituary of a certain Shāhīn-bak, where he was referred to as "Caliph of the Age." This raised the question whether it is ever permissible for a king to call himself Caliph. The verdict was that a king can be called Commander of the Faithful and Caliph of the Prophet, but it is not acceptable to call himself Caliph of God or Caliph of the Age.[58]

Occasionally strictly contemporaneous matters cropped up. On one occasion, as the sultan's oxen were being led out to clover, their keepers had run amuck looting shops in Cairo—the sort of thing that had allegedly happened frequently under earlier sultans like Baybars and Qalāwūn. Qānṣūh issued a proclamation banning this *bidʿah,* and he made arrangements through Zaynī Barakat, the *muḥtasib,* for the shopkeepers to be compensated. However, it would appear that during the disturbances some of the sultan's cattle were killed, and therefore four men were crucified and strangled and the rest were disgraced (Ibn Iyās does not mention this incident). In order to emphasize that this truly was royal justice,

[56] Al-Ḥusaynī, *Nafāʾis,* 101–2.

[57] Ibid., 111

[58] *Kawkab,* 73–74.

al-Ḥusaynī follows the mention of those executions with a tale about how Sultan Maḥmūd [of Ghazna], disguised as a *faqīr,* was wandering about at night when he was accosted by a sorrowful old woman. When he asked about the cause of her grief, she told him that a trooper *(jundī)* had fornicated with her daughter. Sultan Maḥmūd asked her to describe the man, which she did. Thereupon the sultan had the "trooper" killed, and only after that did he reveal that the executed man was his own son. The anecdote is then capped by a maxim from Anūshirvān to the effect that "rightness of judgement is better than many soldiers and kingship."[59]

The *Kawkab* includes a discussion of what could be done about Birkat al-Ratlī. The area round this Cairene pleasure lake had become a place of low repute where people were drinking alcohol and consuming drugs, and yet some important people, including several of the leading ulama, had acquired houses in the area. The sultan thought that this showed a lack of maturity *(murūwah)* on their part. The celebration of the mock marriage of the Birkah with the Khalīj al-Nāṣirī at the time of the Nile's flooding with the throwing of henna, halva, and other stuff was particularly reprehensible. The crowds included riffraff *(awbāsh),* veiled women, and loose women displaying themselves at windows or on rugs. What should be done about this? The author of the *Kawkab* offers several possibilities, such as filling up the Birkah, without saying what, if anything, the sultan decided.[60] However, Ibn Iyās reports that in 917/1511–12 a decree was issued that none of the civil functionaries should dwell on the banks of the Birkah on pain of severe penalties. So the area became sad and deserted and there were indeed rumors that the sultan was going to close it to boats.[61]

Other incidents from recent times cropped up. In one *majlis* the sultan teased the qadi Shams al-Dīn al-Ghazzī, saying that this man had a vulgar intellect. Here the sultan was alluding to the rebellion of the amir Dawlatbāy against the sultan. (This short-lived affair started in Tripoli in Jumādá II 910/November–December 1504.)[62] At that time the qadi had counselled Dawlatbāy against revolt, warning him that it would come to no good. Dawlatbāy angrily told him to shut up and declared that he had "a vulgar intellect." The qadi then fled from Dawlatbāy.[63]

The sort of political theorizing offered to Qānṣūh was, in its own way, just as sententious as the theorizing of ulama like Ibn Jamāʿah. As Crone puts it in her discussion of advice literature in *Medieval Islamic Political Thought:* "They often seem to be written on the assumption that political problems could be solved by

[59] Al-Ḥusaynī, *Nafāʾis,* 120–22.

[60] *Kawkab,* 64–66.

[61] Ibn Iyās, *Badāʾiʿ,* 4:234.

[63] Al-Ḥusaynī, *Nafāʾis,* 132.

moral precepts."[64] If the ruler is morally perfect there can be no problem. But Qānṣūh was not really perfect.

In these soirees Qānṣūh appears as a vain, pious, prissy, quite witty, scholarly man with wide literary and cultural interests. Contrary to the impression given by Ibn Iyās, he seems to have spent a lot of time listening to the opinions of the ulama. The above has been a selection from an idealized account of what went on at the soirees. Doubtless the questions that were unanswerable, the ums and ers, as well as examples of the sultan's stark ignorance and ugly spats between competitive courtiers, were erased from the record. The aim of both treatises was to glorify Qānṣūh. It may well be that the sultan only paid lip-service to the precepts of Ardashīr and Alexander or the example of Sulṭān-Ḥusayn Bāyqarā. But the point is that these were the models to which he thought he should be seen to be paying lip-service. This was Qānṣūh's self-presentation. It was perhaps not a true one, but it was the fashionable one. And perhaps the sultan himself was as much deceived by this façade of high-minded debate as his courtiers pretended to be. This was the language of despotism in the early decades of the sixteenth century. That story about the deaf Hindu king instructing victims of tyranny to wear red so that their complaints might properly be addressed must have seemed laughable, or rather something to weep over, to those who had witnessed Qānṣūh's licensing of brutal amirs like Qāyt Rajabī and professional torturers like Zaynī Barakat.

In 910/1504–5, the year of the sessions covered in the *Nafāʾis,* while Qānṣūh and his courtiers debated obscure points of shariʿah law and the literary merits of the *Shāhnāmah,* the qadi Badr al-Dīn Muzhir was subjected to prolonged and horrific torture under which he eventually died. The *nāẓir al-jaysh,* Shihāb al-Dīn Aḥmad, had his carefully collected marble arbitrarily confiscated by the greedy sultan. Illegal taxes were levied. Extortion, torture, popular discontent, and threats of revolt were leitmotifs running throughout Qānṣūh's reign. Perhaps the reports of the soirees tell us very little about the real political thinking of Qānṣūh (much less so than the table-talk of Hitler tells us about the mentality of Hitler), but they tell us a great deal about the language of political panegyric and obfuscation that prevailed at the time.

Maqriziana II: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method Analysis

Towards an Archaeology of Scholarship

The process of writing in all its complexity, i. e., from the moment an author hits upon the idea of writing a book on a given subject until the work is published and distributed, is one of the least understood and studied concepts of scholarship, whatever the field, and as such certainly constitutes one of the most exciting challenges for the researcher. Where, when, and how did the author think of writing about such a topic? How did he collect the material? How did he organize it? How did he handle the sources? Did he gather abstracts and excerpts, and in what manner? Did he take notes on slips of paper? Did he work with note-cards? How did he arrange the material, and in whose words, his own or those of his sources? When and how was the book published and made available to the public? Was it possible for the author to correct mistakes after this point? Answers to these questions, however incomplete or conjectural, would help us understand how scholarship was undertaken in the past.

In the field of classical studies, this issue has been the subject of inquiry for a long time, but it has received much more attention since the eighties of the last century. In a pioneering book presenting the findings he has amassed during the last twenty years, Tiziano Dorandi[1] succeeds in providing answers to many of the above-mentioned questions. Because they deal with Greece and Rome, civilizations

Several parts of this article are based on different versions of a paper read on various occasions: seminar (Institut français d'archéologie orientale, Cairo, 7 May 2000), congress (XXe Congrès de l'Union Européenne des Arabisants et Islamisants, Budapest, 10–17 September 2000), conferences (University of Notre Dame, South Bend, 29–30 September 2001; Université de Paris IV-Sorbonne, Paris, 22 May 2004; Université de Liège, Liège, 18 November 2005), and lectures (Nederlands-Vlaams Instituut te Cairo, Cairo, 13 September 2001; Oxford Center for Islamic Studies, 26 February 2003; Universiteit van Leiden, Leiden, 27 November 2003; Universität von Zürich, Zurich, 9 December 2004). I would like to express my gratitude to all the persons who have invited me to discuss this fascinating topic and to thank the various audiences who helped me, by their questions, to improve the presentation of the data.
This research would have never reached this stage without the financial support of the Université de Liège, which gave me several research grants, and a fellowship of the Scaliger Institute (Universiteit van Leiden, June 2003).
[1] Tiziano Dorandi, *Le Stylet et la tablette: dans le secret des auteurs antiques* (Paris, 2000).

that have not left behind a large number of books, let alone autograph versions,[2] classicists struggle with either *(a)* rare quotations where the *modus operandi* of some authors is described, or *(b)* even rarer tangible evidence. The first group represents what could be called the "indirect tradition," in which either first- or second-hand testimonies of the working method of an author are found. In the second group, the evidence constitutes the "direct tradition," i.e., all the original documents (holograph and autograph manuscripts of the fair and draft versions, notebooks). Needless to say, classicists seldom are lucky enough to deal with items from the second group.

It is well established that Islam was a civilization of the book where the practice of scholarship and writing was undeniably given impetus by the introduction of a new writing material (paper).[3] Islamic civilization is more recent than Greek and Roman civilization, and thus more examples of Islamic books have survived. Furthermore, the quality of the material used for the publication and transmission of texts assured better preservation of the manuscripts, provided—of course—that the political situation permitted it. Thus, there is no reason to wonder why several million Islamic manuscripts have survived, mainly from after the sixth/twelfth century until the last century. Among them, the large number of autograph copies representing the final version of a work or another step of the writing process is quite impressive. If the researcher specializing in the field of Islamic studies has no reason to complain in comparison with his fellow classicist, who adheres to the adage "a little is better than nothing," it is also true that he is sometimes overwhelmed by the volume of the manuscripts preserved. Consequently, he concentrates his research on more directly palpable aspects, such as the text itself (i. e., the contents of the manuscript), and seldom considers the material approach. Despite the abundance of material, the field of Islamic studies is deficient in the analysis and explication of the working methods of writers. Some stimulating attempts, however, have been made, but to little avail. Worth mentioning is the landmark study of Franz Rosenthal,[4] published as early as 1947, in which he mainly addressed the problem of scholarship, his aim being "to find out what Muslims

[2]Alphonse Dain's words perfectly echo this situation: "À l'exception de quelques textes grecs ou latins du Moyen Age déjà avancé, aucun ouvrage ancien ne nous est parvenu sous forme d'original, exemplaire dû à l'auteur lui-même ou à son secrétaire. Nous n'avons pour ainsi dire jamais affaire à un livre *autographe*." Alphonse Dain, *Les Manuscrits,* 3rd ed. (Paris, 1975; reprint, 1997), 15. Since then, the "Papyrus of Herculanum" 1021 has been identified as a rare item of an authorial manuscript, i.e., a work written by an author, but not necessarily in his handwriting. See Dorandi, *Le Stylet,* 13.

[3]See François Déroche, *Le Livre manuscrit arabe: Préludes à un histoire* (Paris, 2004), 44.

[4]Franz Rosenthal, *The Technique and Approach of Muslim Scholarship* (Rome, 1947).

thought, and not how they acted."[5] Nevertheless, Rosenthal summarily tackled some technical aspects connected with the methods employed by authors to write their books.[6] His observations were exclusively based on the indirect tradition, i.e., the testimonies which the authors interspersed or hinted at in their works, or the clues they deliberately or unwittingly left. In the following decades, several books devoted to the methods to which an author had recourse in order to compose his book(s) have appeared.[7] Once again, these studies base themselves on a unique, somewhat biased, tradition: the evidence provided by the final stage of a work which, most of the time, survived in later manuscripts. Most of these deal with the peripheral problem of the sources *(Quellenuntersuchungen),* source criticism together with the relationship of the author to his sources (oral or written), and the quotation technique. Among these, the studies relying on books written in the classical period (pre-fifth/eleventh century) employing the traditional quotation technique *(isnād)* constitute the lion's share, because the underlying question of the trustworthiness of the information is foremost in the author's mind.[8] The recent contribution of Gregor Schoeler,[9] which represents the *lubb al-albāb* of his research in this direction for the last two decades, gathers some of the results reached by his predecessors. Moreover, it breaks new ground in giving, for the very first time, a clear view of the arduous procedure of the transmission of texts and the writing process in early Islam, as well as the problem of authorship in all fields of writing activity. The answers he suggests also enlighten us, although superficially, on the working method for the classical period.

More testimonies of the direct tradition survive from later periods, but at the same time interest in the working method of Muslim scholars diminishes. The

[5]Ibid., 1.

[6]The question of the taking of notes, the existence of note-cards, and the problem of the draft are all briefly dealt with.

[7]Arab authors seem to have been more interested in these themes, as the bibliography shows. One can cite, for example, the following references: Dāwūd Sallūm, *Dirāsāt Kitāb al-Aghānī wa-Manhaj Muʾallifihi,* 3rd (sic) ed. (Beirut, 1985); Muṣṭafá al-Shakʿah, *Manāhij al-Taʾlīf ʿinda al-ʿUlamāʾ al-ʿArab: Qism al-Adab,* 3rd ed. (Beirut, 1979 [1973]); Akram Ḍiyāʾ ʿUmarī, *Mawārid al-Khaṭīb al-Baghdādī fī Tārīkh Baghdād* (Damascus, 1395/1975); Maryam Muḥammad Khayr al-Dirʿ, *Mawārid Ibn al-ʿAdīm al-Tārīkhīyah wa-Manhajuhu fī Kitāb Bughyat al-Ṭalab fī Tārīkh Ḥalab* (Damascus, 1426/2005).

Geburtstag,* ed. Rainer Brunner et al. (Würzburg, 2002), 139–53.

[9]Gregor Schoeller, *Écrire et transmettre dans les débuts de l'islam* (Paris, 2002).

overwhelming number of manuscripts probably plays a role in this indifference along with the technical and administrative problems encountered by the researcher who would like to address this issue. No wonder if, here again, efforts have been directed to source criticism and all the correlative issues. For the Mamluk period, the works of Ulrich Haarmann and Donald Little are considered milestones.[10] Even though their aims are quite different from those implied in this article, their results could elucidate some interesting features pertaining to working method; as Little put it: [while] "what is proposed [. . . is more a] close study of the way in which each historian used his sources and the type of events which he chose to describe, it is also hoped that some insight will be gained into the principles and methodology of Muslim historiography of this period."[11] In these particular cases, the inquiry did not focus on a single author and one of his works, but rather on the comparison of several works which revealed the similarity and the confluence in the wording and details in the depiction of a given event.

So far, the only research conducted on the *modus operandi* of scholars is with regard to a very late author of the Ottoman period, Kātib Chelebi (a.k.a. Ḥājjī Khalīfah, d. 1067/1657). The autograph draft of the work which contributed to his fame more than any other *(Kashf al-Ẓunūn ʿan Asāmī al-Kutub wa-al-Funūn)* is full of slips of paper covered with notes to be added to the final text. As such, it illustrates Kātib Chelebī's method of working. Eleazar Birnbaum understood the value of this manuscript, and in his thorough study of it tried to discern how the author composed his book.[12]

All these studies have yielded results. However, they do not give answers to the whole set of questions we put forward at the beginning of this article. This is not surprising, considering the huge quantity of material from both the indirect and direct traditions required in order to tackle this complex issue in an exhaustive manner.

The indirect tradition, surveyed quite comprehensively by Rosenthal and Schoeller (although in the latter case within the limits of the periods considered), is of particular importance. In fact, it is usually the author who, speaking in the first person, gives valuable hints about his working method. While first- and

second-hand testimonies are useful, they are also scarce. Indeed, several others are still waiting to be tracked down, as illustrated by the following description dated to the seventh/thirteenth century, probably the most detailed at our disposal, by Ibn Ṭāwūs (died 664/1266 in Baghdad). This Shiʿi figure, whose peculiar method of quotation has drawn the attention of Etan Kohlberg,[13] also provided, in two of his books, a very precise picture of how he composed books, differing, he says, from the traditional method. The various steps are summarized by Kohlberg as follows:

> IṬ [Ibn Ṭāwūs] explains that he was too busy with other matters to be able to work in the usual fashion. Instead he used the services of a copyist (who seems to have been incorporated into the household for the duration of the work: *kāna ʿindanā nāsikh*). The copyist was employed in the following manner: (a) IṬ would jot down his ideas on slips of paper *(ruqayʿāt)* which the *nāsikh* would copy at once; (b) when citing from written texts, IṬ would either dictate to the copyist from the original book or show him the passage which he wanted copied, and the copyist would write it down. This obviated the need for the initial draft. The individual folios produced by the copyist did not follow any particular order, and may be compared to index-cards. The next step was for IṬ to take each completed folio *(qāʾimah)* and copy its text into the appropriate place in the final version of the book (presumably with revisions).[14]

This passage is of particular importance for our purpose thanks to its detailed description. Not only does it establish that the author worked with the help of a copyist, but it also confirms what has been postulated for a long time: that authors used to have recourse to what corresponded to index cards, individual sheets of paper which could be organized according to the outline of the final work. Interestingly too, the process resembles Pliny the Elder's working method as described by his nephew, Pliny the Younger, for the composition of his *Naturalis Historia:*[15] apparently, Pliny the Elder read sources or had them read to him by a slave; he marked the passages he was interested in; he dictated those passages to have them copied in *pugillares* (notebooks); he then utilized these passages for the

[13]Etan Kohlberg, *A Medieval Muslim Scholar at Work: Ibn Ṭāwūs and His Library* (Leiden, New York, and Cologne, 1992).

[14]Ibid., 86 (on the basis of the description provided by Ibn Ṭāwūs in his *Falāḥ al-Sāʾil wa-Najāḥ al-Masāʾil* and *Al-Iqbāl bi-al-Aʿmāl al-Ḥasanah*).

[15]See Dorandi, *Le Stylet,* 29-40. The passage in question has been the object of several interpretations due to the ambiguity of the terms used. The process given hereafter results from Dorandi's reading.

composition of his book. This example from antiquity is given here to show that, in this matter, the working method was a question of innate *modus operandi* which was to be formalized only in the Renaissance period.[16]

As for the direct tradition, the inquiry should rely on the material evidence, in the best cases that would have reached us, the ideal being:

a) manuscripts representing the final stage of a book *(mubayyaḍah, mubyaḍḍah);*
b) manuscripts of the draft version of a book *(musawwadah, muswaddah);*
c) manuscripts of the summaries and abstracts of the original sources used for the composition of a book (*mukhtaṣar, mukhtār, muntaqá*, etc);
d) manuscripts of the notebooks compiled by an author to write his book *(tadhkirah, majmūʿ, taʿlīq);*
e) original manuscripts of the sources used by an author with undeniable proof that these manuscripts were in his hands at a given time.

With the exception of (e), all of these should be holograph manuscripts of the author. Examples from each of these categories would make possible a serious study on the working method of a given scholar. Unfortunately, even though Islamic civilization has produced and preserved more manuscripts than any other, as already pointed out, it is unrealistic to assume that manuscripts fulfilling all these conditions are available. Various examples can undoubtedly be found for categories (a) and (c). As for (b) and (d), there are good reasons to believe that manuscripts of drafts and notebooks could only survive by chance. This is logical: a draft representing the intermediary stage of a book lost its usefulness once the finished version had been completed. Moreover, most of the works left unfinished by an author at his death either disappeared or were taken by another scholar who decided to polish them, sometimes to emend them, and in the end to publish them in the author's name or, more perfidiously, in his own name.[17] Notebooks, on the other hand, are made by the author only for his own benefit. They do not represent a finished version of a work. Here again, they rarely arouse the interest of others and were generally considered as the author's *nachlaß,* at a time when this genre of personal notes was considered at face value.

It remains that if several examples of categories (a) and (c) have been preserved, they do not necessarily come from the same author, and even in this case the picture of his *modus operandi* will be limited by the lack of additional

[16]See ibid., 3.

[17]Regarding al-Maqrīzī, for instance, see my forthcoming study: "Maqriziana IX: Should al-Maqrīzī Be Thrown Out With the Bathwater? The Question of His Plagiarism of Al-Awḥadī's *Khiṭaṭ* and the Documentary Evidence" (to be published in a forthcoming issue of this journal).

material evidence for the other categories. Still, there is an exception, an author for whom all the above-mentioned categories are represented by even more than one manuscript: al-Maqrīzī. Strangely, one of the most representative figures of Muslim scholarship, considering all periods, is precisely the one for whom more than twenty-three autograph manuscripts have been preserved (nearly 5,000 leaves)[18] together with several copies of the sources he consulted,[19] the whole covering all the categories regarded as necessary for an exhaustive study of his working method.[20] Thanks to this abundance of material evidence, it is possible not only to compare the final stages of his works to the draft versions, but also to the (preserved) sources he used (i.e., the original manuscripts he consulted), and to the preliminary work necessary for an author to prepare a book (abstracts, notebooks, note-cards). The discovery of one of his notebooks constitutes a unique opportunity not only for the reconstruction of his working method, but also, more generally, to contribute to the building of an archaeology of scholarship, as expressed by Thierry Bianquis as early as 1997. In his review[21] of an edition of one of al-Maqrīzī's drafts,[22] he recognized the value of these autograph manuscripts and adumbrated the results that could be obtained through their study as witnesses of the author's technique: "Quand j'avais travaillé sur ce texte à la BN [Bibliothèque nationale de France, MS Ar. 2144, "Al-Tārīkh al-Muqaffá al-Kabīr"], j'avais pensé que toute une archéologie du savoir historique pourrait être reconstituée en analysant ce type d'écrit et en travaillant en même temps sur l'usage qu'avait fait al-Maqrīzī, dans l'*Ittiʿāẓ al-Ḥunafāʾ*, du manuscrit d'al-Musabbiḥī que nous avions publié et qui porte une mention de sa main en première page indiquant qu'il l'avait utilisé." This "archaeology of scholarship," historical scholarship in this case, echoes the title of Michel Foucault's book first published in 1969,[23] but it has a different scope. Foucault's vision was that of a philosopher and his work was epistemological. The archaeology of scholarship, as put forward by Bianquis, is closer to the technical meaning of the first term: it should aim at studying, digging up what amounts to the soil for the traditional

---

[18]See Appendix I at the end of this article. Reference is made here to the numbers attributed to each manuscript in this appendix, with the exception of no. 18 (copy of the autograph) and no. 15 (partly autograph).

[19]See Appendix II at the end of this article.

[20]They can be divided in this manner (the letters refer to the categories): (a) 1–7, 15, 17; (b) 9–14, 16, 19, 21; (c) 8, 18, 22; (d) 20, 21, 23; (e) see Appendix II (18 manuscripts representing 6 sources).

archaeologist, i.e., the manuscripts, in order to reconstruct the techniques, the methods followed by writers to compose their books; that is to say, in a few words, to try to deduce the writer's creative process.

As mentioned earlier, al-Maqrīzī constitutes a case study and a logical starting point.[24] The present article is conceived as a contribution to this new form of archaeology, keeping in mind two caveats:

It does not aim at reconstructing al-Maqrīzī's working method in all its complexity, for two reasons. Firstly, it is seen as a continuation of the preceding articles in which the notebook was comprehensively described. In the following pages, the analysis will be primarily based on this witness, although limited references will be made to the other autograph manuscripts. Consequently and secondly, it is implied that a study considering all the autograph manuscripts would take more time and space than is allowed for such an article.[25]

The conclusions drawn from the present study are by no means definitive, given the partial sample taken into consideration, and should not be regarded as applicable to every author. Although the working methods might have been identical, they probably differed according to the persons, the place, and the period considered. Only a more comprehensive analysis based on several authors of different periods could lead to such general conclusions.

The *Codex Leodiensis*: A Notebook?

Although some folios clearly give the impression that one is looking at a notebook, most of the parts appear, *prima facie,* as neatly copied texts. This raises the question whether the manuscript should really be identified as a notebook or not. The definition of a notebook, as provided by the *Oxford English Dictionary* (2nd ed., Oxford, 1989), is "a book reserved for or containing notes or memoranda." In this sense, a scholar's notebook is the place where he jots down information he is interested in for his own research and writing, but not unreservedly: he may be struck by an anecdote or a story without necessarily feeling the need to use it in

[24]Regarding al-Maqrīzī, some attempts have already been made, but all are sketchy. Ayman Fuʾād Sayyid only touched on the subject in the following publications: Ayman Fuʾād Sayyid, "Remarques sur la composition des *Ḫiṭaṭ* de Maqrīzī d'après un manuscrit autographe," in *Hommages à la mémoire de Serge Sauneron, 1927-1976*, vol. 2, *Égypte post-pharaonique* (Cairo, 1979), 231–58; idem, "Early Methods of Book Composition: al-Maqrīzī's Draft of the *Kitāb al-Khiṭaṭ*," in *The Codicology of Islamic Manuscripts: Proceedings of the Second Conference of al-Furqān Islamic Heritage Foundation, 4-5 December 1993,* ed. Yasin Dutton (London, 1995), 93–101. On the other hand, Muḥammad ʿIzz al-Dīn ʿAlī followed the traditional method which concerns the question of the sources and the method of quotation, which brings some answers, however partial. See Muḥammad Kamāl al-Dīn ʿIzz al-Dīn ʿAlī, *Arbaʿat Muʾarrikhīn wa-Arbaʿat Muʾallafāt min Dawlat al-Mamālīk al-Jarākisah* (Cairo, 1992).

[25]It is the present writer's project to carry out this larger analysis.

the future. Thus the notebook plays the role of a memorandum, a book to which a scholar is able to refer when needed. Such a book will contain two kinds of information: first, personal observations and even oral testimonies, heard during the day and memorized, or already scribbled on slips of paper on the spot, with the intent to transfer them into the notebook later on, at the end of the day, for instance, or when it comes to mind again.[26] Second, during the reading of the sources, with a projected book in mind or not, the scholar writes down all the material he deems useful, which may consist of small notes. But if the mass of material is very important, he may rather make a summary in order to make the best use of this source. The summary might be faithful to the original, a word-by-word excerpt, or, on the contrary, paraphrased, depending on its usefulness and the ultimate scope of the finished work. Obviously, the notebook will also reflect the scholar's interests, depending on the period considered: his notes and excerpts based upon an eclectic range of works would be the result of his readings in a great variety of fields. The comprehensive description of the *codex leodiensis* has revealed the heterogeneous character of the texts collected (from history to zoology, from Quranic commentary to numismatics), as well as the diversity of the nature of these texts (from summaries to excerpts, from personal notes to short quotations). Furthermore, the question of authenticity is not problematic, given that the script may be compared without difficulty to the numerous other holograph manuscripts of al-Maqrīzī. Handwriting, together with style, could be affected by the very nature of the work accomplished by a scholar in his notebook. The scholar, concentrating on the task of condensing his source, might not be liable to devote his whole attention to his style, in which grammatical mistakes and aberrant orthographical features would be visible.[27] As for handwriting, one would expect a more cursive script than the one used for the writing of a book.[28] On the other hand, the scholar might wish to avoid, as often as possible, any

[26] If the notebook consists of only this kind of information, it should rather be considered a journal. Two exceptional witnesses of this genre have reached us, one from eleventh-century Baghdad and the other from fifth-century Damascus: Georges Makdisi, "Autograph Diary of an Eleventh-Century Historian of Baghdād," *Bulletin of the School of Oriental and African Studies* 18 (1956): 9–31, 239–60; 19 (1957): 13–48, 281–303, 426–43; Shihāb al-Dīn Aḥmad Ibn Ṭawq, *Journal d'Aḥmad ibn Ṭawq (834/1430–915/1509) = Al-Taʿlīq: Yawmīyāt Shihāb al-Dīn Ibn Ṭawq (834–915 H./1480–1502 M.)*, ed. Jaʿfar al-Muhājir (Damascus, 2000–4).

[27] Such features are conspicuous in al-Maqrīzī's notebook and have been inventoried in the forthcoming study: Frédéric Bauden, "Maqriziana VIII: Quelques remarques sur l'orthographe d'al-Maqrīzī (m. 845/1442) à partir de son carnet de notes : peut-on parler de moyen arabe?" in *Moyen arabe et variétés mixtes de l'arabe: Actes du Premier Colloque International (Louvain-la-Neuve, 10–14 Mai 2004),* ed. Jérôme Lentin and Jacques Grand'Henry (Louvain-la-Neuve, 2008), 21–38.

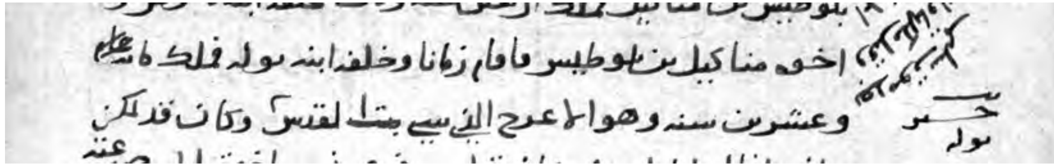
[28] Item XXII, which most probably represents the first stage of redaction of a biography by al-Maqrīzī, shares this characteristic.

ambiguity in the reading of passages which are not his own, in which case he might be unable to read his own handwriting correctly. This raises the problem of the neatly written texts found in the notebook, which give the impression that al-Maqrīzī copied what he had already condensed elsewhere. If this is the case, material evidence characteristic of the technique of copying would emerge, like homoioteleuton, for instance.[29] However, such a phenomenon is not observed in the manuscript. The question arises whether these neatly written summaries and excerpts were made on the spot, i.e., at the very moment when al-Maqrīzī was reading the source, or written later on in the notebook. An answer can only be found through the comparison of the results of this scholar's notes and the original sources, when preserved. Several examples will serve to give an unequivocal answer.

Definitely one of the most meticulously written texts, item II consists of a summary *(talkhīṣ)* of Ibn ʿAbd al-Ḥakam's *Kitāb Futūḥ Miṣr wa-Akhbārihā*. This and the following references to "items" refer to the organization of al-Maqrīzī's notebook set forth in my two previous articles in *Mamlūk Studies Review:* vol. 7, no. 2 (2003): 21–68, and vol. 10, no. 2 (2006): 81–139. The original work is composed of reports transmitted in the traditional way, i.e., as hadith and *khabar* supported by a chain of authorities. Given the nature of this historical data, the note-taker does not have the same discretion to summarize as he would with another genre of historical writing. As a traditionalist himself, al-Maqrīzī would be reluctant to distort the original. It is no surprise then to note that this summary is almost completely faithful to the original, although several additional notes and erasures visible in the margins indicate that some alterations nevertheless were made.

In the following example, the original text reads:[30]

. . . فملك مائة سنة وعشرين وهو الأعرج . . .



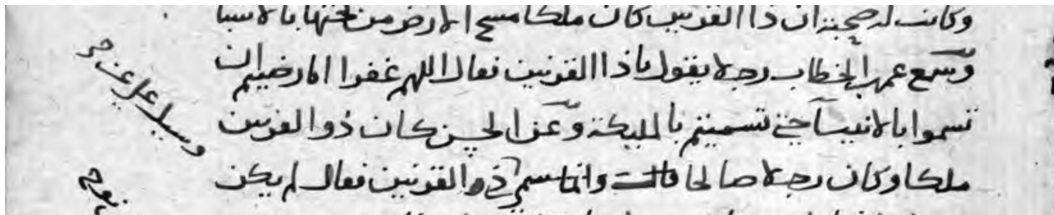
where a peculiar grammatical construction is discernible.[31]

If we turn to the notebook, we notice that al-Maqrīzī was obviously condensing the text while he was reading it, as he faithfully copied it, except that he changed the word "*sanah*" into "*ʿām.*" But when he got to the word "*ʿishrīn,*" the structure of the sentence appeared singular to him, and he decided to erase the word "*ʿām*" and to replace it at the end of the numerals by the word "*sanah*"!

[29]Dain, *Les Manuscrits,* 44.

[30]Abū al-Qāsim ʿAbd al-Raḥmān ibn ʿAbd Allāh Ibn ʿAbd al-Ḥakam, *The History of the Conquest of Egypt, North Africa and Spain Known as the Futūḥ Miṣr of Ibn ʿAbd al-Ḥakam,* ed. Charles C. Torrey (New Haven, 1922), 29.

[31]If the word "*sanah*" had been repeated after "*ʿishrīn,*" the construction would have been correct according to the rules. See William Wright, *A Grammar of the Arabic Language,* 3rd ed. (Cambridge, 1896–98), vol. 2, § 104.



MS 2232, fol. 48b (Courtesy Université de Liège)

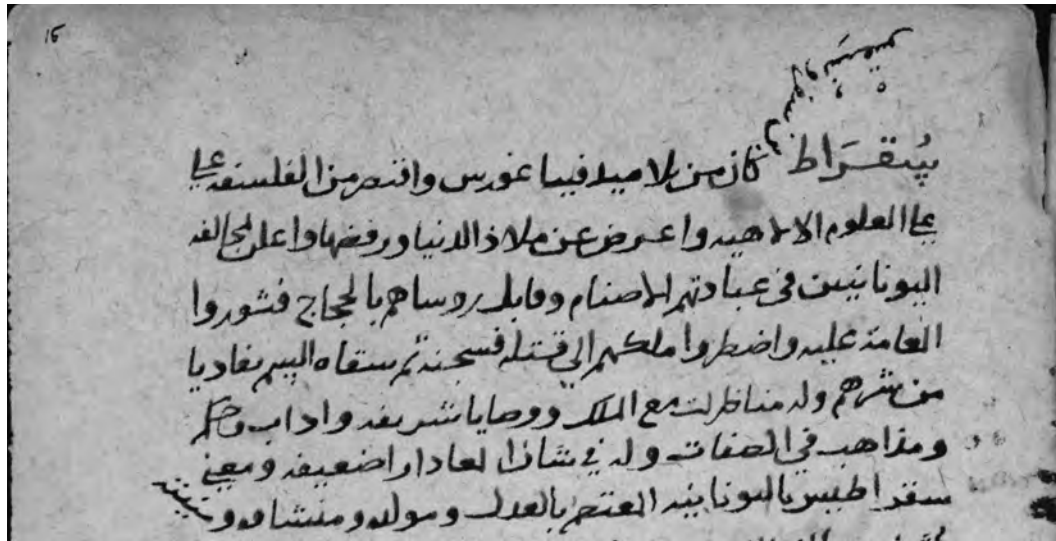
There is no other way to interpret the following passage but that al-Maqrīzī was truly condensing the source during the reading process. The passage reads as follows in Ibn ʿAbd al-Ḥakam's *Futūḥ Miṣr* (pp. 39–40):

قال وإنّما سمّي ذا القرنين كما حدّثنا وثيمة حدّثنا سفيان بن عيينة عن ابن أبي حسين عن أبي الطفيل أن عليّا رضي الله عنه سئل عن ذي القرنين فقال لم يكن ملكا ولا نبيا. . . .

In the notebook, al-Maqrīzī once again wrote as he was reading, but with the intention to summarize. He thus read the beginning of the sentence, took note of it as he was interested in it, and did not change anything in the wording, except that he made a grammatical mistake *(dhū* instead of *dhā):*

قال وإنّما سمّي ذو القرنين. . . .

MS 2232, fol. 53a (Courtesy Université de Liège)



Once he had written down this passage, he proceeded further in the reading of the text and discovered that Ibn ʿAbd al-Ḥakam quoted a *khabar* in support of this appellation, which introduced a redundancy with the previous words already quoted. Clearly, al-Maqrīzī did not consider the chain of transmitters in this summary, but he could not pass over the material provided by the *khabar*. He thus decided to strike out some of the words already written *(qāla wa-innamā summiya)* and added, in the margin, part of the following text found in *Futūḥ Miṣr,* slightly modifying the phraseology *(wa-suʾila ʿAlī ʿan)* and indicating in the text the exact point where this marginal addition should find its place. This caused him to erase the *wāw* of *dhū* and to replace it by a *yāʾ*. Consequently, the final result must be read thus:

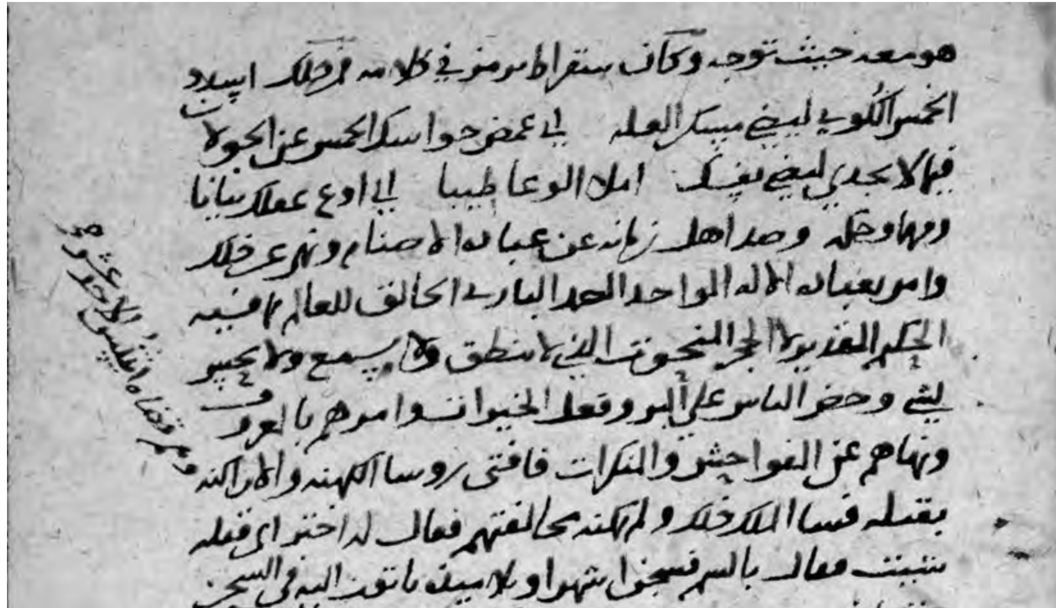
وسئل علي عن ذي القرنين فقال لم يكن ملكا ولا نبيا. . . .

In order to establish that this process of epitomizing during the reading operation is typical of al-Maqrīzī's working technique, it is necessary to demonstrate that

similar features appear in the other summaries. It is obviously impossible to deal with all the abstracts present in the notebook and for which the original source has been preserved, but the three following examples regarding two of these abstracts should provide convincing proof.

As already noted, the notebook opens with an epitome of Ibn Abī Uṣaybiʿah's *ʿUyūn al-Anbāʾ fī Ṭabaqāt al-Aṭibbāʾ* (item I). On folio 16a, al-Maqrīzī started summarizing a new biography: Socrates. He wrote the name in red ink to catch the eye, and began to read the source and to condense it. There is, however, a marginal note just above the name, which was added later. It consists of the name of the philosopher's father (*ibn Sufrūnusiqs* [sic]).

MS 2232, fol. 16a (Courtesy Université de Liège)



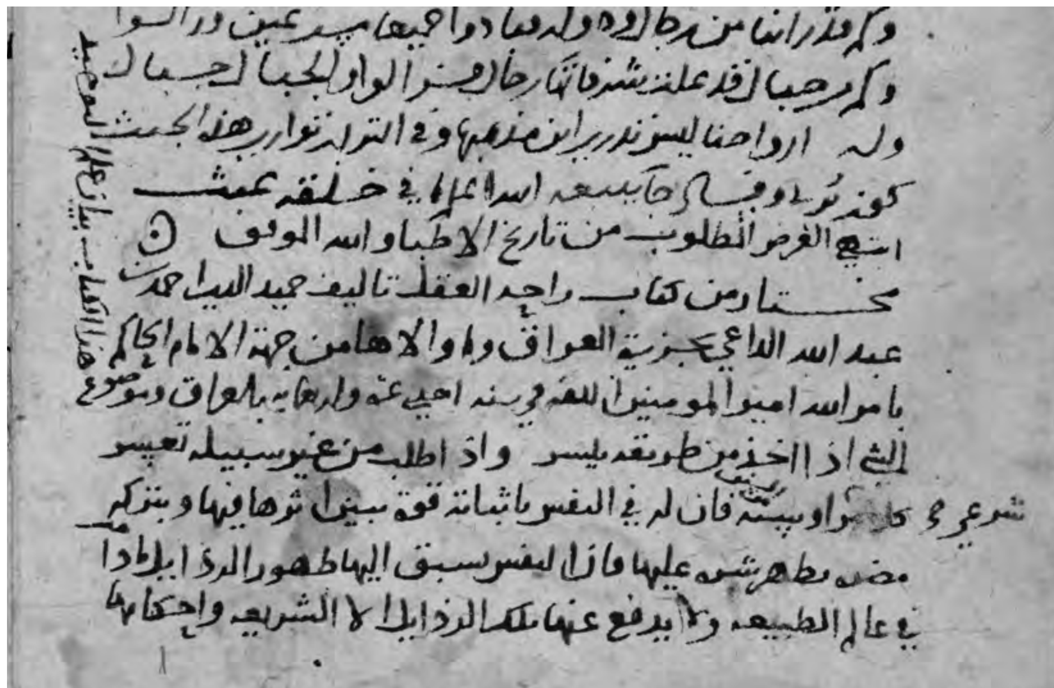
To understand why it appears there, it is necessary to turn back to the source[32] and to compare it to al-Maqrīzī's rendering:

ابن أبي أصيبعة	المقريزي
سقراط.	سُقرَاط بن سفرونُسِقْس.
قال القاضي صاعد في كتاب طبقات الأمم إن سقراط كان من تلاميذ	كان من تلاميذ
فيثاغورس. إقتصر من الفلسفة على العلوم الإلهية وأعرض عن ملاذ الدنيا	فيثاغورس واقتصر من الفلسفة على العلوم الإلاهية وأعرض عن ملاذ الدنيا
ورفضها وأعلن بمخالفة اليونانيين في عبادتهم الأصنام وقابل رؤساءهم	ورفضها وأعلن بمخالفة اليونانيين في عبادتهم الأصنام وقابل رؤساءهم
بالحجاج والأدلة فثوروا العامة عليه واضطروا ملكهم إلى قتله فأودعه الملك	بالحجاج فثوروا العامة عليه واضطروا ملكهم إلى قتله فسجنه
الحبس تحمدا إليهم ثم سقاه السم تفاديا من شرهم مع مناظرات جرت له مع	ثم سقاه السم تفاديا من شرهم وله مناظرات مع
الملك محفوظة وله وصايا شريفة وآداب فاضلة وحكم مشهورة ومذاهب	الملك ووصايا شريفة وآداب وحكم ومذاهب
في الصفات قريبة من مذاهب فيثاغورس وبندقليس إلا أن له في شأن المعاد	في الصفات وله في شأن المعاد
آراء ضعيفة بعيدة عن محض الفلسفة خارجة عن المذاهب المحققة.	آراء ضعيفة
وقال الأمير المبشر بن فاتك في كتاب مختار الحكم ومحاسن الكلم معنى	ومعنى
سقراطيس باليونانية المعتصم بالعدل وهو ابن سفرونسقس ومولده ومنشأه	سقراطيس باليونانية المعتصم بالعدل ومولده ومنشأه
ومنبته بأثينة. . . .	ومنبته بأثينة. . . .

The collation of both texts reveals that Ibn Abī Uṣaybiʿah is primarily interested in quoting his sources faithfully, apparently without reworking the wording or the plan. This explains why the biographical data regarding Socrates, such as his father's name and his birthplace, appear in the second quotation. Reading the source, al-Maqrīzī discovered his father's name several lines later, but his aim differs from Ibn Abī Uṣaybiʿah's: though summing up raw material, he is nevertheless trying to organize the material at this early stage and this is the reason why he placed the father's name in the margin, above Socrates' name, rather than leaving it in its original place in the source. This comparison, as shown, also allows several observations regarding other features of al-Maqrīzī's working method while composing a summary. It first shows that he completely disregarded the sources quoted by Ibn Abī Uṣaybiʿah, thereby attributing those words to him. Then, it illustrates his desire to be brief, as he left out superfluous words whose omission does not modify the meaning (adjectives as in line 6: *ādāb fāḍilah wa-ḥikam mashhūrah* → *ādāb wa-ḥikam*) or changed the wording to be more concise (as in lines 3–4: *fa-awdaʿahu al-malik al-ḥabs taḥammudan ilayhim* → *fa-sajanahu*).

[32]Ibn Abī Uṣaybiʿah, *ʿUyūn al-Anbāʾ fī Ṭabaqāt al-Aṭibbāʾ*, ed. August (Imruʾ al-Qays ibn al-Ṭaḥḥān) Müller (Cairo/Königsberg, 1299/1882–84), 43.

A little bit further in the biography (fol. 17a/p. 45), another example corroborating the idea that the summarizing process takes place during the reading is provided.



MS 2232, fol. 17a (Courtesy Université de Liège)

ابن أبي أصيبعة.	المقريزي.
فلما علم الرؤساء في وقته من الكهنة والأراكنة ما رامه من دعوته وأن رأيه	فأفتى رؤساء الكهنة والأراكنة وهم قضاة أثينُس الأحد عشر
نفي الأصنام ورد الناس عن عبادتها شهدوا عليه بوجوب القتل وكان	بقتله
الموجبون عليه القتل قضاة أثينس الأحد عشر وسقي السم الذي يقال له	
قونيون لأن الملك لما أوجب القضاة عليه القتل ساءه ذلك ولم يمكنه	فساء الملك ذلك ولم يمكنه
مخالفتهم. . . .	مخالفتهم. . . .

In this case, it is clearly established that al-Maqrīzī read a bigger part, i. e., the first two lines, before he started summarizing. He shows here his ability to extract the meaning of the whole sentence concisely, stated here in a nutshell (five words). Then, he discovered that those who were responsible for Socrates' death were the eleven judges of Athens. In his modified text, this part came at a better place to describe who those high priests and archons were, and so he added this information in the margin, opposite their mention. If he had read the whole passage on this affair, he would have had time to organize it then and would not have added the additional information in the margin. This passage demonstrates, if necessary, that the epitomizing process happened during the reading of a few words or of a whole phrase, but not more.

The last example considers a very short excerpt (item XXIII) appended to the previous abstract (Ibn Abī Uṣaybiʿah, *ʿUyūn al-Anbāʾ*), which ends on fol. 31b. The space left blank (roughly one third of the leaf) was filled in with an excerpt of seven lines. There is no doubt that it ends there because al-Maqrīzī did not write a catchword, as he did for the previous abstract. On the other hand, fol. 31 lies in the third quire which is completed with fol. 35. All these folios, which were also blank, have been filled with various notes taken from different sources (items XXIV–XXX). This excerpt, as already indicated,[33] is remarkable by its very nature, as it was taken from a book of Ismaʿili literature: *Kitāb Rāḥat al-ʿAql* of Ḥamīd al-Dīn al-Kirmānī. Its mere presence in the notebook might reveal whether or not al-Maqrīzī truly had access to Ismaʿili sources, as he claimed. Several elements found in the excerpt reveal that, at least for this work, this statement was true.

A close look at the arrangement of the text in the notebook suggests that the content of the book has been partly added in the right margin.

MS 2232, fol. 31b (Courtesy Université de Liège)

[33]See Frédéric Bauden, "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method: Description: Section 2," *Mamlūk Studies Review* 10, no. 2 (2006): 82–83.

In order to understand why this data is found there, it is necessary to turn to the original source and see how the material is organized there.[34]

الكرماني.	المقريزي.
١) فنقول إن كتابنا هذا كتاب راحة العقل (ص. ١٠٦\٢٠).	١) مختار من كتاب راحة العقل.
٢) ومؤلفه حميد الدين أحمد بن عبد الله الداعي بجزيرة العراق وما وليها[35] من جهة الإمام الحاكم بأمر الله أمير المؤمنين . . . ألفه في سنة إحدى عشرة وأربعمائة في ديار العراق (ص. ١٠٦\٢٠).	٢) تأليف حميد الدين أحمد بن عبد الله الداعي بجزيرة العراق وما والاها من جهة الإمام الحاكم بأمر الله أمير المؤمنين. ألفه[36] في سنة إحدى عشرة وأربعمائة بالعراق.
٣) لما كان الغرض المقصود في تأليف هذا الكتاب بيان علم التوحيد (ص. ١١١\٢٤).	٣) وموضوع هذا الكتاب بيان علم التوحيد.

٥) إذ كل أمر من الأمور وسنة من السنن لها في النفس بإحيائها قوة يتبين أثرها فيها وبتركها مضرة يظهر شرها عليها ذلك بأن النفس بكونها في عالم الطبيعة ظهور الرذائل فيها أسبق إليها من سبق النار إلى النفط وليس يدفع عنها تلك الرذائل إلا الشريعة وأحكامها (ص. ١٠١\١٧–٢).	٥) كل ضر شرعي[37] أو سنة من السنن[38] فإن له في النفس بإثباته قوة يبين أثرها فيها وبتركه مضرة يظهر شره عليها فإن النفس يسبق إليها ظهور الرذائل ما دامت في عالم الطبيعة ولا يدفع عنها تلك الرذائل إلا الشريعة وأحكامها.

The comparison of both texts broadly hints that al-Maqrīzī is summarizing the original text, and not a secondary source. During the reading process, it is necessary to condense the ideas and al-Maqrīzī did not hesitate to state the material in his own words, particularly for passage no. 5. However, the arrangement of the material in al-Kirmānī's text is rather different from what one finds in the notebook. There, the various passages appear in the following order: 4, 5, 1, 2, 3, keeping in mind that 3 is located in the margin in the notebook. The *Rāḥat al-ʿAql* is quite peculiar in that it begins with a fairly long introduction and the reader must wait for several pages before reaching the point where the author gives his name and the title of his work.[39] A reader looking for this information must first go through those preliminary chapters. We notice that al-Maqrīzī did not take notes from these before reaching the title of the work and the name of its author, and, possibly, the date of composition. Once he had copied these, he did not proceed further in the book, but rather went back to the introductory chapters where he selected a phrase and a short passage. Only then did he complete the reading of

[34]Reference is made here to the following editions: Muḥammad Kāmil Ḥusayn and Muḥammad Muṣṭafá Ḥilmī (Cairo, 1953); Muṣṭafá Ghālib (Beirut, 1967).

[35]In one manuscript: والاها.

[36]In the manuscript: اللفه. See, on this mistake frequently displayed in the notebook, "Maqriziana VIII."

[37]شرعي : marginal addition.

[38]من السنن : interlinear addition.

[39]It appears in the second *mashraʿ*.

the following chapters, particularly the fourth *mashra*ʿ where the author explains the aim of the book.[40] In al-Maqrīzī's eyes, this was better placed between the historical and the philosophical material already selected by him and left at the end of passage no. 2 and the margin, where he could just write the first word (*wa-mawḍū*ʿ). This analysis definitely proves that al-Maqrīzī had access to a copy of this work, because he would never have been able to arrange the material in this way if he could not thumb through the book. It also resolves the question of his access to the works of Ismaʿili literature!

The preceding examples, selected from dozens, undoubtedly establish how the summarizing process took place and, bearing in mind the definition of "notebook" provided earlier, establishes that this particular manuscript is indeed a notebook.

Its Constitution over Time

Given its nature, the notebook in its present state is the result of an activity which spanned a long period of time, as confirmed by the evolution of the script, the great number of extracts of all kinds, and the numerous notes scattered throughout the manuscript. In this sense, the history of its constitution may be disclosed thanks to these internal elements as well as external ones. It thus helps us understand another aspect of al-Maqrīzī's working method, i.e., how he collected the abstracts and the notes.

While it is documented that authors of classical antiquity utilized, for the taking of notes and copying of their drafts, scrolls of papyrus *(volumen* or *rotulus)* rather than sheets of the same material assembled in scrolls later on,[41] the use of paper lent itself to another organization of the writing material: instead of the scroll, which is also attested in the Muslim world, but in a somewhat confined use,[42] paper allowed the creation of a quire made of several sheets folded in two. The multiple quires could then be sewn together and bound in order to protect the whole (codex).[43] The codex was a model of book already widespread in the

[40] "Al-mashraʿ al-rābiʿ fī al-gharaḍ al-maqṣūd fī tartīb aswār hādhā al-kitāb bi-mā nusawwiruhu min mashāriʿihi ʿalá mā ruttibat ʿalayhi."

[41] Evidence of this is provided by traces of script over the pasted strips of the sheets of papyrus put together to form a scroll. If the sheets had been independently copied and then pasted together, the strips resulting from this operation would be blank. See Dorandi, *Le Stylet,* 13–14. It seems, however, that quires of papyrus could be made for the copying of notes. See note 43.

[42] Scrolls made of sheets of paper glued together were used by the Muslim chanceries until the Ottoman period.

[43] Codices made of papyrus are also attested, but are quite late and rare. See for instance a blank papyrus codex later used for various notes (ca. 400 C.E., Chester Beatty Library, Pap. Ac. 1499) in Jonathan M. Bloom, *Paper Before Print: The History and Impact of Paper in the Islamic World* (New Haven and London, 2001), 26. Papyrus was particularly unsuitable for this kind of book.

Middle East and the Mediterranean area in the first centuries of the common era and it ultimately outweighed all the others in these areas.[44] Quires, first of papyrus and parchment, then of paper, rather than loose leaves, were thus used for the taking of notes by Muslim scholars. Al-Maqrīzī's notebook shows this observation to be a certainty.[45] Physical analysis indicates that the notebook is composed of 21 quires, most of which (14) consist of five sheets. Some summaries are spread over several quires. This means that al-Maqrīzī had at his disposal a stock of such quires (most probably of five sheets each). When he saw that he would lack space to complete a summary, he had two options: either he inserted an intermediary sheet, thus modifying the structure of the quire (for instance, quire XIII has six sheets), or he continued on with a smaller one (two or three sheets, as in quire XVI, for example). In some cases, it happened that he finished a summary earlier in the quire, thus leaving several blank leaves. These leaves were later used for notes selected from different sources, which explains why they are sometimes scattered over several quires. However, when these notes fell at the intersection of two quires, they definitely linked these quires to one another. It thus establishes that those quires were in that order in al-Maqrīzī's lifetime. But we can further refine our understanding of this aspect of his working method by proceeding to another level of analysis. As already stated,[46] two different kinds of paper are found in the notebook: al-Maqrīzī utilized blank paper together with recycled paper, a feature which is not characteristic of this manuscript only, but of a large part of his autograph manuscripts. The recycled paper consists of chancery documents which were in the shape of scrolls *(rotulus)* and were cut into pieces, most probably by paper merchants.[47] It is reasonable to believe that, when such documents were cut, the sheets obtained through this process and pertaining to the same document were gathered to form quires. In this way, we should find sheets belonging to the same document in a quire of the notebook made of this kind of paper. If we look carefully at the distribution of documents I and II, among the five identified in the notebook and reconstructed afterwards, we notice that the first

[44]Déroche, *Le Livre manuscrit,* 16.

[45]The following remarks are summed up on the basis of the following publication: Frédéric Bauden, "Maqriziana IV: Le Carnet de notes d'al-Maqrīzī: l'apport de la codicologie à une meilleure compréhension de sa constitution," in *Scripts, Page Settings and Bindings of Middle-Eastern Manuscripts: Papers of the Third International Conference on Codicology and Paleography of Middle-Eastern Manuscripts (Bologna, 4–6 October, 2000), Part 2*, ed. François Déroche and Francis Richard, *Manuscripta orientalia* 9 (2003): 24–36.

[46]Frédéric Bauden, "Maqriziana I: Discovery of an Autograph Manuscript of al-Maqrīzī: Towards a Better Understanding of His Working Method: Description: Section 1," *MSR* 7, no. 2 (2003): 28.

[47]See Frédéric Bauden, "The Recovery of Mamlūk Chancery Documents in an Unsuspected Place," in *The Mamluks in Egyptian and Syrian Politics and Society,* ed. Michael Winter and Amalia Levanoni (Leiden, 2004), 59–76.

one is represented by quires IX and XII and that the second one constitutes quires I to III and XI. This corroborates the hypothesis that those recycled documents were cut up consecutively, and that the quires were also produced according to the same sequence.[48] It also raised the question whether or not the summaries scribbled on quires made of sheets belonging to the same document, such as quires I to III and XI (= document II), were written at approximately the same time. The answer can only be affirmative, because if al-Maqrīzī had recourse to recycled paper, it was for financial reasons: blank paper, at that particular period,[49] must have been too expensive for writings not meant to survive after his death, like abstracts, notes, and drafts. In this sense, he probably bought a stock of quires of this recycled paper and used it over several years for various applications, although mainly for the drafts and the notebooks.[50] The stock must have been quite impressive: among the 22 autograph manuscripts,[51] 13 contain 509 sheets of this recycled paper, more than 10% of the total number of sheets, but most of it was used during a short period, given that 83% is found in only 3 volumes.[52] Quire XIII provides evidence that corroborates the idea that al-Maqrīzī had at his disposal several quires of this recycled paper. That quire consists of six sheets of recycled paper, contrary to the five sheets usually found in the notebook and al-Maqrīzī's other autograph manuscripts. An analysis of the paper shows that five sheets belong to the same document (no. III in our reconstruction), while the extra sheet comes from document II! There is only one possible explanation: al-Maqrīzī realized that he would run short of paper to complete his epitome, but that he did not need a full quire, just a sheet. He thus added one sheet to quire XIII, but this additional sheet was taken from a quire composed of the recycled

[48] It is even possible to affirm that the production of the quires only took place once a complete document had been cut. There is no other way to explain the disorder of the text of the documents inside the quires. For instance, document I in quire XII is in the correct order if the sheets are arranged this way : fols. 113, 114, 112, 111, 115.

[49] At the present stage of the research, it is impossible to determine exactly when the purchase took place, except that it was prior to 811/1408 (see note 52). It is established that archival material from the chancery was sold in 791–92/1389–90, but it is difficult to ascertain if the recycled paper found in al-Maqrīzī's autographs corresponds to this archival material. See ibid., 74. It is important to note that he was not the only one in his milieu to exploit this kind of paper. See, for more details, "Maqriziana IX"; "Maqriziana VIII."

[50] This is confirmed by the actual distribution of this recycled paper in his autograph manuscripts. See the following note and Appendix II (last column, the number in parentheses).

[51] No. 18 is excluded from this figure since it is a copy of an autograph manuscript.

[52] The great majority is found in the notebook now in Liège and in the two preserved volumes of the draft of the *Khiṭaṭ* (comprehensively 420 sheets). With regard to the two volumes of the *Khiṭaṭ,* it is now established that they were written between 811/1408 and 816/1413. See "Maqriziana IX."

paper pertaining to document II. Moreover, if we look more closely at abstract V, which covers quires XI–XIII and IX, we notice that those quires are made of sheets belonging to documents I (quires XII and IX), II (quire XI and one sheet in quire XIII), and III (quire XIII). This distribution of the same extract, written during a short period of time, confirms that the quires of recycled paper were in disorder, if we consider the original documents. Al-Maqrīzī selected his recycled sheets regardless of their original order. But this also perfectly demonstrates that the summaries written on that kind of paper are contemporaneous, given that resumé no. I (quires I–III) is composed of the recycled paper of document II. However, there is a caveat. As shown by the actual organization of the notebook, which must be ascribed to al-Maqrīzī, as asserted earlier,[53] the quires made of recycled paper were ordered, at al-Maqrīzī's death, as follows: I–III, X–XIII, IX, XXI, while the quires in between consist only of originally blank paper, and, thus, were written later. What could then explain how the quires, and consequently the summaries they contain, became separated in the notebook by these intervening quires, and consequently their summaries copied at a later date? The answer is provided by indirect testimony found in the autograph manuscripts of *Al-Muqaffá*. In 844/1440, one of al-Maqrīzī's students managed not only to consult, but also to take notes from, with the author's approval, what seems to have been the complete text of *Al-Muqaffá* at that time.[54] To describe the manuscript, this student referred to the technical term ream *(rizmah),* indicating that this unfinished work, unlikely

[53] See p. 18. The only quire that was misplaced after al-Maqrīzī's death is quire IX, which should be replaced after quire XIII. See "Maqriziana I/1," 39 (n. 45).

[54] "Al-Muqaffá," Leiden MS Or. 14533, fol. 170b (see Jan J. Witkam, "Les Autographes d'al-Maqrīzī," in *Le Manuscrit arabe et la codicologie,* ed. Ahmed-Chouqui Binebine [Rabat, 1994], 88–98, 93–94):

الحمد لله طالع هذه الرزمة من أولها إلى هنا داعيا لمصنفها بطول حياته العبد محمد بن محمد بن الخيضري الدمشقي الشافعي غفر الله تعالى له آمين [not عفى الله تعالى الدائم as in ibid., 94] ونقل منها واستفاد في شعبان سنة ٨٤٤ بالقاهرة.

"Al-Muqaffá," fol. 457a (not mentioned by Witkam, "Les Autographes"):

. . . واستفاد محمد بن محمد الخيضري . . . الله تعالى.

"Al-Muqaffá," Paris, Bibliothèque nationale MS Ar. 2144, fol. 41b (partly erased; not mentioned by Witkam, "Les Autographes"):

الحمد لله وسلام على عباده والذين اصطفى. انتهى العبد محمد بن محمد بن الخيضري الشافعي مطالعة هذه الرزمة ودعا لمصنفه بطول حياته بتاريخ شعبان سنة ٨٤٤ بالقاهرة والحمد لله على جميع نعمه.

The Damascene Ibn al-Khayḍarī arrived in Cairo in 843/1439–40, aged 22. There, he became an associate *(lāzama)* of Ibn Ḥajar, with whom he studied. He also studied with al-Maqrīzī until he went to the Holy City for the pilgrimage. See Najm al-Dīn ʿUmar [Muḥammad ibn Muḥammad] Ibn Fahd al-Hāshimī al-Makkī, *Muʿjam al-Shuyūkh,* ed. Muḥammad al-Zāhī and Ḥamad al-Jāsir (Riyadh, 1982), 389–90. Al-Maqrīzī died 13 months after the date of these study-notes, after a long illness. The invocation for a long life might be a reference to the state of al-Maqrīzī's health at that time.

to be completed given al-Maqrīzī's advanced age at that time, was in draft form as an unbound collection of several quires. The position of these reading notes additionally indicates that the actual distribution in the bound volumes differed from the original versions. Above all, this description helps to solve the question of the shifting of the quires in the notebook. If the draft of a work in progress, like the biographical dictionary entitled *Al-Muqaffá,* was unbound in order to allow the shifting of the biographies, there are good reasons to believe that the notebooks were in the same state. Consequently, the quires in the notebook were moved by al-Maqrīzī at a given time because each abstract formed a self-contained unit, the whole perhaps placed together within a cover, until he added additional notes and short extracts from other sources to fill in the blanks left at the end and within those summaries. The result was a volume which probably remained unbound. This explains why a quire (IX) could be misplaced later on, well after al-Maqrīzī's death.

While the preceding pages have helped us to reconstruct how the present notebook was compiled over time, and consequently to bring to light al-Maqrīzī's *modus operandi* during his reading and note taking, it remains to be established when the various parts were written. Dating the present notebook is a difficult, almost impossible task, given that al-Maqrīzī did not date any of the summaries or notes. Internal elements, however, offer valuable hints for the dating of some parts of the manuscript. This is the case with item XXII, which consists of a biography of a Mamluk who was contemporary with al-Maqrīzī. The text in the notebook appears to be a preliminary stage of redaction for the biographical dictionary of his contemporaries entitled *Durar al-ʿUqūd al-Farīdah fī Tarājim al-Aʿyān al-Mufīdah.*[55] This section is the result of al-Maqrīzī's activity as an author and not as a summarizer. If we consider that this person died in 812, we can reasonably conclude that this part of the notebook (quire XXI) was written later on. A *terminus ante quem* can also be fixed thanks to the notes which were written at the end of this biography to complete the blank part of the quire (fols. 191b–1b). As demonstrated,[56] these personal notes were undeniably written during al-Muʾayyad Shaykh's reign (815–24/1412–21). Obviously, the result is a quite lengthy span of time, but it is possible to narrow it by considering a material element together with the conclusions drawn earlier. Account must be taken of the fact that quire XXI is composed of recycled paper. We have arrived at the conclusion that the summaries written on this kind of paper were jotted down in a relatively short period of time, but we have been unable so far to date, even approximately, these summaries. A close look at the use made of this recycled paper in al-Maqrīzī's

[55] See "Maqriziana I/2," 136.

[56] See ibid., 134.

various autograph manuscripts revealed that 83% of this particular paper is to be found in three volumes: the notebook and the two extant volumes of the first draft of the *Khiṭaṭ*. As it has been established that the latter was written between 811 and 816,[57] it is reasonable to assume that the quires made of the same paper in the notebook must be dated before 816. This hypothesis is supported by the fact that the biography in quire XXI was drafted after 812 and that the remaining notes in that quire were written between 815 and 824. Additionally, there is the fact that several parts of the notebook, some of which are written on recycled paper, contain information that was used by al-Maqrīzī in his *Khiṭaṭ,* and more importantly, already in the first draft of this work, where they can be identified.[58]

Other parts can be precisely dated thanks to external elements. It indeed seems that each time al-Maqrīzī borrowed a manuscript which he made use of, he felt the need to indicate this in a note he scribbled, most of the time on the title page, or less frequently elsewhere in the manuscript.[59] These reading notes, which coincide with category (e) in the previously mentioned list of sources for the reconstruction of the working method, offer us a good opportunity to understand how al-Maqrīzī read these manuscripts, since the date is generally appended to the notes. Such notes were found in no less than 25 volumes representing 7 works,[60] but only two of them are useful for the dating of the notebook, more precisely the relevant parts containing either a summary or scattered notes: Ibn Faḍl Allāh al-ʿUmarī's ***Masālik al-Abṣār*** and Ibn Saʿīd's *Al-Mughrib*. The first source is preserved in several sets of numerous volumes, although just ten volumes of the set consulted by al-Maqrīzī have come down to us. On the title page of each of them,[61] he added a note of consultation which reads: "Aḥmad ibn ʿAlī made excerpts from it in the year 831, invoking [God's favors] on its lender." Therefore, we can conclude that al-Maqrīzī obviously managed to consult a whole set of this work at the same time, i.e., in the same year, and more importantly that he could make use of it with the utmost ease given that he had borrowed it from its owner. This is confirmed by the

[57]See, for the details of this dating, "Maqriziana IX."

[58]See, for instance, the third quotation of item XLV ("Maqriziana I/2," 103) in *Al-Khiṭaṭ* (Būlāq ed. [1853], 1:208 = MS Topkapı Sarayı 1405, fol. 76).

[59]All these manuscripts were borrowed from private owners, and not from public libraries, like those of madrasahs. Al-Maqrīzī refers, in *Al-Khiṭaṭ* (Būlāq ed., 2:395 = Ayman Fuʾād Sayyid ed. [London, 2002–], 4:2:592), to such a public library in the madrasah of Maḥmūd al-Ustādhdār, considered as one of the best for its holdings and renowned for its collection of autographs. He emphasizes that the books could not be taken out of the madrasah. On the lending of books in Islam, see Fuʾād Sayyid, "Naṣṣān Qadīmān fī Iʿārat al-Kutub," *Majallat Maʿhad al-Makhṭūṭāt al-ʿArabīyah/Revue de l'Institut des manuscrits arabes* 4 (1958): 125–36.

[60]See Appendix II.

[61]With the exception of vols. I and IV. The latter contains a marginal note in al-Maqrīzī's handwriting, however.

various marginal notes he added in different places.[62] The verb used by al-Maqrīzī is of particular significance for our purpose. By using "*intaqá*," he clearly indicated that he prepared a summary, probably not of the whole work, but rather selecting from among the multiple volumes.[63] This interpretation is corroborated by the evidence provided by the notebook: instead of a unique summary, more or less, equal to the mass of the original source, it is established that, among the 71 items inventoried, 3 correspond to summaries made on the basis of this source (VII, XVII, XIX), although al-Maqrīzī never mentioned Ibn Faḍl Allāh al-ʿUmarī's name in any of these summaries.[64] Moreover, these three epitomes involve passages located in different volumes in the original source. The first of these covers quires XV–XVI, starting at the beginning of the first quire. From this, it can be inferred that al-Maqrīzī started the summary of the relevant section in the original source with a new quire and continued with another quire in order to complete it. The remaining part of quire XVI was left blank and filled with notes at a later date (items LXII–LXIII). The other two summaries are found in quires XVII–XVIII. The first starts on the last folio of quire XVII and ends on the verso of the first folio of the next quire. It therefore shows that al-Maqrīzī added quire XVIII in order to be able to finish this summary. However, the second summary based on *Masālik al-Abṣār* does not follow immediately, but rather is separated from the preceding one by another summary made on the basis of a different source (Ibn al-Maʾmūn al-Baṭāʾiḥī). From this, it may be deduced that al-Maqrīzī consulted and summarized a manuscript of this source during the period in which he had access to the whole set of *Masālik al-Abṣār,* i.e., in 831! It helps to date the references to this section of Ibn al-Maʾmūn al-Baṭāʾiḥī's work in al-Maqrīzī's books. This reasoning can also be applied to the references to the *Masālik al-Abṣār,* but additionally the related parts in the notebook can be dated accordingly.[65] Finally, the notes added by

[62]Reference is made here to the facsimile edition by Fuat Sezgin et al. (Frankfurt am Main, 1988–89), 4:72, 110; 5:8–9, 135, 143, 149, 165, 170, 218, 235, 300; 6:129, 192, 208, 297; 14:2, 152; 15:89, 252, 314; 17:2, 9, 34, 98; 19:234. Making marginal notes in a borrowed manuscript was not considered a reprehensible act, since it did not pertain to the content of the work. On this subject, see Rosenthal, *The Technique and Approach of Muslim Scholarship,* 17.

[63]As was the case with other multi-volume works like al-Ṣafadī's *Al-Wāfī bi-al-Wafāyāt* (resumé II) or Ibn Abī Uṣaybiʿah's *ʿUyūn al-Anbāʾ* (resumé I), or even his *Al-Muntaqá min Akhbār Miṣr* of Ibn Muyassar (completed in 814). On the contrary, his *Mukhtaṣar al-Kāmil fī al-Ḍuʿafāʾ li-Ibn ʿAdī* (completed in 795), is considered an independent resumé. For the analysis of the verbs used by al-Maqrīzī to describe his summarizing activity, see the next section below.

[64]For the identification, see "Maqriziana I/1," 63 and "Maqriziana I/2," 135. On the other hand, it should be noted that other resumés from this source must have been made by al-Maqrīzī, although they are not found in this notebook. This is evidenced by quotations from this source in al-Maqrīzī's works which are not the subject of the resumés present in the notebook.

[65]I.e., summaries VII, XVII–XIX.

al-Maqrīzī at a later date to fill up the blanks left at the end of these summaries can also be situated temporally: they were jotted down after 831. It must be added that this dating has an impact on other autograph manuscripts too, like the notebook preserved in Alexandria, and gives a hint as to the exact period when part of it was written and the related section in the final version of his books, like *Al-Khiṭaṭ.*[66]

Nevertheless, this kind of analysis must be applied with caution as regards the scattered brief notes, as illustrated by the following. Thanks to a note of consultation added to two volumes of Ibn Saʿīd's *Al-Mughrib fī Ḥulá al-Maghrib,* we know that al-Maqrīzī read both volumes and made excerpts *(istafāda)* from it in 803. Considering this dating together with the notes found in the notebook and identified as originating in this source (items XXXIII, LVI/1–2, LVII, LXI), the logical conclusion would lead to dating these notes to 803, which is quite early in comparison with the other datings suggested for several parts of the notebook. If we scrutinize one of these notes, for example item LXI, we notice that this note consists of just two lines which al-Maqrīzī utilized in *Al-Khiṭaṭ* where, however, the two lines became several.[67] A comparison with the original source reveals that the passage that appears in *Al-Khiṭaṭ* tallies with it, thus implying that al-Maqrīzī went back to the source to enlarge the quotation.

[66]Summary XIX in the notebook, which deals with Chingiz Khān from Ibn Faḍl Allāh al-ʿUmarī's *Masālik al-Abṣār,* was partly reused by al-Maqrīzī for the section he devoted to the *yāsā* in *Al-Khiṭaṭ.* A first draft of this section meant for *Al-Khiṭaṭ* is to be found in the notebook kept in Alexandria. Hence, the intellectual process which drove al-Maqrīzī to distort Ibn Faḍl Allāh's words can be followed quite precisely from the original source to the final result through his summarizing and redrafting. Thanks to the reading note al-Maqrīzī put on the manuscript of this source, it is finally possible to determine exactly when in his lifetime it took place. See Frédéric Bauden, "Maqriziana VII: Al-Maqrīzī and the Yāsa: New Evidence of His Intellectual Dishonesty," in *Proceedings of the Conference "The Mamluk Sultanate: Political, Military, Social and Cultural Aspects," University of Haifa and Hebrew University of Jerusalem, 3–6 April 2006,* ed. Amalia Levanoni and Reuven Amitai (forthcoming).

[67]See "Maqriziana I/2," 122.

المقريزي (مخ. لياج، ١٣٠ب).	المقريزي، الخطط.[68]	ابن سعيد، المغرب.[70]
القرافة: قال ابن سعيد في المغرب:	وقال علي بن موسى بن محمد بن سعيد في كتاب المغرب في أخبار المغرب:	
وهي في شرقيها بها منازل لأعيان الفسطاط والقاهرة وقبور عليها.	وبت ليالي كثيرة بقرافة الفسطاط وهي في شرقيها بها منازل الأعيان بالفسطاط[69] والقاهرة وقبور عليها مبان معتنى بها وفيها القبة العالية العظيمة المزخرفة التي فيها قبر الإمام الشافعي رضي الله عنه وبها مسجد جامع وترب كثيرة عليها أوقاف للقراء ومدرسة كبيرة للشافعية ولا تكاد تخلو من طرب ولا سيما في الليالي المقمرة وهي معظم مجتمعات أهل مصر وأشهر متنزهاتهم وفيها أقول . . .	وبت ليالي كثيرة بقرافة الفسطاط وهي في شرقيها بها منازل لأعيان فسطاط والقاهرة وقبور عليها مبان معتنى بها وفيها القبة العظيمة العالية المزخرفة التي فيها قبر الإمام الشافعي رحمة الله عليه وبها مسجد جامع وترب كثيرة عليها أوقاف للقراء ومدرسة كبيرة للشافعية ولا تكاد تخلو من طرب ولا سيما في الليالي القمرية وهي معظم مجتمعات أهل مصر وأشهر متنزهاتهم وفيها أقول . . .

In this case, the manuscript must have been at his disposal during the composition of his opus magnum, though it will be established, as already mentioned,[71] that this work was not begun before or only shortly before 811. Given that the manuscript of *Al-Mughrib* belonged to someone else, as indicated by al-Maqrīzī himself,[72] how then could he gain access to it later on? The inscription indicates that he utilized it[73] in 803, but the word used *(istafāda)* refers here to more than this, as it was also used by al-Maqrīzī on several volumes of Ibn ʿAdī's *Al-Kāmil lil-Ḍuʿafāʾ*[74] of which he produced a *mukhtaṣar* dated to 795. If this term implies that he made a summary of *Al-Kāmil,* then it is clear that the same conclusion can be drawn for *Al-Mughrib*. This summary, however, is now lost and the very brief notes traceable to this source which are scattered in the notebook conspicuously do not represent

[68]Būlāq ed., 2:444; Sayyid ed., 4:849.

[69]This reading may be questioned, as both the extract in the notebook and the autograph of Ibn Saʿīd used by al-Maqrīzī give a common reading. The editor of the new edition probably followed the Būlāq edition. See also, for a similar conclusion, p. 53.

[70] Ed. Zakī Muḥammad Ḥasan et al. (Cairo, 1953), 10.

[71] See "Maqriziana IX."

[72]In his note of consultation, he invoked God's favor on the lender. See Appendix II.

[73]Al-Maqrīzī was preceded in this by several of his colleagues, some of whom were his contemporaries, such as al-Awḥadī in 802 *(ṭālaʿahu Aḥmad ibn ʿAbd Allāh ibn* [*al-Ḥasan*] *ibn al-Awḥadī sanah 8*[*0*]*2),* and Ibn Duqmāq *(istafāda minhu dāʿiyan li-mālikihi Ibrāhīm ibn Duqmāq ʿafā Allāh ʿanhu wa-raḥimahu āmīn).* Al-Ṣafadī also benefitted from the text which he owned *(ṭālaʿahu wa-intaqá minhu mālikuhu Khalīl ibn Aybak ibn ʿAbd Allāh al-Ṣafadī ʿafā Allāh ʿanhu)*. See reproduction of fol. 1a of *Al-Mughrib* (vol. 4, Cairo, Dār al-Kutub MS 103 Tārīkh Mīm) in B. Moritz, *Arabic Palaeography: A Collection of Arabic Texts from the First Century of the Hidjra till the Year 1000* (Cairo, 1905), 167.

[74]See Appendix II.

the result of the summarizing process. Rather, they must be regarded as extracts selected from the resumé in order to be reused afterwards. The fact that two of these notes found their way into *Al-Khiṭaṭ* corroborates this hypothesis.[75] In doing so, al-Maqrīzī probably went back either to his summary or to the original source[76] in order to be able to quote the given paragraph completely. Nevertheless, there is no doubt that the notes taken from *Al-Mughrib* are not datable to 803, but to a later date.

Owing to an internal and external analysis of the notebook, together with the notes of consultation found on the manuscripts of the sources al-Maqrīzī had in hand, the dating of several parts can be proposed. The summaries written on the recycled paper were surely not jotted down before 816, while the others on blank paper must have been added later. In one case (the summaries based on Ibn Faḍl Allāh al-ʿUmarī's *Masālik al-Abṣār*), a note of consultation even allows us to date them precisely to 831. As for the scattered notes, their position in the quire and on the leaf may reveal when they were jotted down.

What For?

The question might seem ingenuous. However, it raises many problems that will be dealt with and, together with the answers given, it will show that the question is far from being self-explanatory.

Since antiquity, notebooks have been produced by scholars who wished to preserve what their memory could not necessarily retain with the passing of time. Notes, summaries, and excerpts were written during the reading of sources or lectures. When referring to these notes/notebooks, classical authors used a great variety of terms, but the most frequently encountered term is *pugillares*.[77] The aim of these was twofold. First and foremost, they constituted an aid to the memory (hence the use of the term *hypomnēmata*/ὑπομνήματα).[78] Secondly, they represented the raw material from which the author could extract a given quotation or an idea. The following passage, in Aulus Gellius' *Attic Nights* (*præf*. 2–3), illustrates

[75]The remaining two must have been reused in *Al-Muqaffá* in the parts unfortunately now lost.

[76]The manuscript of *Al-Mughrib* entered, at some time, into al-Muʾayyad Shaykh's ownership, who then bequeathed it as *waqf* to the library annexed to his mosque. See Shawqī Ḍayf in Ibn Saʿīd, *Al-Mughrib fī Ḥulá al-Maghrib [Washy al-Ṭurus fī Ḥulá Jazīrat al-Andalus],* 2nd ed. (Cairo, 1964), 1:22. Al-Maqrīzī could have had access to the original as often as he needed once it entered the library of al-Muʾayyad Shaykh's mosque.

[77]In certain circumstances, the term also refers to the draft of an author. See on *pugillares* Dorandi, *Le Stylet,* 17–25.

[78]This border between personal notes and summaries is sometimes subtle. As a consequence, the term is also used to describe the preparatory notes intended for a personal work and even the draft version of this work. It is then opposed to the *syngrammata*/συγγράμματα See ibid., 77–101.

this perfectly: "For whenever I had taken in hand any Greek or Latin book, or had heard anything worth remembering, I used to jot down whatever took my fancy, of any and every kind, without any definite plan or order; and such notes I would lay away as *an aid to my memory,* like a kind of literary storehouse, so that when the need arose of a word or a subject which I chanced for the moment to have forgotten, and *the books from which I had taken it were not at hand,* I could readily find it and produce it."[79]

As for the milieu of traditional Islam, there is no reason to believe that things were different. Given the very prolific activity of Muslim scholars in ancient times, it is no surprise to remark that the *ars excerpendi,* "the art of condensing a book or treatise came to be considered one of the accomplishments of true scholarship,"[80] to such an extent that authors such as Ibn ʿAbd Rabbihi considered that "condensing a work is more complicated than writing it."[81] The particularity of its educational system based on the oral, or more correctly aural,[82] transmission of texts gave birth to a great variety of notes: those prepared by a teacher for his lectures, those jotted down by a student during these lectures, and finally those taken by any one of them during their readings for their personal use. The first category corresponded, somewhat, to the first stage of an authorial work: the teacher had selected and organized the material and commented on it. It could eventually give birth to the publication of a book, either by the author himself, or, after his death, by a disciple who then put his master's notes in order or, when these were no longer available, his personal notes (second category).[83] The third category consisted of the personal notes resulting from reading of sources or any other kind of information gleaned by other means. The result of the three categories of activity could be found, either separately or altogether, in what was, in fact, a notebook. The evidence provided by al-Maqrīzī's specimen combined with the indirect tradition[84] shows that they contained summarized texts, short excerpts, personal testimonies, comments, and first sketches of small parts to be included in drafts later on, but the group of summaries by far surpasses the other categories. If notes played a mnemonic role in ancient Greece and Rome, they served the same purpose in Islamic civilization. Consequently, summaries were not only meant for

[79]*The Attic Nights of Aulus Gellius,* trans. John C. Rolfe (London and Cambridge [MA], 1954), xxvii. The French translation is quoted in ibid., 40. The italics are mine.

[80]Rosenthal, *The Technique and Approach of Muslim Scholarship,* 45.

[81]Aḥmad ibn Muhammad Ibn ʿAbd Rabbih, *Al-ʿIqd al-Farīd,* ed. Muḥammad Saʿīd al-ʿAryān (Cairo, 1372/1953), 1:2 (واختيار الكلام أصعب من تأليفه).

[82]For the distinction, see Günther, "Assessing the Sources of Classical Arabic Compilations," 78 n. 10.

[83]See ibid., 78–79, and more particularly for the authorial question.

[84]See below the section entitled *Referring to the Notebook?*

didactic use or for the sake of offering quicker access to a voluminous work.[85] Here, a clear distinction must be made between two purposes. The first is represented by the summary intended as a handbook, an abridged manual, sometimes itself the object of commentaries, or a condensed version of a comprehensive work. This genre can easily be differentiated as the condenser produces what he considers an authorial work as confirmed by several common features: introduction where the condenser mentions his name and explains why he contemplated doing this work, cross- and internal references in the body of the text, and an epilogue. Generally speaking, all these characteristics indicate the condenser's intention to see his work published. Summaries may have another objective, however. Instead of being intended to serve others, they may be produced by a scholar who wants to take note of things he considers seminal for his reflection and useful for his own book production, since "he who condenses gets ideas."[86] In case of need, he would be able to go back to a passage of his summary he wants to quote or refresh his memory on a particular subject. It does not mean that this kind of summary will not be copied by someone else, after the author's death, and thus published, but then it goes beyond the author's initial intention. To illustrate this theoretical passage, the circumstances in which Ibn al-Athīr composed his *Al-Kāmil fī al-Tārīkh* may be detailed. As Ibn al-Athīr explains in his introduction, he initially wanted to produce a book dealing with history where all the facts that could otherwise only be read in several books would be available. In that way, the result would have served him "as a *memorandum* which I could have consulted for fear of forgetting."[87] He started condensing al-Ṭabarī's *Tārīkh,* and then added what he found in other books, inserting them at the right place in his resumé. He proceeded this way, adding more and more material, making of his resumé a personal work, until a friend of his asked him to transmit it to him. After some hesitancy, he agreed. In this way, what started as a memorandum for his personal use became a work ready to be published to the world.[88]

The study of al-Maqrīzī's summarizing activity reveals that he produced both kinds of resumés. Considering first the three examples preserved outside the notebook,[89] we notice that two of them deal with hadith, while the third has to do with history. The first is a resumé *(mukhtaṣar)* of Ibn ʿAdī's *Al-Kāmil fī al-Ḍuʿafāʾ,* a book which criticizes transmitters and emphasizes the weaknesses of the traditions they transmitted. The text features the characteristics of a resumé

[85] A. Arazi and H. Ben-Shammay, "Mukhtaṣar," *The Encyclopaedia of Islam,* 2nd. ed., 7:536–39. This article is by far too restrictive, as it only considers the first purpose listed here.

produced to be published: the title, together with his full name, is written in his own hand on the title-page which consists of the recto;[90] it starts with a preface in which al-Maqrīzī states that he wanted to condense *(ulakhiṣṣ)* Ibn ʿAdī's work, focusing his attention on its substance. His main goal is to eliminate the superfluous chains of transmitters *(isnād)* as well as his criticism of the traditions, except those he thought it necessary to include.[91] Finally, it ends with a colophon where he repeats his goal and his name, and gives the date of completion.[92] The same characteristics are observed in the second resumé, once again entitled *mukhtaṣar,* which he made on the basis of three works ascribed to al-Marwazī,[93] though in this case he focused on deleting the traditions repeated by the author with a different chain of transmitters. But unlike what he did with Ibn ʿAdī's book, he quoted the traditions with their full *isnād,* omitting, on the other hand, the non-Prophetic traditions *(āthār)*.[94] As for the third, it consists of a resumé *(muntaqá)* of Ibn Muyassar's *Akhbār Miṣr*. Unfortunately, only the second volume of it has been preserved.[95] While the two aforementioned resumés represent the holograph copy in al-Maqrīzī's handwriting, the *Muntaqá* is a copy made by a later scribe on

[94]*Mukhtaṣar Kitāb Qiyām al-Layl lil-Marwazī* (Lahore, 1320 H.), 2:

أما بعد فإني اختصرت في هذا الجزء كتاب قيام الليل تأليف أبي عبد الله محمد بن نصر المروزي رحمه الله على أني أحذف المكرر من الأحاديث المسندة والآثار وأورد جميع ما فيه من الأحاديث المسندة بأسانيدها وجميع الآثار مع حذف أسانيدها والله أسأل الإعانة على إتمامه والتوفيق للعمل به إنه قريب مجيب.

The colophon (p. 144) is placed at the end of the third resumé, where he indicated that he made the whole on a manuscript dated to 287:

وبآخر النسخة التي اختصرت منها ما مثاله وذلك في شهر ربيع الآخر لنصف منه من سنة سبع وثمانين ومائتين [...] وتم هذا المختصر على يد كاتبه أحمد بن علي بن عبد القادر بن محمد المقريزي في نصف يوم الخميس لثمان أن بقين من جمادى الآخرة سنة سبع وثمانيمائة ولله الحمد أولا وآخرا.

[95]The preface is thus lost. The second volume bears a less indicative title:

الجزء الثاني من أخبار مصر تأليف محمد بن ميسر بن يوسف بن جلب عفا الله عنه.

See al-Maqrīzī, *Al-Muntaqá min Akhbār Miṣr li-Ibn Muyassar*, ed. Ayman Fuʾād Sayyid (Cairo, 1981), 1.

the basis of the autograph and its contents demonstrate that he had at his disposal what looks like a fragment of the notebooks. Evidence of this assumption lies in the fact that some portions are not part of Ibn Muyassar's *Tārīkh*, but are rather excerpts from two other sources al-Maqrīzī often relied on (Ibn Zūlāq and al-Musabbiḥī).[96] An interesting bit of information the copyist did not fail to mention is the colophon al-Maqrīzī added at the end of his resumé.[97] Nevertheless, this resumé is not of great help for our concern given that the features dealt with here (title page, preface) have been lost.

On the basis of the first two resumés, called *mukhtaṣar,* it is nonetheless possible to consider them as answering the first of the purposes mentioned earlier. The aim is to provide the reader with a less voluminous work, unburdened of all its repetitions and inconsequential elements. Their obvious function is to be useful to the condenser who also has in mind a potential general readership. The presence of the whole variety of characteristics typical of a work meant to be published reinforces this view, which is further strengthened by an examination of the other summaries in the notebook.

Among the numerous summaries found in the notebook, only three are introduced by a short preface, preceded by the *basmalah,* where al-Maqrīzī explained what motivated him to summarize them. The more complete one concerns Ibn ʿAbd al-Ḥakam's *Kitāb Futūḥ Miṣr.*[98] The condenser explains that his present aim *(fa-innī qāṣid)* is to summarize *(talkhīṣ)* the book, selecting the reports *(al-akhbār)* he needs and omitting what is unnecessary *at the moment (al-ān),* such as mention of houses and mosques which have fallen into oblivion and the chain of transmitters of the non-Prophetic traditions, and the like.[99] Of particular concern is the reference to "at the moment." Al-Maqrīzī's intention is clearly revealed: the summary is meant for his personal use only, and even limited in time, as he skipped over what he deemed unnecessary for his purpose *at that moment.* As already noted, the end of this summary is missing, or rather was never finished,[100] which is perfectly understandable given the introductory words. Be that as it may, al-Maqrīzī never intended to publish it, at least as it appears in the

[96] See "Maqriziana I/2," 100 (no. 62).

[99] Liège MS 2232, fol. 37v:
وبعد فإني قاصد تلخيص كتاب فتوح مصر وأخبارها من تأليف عبد الرحمن بن عبد الله بن عبد الحكم رحمه الله مع الاجتهاد في سرد ما حواه من الأخبار التي تدعو الحاجة إليها وترك ما لا يحتاج إليه الآن من ذلك كنحو ذكر الدور والمساجد التي دثرت وكذكر الأسانيد في الأخبار غير النبوية وشبه هذا والله أسأل تسيير ذلك بمنه وكرمه.

[100] See "Maqriziana I/1," 34–35, and "Maqriziana V" (forthcoming).

notebook.

The same conclusion may be applied to another summary, the one based on al-Ṣafadī's *Al-Wāfī bi-al-Wafāyāt.*[101] Here, the introductory section is even shorter: al-Maqrīzī is content with mentioning that the following are "useful notes" *(fawāʾid)* he selected *(iltaqaṭtuhā)* from al-Ṣafadī's book.[102] No reference is made to the elements looked for or omitted. This may be due to the fact that, contrary to all the previous resumés already studied, the contents of this source are not primarily based on hadith. As with the previous example quoted, the end of this summary is missing in the notebook as it has come down to us, but in this case it is highly probable that al-Maqrīzī went further than what is preserved.[103] Though it is unknown if he condensed the whole of *Al-Wāfī,* there is no reason to believe that the present summary was ever to be published: even though there is a preface, it is too concise to play that role, and furthermore his name never appears throughout the text. Whether he wrote a colophon or not, given that the end is wanting, is purely conjectural. Yet a hint may be found in the last example to be considered.

The summary he prepared of Ibn Abī Uṣaybiʿah's *ʿUyūn al-Anbāʾ* shares the same features with the previous one. The introductory words are once more striking in their brevity—he uses two verbs to describe his summarizing activity *(ikhtartu* and *intaqaytu)* and speaks of the result as "something" *(shayʾ)* and "words" *(kalim),*[104] but contrary to what we have for *Al-Wāfī,* al-Maqrīzī indicated, in a colophon, that he had reached the goal he had intended.[105] Nevertheless, the collation of this summary with the original source indicates that he did not condense the whole work, but stopped at an early stage in the book. In a way, al-Maqrīzī applied the same principle developed in his summary of *Al-Wāfī:* to condense what he needs at the moment of the reading. Compared with the other examples quoted above, this colophon does not offer any information about the authorship or the date when the summary was completed.

If we take account of another meaningful detail, the physical appearance of these epitomes, we will find another confirmation of their utility. Nos. II and V start on the verso of the first leaf of a quire, while no. I begins on the recto. The disposition of the first two is not problematic: a copyist will usually start writing

[103] See "Maqriziana I/1," 46.

[104] Liège MS 2232, fol. 4r:
هذا شيء اخترته وكلم انتقيته من كتاب عيون الأنباء في طبقات الأطباء جمع أحمد بن أبي القاسم بن خليفة الخزرجي المتطبب رحمه الله.

[105] Ibid., fol. 31v: انتهى الغرض المطلوب من تاريخ الأطباء والله الموفق.

this way in order to protect the first page of the text from future damage. The recto is thus reserved for the title page.[106] No. I, on the other hand, constitutes an exception: al-Maqrīzī wrote his summary on the recto. This last example allows us to establish that it was meant to be part of a notebook; hence the reason why al-Maqrīzī did not deem it necessary to "protect" it. For the others, he must have felt that it was better to start on the verso because these resumés were perhaps considered as independent elements, given their volume (five quires for the first, four for the second). The analysis of the constitution of the notebook now held in Liège has revealed that these independent elements were gathered together at a given date, notes being scattered later in the spaces left blank, thus joining the whole.

As for the numerous other texts contained in the notebook, besides the scattered notes, their major characteristic mainly lies in their brevity (generally less than one quire). Additionally, none of them is preceded by a preface, except, in one case, by a *ḥamdalah;* the name of the author and the title of the work is given at the beginning or at the end, in some cases. They usually start on the recto of the first leaf of a quire and al-Maqrīzī rarely stated in a colophon that he had finished his work, except in two cases.[107] Another common feature regards the term used by al-Maqrīzī to describe his work: in five cases, he described the text as a *mukhtār*, to be understood as a selection made from a greater work, and definitely not as a complete resumé.[108] The remainder is sometimes preceded by the word *faṣl*.

To conclude, none of the resumés appearing in the notebook was intended for publication. They all correspond to the second type defined earlier: their function was primarily mnemonic, allowing al-Maqrīzī to use these notes in case he could not get access to the original source, or as a memorandum before returning to the source. Finally, their incomplete character reinforces this hypothesis. As a matter of fact, while the resumé of Ibn ʿAbd al-Ḥakam's *Futūḥ Miṣr* ends abruptly in the middle of the story of the virgin thrown into the Nile by the Copts to encourage its flooding, the complete version of this anecdote can be read in *Al-Khiṭaṭ* (1:58),

---

[106] This convention is generally followed in Islamic manuscripts and al-Maqrīzī's fair copies respect it. The Leiden volume made of his many opuscules (MS Or. 560), copied by a scribe he presumably hired for this specific purpose, illustrates it: each opuscule starts on the verso, the recto being reserved for the title page on which al-Maqrīzī himself, in most of the cases, added the title later (sometimes the word *kitāb* has been written by the copyist, the real title being written by al-Maqrīzī afterwards). See, for instance, fol. 66r.

[107] At the end of nos. XIII (in the margin: انتهى المختار) and XV (لخصت ما قيل في الدرهم والدينار من مختار من كتاب الدنانير والدراهم تأليف أبي بكر محمد بن خلف بن حيان المعروف بوكيع ولم أقف على الأصل).

[108] See nos. XII, XIII, XVIII, XXIII, and XXVIII. No. XV is rather a *talkhīṣ* of a *mukhtār* made by someone else and al-Maqrīzī's words establish that he made the best of a bad job *(wa-lam aqif ʿalá al-aṣl)*.

where the text tallies exactly with the *Futūḥ Miṣr!*

Likewise, the study of the terminology might enlighten our understanding of al-Maqrīzī's intentions. Though it is hazardous to draw conclusions solely on the basis of the small sample under study, the consideration of other elements will support the following remarks. We have seen that al-Maqrīzī's notes of consultation placed on the manuscripts he had access to prove without a doubt that he made use of them *(istafāda),* meaning by this that he had made a resumé.[109] In some cases, he alludes to his summarizing activity in more direct terms: the term *intaqá* (to pick out) leaves no doubt that he took what he reckoned useful for his purposes.[110] While the term *mukhtaṣar* was probably reserved for a resumé meant to be published, in al-Maqrīzī's mind, the other terms might have referred to generally incomplete, summarized texts not fit for publication: hence the use of *talkhīṣ* for books composed of traditions,[111] and *muntaqá/mukhtār* for all the other kinds of books, simply differentiated one from the other by the extent of the selection. Such a classification can only be temporary, and if confirmed by other evidence, applicable to al-Maqrīzī alone. Nevertheless, the testimonies provided by the direct and indirect traditions tend to show that some of the preceding remarks are somewhat general for a given period and that these technical terms were not idiolects. Several examples may indeed be invoked regarding historians/traditionists.[112]

---

[109]See previous section.

[110]See Appendix II. He uses the same term regarding his selections in al-Musabbiḥī's *Tārīkh*. See "Maqriziana I/2," 96–97 and 117.

[111]*Talkhīṣ* is applied twice to such works, both of them made up of traditions (Ibn ʿAbd al-Ḥakam's *Futūḥ Miṣr* and Wakīʿ's *Kitāb al-Danānīr wa-al-Darāhim*).

[112]These are only some examples: Rashīd al-Dīn al-Mundhirī (d. 643 or 644/1245–47), *Muntaqá Tārīkh al-Musabbiḥī* (see "Maqriziana I/2," 97); al-Ṣafadī (d. 764/1363), an *Intiqāʾ* of Ibn Saʿīd's *Al-Mughrib fī Ḥulá al-Maghrib* (see n. 73); Ibn Qāḍī Shuhbah (d. 851/1448), *Muntaqāʾ Tārīkh Ibn al-Furāt, Muntaqāʾ Tārīkh Ibn Duqmāq, Muntaqá Tārīkh al-Dhahabī, Muntaqá Tārīkh Madīnat Dimashq, Muntaqá Nihāyat al-Arab* (see David C. Reisman, "A Holograph MS of Ibn Qāḍī Shuhbah's '*Dhayl*'," *MSR* 2 (1998): 45), *Muntaqá al-ʿIbar lil-Dhahabī* (MS British Library Suppl. Ar. 460); al-Dhahabī (d. 748/1348) (see the list provided by Bashshār ʿAwwād Maʿrūf in *Siyar Aʿlām al-Nubalāʾ* [Beirut, 1996], 1:85–87). The connection with the traditionists is not innocent: most historians of the period considered still passed through the traditional education system and were first and foremost traditionists. The term *muntaqá* is found profusely in répertoires of texts based on hadith where it means that a disciple made a selection of the traditions transmitted by a master. See particularly *Al-Fihris al-Shāmil lil-Turāth al-ʿArabī al-Makhṭūṭ: al-Ḥadīth al-Nabawī al-Sharīf wa-ʿUlūmuhu wa-Rijāluhu* (Amman, 1991–92), s.v. *muntaqá*. In light of what has been said, the following words sound somewhat misplaced: "Furthermore, there appeared a new kind of writer who devoted his talents to compiling *mukhtaṣars*; al-Dhahabī constitutes an apt example: the majority of his output comprises abridgments of works by other authors" (Arazi and Ben- Shammay, "Mukhtaṣar," 537). Al-Dhahabī's numerous abridgments are of course linked to his authorial activity, and were

Finally, the analysis of the distribution of some scattered notes in the quires reveals that al-Maqrīzī did not prepare a resumé of all the sources he consulted. Some of these were less relevant for his purpose, such as the histories written by Eastern authors, who were less well informed of the events that happened in Egypt, al-Maqrīzī's main subject of study. In the notebook, several scattered notes have been identified as coming from Ibn al-Jawzī's *Al-Muntaẓam* and Ibn ʿAsākir's *Tārīkh Madīnat Dimashq,* two works belonging to this category. Al-Maqrīzī was obviously not interested in summarizing these multi-volume books and took note, during his readings, of only the most relevant information. If we first consider Ibn ʿAsākir, we notice that the material selected can be traced back in this source and that its placement in the published volumes reveals the progression of al-Maqrīzī's reading process in this work (excerpts LVI/36–37: vol. 62; LXIII: vols. 52, 69, 70, 74; LXVII: vols. 64, 67). Thanks to this arrangement of the data, we know precisely which parts he read and in which order. The same conclusion applies to Ibn al-Jawzī (excerpts LII: vol. 17; LV: vols. 16, 17; LVIII: vol. 16). These excerpts were clearly written backwards in the notebook, utilizing the spaces left blank. The volumes correspond to the end of the work, i.e., al-Maqrīzī consulted the parts contemporary with the author. This was another aspect of his working method: to consider works relating contemporary events to be the most reliable ones.[113]

Summarizing, Epitomizing, Excerpting vs. Quoting, Paraphrasing, Interpreting

Now that we can take for granted that the resumés and the scattered notes found in the notebook had a mnemonic role, that both occasionally functioned as a first sketch representing the redactional process, and that the whole served as raw material al-Maqrīzī could pick from when he needed it, we have to scrutinize several issues connected with the summarizing and writing processes: the psychological conditions of these activities, and the connection between summarizing the text and exploiting the summarized material.

The process of copying, in all its complexity, can be divided into four different tasks, which are not reducible to consecutive steps since they are all concomitant. Nonetheless, each operation can be differentiated from the others thanks to a series of alterations that affect the copied text and that are attributable to the given operation. These four operations are: the reading of the text, the comprehension of the text, the silent dictation, and finally the act of copying.[114] The first operation generally requires from the copyist various abilities like the decipherment of the

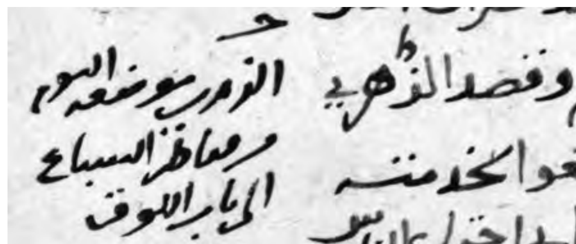
essentially made for his personal use.

[113]See also the forthcoming study Frédéric Bauden, "Maqriziana XI: al-Maqrīzī et al-Ṣafadī: Analyse de la (re)construction d'un récit biographique," in a forthcoming monographic volume of *Quaderni di Studi Arabi* devoted to the working method of classical Islamic historians.

[114]Dain, *Les Manuscrits,* 41.

text (in the case of Arabic, everyone knows the difficulties connected with the cursive script, the potential lack of diacritics and vowels), and the understanding of the meaning of the text, which requires knowledge in a great variety of fields, particularly of technical or archaic vocabulary. Thus, one cannot be content with just reproducing what he sees, though in some cases, this cannot be avoided. These four operations are characteristic of the act of copying. However, in the case of al-Maqrīzī, another operation, necessitated by the desire to summarize the text, must sometimes be added, then emphasizing, more than ever, the difficulties of the copyist's work. The study of the notebook reveals that al-Maqrīzī did not escape the vicissitudes inherent in the act of copying and found in every manuscript which was copied from another. One of the most interesting features imputable to the third operation listed above (the silent dictation) regards the idiosyncratic phonetic peculiarities of the copyist. While it is established that a Latin copyist of German origin will tend to write *suafis* instead of *suavis,*[115] in the case of Arabic, a copyist will probably be less influenced by his mispronunciation than by phonetic and grammatical traits of Middle Arabic. This is even more to be expected when the copyist is a scholar engaged in a summarizing activity, during which his main focus is the rendering of the meaning of the text. Of course, the more the text is condensed, the more he will make mistakes characteristic of the language he speaks daily. The question has been considered regarding al-Maqrīzī and his notebook, where such features are observed more than anywhere else. The preliminary results confirm that the notebook presents several peculiarities that can be characterized as pertaining to Middle Arabic (orthographical aberrations, morphological and syntactical mistakes), such as the doubling of *lām* in the word *allafa,* the presence of a *wāw* in the aorist (3rd sg.) in *verba tertiæ radicalis* و, and the use of a plural verb preceding the subject *(akalūnī al-barāghīth)*.[116] Such features will doubtless be identified in the autograph manuscripts of his books, once they have been scrutinized in that way.

Mistakes affecting numbers (ciphers and dates) are common in most manuscripts. In the notebook, these are written both in letters or with figures. Figures are less a source of mistakes than letters and their presence in the notebook, on several occasions, might be interpreted as a conscious effort to avoid mistakes in their writing. However, we shall see, in the next section, an example due to the lack of attention where al-Maqrīzī modified a date three times (513, 512, 515). Although the second date is presumably the result of absentmindedness, as it was written on a note-card, the third must rather be seen as an a posteriori correction made on the basis of another source. Other errors, or better, inaccuracies, are not always easily



[115]Ibid., 44–45.

[116]See "Maqriziana VIII."

identifiable as such given that they could be imputed to the source rather than to al-Maqrīzī's lack of attention. Consequently, caution is always recommended when noticing such errors.[117]

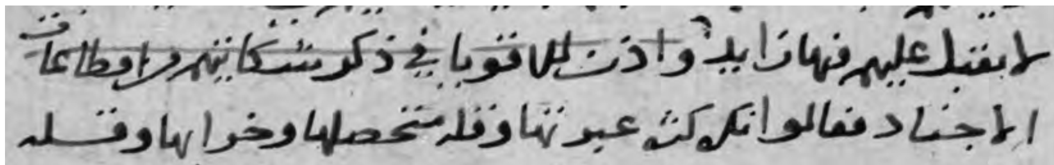
The ability of the copyist to understand the text is also of particular importance. "Of concern as well is the intention of al-Maqrīzī. Is he quoting or paraphrasing? If he paraphrases material, it might contain a hint as to how he understands what he reports. One may presume in many cases that he knew best what his source was trying to say. A quotation indicates only what the actual words convey but the paraphrase may reveal more, particularly about what al-Maqrīzī perceived as the implication of the material he reported."[118] This quotation highlights the problem of understanding reused material, but we have seen that, prior to this phase, al-Maqrīzī summarized in most of the cases. Before considering this second phase, we should analyze al-Maqrīzī's understanding of the source on the basis of the resumé he prepared. Several examples could be chosen for this purpose, but a text dealing with an earlier era such as the Fatimid period represents an excellent starting point, as words, facts, and events pertaining to this period were not necessarily understood in the fifteenth century in the way they were expressed in a text written by a person who lived in the earlier period. The notebook containing a summary of Ibn al-Maʾmūn's *History* (no. XVIII) will serve as the basis of our analysis.

Although this summary is short, covering only four folios, a particular symbol is displayed in it more than anywhere else in the notebook. In each occurrence, al-Maqrīzī wrote it in red ink, as an additional means to attract his attention, over a word. Looking like a small *kāf* (probably standing for *kadhā,* i.e., *sic*), its function was to signify that al-Maqrīzī did not understand what the word meant. The following example will explain how it functioned.

MS 2232, fol. 159a (Courtesy Université de Liège)

The symbol is visible over a word which al-Maqrīzī obviously did not understand. It is only at a later date, as confirmed by the color of the ink and the character of

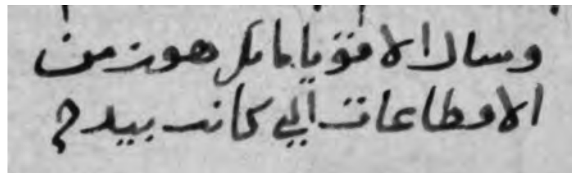
[117]See for instance item LII ("Maqriziana I/2," 109).



[118]Paul E. Walker, *Exploring an Islamic Empire: Fatimid History and its Sources* (London and New York, 2002), 222 n. 3.

the script, that he discovered what the word meant and added, in the margin, a gloss preceded by the letter *ḥā*ʾ (for *ḥāshiyah,* "gloss"). The text thus reads:

وقصد الذهري　　　حـ [حاشية] الذهري موضعه اليوم من قناطر السباع إلى باب اللوق



Other instances found in the same summary[119] allow us to confirm the meaning of the symbol used together with al-Maqrīzī's perplexity over several words appearing in this text. Consequently, it can be established that, for al-Maqrīzī, Ibn al-Maʾmūn's *History* represented a difficult source, due to the presence of several unknown words. It also shows that a text composed three centuries earlier could contain words which were no longer used and understood by a historian of the fifteenth century.

The problem of quotation and paraphrase, bearing in mind that we are dealing here only with a source and its summary, is obviously linked to the question of understanding, as already shown. In this case too, the notebook provides an answer as to whether al-Maqrīzī summarized a source without modifying the wording or whether he paraphrased it. In fact, he did both and both are attested even within the same summary. On this matter, the source considered above, Ibn al-Maʾmūn's *History,* provides another example. Though the original text is lost, it is possible to arrive at this conclusion through the following extract.

MS 2232, fol. 157a (Courtesy Université de Liège)

As can be observed, al-Maqrīzī cancelled almost a complete sentence with a red line, leaving only the last word *(al-ajnād)* untouched. To replace it, he wrote another sentence, vertically in the margin, indicating, through a sign (¬) that it had to be substituted for the cancelled one.

MS 2232, fol. 157a (Courtesy Université de Liège)

The whole can be illustrated thus:

لا يقبل عليهم فيها زائد ¬~~وأذن للأقوياء في ذكر شكايتهم من إقطاعات~~ الأجناد

119See next section.

وسأل الأقوياء ما يكرهون من الإقطاعات التي كانت بيد **صح**.
Thanks to this modification, we can safely infer that what al-Maqrīzī wrote corresponded to the words he read in the source, which implies that he is not paraphrasing it, but rather quoting it. The modified sentence does not say something different (the *aqwiyāʾ* could express their displeasure towards the land grants, *iqṭāʿāt,* of the soldiers), but is simplified. Nevertheless, al-Maqrīzī, of course, understood the ins and outs of the affair, and felt the need to modify the sentence in order to interpret it: instead of considering, as the source related, that they were allowed to complain about the *iqṭāʿāt* of the army, he preferred to let the text imply that they were asked what their complaint was.

In other circumstances, we already noted that al-Maqrīzī was able to get the most out of his source, paraphrasing, for example, a sentence of 50 words in just 15.[120] In each case, it has been established that this takes place during the reading of the source. Owing to the psychological conditions attendant to the copying process referred to earlier, it can be said that he could not read more than a limited number of words in order to be able to paraphrase or to quote, hence the modifications intervening in the margins or directly in the text.

Once the text had been summarized, faithfully or in paraphrase, it served al-Maqrīzī either as raw material which could be reused as such, or as a mnemonic support before returning to the source. In the latter case, it implies that he had at his disposal a copy of the work or that he could once again gain access to the manuscript he had consulted months or years before. An answer to the crucial question of whether he owned or had permanent access to a copy of the work cannot be given with certainty, but the evidence provided by the notebook suggests that there is no other solution. For instance, the notebook contains a biography of a physician taken from a so-far unidentified source.[121] Al-Maqrīzī devoted some space to him in *Al-Muqaffá,* where he quotes Ibn Abī Uṣaybiʿah among his sources for information about this person. However, al-Maqrīzī did not include him in the resumé he prepared of *ʿUyūn al-Anbāʾ,* and we have seen that he indicated at the end of this resumé that he had extracted all that he needed. How then could he quote Ibn Abī Uṣaybiʿah if the original text was not available to him, given that he had not taken note of the biography in his resumé? Beside that, it demonstrates that the mnemonic function of the resumé sometimes had limits.

Be that as it may, this leads us to consider how al-Maqrīzī reused the material found in the notebook: did he quote or paraphrase the resumé or the original source? Before the discovery of the notebook, a partial answer could be arrived at through a comparison between the assumed source used by al-Maqrīzī, particularly

[120]See above, p. 14.

[121]No. 21 of LVI.

when he did not quote its title or author, and the evidence provided by his books.[122] This procedure has revealed al-Maqrīzī's extraordinary capacity to extract the fundamental data and to combine it in a concise and well-constructed manner. But it has its pitfalls, in particular when the source cannot be identified with certainty. Thanks to the notebook and taking into consideration the autograph drafts of his works, this method of analysis can be refined in the best circumstances: in many cases, several versions can now be compared for a given source, whether or not it is extant. In the next section, for instance, a synoptical analysis of four versions of the same text is given, from the resumé up to the last version in the fair copy. It is thus possible to follow the evolution of al-Maqrīzī's intellectual activity from the very beginning up to the end of the process. Such analyses will not be detailed here for reasons of space:[123] only selected short instances will be dealt with.

A collation of the various resumés and the scattered notes with the material exploited by al-Maqrīzī in his books establishes that a concrete answer cannot be given to the question posed above, proving once more the complexity of his working method.

The material summarized can indeed be quoted verbatim, as is shown by the analysis of a quotation from Ibn al-Maʾmūn's *History* in the next section. In other circumstances, the material is slightly modified, tending toward a simplification or an extrapolation of the meaning of the text. This indicates that he considered the text he took note of as being already either a quotation, or a first sketch of what it should be in the final version. In this case, the paraphrase is made with an idea of its final destination already in mind.

The following example illustrates perfectly how it worked. The source of this biography has not yet been identified, which means that the analysis can only be made on the basis of al-Maqrīzī's words. In the reworked version, as provided by al-Maqrīzī in his *Khiṭaṭ,* the elements modified have been underlined.

The comparison reveals, at first sight, that the text found in the notebook, though we do not know whether it is a paraphrase, a summary, or a quotation, already contained all the material al-Maqrīzī deemed necessary. Apart from several names of the subject's ancestors, the reworked version does not lack any of the information. Instead, it contains various additions which are all al-Maqrīzī's. These added parts do not provide anything new, but rather sum up the exact meaning of the text or place the data in context, and in certain cases reveal al-Maqrīzī's interpretation. A hint that al-Maqrīzī is probably paraphrasing some parts may be inferred by the grammatical mistake he made in the notebook regarding the two rulers under whose reigns the subject served. Whereas the notebook displays a *muḍāf* followed by two *muḍāf ilayhi (dawlatay al-ʿĀdil wa-al-Kāmil),* the text in *Al-Khiṭaṭ* has been corrected according to the correct grammatical rule. The names of the rulers have also been clarified as the data is out of context. On the other hand, the addition regarding the fact that the biographee worked in the state chancery *(dīwān al-inshāʾ)* is redundant due to the mention of his office *(kātib)* and his mastery of writing (script and composition). The modification affecting his date of birth, as well as the verb used to indicate his death, were also unnecessary and might reflect al-Maqrīzī's desire to modify slightly the phrasing of the source, although the reason which caused him to do so remains unknown. As for the book the subject memorized *(Al-Muhadhdhab),* al-Maqrīzī felt the addition was necessary, though anyone knowledgeable understood which book was referred to here. The last two differences are dependent on al-Maqrīzī's interpretation. His personal knowledge, reinforced by other readings for instance, could be invoked to explain why the piece *(qiṭʿah)* became a lot *(kathīran),* but the rather neutral *ishtaghala bi-al-adab* changed into a more biased *baraʿa fī al-adab* could be the result of his own understanding of the text or of his wish to embellish the subject's

[124]Būlāq ed., 2:93; Sayyid ed., 3:309.

achievement. In the end, the text has become al-Maqrīzī's rendering, through small, but effective additions.

Another feature of al-Maqrīzī's *modus operandi* relates to his desire to go back to the most ancient sources he identified in a later work. Dealing with fires and their functions in the pre-Islamic period, al-Maqrīzī synthesized the data provided by al-Nuwayrī in his encyclopedic work *Nihāyat al-Arab* (item XXXV), but when he utilized it in one of his books *(Al-Khabar ʿan al-Bashar),* he also quoted al-Nuwayrī's source for this subject, al-Jāḥiẓ's *Kitāb al-Ḥayawān,* demonstrating that he was not content with relying on a secondary source.[125] Obviously, he could only do this once he got access to a copy of al-Jāḥiẓ's work.

We have also seen that, in some cases, al-Maqrīzī did not quote an extract transcribed in the notebook, but rather turned back to the source from which he took the extract. In the example of Ibn Saʿīd's *Al-Mughrib,*[126] al-Maqrīzī selected just one sentence while, in *Al-Khiṭaṭ,* where the quotation fit better than anywhere else, the quotation tallies exactly with Ibn Saʿīd's text. This is interpreted as an indication of the existence of a comprehensive resumé, a fact confirmed by the note of consultation al-Maqrīzī wrote on the title page of the copy of Ibn Saʿīd's text he had in hand, and finally as a clue that this scattered note in the notebook served as a memorandum for future quotation.

WORKING WITH NOTE-CARDS

Among the manifold aspects of the *modus operandi* of an author, whatever the period and the civilization considered, the use of note-cards or file cards has been questioned. How may we conceive that an author could compose voluminous works, implying the handling of huge amounts of data, without an organizational system that provided the author with the possibility to arrange the data according to the evolutionary scheme of his work(s)? As early as 1930, W. K. Prentice postulated the use of such a system by the Greek historian Thucydides: "But how was it possible for Thucydides to be continually revising and enlarging his book, how could he have acquired certain 'documents gradually and stuck them in his manuscript to work up later,' if his manuscript was on papyrus rolls? Such a procedure can be imagined only if the author wrote on flat sheets, which he kept together in a bundle or in a box. And there is no reason whatever for rejecting such a supposition."[127] Prentice was deeply convinced that classical authors resorted to loose sheets of papyrus or parchment that they kept bundled or in boxes—the whole corresponding to an authorial manuscript—before organizing

[125]See "Maqriziana I/2," 93–94.

[126]See above, p. 25.

[127]W. K. Prentice, "How Thucydides Wrote His History," *Classical Philology* 25 (1930): 125, quoted by Dorandi, *Le Stylet,* 6.

them and copying the final version on papyrus rolls. Since then, classicists have moderated Prentice's views and generally consider that if note-cards were used, it was only in the first stage of the work: for the taking of notes, for excerpts, or for occasional additions to the final text.[128] As can be deduced, the problem resides in the transfer, the addition of data to a written text, and implicitly has to deal with the organization of the material. It is indeed quite difficult to move or to add information in a manuscript, be it a roll made of sheets pasted one to the other or a codex made of quires. If one is working, say, on a biographical dictionary alphabetically organized, he should ideally write each entry as an independent unit, so that it will be possible for him to move it according to the evolution of the work and the discovery of new material. Additional data pertaining to a biography could be added in the margins, if limited, or on a slip of paper inserted between two sheets with a cipher indicating where this addition must find its place. Once the author considers his work completed, a fair copy is produced. The note-card can thus be just a slip, a sheet, or even a quire, but the common feature is that it can be moved without requiring rewriting.

What about Islamic authors? Fortunately, the indirect tradition provides more examples than classicists could hope for. Some of them had already been collected by Rosenthal as early as 1947,[129] who showed that the terminology still remains to be investigated, according to the period and probably the area of origin of an author, as various terms are referred to in this study with the meaning of "notes." Indeed, a clear distinction must be made between the notes which resulted from the reading and summarizing activity of a scholar and the note-cards which are already the result of his composing activity. The first represents the raw material which he will perhaps reuse, while the latter corresponds to a later stage, being preliminary to final redaction. The quotation of Ibn Ṭāwūs' description of his personal working method, though precise,[130] provides another testimony to the use of note-cards. While the ones meant to keep his personal ideas are referred to as *ruqayʿāt* (slips of paper), the others containing the quotations from the secondary literature are defined as *qāʾimah/qawāʾim* (individual sheets of paper) which could be reorganized according to the scheme of the work. On the basis of these indirect witnesses, it can be ascertained that note-cards were one of the various techniques used by Muslim authors to compose their books. If the indirect tradition had long ago provided convincing evidence of the use of note-cards, there was still a lack of examples of the direct tradition. Once again, the unusual collection of direct witnesses of al-Maqrīzī's authorial activity helps to fill

[128]Ibid., 25.

[129]Rosenthal, *The Technique and Approach of Muslim Scholarship*, 6 ff.

[130]See above, p. 5.

this gap. Examples of note-cards, implying that card indexes must have existed, have been tentatively identified as such in *Al-Muqaffá*[131] and *Al-Khiṭaṭ,*[132] where biographies or details have been added on slips of paper inserted in the quires. In these particular cases, the note-cards seem to result from the necessity to add a biography or information at an already advanced stage of the work, hence the organization in quires, and in this sense these should be considered more as a technical solution, not necessarily implying the existence of a card index. Be that as it may, they correspond to what one can call note-cards: they were produced once a new source was discovered, read, and perhaps summarized; then the data was selected, organized, and quoted or paraphrased, and finally written on a slip of paper appended at the right place in the work in progress. In some cases, the material read could be directly transferred on a slip of paper. At the end, once the fair copy was made, the note-cards were intended to be discarded together with the draft. Nonetheless, an instance illustrating the whole process (summary, note-card, draft, fair copy), therefore confirming the status of the card, had never previously been discovered. It is only by chance that such a witness has survived in the notebook, given that it represents a *hapax*.[133]

[131] Witkam, "Les Autographes," 94.

[132] See Sayyid, "Remarques sur la composition des *Ḫiṭaṭ* de Maqrīzī."

[133] Item XXXVIII must have played the same role, but unfortunately one stage of the process (summary) is missing now.

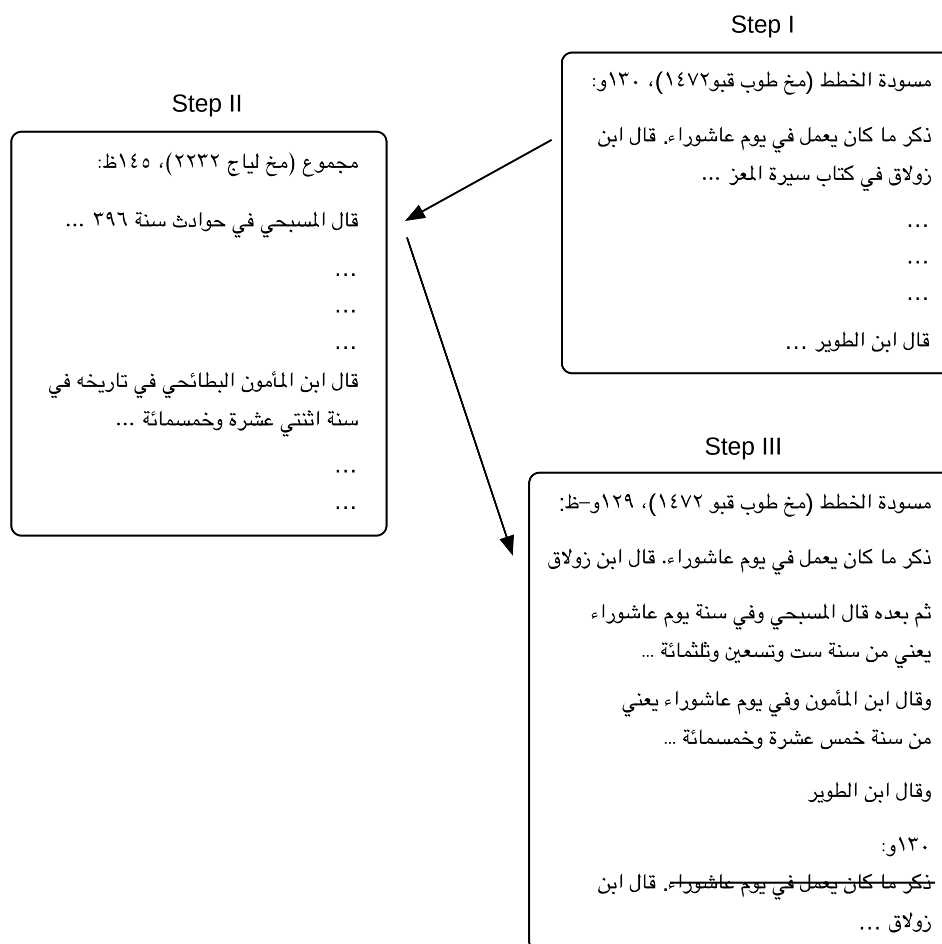
MS 2232, fol. 145r (Courtesy Université de Liège)

MS 2232, fol. 145v (Courtesy Université de Liège)

Originally, fol. 145 (items LXIV–LXV) was a loose piece of paper which had been attached to the notebook by a narrow strip of paper by a later owner. It consists of two quotations from Fatimid sources, each one lying on one side of the leaf: al-Musabbiḥī on the recto and Ibn al-Maʾmūn on the verso.[134] Both deal with a similar subject (the etiquette observed at the Fatimid court on the occasion of the feast of ʿĀshūrāʾ), and together with the layout as well as the size of the slip (9.5 x 16 cm), it must be identified as a note-card. The following demonstration will corroborate this statement. In Ibn al-Maʾmūn's text found on the note-card, two quotations may be identified: the first one which, erroneously as we shall see, refers to the year 512 (read 513), and the other one, placed just at the end of the latter from which it is separated by "*wa-qāla*," which deals with a similar event that took place, once again mistakenly, in 416 (read 516). Physically, both quotations were rendered jointly as al-Maqrīzī did not indent a new line for the second quotation. It can only be differentiated thanks to the extended form of the introductory word "*wa-qāla*." Turning to what was considered by al-Maqrīzī as the recto, it can be observed that the quotation from al-Musabbiḥī is smaller and that it does not fill the whole space. From this, it can be deduced that al-Maqrīzī obviously wanted to separate the two sources although they spoke of a similar event. The result is a note-card with different sources on each side, but all dealing with the same event. If this interpretation is confirmed, it should mean that al-Maqrīzī made it while consulting the original sources or the resumés he made from them, at different intervals. Fortunately, the notebook preserves a short resumé of Ibn al-Maʾmūn's *Tārīkh,* now lost (no. XVIII). It specifically touches on events which took place between 501 and 515. On fols. 158v–159r, under the year 513, the text of the first quotation found on the note-card appears in almost exactly the same words. The comparison proves concretely that the aim of fol. 145 was to provide al-Maqrīzī with a tool to be used in one of his works, and this tool could only be a card. It remains that if it was really a card, we should find its text in one of al-Maqrīzī's works, and, why not, in an autograph copy of it. In this way, the demonstration would be complete and unquestionable. It happens that the text of the card found its way into his *Al-Khiṭaṭ* and, by chance, it appears in the preserved part of the autograph draft of this work too.

A thorough study of the autograph draft reveals a striking feature on fol. 130r. The title *(dhikr mā kāna yuʿmal fī yawm ʿāshūrāʾ),* written in red ink, was cancelled by al-Maqrīzī, while the text following it was maintained.

[134]Actually, this piece of paper is bound on the wrong side given that al-Musabbiḥī's quotation pertains to the year 396 while Ibn al-Maʾmūn's deals with the year 512 (to be corrected to 513).



MS 1472, fols. 129v–130r (Courtesy Topkapı Sarayı Müzesi Kütüphanesi)

MS 1472, fols. 128v–129r (Courtesy Topkapı Sarayı Müzesi Kütüphanesi)

Turning to the immediately preceding folio (129r), one notices that it starts with the same title crossed out on fol. 130r and, even more strikingly, the title is followed by the introductory words of the first quotation found on fol. 130r *(qāla Ibn Zūlāq),* although the quotation is not found on fol. 129r. Instead, one reads "*thumma baʿdahu qāla al-Musabbiḥī.*" From this, it can be inferred that al-Maqrīzī wanted the text written on fol. 129 to be inserted after the quotation from Ibn Zūlāq found on fol. 130r. This is confirmed by the words added at the end of fol. 129v: "*wa-qāla Ibn al-Ṭuwayr,*" after which there follows a blank representing one third of the folio. Here again, al-Maqrīzī clearly indicated that, after this addition contained in fol. 129, the text had to proceed with the next quotation on fol. 130r, just after Ibn Zūlāq's text. In summary, the various steps may be represented in the following scheme.

First, al-Maqrīzī wrote a section dealing with the events that took place on the occasion of the feast of ʿ*āshūrā*ʾ during the Fatimid period. At that time, he only had access to two sources which addressed this event: Ibn Zūlāq and Ibn al-Ṭuwayr. Later on, he gained access to two other sources (al-Musabbiḥī and Ibn al-Maʾmūn), from which he made resumés[135] and, a second time, a note-card for this particular subject. The note-card was not inserted in the draft already prepared, although the additional text was meant to be inserted between the texts of Ibn Zūlāq and Ibn al-Ṭuwayr. Indeed, the chronological order had to be observed and, while Ibn Zūlāq spoke of an event that took place in 363, al-Musabbiḥī and Ibn al-Maʾmūn's texts dealt with the same event that happened later, but before Ibn al-Ṭuwayr's quotation. Instead of rewriting the whole quire, which represented a waste of time and paper, he preferred to add a leaf to the quire and indicate where the text had to be placed in the fair copy. He could not indicate it better than by cancelling the original title and rewriting it at the beginning of the additional text leaf. The question remains why al-Maqrīzī did not simply paste the note-card between fols. 128 and 130, as he did in many cases in several of his works. The answer is provided by the comparison of the text of the note-card with fol. 129 in the draft of *Al-Khiṭaṭ:* it reveals that both texts are identical, save some irrelevant discrepancies. However, this time, all the quotations follow each other, without physical separation. And more importantly, there is one additional quotation from Ibn al-Maʾmūn's *Tārīkh,* regarding the year 517, which was placed at the end of fol. 129v, before shifting to Ibn al-Ṭuwayr's text: it indicates that another note-card made for the same purpose existed and was copied here. Al-Maqrīzī probably felt uncomfortable pasting two note-cards in the same place, fearing that both could inadvertently be taken off or worked loose during the manipulation of the draft. Copying them anew seemed less risky to him. It is clear that al-Maqrīzī definitely worked with note-cards with the purpose of adding material to his books in embryo or already at an advanced stage and that he could organize them, in this particular case, according to chronological criteria.

There is more to say. We have come to the conclusion that the resumé of Ibn al-Maʾmūn's *Tārīkh* (no. XVIII) in the notebook could be dated through a *terminus post quem* to after 831.[136] On this basis, the note-card, and consequently fol. 129 in the draft of *Al-Khiṭaṭ,* must have been copied after that date. Thanks to this dating, it is now possible to postulate that a fair copy of that work was not produced before 831!

Of concern too is the comparison of the various versions. The source is

[135] This is now confirmed for al-Musabbiḥī, thanks to the reading note al-Maqrīzī added on the title page of vol. 40 (see Appendix II) and a note ascribable to him in the notebook (see "Maqriziana I/2," 96–97, 117–18 (last page, line 3, read "al-Mundhirī" instead of "al-Maqrīzī").

[136] See above, p. 23.

unfortunately lost, but no less than four different versions of Ibn al-Maʾmūn's two quotations have been preserved as shown by the following collation.[137] It offers a unique opportunity to scrutinize al-Maqrīzī at work in different circumstances: summarizing and excerpting in the notebook; quoting in the draft and the final version of his book. It will bring us closer to his uncertainties, his misunderstandings, his misapprehensions, and sometimes his ignorance. The analysis will also highlight some of the deficiencies of ecdotics nowadays.

[137] For the sake of space, only the first of these is studied here.

[138] Al-Maqrīzī put a symbol over the word that looks like a ك [i.e., *kadhā*?, *sic*], indicating that it required an explanation of its meaning.

[139] Same remark as above.

[140] Written مصفا.

المقريزي، مسودة الخطط (مخ. طوب قبو سراي ١٤٧٢، ١٢٩أ).

وقال ابن المأمون: وفي يوم عاشوراء يعني من سنة خمس عشرة وخمسمائة عبئ السماط بمجلس العطايا يعني من دار الملك بمصر التي كانت سكن الأفضل بن أمير الجيوش وهو السماط المختص بعاشوراء وهو يعبأ في غير المكان الجاري به العادة في الأعياد ولا يعمل مدورة خشب بل سفرة كبيرة أدم والسماط تلوها[141] من غير مرافع نحاس وجميع الزبادي أجبان وسلائق ومخللات وجميع الخبز شعير وخرج الأفضل من باب فرد الكم وجلس على بساط صوف من غير مسوَرة[142] واستفتح المقرئون واستدعيت الأشراف على طبقاتهم وجُمل[143] السماط بهم[144] وقدم الصحن الأول من الذي بين يدي الأفضل إلى آخر السماط عدس أسود ثم بعده عدس مصفى إلى آخر السماط ثم رفع وقدمت صحون جميعها[145] عسل نحل.

المقريزي، الخطط (تحقيق أ. ف. سيد)، ٢:٤١٩.[146]

وقال ابن المأمون: وفي يوم عاشوراء يعني من سنة خمس عشرة وخمسمائة عبئ السماط بمجلس العطايا من دار الملك بمصر التي كان يسكنها الأفضل بن أمير الجيوش وهو السماط المختص بعاشوراء وهو يعبأ في غير المكان الجاري به العادة في الأعياد ولا يعمل مدورة خشب بل سفرة كبيرة من أدم والسماط يعلوها من غير مرافع نحاس وجميع الزبادي أجبان وسلائق ومخللات وجميع الخبز من شعير وخرج الأفضل من باب فرد الكم وجلس على بساط صوف من غير مِسوَرَة[147] واستفتح المقرئون واستدعيت الأشراف على طبقاتهم وحمل السماط لهم وقد عمل في الصحن الأول الذي بين يدي الأفضل إلى آخر السماط عدس أسود ثم بعده عدس مصفى إلى آخر السماط ثم رفع وقدمت صحون جميعها عسل نحل.

As stated earlier, the first quotation of Ibn al-Maʾmūn on the note-card was selected by al-Maqrīzī in the summary he prepared of this source. At a later stage, the text of the note-card was transferred into the draft of the *Khiṭaṭ* and later on to the fair copy which was produced on this basis. The quotation deals with the events that took place during the feast of *ʿāshūrāʾ* during the second decade of the sixth/twelfth century. According to Ibn al-Maʾmūn, on that day, a tablecloth *(simāṭ),* reserved for that purpose only, was laid in the council of the gifts *(majlis al-ʿaṭāyā)*.[148] He then proceeds to give details on the characteristics of this tablecloth, the dishes, and the etiquette followed on this occasion. The source being lost, it is obviously difficult to say whether al-Maqrīzī paraphrased the original text or not. The general impression is that he was summarizing without significantly modifying the source. A confirmation of this may be seen in the fact that the text is very descriptive and that al-Maqrīzī did not omit words he clearly did not understand. Two instances occur in the text. In both cases,

[141]Not يعلوها as in al-Maqrīzī, *Musawwadat Kitāb al-Mawāʿiẓ wa-al-Iʿtibār,* 316.

[142]Not مشورة as in ibid. Over the word, al-Maqrīzī put a ك as in the resumé, indicating his perplexity towards this word and the necessity to explain it. See note 138 and p. 36 above.

[143]Not وحُمِل as in ibid.

[144]Not لهم as in ibid.

[145]جميعها is lacking in ibid.

[146]Būlāq ed., 1:431 = Ibn al-Maʾmūn al-Baṭāʾiḥī, *Nuṣūṣ min Akhbār Miṣr,* ed. Ayman Fuʾād Sayyid (Cairo, 1983), 15. The discrepancies between the Būlāq edition and Ibn al-Maʾmūn's text with Sayyid's edition of the *Khiṭaṭ* are not indicated here.

[147]The editor added a footnote on the basis of a marginal note found by the copyist in al-Maqrīzī's handwriting: المسور والمسورة بكسر الميم متّكأ من أدم وهي التي يقال لها في زمننا المدورة.

[148]On this council, instituted by the vizier al-Afḍal, see al-Maqrīzī, *Al-Khiṭaṭ* (Būlāq ed., 1:483 = Sayyid ed., 2:573–74).

al-Maqrīzī wrote the words as he read them, but indicated, through a symbol *(kāf? for kadhā?)*, his perplexity and the need to provide an explanation of both terms, something he was able to do at a later stage, as we shall see. A collation of the summarized text with the excerpt found on the note-card reveals several discrepancies. First of all, the handwriting is noticeably different in the sense that the note-card is the result of haste: it appears as if al-Maqrīzī is just copying the text in a hurry and that is understandable as he is preparing a note-card. It is clearly visible in the less numerous diacritics and also in the modification he brings to the text while reading and writing it: while the summary gave *bi-ghayr* (l. 3), he changed it to *fī ghayr* directly after he wrote the words in accordance with the source, deleting them with a stroke.[149] On the other hand, his haste might be the reason why he made a mistake in copying the date. In the summary, the date was indicated in ciphers, while on the note-card, he wrote it in letters. But instead of 513, he wrote 512. Another interesting feature lies in the exegesis supplied in the note-card. The quotation, taken out of context, required some explanation. The council of the gifts, which was mentioned and explained in the summary under the year 512 (fol. 158r),[150] now lacked clarity and al-Maqrīzī added the required data just after its mention *(yaʿnī min dār al-afḍal ibn amīr al-juyūsh)*. More interestingly, one of the two terms al-Maqrīzī marked as requiring further clarification is missing completely in the note-card *(min ghayr miswarah)*. Did he feel that he could not find the meaning and thus preferred to skip over it? In any case, he reconsidered his decision later on, given that it appears in the draft. Moving to the draft version, the changes made to the summary in the note-card all remain untouched. Nonetheless, other differences emerge: the date, mistaken in the note-card, here became 515 and this is the version to which al-Maqrīzī ultimately adhered since it is the one that is provided in the final version. The basis on which this modification in the dating was made is unclear, since the summary, presumably made on the basis of the source, indicates the year 513. If he changed it to the year 515, this means that he found a corroborative indication of this in another source. This happened between the time when he produced the note-card and when he inserted it in the draft. As for the portion he skipped in the note-card *(min ghayr miswarah),* it surfaces here again with the typical symbol[151] and a vowel.[152] Al-Maqrīzī thus returned to the summary and did not just copy the text of the note-card in this particular case. He probably remembered that he

[149]On l. 5, *bi-ghayr* is once again changed to *min ghayr,* this time directly during the writing process.

[150]In the margin: من جملة ما قرر من تعظيم المملكة وتفخيم أمر السلطنة أن المجلس الذي يجلس فيه الأفضل يسمى مجلس العطايا.

[151]This symbol did not attract the editor's attention and he neglected to mention it in a footnote. See the Arabic text above, note 142.

[152]*Fatḥah* on the *wāw* thus implying that the word had to be read *miswarah.*

passed over this passage and felt it necessary to insert it despite his ignorance at the moment. The symbol is there, however, to remind him that the term needed an explanation. The definition was found later by al-Maqrīzī, at a time when the fair copy had already been made. So he added it in the margin. Fortunately, the copyist who relied on the fair copy did not neglect to transcribe the marginal additions in the author's handwriting and we can now find the solution in the edition of Sayyid who provides it in a footnote: the *miswarah* was a round cushion made of leather on which one could lean. The equivalent given by al-Maqrīzī for his time *(mudawwarah)* indicates that the word was no longer understood in its technical meaning, hence his initial perplexity visible in all three stages.

Incidentally, the analysis of the four versions highlights the shortcomings of modern ecdotics. Each of the following examples selected in this very short excerpt will show that an editor should trust his text, especially if it is an autograph manuscript. The first one deals with the tablecloth. Ibn al-Maʾmūn explains that this cloth *(simāṭ)* was laid out on this special occasion and that a large dining table *(sufrah)* of leather was prepared for this, rather than a round table *(mudawwarah)* of wood. The text then specifies where the tablecloth was laid: the three autograph versions clearly supply the word *tīlwahā* (upon it).[153] The editor of the draft of *Al-Khiṭaṭ* however relied heavily, it would seem, on the Būlāq edition and preferred the reading *yaʿlūhā,* which does not change the meaning, but in the end the word is not al-Maqrīzī's. Again, in the new edition of *Al-Khiṭaṭ,* the same reading is provided, without referring to the correct reading in the draft. The same applies to the second example. In the three versions, one can read, thanks to a diacritic and a vowel, the whole in al-Maqrīzī's handwriting: *wa-jummila al-simāṭ bihim* (and the tablecloth was embellished by their [presence, i.e., the *ashrāf*]).[154] Both in the edition of the draft and of the final version, the editor has followed the Būlāq reading: *wa-ḥumila al-simāṭ lahum* (and the tablecloth was brought to them), which, this time, profoundly changes the meaning of the sentence. Last but not least, at the end of the quotation, the reader is confronted with a confusing phrase in the three autograph versions, which only becomes clear in the final version. The original text reads: *wa-quddima al-ṣaḥn al-awwal min alladhī bayna yaday al-Afḍal ilá ākhir al-simāṭ ʿadas aswad thumma baʿdahu ʿadas muṣaffan ilá ākhir al-simāṭ thumma rufiʿa wa-quddimat ṣuḥūn jamīʿuhā ʿasal naḥl.* One understands that, once everybody was seated around the tablecloth, the first dish, containing black lentils, was passed around starting from the one [the *sharīf*] who was facing al-Afḍal until the end of the tablecloth; then, it was followed by pureed lentils

[153]The text adds: "without brass stands" *(bi-ghayr/min ghayr marāfiʿ nuḥās),* i.e., the dining table, with the tablecloth upon it, was laid on the ground.

[154]The place of the *ḍammah* is unquestionable and can not be considered as being over the *mīm*, in which case the translation would have been: "and the tablecloth befitted them."

passed around until the end of the tablecloth. Thereupon, it was cleared and other dishes containing bee-honey were passed around. The problem lies in the structure of the sentence which is partly ungrammatical: *ʿadas aswad* is governed by nothing. Clearly, something is missing, although al-Maqrīzī apparently did not wince as he copied it thrice! The examination of the final version reveals that the meaning of the sentence has been completely modified through a subterfuge: the beginning has become *wa-qad ʿumila fī*, meaning that black lentils had been made in the first dish. Of course, *ʿadas aswad* is now the subject of the sentence, but does it tally with the manuscripts of the final version or the Būlāq edition? Unfortunately, the present writer did not have access to the manuscript used by the editor for his edition of the second volume of *Al-Khiṭaṭ,* but there is no reason to believe that, for the three cases studied, al-Maqrīzī wrote a word or a sentence three times and that he misread it in the final version of his book. Even though the third case presents a grammatical mistake, an editor should give the actual reading, especially if he is dealing with an autograph manuscript.

Referring to the Notebook?

As it is now established that notebooks were produced by al-Maqrīzī and that this was not peculiar to him, but that almost every scholar followed this practice, we may wonder whether or not he ever referred to his notebooks and if other scholars also made such references to his personal notebooks. The answer proposed to the first of these questions will help us to understand how al-Maqrīzī considered them, as we have seen that various terms were used by the scholars when they referred to their notes. At the present stage of this research, three unequivocal testimonies have been detected in al-Maqrīzī's preserved oeuvre.

The first one has been known since 1797, when the treatise on numismatics *(Shudhūr al-ʿUqūd)* was published for the first time.[155] In this opuscule composed at the request of Sultan al-Muʾayyad Shaykh, after 818/1415,[156] al-Maqrīzī, while dealing with an aspect of metrology, added a very personal statement: *wa-qad dhakartu ṭuruq hādhā al-ḥadīth wa-al-kalām ʿalayhi fī majāmīʿī* ("I mentioned the ways of transmission of this tradition and the discussion of it in my miscellanies"). De Sacy thought, on the sole basis of this statement, that those miscellanies

[155]Antoine I. Silvestre de Sacy, *Traité des monnoies musulmanes* (Paris, 1797); *Historia monetæ Arabicæ,* ed. and trans O. G. Tychsen (Rostock, 1797).

[156]The author mentions the *dirham muʾayyadī* that appeared during that year. See Daniel Eustache, "Études de numismatique et de métrologie musulmanes II," *Hespéris Tamuda* 10 (1969): 132 (trans.) and 133 (Ar. text); John L. Meloy, "The Merits of Economic History: Re-Reading al-Maqrīzī's *Ighāthah* and *Shudhūr,*" *MSR* 7, no. 2 (2003): 197.

contained legal judgements.[157] He was followed in his interpretation by Eustache,[158] who went further, conjecturing that al-Maqrīzī collected in these volumes the quotations of the traditions dealing with matters he treated in his writings. He consequently could skip quoting some of these traditions in his opuscule, arguing that they were all available in those miscellanies. Eustache was not far from having solved the problem. The *majāmiᶜ* are undoubtedly to be identified with the notebooks where al-Maqrīzī summarized numerous sources he utilized in his writings. As already emphasized,[159] the *codex leodiensis* contains a resumé of Wakīᶜ's *Kitāb al-Danānīr wa-al-Darāhim*. On fol. 155r, the traditions quoted by al-Maqrīzī in his treaty can be read and the temptation to link the reference to the notebooks with this passage is great. However, the chains of transmitters are not provided in the resumé and, of course, no discussion of the question takes place, as it is not a personal work. Thus, the reference is obviously to another notebook. Yet it demonstrates that the notebooks were referred to as "miscellanies" by al-Maqrīzī and that they not only contained resumés, but also personal statements on certain matters.

The second reference also confirms the mnemonic function of the notebooks. At the end of the first volume of *Al-Sulūk,*[160] al-Maqrīzī jotted down some preparatory notes. On fol. 261r, he relates a story about ʻAlī's grandson through Ḥusayn, named ʻAlī, and the poem al-Farazdaq composed on that occasion. The first verse is quoted by al-Maqrīzī, who added just after it: *al-abyāt wa-ᶜiddatuhā thamāniyah wa-ᶜishrūn bayt qad dhakartuhā fī majāmiᶜī* ("the number of verses is twenty-eight which I mentioned in my miscellanies"). This example further establishes that the notebook contained resumés based on his reading, to which he referred in his personal notes. In this case, the story found at the end of the first volume of *Al-Sulūk* was read by al-Maqrīzī in a given source. He noted the story, but remembered that he had already taken note of al-Farazdaq's poetry on another occasion. It is likely that al-Maqrīzī had read the poetry in a different source, possibly out of context, and that he was satisfied with indicating the first verse only and referring to his notebooks for further reading.

Finally, the third attestation helps to clarify the contents of the notebooks. It appears in his *Durar al-ᶜUqūd al-Farīdah,* the biographical dictionary devoted to his contemporaries. Expounding on the merits of his colleague Ibn Duqmāq, he stated, with some rudeness, that: "Among this [negligence], there is the fact that

[160] Istanbul MS Yeni Cami 887.

he borrowed my personal notebooks *(majāmīʿī)*.[161] When he died, my eyes fell on what he had written about the story of Tīmūrlank the Tyrant, and lo there he had copied a section on Tīmūr's seizing of Ḥalab that I had written in which I said: 'A trustworthy witness informed me that he saw . . .' He copied as he saw: 'A trustworthy witness informed me . . .,' making the reader believe that he was the author of this section. By God! He did not find this section except in my handwriting."[162] Besides the anecdotal side of this report, which has to deal with the concept of intellectual property and the question of plagiarism,[163] another reference to the notebooks is clearly made: they even could be lent to a colleague who could read them and benefit from them, provided, as al-Maqrīzī suggests, that he indicated his source for that information. It furthermore allows us to conclude that the notebooks also included pieces of personal redaction and that these presumably short pieces were called by al-Maqrīzī himself *juzʾ* (a section, but more likely a single-quire section).[164]

The use of the term *majmūʿ* as meaning notebook, miscellany of notes, personal or not, is attested in the literature and was even used by al-Maqrīzī, when he spoke of his colleague and friend al-Awḥadī (d. 811/1408): *wa-jamaʿa majāmīʿ* ("He compiled notebooks").[165] When describing al-Maqrīzī's activity in the field of history, his biographers had recourse to the same word: *wa-tawallaʿa bi-al-tārīkh fa-ḥafiẓa minhu kathīran wa-jamaʿa fīhi shayʾan kathīran wa-ṣannafa fīhi kutub ḥasanah mufīdah khuṣūṣan fī tārīkh al-Qāhirah* ("He was passionately fond of history. He memorized a lot of it, compiled a lot in [this field], and composed in it good and useful books, especially regarding the history of Cairo").[166] This quotation is of particular importance, because the word *jamaʿa* is used in context with the term *ṣannafa,* thus clarifying the meaning of the first: he did not compile a work, but rather notes taken from other sources.

---

[161]The text says "my notebooks in my own handwriting." Al-Maqrīzī surely wants to differentiate them in order to state clearly to the reader that those were his personal notebooks and not those of others. This statement is important in view of the words that follow.

[162]Taqī al-Dīn Aḥmad ibn ʿAlī al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah fī Tarājim al-Aʿyān al-Mufīdah,* ed. Maḥmūd al-Jalīlī (Beirut, 2002), 1:102:

فمن ذلك أنه كان يستعير مجاميعي التي بخطي فلما مات وقفت على أخبار الطاغية تيمورلنك من خطه فإذا هو قد كتب فصلا في أخذ تيمور لحلب من خطي قد قلت فيه : أخبرني من لا أتهم أنه شاهد، فكتب هو كما رأى أخبرني من لا أتهم فصار يوهم الناظر أنه هو الراوي للجزء ولا والله وقف على ذلك الجزء إلا من خطي.

[163]See, for further investigation, "Maqriziana IX."

[164]For this meaning, see Adam Gacek, *The Arabic Manuscript Tradition: A Glossary of Technical Terms and Bibliography* (Leiden, 2001), 23 ("independent, small piece of writing, usually not more than a quire").

[165]Taqī al-Dīn Aḥmad ibn ʿAlī Al-Maqrīzī, *Al-Muqaffá al-Kabīr,* ed. Muḥammad Al-Yaʿlāwī (Beirut, 1411/1991), 1:513–14.

[166]Ibn Fahd al-Hāshimī al-Makkī, *Muʿjam al-Shuyūkh,* 66.

To conclude this section, it may be stated that al-Maqrīzī referred to his own notebooks with the word *majmūʿ,*[167] while other scholars preferred the term *tadhkirah* (memorandum) or *taʿlīq* (notebook). Though *taʿlīq* could also be applied to these kinds of texts,[168] it must still be demonstrated whether *tadhkirah* was also used by al-Maqrīzī to refer to his notebooks. A work of his is so titled.[169] It is unfortunately lost, but a later author could still consult it and make use of it.[170] The content of his introduction seems to indicate that *Al-Tadhkirah* is an independent work and not a notebook. Furthermore, a summary, prepared by the author himself *(Muntakhab al-Tadhkirah),* which has been partially preserved,[171] establishes that *Al-Tadhkirah* was considered by al-Maqrīzī as a work and not a notebook: *fa-hādhā kitāb . . . intakhabtuhu min kitābī al-musammá bi-al-Tadhkirah* ("This is a book . . . that I condensed from my book entitled *Al-Tadhkirah*").[172] The introduction clearly indicates that *Al-Tadhkirah* was a book on history, organized chronologically, starting from the pre-Islamic period, and that it was meant, in al-

---

[167]When speaking of his master, Ibn Ḥajar, al-Sakhāwī explains that on one occasion he asked the latter for a copy of one of his many small treatises of traditions he heard and took note of. Ibn Ḥajar tore the requested piece from one of his notebooks *(majmūʿ min majāmīʿihi)*. See Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Jawāhir wa-al-Durar fī Tarjamat Shaykh al-Islām Ibn Ḥajar,* ed. Ibrāhīm Bājas ʿAbd al-Ḥamīd (Beirut, 1419/1999), 3:1018.

[168]The following quotation shows that Ibn Fahd was also authorized to consult al-Maqrīzī's notebooks, during al-Maqrīzī's last stay in Mecca that ended in 839. There, the word used to describe the notebooks is *taʿlīq*. It also means that they accompanied al-Maqrīzī in this travel to the Holy City. See Najm al-Dīn ʿUmar [Muḥammad ibn Muḥammad] Ibn Fahd al-Hāshimī al-Makkī, *Itḥāf al-Wará bi-Akhbār Umm al-Qurá,* ed. Fahīm Muḥammad Shaltūt et al. (Mecca and Cairo, 1404–10/1983–90), 1:4:

وقد رأيت بخط شيخنا الإمام العلامة المؤرخ الكبير تقي الدين أبي العباس أحمد بن علي بن عبد القادر المقريزي المصري تغمده الله برحمته في بعض تعاليقه ما نصه

("I have read in the hand of our master, the leader, the well-versed scholar, the great historian Taqī al-Dīn Abū al-ʿAbbās Aḥmad ibn ʿAlī ibn ʿAbd al-Qādir al-Maqrīzī—may God protect him with his grace—in one of his notebooks *(taʿālīq)* what follows . . .").

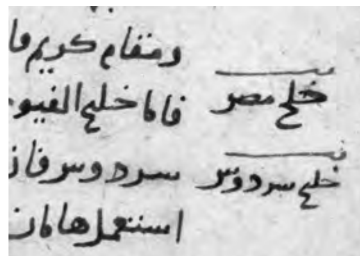
[169]ʿIzz al-Dīn ʿAlī, *Arbaʿat Muʾarrikhīn,* 191 (no. 13). It consisted of about eighty volumes, according to Yūsuf Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿd al-Wāfī* (Cairo, 1985–2005), 1:419, who, however, did not consider giving more detail about it.

[170]Abū al-Fidāʾ Qāsim Ibn Quṭlūbughā al-Sūdūnī, *Tāj al-Tarājim,* ed. Muḥammad Khayr Ramaḍān Yūsuf (Damascus, 1413/1992), 85:

وبعد فيقول العبد الضعيف قاسم بن قطلوبغا الحنفي : لما وقفت على تذكرة شيخنا . . . المقريزي . . . رأيت فيها ما كتبه من تراجم الأئمة الحنفية، فأحببت أن ألحق بكل اسم ما تيسر لي من تراجم من تسمى به منهم على نحو ما قصد من الاقتصار على ذكر من له تصنيف

("Now then, the modest servant [of God], Qāsim ibn Quṭlūbughā al-Ḥanafī said: When I fell on the *Tadhkirah* of our master . . . al-Maqrīzī . . . , I saw in it the biographies of the Hanafite imams he had written and I wanted to add to each name the biographies that I could of those who were named with it [this name], aiming, as he did, to concisely mention those who have composed a book").

[171]Paris, Bibliothèque Nationale MS Ar. 1514. It corresponds to the first volume. The end is missing.



[172]Ibid., fol. 2v.

Maqrīzī's mind, as a memorandum.[173] Thus, it is impossible that al-Maqrīzī used the term *tadhkirah* for his notebooks.

Finding His Way in the Notebook?

Now that it has been established that several volumes consisting of notebooks and independent summaries were prepared by al-Maqrīzī, the question arises as to how he managed all the data collected in this voluminous compilation. Note-cards, as demonstrated, played an important role in this respect. It nevertheless remains that the vast number of sources which he summarized and from which he made quotations raises the problem of finding his way in the notebooks, of taking advantage of the data and of avoiding repetitions. Al-Maqrīzī must have developed and used several systems to minimize the potential confusion arising from his tremendous reading and summarizing activities. The *codex leodiensis,* together with the evidence provided by other autograph manuscripts, suggests several answers to these questions.

In one particular case,[174] al-Maqrīzī added in the margins, in front of the description of a given event, a heading indicating the content, the whole highlighted by a cipher in red ink, probably signifying *qif* ("pay attention").

MS. 2232, fol. 39v (Courtesy Université de Liège)[175]

Such a system was intended to attract his attention when he was searching for a particular passage he wanted to quote from this source. Thanks to it, he could get a general idea of the content of the page and proceed quickly through the whole resumé. The use of headings was limited however: besides the summary made on the basis of Ibn ʿAbd al-Ḥakam's work,[176] they appear in summary XX (from fol. 173b to 174b). Apart from these examples, the only case where a heading is used pertains to scattered notes all connected with secretaries who worked within the

---

[173]See, for a short analysis, ʿIzz al-Dīn ʿAlī, *Arbaʿat Muʾarrikhīn,* 211–13. Cf Ibn al-Athīr's words, in his introduction to *Al-Kāmil fī al-Tārīkh,* 1:5:

فلما رأيت الأمر كذلك شرعت في تأليف تاريخ جامع لأخبار ملوك الشرق والغرب وما بينهما ليكون تذكرة لي أراجعه خوف النسيان.

[174]No. II: *Talkhīṣ Kitāb Futūḥ Miṣr wa-Akhbārihā* of Ibn ʿAbd al-Ḥakam.

[175]The headlines read: *khuluj Miṣr* and *khalīj Sardūs.*

[176]Even in this case, the headlines disappear after fol. 54r, although the resumé ends on fol. 81v.

Egyptian chancery (fol. 130b: من الكتاب في الإنشاء, in red ink). On the basis of the scarcity of these headings, it can be concluded that headings were not usually used by al-Maqrīzī to orientate himself in the notebook.

Red ink, without doubt, played a role similar, although less useful, to headings. It is found throughout the notebook in various situations: it is employed for the symbol قف put over a given passage or at the beginning of a new sentence. The role of this symbol is to catch the eye and lead it to the starting words of a sentence in the course of a summary covering several pages. In this way, al-Maqrīzī could concentrate on only some points on the page and did not need to read, even quickly, the whole page. Red ink is also featured in keywords, where a stroke, in black ink, is overwritten in red.

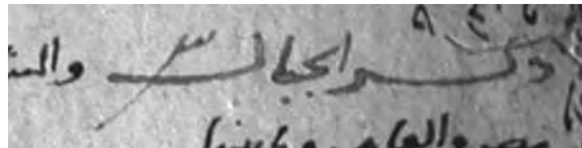
MS 2232, fol. 167v (Courtesy Université de Liège)[177]

The titles of chapters and sections and the first name of a person given a biographical entry were generally indicated in the same way.

All that has been said has to do with the necessity of quickly finding something. Once a particular passage had been found and quoted, al-Maqrīzī had to avoid wasting time in reading, once again, the same passage, and more importantly to avoid repetitions. The best way to know whether he had already used something was to clearly indicate it in the notebook. Throughout the manuscript, usually in the margin, in front of a biography, or over the first word of a passage, a cipher looking like the numerals ٣ or ٢ has been added, indifferently in red or brown ink.

MS 2232, fol. 32v and fol. 122r[178]
(Courtesy Université de Liège)

[177]In this case, the horizontal stroke of the *lām* has been overwritten in red. The word *(qāla)* represents a break in the text that introduced another discourse, hence the necessity to indicate it with this system.



[178]In this case, both ciphers have been used.

These ciphers must have indicated that al-Maqrīzī had already used the data noted in this way. In order to know until what point he quoted the text, he needed to add another mark. It is regularly observed together with the previous cipher, but of course at the end of the portion of text quoted. This mark looks like a small إلى.

MS 2232, fol. 96v (Courtesy Université de Liège)

Whereas the latter can easily be interpreted as meaning "up to here," the first is more difficult to decipher. The solution is offered by some of the remaining autograph manuscripts. In the two volumes of the draft of *Al-Khiṭaṭ,* for instance, the same mark regularly appears:

MS 1472, fol. 13r (Courtesy Topkapı Sarayı Müzesi Kütüphanesi)

However, in some rare cases, other words have been appended to it:

MS 1472, fol. 9r; MS 1405, fol. 21r; MS 1405, fol. 111r;[179]
and MS 1405, fol. 104v
(Courtesy Topkapı Sarayı Müzesi Kütüphanesi)

In each of these cases, the additional words read respectively: *jamīʿuhu, illā yasīran, illā qalīlan,* and finally *min hunā*. Thanks to these words, it is clear that the cipher probably means that "the whole has been copied," or that "it has been copied nearly completely," or that "it has been copied from here." In this respect, it is very tempting to interpret the cipher as an abbreviation of the verb *nusikha,* which tallies exactly with the assumed meaning. In that case, the cipher would be a *sīn*. However, this hypothesis must be rejected because if this is supposed to be a *sīn* and a cipher, why would al-Maqrīzī take such care to trace the strokes that are clearly visible in each occurrence instead of a more cursive form? What might have remained a mystery was finally solved thanks to an almost unique witness.

[179]In this example, the greatest part of the cipher disappeared due to the trimming.

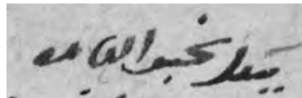
In an article published in 1986, Geoffrey Khan studied a copy of a decree dated to the Fatimid period.[180] This document is of particular importance given that it is not the original which was released to the beneficiary, but the copy that was filed in one of the registers held in the archives. One of the most interesting features of this document lies in the mark that crosses the whole text on the first page. This mark looks like a big three in Arabic[181] and it tallies exactly with the cipher used by al-Maqrīzī in his notebook and his drafts, confirming that this could not be a *sīn*. Instead, it clearly stands for the word *nuqila* ("it has been transcribed").[182] It is no surprise to see that al-Maqrīzī utilized a mark for which evidence is found on archival material. Part of his official career took place in the chancery, where he was employed for several years.[183] Consequently, he was knowledgeable in all the nuances of this practice. On the other hand, the fact that this mark was still in use in the Mamluk period demonstrates the durability of the conventions of the chancery bureaux. While this cipher worked as a check mark in al-Maqrīzī's notebook, indicating that a passage had been transcribed in one of his works, it meant, when used in his drafts, that a passage had been recopied in the new, either intermediary or final, version. As for the other mark, which looks like the Arabic numeral for 2, it is unlikely that it corresponds to a more cursive form of the preceding mark, because it is sometimes used together with the latter.[184] It could be interpreted as an indication that al-Maqrīzī had to quote the passage characterized in that way; hence the sporadic presence of an *ilá*, at the end of the text, and of the check mark as indicated above. If such was the case, this system

[180]Geoffrey Khan, "A Copy of a Decree from the Archives of the Fāṭimid Chancery in Egypt," *Bulletin of the School of Oriental and African Studies 49* (1986): 439–53.

[181]See the reproduction in ibid.

[182]On this meaning, see Gacek, *The Arabic Manuscript Tradition,* 144. This interpretation is confirmed by other evidence studied below (see p. 62). The mark was tentatively interpreted by Khan as being the word *ṣaḥḥa,* a reading he was not happy with as he proposed later to rather consider it as "a checking mark that is not derived from any Arabic word." See Geoffrey Khan, *Arabic Legal and Administrative Documents in the Cambridge Genizah Collections* (Cambridge, 1993), 444. Another document bearing the same mark is studied by the same author (ibid., 491–92). The fact that a document had been registered or filed in the archives of the various bureaux was indicated on the original documents delivered to the beneficiaries by other words corresponding to an instruction: *athbata, nazzala, nasakha* ("to register") or *khallada* ("to file"). See, for the Fatimid period, Samuel Miklos Stern, *Fāṭimid Decrees: Original Documents from the Fāṭimid Chancery* (London, 1964), 166–69.

[183]Maḥmūd al-Jalīlī's conclusions (al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* 4:51–52), based on the data found in *Durar al-ʿUqūd al-Farīdah,* according to which al-Maqrīzī worked in the chancery well after that date, and even almost until his death, totaling 50 years of service, must be taken with caution and require further investigation.



[184]See the instance given for fol. 122r above (it is in brown ink while the mark for *nuqila* stands in red ink).

did not indicate precisely where the quotation had to be transcribed. In some cases, al-Maqrīzī must have been aware of the place where he wished to use a given text, but this was probably not generally true. Evidence of this is provided by the existence of unambiguous references to the need to copy some parts in his books in embryo. At least two such references are found in the notebook. The first (fol. 122r)[185] was placed at the end of a biography and reads: *yudhkar fī Khiṭaṭ Miṣr* ("let it be mentioned[186] in the topography of Egypt").

MS 2232, fol. 122r (Courtesy Université de Liège)

The data is indeed found in *Al-Khiṭaṭ*[187] and the cipher *(nuqila)* is to show that the data had already been transferred, thus confirming its function. The second example (fol. 156v) shows that the indication could be quite elusive. The phrase must be deciphered as: *yunqal bi-khabar al-Qāhirah* ("let it be transcribed with the story of Cairo").

MS 2232, fol. 156v (Courtesy Université de Liège)

Given that the text deals with several historical facts spanning a period of thirty years, the passage could not logically have found its way *en bloc* into one of al-Maqrīzī's books. The mention of Cairo might be misleading, since one might expect to read this information in *Al-Khiṭaṭ*. Instead, it ended up in the history of Egypt under the Fatimid dynasty *(Ittiʿāẓ al-Ḥunafāʾ)*.[188] In this case, however, al-Maqrīzī did not use the check mark, showing that the system was not routine. On the other hand, the verb used by al-Maqrīzī in this example corroborates the decipherment of the check mark *(nuqila)*. In the end, all the systems dealt with in this section validate, once again, the identification of the *codex leodiensis* as a notebook.

Conclusion

[185]It is in regard to the first biography of the scattered notes found on this folio (no. L).

[186]It must be noted that what corresponds here to an order should be introduced by a *lām al-amr* (Wright, *A Grammar of the Arabic Language,* 2:35). The documents where registration orders were written display a great majority of these orders beginning with this *lām*. In some cases, it has been omitted. See, for instance, Stern, *Fāṭimid Decrees*, 36–37. Other instances are mentioned for classical Arabic, but Wright *(Grammar)* considered the phenomenon rare.

[187]Būlāq ed., 2:85 = Sayyid ed., 3:282. See also "Maqriziana I/2," 108.

[188]See "Maqriziana I/2," 127.

The aim of this study was to present the preliminary results obtained through a thorough analysis of al-Maqrīzī's notebook pertaining to his working method. As shown in the first part of the study ("Maqriziana I"), the notebook is a heterogeneous manuscript reflecting al-Maqrīzī's complex *modus operandi*. The following conclusions may be drawn, although they still must be corroborated and clarified by further studies on the notebook and the other autograph manuscripts of this author. The richness of the surviving corpus of writings by al-Maqrīzī, as has been stressed, is of particular importance and represents an opportunity that cannot be overlooked. It is hoped that, in the future, these conclusions will be applicable to other scholars thanks to corroborating analyses.

This study has allowed us to establish that:

-the *codex leodiensis* corresponds to a notebook, a place where a scholar stored the raw material he selected during his readings;

-the notebook contains abstracts, scattered notes, and first drafts of al-Maqrīzī's personal production;

-the abstracts, excerpts, and notes were all produced during the reading process;

-the notebook, in its actual presentation, is the result of the evolution of al-Maqrīzī's reading process: quires were taken out of a pile made of recycled or blank paper; some voluminous abstracts covering more than a quire were considered as independent units which were gathered at a later date to form a volume; the blank spaces left at the end of the abstracts were covered with scattered notes which jointly fixed the order of the quires and their succession in the volume;

-thanks to several notes of consultation written by al-Maqrīzī on the manuscripts of the sources he consulted, it is possible to precisely date several abstracts, and consequently others through the analysis of their position in relation to the latter, and finally the parts in al-Maqrīzī's own works where the data originating from these sources are found;

-the function of the notebook was mainly mnemonic: the abstracts and the notes served al-Maqrīzī as a memorandum for the composition of his works;

-the abstracts might be faithful to the source, or consist of a paraphrase, but they did not necessarily imply that al-Maqrīzī quoted directly from them: sometimes he did; in other circumstances, he went back to the original source to make a faithful quotation;

-the notebook also features a unique example of a note-card, proving that this system was used by al-Maqrīzī in composing his books;

-the notebook allows a comparison of several versions of the same excerpt, in the best cases as many as four, from the source from which it was selected up to the fair copy of one of his books, passing through the resumé and the draft copy: it thus provides a unique opportunity to study al-Maqrīzī's intellectual process;

-al-Maqrīzī's notebooks were referred to by him as *majāmīʿ* (miscellanies);
-in order to find his way in the notebook, al-Maqrīzī utilized a series of techniques, one of which was characteristic of chancery practice.

APPENDIX I: AL-MAQRĪZĪ'S AUTOGRAPH MANUSCRIPTS

No.	*City*	*Library*	*Shelf-mark*	*Title*	*No. of lvs.*[189]

	Total		23 MSS		4714 (509)

[191] The manuscript is not, strictly speaking, an autograph, but a copy of the autograph which was dated 814. However, it remains useful as it faithfully mirrors the result of al-Maqrīzī's summarizing activity.

[192] Previously in al-Maktabah al-Baladīyah, Alexandria. See ʿIzz al-Dīn ʿAlī, *Arbaʿat Muʾarrikhīn,* 214 (no. 39), who was the first to mention it.

APPENDIX II: AL-MAQRĪZĪ'S NOTES OF CONSULTATION ON MANUSCRIPTS

City	*Library*	*Shelf-mark*	*Author*	*Title*	*Date*
Cairo	Dār al-Kutub	Muṣṭalaḥ ḥadīth 94	Ibn ʿAdī	"Al-Kāmil lil-Ḍuʿafāʾ"	[795][193]
Cairo	Dār al-Kutub	Muṣṭalaḥ ḥadīth 95–96	Ibn ʿAdī	"Al-Kāmil lil-Ḍuʿafāʾ"	[795][194]
Manches-ter	J. Rylands Library	344	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vol. 20)	831[195]
Istanbul	Süleymaniye Kütüphanesi	Ayasofiya 3418, 3428, 3432, 3437	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vols. 5, 15, 19, 25)	831[196]
Istanbul	Süleymaniye Kütüphanesi	Laleli 1037	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vol. 6)	831
Istanbul	Süleymaniye Kütüphanesi	Yazma bağışlar 1917	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vol. 26)	831
London	British Library	Add. 9589	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vol. 14)	831
Paris	Bibliothèque nationale	Ar. 2327	Ibn Faḍl Allāh al-ʿUmarī	"Masālik al-Abṣār" (vol. 17)	831
Rabat	al-Khizānah al-ʿĀmmah	240-241 qāf	Ibn al-Furāt	"Al-Tārīkh" (vol. 5)	818[197]

[193] Two volumes. The note, on two lines (fol. 1a), reads in each volume as follows: استفاد منه داعيا لمالكه أحمد بن علي لطفه الله. See *Fihrist al-Makhṭūṭāt: Al-Mujallad al-Awwal: Muṣṭalaḥ al-Ḥadīth* (Cairo, 1375/1956), 279. The date appears in the resumé he made of this text (Istanbul, Murat Molla Kütüphanesi MS 569, autograph, fol. 215b. See also al-Maqrīzī, *Mukhtaṣar al-Kāmil,* 844).
[194] Five volumes. The note, on two lines (fol. 1a), reads in each volume as follows: استفاد منه داعيا لمالكه أحمد بن علي لطفه الله. See *Fihrist al-Makhṭūṭāt (al-Ḥadīth)*, 279. For the date, see the preceding note.
[195] Part of the same partial set composed of ten volumes now scattered in various European libraries. The inscription, placed on the title page of each volume, reads: انتقاه داعيا لمعيره أحمد بن علي المقريزي سنة ٨٣١. See also al-Maqrīzī, *Al-Khiṭaṭ,* Sayyid ed., 1:198 n. 2.
[196] The inscription is equivalent to the one found in vol. 20. See preceding note. This is valid for all the other volumes of this set listed below.
[197] Part of the same set now scattered between Vienna, Rabat, and the Vatican (autograph manuscripts of Ibn al-Furāt). See ibid., 1:64 (of the introduction); Ayman Fuʾād Sayyid, *Al-Kitāb al-ʿArabī al-Makhṭūṭ wa-ʿIlm al-Makhṭūṭāt* (Cairo, 1997), 2:341, where only the date is provided. The note must be similar to the one found on the volume in the Vatican Library (see next footnote).

Vatican	Biblioteca apostolica vaticana	Ar. 726	Ibn al-Furāt	"Al-Tārīkh"	818[198]
Vienna	Österreichische National-bibliothek	AF 123	Ibn al-Furāt	"Al-Tārīkh" (vol. 7)	819[199]
Dublin	Chester Beatty Library	Ar. 3315	Ibn al-Nadīm	"Al-Fihrist" (vol. 1)	824[200]
Cairo	Dār al-Kutub	Tārīkh 103 mīm	Ibn Saʿīd	"Al-Mughrib"	803[201]
Balaṣfūra (Sūhāj)	Private library	--	Ibn Saʿīd	"Al-Mughrib"	803[202]
Escorial	Library	534 (fols. 132–289)	al-Musabbiḥī	"Akhbār Miṣr" (vol. 40)	807[203]
Lost?			Ibn al-Khaṭīb	"Al-Iḥāṭah"	808[204]

[198] The note appears on fol. 291b and is almost illegible today: انتقاه داعيا لمالكه أحمد بن علي المقريزي في شهر ربيع الاول سنة ٨١٨. The month and the date are illegible, but were read, almost a century ago, by Eugenius Tisserant, *Specimina codicum orientalium* (Bonnae, 1914), p. XXXIII, who, however, was unable to read the second and the third words. See also Claude Cahen, "Quelques chroniques anciennes relatives aux derniers Fatimides," *Bulletin de l'Institut français d'archéologie orientale* 37 (1937): 15 n. 6.

[199] On fol. 95b: انتقاه داعيا لمالكه احمد بن علي المقريزي ففرغ منه في صفر سنة ٨١٩.

[200] Part of the same set in two volumes, the second being in Istanbul (Süleymaniye Kütüphanesi MS Şehid Ali Paşa 1934). The note, which appears on fol. 1a of volume 1 only, is difficult to read today: انتقاه . . . أحمد بن علي المقريزي سنة ٨٢٤. See Muḥammad ibn Isḥāq al-Nadīm, *Al-Fihrist,* ed. Riḍā Tajaddud (Tehran, 1971), *bāʾ* and pl. 1. The reading given by the editor in al-Maqrīzī, *Al-Khiṭaṭ,* Sayyid ed., 1:89* (استفاد منه داعيا لمعيره أحمد بن علي المقريزي ٨١٣), is partly erroneous and conjectural given the actual state of this reading note.

[201] On fol. 132a of vol. 4: استفاد منه داعيا لمالكه أحمد بن علي المقريزي سنة ٨٠٣. See ʿAlī ibn Mūsá Ibn Saʿīd al-Andalusī, *Al-Mughrib fī Ḥulá al-Maghrib: al-Juzʾ al-Awwal min al-Qism al-Khāṣṣ bi-Miṣr [al-Ightibāṭ fī Ḥulá Madīnat al-Fusṭāṭ],* ed. Zakī Muḥammad Ḥasan et al. (Cairo, 1953), 59 (of the introduction); and Moritz, *Arabic Palaeography,* 167.

[202] Part of the same set as the preceding one (autograph manuscript of Ibn Saʿīd), same note as above. A microfilm of this manuscript is held at the Dār al-Kutub al-Miṣrīyah, Cairo (Tārīkh 103 mīm; see Fuʾād Sayyid, *Fihrist al-Makhṭūṭāt: Nashrah bi-al-Makhṭūṭāt allatī Iqtanathā al-Dār min Sanah 1936–1955* [Cairo, 1380–83/1961–63], 3:81).

[203] On fol. 132a: استفاد منه داعيا له أحمد بن علي المقريزي في سنة ٨٠٧.

[204] The reading note was noticed by al-Maqqarī, during a stay in Cairo, on the autograph copy sent by Ibn al-Khaṭīb. It read: انتقى منه داعيا لمؤلفه أحمد بن علي المقريزي في شهر ربيع [كذا] سنة ثمان وثمانمائة. See Aḥmad ibn Muḥammad al-Maqqarī, *Nafḥ al-Ṭīb min Ghuṣn al-Andalus al-Raṭīb,* ed. Muḥammad Muḥyī al-Dīn ʿAbd al-Ḥamīd (Cairo, 1369/1949), 9:312.

Mamluks of Mongol Origin and Their Role in Early Mamluk Political Life

It will come as no surprise to even a casual student of Mamluk history when I state that the Mongols were the major foreign policy concern of the Mamluk Sultanate during its first century of existence, certainly after 1260. Be it the war with the Ilkhanids in Iran and the surrounding countries, or the amicable relations with the Golden Horde, the leadership of the young sultanate devoted much thought and many resources to dealing with the Mongol danger from the east on the one hand, and co-opting the Mongols from the far north on the other. Even after the conclusion of peace with the Ilkhanate in the early 1320s, the Mongols remained a concern for the Mamluks, although perhaps without the same urgency. With the breakup of the Ilkhanid state after 1335, the Mamluks still had to take into account for several decades their relations with different Mongolian rump states on their eastern and northern frontiers. In short, one can scarcely comprehend the history of the early Mamluk Sultanate without considering the impact of its preoccupation with the Mongols.[1]

One aspect of Mamluk-Mongol relations is the question of Mongols in the Mamluk army, as soldiers and officers, and once even as a sultan. These could be Mamluks themselves or Mongol tribesmen who came as *wāfidīyah* or *mustaʾminūn,* i.e., refugees seeking sanctuary in the sultanate. This phenomenon of the *wāfidīyah,* Mongol and otherwise, received attention over half a century ago in a well-known article by the late David Ayalon,[2] who subsequently touched upon the phenomenon of Mamluks of Mongol origin in his wide-ranging series of papers on the *yāsā,*[3] as well as in his article "Mamlūk" in the *Encyclopaedia of*

[1]Some important general comments on Mongol-Mamluk relations are found in David Ayalon, "The Great Yāsa of Chingiz Khān: A Reexamination," *Studia Islamica,* Part C1, 36 (1972): 117. My own investigations into these relations have been published in *Mongols and Mamluks: The Mamluk-Ilkhanid War, 1260–1281* (Cambridge, 1984) and *The Mongols in the Islamic Lands: Studies in the History of the Ilkhanate* (Aldershot, 2007). These studies contain many references to other articles and books on the subject.

[2]David Ayalon, "The Wafidiya in the Mamluk Kingdom," *Islamic Culture* (1951): 91–104.

[3]Ayalon, "The Great Yāsa of Chingiz Khān," Part C1, 124–28. For the complete series of articles, see *Studia Islamica,* Part A, 33 (1971): 97–140; Part B, 34 (1971): 151–80; Part C1, 36 (1972): 113–58; Part C2 (1973): 107–56.

Islam.[4] Recently, Nakamachi Nobutaka[5] has written an interesting and innovative essay published in *Mamlūk Studies Review,* in which the status of the *wāfidīyah* in general, with some emphasis on the Mongol *wāfidīyah,* is reconsidered. I propose in the following article to look mainly at the "Mongol" Mamluks and their role in early Mamluk political life, without neglecting their possible connections with the Mongol *wāfidīyah.* I will end with some comments about the Mongol *wāfidīyah,* particularly in light of Nakamachi's article.

Finally, one small technical note: in the interest of brevity, in this article I will generally refer to Mamluks of Mongol provenance as Mongol-Mamluks. I hope that this shorthand will not prove confusing.

We have the names of several prominent Mongol-Mamluks who reached the sultanate in various ways. There were probably many more such Mamluks who remained nameless in the sources, reflecting their modest ranks and achievements. This is something that we could expect *a priori.* First, we could imagine that some Mongol youths would be caught up in the trade of young Qipchaq Turks from the realm of the Golden Horde (more about this below). This point has already been made by Ayalon.[6] Secondly, some young Mongols would have been among the captives from the battles and border warfare between the Mamluk Sultanate and the Ilkhanate, where the Mamluks almost invariably had the upper hand (some prominent examples are given below). Thus, it seems probable that the senior Mongol-Mamluk officers whose names we know were only the tip of an iceberg, made up of lower-ranking Mamluks of Mongol origin.

We are fortunate not to have to remain in the realm of speculation. As early as the reign of Qalawun (678–89/1279–90),[7] we learn that this sultan purchased 12,000 "Turkish, Mongol, and other Mamluks."[8] Of course, this gives us no idea of the relative or absolute size of this contingent of Mongol-Mamluks, but they were certainly significant enough to be mentioned after the Turks. Note that the Circassians, who—as is well known—were bought in large numbers by Qalawun,

[4]David Ayalon, "Mamlūk," *Encyclopaedia of Islam,* 2nd ed., 6:314; cf. the longer version in idem, *Islam and the Abode of War* (Aldershot, 1994), art. II, 3.

[5]Nakamachi Nobutaka, "The Rank and Status of Military Refugees in the Mamluk Army: A Reconsideration of the *Wāfidīyah,*" *Mamlūk Studies Review* 10, no. 1 (2006): 55–81.

[6]Ayalon, "The Great Yāsa," Pt. C1, 126–27.

[7]In this paper I have striven to render the names of Mamluks and Mongols in a transliteration which I hope best approaches the way they themselves would have pronounced them. Those names which I am unable to provide in this way, I have given in the Arabic transliteration.

[8]Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk,* ed. Q. Zurayk and N. ʿIzz al-Dīn (Beirut, 1939), 8:97 (s.a. 689, as part of the summation of Qalawun's rule); cited in Ayalon, "The Great Yāsa," Pt. C1, 124–25.

are not mentioned in this passage.[9] Baybars al-Manṣūrī, in his entry for 699/1299–1300, reports that one of the results of the civil war in the Golden Horde between the Khan Toqta (<Toqtagha) and the army commander Noghai was that many Mamluks and slave girls were brought to the sultanate. We can assume that some of these Mamluks were Mongols.[10]

We have some indirect evidence that young Mongols were indeed caught up in this trade of Mamluks: Toqta attacked Genoese settlements in the Crimea in 707/1307–8 for various reasons, including retaliation for the capture of Mongol children *(awlād min al-tātār)* who were then sold to the Muslim countries, referring most probably to Egypt and Syria.[11] Even if the Mongol candidates to become Mamluks were not connected to the previously mentioned Toqta-Noghai war, this second passage shows that Mongol children were indeed part of the regular trade in young Mamluks, at least for a certain time.

This appears to have continued well into the eighth/fourteenth century. The mid-fourteenth-century encyclopedist Ibn Faḍl Allāh al-ʿUmarī has this to say in his chapter on the Golden Horde in the section on the Mongols in *Masālik al-Abṣār:* The Mongols sold their own children on one hand, and on the other hand, the Qipchaqs themselves also kidnapped the children of their Mongol subjugators and sold them to slave-traders.[12] There is no mention of a particular time-frame for this information, and it is unclear if the author is referring to a general phenomenon or to one particular period. Al-Maqrīzī (d. 1442), however, is more specific. He writes that in the third reign of al-Nāṣir Muḥammad ibn Qalawun (1310–41), the Mongols of the Golden Horde competed with each other in selling their boys, girls, and relatives to the slave-merchants. The competition was so fierce among

I should mention here Robert Irwin's yet-unpublished paper, "How Circassian Were the Circassian Mamluks?" which was presented in April 2006 in Haifa.

[10]Baybars al-Manṣūrī, *Al-Tuḥfah al-Mulūkīyah fī al-Dawlah al-Turkīyah,* ed. ʿAbd al-Ḥamīd Ṣāliḥ Ḥamdān (Beirut, 1407/1987), 159; idem, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. D. S. Richards (Beirut and Berlin, 1998), 347.

[11]Baybars al-Manṣūrī, *Zubdah,* 399; al-Nuwayrī, *Nihāyat al-Arab fī Funūn al-Adab* (Cairo, 1923–97), 27:374. Toqta sent off an army to Kaffa, their headquarters, but the Genoese had advance notice of the attack and fled by boat. Toqta found some solace by expropriating the wealth of their compatriots in Saray.

[12]*Das Mongolische Weltreich: al-ʿUmarīs Darstellung der mongolischen Reiche in seinem Werk Masālik al-abṣār fi'l-mamālik al-amṣār,* ed. and trans. K. Lech, Asiatische Forschungen 14 (Wiesbaden, 1968), 72; cited by Ayalon, "Mamlūk," *EI²,* 314 ; cf. the longer version of this article in Ayalon, *Islam and the Abode of War,* art. II, 3.

those Mongols that it even marred their internal relations,[13] although what this means exactly is unclear. Perhaps it refers to some type of disruption of normal social relations, due to the outflow of young people and even depopulation.

Finally, we can note that young Mamluks also arrived, probably sporadically, from the territory of Qaidu (and his Chaghatayid allies) in Central Asia. Al-Nuwayrī reports in his section on the Mongols in *Nihāyat al-Arab* that after Qaidu defeated Nomughan, the son of the Great Khan Qubilai, ca. 1276, many women and children were taken captive and were exported by traders to Egypt (perhaps via the territory of the Golden Horde).[14] There are some problems with the description of these events in Central Asia,[15] but as the story of the young mamluks is told *en passant,* we can accept it at face value. It is, however, unclear, how often mamluks came from this region, in what quantities, and how many of them were actually Mongols. Still, some Mongols, it would seem, probably entered the Mamluk army from this relatively far-away region.

We see, then, that young Mongol boys (and girls for that matter) played some part in the trade in Mamluks conducted with the Golden Horde. We are now in a better position to examine the careers of prominent Mongol-Mamluks, and to see whether their advancement and behavior had anything to do with this Mongol-Mamluk milieu. I will begin with a brief review of the senior Mongol-Mamluks of whose name and identity we can be sure. I confess that I may have missed one or more individuals, and additional names will be welcome. The order is roughly chronological.

Zayn al-Dīn Kitbugha al-Manṣūrī

He was captured as a youth at the first battle of Homs (December 1260) and enrolled in the Mamluk unit of Qalawun,[16] already serving as an officer during his amirate. With Qalawun's death in 1290, Kitbugha also served al-Ashraf Khalīl, although he was somewhat estranged from him. After the latter's murder in 1293, he led the Qalawunid "loyalist" forces who fought and defeated the conspirators

(Wiesbaden, 1931–), 24:318; idem, "Aʿyān," MS Aya Sofya 2967, fol. 47a; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (rpt., Cairo, n.d., of Cairo, 1930–56), 8:55. Cf. al-Nuwayrī, *Nihāyat al-Arab,* 29:475, and Ibn al-Ṣuqāʿī, *Tālī Kitāb Wafāyat al-Aʿyān,* ed. J. Sublet (Damascus, 1934), 131, who both say he was captured at ʿAyn Jālūt.

led by Baydara. Upon the accession of the boy-king al-Nāṣir Muḥammad, Kitbugha became *nāʾib al-salṭanah* and one of the two strongmen of the state, the other being Sanjar al-Shujāʿī. Relations soon deteriorated between these two officers, and open fighting broke out in the streets of Cairo. This ended in Kitbugha's victory and his subsequent enthronement (1294). Taking the title al-Malik al-ʿĀdil, he ruled for some two years until deposed by a conspiracy led by Lachin (Lājīn), who replaced him. Kitbugha lived out his life as governor of Sarkhad and then Ḥamāh, dying in 1303. His reign was marked by a famine and the resulting crisis, as well as the arrival of an extremely large group of Mongol *wāfidīyah* in early 1296 from the Oirat tribe, from which he himself hailed. See below for how his Mongol affinities affected his policies and actions.[17]

SAYF AL-DĪN SALĀR AL-MANṢŪRĪ

He was captured at the battle of Abulustayn in 1277 and eventually became a Mamluk of Qalawun, although he started off as a Mamluk of his son al-Ṣāliḥ ʿAlī (d. 1288).[18] During the second reign of al-Nāṣir Muḥammad (1299–1309), Salār, the *nāʾib al-salṭanah,* was one of the two most powerful amirs, together with Baybars al-Jashnakīr, also a Manṣūrī (albeit of Circassian origin) who enjoyed the support of the Burjīyah. Salār was also an Oirat Mongol and brought over two of his brothers and mother to the sultanate in 1305.[19] After al-Nāṣir Muḥammad's return to power for the third time in 1310, Salār was imprisoned and starved to death. His personal wealth and income were proverbial.[20]

SAYF AL-DĪN QIPCHAQ (QIBJAQ) AL-MANṢŪRĪ

He was also captured at the battle of Abulustayn, becoming a Mamluk of Qalawun after first serving his son al-Ṣāliḥ ʿAlī.[21] As governor of Damascus in Lachin's reign,

[21] Baybars al-Manṣūrī, *Zubdah,* 155; Amitai-Preiss, *Mongols and Mamluks,* 174. Another Mongol who is mentioned as being captured at this time (Baybars al-Manṣūrī, *Zubdah*) and also becoming a Mamluk is Sayf al-Dīn Jāwurshī, about whom nothing else is known.

he fled to the Mongol court of Iran. There he found his father (named Toghril) and brothers, who hel prominent positions at court. Qipchaq was awarded the governorship of Hamadān, although it is doubtful that he actually took it up. He accompanied Ghazan on his successful campaign into Syria in 1299–1300. After the Mongol occupation of Damascus, he was appointed the Mongol governor of Syria, but in the aftermath of Ghazan's withdrawal from the city (followed by the retreat of the remaining Mongol troops), Qipchaq returned to the Mamluk fold. He was pardoned and was awarded the governorships of Shawbak and then Ḥamāh, dying in 1310.[22] According to al-Ṣafadī, "He spoke and wrote excellent Mongolian" *(wa-yujīd al-kalām wa-al-khaṭṭ bi-al-lughah al-mughulīyah),* and had been the scribe *(kātib)* to Ḥasan Taqu, one of the *noyan*s of the Mongols. His father had also been one of the leading scribes among the Mongols. Qipchaq said about the Mongolian language, comparing it to Arabic: "Like with you, there is proper and improper speech, so with us."[23]

Sayf al-Dīn Aytamish/Utamish al-Nāṣirī

Originally a Mamluk of al-Ashraf Khalīl, then of al-Nāṣir Muḥammad, Aytamish first comes to our notice as a trusted envoy of the latter during his exile in Karak (1309–10). He was named governor of Karak when al-Nāṣir Muḥammad left to regain the throne, remaining in this position until 1311. Subsequently, Aytamish became a loyal member of the sultan's inner circle, although never rising above the rank of an amir of forty; in this capacity he fulfilled a number of missions. Probably the height of his career was the series of embassies he led to the court of the Ilkhan Abū Saʿīd, both during the peace negotiations that led to the treaty of 1323 and the subsequent years. Al-Ṣafadī writes that he traveled to the Ilkhanate with his personal contingent *(ṭulb)* and musical band *(ṭablkhānah),* but I assume that if this was the case it was only in the aftermath of the peace treaty. Aytamish spoke and wrote Mongolian, and knew the customs of the Mongols *(ādāb al-mughulī)*. "He judged in the house of the sultan among the *khaṣṣākīyah* according to the *yāsāq* that Chinggis Khan established. He knew the biography of Chinggis Khan, explained it, and reviewed it. He was acquainted with the branches of the Mongols and their roots, and he knew by heart their histories and events." Aytamish answered letters in Mongolian for the sultan.[24] He died in Ṣafad in

Amalia Levanoni and Michael Winter (Leiden, 2004), 21–41, esp. 22–25.

[23]Al-Ṣafadī, *Al-Wāfī,* 24:178.

[24]In Aytamish's absence, he was replaced by the sultan's maternal uncle, Tayirbughā, who is mentioned at the end of this article.

737/1336, having received the governorship there a few months earlier, the previous incumbent being his brother Ariqtay (see below).[25]

SAYF AL-DĪN ARIQTAY

Ariqtay may have been the brother of the above-mentioned Aytamish (although it is probably more likely that this "brotherhood" *(ukhūwah)*[26] was metaphorical). Aytamish was buried in Ariqtay's *turbah,* near the "external" mosque (referring, it would seem, to the mosque outside of the citadel, in Ṣafad).[27] Early in al-Nāṣir Muḥammad's third term he became *jāmdār*. For over twenty years Ariqtay was governor of Ṣafad, replaced in 1336 by Aytamish. In the post-al-Nāṣir Muḥammad period, Ariqtay had an illustrious career until his death in 750/1349.[28] Al-Ṣafadī notes that both Aytamish and Ariqtay spoke Turkish and Qipchaqi fluently *(wa-humā fī lisān al-turk wa-al-qibjāqī faṣīḥān)*. The latter term must refer to Mongolian, clearly that of the Golden Horde.[29]

SAYF AL-DĪN ALMALIK[30]

He was captured by the Mamluks at Abulustayn in 1277[31] and thus was presumably a Mongol, around the relatively advanced age of 20. Although originally bought by Qalawun, he was given to his son-in-law, Berke Khan, who thereupon gave him to Küvendik (who became *nāʾib al-salṭanah* after Berke's accession); the exact chronology is not clear. Eventually Almalik became the Mamluk of Qalawun's

[28]Al-Ṣafadī, *Al-Wāfī,* 8:361, 9:440; for a discussion of their "brotherhood," see Ayalon, "The Great Yāsa," Pt. C2, 138. For a different reading of the line about the languages, see ibid., 137.

[29]For Qipchaqi language as a synonym for Mongolian language, see Ayalon, "The Great Yāsa," Pt. C1, 133.

[30]For the vocalization of this name, see the editor's comments in his biography in al-Ṣafadī, *Al-Wāfī,* 9:372, note.

[31]Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah* (Hyderabad, 1392–96/1972–76), 1:489.

son al-Ṣāliḥ ʿAlī.[32] During the time of al-Nāṣir Muḥammad's second exile in Karak (1309–10), Almalik played an important role as an intermediary between him and the amirs in Cairo, and by 1312, two years after al-Nāṣir Muḥammad's return to the sultanate, he was promoted to the rank of an amir of one hundred. Throughout al-Nāṣir's long reign he played an important role, as he did in the confused years after his death. He was arrested and executed in 1346, at the ripe old age of 90.[33]

We have thus a list of six prominent Mamluk officers, one who even became sultan, of Mongol origin. In four cases, they joined the Mamluk ranks as a result of being taken captive in battle. The way that the apparent brothers Aytamish and Ariqtay came to the sultanate is unknown: the slave trade and captivity are possibilities; if the former, then it is more feasible that they came from the Golden Horde and not from the Ilkhanate. The fact that they are said to know "Qipchaqi" (i.e., in this case, the Mongolian of the Golden Horde) indicates this also. Kitbugha and Salār are explicitly reported to have been Oirat Mongols, while the fluency of Qipchaq, Aytamish, and Ariqtay in Mongolian clearly indicates a Mongol provenance. Qipchaq is cited by al-Ṣafadī as using the first person plural when referring to the Mongolian language, so there is no doubt of his origins. Only Almalik may be of doubtful Mongolian birth: he was captured in the battle of Abulustayn, but it is conceivable that he may have hailed from among the Turkish troops who served the Mongols. Lacking clear evidence of this, I will continue to include him among the Mongol-Mamluks.

One personality who has not been included in this list is Küvendik[34] al-Sāqī, to whom some scholars have attributed a Mongol origin.[35] He had become ***nāʾib al-salṭanah*** of his old friend al-Saʿīd Berke Khan in 1277 after the death of Bilik al-Khaznadār and the short incumbency of Āqsunqur al-Fāriqān. Subsequently, he played an important role in the deposition of Berke Khan. Later, Küvendik was accused of leading a conspiracy against Qalawun (including corresponding with the Franks) and was executed by drowning in Lake Tiberias in May 1281.[36]

[32]Al-Maqrīzī, *Sulūk,* 2:723.

[33]For his biography, see Joseph Drory, "Aal-Malik [sic] and His Inscription," *Cathedra* 117 (2005): 75–80 [in Hebrew].

[34]Various transliterations of this name are given by scholars. According to G. Clauson, *An Etymological Dictionary of Pre-Thirteenth-Century Turkish* (Oxford, 1972), 690, *küven-* means "to be happy, pleased," "to rejoice" in Qipchaq.

[35]Holt, *The Age of the Crusades,* 99; Irwin, *The Middle East,* 62. Northrup, *From Slave to Sultan,* 189, also implies that Küvendik was a Mongol.

[36]Cf. Holt, *The Age of the Crusades,* 102: "Küvendik . . . was accused of heading a conspiracy of Mamluks of Mongol origin." See also Irwin, *The Middle East,* 71; Northrup, *From Slave to Sultan,* 188–89. Cf. Amitai-Preiss, *Mongols and Mamluks,* 186: the conspirators were composed mainly of

I confess, however, that I have not found clear evidence of Küvendik's Mongol origins. For example, in his death-notice in Ibn al-Furāt's chronicle (s.a. 681), there is no mention of his so-called Mongol provenance.[37] Given his particular, albeit short-lived, prominence, as well as the especially important role he played in the higher politics of the time, the matter of Küvendik's origins is perhaps not an insignificant point, and it involves more than just increasing our list from six to seven senior officers of Mongol heritage.

In order to facilitate the continuation of our investigation, and to provide some basis for comparison, let us look at the data for the leading Mongol *wāfidīyah,* i.e., those Mongols who left the territory of the Ilkhanate for various reasons, seeking refuge with the Mamluks. As I mentioned above, this subject was initially discussed systematically by Ayalon, and recently by Nakamachi Nobutaka. I must commend the latter for his exhaustive and comprehensive research, which culminates in his detailed and impressive list of 28 officers in the Mamluk army of *wāfidī* origin. This list can be divided into two parts: those who reached their greatest prominence before the third reign of al-Nāṣir Muḥammad ibn Qalawun (1310–41), and those—including some who had arrived earlier—who became senior officers (i.e., "amirs of one hundred/commanders of one thousand") later. I will briefly look at a few from the former category, while I will address the latter group at the end of this article. I should add that Nakamachi's meticulous work greatly facilitates a comparison of Mongol-Mamluk and Mongol *wāfidī* senior amirs.

The list contains thirteen individuals whose careers peaked before 1310 (nos. 1–11, 16–17 in Nakamachi's list). I am disregarding at this point those Mongol *wāfidīyah* who may have arrived before 1310 but were important only afterwards. Three of these were members of the Rum Seljuq elite (nos. 8, 9, and 11), and thus are not relevant to our discussion. Of the ten Mongols, I will mention the four most prominent; nos. 16 and 17 were leaders of the Oirat *wāfidīyah* who came in 1295 but were both eliminated by 1300. Perhaps the most important of these is Sayf al-Dīn Noghai/Nūkāy[38] al-Tatarī (no. 4 in Nakamachi's list), who came over in the group of Mongol deserters in 661/1263. He was arrested by Baybars, but later released and made an amir of one hundred by Qalawun. Noghai was killed

Ẓāhirīyah (i.e., the mamluks of Baybars). The Mongol *wāfidīyah* were evidently part of the group, but not its main component (see al-Maqrīzī, *Sulūk,* 1:685–86, for how the *wāfidīyah* fled with coconspirators Aytamish al-Saʿīdī and others to Sunqur al-Ashqar in north Syria). In any event, there does not seem to be any justification in seeing the involvement of "Mamluks of Mongol origin."

[37] Ibn al- Furāt, *Tārīkh al-Duwal wa-al-Mulūk,* 7:239.

[38] Significantly, perhaps, not a Turkish name, but a Mongolian one (< *noghai,* "dog"). The other *wāfidīyah* at this time also have Mongol names.

in the battle of Wādī al-Khaznadār in 699/1300. He is the only *wāfidī* of this period to reach unequivocally the highest rank in the Mamluk hierarchy.[39] Yet, in spite of his high title and the fact that his three daughters married very well (one even wedding Baybars), Noghai apparently was not a member of the inner circle of sultanic intimates or one of the truly senior amirs, for he is hardly mentioned in the ongoing machinations that characterized the Sultanate in the 1290s. For that matter, in spite of having been appointed an amir of one hundred, he is not mentioned in the Mamluk order of battle at Wādī al-Khaznadār,[40] showing perhaps that he was not one of the more important amirs of one hundred, or perhaps that he had been demoted at some point.

Nakamachi suggests that Sayf al-Dīn Siraghan Āghā (no. 1 on his list), the leader of the first wave of Mongol *wāfidīyah* in 660/1262,[41] also received a commission of one hundred, based on the evidence given by Ibn ʿAbd al-Ẓāhir's *Rawḍ,* where it is written that Baybars "commissioned their leaders with [officer ranks] of one hundred horses and less."[42] I have written that the evidence for these appointments was "mere hyperbole."[43] Nakamachi demurs, writing "there is no logical reason for denying this appointment itself."[44] Well, I will stick to my guns: our friend Siraghan never appears again in the detailed records for the reign of Baybars, neither as an amir of one hundred nor in any other capacity, except to receive part of a village in the environs of Caesarea and Arsūf as *milk* in 1265.[45] One could wonder what kind of amir of one hundred he was that he is never mentioned in the sources during this period of incessant warfare. I have devoted some space to questioning Nakamachi's analysis of Siraghan's rank, since this directly impinges upon his analysis of the role and importance of the early Mongol *wāfidīyah.* I therefore see no reason to call into doubt Ayalon's statement: "Baybars' reign is also marked by the absence of a single appointment [of a *wāfidī*]

---

[39]Nakamachi, "Military Refugees," 77. The fact that al-Yūnīnī (in Guo, *Early Mamluk Syrian Historiography,* 72, cited in Nakamachi, "Military Refugees," 75) refers to him as a "Ẓāhirī" should not be given too much importance. This single attribution does not turn Noghai (spelled here Nukayh) into a mamluk of al-Ẓāhir Baybars, as implied by Nakamachi in note 104.

[40]See Reuven Amitai, "Whither the Ilkhanid Army? Ghazan's First Campaign into Syria (1299–1300)," in *Warfare in Inner Asian History,* ed. N. Di Cosmo (Leiden, 2002), 239–41.

[41]Ibn ʿAbd al-Ẓāhir, *Al-Rawḍ al-Zāhir fī Sīrat al-Malik al-Ẓāhir,* ed. ʿAbd al-ʿAzīz al-Khuwayṭir (Riyadh, 1396/1976), 180, when describing the second wave of Mongol *wāfidīyah,* states that Saraghan Āghā was the commander of the previous wave, i.e., the one that arrived in 660/1262.

[42]Ibn ʿAbd al-Ẓāhir, *Al-Rawḍ,* 138.

[43]Reuven Amitai-Preiss, "The Mamluk Officer Class during the Reign of Sultan Baybars," in *War and Society in the Eastern Mediterranean, 7th–15th Centuries,* ed. Y. Lev (Leiden, 1997), 286.

[44]Nakamachi, "Military Refugees," 65.

[45]Amitai-Preiss, "The Mamluk Officer Class," 295 (no. 21). See note 96 for the vocalization of this name.

to the rank of Amir of One Hundred,"[46] as Nakamachi does.

Another important *wāfidī* Mongol personality was Sayf al-Dīn Geremün (no. 2 in Nakamachi's list, vocalized as Karmūn) al-Tatarī, who led the second group of Mongol *wāfidīyah* in 661/1263. He played noteworthy roles in the campaigns against Arsūf (1265) and Ṣafad (1266), but never seems to have risen above the rank of amir of forty.[47] We should also mention Sögetei (no. 10 in Nakamachi's list), who arrived from Rum (although he was a Mongol) in 675/1276 during the confused events preceding Baybars's campaign to Anatolia that culminated in the battle of Abulustayn. While his daughter Ashlun was married to Qalawun, and gave birth to al-Nāṣir Muḥammad, we know nothing of Sögetei's eventual career. In the end, he was not destined for a senior role in Mamluk military and political life.

It appears that for the Sultanate's first half century or so, the *wāfidīyah* and their leaders, while perhaps of some importance from the perspective of military manpower and contributing something to the social and even political life of the ruling elite drawn from the military society, were on the whole far from the seats of power. I agree somewhat with Nakamachi that perhaps the lines between Mamluk society and the *wāfidī* grandees were not cut and dried,[48] but at the same time the latter did not have true entrée into the higher circles of the Sultanate, and it was clear where the monopoly of power lay. It will be interesting, however, to see how the *wāfidīyah* and the amirs drawn from them could be integrated into the political aspirations and activities of the senior Mongol-Mamluks. This will be examined below.

Let us look at the above-mentioned handful of senior Mongol-Mamluks who became movers and shakers of Mamluk politics at the beginning of the 1290s, and what role their Mongol origin played in their activities. Although three of these amirs are at the nexus of power from 1290 onward, all had been senior amirs already under Sultan Qalawun, perhaps even obtaining their first commissions while he was still an officer (albeit one of the leading officers under Baybars and his immediate successors).[49] The first to gain prominence was Kitbugha al-Manṣūrī, whose Mongol political connections have already been noted by several scholars and have been alluded to above. Because of his Mongol affinities, Kitbugha—then the *nāʾib al-salṭanah* in the short first reign of al-Nāṣir Muḥammad—was in

[46] Ayalon, "Wafidiya," 99.

[48] Nakamachi, "Military Refugees," 75–76.

[49] See Baybars al-Manṣūrī, *Zubdah,* 176–77, for a list of some forty Manṣūrīs who were in Qalawun's service while he was still an amir.

693/1293 given important information on Sanjar al-Shujāʿī's plans against him by the amir Sayf al-Dīn Qunghur/Qunqur, who had arrived with the *wāfidīyah* during the reign of Baybars, and "was of Kitbugha's race" *(wa-huwa min jins kitbughā)*. In spite of the fact that several of his sons were in al-Shujāʿī's service and he himself was among his associates, he gave the intelligence to Kitbugha because of a feeling of ethnic solidarity *(jinsīyah)*. This information prevented Kitbugha from being ambushed and enabled him to organize his forces and eventually to defeat his rival.[50] During the actual fighting, among the forces that joined Kitbugha's side were Mongol *wāfidīyah,* and it is possible that mutual feelings of ethnic solidarity played a role here.[51]

A few months later, Kitbugha had deposed the boy-sultan, and he took the throne as al-Malik al-ʿĀdil. One of the important events of his reign was the arrival of some 10,000 (sometimes given as 18,000) *wāfidīyah* of the Mongol Oirat tribe, which happened to be the same group from which Kitbugha himself hailed. Both 10,000 and 18,000 are enormous numbers, in relation to previous waves of Mongol refugees and to the total size of the Mamluk army. Again, this event has received some attention by scholars, from Ayalon onward. The reasons for the massive influx of these Mongol deserters will not concern us, but it has mostly to do with events in the Ilkhanate and the rise of Ghazan to its throne. Ironically, but perhaps not completely surprisingly, these refugees to the Sultanate had yet to be touched by the growing Islamization of the Mongols in the Ilkhanate; their pagan customs caused some averse comments in the Sultanate. As is well known, Kitbugha gave them a warm welcome, it would seem *inter alia* because of their common origin, but also since he appears to have believed that they would provide a bulwark against his opponents, not the least because of ethnic solidarity. The opposite was achieved: his inordinate support of this group and their leaders only contributed to the growing alienation of a significant number of senior and middle ranking amirs from him. This in turn developed into the *coup d'etat* led by Lachin in 1296, who in turn purged some of the Oirat officers.[52]

This is not the last that we are to hear of the Oirats. In the fall of 1299,

[50]Al-Maqrīzī, *Sulūk,* 1:798–79 (who also mentions one of Qunghur's sons, Jāwurjī); *Beiträge zur Geschichte der Mamlūkensultane, ed.* K. Zetterstéen (Leiden, 1919), 29; Ibn Taghrībirdī, *Al-Nujūm,* 8:42 (the two last mentioned cited by Donald P. Little, *An Introduction to Mamlūk Historiography* [Wiesbaden, 1970], 126, who also cites al-Jazarī, "Jawāhir al-Sulūk fī al-Khulafāʾ al-Mulūk," Bibliothèque Nationale [Paris] MS Ar. 6379, fols. 215–16, which I was unable to inspect). Nakamachi does not mention Qunghur in his list.

[51]Al-Maqrīzī, *Sulūk,* 1:800.

[52]For the arrival of the Oirats, see Ayalon, "Wafidiya," 99–100; for the importance of Kitbugha's pro-Oirat policy in his deposition, see ibid., 91. In both places, abundant sources are cited. See also Nakamachi, "Military Refugees," 59, 65, 79–80.

having entered Palestine on the way to confront the Mongols under Ghazan in the campaign that culminated in the battle of Wādī al-Khaznadār, Oirats in the Mamluk army launched a rebellion under their leader Ulus (rehabilitated since the above-mentioned purge), ostensibly to put their "kinsman" Kitbugha back on the throne. We have here, then, another apparent expression of "ethnic solidarity." This rebellion was put down and Ulus and other leaders were executed. This incident certainly did not contribute to either the preparedness or the morale of the Mamluk army, and it was one of the reasons behind their defeat at the battle north of Homs at the end of the year.[53]

In short, the whole long episode of Kitbugha and the Oirats, lasting some seven years, is a clear example of the apparent role of ethnic solidarity, in this case of an Oirat Mongol variety, in Mamluk politics. Without this Mongol connection, we can scarcely understand Kitbugha's rise to power, his sultanate, his fall, and the ill-fated attempt to reinstate him (apparently without his knowledge or connivance). The role of ethnic solidarity—I prefer this to the older expression "racial solidarity," and not only because of the discredited political connotations—in Mamluk politics has been noted by several modern scholars,[54] "because"—as Donald Little has stated in a different context—"of the importance of ethnic affiliation in the complex system of Mamluk loyalties that provided cohesion to the Mamluk state."[55]

However, I do not want to go overboard by attributing too much importance to ethnic solidarity in the Sultanate's politics, at least among senior Mamluks of Mongol origin. There is nowhere else anything similar to the story of Kitbugha and the Oirats, either in its intensity and duration or with regard to its basic nature, elsewhere in the annals of early Mamluk history. Let us look at the stories of Salār and Qipchaq for illustrations of this point.

Salār, it should be remembered, was also of Oirat origin, and yet we see little evidence of ethnic solidarity on his part, neither *vis-à-vis* Kitbugha nor the Oirat *wāfidīyah*. We find him rising to some prominence early in the reign of Lachin, so he does not appear to have been a protégée or ally of the Oirat Kitbugha.[56] Both al-Kutubī and al-Ṣafadī note that Salār and Lachin were very close friends, and Salār was named *ustādār* when the new sultan reached Cairo.[57] Lachin, it should be

remembered, was apparently of Greek origin, so it is clear that "ethnic solidarity" played little role when Salār threw in his lot with Lachin and abandoned Kitbugha. For that matter, his friendship with Lachin did not stop Salār from participating in the conspiracy against him that resulted in his assassination and replacement by al-Nāṣir Muḥammad ibn Qalawun (his second reign).[58] Other considerations besides ethnic solidarity and friendship played a role in Salār's political calculations. Certainly the former was not a factor when Salār helped to lead the resistance to the attempted Oirat putsch in 1299 in Palestine.[59] Interestingly enough, the late Peter M. Holt describes Salār as later leading the "Turkish" faction as opposed to the Circassian "Burjī" faction headed by Baybars al-Jashnakīr.[60] This may well be the case, although further research is needed to establish the ethnic component of this rivalry and the larger political struggles of the second reign of al-Nāṣir Muḥammad. I do not believe one should infer "ethnic solidarity" from the arrival of a couple hundred Mongols around 705/1305, who included the mother and two brothers of Salār himself. If anything, we have here a clear and interesting example of family solidarity, showing that contact with kin could be maintained for almost three decades over long distances and a distinctly hostile frontier.[61]

Mongolian family reunions are also seen in the story of Qipchaq al-Manṣūrī from the end of the 1290s. But first, some background: Qipchaq was part of the group of senior amirs who acclaimed Lachin sultan in 1296.[62] Whatever ethnic solidarity he might have had with Kitbugha was soon forgotten in the aftermath of his deposition. Qipchaq was appointed governor of Damascus by the new sultan, but relations soon soured, not the least because of the increasing power of the *nāʾib al-salṭanah* Mengü-Temür. Realizing that he was soon to be arrested, Qipchaq and some other amirs, along with their mamluks, fled the Sultanate in 1298 for the Ilkhanate. They were warmly welcomed at Ghazan's court. Qipchaq was reunited with his father (called in the Mamluk sources a *silāḥdār*) and his brothers, married to a Mongol lady, and given the governorship of Ḥamadan. At the end of 1299, he and his ex-Mamluk comrades joined Ghazan in his campaign into Syria, were

[58] Al-Maqrīzī, *Sulūk,* 1:856.

[59] Ibid., 1:883–84; Stewart, *The Armenian Kingdom,* 166. Baybars al-Manṣūrī, *Zubdah,* 330, does not mention the role of Salār or any other amirs in putting down this rebellion.

[60] Holt, *Age of the Crusades,* 110; cf. Irwin, *The Middle East,* 92, who writes that Salār was supported by the aging Ṣāliḥī and Ẓāhirī amirs, "as well as Mongols who favoured Salar because he was a Mongol." It is unclear to me to which Mongols he is referring: the remnants of earlier *wāfidīyah* or unknown Mongol-Mamluks (regular troopers or amirs); he was certainly no friend of the Oirats. In any event, I am not sure that this Mongol support really existed.

[61] Besides the references in note 19 above, see Irwin, *The Middle East,* 101; Little, *Introduction,* 8, 16–17.

[62] Al-Maqrīzī, *Sulūk,* 1:822.

present at the Mongol victory at Wādī al-Khaznadār, and advanced with the triumphant Ilkhan to Damascus. Qipchaq was appointed titular "Mongol" governor of the city (and perhaps beyond) but seems to have exercised little authority beyond facilitating the collection of taxes and other tribute, mediating with the local notables, and trying to restrain some of the excesses of Mongol troops and to moderate demands from the local population. When the Mongols withdrew in the spring of 1300, instead of returning with them to the east, he traveled to the south, meeting the Mamluk leadership that was making its way from Egypt to Syria. His submission and excuses were accepted and he was permitted back in the Mamluk fold, although he never returned to his high position.[63]

I will summarize what I wrote in an article published in the volume edited by Michael Winter and Amalia Levanoni in 2004.[64] Qipchaq had every reason to return with the retreating Mongols and end his days in honorable retirement, surrounded by family, enjoying a comfortable sinecure, and speaking his mother tongue. Qipchaq rejected all that, evidently motivated more by his Mamluk loyalties, developed since his youth. This, to my mind, shows the limits of Mongol ethnic solidarity in general, as well as the ultimate loyalty of mamluks of Mongol provenance.

I should mention an apparently apocryphal story found in some later sources, such as Ibn al-Furāt.[65] In the death notice of Qalawun (s.a. 689), it is told how much the sultan liked Qipchaq, but that he did not permit him to go to Syria (it is not clear if his intention was just to travel to Syria or to be appointed to a governorship or other office there) because he was afraid that he would flee to the Mongols and cause trouble. When Lachin became sultan, however, he made him governor of Damascus. Later, Qipchaq indeed fled to the Mongols and truly caused trouble when he instigated Ghazan's campaign to Syria. Personally, I have my doubts regarding the reliability of this anecdote, and to my mind it is likely that had Qipchaq never been compelled to take his trip to the east, this story would have never circulated. In any case, let us remember the next development, not related in the story: Qipchaq abandoned the Mongols to rejoin the Mamluks.

Robert Irwin has written: "[S]entiments of racial solidarity were inextricably involved in the struggle for political power between what may be termed the inner and the outer elites of the Mamluk armies."[66] I certainly agree with him, but I have tried to show above that we should be careful about seeing Mongol ethnic

[63]This is a summary of a somewhat detailed discussion, with references in Amitai, "The Mongol Occupation of Damascus," 22–26, 32–35, 37–40. I have found no evidence to support the statement in Irwin, *The Middle East,* 91, that Qipchaq fled to the Ilkhanate with other "Mongol mamluks."

[64]Reuven Amitai, "The Mongol Occupation of Damascus," 21–41.

[65]Ibn al-Furāt, *Tārīkh al-Duwal wa-al-Mulūk,* 8:94–95.

[66]Irwin, *The Middle East,* 92.

solidarity being a determinant factor every time the paths of two Mongol-Mamluks crossed, one of them came across some Mongol *wāfidīyah,* or the opportunity to flee to the Mongol enemy arose. Other determinants, including *khushdāshīyah* solidarity, loyalty to patron and sultan, and fidelity to Islam as they understood it, let alone rational decisions based on practical advantage, were still the dominant bases for political behavior among Mamluk officers and probably their inferiors as well.

In order to further explore the role of ethnic solidarity in Mamluk politics in a more general sense, I suggest that at least three further matters must be taken into consideration in future research. The first is the more theoretical question of ethnicity and national feeling in pre-modern societies around the world, not the least in the Middle East and Central Asia. As far as I am aware, we do not have comprehensive discussions of Turkish and Mongolian ethnic feelings in the period of the Mamluk Sultanate.[67] Without a study of how thirteenth- and fourteenth-century Mongols saw themselves as an ethnic collective of some type, hopefully free of modern anachronism, nationalistically inspired or otherwise, it is impossible to analyze fully the sense of ethnic solidarity among Mamluks and *wāfidīyah* of Mongol provenance in the Sultanate.

Secondly, we need more case studies of possible expressions of ethnic solidarity among other groups in the military society of the Sultanate, starting perhaps with the Circassians.[68] Are some groups more prone to ethnic-based solidarity than others? How often is this expressed? Is the solidarity among some groups more powerful than others? In short, in order to study comprehensively ethnicity and its role in Mamluk politics, we first need a series of case studies, which will provide a proper empirical basis for comparison and generalization.

Thirdly, we would gain a fuller picture were we to take into account the gender aspect of this story, not the least the role of the daughters of Mongol *wāfidī*

---

[67]For some examples of ethnic solidarity, or at least affinity, between various groups of Turks in the Middle East in the eleventh century, see David Ayalon, "Aspects of the Mamlūk Phenomenon: The Importance of the Mamlūk Institution," *Der Islam* 53, no. 2 (1976): 210–11; for expressions of Turkish-Mongol solidarity, see idem, "The European-Asiatic Steppe: A Major Reservoir of Power for the Islamic World," in *Proceedings of the 25th Congress of Orientalists (Moscow 1960)* (Moscow, 1963), 2:48–49. Both articles were reprinted in idem, *The Mamlūk Society* (London, 1979), articles Xa and VIII, respectively.

[68]See, however, some prelimary comments in Van Steenbergen, *Order Out of Chaos,* 92–94, who also cites some other relevant comments in other studies. (I was unable to obtain what appears to be an important study by M. Chapoutet-Remadi, "Liens propres et identités séparées chez les Mamelouks bahrides," in *Valeur et distance: Identités et sociétés en Egypte,* ed. C. Décobert [Paris, 2000], 175–88.) Here I should note again Robert Irwin's provocative paper on the problems of studying the Circassians in the Sultanate, delivered in Haifa in 2006; see note 9 above.

amirs, as wives of the sultan and senior amirs.[69] Thus, the biographer of Baybars mentions five wives of the sultan, three of whom were the daughters of Mongol *wāfidī* amirs.[70] Qalawun also took some daughters of Mongol *wāfidī* as wives, including al-Nāṣir Muḥammad's mother, and married a few to his sons.[71] A full-fledged study of the gender and family aspects of higher Mamluk politics carried out with a sensitivity to ethnic networks and origins would certainly prove useful to a comprehensive discussion of the role of ethnicity and ethnic solidarity in Mamluk politics.

Before concluding, I would like to go back to the *wāfidī* amirs discussed by Nakamachi, this time looking at those from the post-1310 period, both those who arrived after this date and those who reached prominence only at this time. There are fifteen amirs in this category (nos. 12–28, minus nos. 16–17, who were the Oirat leaders who came in 1295 and by 1300 were dead). One of these was a Rum Seljuq officer who arrived in the Sultanate in 1276 (no. 12), two were descendents of another of these officers (nos. 13 and 14), and one was the mamluk of a Rumi amir (no. 15). Of the remainder, seven can be defined as Mongols (nos. 18–24). Three of these (nos. 20, 23, 24: Badr al-Dīn Jankālī ibn al-Bābā, Sayf al-Dīn Tayirbugha, and Temürtash, though the last for only a few months) indeed became amirs of one hundred between the years 1310 and 1341. This is noteworthy when compared to the fifty-year period before, although this is far from a *wāfidī* revolution (even with three other non-Mongol *wāfidīyah* who received this position, nos. 25, 26, and 28, the last in Damascus). Still, it is worth analyzing this development. To what can we attribute it? Nakamachi says that in al-Nāṣir's third reign, "the centralization of power was achieved, and the sultan no longer needed to depend on strong units of military refugees. He could advance his favorite retainers whether they were sultan's mamluks or not. Therefore, in this phase, several highly advanced *wāfidī* amirs emerged from *wāfidīyah* groups which had only a small number of personnel or which had collapsed and completely dissolved."[72]

[69] See the relevant comments in Northrup, *From Slave to Sultan,* 116–18; and for a later period: Van Steenbergen, *Order Out of Chaos,* 82–85, esp. 82, n. 117, for other relevant studies.

[70] Ibn Shaddād al-Ḥalabī, *Tārīkh al-Malik al-Ẓāhir,* ed. A. Ḥuṭayṭ (Wiesbaden, 1404/1983), 233.

[71] Northrup, *From Slave to Sultan,* 116–18; P. M. Holt, "An-Nasir Muhammad b. Qalawun (684–741/1285–1341): His Ancestry, Kindred, and Affinity," in *Proceedings of the 1st, 2nd, and 3rd International Colloquium, Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras,* ed. U. Vermeulen and D. De Smet (Leuven, 1995), 313–24.

[72] Nakamachi, "Military Refugees," 75. I plan to discuss in a future paper some of the conclusions from this article, which, while being thought-provoking, are perhaps a bit far-fetched. For example, I am not convinced that early sultans had a need for "strong units of military refugees," and I am not sure that they existed.

Frankly, I do not concur with this explanation. I think that rather the answer is to be found in the nature of al-Nāṣir's personality, the nature of his rule, and the relations between him and his senior amirs. As has been pointed out briefly by Ayalon[73] and in greater detail by Amalia Levanoni,[74] al-Nāṣir Muḥammad wrought many changes in the way mamluks were educated and the whole military system was run. It should then not come as a surprise when we discern such a large presence of senior *wāfidī* amirs. At the same time, like his predecessors, al-Nāṣir Muḥammad had built up a large unit of royal mamluks and surrounded himself with a large group of senior amirs from this formation. Yet, he remained fundamentally suspicious of all those around him, even from the group of his oldest personal mamluks. The fate of Tankiz in 1340 is a case in point. Robert Irwin has written that al-Nāṣir Muḥammad was "a little paranoid in his treatment of those he had chosen."[75] This appraisal seems to me to be an understatement, and the picture drawn should be much starker. It could well be that the cultivation of a few *wāfidī* amirs, two of whom were Mongols, was designed to counterbalance the sultan's own mamluks and to prevent the concentration of too much power within one group. Since al-Nāṣir Muḥammad had already eliminated most of the veteran amirs from the Manṣūrīyah early in his reign,[76] he had no natural group with which he could balance his own mamluks, and thus he also favored *inter alia* two of the *wāfidī* amirs.

As far as I know, there was no extraordinary connection between these *wāfidī* amirs and the Mongol-Mamluks that we named above (Aytamish, Ariqtay, and Almalik), although Tayirbughā on occasion assisted Aytamish with translation work in Mongolian. Moreover, for all of their pride in their Mongol cultural heritage, and in Aytamish's case, ongoing direct contact with a Mongol regime, there is no indication that these Mongol-Mamluk amirs ever acted politically on the basis of ethnic solidarity.

Individual and group identities and their impact on political action can be fluid and multifarious, and the possibility of multiple identities existing concurrently cannot be discounted. When we deal with the Mongol identity of certain Mamluk amirs and its influence on politics, we should be wary of unbalanced attention to certain evidence and drawing too broad conclusions on the basis of one or two examples.

Postscript

As this article was going to press, I came upon the following relevant passage from Ibn Faḍl Allāh al-ʿUmarī's *Al-Taʿrīf bi-al-Muṣṭalaḥ al-Sharīf:*[77]

> The form of correspondence to [Özbeg Khan of the Golden Horde]—if it is written in Arabic—is [the same] form as written to the ruler of Iran [i.e., the Ilkhan], as has been mentioned. But most of the time it is written in Mongolian (bi-al-mughulī), for which is responsible Aytamish al-Muḥammadī, Ṭayirbugha al-Nāṣirī, Arighadliq (?) the translator (*al-tarjumān*), and Qūṣūn al-Sāqī.

Aytamish and Ṭayirbugha are of course mentioned above. Arighadliq[78] may not have been a mamluk, given the nickname *al-tarjumān.* At this point he remains unidentified. Qūṣūn al-Sāqī is the famous amir who rose to prominence progressively towards the end of al-Nāṣir Muḥammad's third reign, briefly becoming the most powerful amir immediately after his patron's death.[79] I perhaps should have included Qūṣūn in my discussion above, due to his apparent Mongol origin, but his activities were connected mainly to a later period than the focus of this paper. I would like to note, however, that Qūṣūn's erstwhile protégé, Bashtak, had become his main enemy, in spite of the latter also hailing from the Golden Horde, and perhaps being of Mongol provenance as well.[80] This is another occurrence where ethnic solidarity among mamluks of seemingly Mongol origin is not evident.

Some Aspects of the Economic and Social Life of Ibn Taghrībirdī Based on an Examination of His Waqfīyah

The famous Mamluk historian Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī was born in Cairo in 812/1409–10 and died in 874/1470. His works and public life have been extensively researched and will not be dealt with here. Instead, Ibn Taghrībirdī's *waqfīyah* will be used to explore other aspects of his life. The text of the *waqfīyah* is given in an appendix to this article. First an attempt will be made to determine the location and the architectural layout of his *turbah,* built in the Northern Cemetery of Cairo. We have no trace of this once "huge" *turbah*[1] as it has totally disappeared. Secondly, the functions, personnel, and the maintenance cost of the *turbah* foundation will be summarized. Finally the *waqfīyah* will also be used to address the financial status of the founder, his family relations, and his sexuality, subjects seldom covered by traditional contemporary sources.

The contents and the formal characteristics of the *waqfīyah* were summarized in a lecture by ʿAbd al-Laṭīf Ibrāhīm at a symposium marking the 500th anniversary of the death of Ibn Taghrībirdī in 1972.[2] Although this paper adopts a different approach to the study of the *waqfīyah,* some overlap and redundancies are unavoidable.

The Source: Description of the *Waqfīyah* Document

The *waqfīyah* is housed in the National Archives in Cairo, cataloged as no. 147 and dated 14 Shaʿbān 870/1465.[3] It is a paper roll 33 cm wide and 17.20 cm long written in black ink in legible handwriting and remains in generally good condition except for some disintegration in the left margins.

Turbah: A New Interpretation

Recent research has shown that the *turbah* developed under the Mamluks and functioned not only as a grave or mausoleum, as is commonly known, but also served other purposes.[4] The *turbah,* in general, consisted of units such as an inner

[1] Shams al-Dīn Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Beirut, 1966), 10:308.

[2] ʿAbd al-Laṭīf Ibrāhīm, "Waqfīyat Ibn Taghrī Birdī," in *Al-Muʾarrikh Ibn Taghrī Birdī Jamāl al-Dīn Abū al-Maḥāsin Yūsuf 812–874 H* (Cairo, 1974), 182–222.

[3] The document we now have is a transcription of the original deed, but it is considered a legal document since it was authenticated by a notary and confirmed by witnesses. See ibid., 184.

[4] Hānī Ḥamzah, "Al-Turab al-Mamlūkīyah bi-Madīnat al-Qāhirah (648–923 AH/1250–1517 AD)"

court *(ḥawsh),* pavilion *(maqsūrah),* domed cube *(qubbah),* mosque, madrasah, *sabīl, kuttāb,* loggia *(maqʿad),* hall *(qāʿah),* residential areas, and stables. All these units were typically enclosed by a wall and entered through a portal within an elaborate façade, which included a minaret in some cases. This architectural setting served several expressive, socioeconomic, and religious objectives of the patrons who came mainly from the Mamluk ranks and the civilian elite.

A study of the remains of several buildings specifically designated by their foundation inscriptions and/or other contemporary sources as *turbah*s led to the formulation of the *turbah* model.[5] The exact layout and functions of the existing *turbah*s are subject to some confusion since many either disappeared or remain only partially standing with no known *waqfīyah*s to provide descriptions. This fact gives a particular significance to the *waqfīyah* of Ibn Taghrībirdī for enabling us to know precisely the typical architectural layout of a *turbah,*[6] and its functions and activities as stated by the founder himself and clearly spelled out in his *waqfīyah.*

Location of the *Turbah*

According to the *waqfīyah* the *turbah* was located outside Bāb al-Naṣr on the sultanic road (al-Darb al-Sulṭānī), the main route to Syria, in the direction of the *turbah* of al-Ẓāhir Abū Saʿīd and Shaykh Kahnafush.[7] The titles and *kunyah*

(Ph.D. diss., Cairo University, 2004), 3–4.

[5]The foundations included in this study are those of: Mankalī Bughā al-Fakhrī (unlisted monument, ca. second quarter of the eighth/fourteenth century); Tankizbughā (Index 85, 764/1362); Princess Tūlūbīyah (Index 80, 765/1364); Ṭaybughā al-Ṭawīl (Index 372, 768/1366); al-Ashraf Barsbāy (Index 121, 835/1432); al-Ashraf Īnāl (Index 158, 855–60/1451–56); Girbāsh Qāshiq (listed as part of the complex of al-Ashraf Īnāl, 853–56/1449–1452); Barsbāy al-Bajāsī (Index 124, 860/1456); Jānibik Nāʾib Jiddah (Index 171, 869/1465); Qāytbāy (Index 95/99/100/101, 877–79/1472–74); Azdamur (Index 90, 885/1480–81); Tikīyah of Abū Sayf (Index 111, end of ninth/fifteenth century), Azdamur min ʿAlī Bay (Index 174, 908/1502); Khayr Bik (Index 248, 908/1502–3); al-Ghūrī (Index 65, 909–10/1503–4); Qurqmās (Index 162, 911–13/1506–7). See *Index to Mohammedan Monuments in Cairo* (Cairo, 1951).

[6]Christel Kessler, who works on the funerary architecture of Cairo, has discussed their architectural features, plans, the decorative scheme of their domes, and their orientation, as well as their placement within the urban fabric of the city. However, she did not classify the *turbah* as a separate building genre and limited her studies to a formal architectural analysis of religious establishments with adjoining mausolea, mainly within the city proper. See Christel Kessler, "Funerary Architecture within the City," in *Colloque International sur l'Histoire du Caire (1969)* (Cairo, 1972), 257–67; idem, *The Carved Masonry Domes of Mediaeval Cairo* (Cairo, 1976); idem, "Mecca-Oriented Urban Architecture in Mamluk Cairo: The Madrasa-Mausoleum of Sultan Shaʿban II," in *In Quest of an Islamic Humanism: Arabic and Islamic Studies in Memory of Mohamed al-Nowaihli,* ed. A. H. Green (Cairo, 1984), 97–108.

[7]Dār al-Wathāʾiq al-Qawmīyah MS 147 Mamālīk, lines 46–47. ʿAlī Kahnafush, or Kahnabush

(epithet) of the sultan are given but his name has disappeared in the damaged margin of the document. ʿAbd al-Laṭīf Ibrāhīm assumed, obviously incorrectly, that the deceased sultan al-Ẓāhir Abū Saʿīd Jaqmaq was meant,[8] not al-Ẓāhir Abū Saʿīd Khushqadam, who was the reigning sultan of that time (r. 865–72/1461–67) and bore the same title and *kunyah.* The latter sultan is the correct choice for two reasons; first, the document includes a prayer for his long reign,[9] a phrase reserved naturally for a living sultan; second, the name of the sultan is not preceded by *al-shahīd* (martyr), which was customary when referring to a deceased sultan in official papers or monumental epigraphy. Contemporary sources indicate that al-Ẓāhir Khushqadam built a *turbah*/madrasah for himself at the northern part of the Northern Cemetery, which no longer exists,[10] in a rare, if not unique, case of the disappearance of a royal Mamluk monument under unknown circumstances.

The *waqfīyah* indicates that the main western façade (with the portal and the windows) faced al-Darb al-Sulṭānī, while the opposite eastern façade (the qiblah side) faced the desert, meaning empty space. The northern façade faced a side road while the southern façade faced the madrasah of al-Ashraf Īnāl, which still exists.[11] Thus we can determine with accuracy the site of the *turbah* as having been north of the madrasah of Īnāl across the main road (fig. 1). It was also near the *turbah* of al-Jamālī Yūsuf ibn ʿAbd al-Karīm, known as Ibn Kātib Jakam *nāẓir al-jaysh wa-al-khāṣṣ* (controller of the army and privy funds), who died in 862/1458.[12] This *turbah* no longer exists.

Plan and Architecture of the *Turbah*

The *turbah*, as described in the *waqfīyah*, is composed of 18 units as illustrated in the plan (fig. 2). Here is a brief description of their form and function:

1. The entrance (1) (lines 49–54):

Made of stone as part of the main western façade alongside the main road. A typical portal with the stairs leading to the door within an arched recess, flanked by two benches *(maksalah)* and two inscription bands (text not quoted).

according to other sources (d. 798/1398), had a *zāwiyah* built for him at the northern part of the Northern Cemetery. See Hani Hamza, *The Northern Cemetery of Cairo* (Costa Mesa, CA, 2001), 25.

[8]Ibrāhīm, "Waqfīyat Ibn Taghrī Birdī," 193.

[11]Dār al-Wathāʾiq al-Qawmīyah MS 147 Mamālīk, lines 93–96.

[12]Hamza, *The Northern Cemetery*, 16.

2. The vestibule *(dirkah)* (2) (lines 55–57):

The portal leads to a vestibule which has a stone platform at its opposite side, and two recesses/cupboards *(kutbīyah)* for the storage of books or other objects topped by a window overlooking the *ḥawsh* (court). Two side doors lead to the *sabīl* and a corridor.

3. The drinking fountain *(al-sabīl)* (3) (lines 58–68):

This occupies the northern corner, with two perpendicular windows overlooking the street, making water available all day except during Ramaḍān. It has a cistern beneath the marble flooring and is covered by a shallow dome with an attached room for the *sabīl* keeper *(mazamalātī).*

4. The corridor (5) (lines 68–73):

An internal barrel-vaulted passage with doors leading to the *kuttāb* situated over the *sabīl* and undefined apartments *(ṭibāq)* through a staircase. Another door leads to the doorman's *(bawwāb)* room (6), and two more doors lead to the court.

5. The court *(ḥawsh)* (lines 73–75):

This is the internal heart of the *turbah* which connects the various units and is used for charity burial as decided by the founder and the *waqf* superintendent *(al-nāẓir)* after him.

6. The residential area (lines 75–86):

This is the largest unit of the *turbah,* located at the southern part and made up of two stories. The ground floor has a large room with no windows (7), which was not assigned any function, and four other parts all entered through doors in the court.

The first unit consists of a passage (8) with a kitchen (9) and a lavatory (10), both for the private use of the founder and his descendants, with a stairway to the upper floor. This passage leads to a large apartment which consists of an inner court *(durqāʿah)* (11) and then leads to an *īwān* (12) with shallow recesses and cupboards. Al-Sakhāwī had mentioned in his biography of Ibn Taghrībirdī that he kept his books and notes at his *turbah;* one can safely assume that they were kept in this part of the *turbah* in the recesses and cupboards, although this fact is not mentioned in the deed. Moreover, a librarian was mentioned in another part of the *waqfīyah* as part of the staff. The staircase leads to an L-shaped apartment with windows overlooking the main and side streets. This part is designated as the private residence of the founder and whomever he chooses, then his family after him, followed by any of the *turbah* staff members if no family members survive,

as chosen by *al-nāẓir*. No outsider is ever allowed to reside here.

The second unit is another windowless room *(khilwah)* (13) with a small apartment on top of it. The third unit has three lavatories (14) for the use of the *turbah* staff and visitors and the fourth part is a stable (15) with another apartment on top of it which was not finished at the time the *waqf* deed was written.

7. The side door *(bāb al-sirr)* (16) (lines 85–86):

This is a secondary door next to the stable leading to the side street, used for coffins being brought for burial, and for the entry of horses or other animals to the stable.

8. The *īwān* and the burial pavilion (17) (lines 86–93):

This is the most sacred part of the *turbah*, as usual occupying the qiblah (eastern) side of the *turbah*. Built of stone, it has four underground burial chambers *(fasqīyah)* and a stone floor most probably raised above the court ground level by two steps, as is common.

The *īwān* consists of five arcades; the middle one contained a mihrab and was used as a mosque for prayers. The other four arcades were not used for prayer, since they are positioned over the four burial chambers and prayers cannot be performed over the remains of the dead. The first *fasqīyah* was assigned for the burial of the amir Qulmiṭāy ibn ʿAbd Allāh al-Isḥāqī (d. 877/1472),[13] the husband of the founder's niece ʿĀʾishah, his family, and his retinue. The second was assigned to his niece ʿĀʾishah bint Jānibik al-Bashmiqdār,[14] and her descendants and retinue. The third was assigned to another niece, Zaynab bint Ḥamzah ibn Taghrībirdī, and her family and retinue. The fourth was reserved for the founder himself and whomever else he chose. Following his burial, the *fasqīyah* was to be locked and sealed so no one else could be buried with him afterwards.[15]

One might wonder why the burial area was divided into four parts, the middle section being assigned as a mosque by the *waqfīyah*. Obviously Ibn Taghrībirdī wanted his own individual burial area as he did not have a wife or children. Each branch of the surviving family was assigned a separate area. The arcades provided the necessary roof or shelter customary on a *fasqīyah* and must have been used for all kinds of rituals including sublimations and reading the glorious Quran for the benefit of each individual family branch. We have to presume the nature of those activities, since the *waqfīyah* assigns a function for the middle arcade only

[13] A junior *amīr ʿasharah* (commander of ten soldiers). See al-Sakhāwī, *Ḍawʾ*, 6:224.

[15] Dār al-Wathāʾiq al-Qawmīyah MS 147 Mamālīk, lines 299–301.

but does not mention the flanking spaces.

Conclusions about the *turbah* model and structure will be incomplete without comparison to other examples. The margin of the *waqfīyah* of Abū Zakarīyā Ibn ʿAbd Allāh Mūsá (chief surgeon of al-Bīmāristān al-Manṣūrī),[16] dated 871/1466 and 885/1480,[17] gives a detailed description which enables us to draw a plan of the *turbah* (fig. 3). It consists of 16 units: entrance, vestibule, *sabīl*, stable, court, side entrance, burial *maqsūrah*, mosque, residential quarters, lavatories, and a kitchen. This plan is very similar to that of Ibn Taghrībirdī's *turbah,* which has the same units albeit arranged differently and with minor variations.

The Organization of the *Turbah* and Its Expenses

Table 1 summarizes the staff appointed to the *turbah* and its expenses (revenue sums are seldom mentioned precisely in a *waqf* deed).[18] The staff consisted of the administrator *(nāẓir),* twenty persons doing various jobs, and ten young orphans below the age of puberty.[19]

The administrative functions were carried out by a staff consisting of the *nāẓir* to oversee the *waqf* properties and the *turbah,* and another person simultaneously acting as *shāhid* (witness) to observe and authenticate the foundation's transactions, and as a librarian to maintain the books and notes that the founder deposited at the *turbah.*[20]

The religious and educational functions were carried out by a *faqīh* (jurist) who taught the young orphans at the *kuttāb,* two Quran readers, and ten Sufis to carry out various tasks.

The service functions were carried out by a *bawwāb* or doorkeeper, a *mazamalātī* or *sabīl* keeper, and four *farrāsh/waqqād* or janitors for cleaning; the *waqqād* handled the lighting and illumination of the *turbah.*

A stipend was allocated for the education of ten young orphans. In addition the

[16]Died in Rajab 888/1483. For his biography see al-Sakhāwī, *Ḍawʾ,* 10:230; Doris Behrens-Abouseif, *Fatḥ Allāh and Abū Zakariyya: Physicians Under the Mamluks* (Cairo, 1987), 21–25.

[17]The *waqfīyah* deed is housed in the National Archives in Cairo (Dār al-Wathāʾiq al-Qawmīyah), under no. 152 Mamālīk; the margin is dated 11 Shaʿbān 872/1468.

[18]The founder endowed several pieces of real estate to finance the *turbah,* comprising a house in Ḥarat Burjwān in Cairo, a plot of land in Būlāq, a minor share in three plots of farmland in Gharbīyah province, and part of a village *iqṭāʿ* in the Manūfīyah province. See Ibrāhīm, "Waqfīyat Ibn Taghrī Birdī," 201.

[19]In a sense, the ten orphans were more beneficiaries of the *waqfīyah* than staff members. However, in the *waqfīyah* they are included with the staff since they received a stipend on the condition that they attended the lessons. They were permanent members of the *turbah* like all other staff, except that they were replaced by younger boys when they reached puberty.

[20]Though this is not explicitly mentioned in the *waqfīyah* it is mentioned by al-Sakhāwī. See al-Sakhāwī, *Ḍawʾ,* 10:308.

founder allocated various sums of money to procure water and equipment for the *sabīl* and maintenance of the *turbah* in general.[21]

The total monthly salaries, according to table 1, came to 7,200 trade *dirham min al-fulūs al-judud*[22] or *fulūs* (plural of *fals,* made out of copper, not silver) per month, which is 86,400 dirhams per year. The founder also allocated 3,900 dirhams yearly for other expenses. The total outlay would have been 90,300 dirhams*,* which seems a large amount, especially if we consider that the average income of a prominent scholar in a religious foundation ranged between 500 to 1,000 dirhams per month.

We can compare this with other foundations of the period. The *waqfīyah* of the complex of Barsbāy, built almost thirty years earlier, as stated by Fernandes,[23] shows a total yearly expense for wages of 15,600 trade dirhams and 7,230 *dirham nuqrah* (silver and copper). According to al-Maqrīzī, one *dirham nuqrah* equaled 20 trade dirhams in 826/1423.[24] Thus the total wages would amount to 160,200 trade dirhams per year; in addition he allocated a bread stipend of 32,100 loaves and 10 *irdabb*s of wheat per year. Al-Maqrīzī also gives the price of three loaves of bread from this period as 1 trade dirham and an *irdabb* of wheat as 80 trade dirhams,[25] which made a total bread stipend of 18,700 trade dirhams per year and a total expense of 179,900 trade dirhams per year.

The expenses of the *turbah* of Ibn Taghrībirdī would have been a little more than half that of the complex of Barsbāy, which is a hefty sum if we consider that the latter was the largest complex in the area, had a teaching function, and was the royal foundation of one of the richest sultans of the Burji period. This is a telling indication of how grand Ibn Taghrībirdī's *turbah* must have been.

As another example, the staff of the complex of al-Ashraf Qāytbāy, which was

[21] The staff functions, stipend, qualifications, and the various expenditure outlays were described in lines 353 to 415 of the *waqfīyah* and shown in more detail in table 1. See also Ibrāhīm, "Waqfīyat Ibn Taghrī Birdī," 206–14.

[22] Meaning "new dirham" and sometime called trade dirham. According to Schultz "this term, the subject of modern disagreement, is best understood as the amount of copper coins necessary to equal the value of a *dirham*'s worth of silver." See Warren C. Schultz, "Mamluk Monetary History: A Review Essay," *Mamlūk Studies Review* 3 (1999): 188. For more details on the use of copper coinage in Mamluk Egypt, see idem, "Mamluk Egyptian Copper Coinage Before 759/1357–1358: A Preliminary Inquiry," *Mamlūk Studies Review* 5 (2001): 25–43.

[25] Ibid.

built in the same period, as summarized by Popper,[26] numbered 38 excluding the students and the orphans of the *kuttāb*. Its total yearly stipend was approximately 253,200 dirhams. The stipend for the forty students was 240,000 dirhams per year, and the stipend for the twenty orphans was 24,000 per year. In addition the deed assigns a daily bread ration of 250 loaves, which would have cost around 65,000 dirhams per year, based on the average price of a loaf of bread in that period, which Adam Sabra has suggested was 0.71 dirhams.[27] Thus, the total annual salary expenses at the *turbah* of Qāytbāy would have been approximately 569,000 dirhams.

The complex of Qāytbāy had a madrasah which represents more than half of the expenses, while the *turbah* of Ibn Taghrībirdī had no students or teaching functions.[28] This means that the expenses of both foundations, apart from those related to teaching, were similar, taking into consideration the relative size of each. In addition the former is the royal foundation of the greatest sultan of the Burji period and his complex, which still stands today, is considered to be one of the jewels of Mamluk architecture.

Financial Status of Ibn Taghrībirdī

These facts, in addition to the large sums spent on building the *turbah* itself, leave no doubt that Ibn Taghrībirdī was a rich man, but the question remains: how did he accumulate such wealth? His father Taghrībirdī al-Atabakī[29] was a high-

[26] William Popper, *Egypt and Syria Under the Circassian Sultans, 1382–1458 A.D.: Systematic Notes to Ibn Taghrî Birdî's Chronicles of Egypt,* University of California Publications in Semitic Philology, vols. 15–16 (Berkeley, 1955–1957), 16:120–21.

[27] Adam Sabra, *Poverty and Charity in Medieval Islam: Mamluk Egypt, 1250–1517,* Cambridge Studies in Islamic Civilization (Cambridge, 2000), 126.

[28] I distinguish between two systems of education in the Mamluk period; one took place in the *kuttāb* and included basic proper conduct *(adab),* study of the Quran, reading, and handwriting. The teacher in this case was called *muʾaddib* (teacher of conduct) or *faqīh* (jurisprudent), and his assistant was called *ʿārif*. In charitable *kuttāb*s the students were invariably drawn from among the poor and pre-pubescent orphans. This was not considered a formal education, but a basic introduction to the tenets of Islam and to proper conduct. Formal education, on the other hand, was conducted in madrasahs by qualified teachers, normally called shaykhs. The students, called *ṭalabah,* were adults. The *turbah* of Ibn Taghrībirdī provided for a *kuttāb* but not for formal education or a student stipend.

Muḥammad Muḥammad Amīn (Cairo, 2003), 4:35.

ranking state official during the turbulent reign of al-Nāṣir Faraj. Taghrībirdī died in Damascus as viceroy of Syria in 815/1412 when his son Abū al-Maḥāsin was only three years old. Taghrībirdī left a large fortune which was confiscated by al-Nāṣir Faraj and squandered in his last military campaign against rebel amirs shortly before his murder. Nothing of this large fortune passed on to Ibn Taghrībirdī or his family and they were left with no money or estate (as he himself testifies).[30] But we know from the *waqfīyah* that he had a house in Ḥarat Burjwān in Cairo, a piece of land in Būlāq, a minor share in three plots of farmland in the Gharbīyah province, and part of a village *iqṭāʿ* in the Manūfīyah province.

As one of the *awlād al-nās* he received a monthly salary and a stipend of fodder, meat, and bread from the government. However, this could not have been much, and we must look for other sources of his wealth.

Unlike many other historians, Ibn Taghrībirdī never held any administrative or military office despite belonging to the *awlād al-nās* and possessing skills in martial arts, as he and his biographers claimed. Perhaps this was because his father died when he was very young. Ibn Taghrībirdī devoted all of his time to scholarly work as well as playing and writing music, yet he possessed a charming character, was generous and modest, and thus enjoyed wide social relations.[31]

His father was *rūmī*, meaning that he most likely came from Greece or the Balkans, and was not a Circassian like most of the Mamluk elite of the time. The background of his mother is unknown. He spoke fluent Turkish, was well acquainted with the manners of the elite, and moved freely within the ruling circle.

Ibn Taghrībirdī had a network of family ties to the sultans al-Ẓāhir Barqūq and his son al-Nāṣir Faraj and the ruling elite; the cousin of his father, Shīrīn al-Rūmīyah, was a wife of the former sultan and the mother of the latter.[32] His father also married a divorcee of al-Ẓāhir Barqūq, who bore him a daughter called Shaqrah. His sister Fāṭimah was married to al-Nāṣir Faraj.[33] His other sister ʿĀʾishah, also known as Shaqrah, was first married to a senior amir, Aqbughā al-Tamrazī (d. 843/1439–40), who was viceroy of Syria, and then was married to

[30] Al-Sakhāwī, *Ḍawʾ,* 10:306; see also the biography written by Ibn Taghrībirdī's friend and disciple Aḥmad Ibn Ḥusayn al-Turkmānī, in Jamāl al-Dīn Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* vols. 1–12 (Cairo, 1929–56); vols. 13–14 ed. [33] Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 4:42.

Sīdī[34] Khalīl, son of al-Nāṣir Faraj.[35] One of his nieces, a daughter of Shaqrah, was married to Muḥammad, the favorite son of al-Ẓāhir Jaqmaq, who was a candidate for the sultanate but for his untimely death in 847/1443–44.[36] The oldest sister of Ibn Taghrībirdī, Bayram, was married to Yashbik Ibn Azdamur al-Ẓāhirī (d. 817/1414–15) when he was the viceroy of Aleppo.[37]

Ibn Taghrībirdī's status and lineage allowed him access to sultans; he went hunting with al-Ashraf Barsbāy and accompanied him on his military campaign against Amid in Anatolia. He was close to the court of al-Ẓāhir Jaqmaq, as he was a friend of his son Muḥammad, the husband of Ibn Taghrībirdī's niece, as we have seen earlier. He attended a scholarly council held by the sultan every Friday at the Citadel and was a close friend of al-Qāḍī Kamāl al-Dīn al-Bārizī, *kātib al-sirr al-sharīf* (royal confidential secretary).[38]

Though he was not close to al-Ashraf Īnāl and seldom visited the Citadel during his reign, Ibn Taghrībirdī was still well connected to him through his close relationship with Yūsuf ibn ʿAbd al-Karīm Kātib Jakam (d. 862/1458), who was *nāẓir al-jaysh wa-al-khāṣṣ* (superintendent of the army and the privy council). He again became close to the court of al-Ẓāhir Khushqadam and particularly close to the most powerful amir of the time, Jānibik, *nāʾib* Jiddah (d. 867/1462).[39]

Both al-Sakhāwī and al-Jawharī, his contemporary and rival historians, alleged that Ibn Taghrībirdī used his origins and contacts with some of the powerful amirs to attract financial favors, including real estate and money, from the state. In their accounts, they also allege that he received gifts and money from members of the elite to write favorably about them in his chronicles.[40] These accusations were strictly denied by Ibn Taghrībirdī and his disciples.[41]

We cannot, therefore, accept those claims at face value, since both historians were professional rivals of Ibn Taghrībirdī and were notoriously jealous of him. However, we also cannot discount the possibility that he used his connections,

[34] *Sīdī,* singular of *al-asyād,* meaning the masters, is the title normally used to designate sons of Mamluk sultans who do not succeed to the sultanic throne.

[35] Marrying of widows and divorcees was very common in Mamluk society.

[39] Ibid., 70–71.

[40] In particular they alluded to his close relationship with al-Ṣāḥib Jamāl al-Dīn Yūsuf Ibn Kātib Jakim (d. 862/1458) and Jānibik *nāʾib* Jiddah (d. 867/1462). See al-Sakhāwī, *Ḍawʾ,* 10:306; ʿAlī ibn Dāwūd al-Jawharī al-Ṣayrafī, *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr,* ed. Ḥasan Ḥabashī (Cairo, 1970), 179–81.

[41] Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 1:16.

social status, and scholarly prestige to augment his wealth.[42] On the other hand we know that he inherited an *iqṭāʿ* that he shared with his brother Qāsim,[43] and it is likely that he may also have inherited reasonable sums of money from his sister who was married to a rich qadi,[44] as well as other family members whom he survived.[45]

FAMILY RELATIONS

Ibn Taghrībirdī, following the practice of most Mamluk historians, did not write his autobiography. What we possess of his biography focuses on his education and works, hardly touching on his personal life. Most of the details we know about his family are derived from the biography he wrote of his father.[46]

Ibn Taghrībirdī was the youngest of ten children, all born to different mothers, except for himself and his full sister. The boys were Qāsim (b. 798/1395–96, d.?), Ḥamzah (b. 800/1397–98, d. 848/1444–45), Ibrāhīm (b. 808/1405–6, d. 826/1422–23), Muḥammad (b. 800/1397–98, d. 819/1416–17) and Ismāʿīl (b. 810/1407–8, d. 833/1429–30). The sisters were Khawānd Fāṭimah, who was married to the sultan al-Nāṣir Faraj (b. 795/1392–93, d. 846/1442–43), Bayram (b. 807/1404–5, d. 826/1422–23), Hājir, who was his only full sister (b. 807/1404–5, d. 846/1442–43), and ʿĀʾishah, also called Shaqrah. She was married to Khalīl, al-Nāṣir Faraj's son, and her mother was a former wife of al-Ẓāhir Barqūq.[47] As a boy, Ibn Taghrībirdī lived with his only full sister, Hājir. She was married to the chief Shafiʿi judge, ʿAbd al-Raḥmān al-Bulqīnī (d. 824/1420–

[42]For more detailed discussions of the properties of Ibn Taghrībirdī and the web of his social relations, as well as his relations with the ruling elite and the sultan, see Darrāj, "Nashʾat Abī Al-Maḥāsin," 64–73.

[43]Al-Jawharī, *Inbāʾ al-Haṣr,* 179.

[44]His sister Hājir was married to ʿAbd al-Raḥmān al-Bulqīnī, who came from a rich family. It is worth noting here that Ibn Taghrībirdī refers to his sister as *karīmatī,* a term used in modern Arabic to designate a daughter, not a sister. Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 7:200.

[45]In addition to the primary and secondary sources quoted above there exists a large corpus of secondary sources dedicated to the study of Ibn Taghrībirdī's private and public life. See Aḥmad ʿIzzat ʿAbd al-Karīm, "Al-Muʾarrikh al-Miṣrī Jamāl al-Dīn Abū al-Maḥāsin ibn Taghrībirdī," in *Al-Muʾarrikh Ibn Taghrī Birdī,* 11–18; Maḥmūd Ismāʿīl ʿAbd al-Rāziq, "Manhaj al-Muʾarrikh Ibn Taghrībirdī fī Kitābihi al-Nujūm al-Zāhirah," in ibid., 107–22; Saʿīd ʿAbd al-Fattāḥ ʿĀshūr, "Makānat Ibn Taghrībirdī bayna Muʾarrikhī Miṣr fī al-Qarn al-Tāsiʿ al-Hijrī," in ibid., 87–106; Aḥmad Darrāj, "La vie d'Abū'l-Maḥāsin Ibn Tagrī Birdī et son oeuvre," *Annales Islamologiques* 11 (1972): 163–81; William Popper, "Abū'l-Maḥāsin Djamāl al-Dīn Yūsuf b. Taghrī Birdī," *The Encyclopaedia of Islam,* 2nd ed., 1:137–38; Gaston Wiet, "L'Historien Abul-Maḥāsin," *Bulletin de l'Institut d'Égypte* 12 (1930): 89–105.

[46]Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 4:31–43.

[47]Ibid., 41–42.

21), who tutored young Yūsuf. This prominent judge played a major role in his upbringing and education as attested by the historian himself.[48] Such kindness evidently influenced the character of Ibn Taghrībirdī, for he remained grateful and attached to his family all his life, as we can see from the *waqfīyah*.

By the time he drew up the *waqfīyah* in Shaʿbān 870/1465 all his brothers and sisters had died except Khawānd ʿĀʾishah Shaqrah. No children or spouses were mentioned in the *waqfīyah* as beneficiaries of any of its resources, which leads us to believe that he had none. This is confirmed in line 336 of the *waqfīyah* where property he owned is assigned to his "possible future" children. The *waqfīyah* was written when Ibn Taghrībirdī was 58 years old and he died four years later on Dhū al-Ḥijjah 874/1470. Ibn Taghrībirdī stopped writing his chronicles in 872/1468 after becoming very sick, and remained bedridden for the last two years of his life. The last modification in the deed, executed only a few weeks before his death, favored a protégé of his and does not mention a wife or children. Thus, we can safely conclude that he died with no children or wife surviving him.

One of the important functions of the *waqf* system was to transmit income to family members by allocating revenues in excess of the *waqf* expenses. This surplus would normally go to the founder in his lifetime and to his descendants upon his death. Having no children of his own, Ibn Taghrībirdī divided the revenue surplus after his death into three equal portions; one third went to his only surviving sister, Khawānd ʿĀʾishah Shaqrah (he did not assign a burial place to her as she was married to Khalīl ibn al-Nāṣir Faraj and was thus entitled to a royal burial at the *khānqah* of Faraj ibn Barqūq). The second third went to his niece ʿĀʾishah, and the remaining amount was to be equally distributed among Zayn al-Dīn Muḥammad al-Maghribī and his brother Badr al-Dīn Barakāt together with the surviving freed slaves of Ibn Taghrībirdī.[49] Zayn al-Dīn may have been his favorite young servant. Al-Jawharī maliciously claims that Ibn Taghrībirdī allocated to him his entire *turbah* and most of its jobs and revenue at the expense of his sisters and heirs.[50] This is a naked lie and a libel aimed at tarnishing the reputation of Ibn Taghrībirdī by his rival, since the *waqfīyah* allocated to him only a minor share of the surplus of revenues and a modest job.

The succession to the top job in the *waqfīyah, nāẓir al-waqf,* also shows Ibn Taghrībirdī's commitment and attachment to his family; after his death it would be passed on to his niece ʿĀʾishah, then to her husband Qulmiṭāy (and their descendants), his sister Shaqrah, his other niece Zaynab bint Ḥamzah, or their descendants, and then to Zayn al-Dīn Muḥammad and his brother. If they were all

[50] Al-Jawharī, *Inbāʾ al-Haṣr,* 182.

deceased, it would then be left to a high-ranking state official.[51]

Ibn Taghrībirdī was wealthy and lived a long life by Mamluk standards, where it was very unusual for someone of his social status and age to have no wife, concubine, or children. The only person from outside the family of the founder who was given a share in the surplus revenue of the *turbah,* and was included in the succession to the position of *al-nāẓir* and exempted from some restrictions, was the aforementioned Zayn al-Dīn Muḥammad. Al-Jawharī believed that Ibn Taghrībirdī willed him all his property at the expense of his sisters and relatives in violation of the inheritance rules set by the shariʿah. He referred to Zayn al-Dīn Muḥammad as "*fatāh,*" meaning the boy or valet of Ibn Taghrībirdī, a term that may carry sexual connotations in the language of the time. Can this be taken as an indication of the sexual preference of Ibn Taghrībirdī in view of his unusual celibacy? Given the current state of our knowledge such a possibility is sheer conjecture; however, it is an interesting dimension that has never been addressed before.

Conclusion

In conclusion, the *waqfīyah* of Ibn Taghrībirdī is useful for investigating several architectural, economic, and social issues. It enables us to reconstruct an accurate layout of the *turbah,* its units, and functions, which suggests the development of the *turbah* from a simple mausoleum into a large complex during the Mamluk period. The analysis of the *turbah*'s financial outlay is a viable indicator of the wage levels at that time, and the financial and social status of the founder and of the *turbah* inhabitants. This study has also shed light on some personal aspects of Ibn Taghrībirdī's life, such as his family relations, his affiliations, and his generous and grateful disposition, and has shown the fallacy of some claims by his envious critics. Such issues are hardly dealt with in the more formal and politically-oriented contemporary biographies.

In conclusion, historiographers are mainly concerned with studying the method, concepts, and literary structure used by medieval historians and schools of historical thought. Such understanding is not possible without an analysis of the interplay between a historian's life, career, and the cultural currents that shaped his literary works.[52] Understanding the life of Ibn Taghrībirdī and his social and economic background is therefore essential for an accurate interpretation of his historical works and their proper context. The conclusions reached here and in similar studies can contribute to this contextualization and an independent interpretation of his historical works.

Table 1. The *turbah* organization and expenditure outlay as defined by the *waqfīyah* of Abū al-Maḥāsin Ibn Taghrībirdī

	Job title	Number	Monthly salary*	Duties and qualifications	Reference (line #)
				Assignments and activities	
1	*Bawwāb* (doorman)	1	400	Duties: To reside at the *turbah* and leave it only in case of necessity.	353–59, 469–71
				Assignments and activities: To guard the *turbah,* open and close its doors, keep its keys, and remove intrusions on the façade along the sultanic highway.	
2	*Mazamalātī* (*sabīl* keeper)	1	300	Duties: To reside at the *turbah.*	357–63, 467
				Assignments and activities: To wash, clean, and fumigate the cistern every year. To fill up the *sabīl*'s water-dispensing mechanism. To tend the *sabīl*'s window every morning. To keep the tools of the *sabīl.* To clean and sweep the *sabīl.* To clean, fumigate, and hang the *sabīl* jugs after filling them with water for the benefit of the passers-by.	
3	*Farrāsh* (janitor) and *waqqād* (candle lighter)	4	500	Duties: To reside at the *turbah.*	370–77, 467
				Assignments and activities: To sweep the *turbah* and clean its floor mats. To pick up the wilted flowers from the graves and throw them outside the *turbah.* To light candles. To wash and clean the lanterns and to light and extinguish them.	
4	Students	10	150	Qualifications: Young orphans and children of the poor and needy to be selected by the *nāẓir.*	378–84
				Assignments and activities: To recite the glorious Quran and dedicate the accrued blessing to the founder, his siblings, parents, and Muslim residents of the *turbah.* The recitation is to be concluded daily by supplications to the Prophet except on Tuesdays, Fridays, feasts, and anniversaries.	

*In trade dirhams per person.

5	*Faqīh* (jurist)	1	300	Duties: To teach the students every day, except on Tuesdays, Fridays, feasts, and anniversaries.	385–86, 471
				Assignments and activities: To discipline the students and teach them reading and writing, as well as recitation of the glorious Quran daily, except on Tuesdays, Fridays, feasts, and anniversaries.	
6	Quran readers	2	150	Duties: To memorize the Quran and never interrupt reading unless sick, traveling on pilgrimage, or other legal excuse.	387–91, 472–74
				Assignments and activities: To recite collectively half of a *ḥizb* of the Quran after the morning prayer at the founder's grave and dedicate the blessing of the recitation to the Prophet, then to the founder, his siblings, parents, and Muslim residents of the *turbah.* The recitation is to be concluded by praying for the Prophet.	
7	*Shāhid* (notary) and *khāzin al-kutub* (librarian)	1	200 for each	Qualifications: Zayn al-Dīn Muḥammad al-Maghribī is assigned to this job, then his brother al-Saʿīd Rukn al-Dīn Abū al-Barakāt, then any of their sons, or someone to act for them if they are not of legal age or competent.	392–404
				Assignments and activities: No special tasks are mentioned, but from the designation we can conclude that the job of the notary is to authenticate all the financial and legal transactions of the foundation. The librarian's task is to look after the books and compilations of the founder.	

8	*Nāẓir* (super-intendent)	1	500	Qualifications: The founder himself, then his siblings by order of age, then his niece ʿĀʾishah, wife of Qulmiṭāy, then their siblings by order of age, then Qulmiṭāy himself, then ʿĀʾishah Shaqrah, sister of the founder, then his niece Zaynab, then al-Zaynī Muḥammad and his brother Badr al-Dīn Muḥammad Abū al-Barakāt, then any of their siblings afterwards, then al-Dawādār al-Thānī in Egypt, then the *kātib al-sirr* (confidential secretary), then the sultan or whom he deputizes.	412–22, 476–90
				Assignments and activities: To utilize the foundation in legitimate activities. To disburse the revenue to the beneficiaries holding jobs at the foundation and according to the other expenditure outlay as specified in the *waqfīyah* deed. To distribute the revenue surplus as specified in the *waqfīyah* deed. In general, he is charged with the administration of the *turbah* and its workforce.	
9	Sufis	10	150	Qualifications: People of charitable and religious qualities who come to the *turbah* daily after sunrise.	438–47
				Assignments and activities: To recite ten parts of the glorious Quran. One of the Sufis is singled out as their shaykh, and he puts his Quran in front of him on a special *kursī* (stand) presented to him by the *khādim al-muṣḥaf* (servant of the Quran), who is also one of the ten Sufis. Two of them conclude the recitation by reading *Sūrat al-Ikhlāṣ* (*sūrah* 112), *Al-Fātiḥah* (opening *sūrah* of the Quran), and supplications, all to be dedicated to the Prophet, his siblings, his household, and his companions, as well as to the founder, his siblings, the *turbah* residents dead and living, *the nāẓir,* and all Muslims. One of the Sufis is to be *mādiḥ* (panegyrist) of the qualities of the Prophet.	

*In trade dirhams per person.

Expense	**Monthly outlay***	**Explanation**	**Reference (line #)**
Fresh water	300 yearly	Clean fresh water totaling 300 *rāwiyahs* (water bags) in addition to the 200 *rāwiyahs* from the *waqf* foundation of ʿĀʾishah, wife of Qulmiṭāy. To fill up the cistern after its being washed, cleaned, and fumigated.	364–69
Miscellaneous	100	For the tools of the *sabīl* and the requirements of the southern *īwān,* such as floor mats, tools, glass, and drinking jugs.	405–6
Maintenance works	200	To repair fallen parts of the *turbah* or its *waqf* property, and to maintain its buildings. The surplus from this expense item is to be used for procuring real estate by the *nāẓir* to be added to the *turbah* property.	407–11
Surplus		The surplus of the revenues will go to the founder during his lifetime. If he dies without siblings, it will be divided into three equal parts. One third goes to ʿĀʾishah Shaqrah, sister of the founder; the second third goes to his niece ʿĀʾishah, wife of Qulmiṭāy during their lifetime; the last third is divided equally among the brothers Zayn al-Dīn and Badr al-Dīn Muḥammad Abū al-Barakāt and the living freed slaves of the founder (but the two brothers get a double share). The share of each of the above will go to their siblings at their deaths. If all of the above expire, the surplus goes to the ten Sufis.	422–36

Text of the Waqfīyah of Ibn Taghrībirdī

The *waqfīyah* is kept at the National Archives in Cairo under no. 147 and dated 14 Sha'bān 870/1465 recto and verso.[53] It is a paper roll 33 cm wide and 17.20 m long, written in black ink in clear handwriting, and remains generally in good condition except for some disintegration in the left margin.

The following is a transcription[54] of the microfilm copy of the *waqfīyah*. The notarization sections with the standard legal formulae of attestation and certification by the chief judges in the recto and verso or margins of the *waqfīyah* have been omitted. Those notarization sections in many cases are either damaged or illegible and are not relevant to the context of this article.

The recto of the *waqfīyah* consists of 25 pages, of which pages 1 to 13 and 18 to 24 are notarization sections. The verso of the *waqfīyah* comprises the most important part, with brief notarization sections in the margins that are also omitted.

Recto:

A Legal Instrument in the Service of People and Institutions: Endowments in Mamluk Jerusalem as Mirrored in the Ḥaram Documents

Religious endowments formed an important part of spiritual and legal life in the pre-modern Islamic world. Much has been written on the religious foundations for al-Ḥaram al-Sharīf by the sultan Saladin (Ṣalāḥ al-Dīn) after his conquest of Jerusalem in 583/1187.[1] But his were only the first in a long tradition of endowments in her "Noble Holiness," al-Quds al-Sharīf, as the city was called in contemporary writings. From the seventh/thirteenth century onwards, Jerusalem was the place of numerous endowments by high-ranking Mamluk officials and ladies who founded mausoleums (sing. *turbah*), colleges (sing. *madrasah*), Sufi hospices (sing. *khānqāh*), and Sufi-convents (sing. *zāwiyah*). These buildings shaped the city and some still exist today.[2] As private institutions with their own sources of revenue, these foundations fulfilled social and religious functions, provided teaching posts for religious scholars, and paid for worship services both within their own confines and within the holy district, al-Ḥaram al-Sharīf, with its two sanctuaries, al-Masjid al-Aqṣá and the Dome of the Rock (Qubbat al-Ṣakhrah).[3] Some attention has been given to the founders of these endowments, the economic support they provided, and their history in the centuries after the Mamluk period.[4]

This article will take another angle and enquire into legal practice connected to endowments in Mamluk society. Several specimens from the so-called Ḥaram

[1]On the endowments of Ṣalāḥ al-Dīn al-Ayyūbī, see Y. Frenkel, "Political and Social Aspects of Islamic Religious Endowments *(Awqāf):* Saladin in Cairo (1169–73) and Jerusalem (1187–93)," *Bulletin of the School of Oriental and African Studies* 62 (1999): 1–20; and Johannes Pahlitzsch, "The Transformation of Latin Religious Institutions into Islamic Endowments by Saladin in Jerusalem," in *Governing the Holy City: The Interaction of Social Groups in Jerusalem between the Fatimid and the Ottoman Period,* ed. Johannes Pahlitzsch and Lorenz Korn (Wiesbaden, 2004), 47–69, with a new edition of the *waqfīyah* and a translation in ibid., 60–68.

[2]On this issue, see the excellent architectural overview in Michael Hamilton Burgoyne, *Mamlūk Jerusalem: An Architectural Study: With Additional Historical Research by D. S. Richards* (Jerusalem, 1987); more general is Yūsuf Darwīsh Ghawānimah, *Tārīkh Niyābat Bayt al-Maqdis fī al-ʿAṣr al-Mamlūkī* (Amman, 1982), 107–11.

[4]Ibid., 66a–70b.

corpus, 900 documents from eighth/fourteenth-century Jerusalem,[5] concern various aspects of religious and private endowments. Little is known about the functioning of these foundations from the leaseholders' perspective, that is, the legal relations of shopkeepers and farmers on *waqf* land to the *waqf* administration. One of the first things we may learn from the Ḥaram documents is that the legal paperwork in Mamluk times was not restricted to the endowment deed by which a foundation had been established. In the following we will discuss a variety of documents that at various times were certified in court and attested to the existence of an endowment. These documents also demonstrate how some people used the legal instrument of "endowment" in ways quite different from Mamluk sultans and their officials.

Our first example is a deed from a citizen of Hebron from 26 Ṣafar 759/7 February 1358, which endowed a house *(dār)* in Jerusalem. The document describes the estate, and enumerates as beneficiaries the founder and his children, followed by their descendants.[6] Less than one month later, this deed was confirmed by the procedure of *thubūt* (establishing as legal fact).[7] For this, the judge summoned and questioned the witnesses, accepted their testimony as legally binding, and ratified the document with his *ʿalāmah* (official motto). Only then would he call upon his court witnesses to attest to the *thubūt* procedure in the form of a notarized *ishhād* on the verso of the document.[8] In terms of layout, this endowment deed resembles any other legal document in the Ḥaram collection with the exception of the phrase "*waqafa wa-ḥabbasa* . . ." (it has endowed and alienated . . .). The deed did not follow a specific decorative format of notarization, as we may find in marriage contracts written in columns with a wide blank space between two lines.[9]

The second endowment deed in our archives was drawn up on 5 Ṣafar 768/11 October 1366 and concerned a house *(dār)* in the Bāb al-ʿAmūd quarter

[5]See Donald P. Little, *A Catalogue of the Islamic Documents from al-Ḥaram aš-Šharīf in Jerusalem,* Beiruter Texte und Studien 29 (Beirut/Wiesbaden, 1984).

[6]See Ḥaram document no. 617/1, lines 2ff. deal with the presence in court, lines 10ff. with the beneficiaries of the *waqf* (a part of this sentence remains undeciphered). Cf. also Little, *Catalogue,* 319. Only the registration on the verso names the city of Jerusalem as the location of the estate. As a convention, I indicate with a slash after the number of a Ḥaram document, here "617/1," one of several recordings on the same piece of paper or parchment, numbered in chronological order, which rarely corresponds with the layout given in the *Catalogue* by Little.

[7]See Ḥaram document no. 617/2 (verso) from 22 Rabīʿ I 759/4 March 1358; cf. Little, *Catalogue,* 319.

[8]On this procedure and subsequent notations on the documents see my analysis of the Ḥaram documents from a judicial and historical perspective, "Qāḍī-Gericht und Rechtsadministration in Jerusalem: Studie der mamlūkischen Dokumente des Ḥaram Sharīf" (forthcoming), here chapter IV, "Gerichtliche Verfahrensarten."

[9]Cf. Little, *Catalogue,* 301.

of Jerusalem. After the founder's death, the estate would pass to the Ṣalāḥīyah Hospice.[10] We note the same lack of formality in its notarization. This document does not bear any signs of a *thubūt* procedure in court, and we must assume that court confirmation was not indispensable for the validity of a foundation, unless there was a dispute. Was it the absence of any family heirs which made additional judicial procedure unnecessary for the Ṣalāḥīyah Hospice?

A third endowment deed was, once again, certified in court after some time, and in this case family members do appear as additional actors. On 25 Rabīʿ I 747/16 July 1346, Fāṭimah al-Marʾ (?) Saʿūd had it notarized that she had endowed from her personal property the renovated Roman vaulted gallery *(qabw)* next to her house in the Maghribī Quarter. The beneficiaries were the old Maghribī *fuqarāʾ* living in the rear of this gallery, probably in the Zāwiyat ʿUmar, which formed the northern boundary of the *waqf*. When the *fuqarāʾ* had perished, the place should pass to the *waqf* of the Maghribī Quarter.[11] As is made clear from the description, this vaulted gallery formed a street corner to its west and south, with the founder's house at its eastern side.

To challenge the endowment, claims would be made that Fāṭimah had not been full proprietor of the property, and that she did not have the legal capacity to make such an endowment. Unlike the first endowment cited above, here there occurred another step before court certification of the endowment was notarized: some weeks after the endowment deed was written, the founder's son, Masʿūd, present in court, was accused of having changed the parameters *(taḥyizat al-ʿimārah)* of the endowed building.[12] Finally, he acknowledged his mother's property rights on the gallery, and this was notarized in the same document on 9 Rabīʿ II 747/30 July 1346.[13] Again some weeks later, the two documents were "established as legal facts" *(thubūt)* by the Shafiʿi judge of the city.[14] After this, the son had no legal opportunity to overturn his mother's endowment.

Another document, dating from 6 Dhū al-Ḥijjah 778 (?)/16 April 1377 (?), contained the acknowledgement by Sitt al-Bintayn al-Bilbaysīyah of her endowment of an orchard *(karam)* with fig trees, grapes, and olives within described boundaries on land of the Khān Banī Saʿd in Jerusalem. She designated herself as beneficiary during her lifetime, followed by her brother ʿUmar and

[10]Ḥaram document no. 20, edited by Ghawānimah, *Tārīkh Niyābat Bayt al-Maqdis,* 194, no. 9, and Muḥammad Ṣāliḥīyah, "Min Wathāʾiq al-Ḥaram al-Qudsī al-Sharīf al-Mamlūkīyah," *Ḥawliyāt Kulliyat al-Ādāb* (Kuwait) 6 (1985): 49ff.

[11]Ḥaram document no. 833/1 (recto), cf. Little, *Catalogue,* 319; edited in Kāmil Jamīl al-ʿAsalī, *Wathāʾiq Maqdisīyah Tārīkhīyah* (Amman, 1983 and 1985), 1:235ff.

[12]Ḥaram document no. 833/2 (verso), ll. 3–4, not edited.

[13]Ibid.; cf. Little, *Catalogue,* 320.

[14]Ḥaram document no. 833/3 (4 Jumādá I 747/23 August 1346); Little, *Catalogue,* 320.

finally the Māristān Ṣalāḥīyah,[15] which benefitted the poor orphans of Jerusalem.[16] This is an example of an endowment of a plantation *(ghirās)* on *waqf* land.[17] No process of court certification took place in this case, to which we will return later. There is a slight, but historically important, difference between the document concerning Fāṭimah and this last one by Sitt al-Bintayn. In the first case, the act of endowment was notarized, and the witnesses attested to Fāṭimah's declaration, by which she made the endowment.[18] The second document attests to the fact that on such and such day, Sitt al-Bintayn declared having made an endowment. The act of endowment may have preceded the declaration by any period of time, whereas Fāṭimah made her endowment when the document was written.

The creation of an endowment demanded proof that the landowner held full property rights.[19] A house in Jerusalem is the subject of another Ḥaram document which demonstrates this point. In the last document in this series of attestations, a man acknowledged having endowed the house *(dār)* as *waqf* for himself and his wife as initial beneficiaries, followed by the Khānqāh Ṣalāḥīyah.[20] The first document on the recto, however, concerned the acknowledgment by an ill woman, ʿAmīrah/ʿUmayrah bint Muḥyī al-Dīn al-Qiramī, of the sale of her residence *(dār)* to Shaykh Aḥmad ibn Khaḍir al-Qiramī. Just one day later, on 13 Rajab 783/3 October 1381, this acknowledgment was certified in court,[21] followed less than three weeks later by the formal attestation of how ʿAmīrah herself had acquired the property by transfer *(intiqāl)* from the "register of the public treasury" *(dīwān bayt al-māl)* on 12 Shaʿbān 768/13 April 1367.[22] Taken together, these three legal documents attest to the transfer of property rights of this particular house that Shaykh Aḥmad had acknowledged he had converted into a *waqf*. The date of his acknowledgement attestation is ambiguous,[23] but as mentioned before, the date of

[15]The hospital founded by Ṣalāḥ al-Dīn in 584/1187 in the Dibāghah Quarter; cf. Little, *Catalogue*, 203.

[16]Ḥaram document no. 204; I read "*khān*" for "*ḥārah*": the orchard was situated on "land of the Khān Banī Saʿd", not in the Ḥārat Banī Saʿd; cf. Little, *Catalogue,* 203.

[17]For details see below.

[18]See al-ʿAsalī, *Wathāʾiq,* 1:236, after line 13.

[19]See above the acknowledgement of Fāṭimah's son Masʿūd.

[20]Ḥaram document no. 58/4 verso right; cf. Little, *Catalogue,* 194.

[21] Ḥaram document no. 58/2 verso, 13 Rajab 783/3 October 1381; Little, *Catalogue,* 193.

[22]Ḥaram document no. 58/3 recto bottom, 2 Shaʿbān 783/22 October 1381; Little, *Catalogue,* 193.

[23]Whereas "8 Shawwāl" is perfectly readable, line 18 may very well be 783—which would be six days after the attestation of *intiqāl*—but the witness signature below on the right has a different year, possibly 784: Ḥaram document no. 58/4 verso right. Little, *Catalogue,* 194, reads "786?," which I cannot confirm.

the acknowledgement does not signify the creation of an endowment. The house might well have been endowed when Shaykh Aḥmad asked ʿAmīrah to attest to the sale, possibly in order to protect the endowment against other claims.

ʿAmīrah's written acknowledgement of her sale to Shaykh Aḥmad did not have the legal standing of a sales contract. It indicates neither the price for the house, the means of payment, nor the requirements for concluding the contract. Other sales contracts with added notarization of the property transfer to the seller have survived, however.[24] Therefore we may assume the original sales contract being lost, Shaykh Aḥmad turned to the sick ʿAmīrah, who could acknowledge the sale. After her death, a proof of this sale and the property rights to the endowment without the sales contract would turn out to be much more complicated. The fact that ʿAmīrah's written acknowledgement was immediately followed by court certification and the *intiqāl* attestation indicates the desire by one of the parties to use this attestation in current legal affairs. My point is not to establish the time when Shaykh Aḥmad in fact endowed his house, but rather to demonstrate how people made use of legal documents and court procedures to ensure their endowments. Obviously the buyer, Shaykh Aḥmad, and his wife had no children, otherwise he would have noted them as beneficiaries, before the Khānqāh Ṣalāḥīyah. Without children, the public treasury would inherit a portion of the shaykh's estate in addition to the widow's, which might have resulted in the public sale of the house. To avoid this risk and its adverse effect for his wife, good reasons existed for the creation of an endowment that guaranteed the use of the entire house within the couple's lifetime. This surviving document was probably held by the Khānqāh Ṣalāḥīyah after the death of Shaykh Aḥmad and his wife, as attestation of rights to a house, which the *khānqāh* administered. In such a context, ʿAmīrah's acknowledgement and the following attestations were even better suited than the endowment deed by Shaykh Aḥmad, which does not attest to how its founder acquired the property. As a matter of fact, this *waqf* deed was not preserved.

Another acknowledgement of an endowment was notarized for still other purposes. This document concerned the endowment by the noblewoman Sufrā Khātūn of a mausoleum *(turbah)* and college *(madrasah),* not the dwellings of a family. On 26 Dhū al-Ḥijjah 770/1 August 1369 Sufrā Khātūn, wife of the deceased ʿImād al-Dīn al-Bāwardī,[25] acknowledged the endowment of various commodities, including carpets and lamps, for the *turbah* and the madrasah she

[24] See, e.g., Ḥaram document no. 39/2 recto; Little, *Catalogue,* 278 (referred to as "B").

[25] Ḥaram document no. 76/1, l. 3.

had established in Jerusalem.[26] This document had been written in Jerusalem, as far as one can judge from the testifying witnesses.[27] Literary sources inform us that Sufrā founded the Madrasah al-Bāwardīyah in the year 768/1367,[28] two years before the present document. What then could be the use of this document, written two years after the initial endowment? Two things seem to be important: firstly, the items mentioned as endowment in the acknowledgement of 770/1369 concern the furnishings, not the establishing of the institution. These items should only be used by those who staffed the endowed buildings *(man lahu waẓīfah fī al-makān)* and should not be taken away.[29] Secondly, this written acknowledgement was obviously meant to be legally valid in a town other than Jerusalem.[30] This however necessitated a first court certification *(thubūt)* from the Shafiʿi judge in Jerusalem, given two and a half months after the acknowledgement, on 2 Rabīʿ I 771/4 October 1369.[31] Attached to the four signatures attesting to this *thubūt* procedure is the *tazkiyah* attestation of 22 Rabīʿ II 773/2 November 1371 concerning the *ʿadālah* of one of these witnesses.[32]

After court certification in Jerusalem, Sufrā's acknowledgement of her endowment could finally be accepted as a legally binding document in Damascus. On 29 Jumādá II 773/7 January 1372 the Shafiʿi deputy judge of Damascus certified the various documents,[33] more than two years after the initial acknowledgement. These court procedures certainly cost money, and we may imagine a dispute over

[26]Ḥaram document no. 76/1 (recto), not "790" as in Little, *Catalogue,* 194 (see below). The name in line 3 reads "Bāwardī" and not "Bārūdī," as it is given in Burgoyne, *Mamlūk Jerusalem,* passim, and Little, *Catalogue,* 194, n. 13. On the *nisbah* Bāwardī see ʿAbd al-Karīm ibn Muḥammad al-Samʿānī, *Al-Ansāb* (Beirut, 1988), 1:274; cf. Mujīr al-Dīn ʿAbd al-Raḥmān al-ʿUlaymī, *Al-Uns al-Jalīl bi-Tārīkh al-Quds wa-al-Khalīl* (Najaf, 1388/1968), 2:43: al-Madrasah al-Bāwardīyah.

[27]We find the characteristic signature in the right position of Ḥaram document no. 76/1 (Muḥammad ibn ʿUmar al-. . .) on several other documents from Jerusalem between the years 765 to 776: Ḥaram document no. 38 (middle), no. 322 (middle), no. 352/1 (middle), no. 352/2 (first), no. 354/1 (middle right), and no. 714 (right).

[28]Mujīr al-Dīn, *Uns,* 2:43f., with her father being known as "al-Bāwardī" contrary to Ḥaram document no. 76/1. Cf. also Little, *Catalogue,* 194, n. 13.

[29]Ḥaram document no. 76/1, ll. 11–13.

[30]See court validation by the *nāʾib fī al-ḥukm* of Damascus in Ḥaram document no. 76/4 (verso, right side); for details see below. On the procedure for court certification see my "Qāḍī-Gericht," chapter IV.

[31]Ḥaram document no. 76/2 (verso left). The year cannot be "791," as in Little, *Catalogue,* 194, since the judge and his witnesses were active around 770. This excludes dates as given in ibid., 194f., in the 790s.

[32]Ḥaram document no. 76/3 (below no. 76/2); this attestation is not mentioned in Little, *Catalogue,* 194. "*ʿAdālah*" is the legal quality necessary for any legally binding testimony.

[33]Ḥaram document no. 76/4 (verso, right side); cf. Little, *Catalogue,* 195. However, it is not the *ḥākim,* but the *nāʾib fī al-ḥukm* of Damascus.

items left by the late Sufrā in Damascus, which required legal proof that they had been endowed for her mausoleum and college in Jerusalem. Of course, this explanation remains conjectural, but fits our documentary findings. It would even explain why the document was preserved in Jerusalem, in the hands of those persons who administered the Madrasah al-Bāwardīyah.

Up to this point, we have examined documents pertaining to the creation of endowments, mostly for the benefit of family members, but also, as in the last case, for religious purposes. The next two cases concern litigation within a family over the administration and distribution of revenues. Regulating inheritance between family members was common practice in Mamluk Jerusalem and did not concern only houses or orchards. A certain Ghāliyah bint ʿUthmān addresses a petition to the judge Sharaf al-Dīn (d. 797/1395) and alleges that her brother ʿUmar arrogated revenues from their common family endowment for himself.[34] From her undated petition, we learn that her father, ʿUthmān ibn Thuʿaylib, had created an endowment, immediately before his death, in favor of his descendants *(waqf ʿalá al-dhurrīyah)* and had ʿUmar installed as administrator *(mutawallī)*.[35] Then Ghāliyah complained that ʿUmar sold *laban* "for 20 [possibly dirhams]" daily, which he got from the 200 sheep *(raʾs ghanam)*. They also had an orchard *(karam)* in the Māmillah area with two houses, one of them inhabited by his brother-in-law *(ṣihruhu),* the other leased to him (?) for 20 years. In addition to this, her sister had made off with the *waqf* deed and sold one feddan for 800 dirhams. The petition continues on the right margin, where Ghāliyah states that her father had seen the judge before his death and explained that ʿUmar had no right to the sheep.[36]

From estate inventories drawn up for the deceased ʿUthmān during his lifetime, we know that he had endowed a house with five apartments *(masākin)* in the Jawālidah Quarter of Jerusalem on 9 Dhū al-Qaʿdah 795/16 September 1393, the same day he called upon witnesses to draw up the inventory.[37] The same documents notarize that "ʿUmar is the sole proprietor of 200 black sheep and the complete half of a plantation," with boundaries given. According to the estate

---

[34] Ḥaram document no. 278; cf. Little, *Catalogue,* 43: the petitioner does not bear the *nisbah* Sharafī, this applies only to the judge. For the edition see al-ʿAsalī, *Wathāʾiq,* 1:217f., no. 25; emendations in Diem, "Philologisches zu Mamlūkischen Erlassen, Eingaben und Dienstschreiben des Jerusalemer al-Ḥaram ash-Sharīf," *Zeitschrift für arabische Linguistik* 33 (1997): 51–54, but with sometimes far-fetched "explanations."

[35] Al-ʿAsalī, *Wathāʾiq,* 1:217, ll. 6–7.

[36] Ibid., ll. 12–16, text on right margin without line numbers.

[37] Of this estate inventory two copies exist, Ḥaram document no. 515 and Ḥaram document no. 626 (with clearer handwriting); cf. Little, *Catalogue,* 134 and 148.

inventories, three sisters and his wife were present and had confirmed ʿUthmān's statement. They had also acknowledged having no rights to the sheep and the plantation.[38] As Ghāliyah is mentioned among ʿUthmān's heirs together with her brother ʿUmar, two sisters, and ʿUthmān's wife, there is no doubt about her having drawn up the petition mentioned above.

How should one understand these different documents? The problem is to know whether the sheep and the plantation mentioned in Ghāliyah's petition to the judge are the same as those that are designated in the inventory of her father. Unfortunately, the description of the plantation only mentions the neighbors, not the area, and we cannot be sure that these were situated in the Māmillah region, as explained in the petition. The same number of 200 sheep in the inventory and in the petition is certainly significant, but no proof they constitute the same flock. Therefore two possibilities remain: The father had only endowed the house in the city, which would give ʿUmar every right to the houses within the plantation. In addition, if the 200 sheep mentioned in the inventory did not correspond to those mentioned in the petition, then Ghāliyah's complaint would have been unfounded. How then do we explain Ghāliyah's statement that her father had declared in front of the judge that ʿUmar had no right to the sheep?[39] Could it be that the inventory did not correspond to the father's expectation?

Or, as a second possibility, Ghāliyah was right to complain about an embezzlement of her father's endowment. One cannot exclude the possibility that the written inventory did not correspond to what had been explained to her. This could explain why she insisted that her father had seen the judge before his death. We will probably never resolve this case of family quarrels between brothers and sisters. Ghāliyah mentioned also that one sister had availed herself of the "*kitāb,*" the written form of her father's endowment,[40] and that her brother ʿUmar was found drunk the day of her father's death and could not assist at his funeral.[41] In any case, the qadi obviously did not respond to Ghāliyah's petition with an order *(marsūm)* to investigate the affair.[42] The accounting on the back of the petition dates from the year 797/1395 (line 1) and concerns "al-Ḥājj ʿUthmān," which may well be the father of the petitioner Ghāliyah on the recto.[43]

[38] Inventories: Ḥaram documents no. 515 and no. 626.

[39] See above, with text on the right margin of Ḥaram document no. 278.

[40] Ibid., ll. 15–16.

[41] Ḥaram document no. 278, ll. 18f.

[42] Compare Ḥaram document no. 25/2 and below, for the qadi's order on the back of a similar petition; cf. also Ḥaram document no. 215/2, both edited by Donald Little in "Five Petitions and Consequential Decrees from Late Fourteenth-Century Jerusalem," *Al-Majallah al-ʿArabīyah lil-ʿUlūm al-Insānīyah* 14, no. 54 (1996): 348–94.

[43] Cf. Little, *Catalogue,* 43. The accounting is not edited.

In the next litigation the manner in which revenues from a *waqf* were distributed among family members became the subject of a court case. Apparently, this endowment had already functioned for a long period of time before the document in our hands was drawn up.[44] The petitioners[45] claim that the stipulation of an endowment made by one of their ancestors benefited only his male descendants and that they have been receiving income in accordance with this stipulation for an extended period of time. According to these petitioners, they possessed successive grants of approval[46] and a *maḥḍar* certified by judges, attesting to the validity of this regulation.[47] It seems, however, that this distribution of revenues had always been contested; otherwise neither legal permission *(ijāzah),* nor court documentation *(maḥḍar)*[48] would have existed. The petitioners explain that a person subsequently disputed this usage and claimed the endowment was intended for both male and female descendants, but that he had nothing to substantiate *(yadillu)* the validity of his claim *(daʿwāhu)*. Rather, he circulated this among persons, "by whose word nothing can be corroborated [legally]."[49] It seems from this, that a claim in court for equal distribution of the *waqf* revenues among both male and female descendants was ongoing. The petitioners ask their "Lord and Master, Judge of the Judges"[50] for a written decree *(marsūm)* to the judge in the district to consider their case in their favor.[51] The judge of Nablus, in an answer to this petition, wrote that he would "clarify the aforementioned case and settle the matter in accordance with the dictates of the stipulation of the endower."[52]

[44] Ḥaram document no. 25/1, edited by Little, "Five Petitions," 351–57.

[45] The translation "slaves" for "*mamlūk*," ibid., 353f., is misleading, since this was the expression used in any respectful correspondence or petition.

[46] Ḥaram document no. 25/1, l. 5, not "*ajāʾir mutawāfirah*" (ibid., 353), but "*ajāʾiz mutawātirah."*

[47] Ibid.

[48] A *maḥḍar* at that time was a *shahādah* document, written only on a judge's order. On this technical definition see my "Qāḍī-Gericht," chapter I.2.a.

[49] Little, "Five Petitions and Consequential Decrees," 354, ll. 7–10, here 10: "*lā yathbutu bi-qawlihi shayʾun*," which means that his word is not valid for *thubūt*, i.e., he does not have the quality of a witness, which is more precise than "who cannot corroborate his word in any way" (ibid.).

[50] This should be read as a very respectful salutation, not as an exact title like "Chief Judge," cf. ibid.

[51] Ibid., ll. 12–13.

[52] Contrary to Little's translation (ibid., 357, ll. 2–3), I do not think this is an order to the "Magistrate of Nablus" by the judge of Jerusalem (ibid., 356f.). Rather, Ḥaram document no. 25/2 consists of the statement by the qadi of Nablus "that the affair should be settled according to the founder's stipulations." Sharaf al-Dīn Abū al-Rūḥ, the judge in whose court the Ḥaram documents originate, later judge in Jerusalem between 793 and 797, was in 783 judge (and not deputy judge) of Nablus; cf. his court attestations: Ḥaram document no. 55/3 from 19 Shawwāl 782/16 January 1381 (cf. Little, *Catalogue,* 313, who reads for the year "781" instead of my "782") and Ḥaram document

With this we move to the administration of bigger foundations that were not endowed for the benefit of a single family. As we have seen, legal proof of an endowment could be achieved by means other than the original endowment deed. Bigger foundations were not always created by one act, but successively according to the will (and the means) of their founder. Then, there would exist various deeds, issued at different times and concerning different aspects of the same *waqf*. The administration of a big foundation on the basis of divergent endowment deeds may not have been easy. There were ways to reduce the complexity of various documents and to organize the major aspects of a *waqf* in a legally binding way.

One Ḥaram document is such a "synopsis of *waqf* purposes" *(talkhīṣ maqāṣid al-waqf)* that summarizes various documents concerning the same endowment of a mausoleum and a college. This *waqf* summary was issued on 21 Shawwāl 793/21 September 1391 and bears the signatures of three witnesses as well as a note in the right margin as follows: "I allowed this [document] to be transcribed and collated" *(adhantu naql dhālika wa-muqābalatahu)*.[53]

This *waqf* summary concerned the endowment of Muḥammad Beg, made between the years 748 and 751, in favor of a college that was known after him as al-Madrasah al-Muḥammadīyah.[54] Donald Richards has already given a summary of its content and analyzed it from various points of view.[55] The question to ask here is why was this document written when it was (42 years after the initial endowment), and for what purpose? The answers may tell us more about the functioning of such a religious foundation years after its establishment.

This Madrasah Muḥammadīyah was headed by a shaykh, whose function as administrator of the *waqf* and spiritual head was well defined in the *waqf* summary. He was supposed to be a person versed in the "ways of the Sufis," and it is clear from this and from other documents[56] that this foundation was not administered by a member of the founder's family, but by a religious scholar and Sufi. To answer the first question, why the summary was written in Shawwāl

no. 609/5 (6 Rajab 785/4 September 1383) (cf. Little, *Catalogue,* 257). In the Ḥaram documents, judges *(quḍāh)* are referred to as the "*ḥākim*" of a city. The distinction between qadi and *ḥākim,* as pointed out by Little, "Five Petitions," 356, is not valid for the Ḥaram documents in general, nor for the ways in which a judge was named in attestations of his own court procedures in particular; see my "Qāḍī-Gericht," chapter IV. Therefore we must assume that this document, Ḥaram document no. 25/1, was addressed to Sharaf al-Dīn, then qadi of Nablus, and stayed among his papers, not with "*al-ḥākim bi-al-nāḥiyah*" (contrary to Little, "Five Petitions," 356). As a result, it is impossible to conclude "that the Jerusalem judge had jurisdiction over the judge in Nablus" (ibid.).

[53]Ḥaram document no. 643; Little, *Catalogue,* 321.

[54]Cf. Mujīr al-Dīn, *Uns,* 2:44.

[55]See Richards in Burgoyne, *Mamlūk Jerusalem,* 66a, 66b, 68a, 69b, 72b.

[56]See the acknowledgment of the shaykh of this *waqf* in Ḥaram document no. 210/1 (2 Rabīʿ II 791/31 March 1389), Little, *Catalogue,* 206.

793/September 1391, it is probably not a coincidence that the former shaykh, Muḥyī al-Dīn Yaḥyá ibn Ḥusayn had recently died and his effects were sold in the following month, on 12 Dhū al-Qaʿdah 793/11 October 1391.[57] Obviously his wife had already died before him, and he had no heir.[58] We also know that the proceeds from the public auction went directly to Egypt, by order of the *ustādār* Maḥmūd, then a very influential Mamluk official.[59]

The *waqf* summary, Ḥaram document 643, was not meant to safeguard the validity of the act of endowment: no mention is made of the founder's will, the conversion of his own private property into a *waqf,* etc. On the contrary, this "*waqf* summary" gives detailed instructions on the quality of the shaykh as Sufi and his duties as a spiritual guide, as well as how to provide for the daily needs of the community living in the college and occasional passers-by. Also, explanations are given for the lease period for the *waqf* land (usually one year, only exceptionally up to three years),[60] those persons deciding on the next inspector,[61] and the property belonging to the foundation.[62] From this, the major interest of this document seems to be in describing the administration of the *waqf* in general—with special focus on the inspector's tasks and function. Any inspector would need this information in order to fulfill the founder's wishes, and I am inclined to think that this was a copy furnished to the newly nominated shaykh, or to those reviewing his nomination.

This summary however, was not just a simple copy of other documents. It was signed by three court witnesses,[63] and contained an official notarization that the summary had been meticulously compared to the documents on which it was based. The document therefore had legal significance, since its witnesses would attest to its content in court. We can go one step further by supposing that it was the judge himself who gave this permission: the writing of this notation in

[57]Ḥaram documents nos. 768a and 768b; Little, *Catalogue,* 343.

[58]On Muḥyī al-Dīn Yaḥyá ibn Ḥusayn and his wife see their mutual acknowledgements from 2 Rabīʿ II 791/31 March 1389 (Ḥaram documents nos. 210/1 and 315/1), certified in court the following day (Ḥaram documents nos. 210/2 and 315/2) (Little, *Catalogue,* 206 and 209). The wife is not mentioned as heir in Ḥaram document no. 768a. See the edition of Ḥaram document no. 315/1 in Huda Lutfi, "A Study of Six Fourteenth Century Iqrārs from al-Quds Relating to Muslim Women," *Journal of the Economic and Social History of the Orient* 26 (1983): 278, and in al-ʿAsalī, *Wathāʾiq,* 2:118.

[59]Ḥaram document no. 768a. Other documents in this case are Ḥaram document no. 719/1 and following, as well as inventory no. 178. See my "Qāḍī-Gericht" on the context.

[60]Cf. Ḥaram document no. 643, and Richards in Burgoyne, *Mamlūk Jerusalem,* 68a.

[61]Cf. Richards in Burgoyne, *Mamlūk Jerusalem,* 72b.

[62]Ibid., 66a.

[63]We find their signatures on court documents of this period.

the right margin[64] corresponds exactly to other notations by the Shafiʿi judge of the time, Sharaf al-Dīn Abū al-Rūḥ ʿĪsá ibn Ghānim (d. 797/1395). In contrast to this legal document, the two *daftar* sheets of an endowment established by the sultan al-Malik al-Nāṣir Muḥammad (beginning of eighth/fourteenth century) do not bear witness signatures or the annotation of a court official.[65] As Donald Little supposes, these pages formed part of the copy (of a copy) of a large *waqf* document.[66]

If the *waqf* summary of the Madrasah Muḥammadīyah did not serve to guarantee the legal status of the endowment, how was the existence of *waqf* institutions in perpetuity insured in a legal system which did not grant to written documents the status of a proof? In order to guarantee the validity of oral witness testimony on the authenticity of a document, the judge summoned the witnesses of the original deed and had them testify orally in court. This *thubūt* procedure allowed the judge to consider the text of the document as a legally "established fact" and subject to his ratification by his *ʿalāmah*. As will be shown elsewhere in detail,[67] a ratified attestation of the *thubūt* procedure in the form of an *ishhād* on judicial procedure on the back of a legal document made a document valid over time and space even without oral testimony. These *ishhād* attestations of a qadi's court were legally binding on other judges, be they in another city or in a later time. In order to guarantee the judicial value of a document, like an endowment deed, over long time periods, we cite the renewing of court attestations at periodic intervals from several up to thirty years.[68]

One specimen of this kind figures among the Ḥaram documents: the endowment of seven shares of the village Bayt al-ʿAṭṭāb al-Fawqá and six shares of Bayt al-ʿAṭṭāb al-Suflá for the benefit of the *fuqarāʾ* (lit. "poor") of Jerusalem.[69] The document

---

[64]Although called "*ʿalāmah* notation" by Little in his *Catalogue,* 321, it is in the place where the judge would place his *tawqīʿ* orders to his court witnesses, although here it is not such an order.

[65]Ḥaram documents nos. 77 and 306 (which contains a text beginning with the *basmalah*); see also Little, *Catalogue,* 374f.

[66]Ibid.

[67]See my "Qāḍī-Gericht," chapter VI.2.

[68]See, e.g., the *waqfīyah* of Ṣalāḥ al-Dīn (references in note 1), and court certifications edited by al-ʿAsalī, *Wathāʾiq*, 1:73–90 (from the year 590 to 791) and 98–100 (in the tenth/sixteenth century); however, there are many examples. A study on this long-term use of written documents is lacking.

[69]Ḥaram document no. 333; cf. Little, *Catalogue,* 320f. The term "*fuqarāʾ*" usually refers to persons that are "*faqīr ilá Allāh*" (needy of God), that is, religious scholars, not necessarily materially poor people.

opens with the endowment from the year 712/1312–13,[70] "transferred" *(untuqila)*[71] from "a copy in 12 chapters," which had been attested to by court procedure for the first time in the year 720/1320–21.[72] Then follow the enumeration of further court attestations in the years 727/1327,[73] 743/1343,[74] 746/1346,[75] 747/1346,[76] and finally in the year 754/1353.[77] Each court attestation mentions the exact day and the name of the judge,[78] a way to confirm whether the judge had been in office or not. This specific document does not bear witness signatures. It probably served as an aide-mémoire, not as a legal attestation. A filing notation on the verso mentions the shares of the endowed villages, which had obviously been sold by some of the founder's children.[79]

From a general point of view, this specimen shows that even minor endowments, not just the big imperial foundations like those of Ṣalāḥ al-Dīn, cited above, were the object of renewed court validation: in our case, it was obviously the *waqf* administration of Jerusalem in the name of the "*fuqarā*ʾ of Jerusalem" who had taken care of the repeated court validation. This system of repeated court validation could guarantee the legal standing of an endowment deed over a long time. However, without it, the deed loses the force of proof. Certainly no such renewal of a court validation was made when private endowments ceased to function and no longer provided substantial income. Then, after one or two generations, the original documents had lost any legal standing and the unvalidated *waqf* fell into disuse.

This brings us to our last point, the economic use of endowments by those persons who rented them and thus provided an income to the *waqf*. With regard to Jerusalem, Donald Richards has already pointed to the problem of leasing contracts of long duration that might alienate endowed property and thus bring the *waqf* to an end.[80] From an economic perspective, there are, however, various aspects to consider.

We have at our disposal several contracts of sale concerning "plantations"

[70] Ḥaram document no. 333, ll. 1–13.

[80] Ibid.

(ghirās) in vineyards and orchards within the city's limits. Like any sale of a dwelling *(dār),* these contracts delimit the object of the sale by its borders, the type of trees or plantations, its sale price, the conclusion of the contract, and the transfer of property to the buyer. Only the plantations are sold, however, not the land on which they are growing. This practice conforms to Shafiʿi law, allowing the sale of objects firmly rooted into the ground—without touching upon the legal status of the ground.[81]

In these cases, the land, the "basis" (*aṣl*, in legal terms), belonged either to a *waqf*[82] or was part of an *iqṭāʿ*.[83] All these sale contracts on plantations state at the end that "the buyer knows of the obligation to pay an annual ground rent *(ḥikr)* of a certain sum [between 5 and 15 dirhams per annum] to the endowment or to the *iqṭāʿ*." When, however, land *(arḍ)*[84] or a vegetable garden *(ḥākūrah)*[85] was sold, no mention of paying *ḥikr* was made. A similar sales contract concerned an apartment (*bayt*) within a family estate *(dār),* for which *ḥikr* was due to [the endowment of] the Madrasah al-Ṣalāḥīyah.[86]

This practice of selling immovable objects, but not the ground where they were rooted, was not restricted to agricultural land or to dwellings. Several shops *(ḥānūt,* pl. *ḥawānīt)* were sold in Ramaḍān 747/December 1346–January 1347 for 780 1/2 dirhams, and the buyer knew of his obligation to pay one dirham *ḥikr* each month to the endowment of the Ribāṭ al-Amīr ʿAlāʾ al-Dīn al-Ruknī, on whose

[85]Cf. the various sales of parts *(sahm,* pl. *ashām)* from the same *ḥākūrah,* Ḥaram document no. 372/1, from 29 Ramaḍān 771/26 April 1370, and following contracts, Little, *Catalogue,* 290f.

[86]Ḥaram document no. 43, with line 4 on the payment of the *ḥikr.*

land the shops were situated.[87] These shops were the object of several attestations and court procedures,[88] and two of them were resold in the year 752/1351 for 300 dirhams, the *ḥikr* being one and a half dirhams per month.[89] Without going into the details of this complicated case,[90] we realize that these shops were subject to free commercial transaction, separate from the ground on which they stood. The only constraint was the payment of the *ḥikr* to the endowment that owned the land.[91] Unfortunately, sold objects varied from one contract to another, but the impression is that the *ḥikr* increased; from one dirham per month in the year 747/1347 for several shops to one and a half dirhams in the year 752/1351 for only two shops.

It is important to note that the obligation to pay *ḥikr* did not end with the death of a person. The duty "to pay *ḥikr* is transferred," as jurists would say, "to heirs and buyers."[92] The sale of two shops, mentioned above, was done "*waṣīyatan,*" that is, after the death of their proprietor.[93] Among the Ḥaram documents figures also the receipt of 75 dirhams annual *ḥikr* for the shop of a rich textile merchant, paid by the guardian of his minor heirs to the foundation of the Madrasah Ṣalāḥīyah in 790/1388.[94] From this, we may conclude that any investment made by the shop owner, or in any plantation, was for the benefit of his proprietor, who could sell freely his property, under the sole condition that the *ḥikr* be paid.[95]

[87]Ḥaram document no. 42/1, recto (6 Ramaḍān 747/21 December 1346), Little, *Catalogue,* 279. On the Ribāṭ see Burgoyne, *Mamlūk Jerusalem*, 117–26.

[88]Ḥaram document no. 42/2, recto (14 Ramaḍān 747/29 December 1346): acknowledgement of "no rights;" Ḥaram document no. 42/3, verso (27 Ramaḍān 747/11 January 1347): court validation; and Ḥaram document no. 42/4 recto (5 Rabīʿ II 750/23 June 1349): court validation; Little, *Catalogue,* 279–80.

[89]Ḥaram document no. 42/5, verso (20 Rabīʿ II 752/16 June 1351), ll. 28 and 31. Cf. Little, *Catalogue,* 280. In the right margin of recto and verso two more sales of some of the same objects are mentioned, without any details however; see Ḥaram document no. 42/7 (verso) from 6 Shawwāl 754/4 November 1353, and no. 42/8 (recto) from 27 Ramaḍān 756/5 October 1355.

[90]See additionally the buyer's acknowledgement of having acted on behalf of a third person: Ḥaram document no. 42/9, recto (27 Ramaḍān 756/5 October 1355).

[91]Compare also Shams al-Dīn Muḥammad al-Asyūṭī, *Jawāhir al-ʿUqūd wa-Muʿīn al-Quḍāh wa-al-Muwaqqiʿīn wa-al-Shuhūd,* ed. Musʿad ʿAbd al-Ḥamīd Muḥammad al-Saʿdanī (Beirut, 1996), 1:69, with corresponding contractual clauses.

[92]For this phrase see the Hanbali jurist Muḥammad al-Maqdisī Ibn Mufliḥ (d. 763/1362) in his *Kitāb al-Furūʿ,* ed. Abū al-Zuhrā Ḥāzim al-Qāḍī (Beirut, 1418), 4:321. This corresponds exactly to the findings in the Ḥaram documents. Until now however, I have not found a similar Shafiʿi quotation.,

[93]Ḥaram document no. 42/5, l. 24.

[94]Ḥaram document no. 662 (16 Muḥarram 790/26 January 1388), Little, *Catalogue,* 329 (see above).

[95]I did not find any reference to a limitation of such a *ḥikr* contract to, for instance, 99 years.

These contracts of sale reflect an economic reality very different from that of the village headmen *(ruʾasāʾ al-qariyah)* who guaranteed the payment or delivery of harvested crops to the Ḥaram *waqf.*[96] In some cases, the obligation of the villagers to cultivate their land was enforced by a formal *qasāmah* oath, whose breach was considered perjury *(ḥinth)* and subject to high fines.[97] These villages were part of the Ḥaram endowment created by Ṣalāḥ al-Dīn al-Ayyūbī in the sixth/twelfth century. For the villagers, the obligation to deliver a part of their harvest to the *waqf* may have resembled a tax, which they paid for the previous year.[98] Apparently, farmers also paid individually to the *waqf* administration. One account of revenues from the village al-Quṣūr, which was part of the Ḥaram *waqf,* distinguished between revenues from the farmers *(fallāḥīn)* and revenues guaranteed by the village head *(ḍamān).*[99]

We can also identify cases in which individuals had rented land for agriculture from a *waqf* in an *ijārah* (rental) contract. The leaseholder paid *ujrah* (rent), not *ḥikr,* but the difference went beyond denominations. Unlike *ḥikr* land, which stayed in the possession of the heirs, the death of a leaseholder might have caused problems for his heirs, even with a long-term *ijārah* contract.

On 25 Shawwāl 794/14 September 1392 the Shafiʿi judge of Jerusalem, Taqī al-Dīn, gave his verdict to the claim of the Khānqāh Ṣalāḥīyah Foundation, represented by the Shaykh Jamāl al-Dīn ʿAbd Allāh Ibn Ḥāmid, to terminate a lease of land in the Buqʿah area outside Jerusalem, because the leaseholder had died prior to its termination. The contract had been concluded in Shaʿbān 791/August 1389 for thirty years at an annual rent of 76 dirhams. The defendant, one of the leaseholder's heirs, insisted that the contract be continued, since its term had been set for 30 years and was not linked to the life of the original leaseholder. According to the defendant, there was no reason to terminate the contract

---

[96]See Ḥaram documents nos. 19, 48, 110, 194, 202, 280, 348, and 459, all from the years 706/1306 to 708/1308, some of them mentioned by Richards in Burgoyne, *Mamlūk Jerusalem,* 67.

[97]See Ḥaram documents nos. 293 and 697; cf. D. S. Richards, "The Qasāma in Mamlūk Society: Some Documents from the Ḥaram Collection in Jerusalem," *Annales Islamologiques* 25 (1991): 245–84.

[98]Cf. Ḥaram document no. 348, cf. Richards in Burgoyne, *Mamlūk Jerusalem,* 67b. For the complexity of this phenomenon from a juridical point of view, see Baber Johansen, *The Islamic Law on Land Tax and Rent: The Peasants' Loss of Property Rights as Interpreted in the Hanafite Legal Literature of the Mamluk and Ottoman Periods* (London, 1988).

[99]See Ḥaram document no. 769a (for the years 792 and 793), recto, column A, first item: *faḍl al-ghallāt bi-ism al-fallāḥīn 2000 dirham;* second item: *ḍamān al-muʿallaq bi-ism al-ruʾasāʾ wa-al-fallāḥīn 9000 dirham.* Another document from the year 795, Ḥaram document no. 847, ed. Richards, "Qasāma," 267, has the elders of the village al-Quṣūr attest to having paid only *zakāt,* and not their taxes *(ḍarāʾib dīwānīyah),* for the last four years. I am not sure how to resolve this contradiction, if there is one.

since the claimants would receive all outstanding payments from the estate of the deceased. The qadi Taqī al-Dīn gave a judgement *(ḥukm)* in favour of the leaseholder's heirs and allowed the rent to be paid from the estate.[100] In this case, the heirs' interest in continuing the contract is obvious. The existing conditions suited them better than what they could have hoped to obtain in a new contract, whether another lease or a *ḥikr*.[101] The lease of arable land to farmers seemed to have been a common practice.[102] From Ḥaram document no. 629, we learn that endowments sometimes leased the plantations *(ghirās)* in their possession for a specified period; here it was for 10 years.[103]

As a result, we conclude that at least two types of contracts regulated the use of *waqf* property for commercial and agricultural activities: the lease of an object *(ujrah)* and the ground rent *(ḥikr)*. Since most of the surviving documents concern the estates of deceased persons, we have at our disposal two acquittals for payments vis-à-vis the Ḥaram endowment, made from the qadi's depository in the name of the heirs or from their *waṣīy*. One concerns the annual rent *(ujrah)* for a shop in the Sūq al-Wusṭānī amounting to 15 1/2 dirhams per month.[104] The other is the previously mentioned receipt of 75 dirhams annual *ḥikr* for the shop of a rich textile merchant, paid by the guardian of his minor heirs to the foundation of the Madrasah Ṣalāḥīyah in 790/1388.[105] Although any comparison without knowing the exact circumstances in each case is always problematic, the amount of the annual rent *(ujrah)* of 186 dirhams (15 1/2 x 12) being more than double that of the *ḥikr* may well be explained by the fact that the rented shop belonged to the endowment, contrary to the shop on *ḥikr* land.[106]

The interest of a *waqf* administration in transforming their assets into *ḥikr* was

[100] Ḥaram document no. 334, edited by al-ʿAsalī, *Wathāʾiq,* 2:22f. On a discussion of the *ḥukm* in this case see Christian Müller, "Settling Litigations without Judgment: The Importance of a *Ḥukm* in *Qadi*-Cases of Mamlūk Jerusalem," in *Dispensing Justice in Islam: Qadis and their Judgments,* ed. Muhammad Khalid Masud, Rudolph Peters, and David S. Powers (Leiden, 2006), 51–55.

[101] The qadi Sharaf al-Dīn was known for having transformed land in the Buqʿah area into *ḥikr* in the year 793/1391 (see below), one year before the verdict of Taqī al-Dīn. This "coincidence" may illustrate an ongoing pressure on farmers to change contracts.

[102] See Ḥaram document no. 640 from 7 Dhū al-Qaʿdah 796/3 September 1394, edited by al-ʿAsalī, *Wathāʾiq,* 2:62; cf. Little, *Catalogue,* 236. The land was leased by the Mamluk viceroy.

[103] Ḥaram document no. 629/1 (1 Shaʿbān 796/1 June 1394), Little, *Catalogue,* 299; cf. Richards in Burgoyne, *Mamlūk Jerusalem,* 67.

[104] Ḥaram document no. 325 (12 Rabīʿ I 797/5 January 1395), Little, *Catalogue,* 210, rent to the "*waqf mabrūr*."

[105] Ḥaram document no. 662 (16 Muḥarram 790/26 January 1388), Little, *Catalogue,* 329 (see above).

[106] Compare also the sale of such shops and the *ḥikr* due in former years, above.

primarily to allow the development of land by private investors. They planted trees or built shops and houses, which became their private property. A citation by Mujīr al-Dīn in his chronicle of Jerusalem, *Al-Uns al-Jalīl,* mentions a case of the transfer of land to *ḥikr* in the period of the Ḥaram documents. The qadi of the city, and shaykh of al-Khānqāh al-Ṣalāḥīyah, Sharaf al-Dīn ʿĪsá ibn Ghānim (d. 797/1395)

> made the land of al-Biqʿah outside Jerusalem, which is included in the *waqf* of the aforementioned *khānqāh,* into *ḥikr* in the year 793. It was given over to vineyards *(kurūm)* whereby the revenue for the *waqf* grew, the people having developed a liking for this land and its utilization having increased since the time when it was sown land.[107]

Even before this date, the Khānqāh Ṣalāḥīyah possessed olive trees cultivated by wage laborers. See for this an account of the sale of olives including the payment of wages from the year 789/1387.[108] Already cited is the litigation between the Khānqāh Ṣalāḥīyah and the heirs of a leaseholder over the continuation of the *ijārah* contract.[109] The other documents concerning economic activity of this endowment, like the renting of shops or a bath, certainly merit a detailed study[110] that is beyond the scope of this article.

The Ḥaram documents provide insights into *waqf* as a legal institution on various levels of Mamluk society. The city of Jerusalem as a center of veneration and pilgrimage profited greatly from the influx of "foreign" capital that established endowments within the city for religious reasons. One should not underestimate its material help for religious scholars living in the city or on pilgrimage *(mujāwir),* in matters of food and housing. Endowments provided the material basis for religious services not only in the Holy Sanctuaries, but also in private Sufi convents. They paid the professors in colleges and gave shelter to their students.

Outside the world of learning and religion, the local economy was certainly stimulated by building and repair activities that were supported by the *waqf*s'

[110]See Richards in Burgoyne, *Mamlūk Jerusalem,* 67a. To the documents cited by him, one may add other accounts of this endowment, such as Ḥaram documents nos. 775a, 775b, 775t, 775th and 775j.

founders and their administrators.[111] Certain endowments provided elementary teaching for children and material help for orphans. *Waqf* administrations were the landlords of numerous shops and buildings in the city, as well as the owners of orchards and arable land. Craftsmen and farmers were directly affected by the policy of *waqf* administrations, by the type of lease contract they had obtained, and by investment opportunities given through the *ḥikr* system. We should be cautious of generalities, such as the suggestion that too long a contract or the *ḥikr* alienated *waqf* property and led to its cessation. Long contracts were sometimes necessary to attract capital for investment to the benefit of both sides. Unfortunately, our documents do not furnish information about the duration of the *ḥikr* status. The documents at hand show perfectly how legal rights could be preserved over a long period of time. However, the legal status of documents in Islamic law made their court confirmation necessary within certain intervals. Only fairly reasonably managed *waqf* institutions would take the necessary steps and preserve their rights. This leads us to the various types of *waqf* foundations which in the case of Jerusalem went from the big administration of the Ḥaram *waqf* with its revenues from all over Palestine, to middle-sized religious foundations by individuals, to the endowing of property for the benefit of a family. At all levels of Mamluk society, the legal instrument "*waqf*" served men and women as a means to realize economic projects and to stabilize social situations. Prestigious religious and humanitarian institutions in the city, like the Ṣalāḥīyah Hospital[112] or the Ḥaram foundation, profited from the necessity in each endowment deed to name a final beneficiary in perpetuity. Over the centuries, they received the endowed property of families that had ceased to exist. In this way, the will of individuals finally merged into a communal project that helped to maintain traditional society.

Book Reviews

Response to Thomas Bauer, review of *Arabic Literature in the Post-Classical Period,* edited by Roger Allen and D. S. Richards, *Mamlūk Studies Review* 11, no. 2 (2007): 137–67.

Salma Khadra Jayyusi, East-West Nexus/PROTA

Thomas Bauer seems very much intent on discrediting my chapter on Mamluk and Ottoman poetry (in the Post-Classical Period volume of the *Cambridge History of Arabic Literature*, edited by Roger Allen and D. S. Richards and published in 2006), which apparently contradicts the premises and ideas he himself had already put forward about this long period, one that happens to be his chosen area of specialization.

To this end he has resorted in his review article to an unseemly, incoherent, and unscholarly all-out attack on my ideas, my stance, and my work, even my person. The attack is unseemly because the personal slurs, innuendos, and insinuations generously distributed throughout his paper are unbefitting the tasks and objectives of genuine scholarship, and simply compromise their own source; incoherent because Bauer seems unable to stay the course of a single principle or standard of judgment in his rush to condemn my work and my stance; unscholarly because he builds his case on heavily decontextualized references, betrays a thorough ignorance of my corpus of work (and so my actual stance on particular issues of literature and culture), and critiques my translation of Arabic poetry in a manner that sadly betrays the weakness of his own grasp of the Arabic literary language and its idioms.

First of all, it needs to be acknowledged that there are obviously serious and deep-rooted differences in our assessment of the poetry of the period in question. Yet to slip from scholarly engagement with disagreement and alternative judgments to a vituperative lashing-out, filled with charges of all kinds, including insinuations which are meant to reflect on the person of the other, is beyond ordinary comprehension. Whereas a scholarly disagreement can be welcomed as a contribution to shaping or instigating a debate, this kind of inelegant and uncivil attack cannot be allowed to stand without challenge, although I admit to finding no pleasure whatsoever in having to respond to this level of writing.

Bauer has the audacity to heap personal invective on me simply for thinking differently from him, for not seeing in the poetry of this period the greatness and superior quality he himself sees. And yes, it is indeed true that I do not have a

high view of most of the poetry of this period, with the exception (as I said in my essay) of Sufi poetry, some of which is of a high order; of a certain number of other religious poems on account of their ardor and genuine sensibility; and of the work of a very few specific poets, notably al-Bahāʾ Zuhayr and Ṣafī al-Dīn al-Ḥillī. I am not an easy admirer of anything that I do not find up to standard and I reiterate my unswerving lack of admiration for Ibn Nubātah al-Miṣrī, who seems to be Bauer's favorite poet of this period—viewed by him as one of the greatest poets of the Mamluk age, and on whom he has written with such high appreciation.

The Arab literary renaissance of the nineteenth century (on which I have written elsewhere[1]) reconnected directly and purposively with the earlier periods (at least seven centuries of them overall, beginning in the sixth century of the Christian era, if not earlier)—in other words, with those periods regarded as forming the golden or "classical" era of our verse, viewed almost unanimously by Arab scholars as the fountainhead of Arabic poetry. It was from the poetry of this period that the nineteenth- and early twentieth-century revivalists took their models, leaping over the Mamluk and Ottoman centuries. The overriding need in the nineteenth century was to inject into a weakened, imitative, and formulaic verse, inherited from those two periods, a strength of language and a well-built phraseology, to rid it of artificiality and what was deemed an absence of profundity or even worthwhile meaning. This leap back to older centuries was certainly an interruption in the course of a poetry that had spanned such a very long period. However, it was certainly also a welcome interruption to its direction, diction, imagery, and semantics. In fact, Arabic literature in both poetry and prose has witnessed several major interruptions, sometimes even arrests, to its steady course of evolution, but this leap back in the modern era to a much older kind of poetry is one of the most serious, and in my estimation, one of the most fortunate. It points to a direct indictment of the kind of poetry which the Mamluk and Ottoman eras had offered. The poet-revivalists, literary historians, and anthologists of the time were unanimous in their rejection of the poetry that directly preceded their times and in their decisive resort to the golden or classical period. They rejected the vacuity and serious aesthetic fatigue that had hampered the inherited poetry of their age, and knew instinctively that a continuity with the immediately previous poetry would lead them to an artistic dead end.[2] Their

[1] See "The Arab Literary Renaissance in the Nineteenth Century," in *Trends and Movements in Modern Arabic Poetry,* ed. Salma Khadra Jayyusi (Leiden, 1977), 1:15–45.

[2] See my description of the poetry inherited from the Ottoman period in my *Trends and Movements in Modern Arabic Poetry,* 1:25, where I say: "Arabic poetry in the earlier part of the nineteenth century was benighted in every meaning of the word. It had become a genre mainly concerned with amusement and politesse. . . . It was an exercise of the wits that revolved around itself in a

judgment, with which I fully agree, was that the poetry of these two periods had been moving overall towards banality, repetitiveness, and artificiality, mired in aesthetic clichés and formulaic descriptions. This was a trend which had its inception during the two periods in question, and the line of poetic decline had continued up to the modern Arab literary renaissance.

Bauer suggests (p. 159) that in taking this position, I simply "rely on blind [sic] personal taste," without questioning the standards I am "applying to the object of research." Yet it is clear that this assessment, and the choice of the Arab revivalists, was (as any contemporary history of the Arab literary renaissance would indicate) a matter of general and home-grown Arab consensus. Yet on this point, Bauer is inconsistent: while he ventures here that this judgment is based on my blind personal taste, he asserts, earlier on in his review, that this assessment is the outcome of a Eurocentric conceptualization derived from Orientalist sources, or expressing the Hegelian view of history, which he suggests was itself the foundation for many Orientalist accounts (see his many pages on this. pp. 141–44). It would be an extraordinary claim to make that this judgment was copied from the ideas of ill-intentioned Orientalists[3] or Hegelian theories—of whose very existence most Arab revivalists of the time were largely unaware. What connection is there between the considered judgment of nineteenth- and early twentieth-century Arab poets, critics, anthologists, literary historians, and the huge Arab audience everywhere with Western conceptions of the Mamluk and Ottoman periods? Does Bauer seriously want to imply that the Arabs involved had no powers of independent thought or literary taste, that they were slaves to others outside their own culture? Is this his belittling view of the Arabs, and of their spontaneous judgment of their own poetic history?[4] Perhaps he should

vacuum. . . . [It] had become artificial, imitative and sham . . . [and] bore no relation to the best examples of Classical poetry." It would have been totally unsuccessful technically to try to draw strength for renewal from the Ottoman poetry preceding the revival.

[3] Bauer seems to believe that what he calls "prejudices" which have "for a long time prevented scholars in the Arab and Western world alike from appropriately assessing Mamluk and Ottoman literature" can "easily [sic] be discerned as originating in Western ideologies of this era." See his article, "Mamlūk Literature: Misunderstandings and New Approaches," *Mamlūk Studies Review* 9, no. 2 (2005): 105, also 118. Western prejudices, however, were not really confined to this era, but indeed to the *entire* corpus of Arab literary and cultural history. It is indeed strange that Bauer should overlook this. In fact, even if an early Arab revivalist had come in contact with Western ideas on the subject, I cannot see that he would simply have acquiesced in the assumptions involved. I believe, on the contrary, that men like Nāṣīf al-Yāzijī, whom he gives as an example of one influenced by Western judgments on this literature (pp. 105–6 n.), had quite enough critical judgment themselves to be able to make choices of their own.

[4] If it were at all true, the Arab revivalists and the huge Arab audience at their heel would have shunned their most favorite poet, al-Mutanabbī, who is still regarded by Arabs as a supreme poet,

critically re-examine his own statements. This is precisely the substance of some modalities of Orientalist discourse: the denial to Arabs either of any intrinsic and independent judgment, grounded in their *own* relevances and needs, or any *value* to such judgment. Despite his overt attack on Orientalist thinking, he is perilously engaged in an equivalent figure of discourse. What reinforces this sense is precisely his inconsistency. Whilst in the introduction to his review, as we have seen, he objects stridently and at length to the premises, periodization, and conception of the volume as a whole (making special reference, of course, to my own article within this [p. 142]) as being Eurocentric and derived from Western imperial visions, he nevertheless equally lashes out against any descriptions of aspects of Arab literary or cultural heritage as evidencing any continuity, or shared concerns, vision, or style: for example, he objects strongly to the notion of an "Arab literary identity" (see p. 161), describing this as an "anachronistic" claim on my part, especially when applied to the period in question, and charging that it results from blind nationalism.

One cannot help reading in this an embodiment of the *newer* form of Orientalist discourse which insists on seeing in the region and its history nothing more than multiple, local, fragmented identities and projects. Certainly one can note a parallel between the structure of thinking and feeling fostered and championed by the contemporary imperial project and this kind of angry response to a stance that suggests that Arab civilization and culture had anything resembling unity to them. I shall return to this point later.

On a more specific level, Bauer needs to make up his mind: am I a Eurocentric subscriber to "Hegelian teleological thinking" (p. 142) which sees the sole function of Islamic culture as bringing "classical thinking . . . to the West" (p. 142), a writer "blinded" by my "nationalist ideology" (p. 161), or a "pro-Western" intellectual, one of those who "hail Western liberal modernity" (p. 162)? It strikes me that his attempt at discrediting my work aims to secure sympathy from a very wide range of practically opposed constituencies of opinion. But it really will not do for him to try to have his cake and eat it too. He needs to develop some consistency of approach and a convincing analysis, beyond simply that of seeking to discredit my work and person, not to mention the volume in question.

Let me turn now to the details of the specific critique Bauer makes of my paper. As part of his interest in discrediting my analysis of the poetry of the period in question, he resorts to accusing me of being ahistorical (p. 159) and essentialist (pp. 159–60). He writes (p. 160): "In her essentialist conception, it is 'the essence of poetry' (p. 29) or the 'poetic essence' (p. 41) imbued with 'the essence of a free Arab spirit' (p. 38) to capture the 'human essence' (p. 29), 'the essence of life' (p.

but who was misunderstood and, to put it mildly, treated lightly by Orientalists.

29)." What is noteworthy here is the manipulative use of *very short* quotes, taken out of context, and used *out of sequence,* in order to attribute a larger statement to me which I do not make, and which simply serves the purpose of maligning my work. The sinister part in all this is the suggestion, implicit in the way he relates all these short quotes, that it is wrong to use the word "essence" in any context. It is this which sets the stage for the next statement, namely that, according to my conception, "the history of poetry is simply the history of the realization of the *immutable* 'poetic essence'" (italics added). This betrays an ignorance (or intentional neglect) of the thrust and logic of my work on poetry; most notably relevant to this argument are my *Trends and Movements in Modern Arabic Poetry,* my chapter on Umayyad poetry—which he lightly mentions—and my chapters on Andalusi poetry.[5] But beyond that, it demonstrates a willful misreading of my own statements in this paper: the only place in my entire paper where I use the term "the essence of poetry" is in reference to what another critic had said, specifically the Andalusi Ḥāzim al-Qarṭājjanī (d. 456/1064) speaking of a poetry previous to his time which was already showing signs of some decline, and by this anticipating the systematic poetic decline during the following Mamluk and Ottoman periods. I write: "For two centuries, he [i.e., al-Qarṭājjanī] said, poets there had lacked all sense of the essence of poetry, and had not, in that time, produced a single *faḥl.*" Again the only place in my entire paper where I use the phrase "poetic essence" is when I say: "Yet, for all the continuity of the old traditions in these and some other poets, there was a relentless, ongoing change in style, strength of language and poetic essence. The parallel phenomena of change and continuity that are so evident in the poetry of the eleventh and twelfth centuries may be seen as clear illustrations of a process that would be repeated constantly throughout the ensuing period under discussion here. . . ."

Immutability? Indeed, Bauer singularly fails to provide the reader with the actual context and substance of my argument which emphasizes change in both the social context of literature and accordingly its content, form, and substance. I address this from the very beginning and throughout my paper. I conclude, for example (p. 58):

> What did this lengthy era, full of significant political and social developments, contribute to the course of Arabic poetry on the one hand, and, on the other, to the knowledge of poetry as a universal art form? First, it provides fertile ground for various studies in

[5] See "Umayyad Poetry," in *Arabic Literature to the End of the Umayyad Period,* The Cambridge History of Arabic Literature (1983); and for the chapters on Andalusi poetry, see: "Andalusi Poetry: the Golden Period" and "Nature Poetry in al-Andalus and the Rise of Ibn Khafaja," in *The Legacy of Muslim Spain.,* ed. Salma Khadra Jayyusi (Leiden, 1992), 317–66 and 367–97, respectively.

> the theory of literature, showing many aspects of the nature of "change." It also illustrates the effect of tradition on art, the hold that it has on the imagination of creative writers, the struggle during periods of change between various idioms and also between those forces of resistance and surrender that are a continuous part of the very stuff of poetry.

Clearly, his short quotations, strung together in a contrived way, are grievously misleading, and violate the fundamental trust between critic and reader. Most of his short quotes from my work, which pepper his tirade, are decontextualized in the same mode, and manipulated in the same prejudicial manner in order to attribute to me something I have neither said, nor expressed in my corpus of work, nor ever thought of. This is an issue of *interpretive integrity,* and integrity of transmission. I would have thought that this kind of integrity was one of the fundamental standards of critical and scholarly work.

Which brings me directly to a related issue in Bauer's critique that follows from the above and has to do with the standards of judgment and critique (although it is uncertain after the above demonstration of Bauer's "standards" for critical work whether he can even resonate with the points I will raise). It also again raises the issue of the historical as opposed to an ahistorical approach. Bauer asserts that there are "established premises" of "literary scholarship," which I supposedly violate in my "essentialist" stance, arrogating for myself the "competence to define the aesthetic criteria according to which all poetry of all periods must be measured" (p. 160). Individual critics, however expert, however responsible, will work from the base of differing world views. There is simply no point in Bauer appealing to such "established premises," when responsible critical viewpoints and methodologies vary so widely in practice. Does Bauer view "established" premises as permanently frozen criteria, such that a critic with verve and originality like M. L. al-Yousfi (whom he so categorically maligns in his review) cannot be permitted his own "different" assessment of literary change and values? Should these established criteria hold an observer back from offering a new method of dealing with literary history, a new interpretation and an original treatment of a particular topic, of a literary period, or of an author—all the more so when he or she is dealing with a culture like Arabic culture, which, though highly rich, complex, and multi-faceted, remains for numerous reasons in major need of cogent study, analysis, and interpretation? For someone who speaks so strongly of the need for a historical approach in scholarship, Bauer seems to contradict himself. He has argued earlier (p. 159) that historical judgments change, that there cannot be timeless criteria by which to assess poetic quality. Yet now he talks of "established premises and methods." Can he perhaps be a little more precise?

However, perhaps these two positions can be harmonized, if one now sees that the source of standards and criteria which may be used, and any reassessments to be allowed within them, can never be home-grown or indigenous. This effectively is Bauer's implicit position. Standards and criteria engendered internally, including within and through the Arab revivalist movement, a whole generation of renewal and regeneration, which laid the foundations in the nineteenth and early twentieth century for the rich developments of modern Arabic poetry, are all illegitimate.

In fact, Bauer's judgment of poetry leaves much to be desired generally. "Jayyusi never asks," he says (p. 164), "what the poets themselves wanted to accomplish, which, *of course, is the only standard according to which they can be measured* [italics mine]." But is that really true? Leaving the personal slur aside, this is one of those resounding critical statements which will simply not stand up to close scrutiny. *The point is, of course, that it is not enough to accomplish what one aims to do. The aim must be worth striving for in the first place.* Whatever standards of poetic or literary assessment have been used, this cannot coherently or artistically be one of them. To begin with, how exactly do we judge what the poet "wanted to accomplish"? What is the criterion for this? Further, at what point, and by what criteria, do we in the first place judge that the poet has "accomplished" what he had wanted to? But let us suppose that we have the means unequivocally to determine what the poet wanted to accomplish and whether he did accomplish it, how then, by this measure, do we find ways of distinguishing between different levels of accomplishment among poets; where is the difference between great poetry and other verse? Or is this distinction no longer to be entertained? Bauer dismisses the idea that good poetry relates to profound issues of human life, and suggests that it is enough to "find a charming entertainment" in it (p. 164) or be "surprised by a pointed literary conceit" (p. 164). I fear Bauer diminishes the entire literary and artistic enterprise by such a "standard."

The point is, of course, that it is not enough to accomplish what one aims to do as a poet or artist: literary criticism classically articulates standards which also turn on the meaningfulness of the text and its substance, not merely its *artfulness*. Great poetry, I affirm, even just good poetry, does not depend primarily on the fulfilment of aim, and certainly does not depend on ornate diction, on elegance and an elaborate poetic style. It is not something remote and abstracted from experience. On the contrary, it is the profound, instinctive, intuitive expression of experience and of a major poet's vision of the world; and that is what gives it universality and permanent appeal. It is a poetry of genuine emotion, which brings out the profound secrets of existence shared by humanity everywhere and therefore belonging to all humanity. Otherwise, why translate any poetry to the world? It is the voice of the conscience, as W. B. Yeats once said, related to the conditions and predicaments of life, and its major lived encounters and

departures: love, death, hope, despair, pain, deep joy, the struggle for existence, wisdom as an expression of lived experience, and other existential encounters with which living in this world abounds. A poem that concentrates on aesthetics alone can be pleasing and interesting, and perhaps very skillful (as many of the nature poems in al-Andalus and elsewhere were); but to be a truly major poem, it must deal also with vision and experience, with at least some facet, however specific and however small, of the human condition. If we survey the history of poetry world wide, starting with the very first epic, Gilgamesh, it is hard not to acknowledge that the poetry *consistently* considered great, both within a culture and across cultures, has been deemed to have meaningfulness in relation to lived experience, that being another way of talking about the human condition; a depth of meaning, communicated in a profoundly creative way so that it touches the reader or listener. Bauer is, of course, welcome to differ, but he needs to make a better argument. Moreover, it is certainly not my solitary judgment that he will have to take on in such an endeavour

As for the reception by a poet's contemporaries of his or her poetry (see p. 160 of Bauer's review), this is no criterion either. Indeed, I refer again to his own statement earlier: "The perception of whole periods of art," he notes, "is constantly undergoing change" (p. 159). This point has in fact been clearly dealt with in the introduction to my *Trends and Movements in Modern Arabic Poetry* (see especially pp. 5–9). The perception of the audience during a certain period is no necessary determinant of a poet's contribution and its value. In the modern period poets from many parts of the Arab world have gained great reputation and popularity, not because they have written superior poetry but merely because they have written poetry on political and patriotic subjects which deals with pertinent issues with which the contemporary Arab audience is deeply concerned. Conversely, during the classical period, Dhū al-Rummah (696–735) was regarded as a secondary poet (in fact, one quarter of a poet, as the old critics said). Yet he has now begun to be seen as one of the greatest poets of the classical (golden) period. The quality of poetry is not dependent simply on the "taste" of the audience or of the literary historian, but on its own interior qualities of meaningfulness and stance, as well as poetic charge and literary structure. This is a complex area of creativity. Yet it is a recognized domain within literary assessment, and the history of all literatures shows how reputations, luminous in their time, can crumble, and others, misunderstood or dimmed in the eyes of their contemporaries, are brought back to life; how the best poets survive over centuries and many generations, and how others are left behind.

There are a series of other points which Bauer raises. He bewails my omission of a number of poets of the period. The period had indeed numerous poets. However, to write a literary history of a period does not mean writing about a

large number of its authors. Let us consider the writing on poets of the modern period. It would take many volumes to cover even one tenth of them. The Bābitain Poetry Organization in Kuwait is presently working on a new encyclopedia, due to come out in October 2008, of Arab poets who lived and died in the nineteenth and twentieth centuries. There are now already over nine thousand names.

In every age poets have abounded in the Arab world, but one can certainly write the literary history of the modern period, indeed of any period, without mentioning many of its poets. In writing the literary history of a period, especially in the frame of a single chapter, rather than a full-length book, paramount attention must be given not to the sheer *number* of authors, even of some good ones among them, but to those among them who best shaped its literary history.[6] A literary genre is developed, enhanced, moved into a new school, wrenched from its course, or arrested by some of its leading authors, working alone or in groups. It is these of whom a literary historian will speak.

Bauer also attacks me for my supposed attitude to nature poetry (pp. 164, 166). Here, once more, he betrays how little he has actually seen of my work on poetry. He is speaking from a lack of knowledge, unless (as I hope is not the case) he is wilfully ignoring what he knows with a view simply to malign. In my chapter on "Nature Poetry in al-Andalus and the Rise of Ibn Khafāja," [7] I gave a lengthy, positive, and (to the best of my knowledge) new description of this poetry and its aesthetic refinements, particularly the dehumanized[8] (to use Ortega y Gasset's description) poetry of many short poems of *al-wardīyāt, al-rabīʿīyāt, al-nawrīyāt,* etc., which mostly had no relation to human experience and hence to the human condition. This poetry, which began in the East,[9] developed widely in al-Andalus, and has subsequently drawn much admiration from Western moderns. Lorca,

[6] Unless of course one wants merely to give a tepid survey of who wrote during that period: this kind of survey, however, is more of a social science than a critical literary genre of writing. I fear Bauer confuses the two sorts of enterprises, as seen in his use of the method of statistical analysis of poetic output, which offers no critical insights into the literature he treats herein at all. For a single example, see Bauer, "Abū Tammām's Ghazal," *Journal of Arabic Literature* 27 (1996): 18–21.

[7] *The Legacy of Muslim Spain,* 367–79.

[8] See what Ortega y Gasset had to say about dehumanized poetry, i.e., the poetry that does not speak of direct human experience, in *The Dehumanization of Art and Other Essays on Art, Culture and Literature (*Princeton, 1972), 24.

[9] Although the particular kind of poetry concentrating on nature had been written by the pre-Islamic poets in their intricate and "dehumanized" descriptions of the horse and the she-camel, focus on flowers and nature and the seasons as such was introduced in a big way by Ibn al-Muʿtazz (861–908), the one-day caliph in Baghdad, and taken up in the next generation by the Syrian al-Ṣunawbarī and the Egyptian al-Tinnīsī and others, being already fully entrenched when it reached al-Andalus.

for example, was an admirer, and beautiful selections have been translated by three sets of fine translators in modern times.[10] This is all covered in my chapter.[11] Nevertheless, these poetic miniatures, no matter how perfected and chiselled they were, could never have a claim to be great poetry. Great poetry, not to belabour a point, has always been a poetry of human experience and vision, of the human condition, not simply of artistic and elaborate description. But this is a platitude, something known to every perceptive reader of poetry in any language. If Bauer disagrees, all very well: but he needs to provide a substantive argument; there is no profit in piling up accusations that will not stand the test of time or honest research. My work abounds in statements and interpretations that belie Bauer's aggressive claims.

In the interest of scholarly accuracy, incidentally, I should point out that my Umayyad chapter appeared not in the *Abbasid Belles Lettres* volume of the Cambridge History of Arabic Literature, as Bauer writes (p. 162), but in Volume One, titled *Arabic Literature to the End of the Umayyad Period* (1983).

Some further corrections: *uqḥuwān* appears as "daisy" in more than one dictionary: see Wehr and *The Concise Oxford English-Arabic Dictionary*. Bauer attempts to critique my translations. But is he really competent to speak of my translation from the Arabic, or to make such high-handed judgments of it? Has he really mastered the language to this extent? In fact, when we look at a collection of his own translations (see his above-mentioned article on Abū Tammām), it appears that he does not understand the poetic idiom or is unable, at least, to deal with it in translation. His translations, to put it very mildly, leave much to be desired on account of the author's doggedly literal rendering of some passages in the poems he quotes, which betrays a serious lack of knowledge of the Arab poetic idiom as well as his poetic sensibility. His translations of excerpts from Abū Tammām's poetry, for example, are literal and flat; they betray an incapacity to understand the idiomatic meaning of the Arabic lines and the necessity of translating them without undue homage to the literal details (as is indeed the case with idioms in all languages). What poetic pleasure will a reader in English gain from Bauer's translation of some of the *ghazal* passages from Abū Tammām?

[10] See Cola Franzen's lovely translation of a selection of these poems, *Poems of Arab Andalusia* (San Francisco, 1989); James Bellamy and Patricia Owen Steiner, *Banner of the Champions, an Anthology of Medieval Arabic Poetry from Andalusia and Beyond (*Madison, 1989); and Christopher Middleton and Leticia Garza-Falcon, *Andalusian Poems* (Boston, 1992).

[11] Indeed, as I also said in my opening address at the conference on *qaṣīdah* poetry in Islamic Asia and Africa at the School of Oriental and African Studies in July 1993, "Let me say at the outset . . . that I am not a conventional lover of poetry. True lovers of poetry cannot fail to see the splendor of every aesthetic form: they are versatile, mobile, open to every kind of beautiful utterance, endlessly captivated by the poignant poetic passage in any language and in any form." See *Qaṣīda Poetry in Islamic Asia and Africa,* ed. Stefan Sperl and Christopher Shackle (Leiden, 1995), 1:1.

What, for instance, does Abū Tammām (along with many other poets of the Classical Age) mean by *naqā*?[12] Just a heap of sand? Or one to compare to a part of the beloved's body? Her buttocks, in fact: rounded, ample, and white like a sandhill. Since a "sandhill" has no such connotations for an English reader, such a translation completely robs the verse of its poetic substance:

> Oh twig of a moringa tree of tender growth, upon a sandhill (oh twig)
> Of which the upper part sways (p. 15).

The poet's intention is simply to describe the slim waist of the beloved and her ample white buttocks.

Most of the translations included in this article are lacking in accuracy and, particularly, in poetic appeal; they render the phrases verbatim, disastrous in any translation.

I could embark on a long list pointing out the mistakes or infelicitous choices Bauer has made in translation. *Aḥshāʾ* (p. 14 of the same article) cannot be translated in English literally as "viscera" without a grotesquely misplaced connotative effect. The verb *alifa, yaʾlafu* is not to be translated as "acquainted with" but as "familiar with" (p. 17). And how can anyone offer the following in the same article as a good translation:

> Beauty prostrated itself before his face when it saw the perplexity
> of the minds brought on by his outstanding beauty (p. 16)!

In other words: "Beauty itself was in awe at the loveliness of his face when it saw all the wonder his beauty stirred."

Again, it is a well-known usage to say, when describing the tenderness of the beloved's skin, that, being so tender, even water scratches *(khamasha)* it (not as Bauer says: "makes smooth his skin") so that it becomes red, as if wearing a robe of embers (Bauer, pp. 16–17).

Then consider this:

> Separation had made me swallow the juice of colocynths, and separation has made me bereft of a son. (p. 17 of the same article).

What does all this mean when all the poet intends is that separation has made him suffer bitterly and feel bereft? The colocynth *(ḥanẓal)* is idiomatically understood, not just in poetry, but also in present-day prose and conversation, to denote bitterness of experience. Translated *literally* into English, it loses its meaning, and, like several of the other translations I have quoted, looks virtually

[12] See pp. 14–15 of "Abū Tammām's Ghazal."

comic. And *thakila* can also mean losing someone loved, not just losing one's child (see *Muḥīṭ al-Muḥīṭ* under *thakila*).

There are many similar renderings in Bauer's poetic translation, and indeed in his discourse. For example, how can he translate *mujūn* as "satire"?[13] *Mujūn* is the use of heavy, bad language, uncontrolled and impervious to social decorum. It was a sign of the age itself, and of its accepted ethics and culture—one that he describes as "a culture of refinement, sophistication, and elegance" (p. 162 of his review on our volume)—that the word *mujūn* was used openly by poets and was explicitly present as a section title in some of their *diwāns*. It would be quite impossible for poets to use it in their poetry now.

But in this context, Bauer accuses me of "prudishness." My objection to the poetry of this period that delved into mere sexual delineation is simply an objection to vulgarity, which is inimical to art and which is amply manifested in the poetry of this period.[14] By way of contrast, I refer the interested reader to a poem I have quoted elsewhere by the early Iraqi poet ʿAbd al-Ghaffār al-Akhras (1780–1863).[15] In this lively, spirited, and delightful poem, the poet speaks of lust and wine and of a gaiety dizzy with drink. The problem is not a content that includes some explicit sexuality-–as al-Akhras's poem in fact does-–but the triviality from which most of the sexually explicit poetry of the period under discussion suffered, a triviality whose legacy is a corpus of bad and vulgar verse.

I note, in this context, that Bauer presents me as deliberately maligning ʿUmar ibn Abī Rabīʿah (p. 162), stating that I have regarded the Umayyad period as "marred" by the ʿUmar ibn Abī Rabīʿah syndrome. He contrives the following phrase to describe it (to be understood presumably as reflecting my position): "an abominable degeneration that consists of enjoying one's life without feeling guilt." I have treated the issue of guilt and shame in Arabic culture elsewhere, and would note that the above statement, with its implications, is not in my essay on Umayyad poetry nor has it ever been in my thought.[16] How did Bauer come to invent such words and such an attitude? Authentic scholarship is a matter of hard-earned status, depending first and foremost on a reputation for veracity of research and honesty of interpretation. This kind of personal assault on another scholar, through innuendo, misquotation, and slur, is (to put it charitably) highly unusual.

And "homophobia" (a further implied censure)? In my chapters on Andalusi

[14] Ibn ʿUnayn was banished from Damascus on account of his harsh invective, full of wantonness and crudity.

[15] See *Trends and Movements,* 1:30–31.

[16] The reader can see what I wrote on ʿUmar in my chapter, "Umayyad Poetry" in *Arabic Literature to the End of the Umayyad Period,* 422–24 and *passim.*

poetry, I spoke with genuine admiration of the anguish of a dying poet (Ibn Shuhayd), expressed in lovely and heart-rending verse, at parting with ʿAmr, a young man with whom he was deeply in love.[17] Yet again Bauer fails to provide the actual context for my discussion of sexuality and love (or for that matter my discussion of eulogy and almost every other matter I do address) in the period in question, preferring to enumerate the appearance of words and tiny phrases from that discussion, as though this was any kind of genuine critical assessment. The fact that I am addressing the ways that two of the major genres of Arabic poetry (love poetry/*ghazal* and eulogy) became transformed in response to radical transformations and changes in the historical, social, and institutional conditions of the time apparently is not an issue he deems worthy of serious engagement.

What is worse here, however, is his discreditable and defamatory charges of homophobia and racism, threading their way throughout his review in order to be explicitly presented at the end (p. 167). Indeed, perhaps what is particularly outrageous is his ill-concealed attempt to assimilate my descriptions of the pre-Islamic Arabs to the waves of fascism in Europe of the twentieth century (p. 161). Again, all he has to say is based on the same method of selective quotation and enumeration as I have already outlined. However, the contexts and ways in which he repeatedly brings up the phrase "the Arab race," a phrase I never used, in order to attribute to me ideas that I express neither implicitly nor explicitly, do raise a question about his own stance.

Why should it irk this writer so much if I posit a difference between the Arabs of old and the Arabs of the later urban centuries (p. 161)? And if I describe the old Arab way of life, so different from the urbanized and stylized way of life of the Mamluk and Ottoman periods? People may justifiably hold opposing views, but that is totally different from a mere assault on another in terms of multiple personal innuendo, defamation, and invective.

Why, too, this strange ire and rage (p. 161) because I see a basic concept of poetry common to all Arabic-speaking peoples, and a unified Arab poetic identity? This is a simple fact of literary history; it has been the case in the past and remains so now, throughout the Arab world. It would be extremely difficult, at the present time, to attribute an unsigned poem to a specific Arab country or region—more so, indeed, than in the period under discussion, when regional poetries exhibited certain differences of diction and tone. Changed means of communication, and the ubiquity of conferences and poetry festivals, have ensured that the poetry of the whole Arab world has now become to a high degree unified; and poetries are now distinguished rather through the known styles of certain poets than via local

[17] See my article "Andalusi Poetry: The Golden Period," in *The Legacy of Muslim Spain,* 339–40 and *passim.*

identities. This is an interesting point of literary history.[18] What does it have to do with some "nationalist ideology" that blinds judgment? Indeed, Bauer's ire betrays the nature of his own stance on what can be permissibly said about the Arabs, or permitted for them, a point that I have addressed earlier. Interestingly, although he has issues to raise with some of the other authors, his invective is reserved only for the Arab scholars he disagrees with in the volume. It feels like a new old story. M. L. al-Yousfi (whom Bauer also attacks with slurs) is one of the very finest critics of poetry and prose literature in contemporary Arabic. The author of a seminal three-volume work, *Fitnat al-Mutakhayyal* (Beirut, 2002), he is original, creative, and gives a much-needed new and cogent interpretation and a breath of fresh air to literary criticism in the Arab world.

It is not within the rules of decorum in scholarly criticism that a reviewer should (directly or by implication) accuse an author of such negative personal qualities as homophobia and blind national fanaticism, even racism. At best, this serves to betray Bauer's ignorance of my work and his remarkable capacity to leap to judgments which suit either his own preferences or his naive concept of poetry. Yet beyond that, and given the inconsistencies, contradictions, and manipulations as well as the ugliness of the accusations his "review" is replete with, one is left questioning what impulse actually informs this review. He has addressed none of the manifold and extended *technical* points I raise about the development of poetry during the period, nor the extensive social and historical discussion I provide that addresses the environment for the development of this poetry in its different forms, and the constant comparisons with the poetry that came before and after it (except either to outright deny any historical approach on my part, or to treat it in a very superficial and denigrating way when he wishes to make his unscrupulous charges of racism).

I have fervently dedicated myself over the last thirty years or so to serving the reputation and status of my beleaguered culture and literature, and of Arab/ Islamic civilization, through translations and studies. To this end, I founded East-West Nexus/*PROTA* with the vision and aim of providing the English-speaking

[18] A very telling example, which demonstrates my point perfectly, can be drawn from a recent public occasion: on September 7, 2007, Abu Dhabi Satellite Television broadcast (10:00 p.m. local time) an inter-Arab poetry contest for best poet. Thirty-five poets from all over the Arab world (including the Sudan and Mauritania, from which two of the five finalists were selected) competed in this. One of the activities performed, as part of the occasion, was a shared collective composition of a single Arabic poem. A poet would say one verse, in the two-hemistich form, and then a second poet would add another verse in the same meter and rhyme, attempting to develop the semantic element of the poem, until all of them had had their say. The difference in their rendering was only in poetic value and skill, but there was no trace in the wordings themselves to denote the diverse local identities of the poets. This suggests the vibrancy of a shared poetic language, style, and stance.

world, to the best of my ability, with some of the finest manifestations of Arab creative talent, past and present. If I had found in the poetry of the period in question the beauty and greatness which Bauer strives to intimate it has, I would most certainly have included it in my agenda. What could prevent me from further enriching the general work I have undertaken by bringing forward more fruits of original creativity in Arabic? In my work on this project, I have consistently enjoyed the companionship of some of the best world scholars in the field of Arabic and Islamic studies. Many, from literally across the world, have shared in the vision and its objectives, and the work of bringing it to life. There may well be a number of people who may, however, not have welcomed it. This is part of the territory of such attempts at contributing to the transformation of cultural discourses about various issues and regions in the world. But it would be a sad development indeed should the field of Arabic studies fall into the hands of one such as Thomas Bauer, to be expressed in terms of such crude and personal virulence of language, intention, and tone.

Critics, in any age, work responsibly but from an inevitably—indeed bracingly—wide variety of viewpoints; and it is for the reader to make an informed choice. I myself, while observing scholarly principles, always including a close study of historical background, make my assessments from a viewpoint of heartfelt artistic conviction. What is more, I do this openly and in a spirit of respect for my readers and their intelligence. If readers, having read what I have to say, disagree with my viewpoint, I can do nothing about it. If, on the other hand, they find themselves convinced or enthused, then all the Bauers in the world can do nothing to stop this happening.

The above will, I trust, suffice to show the many-sided flaws in Bauer's blind defense of his personal view of the age, and in his venomous attack on views that differ. The only answer to the differing views of others which Bauer should give in order to defend his point of view and to show the soundness of his judgment is not to rain slurs and vituperation on those who differ from him, but rather to put down a genuinely convincing argument about this age, and translate its poetry *poetically* and demonstrate its superiority.

Meanwhile literature and criticism move vigorously on.

DENISE AIGLE, *Le Fārs sous la domination Mongole: Politique et Fiscalité (XIIIe-XIVe s.)*. Studia Iranica, Cahier 31 (Paris: Association pour l'Avancement des Études Iraniennes, 2005). Pp. 246. Includes glossary, maps, and genealogical charts.

REVIEWED BY PATRICK WING, Tulane University

Recent scholarship devoted to the provinces of the Mamluk Sultanate has raised important issues regarding the relationship between imperial authority and the influence and interests of local notables. A recent issue of this journal (11, no. 1, 2007) was devoted entirely to Syria, demonstrating an awareness of the need to consider aspects of Mamluk history taking place outside the citadel in Cairo. Denise Aigle's recent book offers scholars of Mamluk history an opportunity to examine some of these same issues in the context of the Mongol Ilkhanate in the thirteenth and fourteenth centuries. Aigle's *Le Fārs sous la domination Mongole* makes an important contribution to our understanding of the relations between the Ilkhan court, the Mongol administrative elite, and the local Persian notables through a study of the political, social, and economic aspects of Mongol rule in Fars. Aigle's attention to the dynamics of power between military, administrative, and religious elite owes much to the work of Jean Aubin, whom she credits for influencing her approach in this work. Her stated objective is to examine the modalities of Mongol rule in Fars from the first appearance of the Mongol armies in Iran until the end of the Injuid dynasty in 1357.

In the introduction, Aigle points out that the Salghurid rulers of Fars submitted to the Mongols, and thus did not suffer the direct shock and devastation of the Mongol invasion. In addition, the province did not receive a large immigration of Mongol tribes, as was the case in Khurasan, Azarbayjan, and Anatolia. Mongol rule in Fars was exercised in a fiscal manner, and it is in the networks between the local notables, the Salghurid ruling house, and the Mongol rulers at the *ordo* (the court-camp of the khan) that Aigle examines the patterns and impact of Mongol rule in Fars.

Central to Aigle's thesis is the notion that Mongol rule in Fars caused a break in traditional administrative patterns. Previously, financial and secretarial offices had been handed down, generation to generation, in established families. However, under the Mongols, a dual administrative system was set up, consisting of both Mongol and local personnel, directed from the *ordo*. This structure meant that the provincial notables expended great energy and resources to secure loyal clients among the amirs, courtiers, and royal relatives at the *ordo* in order to pursue their own personal interests. The political maneuvering at the royal court meant that Mongol officials serving in Fars could not rely on the local nobility to faithfully manage fiscal affairs in the province. This situation, combined with

weak Salghurid rulers, led the Ilkhans to take more direct control over fiscal and administrative affairs in Fars.

Aigle traces this process chronologically through the death of the last Ilkhan ruler, Abū Saʿīd, in 1335, after which Fars became an object of desire and conflict among the several factions of amirs who attempted to take control in Iran. Conflict in the two decades after the death of Abū Saʿīd was focused on the family of the Injuids, so-called because they had been assigned to administer the Ilkhanid crown holdings *(īnjū)* in Fars in the early fourteenth century, and the Muzaffarids, another local dynasty that had ruled Kirman and Yazd under the Ilkhans. Aigle attributes the eventual victory of the Muzaffarids to their ability to incorporate the local *pahlavān*s, members of youth organizations devoted to the arts of wrestling and archery. Aigle argues that the *pahlavān*s, with their personal bands of followers, greatly contributed to the Muzaffarids' military success. At the same time, the Muzaffarid amir Mubāriz al-Dīn Muḥammad's appeal to religion won him the support of the population of Shiraz. The combination of the *pahlavān*s and Islam enabled the Muzaffarids to take Shiraz in 1353 and execute the last Injuid leader in 1357.

A general issue which could have been addressed more directly in the book was the attitude of the Ilkhan rulers themselves toward Fars, which may help account for its historical development in the thirteenth and fourteenth centuries. In other words, why was Fars spared the devastation of the initial Mongol conquest and the subsequent influx of Mongol tribesmen, in a way that Khurasan and Azarbayjan were not? I would suggest that the Ilkhans' concern with controlling commercial traffic from China and Central Asia to the Mediterranean and Black Seas had a direct impact on the political structure of Mongol Iran from the time of the first imperial governorates there in the 1230s and 1240s. The east-west trade route made direct control of cities like Tabriz and the foundation of the city of Sulṭānīyah an important part of the Ilkhanid political economy. Fars remained outside this economic pattern, and thus the Ilkhans were content to rely on the Salghurids, Injuids, and Muzaffarids to administer Fars, Kirman, and Yazd. However, as Aigle convincingly argues, contrary to common assertions, the Mongols did play an active role in the provincial administration. They did not simply leave the Persian personnel to manage the business of government. The value of this work is in Aigle's skillful analysis of the interests of the political elites, and the ways in which the political structure of the Ilkhanate provided opportunities for and limitations to those local political actors, from the Salghurid governors to the *pahlavān* youth organizations.

In *Le Fārs sous la domination Mongole,* Denise Aigle has not merely provided a "local history" of an Ilkhanid province, but has shown how local interests depended on and influenced the imperial center. As historians of the Mamluk Sultanate and

Mongol Ilkhanate continue to examine issues of imperial-provincial interaction, the possibility for more comparative studies becomes more realistic and more promising. Such comparisons of Mamluk and Ilkhanid provincial administration and economy would surely yield valuable new insights into both of these states and the relations between them.

Reviewed by Li Guo, University of Notre Dame

Woody Allen once famously remarked that ninety per cent of life is about showing up. To illustrate the point, here we have a journal, by a Damascene court clerk in the fifteenth century, which is virtually a laundry list of his showings-up, and no shows, at countless appointments and events required by his job, his family, and his community. The trajectory and significance of Ibn Ṭawq's *Al-Taᶜlīq* have been discussed by Stephan Conermann and Tilman Seidensticker in their review article published earlier in this journal,[1] with an outline of the contents of volume I, the first of four. Volumes II and III, under review here, cover the final years of Sultan Qāytbāy (r. 872–901/1468–96) and the first half of his son Muḥammad's short reign (r. 901–3/1496–98). In the following I have lumped together notes from my preliminary reading of this spectacularly rich text, in an attempt to present a reader's digest of sorts. I will first comment on the compositional features of the text, then describe its main contents, situating the piecemeal diary-entry fragments into context. I will conclude with a categorized list of the materials contained in the text that may be of interest for future research.

I.

For anyone familiar with the modern conventions of a diary, the most notable aspect of Ibn Ṭawq's narrative is its hybrid format: a strange blend of a "public" text, in the format of *tārīkh* annals, and a "private" journal. A synopsis of the opening segment of the year 891/1486 exhibits the pattern (pp. 577–79). It begins with a list of the statesmen of the Mamluk Sultanate in Cairo. Then comes the diary proper, of the first day of the year, to be broken down into nine items:

[1] "Some Remarks on Ibn Ṭawq's (d. 915/1509) Journal *al-Taᶜlīq,* vol. 1 (885/1480 to 890/1485)," *Mamlūk Studies Review* 11, no. 2 (2007): 121–35.

(1) The day fell on a Sunday. Cold weather.

(2) Banyan trees and almond trees began to blossom.

(3) Lesson of Arabic grammar took place at the mosque of the author's patron *(sayyidī),* the Shafiʿi judge Shaykh al-Islām (of whom little is known). Students in attendance and the textbooks used.

(4) A messenger arrived from Cairo, reporting the release of a group of Hanafi scholars from the Citadel.

(5) Lecture at the Grand Mosque ended up with a visiting scholar, ʿAlī al-Miknāsī al-Maghribī, accompanied by a "beardless lad" and others, being badly beaten by a man, also from the Maghrib. The skirmish was ignited when the visitor, a Shafiʿi, made fun of the assaulter, a Maliki.

(6) The *nāʾib* of Syria took off for the northern frontiers. Names of the generals in his entourage and those who stayed behind in Damascus.

(7) List of the four chief judges in Damascus.

(8) List of the civic officials in Damascus.

(9) Meeting with a local shaykh, Abū al-Faḍl, at the latter's request.

Here items 6–8, on local state affairs in Damascus, were recorded perhaps out of the necessity of stocktaking at the beginning of a new year. By and large, an overall concern for the Mamluk state runs throughout the text. The annual hajj processions, military campaigns in Bilād al-Shām, news from Egypt and the Hijaz, and so forth, all find their way into the diary. However, the thin coverage of state affairs amounts to nothing more than mostly secondhand hearsay, introduced with the phrase "I heard that *(samiʿtu* or *balaghanī)*. . . ." It is evident that the author's motivation and impulse for writing the diary lay in his consummate interest in the wellbeing of himself, his community (his family and a small circle of associates and neighbors), and his place: Damascus and its suburbs. It is this portion of the text that stands out as truly original and unique, and merits our attention.

The entries vary in length. There are long ones, and extremely terse ones. "There is nothing worth writing," is the usual explanation for leaving one day's record blank. Sometimes an entire day's entry consists of a single item. One entry reads "The 19th (Rabīʿ I, year 891), Saturday. It rained early in the day" (p. 602); "the 19th (Shawwāl, year 898), Friday. Bars and taverns (? *al-khammārāt wa-al-waqqāfāt*) have been on the rise" reads another (p. 1210). There are also a few unexplained lacunae: a long stretch from Shaʿbān to Dhū al-Ḥijjah of the year 892 (pp. 713–24); the last three weeks of the year 896 (pp. 1067–68); and the last week of the year 900 (p. 1366). All these lacunae occurred at the end of a given year when the author was perhaps preoccupied with some sort of end-of-the-year rush. When he was traveling, the entries tend to be short "due to fatigue," (for example, pp. 664–65, 787–90). On occasion, failing health was the cause for tardiness: resulting from an illness "of forty-three days," starting from the end of

the year 899, the second half of the first month of the ensuing year 900 remained unrecorded, and the entries of the first three months are accordingly sparse (pp. 1308–21), a rarity for this otherwise consistent and diligent diarist.

II.

Overall, the journal makes an intriguing read, in light of the idiosyncrasy of a "private" text, whose context was perhaps better known to the author alone. A case in point: the author mentions that he once "slept" on the bed of his patron's son, the soon-to-be-married Muḥammad (p. 580). The significance of this seemingly off-hand reference is that, according to an ancient Damascene custom (the editor supplemented this information in the footnote), it was considered preferable to have a pious person sleep in the bridal bed three nights prior to the wedding. The author's record of the nights he slept in the groom's house was thus a testimony to his status in his community and his closeness to his patron's family. But since the diary was perhaps never meant to be made public, this kind of scrupulousness can hardly be viewed as self-promotion, for he also kept a record of where he slept after the wedding, rotating between his own house, the residence of the shaykh at the mosque, and other places. Why was that an important issue, then?

It turned out that Ibn Ṭawq's concern for his own job performance was perhaps the *raison d'être* for writing the diary in the first place. The tireless accounts of his whereabouts—where he prayed for the day, where he spent the night, and where he went on those work-related trips—may have to do with the fact that he lived in the suburbs and had to "commute" to the city to report to work and somehow felt the need to record all of his movements. The ubiquitous phrases such as *ḥaḍartu al-Shāmīyah fī khidmat sayyidī* ("was present at the Shāmīyah mosque [or other places] to attend to business for the patron . . .), or *lam adkhul al-madīnah* ("did not come to the city today . . .") underline such functionality of the text. It is perhaps for a similar reason that the no-shows were recorded. Our court clerk was very mindful about his personal hygiene: "Didn't attend the session today; had to go to the bathhouse," is a frequent diary entry. If it was time to do laundry, he would take the day off as well.

As diaries go, tidbits of private life are inevitable. Ibn Ṭawq is candid about it. He describes his medical conditions, namely the pathological mood swings *(taghayyur mizāj)* he suffered (pp. 1362, 1421, 1427, 1449). He laments over family problems: "have had some difficulty," one entry reads, "with the relatives" (p. 1216); "wife has not been feeling well for two days. God have mercy," reads another (p. 1221). He complains about being short of cash from time to time: "have been in bad shape money-wise these days . . . " (p. 829); "deep in debt these days . . . " (p. 847); "have had a hard time [due to legal wrangling over money]" (pp. 1152–53). Nevertheless, he seemed to lead quite a good life. A

lifetime "foodie," his passion for well-prepared meals is unmistakable. We read about his anger over some "so-so quality smoked meat, pickles, and grape leaf wraps" (p. 910); his complaint that "meat was not to be had in Damascus for a week; I have not had meat for two days and two nights!" (p. 1101); and his description of the "six main dishes" presented at the dress rehearsal for his son's wedding banquet (pp. 1419, 1422). One may take note here that the where's-the-beef question was not only for the author's own gastronomic gratification, but was also related to the welfare of his community. "Meat was not available this week in the marketplace; only statesmen and notables *(al-dawlah wa-al-kibār min al-nās)* could have it. God have mercy! . . .," reads one entry (p. 1260); "wheat was sold at [such a high price] thanks to the unjust policy *(ẓulm)* of the governor of Syria!" reads another (p. 1238).

The intimate nature of the diary genre certainly allowed the liberty to divulge some strongly worded commentaries on his surroundings. For example, he was not too happy to see that in a Christian quarter "Muslims and Christians mingle . . . That's not right!" (p. 602). He is not hesitant in lashing out at some Mamluks, including one particular amir who was a "tyrant, unjust, and dead drunk . . ." (p. 1186). Nor does he hold back any thoughts on business transactions he helped to facilitate and finalize. On more than one occasion, he makes it clear that he "was not satisfied with the deal at all" (p. 725).

Ibn Ṭawq had a keen eye for the happenings around him and was fastidious in recording them. Stories of the good, the bad, and the ugly make for some side-bar tales, aside from his own affairs. In telling the tales, his attitudes are unmistakable. For example, the sporadic accounts of the Mamluk military movements are underlined by his awareness of the state of Mamluk rule in the twilight years, in that "the Ottoman advances" pepper his narrative. At one point he exclaims that "the [Mamluk] army collapsed!" (p. 1428). Scandals, especially sexual escapades, are fixtures in the diary, and they are not for entertainment value alone. As a career Shafiʿi, Ibn Ṭawq uses these scandals to point out the moral shortcomings of other *madhhab*s. We read stories, with pointed information, about a "Hanafi" scholar who had impregnated a girl during Ramaḍān and was castrated as a penalty (p. 667); a "Hanbali" who had too much to drink (p. 1103); another "Hanbali who disguised himself as a female to mingle with women" (pp. 1171–72); and, alas, more misbehavior by "some Hanafis" (p. 1180).

There are plenty of unpleasant stories to go around: a raid that involved a preacher *(khaṭīb),* alcohol, and two singing girls (p. 656); Sufis destroying bars in the Christian quarters (p. 1011); a hashish smuggling ring (p. 1141); and more narcotics raids (pp. 1007, 1426, 1515, 1516). Nearly every page contains some dramatic episode in the author's neighborhood: domestic abuse, slave girls running away, shouting matches and fist fights between neighbors, crimes (murder, theft,

prostitution, etc.), fires, riots in the city, and so forth. While most are matter-of-fact, some are quite gruesome, such as the coroner's report of a murder case in the back alleys (pp. 1476–77).

Speaking of neighborly behavior, Ibn Ṭawq obviously had some ax to grind, if only in his journal. Oddly enough, the dirty laundry of his patron's family—money problems (pp. 1378–79), the harem feuds *(nakd)* among two strong-willed wives and a husband in between (pp. 1462, 1515)—forms one of the main story lines. Looming in the background is the shaykh's difficult wife, referred to frequently as "that Egyptian woman," whose "evil deeds" are enumerated in the diary entries, making her *the* villain of all. We are told, for example, that at the wedding of the above-mentioned Muḥammad, the mother-in-law, in her double capacity as the groom's step-mother *and* the bride's birth mother (she had been married to Shaykh al-Islām's brother, whose daughter was to marry Muḥammad), failed to show up. The woman, as Ibn Ṭawq tells it, was "possessed by Satan" and mentally unstable. Ibn Ṭawq then goes on to report that the party went on without a hitch: "the female guests" were fed with a feast of "eight grilled sheep," various kinds of rice dishes, bread, dairy products, and dessert, to be washed down with refreshments; that he personally accompanied the groom to the pre-nuptial bath; that the newlyweds consummated their union at "the early minutes of two o'clock." At the end of the day, the "Egyptian woman's wicked tricks" were defeated by divine intervention (p. 581). Inquiring minds, however, may still want to know: why an account of the food for "female attendees" only? Why such bitter animosity against this particular woman?

One also finds records of birth, death, illness, marriage, divorce, circumcision, and so forth, in the diary entries. Particularly interesting are the accounts of several cases of abortion or miscarriage. The verb used here is *asqaṭat,* the implication of which is not altogether clear. The lexicographers' definition of "a pregnant female cast her young one, or fetus, abortively, or in an immature, or imperfect, state" (Lane, Hava) encompasses a wide range of possibilities: abortion, still birth, or miscarriage. Since most of the incidents involve baby girls—a girl "of two months" (conception? birth?) had been "cast" (p. 899); two girls had been "cast" two days in a row (p. 1325); another girl met the same fate (p. 1363)—one would be inclined to think that abortion was the case here. But we also have cases involving a girl and boy (p. 1047), the circumstances of which remain vague. Such, of course, are the limits of a text of this kind. On the other hand, it is exactly this kind of scrupulous, and intriguing, detail that make Ibn Ṭawq's diary a valuable source for the study of Mamluk history, society, and culture.

III.

Taken all together, Ibn Ṭawq's diary entries are straightforward and repetitive,

but never dry or dull. The journal is local, personal, and informative.

For the student of *environment and natural history,* Ibn Ṭawq's meticulous observations of climate variation and flora and fauna in the vicinity of Damascus stand out as one of the most consistent records of its kind. Attention to the environment and climate variation (solar and lunar eclipses, new moons, earthquakes, the position of the sun, migratory locusts, flooding rivers, etc.) has long been a hallmark of the Syrian historians. Ibn Ṭawq's documentation achieves a new standard in this arena.

For the historian of *architecture and urban development,* Ibn Ṭawq's detailed first-hand descriptions of the houses, mosques, alleys, residential quarters, and other properties are valuable. Certification and verification of measurements of the buildings constituted a large part of his job and he did it diligently. The journal is full of documented accounts about the buildings and grounds in Damascus and its suburbs.

For the study of the *history of the Arabic language,* especially Damascene colloquial, the text provides intimate raw material. Ibn Ṭawq had the tendency to quote people's dialogue, including some heated exchanges, in real situations; the result is a text full of local usage and slang. It is also in this particular area that the present edition has left something to be desired. Although some features of the "Middle Arabic" are noted on occasion, for example, the missing *ḥamzah* (p. 1090, n. 2, *juzayn* for *juzʾayn*) and the *ẓāʾ*/*ḍād* interchange (p. 1211, n. 3; p. 1258, n. 1), many others are not indicated at all, for example, *r-w-s*, for *ruʾūs*, which looks very odd. But overall, the editor did a superb job in transcribing the impossibly cursive handwritten manuscripts. For such a long text, typos and errors are surprisingly few (I spot only one: *aḥmar*an, p. 835). Particularly helpful are the cultural and sociolinguistic notes on all things Syrian or Damascene.

For the student of *social history* of the late Mamluk era, Ibn Ṭawq's snapshots—of the personnel changes in ulama circles, books he read, teaching sessions he attended, poems recited in his presence, and so forth—shed light on his intellectual environment. He was also very alert to the non-Muslim communities. His account of some measures imposed by the local officials on the *dhimmīs*—for example, when they go to the bathhouse, men should wear a rope around their waists and women a bell—is unique to his diary (p. 755, n. 2). As for the study of everyday life in Damascus, the diary is a mine of information. In addition to his aforesaid addictive enthusiasm for the meals he and his fellow Damascenes had savored, our author had a taste for other fine things. He loved his furs and cloth, evidenced by the care given to the detailed accounts of what he wore on a given day. He was also watchful of the fashion trends in his city as well. One entry, for example, notes that high-heeled shoes *(al-tasūmah)* were "hot" among the Damascene ladies, but were once banned (p. 643).

In the domain of social history, Ibn Ṭawq's journal is, in my opinion, most remarkable for its accounts of his daily activities in the capacity of court clerk *(shāhid, kātib),* and is therefore most valuable for the study of *economic life and related legal practices*. Yossef Rapoport's sensible reading, and successful use of the material contained in the journal in his excellent study of marriage and divorce in Mamluk society is but one good example.[2] And there is much more. A sampling of the cases Ibn Ṭawq personally oversaw in the first month of the year 891/1486 (pp. 580–90) is sufficient to give a glimpse of the kind of data the text contains and promises:

Day 4: a rental deal concerning a property near al-Bādiraʾīyah.

Day 7: a case of break-in in al-Ṣāliḥīyah.

Day 8: a dispute between Shafiʿi and Maliki fellows over a debt.

Day 11: a real estate transfer deal involving the author's patron; and prior to that, a property transfer deal involving the sultan's personal translator.

Day 15: a case of jewelry theft by the servant of a Mamluk soldier.

Day 17: a rental deal concerning a property near Bāb al-Barīd.

Day 19: a *waqf* lease; and disputes over a will.

Day 22: family feud with regard to property rights involving the author's patron.

Day 30: the closing of the above-mentioned deal involving the sultan's translator.

And this covers only one month's worth of Ibn Ṭawq's court-related work. Following are more of his job activities as recorded in the diary:

Notarizations *(shahidtu ʿalá),* marriage licenses *(ʿaqd),* case briefings *(infaṣalat al-qaḍīyah),* the description of which occupies most of the space in the text.

Verifications (pp. 736 *[thubūt],* 859 *[tarikah],* 999 *[qaṭīʿah],* 1007, 1264 [fake documents]).

Negotiations and settlements (pp. 584, 696, 758, 765–66, 789 [complaint by a Christian], 890 [mediation efforts, *al-iṣlāḥ*], 897 [crop harvest], 1450 [negotiation with fellahin over *kharāj*-revenues]).

Property inspection and appraisal: the commonly used verb is *ṭalaʿtu,* "I went to such-and-such place to inspect . . ." (pp. 605, 617, 623, 628, 630, 637, 647, 707, 759, 818, 862, 867, 877, 878, 882, 883, 884, 888, 927, 968, 989, 1018, 1041, 1082, 1118, 1119, 1162, 1204, 1261, 1264, 1366, 1375, 1466, 1514). Sometimes the inspection involved inventory after a house eviction or state-enforced confiscation (pp. 743, 795, 904, 1253), as well as crop inventory for tax farmers (pp. 955, 1050, 1139, 1143, 1192, 1345, 1357).

Document preparation: mostly *kitāb* (letters) *(passim),* but also other kinds of

[2] Yossef Rapoport, *Marriage, Money and Divorce in Medieval Islamic Society* (Cambridge, 2005).

documents, such as *waqf* papers (p. 1494); *shahādah* (certificate of properties) (pp. 921–22); *nuzūlāt* (residential certificate) (pp. 1014, 1088, 1132); *waraqah (*letter for the sultan) and *wuṣūl* (receipts) (p. 1375); *kharāj (*account) (pp. 1453, 1514). He tells many interesting trivial details. The letters between Egypt and Syria, for example, were collected and delivered in sealed/locked postal bags *(khirqah mukhayyaṭah, kīs);* important letters were written on a specific kind of paper and wrapped in blue handkerchiefs for delivery (p. 1209).

Document delivery: *kitāb* (letters), *waraqah* (decrees), *shahādah* (certificates) (pp. 587, 617, 671, 748, 771, 772, 826, 852, 855, 860, 864, 868–69, 886, 988); *taṣdīq* (pp. 638, 649); *fatwá* (pp. 710, 762, 828); secret documents (p. 814).

Payment collection and delivery: collecting (pp. 651, 652, 906, 1012, 1063–64); paying (pp. 665, 671, 828–29, 1010, 1045, 1046, 1254); collecting and paying (pp. 1126, 1145, 1212–13, 1236); money exchange (pp. 1212, 1217 [florin to dirham, for exporting goods from Europe]); and occasionally, returning (!) the money (p. 1213).

Ibn Ṭawq was very good with numbers and had, thankfully, the good habit of writing them down in his diary. Crunching numbers, after all, was his job. A typical case is an accounting session *(muḥāsabah)* with the senior accountant (*raʾīs al-ḥiṣṣah,* pp. 1165–66, 1381, 1382, 1514). Another major task was inventory *(ʿaddādah),* the documentation of which abounds (for example, pp. 1445–47). Other than that, the diary entries contain more numbers: the measurements of the properties (pp. 749–50); various inventories (pp. 842–43, of a *tarikah* [bequest]); expenses of military activities (p. 1228, for a spy network); salaries and compensation paid to the Mamluks and government employees (pp. 823, 875, 904, 1086, 1100); various currencies *(dhahab Ashrafī, fiḍḍah ʿadadīyah, fiḍḍah Shāmīyah, laffat Ḥamawīyah)* and exchange rates with foreign currencies ("single" florin *[iflūrin mufārid]* and "double" florin *[iflūrin muzāwij],* pp. 1217, 1220).

And then, there are lots of prices. Prices of foodstuffs are quoted on a nearly weekly basis. Other prices seldom seen in chronicles abound here, such as those for houses (pp. 915, 1285); farm and orchard leases (pp. 623, 950, 1194); rental/leasing rates (pp. 632, 638, 863–64, 1052 [the annual fees for the restaurant district, Dār al-Tuʿm, was 8,000 *fiḍḍah*], 1341 [a bath house's monthly lease was settled for 160 *fiḍḍah*], 1475–76); slave girls (a "flawed one with bad manners and weak sight" went for 1,230 dirhams [p. 594]; a black maid for 1,300 dirhams [p. 604]; a legally acquired one *[al-sharʿīyah al-mūjibah]* for a sum of 1,170 *fiḍḍah* [p. 730]; a "Muslim" maid of Ethiopian origins went as high as 42 *Ashrafīyah* gold, in cash [*ḥāllah*, p. 1148]; another for 12 gold [p. 1149]); horses (pp. 649, 1273), sheep (p. 760), and cattle (pp. 781, 917). By the way, the cost for causing the wrongful death of a boy was 600 gold, cash (p. 1364).

Such are the sundry facts one can learn from the diary of a fifteenth-century Damascene court clerk. The categorized list above is far from complete. And the text as a whole, as it stands, is far from being "private" as well. Perhaps this is the way Ibn Ṭawq wanted it, after all. He makes it clear that the diary served the purpose of getting the record straight, insofar as *fal-yuʿlam dhālika*, literally "let it be known," is a phrase frequently used by the author to conclude a business-related entry. In any case, modern students of Mamluk history should be thankful that the hard-working fellow not only showed up for work but also felt obliged to leave a record of it. What a record!

Hasan M. El-Shamy, *A Motif Index of The Thousand and One Nights* (Bloomington, Indiana: Indiana University Press, 2006). Pp. 680.

Reviewed by Robert Irwin

In the last five years or so there has been an explosion of academic interest in *The Arabian Nights*. In 2004 several conferences were held to mark the tercentenary of the publication of the first volume of Antoine Galland's French translation of *Alf Laylah wa-Laylah*. The Kyoto conference proceedings were published as *The Arabian Nights and Orientalism: Perspectives from East and West,* edited by Yuriko Yamanaka and Tetsuo Nishio. The Paris conference resulted in *Les Mille et Une Nuits en partage,* edited by Aboubakr Chraïbi. The papers given at Wolfenbüttel were published in special issues of *Fabula* and *Marvels and Tales: Journal of Fairy-Tale Studies*. Recent years have also seen the publication of Daniel Beaumont's *Slave of Desire: Sex, Love and Death in The 1001 Nights; New Perspectives on Arabian Nights: Ideological Variations and Narrative Horizons,* edited by Wen-Chin Ouyang and Geert Jan van Gelder; Margaret Sironval's *Album Mille et Une Nuits; The Arabian Nights Encyclopedia,* edited by Ulrich Marzolph and Richard van Leeuwen; and *The Arabian Nights Reader,* edited by Ulrich Marzolph. We also have a new German translation by Claudia Ott from the Arabic edition of Muhsin Mahdi and a French translation by Jamel Eddine Bencheikh and André Miquel of the Calcutta II printed text of the *Nights* (handsomely published as a three-volume set in a Pléiade edition). In 2008 Penguin will publish a new translation by Malcolm Lyons of the Calcutta II version of the *Nights,* the first translation into English of this version since Richard Burton's in the 1880s.

Hasan El-Shamy is a distinguished and widely published expert on Arab folklore. His previous works include *Folktales of Egypt* (1980) and *Folk Traditions of the Arab World: A Guide to Motif Classification,* (2 vols., 1995). Stith Thompson

published *The Motif-Index* between the years 1932 and 1936. This catalogued in a fairly systematic fashion the elements that could be combined to make up either a folktale or a more literary composition. Although Thompson aimed at global coverage, as El-Shamy pointed out in his *Folk Traditions of the Arab World,* Arabic folklore was badly underrepresented in Thompson's Eurocentric compilation. *A Motif Index of The Thousand and One Nights* represents a further attempt by El-Shamy to redress this imbalance. It is also a major step forward in the study of *The Arabian Nights,* as thousands of story-telling items are here systematically catalogued for the first time.

A Motif Index is a useful book, even if one is not interested in folklore and its categories, since the book can serve general readers as a partial index to the *Nights*. If, for example, one cannot remember which story has the protagonist spying on bird-maidens as they bathe, or which story has a succession of sorcerers who demand that they be tied up and thrown into a lake, then one may find the right story by judicious use of El-Shamy's catalogue, which consists of a huge index of motifs, broadly classified in the way Thompson had laid out. It also includes a shorter alphabetical index of motifs as well as a short register of tale-types laid out following a numerical classification. (El-Shamy has not just classified new material, but he has also added new motif types to Thompson's structure.) If one looks up "mamluke" in El-Shamy's alphabetical index, the first reference is to P.508.1, "Mamelukes expected to rise to high ranks" from the story of "Dalila the Swindler." The second reference is to K252.5, "free person attired like slave (mameluke) sold as slave" from the same story. However, *A Motif Index,* compiled according to folkloristic criteria, is only a partial index, and if, for example, one looks up "camel" in the alphabetical index, one finds only three references to camels (and one of those is to a lover's bite said to have been caused by a camel), whereas if one looks up "camel" in *The Arabian Nights Encyclopedia,* one finds many more very interesting references to these animals.

Each of El-Shamy's motifs (over 5,500 of them) is normally cross-referenced to an Arabic text of the *Nights*, to Burton's English translation, to Victor Chauvin's *Bibliograpie des ouvrages Arabes ou relatifs aux Arabes dans l'Europe chrétienne de 1800 á 1885* (1892–1922), and to *The Arabian Nights Encyclopedia*. This is an admirable and formidable piece of work, except that the choice of Arabic text as a base of reference strikes me as problematic. The text chosen was published in four volumes, printed by the Maktabat al-Jumhūrīyah (Cairo, n.d.). One problem is that this text is not widely available in the West; for example, London University's School of Oriental and African Studies does not possess a copy of this edition (and neither do I). Secondly, the authenticity of this "folk edition of *Alf laylah wa laylah*" is asserted, rather than demonstrated. Among other things, it would be useful to know how much it differs from the Būlāq text. On a more general issue,

El-Shamy makes the following remark: "Most of the narratives constituting *Alf laylah wa laylah* in the Arabic language are literary representations of traditional folktales." This may well be so, but how many is "most"? And can we be sure that the folk version always precedes the literary one? Quite a few of the stories seem to have originated in the repertoire of *nudamāʾ* or in the compositions of moralists working with the theme of *faraj baʿd al-shiddah*.

However, there is much of interest in El-Shamy's short introduction to his index. Burton's translation comes in for some well-deserved criticism. El-Shamy is right to point out that, in the frame story, Sheherazade survives through total submission to the will of Shahriyar and that there is no suggestion that the sultan should be punished for having previously killed so many women. The feminist view of Sheherazade as someone who uses stories therapeutically in order to cure the sultan of his madness must be rejected as anachronistic and as something imposed upon the frame story rather than actually being found in it. More generally, El-Shamy claims, surely correctly, that the stories in his sample are thoroughly male in their orientation: "Women-bound tales are virtually non-existent in *Alf laylah*." To Mamlukists, mention of the word *inshāʾ* will summon memories of wading through the chancery treatises of al-ʿUmarī and al-Qalqashandī. But El-Shamy uses the word to refer to a literary style, signifying "a literary composition in classical academic Arabic, not in the vernacular." Folktales suffer distortion and elaboration when they are written up in the *inshāʾ* manner.

To judge by the bibliography, very little has been written about the folklore of the *Nights* except by El-Shamy. The value of the introduction would have been enhanced by reference to parallel or contrasting work on the *Nights* and on Arabic folk literature more generally. Not all the stories are timeless and lacking a historical context and Patrice Coussonet has done patient work in dating selected stories and giving them a historical context. Malcolm Lyons's magnificent work on Arabic folk epics might also have been mentioned.

Muslim Military Architecture in Greater Syria: From the Coming of Islam to the Ottoman Period. Edited by Hugh Kennedy. History of Warfare, vol. 35 (Leiden and Boston: Brill, 2006). Pp. xix + 323.

Reviewed by Reuven Amitai, The Hebrew University of Jerusalem

This beautifully produced book (with a price to match) contains many of the papers from a conference held in Aleppo in September 2003. As indicated by the title, the individual articles cover a wide chronological span, stretching before and

after the period usually covered by this journal, although Mamlukists—especially those with an interest in archaeology, historical geography, or military history—may find all of them of interest. The various approaches found in the articles reflect the training and methodologies of the authors: archaeology, architecture, history, and numismatics. Some authors, it is seen, clearly have read the Arabic sources closely in the original, while others are dependent on translations, many of which are quite old and perhaps outdated. Several papers are detailed technical discussions of individual sites, often provisional publications or summaries of works in progress. Other papers are *tours d'horizon,* giving an overview of a particular topic or area. These, to my mind, will be of particular interest for readers of *MSR*. Two archaeologically informed historians (Stefan Heidemann and Angus Stewart) have succeeded in presenting riveting accounts of a couple of sites, integrating historical and archaeological information (and in the former case, numismatic evidence). The inclusion of an author (John France) specializing in the Frankish view of warfare in the Levant is a welcome addition, and his article provides an interesting and significant perspective on the topic.

Actually, several of the papers, particularly at the beginning of the book, deal more with post-military architecture than sites with real defensive intent. The first two articles, by Denis Genequand and Ignacio Acre, are certainly of this kind. The former, writing about "Umayyad castles," shows that there had been a shift from the military architecture of late antiquity on the frontier with the desert, to a more palatial style. The round towers of Umayyad palaces may have been inspired by Roman models, but were no longer of a true military nature. Likewise, Acre's article on Qaṣr Ḥallabāt in Jordan shows a demilitarization of the site, the aim of which was to project grandeur and to show hospitality rather than to serve as a focus of defense. Donald Whitcomb, in his paper on the walls of early Ayla (chapter 5) takes up this issue, although the matter is not cut and dried here: the city represents a transitional form between the Roman legion camp and the Muslim *amṣār* (military camps that turned into cities). It is not clear how important its walls were, and perhaps they may have been more symbolic than functional.

The symbolic values of city or castle walls, projecting power perhaps more than actually providing it, is a matter that resurfaces elsewhere in the book. It comes up in the third chapter by Jan-Waalke Meyer, who discusses the early Abbasid Kharāb Sayyār to the southeast of Ḥarrān. Its weak wall had little military worth, and thus may have been symbolic like those Umayyad sites mentioned above. The situation of the nearby Ḥiṣn Maslamah, today Madīnat al-Fār, also has what can be described as weak city walls and thus appears to be similar (chapter 4 by Claus-Peter Haase). Perhaps a comment regarding the inclusion of these two sites in the volume is in order. "Greater Syria," the translation of Bilād al-Shām

as far as I understand it, means the territory between the eastern Mediterranean coast and the Euphrates River. East of the river is al-Jazīrah. The inclusion of these sites, deep within this last mentioned region, in the present volume may have more to do with present day political realities than the historical and geographical consciousness of the pre-modern residents of these regions. On the other hand, Qalʿat Simʿān, the subject of chapter 6 by Jean-Luc Biscop, is firmly in Syria, on the road between Antioch and Aleppo. Its fort, or "kastron," was apparently built in 966 along with a crude enclosure wall around the surrounding town under Byzantine auspices. Here, too, a strict application of the title of the book would preclude its inclusion, but it was in the general environs of Muslim rulers, and as the editor writes (p. 2), "it seemed . . . important and useful to present a scientific account of Byzantine fortification of tenth century Syria for purposes of comparison." The symbolic value rather than the military worth of the construction is also noted here by the author.

With the comprehensive article by Nasser Rabbat, "The Militarization of Taste in Medieval Bilād al-Shām" (chapter 7), we enter the portion of the book that will definitely interest students of Mamluk studies in particular and the pre-Ottoman history of the Turks in the Middle East in general. This article is an excellent review of expressions of legitimization and identity of the Turkish military class, be it of tribal or mamluk origins, particularly as found in construction projects of various types. First, we learn of the new-found importance of citadels under the Turks, which combined palace, audience halls, barracks, and stables, a process which appears to have begun before the arrival of the Saljuqs, but which gains real momentum in Syria and its environs with the Saljuqs and their various successors. Adornment, be it monumental inscription or zoomorphic ornamentation (dragons, large felines—not necessarily only lions, etc.), as well as military themes, are also found in abundance. This article is a very good starting point for the textual historian wanting to explore material aspects and expressions of Turkish rule in Syria, and can also serve as appropriate reading for students learning about Syria and its neighbors in the period between the first arrival of Turkish tribes in the eleventh century and the Ottoman conquest at the beginning of the sixteenth. I have just one point of possible disagreement: I am not convinced that the Mamluk military class was seeking or achieved a greater accommodation with their subjects in the fifteenth century. The sense that I get is actually a greater alienation between rulers and ruled, or at least the latter's growing dissatisfaction with the heavy-handed attitude and actions of the former.

The next chapter by Benjamin Michaudel, "The Development of Islamic Military Architecture during the Ayyubid and Mamluk Reconquests of Frankish Syria," is a laudable first attempt (to the best of my knowledge) to give an overview of this important topic. In spite of some important studies of specific

forts and some comments in the literature about Mamluk fortification policy, there is no comprehensive work on either this subject or the general approach of the Mamluks, let alone that of their Ayyubid predecessors, to fortification construction. This is a nice preliminary survey of mostly urban Ayyubid and Mamluk military architecture and I found the author's terse but systematic analysis of the development of military architecture cogent and easy to follow. On the other hand, the article does not really take into consideration either the role of the Mongols as generating a more serious Mamluk approach to fortifications or the Mamluk policy of destroying captured Frankish fortifications on the coast, while rebuilding those inland. Certain interesting Ayyubid forts in southwest Bilād al-Shām, such as Mt. Tabor and al-Ṣubaybah (the latter with important Mamluk additions) are not discussed. In short, this article is a very useful comparative, albeit preliminary, study, and it should be seen as a jumping off point for further comprehensive and comparative research on this hitherto ignored aspect of Ayyubid and Mamluk military history.

Stefan Heidemann's paper on "The Citadel of al-Raqqa and Fortifications in the Middle Euphrates Area" is to my mind an exemplary study combining historical, archaeological, and numismatic sources to provide a picture of one particular urban fortification within the regional context. The article also contains a pithy and useful definition of the roles of an urban citadel (p. 129), worthy of citation by those interested in this topic, and not only in the framework of late medieval Islamic military history. Heidemann's discussion of the increased construction of fortifications in the area complements that in Rabbat's article mentioned above. Initially, the citadel here and elsewhere in the region served garrisons and winter camps (for other troops I presume). Under the Ayyubids, it functioned more as a princely residence and lacked clear military value, a fact proved during the Mongol conquest of the region.

A more technical study is provided by Sophie Berthier on the citadel of Damascus (chapter 10: "Le citadelle de Damas: Les apports d'une étude archéologique"), reflecting the spate of excavations and other research at this site in recent years. This is a distillation of many studies and projects conducted by many scholars, not all of them published, providing archeologists and historians with much useful and interesting information, not the least of which is the detailed plan of the citadel (albeit without a scale or directional arrow). I personally found the information about the water supply system most fascinating, which helps to explain why the Mamluk defenders were able to hold out in the citadel during the three months of Mongol occupation of Damascus in early 1300, a fact that I should have taken into consideration in my previous work. In fact, I am glad that the role of the Mongols as destroyers of fortifications (and thus indirectly catalysts for further construction work) was noted here, as it was in the following

article by Julia Gonnella on Aleppo, the name of which ("The Citadel of Aleppo: Recent Studies") reveals its intent and scope. Gonnella's chapter is a nice review of studies, published and unpublished, from recent excavations, which should be of interest for archeologists and historians alike.

Aleppo is also the subject of the short but insightful paper by Yasser Tabbaa: "Defending Ayyubid Aleppo: The Fortifications of al-Ẓāhir Ghāzī (1186–1216)." This is a successful attempt to trace the development and implementation of a systematic fortification strategy of this dynamic ruler of north Syria, who—along with his descendents—was often at loggerheads with other Ayyubid princes, as well as other Muslim and Christian neighbors. The main objective of these forts was indeed to provide an answer to Ayyubid rivals and potential nomadic troublemakers, and not so much "serious" enemies such as the Franks, and the Mongols of the near future. The judicious use of resources to build and strengthen fortifications led in a period of three decades to an enlarged and consolidated principality, whose continued existence was thus facilitated after al-Ẓāhir's death, and provided the basis for al-Nāṣir Yūsuf's expansion to Damascus and much of Bilād al-Shām in 1250. I have, however, some reservations about the idea that al-Ẓāhir was attempting to create "defensible borders" (p. 180). I doubt if such a concept existed in the pre-modern period; in most cases the best one could hope for was an effective frontier system. Given technologies, geography, and the number of troops available, there was no such thing as an Ayyubid equivalent of a Maginot Line or anything close to it. I would suggest that al-Ẓāhir, by constructing and repairing these fortifications, was (1) attempting to make clear which territories were under his influence and power; and (2) creating a means to better control them.[1]

The next two chapters, by Sauro Gelichi ("The Citadel of Ḥārim") and Cristina Tonghini and Nadia Montevecchi ("The Castle of Shayzar: The Fortification of the Access System"), are both fairly technical, detailed descriptions of two medium-sized castles in north Syria (the former an urban citadel). Archaeologists will certainly find these papers of interest, but historians will also derive benefit from the verbal descriptions, the plans, and the photographs, as they will be able to imagine the size and grandeur of these places when they encounter them in the sources for both the Ayyubid and Mamluk period. Cyril Yovitchitch's article ("The Tower of Aybak in ʿAjlūn Castle") is a good, readable study looking at both the archaeology and history of the site, which also frequently appears in our sources. Here, too, it is suggested that the building of the fort had much to do with its symbolic value and was not only a military matter. My one reservation with this article was that the author cites (p. 226) without comment the pioneering work

[1] On the matter of medieval frontiers and castles in them, see the recent book by R. Ellenblum, *Crusader Castles and Modern Histories* (Cambridge, 2007), chapters 8 and 9.

of C. N. Johns on the castle of ʿAjlūn that "arose as a direct retort to the new Latin castle of Belvoir . . . placed on the escarpment on the opposite side of the Jordan valley, between Tiberias and Baysan."[2] How a castle some forty miles from another as the crow flies can be a "retort" is beyond me. If that was the intent, I am sure that the Franks were not too perturbed.

Other names from the Arabic chronicles come alive in the next two chapters by Janusz Bylinski ("Exploratory Mission to Shumaymis—2002") and Balász Major ("Medieval Cave Fortifications of the Upper Orontes Valley"). The story of the cave fortifications was a real eye opener for me (I confess that I have not yet had the opportunity to tour the Upper Orontes region). True, the existence of these "forts" did not significantly shift the strategic balance in north Syria, but it does shed some light on the control of a rural area. I was impressed by this author's combined use of archaeological data (much of which he himself collected) and the evidence from the Arabic sources; he did not rely on older translations or summaries. Angus Stewart ("Qalʿat al-Rūm/Hṙomgla/Rumkale and the Mamluk Siege of 691 AH/1292 CE") does a fine job describing al-Ashraf Khalīl's campaign to take this castle, really a small fortified city, putting his narrative in both a larger historiographical and archaeological context. A stickler might say that this paper does not really belong in this volume, as it only tangentially deals with Muslim military architecture and the fortification under discussion is really not in Syria by just about any definition. True, but mention is made of the Mamluk and Ottoman phases of the construction, and the discussion of the Mamluk siege offers important insight into the defensive strategies employed against a Mamluk military offensive. It is fascinating to see the Mamluks here not only as patrons of military architecture, but also as those seeking to negate its advantages.

John France's essay ("Fortifications East and West," chapter 20) is in my opinion one of the most important and interesting contributions in the book, since it analytically surveys the "confrontation" between Western siege technologies and Muslim military architecture from the beginning of the Crusades, while comparing Frankish and Muslim fortifications in general and examining the question of influence, primarily the latter on the former. In general, the author does not see too much Eastern (not just Muslim, since Byzantium is included here too) influence on the fortification architecture of the Franks, and also does not see a great initial technological disparity between the two sides in this area. Perhaps this last claim is going too far. To my eye, the Norman Tower of London seems fairly modest compared to Antioch or even Jerusalem of this period, let alone the contemporary citadels in these cities. Muslim fortified cities took weeks if not months (and in some cases years and even decades) to be conquered by the first

[2] C. N. John, "Medieval ʿAjlûn," *Quarterly of the Department of Antiquities in Palestine* 1 (1932): 23.

Crusaders. This not only reflects the social organization of the besieged population and its resolution, and conversely was not only a problem of logistics and faulty organization and discipline of the attackers, but shows *inter alia* the strength and sophistication of the fortifications that had to be taken. I also think that Dr. France underestimates the importance of the Frankish concentric fortification, found in such places as Belvoir (Kawkab al-Hawāʾ), Crac des Chevaliers (Ḥiṣn al-Akrād), Marqab, and elsewhere, a type of fortress that began to be developed in the mid-twelfth century. The point of this concentric plan was not only to provide covering fire to the outer wall from the higher inner one, but also to provide a platform for the firing of artillery. By raising the height of the firing platform, the trebuchets had a greater range than the attacker shooting from below.[3]

The volume concludes with two papers on Ottoman fortifications. The first, by Kay Prag ("Defensive Ditches in Ottoman Fortifications in Bilād al-Shām"), actually deals mainly with one ditch (or moat) in Jerusalem. This, by the way, is the only paper in the book to discuss Palestine, an integral part of medieval Bilād al-Shām. The final paper is by Andrew Petersen, and looks at "Ottoman Hajj Forts" in Transjordan, fortifications that are very different from those discussed elsewhere in the volume. Personally, I would have liked some more discussion of the dating of these structures, and the historical context in which they were constructed.

In spite of different emphases and methodologies, the papers are uniformly of high quality and interest. I must commend the general excellence of the plates: the color photographs are crisp and clear, and extremely evocative. I do, however, have some comments about some other technical aspects of the volume: while articles dealing with specific locations had plans or maps, not all were provided with a directional arrow or a scale. There was no map for the whole volume showing clearly and conveniently where all the sites discussed in the articles were located. Some of the papers use only translations of sources found in older, pioneering publications. I think it should be a must that the latest scientific editions and the full array of sources be used for researching a site, and archeologists should seek the cooperation of historians if necessary.

As mentioned above, a theme that emerges in many of the papers is the symbolic importance of fortifications, which project power and grandeur to the military-

---

[3] In addition to R. Ellenblum's book cited above, see idem, "Frankish and Muslim Siege Warfare and the Construction of Frankish Concentric Castles," in *Dei gesta per Francos: Etudes sur les croisades dédiées Jean Richard/Crusade Studies in Honour of Jean Richard,* ed. M. Balard, B. Z. Kedar, and J. Riley-Smith (Aldershot, 2001), 187–98; idem, "Three Generations of Frankish Castle-Building in the Latin Kingdom of Jerusalem," in *Autour de la première croisade: actes du Colloque de la Society for the Study of the Crusades and the Latin East: Clermont-Ferrand, 22-25 juin 1995,* ed. M. Balard (Paris, 1996), 517–51.

political elite, the ruled population, and enemies. At the same time, some authors also address the military side of military architecture, looking at the advantages and disadvantages of a particular construction project or fortified spot, a complex of sites, or more general questions of fortification policy and technology. Taken all together, this collection certainly enriches our understanding of fortification planning, architecture, and construction, the roles of fortifications in military, political, social and cultural life, the actual maintenance and use of fortifications, and the attempts to negate their effectiveness by attackers, all in Greater Syria and neighboring lands from the advent of Islam until the early modern period.

At the beginning of the volume, it is written that the book "is dedicated to the people of Bilād al-Shām, both officials and ordinary folk," and this is indeed a worthy and honorable dedication. I hope that in the future, conditions will be such that conferences of this type will also include scholars from the southwest portion of Bilād al-Shām, for the benefit of all participants and perhaps even for scholarship in general.

LUCIAN REINFANDT, *Mamlukische Sultansstiftungen des 9./15. Jahrhunderts: Nach den Urkunden der Stifter al-Ašraf Īnāl und al-Muʾayyad Aḥmad Ibn Īnāl.* Islamkundliche Untersuchungen, vol. 257 (Berlin: Klaus Schwarz Verlag, 2003). Pp. 469.

REVIEWED BY JOHANNES PAHLITZSCH, Freie Universität Berlin

The reign of the Mamluk sultan al-Ashraf Īnāl (r. 857–65/1453–61) has not attracted a great deal of attention. Thus Lucian Reinfandt's book, which is a revised version of his dissertation written under the supervision of the late Ulrich Haarmann and Monika Gronke at the Christian-Albrechts-University of Kiel, is most welcome. The main part of his book is an edition with translation and commentary of two parchment scrolls from the Dār al-Kutub al-Qawmīyah (no. 63 tārīkh = DK) and the Dār al-Wathāʾiq al-Qawmīyah (no. 51/346 = DW) in Cairo (part B, pp. 97–397). These scrolls contain various documents regarding the pious foundations *(waqf/awqāf)* of sultan Īnāl and his son and successor Aḥmad. In the first part Reinfandt gives a historical introduction to the reign of Īnāl, demonstrating the importance of Īnāl's foundations for understanding his reign.

To this end Reinfandt gives a stimulating description of the legal and financial means used by Īnāl and other sultans of the fifteenth century in the establishment of pious foundations. Public foundations *(waqf khayrī)* in particular were endowed with much more property than would have been necessary to finance their upkeep. In fact, Reinfandt calculates a surplus of 90% for Īnāl's foundation

of a madrasah, a *khānqāh,* and a mausoleum in the northern cemetery of Cairo. While a great part of this property was probably acquired illegally, for example by embezzling the funds of the state treasury, the surplus could be used by the founder at will. By the addition of further endowments this private reserve could be increased. Reinfandt scrutinizes the persons and strategies involved in creating this clandestine economy, although some aspects of it have to remain obscure due to the lack of sources. It is one of Reinfandt's main theses (following Carl Petry) that public foundations of Mamluk sultans served as their private banks which provided them with the necessary means to act independently despite a chronic budget deficit. Pious foundations were thus a means to stabilize not only their own rule but also the succession of their sons, although their hopes of creating dynasties were not fulfilled.

Of importance in this context is the flexibility of the *waqf* law. By means of *istibdāl,* i.e., the exchange of *waqf* property with property of another foundation, the *waqf* became a dynamic and adaptive economic instrument in the fifteenth century. Reinfandt's work is especially important for the study of "Stiftungswirklichkeit" (reality of foundations) since it illustrates how two specific foundations developed in real life after the founder had specified his intentions in the endowment deed.

After the death of Īnāl and the deposition of his son Aḥmad, the foundations of Īnāl's family were confiscated by the new sultan. However, they were not totally dissolved but continued to exist well into the Ottoman period. Reinfandt speculates that only the surplus, i.e., the bulk of the income, had been confiscated, leaving the institutions as such enough property to ensure their survival. Thus the mausoleum of Īnāl became not only the center of the sultan's family as a burial plot but also in economic terms, because of additional endowments of his descendants which provided income for the members of the family. In this sense Īnāl's establishment of his madrasah-mausoleum complex was crucial for the further development of his newly created family.

Reinfandt then gives a detailed description of the two main foundations of Īnāl including lists of the endowed property (pp. 59–96): the just-mentioned public foundation of a mausoleum, a madrasah, and a *khānqāh,* and his family foundation. Both foundations are documented respectively in scrolls DK and DW together with later additional foundations ("Zustiftungen"), various judicial authentications and certifications, testimonies, and *istibdāl* documents. All in all Reinfandt identifies 17 documents in DK and 9 documents in DW. His careful analysis of the different types of documents and of the composition of the scrolls as such is very helpful for further research on Arabic diplomatics (pp. 97–135).

In the edition of these two documents (pp. 137–255) Reinfandt follows clear editorial principles, publishing the text as written in the documents. Unfortunately, the reliability of Reinfandt's edition could not be checked since only one picture

of scroll DK is given. Especially for scholars interested in paleography and diplomatics it would have been desirable to have more pictures of both documents. The final part of Reinfandt's book is the translation of the documents (257–397). This translation together with its comprehensive historical, topographical, and diplomatic commentary is not only of importance for its content. With the glossary of legal, economic, or architectural terms, titles, measurements, and the like, given in the appendix (pp. 414–57), it is an important tool for anyone dealing with Arabic legal documents.

While the translation of such a large amount of legal documents with their very specific language is an admirable work as such, the method of a very literal line by line translation leads sometimes to unsatisfying results. For example, on p. 309, lines 9ff., a certain phrase in German referring to the enactment of a court ruling which is repeated several times in DK and DW is more or less incomprehensible because of the unclear syntax. A similar case is p. 378, line 859ff. Beside this, a few oversights can be detected which a careful final edit would have prevented, such as incomplete sentences (p. 376, note. 909), references to maps that are not included in the book (p. 135), and an incorrect numbering of pages in the index (one has to add 6 to the numbers given in the index).

Despite these minor shortcomings, the analysis and edition of sultan Īnāl's foundation documents represent a very valuable contribution to the study of the history of the late Mamluk period and shows once again the value of documents as historical sources.

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	’	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	‘				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
ـَا	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

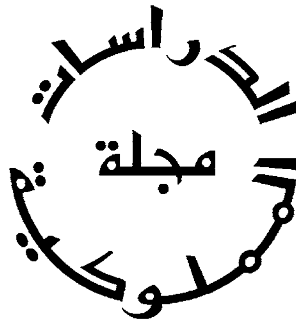
MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

// MAMLŪK STUDIES
REVIEW

Published by the Middle East Documentation Center (MEDOC)
The University of Chicago



Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson provided valuable technical assistance in producing the volume.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The editors would like to thank Prof. Dr. Stephan Conermann, University of Bonn, for his assistance in the preparation of this volume.

The Bruce D. Craig Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2008 Prize, dissertations must be defended by December 31, 2008, and submitted to the Prize Committee by January 31, 2009. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:

2004: Tamer el-Leithy, Princeton University, “Coptic Culture and Conversion in Medieval Cairo: 1293-1524.”

2005: Zayde G. Antrim, Harvard University, “Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries.”

2006: Nahyan A. G. Fancy, University of Notre Dame, “Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)”

2007: No prize was awarded.

Tankiz ibn ʿAbd Allāh al-Ḥusāmī al-Nāṣirī (d. 740/1340) as Seen by His Contemporary al-Ṣafadī (d. 764/1363)

Introduction

Many take Hayden White's "theory of narrativity" to be the beginning of a "change of paradigm," in the sense of Thomas Kuhn, that indicated the bankruptcy of mechanistic and organic models of truth and explanation. Historians could no longer believe in explanatory systems and monolithic visions of history.[1] From now on, they would prefer the formist or contextualist form of argument, which is more modest and fragmentary. It is thanks to "narrativity" that historians were reminded of their cognitive limits, which had been neglected by positivism and other historiographical trends, and it is thanks to White, and to his *Metahistory* in particular, that they were reminded of the importance of their medium, language, and of their dependence on the linguistic universe. With the appearance of White's much-disputed book, the exclusively interlinguistic debate on the so-called "linguistic turn" gained ground among historians. The literary theory which has been developed by Ferdinand de Saussure, Roland Barthes, and Mary Louise Pratt points out that history possesses neither an inherent unity nor an inherent coherence. Every understanding of history is a construct formed by linguistic means. The fact that a human being does not have a homogeneous personality without inherently profound contradictions leads to the inescapable conclusion that every text, as a product of the human imagination, must be read and interpreted in manifold ways: behind its reading and interpretation there is an unequivocal or unambiguous intention. In addition to this, Michel Foucault and Jacques Derrida have referred to the political implications of language and to the hierarchy of power that is expressed by it. The contradictions of human life force the reader to deconstruct every text to lay open its ideological elements. Reality is not transported or mediated but constructed by language and discourse. Language may no longer be seen simply as an "innocent" medium, relatively or potentially transparent, for the representation or expression of a reality outside of

Jahrhundert),* vol. 2 of *Geschichtsdenken der Kulturen: Eine kommentierte Dokumentation,* ed. Jörn Rüsen and Sebastian Manhart (Frankfurt, 2002), 15–25.

itself. The "linguistic turn" has drawn the attention of historians to the important fact that the line between fact and fiction is no Iron Curtain. The single text is a web woven of "threads of discourses," which penetrate into it from the outside and which the scholar must unravel.

Whoever composes a historical narrative approaches elements of the past as objects of historiography through the medium of the language which he employs.[2] The way in which a writer, chronicler, or historiographer makes use of the linguistic categories and of the "literary canons" underlying every representation of history is decisive for the manner in which the past is told and construed in his text. Although there might be a strong will to find the truth and to put things—epistemologically speaking—into the right light, historiography cannot, as most of the older "Quellenkunde" suggest, free the sources from their inherent subjectivity, so that we can, somehow, examine the object as though through the objective medium of a clear magnifying glass. On the contrary, subjectivity stands for the fact that historiography, as a created and organized product of the imagination, is the work of a fallible individual and therefore necessarily reflects the attitude of the chronicler toward his object. The individual intention is embedded in mind sets or mentalities that depend as much on the personal situation of the author as on the overall political, local, material, or social conditions. One of the basic attitudes is surely the conviction that it is important to call attention to one single event or the whole past. In many cases, a writer has it in mind to show his contemporaries and all future generations the evil of past deeds as a caution and the goodness of others as exemplary actions that should be followed by everyone. This pattern is based on the second mind set which is typical for medieval historiography: history is the history of the human being that has been created by God. It is finite and embedded in God's will, which is recognized in revelation and which represents the normative values by which all human behavior is judged.

In analyzing what medieval Muslim historiography has produced, one might point out that its most important principle is didacticism, according to which accuracy as to "fact" was much less important than validity as to life vision.[3] "Facts" often served as the raw material of problem solving, or at least of problem raising. Accordingly, historians did not argue from the particular to the general;

[2]For a good introduction, see Elizabeth A. Clark, *History, Theory, Text: Historians and the Linguistic Turn* (Cambridge, MA, 2004).

[3]An overview of studies on Mamluk historiography is given by Li Guo, "Mamluk Historiographic Studies: The State of the Art," *Mamlūk Studies Review* 1 (1997): 15–44. An excellent study on Ibn Wardī's (d. 749/1349) chronicle is Konrad Hirschler, *Medieval Arabic Historiography: Authors as Actors* (London, 2006). See also Sami G. Massoud, *The Chronicles and Annalistic Sources of the Early Mamluk Circassian Period* (Leiden, 2007).

rather they made particular events and people conform to traditional types or patterns. Since Muslim historiographers pursued the goal of showing the ideal nature of the Islamic community in all its manifestations, in the chronicles the gap between the ideal and the real is especially apparent. The explosive potential of historical writing lay in its ability to depict this gap, to reveal that whatever could be learned about elusive "historical reality" could contradict the ideals of the very pattern into which it was being pressed. Thus, on the one hand there is created in a chronicle a canonical picture of the world and a conventional portrayal of historical figures, while on the other hand, a chronicle is necessarily a compendium of original facts which are to a certain degree capable of destroying the ideal. Historiography played an important role in the politics of a traditional society dependent, as was medieval society, upon the past for legitimacy. It is only by appreciating how deeply this attitude of piety towards the past ran in medieval Muslim society that we can begin to understand the use made of history. It is not a question of the mindless repetition of tradition, of an inability to innovate or create, but of a compelling necessity to find in the past the means to explain and legitimize every deviation from tradition. In such a society, every deliberate modification of an existing type of activity must be based on a study of individual precedents. Every plan for the future is dependent on the pattern found in the past. What is important here is to recognize the fruitfulness of the medieval approach to the past. Medieval Muslim chroniclers often see the past as a school of moral instruction, a storehouse of examples of good and evil conduct which illuminate principles of behavior and teach men how to live. By their very adherence to the theory of the exemplary nature of history, Muslim chroniclers expressed the belief that history had a moral and political utility beyond mere description of past deeds. One result of this approach to history was a willingness to reduce the complexity of human experience into stereotypes according to "literary canons" which could be utilized easily to make a moral point.

To explain these "literary canons," it is useful to consider the method of literary criticism applied by the historian Dimitriĭ Likhachev to medieval Russian chronicles. Likhachev argues that the analysis of various stylistic phenomena in medieval literature should be based on distinctions between "literary cliché" (literaturnoe kliše) and "literary canon" (literaturnyj kanon)—a distinction for which he provides the following picturesque elucidation:

> "The same suit may be worn day after day. This will only make it soiled by wear but will not transform it into a formal outfit. A formal outfit, on the other hand, is worn only on those occasions when etiquette requires it. The shiny, threadbare suit represents literary cliché while the splendid formal attire which always has

> the same shape and appearance and is worn on the appropriate occasions represents literary canon. The author is the master of ceremonies who creates a gala procession. And we witness a festival, not the week-days of routine." [4]

While the medieval Muslim historian may have lacked a specifically modern sense of causation, he nevertheless operated from a set of assumptions about the relationship between past events and present reality which, for him, functioned much as modern theories of causality do for us. In order to understand this, it is necessary to return to the use of *exempla* and reinterpret their possible function in medieval historiography. By means of interpretation within "literary canon," the significance of the past is reaffirmed for the present: the past becomes a prophecy of the future and is predeterminant in the sense that its very existence determines the shape and interpretation of what comes later. With the aid of such "literary canons," the chroniclers could use past figures and events as explanations and modes of legitimizing present political life.

In the year 1969, at a time when the term "linguistic turn" became popular with the anthology *The Linguistic Turn: Essays in Philosophical Method* which the philosopher Richard Rorty edited in 1967, Ulrich Haarmann wrote in his Ph.D. thesis about a process of *Literarisierung* taking place in Arabic historiography during the last centuries of the Middle Ages.[5] Without knowing the philosophical debates on language as constructing reality, Haarmann shows in his study that Mamluk chronicles are in general works of fiction as much as of history. In my opinion, Mamlukologists should pursue this train of thought. By analyzing the biography which the scholar and historian al-Ṣafadī (d. 764/1363) wrote about the amir Tankiz ibn ʿAbd Allāh al-Ḥusāmī (d. 740/1340), I would like to draw our attention again to this remarkable approach.

"Facts" about Tankiz

Tankiz ibn ʿAbd Allāh al-Ḥusāmī al-Nāṣirī Amīr Sayf al-Dīn (d. 740/1340) was governor of the province of Damascus (712–40/1312–40) during the third reign of the Mamluk sultan al-Nāṣir Muḥammad ibn Qalāwūn (709–41/1310–41).[6]

[6] This is an extended version of my article on Tankiz in the *Encyclopaedia of Islam,* 2nd ed., 10:185–86. For good biographies of Tankiz, see Ellen Kenney, "Power and Patronage in Mamluk Syria: The Architecture and Urban Works of Tankiz al-Nasiri (1312–1340)" (Ph.D. diss., New York University, 2004), 19–32 and 396–403; and Ḥayāt Nāṣir al-Ḥajjī, *Al-Amīr Tankiz al-Ḥusāmī—Nāʾib al-Shām fī Fitrat 712–741/1312–1340* (Kuwait City, 1980).

Tankiz, whose name is an Arabic transcription of Old Turkish *teniz,* "sea, ocean," was bought, as a young man, by a certain al-Khwājah ʿAlāʾ al-Dīn al-Sīwāsī. He was brought to Egypt, where he was eventually purchased by the future sultan Ḥusām al-Dīn Lājīn. After Lājīn's violent death in 698/1299 Tankiz became one of the bodyguards *(khāṣṣakīyah)* of Sultan al-Nāṣir. In al-Nāṣir's service he distinguished himself in several battles with Mongol forces. Before the sultan went into exile to al-Karak 708/1308–9, he raised him to the rank of *amīr ʿasharah*. From al-Karak, Tankiz was sent to Syria on some dangerous missions, and, because of the skill with which he fulfilled these tasks, al-Nāṣir appointed him *nāʾib al-salṭanah* of Damascus when he himself took over the Mamluk sultanate for the third time. In Rabīʿ II 712/August 1312 Tankiz arrived at his new headquarters.

Although some chroniclers claim that Tankiz suffered from hallucinations, that he had a mean and weak character, and that his punishments were sometimes unnecessarily cruel,[7] he was respected by the population because of his strong sense of justice. During his governorship, Tankiz maintained a strong personal relationship with the sultan so that he became extremely powerful: in 712/1312 al-Nāṣir gave orders to all governors of Syria not to contact him directly anymore but to send every message via Tankiz. With this appointment to the *niyābah* of al-Shām in 714/1314, Tankiz finally controlled all *nuwwāb* of the Syrian provinces. Almost every other year he travelled to Egypt to meet with al-Nāṣir, who normally received him with great honor and bestowed precious gifts on him. In 730/1331, al-Nāṣir raised Tankiz' son ʿAlī to the amirate and even welcomed the promotion of Tankiz' two other sons, Muḥammad and Aḥmad, as being useful for his own aims.[8] When in 737/1336 Tankiz came to the royal court for the wedding of al-Nāṣir's son to the daughter of Amīr Ṭuquzdamur, the sultan greeted him like a ruler of his own rank.[9] The climax of this kingly favor was reached with the honors that were granted to Tankiz during a visit on the occasion of his daughter's confinement, as she was married to al-Nāṣir. In the course of his meeting, the sultan also arranged the marriage between two of his daughters and the sons of his highly esteemed governor.[10]

During his governorship Tankiz also distinguished himself as an able commander-

in-chief. At the end of the year 715/1315, the sultan sent several regiments from Egypt to Syria to join the Syrian troops and attack Malatya, a town that was allied with the Mongols. He entrusted Tankiz with the supreme command, and Tankiz succeeded not only in taking the town but also in accomplishing some effective raids on the neighboring areas of Lesser Armenia.[11]

The rapid expansion of the Mamluk capital under Sultan al-Nāṣir was followed by repercussions throughout the whole kingdom. The provincial governors displayed a remarkable building activity.[12] This is especially true of Tankiz, whose reconstructions and foundations changed the landscape of Damascus. Besides nine public bath houses and a large expansion of the communications network, he was responsible for the building of an impressive mosque that was named after him, for the extensive restoration of the Great Mosque, and for the rebuilding of the Dār al-Dhahab, which became his residence. In addition one should also mention the mausoleum of Sitt Sitītah, a double construction consisting of a mausoleum and a *ribāṭ* for women that was built for his wife Sitītah bint Amīr Kūkbāy al-Manṣūrī posthumously in Dhū al-Ḥijjah 730/September–October 1330.[13]

Over the course of time the wealth and authority of Tankiz steadily increased, so that the amirs at the court of Sultan al-Nāṣir began to fear his immense power. Tankiz even thought himself powerful enough to undermine the sultan's authority. For example, he sent back one of the envoys of Aratnā, the ruler of al-Rūm, when he arrived in Damascus with a message for the sultan. The insulted Aratnā complained to al-Nāṣir and demanded that he rebuke Tankiz for his improper behavior. Although the sultan kept the affair to himself, his ire rose when he sometime later learned that Tankiz had put one of the sultan's mamluks in prison and refused the ruler's request to release him.[14] In addition to this, Tankiz once again incurred the anger of the sultan when in 739/1340 he not only held back the taxes levied from Damascene Christians who had been accused of arson in the provincial capital but also punished them with inappropriate cruelty. As a result, the relations between the sultan, who was suspicious by nature, and his *nāʾib al-*

salṭanah in Syria worsened even more, if one can trust al-Maqrīzī, who reports on Tankiz' intention to overthrow al-Nāṣir.[15]

When the sultan informed Tankiz of his decision to send some of his amirs, including Sayf al-Dīn Bashtāk, together with 350 of his mamluks to Damascus in order to accompany his two sons to their promised wives, Tankiz tried with sundry excuses to prevent them from coming. It seems that he now for his part mistrusted the sultan and had a strong suspicion that the real aim of this visit was his incarceration. His suspicions proved to be right, as al-Nāṣir did eventually give the order for his arrest. On 23 Dhū al-Ḥijjah 740/21 June 1340, Tankiz was put into prison by Amīr Sayf al-Dīn Ṭashtamur, the governor of Ṣafad. He was brought to Cairo in chains and later to Alexandria, where he was imprisoned and finally, on Dhū al-Ḥijjah 740/May–June 1340 or Muḥarram 741/June–July 1340, executed. His fortune and properties were confiscated and distributed among various high-ranking amirs. Two years after the death of Sultan al-Nāṣir (he died in 741/1341), Tankiz was buried in his mausoleum in Damascus.

THE STORY

The philologist, literary critic, litterateur, biographer, and all-around humanist Ṣalāḥ al-Dīn Khalīl ibn Aybak al-Ṣafadī (696–764/1297–1363),[16] who served Tankiz as a chancery secretary in the *dīwān al-inshāʾ* from 731/1331 onward, writes of him in his *Kitāb al-Wāfī bi-al-Wafayāt:*[17]

> Tankiz, the great and formidable amir Sayf al-Dīn Abū Saʿīd, the viceroy of Syria. He was brought to Egypt as a boy and grew up there. He had a light olive complexion, was lean of physique, and had beautiful, slightly grey hair and a slow growth of beard. He was of handsome build. It was al-Khwājah ʿAlāʾ al-Dīn al-Sīwāsī who brought him and from whom the amir Ḥusām al-Dīn Lājīn bought him. When Lājīn was murdered during his reign, he became one of the sultan [al-Malik al-Nāṣir]'s bodyguards. He fought with him in the battle of Wādī al-Khazindār and at Shaqḥab. The judge Shihāb

Jahrhunderts: Vier ausgewählte Sultans- und Emirsviten aus dem biographischen Wörterbuch aṣ-Ṣafadīs (Übersetzung und Kommentar)" (University of Freiburg in Breisgau, 1991), 35–47.

al-Dīn ibn al-Qaysarānī told me [the following], saying:

"One day he told me he and the amir Sayf al-Dīn Ṭaynāl belonged to the mamluks of Malik al-Ashraf." He frequently listened to Bukhārī's *Ṣaḥīḥ* [read] by Ibn al-Shiḥnah,[18] to al-Ṭahāwī's[19] work *Al-Āthār* and Muslim's *Ṣaḥīḥ;* he listened to [readings by] ʿĪsá al-Muṭʿim[20] and Abū Bakr ibn ʿAbd al-Dāyim,[21] studying the science of hadith. Al-Maqrīzī [i.e., Shaykh Muḥyī al-Dīn ʿAbd al-Qādir ibn Muḥammad ibn Ibrāhīm ibn Tamīm al-Maqrīzī al-Ḥanbalī,[22] the grandfather of Abū ʿAlī ibn ʿAbd al-Qādir's father] read to him Bukhārī's *Thulāthīyāt* in the city of the Prophet [Medina].

Sultan al-Malik al-Nāṣir made him the amir of ten mamluks before going to al-Karak. He had left his *iqṭāʿ* in the care of the amir Ṣārim al-Dīn Ṣārūgā al-Muẓaffarī.[23] He [i.e., the sultan] was an *aga* to him [i.e., Tankiz], as the Turks would say. When he [i.e., the sultan] went to al-Karak, he was in the sultan's service. Once he sent him as a messenger to al-Afram in Damascus, who suspected him of carrying letters to the amirs of Syria with him. He [i.e., al-Afram] became very afraid of him. He was searched and threatened with punishment. When he returned to the sultan, he gave him news about this, and the sultan said to him: "When I assume power again, you will be governor of Damascus." When he came back from al-Karak, he installed the amir Sayf al-Dīn Arghūn al-Dawādār as viceroy of Egypt after capturing al-Jūkandār al-Kabīr and he said to Tankiz and Sūdī: "Be with Arghūn every day and learn from him to perform the duties of a governor and [also learn] the rules." They did so assiduously for a year. When they had gained experience, he sent Sayf al-Dīn Sūdī as governor to Aleppo and Sayf al-Dīn Tankiz as governor to Damascus. He, al-Ḥājj Sayf al-Dīn Ariqtāy,[24] and the amir Ḥusām al-Dīn Ṭurunṭāy al-Bashmaqdār[25] came [to Damascus]

[25]Died 748/1347. Cf. ibid., 176.

using the messenger route. They arrived there in the month of Rabīʿ II 712/[August 1312]. He was a good governor. He led the troops to Malatya and conquered it. His reputation was great; the amirs and governors in Damascus treated him with reverence and the subjects felt safe under his rule. For fear of him, because of his scrupulousness and his severe punishments, neither an amir nor a man of high degree could oppress anybody, whether it was a *dhimmī* or another. He constantly rose in rank which doubled his *iqṭāʿ,* his presents, and his income in horses, fabric, birds, and birds of prey, so that he was given the title of *Aʿazz Allāh Anṣār al-Maqarr al-Karīm al-ʿĀlī al-Amīrī,* and among his courtesy titles was *al-Atābikī al-Zāhidī al-ʿĀbidī*. He was called *Muʿizz al-Islām wa-al-Muslimīn, Sayyid al-Umarāʾ fī al-ʿĀlamīn*. And it was not known to us that letters of a sultan can also be written by a governor or by someone who is not governor but has a different function or position. The sultan hardly took any steps without sending for and consulting with him.

Rarely was he denied a request he addressed to the sultan. Whatever he decided concerning the appointment of an amir, a governor, an official or a judge, the bestowal of an *iqṭāʿ,* and so forth, the sovereign's approving signature would be given forthwith. Neither I nor any other man has ever heard of him giving someone an *iqṭāʿ,* the position of an amir, or any other office, whether important or unimportant, and accepting a bribe for it. He was incorruptible and virtuous.

Sharaf al-Dīn al-Nashw told me: "What he was given as a present by the sultan in the year 733/[1332–33] added up to 1,050,000 dirhams in addition to the horses and saddles which he was [also] given, the money in cash, the yield of the crops, and the small livestock which he owned in Syria. Then I saw documents in his hand which showed his expenses. These were 23 registers of what he needed during his sovereignty. They included two falcon-drums made of pure gold that weighed 1,000 *mathāqīl,* as well as the dusty long-sleeved gown which he was wearing." At length al-Nashw told me: "It [i.e., the gown] was valued for the sultan at 2,000 or 1,500 Egyptian dinars."

After that he betook himself [to the sultan] four times, I think, and every time the presents he received were doubled. His power and his reputation increased until the Egyptian amirs who were the [sultan's] bodyguards dreaded him. The amir Sayf al-Dīn Qurmushī

al-Ḥājib told me that the sultan had said to him: "O Qurmushī, for 30 years I have been trying to make people understand what I want to do for the amir, and [yet] they haven't understood what I mean with that. The code of sovereignty keeps me from saying myself that I will not do anything for anyone unless it is on his request or intercession," and he wished him [i.e., Tankiz] a long life. This reached his ears, and he said: "For the sultan's life I will die." When the amir Sayf al-Dīn Qurmushī communicated this to the sultan he said to him: "Tell him, if he lives longer than me, then he will be of use for my children, wives, and relatives; if he dies before I do, what should I do with his children? They can't become anything higher than amirs, which they already are now, during his lifetime." This is about how he spoke.

He introduced something we haven't heard of anyone before, for he had a secretary who didn't have any other business than to calculate the wealth which he [i.e., Tankiz] gained and that which he actually possessed. When the year came to an end, he compiled documents about the *zakāt* he [i.e., Tankiz] had to pay. He ordered that [the money] should be taken and given to those who were rightfully entitled to it.

His capital and his private property increased. He built the mosque in Ḥikr al-Summāq in Damascus which was named after him. Next to it he built a tomb and a bath. He built a tomb for his wife next to al-Khawāṣīn and a madrasah next to his house, the Dār al-Dhahab. In Jerusalem he built a caravansary; he renewed Jerusalem, supplied [the city with] water and diverted it to the Ḥaram district right towards the doors of the Aqṣá Mosque. He built two bathhouses there and an extraordinarily beautiful covered bazaar. In Ṣafad he built the hospital which was named after him and renewed the canals in Damascus because their water had changed. He renovated mosques and madrasahs, broadened the paths there [i.e., in Damascus] and took care of issues [regarding the city]. He owned edifices, buildings, and properties all over Syria.

He was not devious and did not hide anything. He would not let anything pass and would not allow any injustice. Neither did he flatter the amirs nor did he pay any special attention to them. In his time people's properties and employment were safe. Each year he went hunting near the Euphrates with his troops. On some of his travels he crossed the Euphrates and stayed on the other side

for five days, hunting. The people fled from him into the cities of Tabriz and Sulṭānīyah, as well as to the cities of Mārdīn und Sīs.

His only aims were justice and its promotion, and to foster the application of the shariʿah. However, he suffered from a hallucination [clouding of the mind], which made him imagine things that were not real, but of which he was absolutely certain. Awestruck, nobody was able to open his eyes and tell him the truth about what he was doing, [even though] it was the cause of several people's deaths. When he was angry he could neither approve nor forgive. When he turned to violence he was immoderately cruel.[26] Even if the offence was inconsiderable and of little account, he magnified and exalted it and inflated it more and more, exceeding all limits.

I saw the following things in His Excellency: mostly, when he was seized by a fury against someone, this person would become so weak and miserable that he died. The judge Sharaf al-Dīn Abū Bakr ibn al-Shihāb Maḥmūd said: "By God, I was constantly worrying and afraid; I always expected something like this," until [eventually] he was arrested and died.

When he was infuriated with someone he would not forgive him. Qiwām al-Dīn Aḥmad ibn Abī al-Fawāris al-Baghdādī told me [the following]: "Once I said to him: 'By God, O master, I have seen greater personalities and wealthier people than you.' When he heard these words, he got into a fury and said to me angrily: 'Whom have you seen that was greater and wealthier than me?' At this I said to him: 'Kharbandā,[27] Jūbān,[28] und Abū Saʿīd.'[29] When he heard that, his fury abated. Then I said to him: 'But [their] subjects did not love them as [yours love you], and they did not wish them any good, as your subjects wish for you. Their subjects did not live in this safety and justice.' At this he said to me: 'What joy could a sovereign have, whose subjects are not safe and sound?'"

About his love for justice [I can report the following]: One day one of his closest confidants, whose name I have forgotten, had

[26] An allusion to Quran 26:130.

[27] The person meant is Khudābandā, Qāzān's brother.

[28] Great Mongolian amir under Uljāytū and Abū Saʿīd. He was Abū Saʿīd's deputy and son-in-law. Cf. Samira Kortantamer, *Ägypten und Syrien zwischen 1317 und 1341 in der Chronik des Mufaḍḍal b. Abī l-Faḍāʾil* (Freiburg, 1973), 61.

[29] Ninth sovereign of the Ilkhanate (704–36/1305–35), ruled 716–36/1316–35. Cf. Paul Jackson, "Abū Saʿīd," *Encyclopaedia Iranica,* 1: 374–77.

a meal with him. He [i.e., Tankiz] looked at his bandaged finger and asked for the reason, but the man did not want to name it. However, he did not leave him any peace until he finally said: "O master, a bowyer tried to make an arch three times [without succeeding]. He made me angry and I hit him with my fist." When he heard what the man was saying, he turned away from his food and said: "Raise him." Then he hurled him to the ground and gave him the cane 400 times, as it is said. He stripped him of his *iqṭāʿ* and was angry with him for years, until someone put in a good word for him. Then he showed himself favorable to him again. Years after Tankiz's death, his secretary Nāṣir al-Dīn Muḥammad ibn Kūndak told me: "By God, during the time I was in his service I have never seen him inattentive. I always saw him as if he stood in front of God, the Sublime. At nighttime he only prayed with a fresh ritual washing," so he said.

The Shaykh Ḥasan ibn Damurtāsh[30] was vexed with him [i.e., Tankiz] and dreaded him. It is said that he defamed him in front of the sultan and said to him: "He wanted to come to me and conspire against you." After this the sultan acted unapproachably [towards Tankiz]. This happened [just] when the amir Sayf al-Dīn Bashtāk, Sayf al-Dīn Yalbughā al-Yaḥyawī,[31] as well as twenty amirs from the [sovereign's] bodyguard were planning on coming to Damascus with two of the daughters of the sultan of Egypt, to marry them off to the two sons of the amir Sayf al-Dīn Tankiz. Thereupon [Tankiz] sent the following [message to the sultan]: "O master, what is the use of those noble amirs coming to Damascus? The coast lands are barren this year, [and] high expenses for the army are necessary. I will come to [your] palace together with my sons and the wedding will take place there."

At this, [the sultan] sent the amir Sayf al-Dīn Ṭājār al-Dawādār[32] to him, who told him: "The sultan is sending you his regards and says he is not asking you to come to Egypt any more; also he is not sending you a noble amir any more, so you do not need to worry." Thereupon he said: "I will go to him with you and my sons." The other said to him: "If you arrived in Bilbays he would send you back. I want to spare you this sorrow. In eight days I will

[30]Cf. Kortantamer, *Ägypten und Syrien,* 194.

[31]He successively became governor of Ḥamāh, Aleppo, and Damascus and died in 748/1347. Wiet, *Les biographies,* 403.

[32]A Mamluk amir, died 742/1341. Wiet, *Les biographies,* 174.

be with you again with a new certificate of appointment and new presents." With these words he convinced him. Had he gone to see the sultan it would have been better for him, but God decides what will be executed.[33]

In those times the inhabitants of Damascus had spread the rumor that he had decided to go to the country of the Mongols. This gossip came to the ears of Ṭājār al-Dawādār. Tankiz had treated him in an indecorous manner in those times, whereupon he angrily turned away from him. It seemed as if he had falsified a remark [of Tankiz], but God knows best. The sultan was very cross. He sent 5,000 or 10,000 horsemen, and Bashtāk was their commander. He made the entire Egyptian army swear [allegiance] because he was scared. He sent [an order] by way of a messenger to the amir Sayf al-Dīn Ṭashtamur, the governor of Ṣafad, commanding him to go to Damascus to arrest Tankiz. He wrote [orders] to the chamberlain, the amir Sayf al-Dīn Quṭlūbughā al-Fakhrī and the amirs [and commanded them] to arrest him, and he said: "If you can keep him from going [to the Mongols], then that is all I want. The troops will come to you from Egypt."

The amir Sayf al-Dīn Ṭashtamur reached al-Mizzah by noon and sent for the amir Sayf al-Dīn al-Fakhrī. His secretary had already arrived in the early morning of that day and had met the amirs. They had made an arrangement. The amir Sayf al-Dīn al-Lamash al-Ḥājib went to al-Qābūn and made the way [there] impassable. He threw pieces of wood on [the way], tethered camels [there], and [unloaded] bales of straw. He said to the people: "The enemy of the sultan will be passing you soon; stop him." The amirs rode off and gathered at the Bāb al-Naṣr.

All this happened while he [i.e., Tankiz] was awaiting the arrival of Ṭājār al-Dawādār, without having any notice of what was being planned against him. This day he had gone to the palace which he had built on [his] fief with his wives. The amir Sayf al-Dīn Qurmushī went to him and told him about the arrival of the amir Ṭashtamur. He was astonished and perplexed about that and said to him: "What am I supposed to do now?" [The other] said: "We are going into the Dār al-Saʿādah." Thereupon he went and entered the Dār al-Saʿādah, and the gates of the city were closed. He wanted to put on [his battle] dress and fight. Then he was told

[33]An allusion to Quran 8:42.

that the people were plundering and that Damascus was at war; upon this he preferred allaying the riot without drawing weapons. He was advised to leave. Thereupon he sent for the amir Sayf al-Dīn Ṭashtamur and had him told: "Why have you come [here]? Come in to see me." [The amir] said: "I have come as a messenger from your master; if you come outside to see me I will tell you what he told me to do. Even if you go to where the sun rises, I will follow you. I will not return unless one of us dies. [But] I will not enter the city."

Thereupon he went outside to them and realized that this was his end. So he surrendered. His sword was taken from him, and he was tied up behind the mosque al-Qadam; in the afternoon on 23 Dhū al-Ḥijjah 740/[21 June 1340] he was sent to the sultan, together with the amir Rukn al-Dīn Baybars, the armor-bearer. The inhabitants of Damascus pitied him. How long they pitied him! Hail to the one who can sweep away [all] wealth [at once], the one whose reign does not end, whose power is everlasting and who is not befallen by misfortunes.

I saw him myself in the year 739/[1338–39], when the sultan went to Biʾr al-Bayḍāʾ with his amirs and children to meet him. When he was close to him, he approached him by foot, kissed his head, embraced him, and honored him in an exaggerated way, after one amir after the other had already come to him, greeted him, and kissed his hand and his knee. The amir Sayf al-Dīn Qawṣūn came to the inn in al-Ṣāliḥīyah to welcome him. As for the presents with which he [i.e., the sultan] overwhelmed him daily in the year [739], until he went away for a period of almost fifty days, they were beyond all limits.

I saw him when he was hunting in Upper Egypt that year. The sultan came to him. In front of him came the amirs Malaktamur al-Ḥijāzī,[34] Yalbughā al-Yaḥyawī, Alṭunbughā al-Māridānī,[35] Āqsunqur, and another, whom I have now forgotten. On the hand of each of them sat a bird of prey. He [i.e., the sultan] said to him: "O officer, I am your hunting amir; those are your falcon-bearers and these are your birds." Then [Tankiz] wanted to dismount to kiss the earth, but [the sultan] kept him from it.

Then I saw him myself the day he was arrested and chained.

[34]A Mamluk amir, died 748/1347. Wiet, *Les biographies,* 380.

[35]A Mamluk amir and governor of the province of Ḥamāh and Aleppo; died 744/1343. Ibid., 77.

The blacksmith [who put him in irons] made him stand up and sit down again four times while the people stood in front of him. This was a clear warning to me. His income was confiscated, and Ṭughāy[36] and Janghāy,[37] his two mamluks, were held in the citadel. After a short while the amirs Sayf al-Dīn Bashtāk, Ṭājār al-Dawādār, al-Ḥājj Ariqṭāy, and seven more amirs arrived. They stayed at the palace al-Ablaq. At their arrival they made the amir swear [allegiance] and began to exhibit his income in public. They brought out his treasures and accumulated belongings.

Bashtāk went to Egypt; with him he had 336,000 Egyptian dinars from [Tankiz'] property, as well as 1,500,000 dirhams, jewels made of precious rubies, wonderful pieces, rare pearls, brocade fabrics, caps made of brocade, golden belts, silver containers inlaid with gold, and satin and other fabrics whose quantity added up to 800 *ḥiml*. He had left Barsbughā[38] in his place, who then went [after him] to Egypt carrying 40,000 dinars as well as 1,100,000 dirhams, after having extorted these from the people and the remaining property of Tankiz, and having taken his mamluks, [female] slaves, and valuable horses.

As for himself [i.e., Tankiz], he was sent to Alexandria. There he was held prisoner for a period of less than a month. Then God the Sublime decided on his case. It is said that the commandant Ibrāhīm ibn Ṣābir[39] went to him, and that this was the last thing ever to become known about him. He died and the inhabitants of Alexandria prayed for him. His grave is now visited and prayed at. May God the Sublime take pity on him. [In the meter *al-kāmil*]:

> "Like lightning, flaring up in the land, he vanished as if he had never shone."

Then the decree of the sultan was published [with the command] to list his property. This was done justly by experienced people and persons who knew how to estimate the value properly. Together with this [list] official statements came into the state chancellery to be sent to the sultan. From these I copied the following: [Here

[36]Died 741/1341. Ibid., 177.

[37]Died 741/1341. Ibid., 124.

[38]A close confidant of Sultan al-Malik al-Nāṣir. He died 742/1342. Kortantamer, *Ägypten und Syrien*, 160.

[39]As a *jandār*, he was responsible for torture and executions. After Sultan al-Malik al-Nāṣir's death, he himself was tortured until he died in 742/1341. Ibid., 236.

> follows a list of his properties in Syria and their values]. . . .
>
> All this [which has just been listed] is in addition to the properties and charitable institutions he owned in Ṣafad, ʿAjlūn, Jerusalem, Nābulus, al-Ramlah, Jaljūlyah, and Egypt. He built a beautiful hospital in Ṣafad, and this was also where he had some of his charitable foundations. In Jerusalem he built a hospice, two bath houses, and covered bazaars. He owned a very beautiful caravansary in Jaljūlyah, which I think is a charitable institution [foundation]. In al-Ramlah and in the Kāfūrīyah gardens in Cairo he owned a magnificent house, a bath, and several stores.
>
> At the beginning of Rajab 744/[middle of November 1343] his coffin was transferred from Alexandria to Damascus. He was laid to rest in his mausoleum next to his mosque, of which it is known that he had it built. May God take pity on him.

Facts or Fiction?

A typical feature of Mamluk historiography is the various narrative strategies the different chroniclers use in their biographical or annalistic texts to produce emotional effects on their readers.[40] They utilize, for example, tropes (metaphor, metonymy, synecdoche, and irony) or anecdotes, dialogues, and/or quotations from poems and from the Quran. In his description of Tankiz' life and career we find several of these literary elements:

Anecdotes

Al-Ṣafadī enriches his story with numerous little anecdotes *(nukat),* i.e., short tales narrating an interesting or amusing biographical incident. By giving variety and color to the text, they satisfy the taste of the audience. Ulrich Haarmann writes in his study on Mamluk historians that such anecdotes serve as a connection between history and literature. In general they should

> on the one hand, illustrate complex, dry, or very factual accounts to increase the readers' awareness of the historian's main issues. On the other hand, they can serve the author's interest in entertaining his readership as well. If this is the case, the anecdotes exclusively focus on those facts which are suited to telling a good story. At this point, it is no longer the question for the chronicler whether these textual fragments are important for the overall scheme of his work

[40] Cf. Haarmann, *Quellenstudien,* 167. For some of the following arguments, see also Fischer, "Vier ausgewählte Sultans- und Emirsviten," 66–76.

or not.[41]

Within al-Ṣafadī's *Wāfī* these short, entertaining, and amusing anecdotes have the function of emphasizing certain features and characteristics of historic figures. They illuminate special events in their curricula vitae. The annalistic framework of their narratives is punctuated by the inclusion of anecdotes, digressions which serve as commentary on the events of the present. Haarmann quotes Ibn al-Dawādārī (d. 713/1313), who recommends in his universal history *Kanz al-Durar* the use of stories as a rhetorical stylistic device:

> For this digression we have several good reasons. The first is the following: books whose story follows just one mode of narration are bound to be boring. Therefore, we tried to present our speech in an interesting and varied way by using odd and remarkable anecdotes.[42]

Two short anecdotes which al-Ṣafadī incorporates in his biography of Tankiz constitute a good example of this narrative strategy:

> When he was infuriated with someone he would not forgive him. Qiwām al-Dīn Aḥmad ibn Abī al-Fawāris al-Baghdādī told me [the following]: "Once I said to him: 'By God, O master, I have seen greater personalities and wealthier people than you.' When he heard these words, he got into a fury and said to me angrily: 'Whom have you seen that was greater and wealthier than me?' On this I said to him: 'Kharbandā, Jūbān, and Abū Saʿīd.' When he heard that his fury abated. Then I said to him: 'But [their] subjects did not love them as [yours love you], and they did not wish them any good, as your subjects wish for you. Their subjects did not live in this safety and justice.' On this he said to me: 'What joy could a sovereign have, whose subjects are not safe and sound?'"
>
> About his love for justice [I can report the following]: One day one of his closest confidants, whose name I have forgotten, had a meal with him. He [i.e., Tankiz] looked at his bandaged finger and asked for the reason, but the man did not want to name it. However, he did not leave him any peace until he finally said: "O master, a bowyer tried to make an arch three times [without succeeding]. He made me angry and I hit him with my fist." When

[42] Quoted from Ulrich Haarmann, "Auflösung und Bewahrung der klassischen Formen arabischer Geschichtsschreibung in der Zeit der Mamluken," *Zeitschrift der Deutschen Morgenländischen Gesellschaft* 121 (1971): 55–56.

> he heard what the man was saying, he turned away from his food and said: "Raise him." Then he hurled him to the ground and gave him the cane 400 times, as it is said. He stripped him of his *iqṭāʿ* and was angry with him for years, until someone put in a good word for him. Then he showed himself favorable to him again.

These insertions correspond to the aim and objective of anecdotes. On the one hand they give us information about al-Ṣafadī's idea of Tankiz' character. On the other hand they provide us with an interesting and entertaining biography of the governor.[43] In general, one should be very careful when it comes to reconstructing reality from this material. We never know whether the picture the author draws in his text is real or just the result of his imagination. One has to find really independent sources which tell the same story to be sure that the event described actually happened.

Dialogues

When reported or imitated in the narrative, dialogues constitute a form of literature used for purposes of rhetorical entertainment and instruction. In his biographies al-Ṣafadī often puts words into the mouths of people. Everything in these scenes, from their setting to the dramatis personae, can be an invention of the chronicler.[44] Normally, he just wants to bring out a very complex and complicated relationship between two or three persons:

> His power and his reputation increased until the Egyptian amirs who were the [sultan's] bodyguards dreaded him. The amir Sayf al-Dīn Qurmushī al-Ḥājib told me that the sultan had said to him: "O Qurmushī, for 30 years I have been trying to make people understand what I want to do for the amir, and [yet] they haven't understood what I mean with that. The code of sovereignty keeps me from saying myself that I will not do anything for anyone unless it is on his request or intercession," and he wished him [i.e., Tankiz] a long life. This reached his ears, and he said: "For the sultan's life I will die." When the amir Sayf al-Dīn Qurmushī communicated this to the sultan he said to him: "Tell him, if he lives longer than me, then he will be of use for my children, wives, and relatives; if he dies before I do, what should I do with his children? They can't

[43] Sometimes al-Ṣafadī includes in his *Wāfī* biographies in which we find only anecdotes and no concrete information about the person at all. Cf. Donald P. Little, *An Introduction to Mamlūk Historiography: An Analysis of Arabic Annalistic and Biographical Sources for the Reign of al-Malik an-Nāṣir Muḥammad ibn Qalāʾūn* (Wiesbaden, 1970), 104–5.

[44] Cf. Haarmann, "Auflösung," 57.

> become anything higher than amirs, which they already are now, during his lifetime." This is about how he spoke.
>
> All this happened while he [i.e., Tankiz] was awaiting the arrival of Ṭājār al-Dawādār, without having any notice of what was being planned against him. This day he had gone to the palace which he had built on [his] fief with his wives. The amir Sayf al-Dīn Qurmushī went to him and told him about the arrival of the amir Ṭashtamur. He was astonished and perplexed about that and said to him: "What am I supposed to do now?" [The other] said: "We are going into the Dār al-Saʿādah." Thereupon he went and entered the Dār al-Saʿādah, and the gates of the city were closed. He wanted to put on [his battle] dress and fight. Then he was told that the people were plundering and that Damascus was at war; upon this he preferred allaying the riot without drawing weapons. He was advised to leave. Thereupon he sent for the amir Sayf al-Dīn Ṭashtamur and had him told: "Why have you come [here]? Come in to see me." [The amir] said: "I have come as a messenger from your master; if you come outside to see me I will tell you what he told me to do. Even if you go to where the sun rises, I will follow you. I will not return unless one of us dies. [But] I will not enter the city."

Dialogue expresses the convolutions of human thought so spontaneously that it almost defies analysis. We should not trust it.

POEMS

Al-Ṣafadī had a predilection for poetry. In his *Wāfī,* he heaps very long and redundant *sajʿ* poems upon the reader. They don't refer to any event in the life of the main character but are only of rhetorical value. That is also true for the verses at the end of Tankiz' biography.[45] As a rule, the poems were not written by him. This does not mean that al-Ṣafadī wasn't a good poet. Quite the contrary, he belongs to the small group of outstanding, creative, and innovative poets of the Mamluk era.[46]

[45]Cf. al-Ṣafadī, *Wāfī*, 432–35.

[46]On al-Ṣafadī as a remarkable poet, see Thomas Bauer, "Literarische Anthologien der Mamlūkenzeit, " in *Die Mamlūken: Studien zu ihrer Geschichte und Kultur: Zum Gedenken an Ulrich Haarmann (1942–1999),* ed. Stephan Conermann and Anja Pistor-Hatam (Schenefeld, 2003), 71–122. See also Bauer's "Mamluk Literature: Misunderstandings and New Approaches," *Mamlūk Studies Review* 9, no. 2 (2005): 105–32.

Quranic Allusions

References to the Holy Book are a very important rhetorical element in historiographical texts. In Tankiz' biography al-Ṣafadī writes:

> His only aims were justice and its exercise, and to foster the application of the shariʿah. However, he suffered from a hallucination [clouding of the mind], which made him imagine things that were not real, but of which he was absolutely certain. Awestruck, nobody was able to open his eyes and tell him the truth about what he was doing, [even though] it was the cause of several people's deaths. When he was angry he could neither approve nor forgive. *When he turned to violence he was immoderately cruel.* Even if the offence was inconsiderable and of little account, he magnified and exalted it and inflated it more and more, exceeding all limits.
>
> At this, [the sultan] sent the amir Sayf al-Dīn Ṭājār al-Dawādār to him, who told him: "The sultan is sending you his regards and says he is not asking you to come to Egypt any more; also he is not sending you a noble amir any more, so you do not need to worry." Thereupon he said: "I will go to him with you and my sons." The other said to him: "If you arrived in Bilbays he would send you back. I want to spare you this sorrow. In eight days I will be with you again with a new certificate of appointment and new presents." With these words he convinced him. *Had he gone to see the sultan it would have been better for him, but God decides what will be executed.*

The italicized passages are allusions to Quran 26:130 ("And if you attack, you strike ruthlessly?") and to Quran 8:42 ("And had you planned for this meeting, you would have disagreed on its timing, but God was to enforce a command that was already done. So that He would destroy those to be destroyed with proof, and to let those who will live be alive with proof"). For us, it is very difficult, not to say nearly impossible, to supply proof of the truth of al-Ṣafadī's statements.

To sum up, a typical feature of Mamluk biographies is the fact that the personality of the person whom the author describes in his text seems not to be that important. The person as such is only of secondary importance. The biographer does not show any interest in describing the inner development or socialization of character. The traits of the heroes are very often presented in the form of short anecdotes. We get, for example, very meagre information about Tankiz. He is characterized by al-Ṣafadī as being cruel but just, violent-tempered, and unforgiving. At the same time, the author of the *Wāfī* says that he acted open-mindedly, honestly,

and cleverly. We learn nothing concrete about his childhood, his upbringing, his family, or his feeling. The biographies offer the reader nothing more than a list of certain characteristics. But these features are put so vaguely that they could fit every second historical personality.

Al-Ṣafadī is no exception among the Mamluk historians. Comparing his biographies to vitae written by other scholars, one must say that their inner structures always follow the same pattern: the biographer wants to emphasize the religious, political, or cultural contribution of the chosen person to the Muslim community.[47] Al-Ṣafadī deems Tankiz appropriate and worthy to be included in his *Wāfī* because he was not only an important amir but also a confidant of the sultan, a very successful military leader, and a respected and generous patron of architecture in Egypt and Syria.

Al-Ṣafadī was a man with literary ambitions. He knew all the literary strategies and rhetorical tricks. He was very interested in Abbasid poetry and had an excellent knowledge of the sources. As a Mamluk official he had a tendency to describe his peers. Al-Ṣafadī's method of working meets the expectations of the readership and complies with its demand for "stark literarisierten Werken der Popularitätsmethode."[48] Historical writing is as fictional as other forms of literary expression, being as Hayden White puts it, "a verbal structure in the form of a narrative prose discourse."[49]

Research Perspectives

The discussion of the relationship between "narrativity" and historiography, poetry and narration, language and textuality, fact and fiction has demonstrated that even after the imposition of the scientific method on all realms of knowledge which set in with the closing of the eighteenth century, there are more similarities than differences among historiography, poetry, and rhetoric. Recent studies across the field have shown the soundness of this hypothesis. Unfortunately, the overwhelming majority of modern theoreticians are only interested in European and Anglo-American historiography after 1800 and do not take into consideration other cultures or "premodern" historiographical works. This is, in my opinion, a culpable omission, because I think it a very interesting field of research for a historian not only to sort out basic facts and information about social phenomena from the chronicles but also to analyze how these works are composed. What does the author intend with his chronicle? What kind of narrative techniques does he use, and to what end? Which topoi, stereotypes, clichés, myths, archetypes, and/or

[47] Cf. Little, *Introduction,* 112.

[48] Cf. Haarmann, "Auflösung," 59.

[49] Hayden White, *Metahistory* (Baltimore, 1973), ix, quoted in Hirschler, *Medieval Arabic Historiography,* 4.

legends can we isolate? Is it possible to gain some insight into the "literary canon" and the "literary cliché," i.e., the two categories discussed by Likhachev? Can we distinguish prevailing cultural semiotic associations? What do we know about the historical consciousness that is expressed in the chronicles? Does the author try to make "sense" of the past? And if he does, what form does this "sense" take? What about linguistic and semantic connotations in the text?

Another field of research could be the representation and narratological translation of "historical thinking" in historiographical texts. Here are the main characteristics of "historical thinking": (1) Both happy and unhappy or fortunate and unfortunate events have to be explained. This is the more necessary if these events do not come up to the expectations one has in mind while doing something. Above all it is the realized or unrealized intention that leads to the desire to explain these events. This is true for individuals, groups, or communities, if they want to create an identity. (2) Experiences are always experiences in time. The "historical thinking" has to interpret and explain these experiences in time. (3) Although historiography must invariably be used for interpreting experiences in time, it is not the only form of "historical thinking." It is a fact that historiography normally tries to be nearer to the truth than other texts and tries to operate with chosen elements of "historical thinking," but in the end one shouldn't consider this approach or this sort of texts totally different from other approaches or texts. This is all the more the case if we proceed on the assumption that every text is part of the mental process we call "historical thinking." (4) "Historical thinking" produces sense or meaning out of time. Time in this context again means events which have taken place in time and which have to be explained, whereas sense or meaning stands for understanding all the connotations and epistemological facets the word "time" includes. If someone wants to understand what meaning the present time has for him, he has to refer to the experiences of the past. In addition to that, he can, for example, deduce the further course of development or future processes from comparable cases, which also occurred in the past. His expectations or hopes for the future exercise a strong influence on his acting in the present. They lay the foundation for his social, political, or individual behavior. In the final analysis "historical thinking" and historiography have only the task to make it possible for an individual, a group, or a community to master his or its life or—to say it in other words—to give an orientation in time. The essence of "historical thinking" and historiography is not necessarily its scientific claim. (5) Aside from this orientation in time, "historical thinking" achieves a reflection of the subject or the historical self on its own premises. One can say that action as well as writing as a consequence of thinking always leads to the idea a historical subject has of its own, if this subject understands itself as a planning and acting unity. Therefore, if an action upon which one has been reflecting does not achieve the

intended results, not only the understanding of the world but also the self-image, the conception of oneself is affected. The result is personal and extra-personal self-doubt, especially if we keep in mind that during a period of upheaval and change "historical thinking" gives meaning to our life *(Sinnstiftung)* and continuity to the individual or collective identity. In this manner the understanding of oneself is preserved or newly formulated and has repercussions on future actions, insofar as the historical agents want to be seen and judged by other subjects in the context of its self-image. (6) "Historical thinking" and historiography do not give and cannot give eternal verities or supertemporal answers. This statement seems the more true if we consider the fact that "historical thinking" has to give meaning to the world again and again. On the other hand, it is impossible to think of this task, i.e., giving meaning to the world, without the claim of being true. (7) Here we have the problem of what to consider true. In the field of "historical thinking" historiography or—generally speaking—occupation with the past in every scientific form is synonymous with the institutionalized public dealing with its own collective memory *(Erinnerungsarbeit),* what in the end is a problem of norms. If we ask for the intentions and motives for acting in the past, we have in the first place to reflect upon the current values of this past. Norms, i.e., value judgements on things, attitudes, ways of acting, tastes, etc., are part of the process which leads to the description of the past as history. We are obliged to decipher these norms, because the human past gives us no key to decode its events as a history which has any meaning for the present. The past as such makes no history. What transforms the past into a history is our interest in it, our desire to let the past explain who we are. (8) Today, historical science and historiography are bound to the necessity of being universally valid. This is of course a self-image that this so-called science can hardly ever fulfill. History as the result of historiography is basically in its fundamental structure, i.e., as a narration, not different from other narrations which are related without the claim of being scientific. This narrativity illustrates that history is a construct. It is not possible to give meaning to the world out of the knowledge of past events if we do not see the inner epistemological coherence of a text which becomes evident by its narrative pattern. (9) Considering the fact that we cannot separate historiography from other texts, we have to presume that we can find in historical texts the same narrative strategies as in other texts. Thus, we find for example the following three elements: (a) the claim of having been an eyewitness to the events *(empirical validity);* (b) the hint that the story is important for the reader, i.e., that it leads to a better understanding of the present (*normative validity*, because the choices the narrator makes are influenced by his norms, because he wants the reader to share his values); (c) the narration unites experiences and norms and wants to give meaning to the world *(narrative validity)*. (10) To understand the present in the

context of the past is not possible with isolated facts *(empirical validity)* or with values even if one agrees with these values *(normative validity)*. For this reason, the *narrative validity* is the specifically historical criterion of what is true. Through the applications of norms and values (what is interesting?), it turns the past into history and then draws out of that history conclusions for the present time by giving instructions for acting. This finally is essential for planning the future.

If we want to understand our chronicles better it might be a good idea to follow both of these tracks. At the least, there are some interesting and new questions. I am sure that the answers will broaden our horizon.

Ibn Nubātah al-Miṣrī (686–768/1287–1366): Life and Works Part II: The *Dīwān* of Ibn Nubātah

4. Autograph Manuscripts

Ibn Nubātah's handwriting was considered to be exceptional. Nearly all of his biographers comment on it. Al-Ṣafadī, who cultivated his own, easily recognizable style of writing, praised the hand of his master and colleague. "As far as his handwriting is concerned, it is more precious than pearls," he writes.[1] Ibn Taghrībirdī praises the "extreme beauty of his handwriting."[2] More effusive is the statement of Tāj al-Dīn al-Subkī, who says:[3]

سبق الناس . . . إلى براعة الخطّ فما قدر معارض على أن يحكي له خطًّا أو يجاريه في أصول كتابته وانسجامها وجريانها

"He surpassed everyone . . . in his excellence of penmanship, so that no one who tried to vie with him succeeded in matching him in his script or keeping pace with him in the fundamentals of the art of writing or its harmony and fluency."

Al-Sakhāwī, the devoted pupil of Ibn Ḥajar al-ʿAsqalānī, praises his master's handwriting with the words: "He had nice handwriting in the style of Ibn Nubātah."[4] Since Ibn Nubātah was also Ibn Ḥajar's model in the field of poetry, it is probably not too farfetched to assume that he consciously tried to emulate Ibn Nubātah's style of writing. In fact, the similarity between his and Ibn Nubātah's handwriting can hardly be missed, as figure 5 shows.

As this unanimously enthusiastic judgment of Ibn Nubātah's handwriting shows, a study of his autographs is doubly important. First, these manuscripts shed light on the history of handwriting and the aesthetic principles prevailing at certain times in regard to the beauty of a script, and second, they allow us to reconstruct the history of Ibn Nubātah's work in an unusually detailed way.

Ibn Nubātah makes ample use of ligatures, but also of vowel signs and, at least

Continued from *MSR* 12, no. 1 (2008): 1–35. Bibliographical references given in footnotes nos. 1–29 of the first part are not repeated here in full.

[1] Al-Ṣafadī, *Wāfī,* 1:312; similarly al-Maqrīzī, *Muqaffá,* 7:104.

[2] Ibn Taghrībirdī, *Nujūm,* 5:248–49.

[3] Al-Subkī, *Al-Ṭabaqāt al-Shāfiʿīyah,* 5:153.

[4] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar fī Tarjamat Shaykh al-Islām Ibn Ḥajar,* ed. Ibrāhīm Bājis ʿAbd al-Majīd (Beirut, 1419/1999), 1:287–88.

in some of his manuscripts, quite regularly provides *sīn* with three dots beneath in order to make clear that it is not an undotted *shīn*. Since I am not an expert in this field, I cannot precisely analyze the factors that make Ibn Nubātah's handwriting so distinctive. However, one can hardly fail to notice its elegance. Ibn Nubātah's handwriting obviously matches the sophistication of his texts. And just as his poetry and prose are not particularly easy to understand, his handwriting is not particularly easy to read. But both his literature and his handwriting are very distinctive and easily recognizable. The identification of manuscripts written by Ibn Nubātah is possible beyond any doubt even if the writer is not mentioned (as in El Escorial MS árabe 548). This helps in identifying additional manuscripts written by Ibn Nubātah, and perhaps also manuscripts of works other than his own. So far, the only published reproduction of an autograph manuscript can be found in al-Naṣṣār's edition of the poetry of Ibn al-Rūmī. The editor expresses doubts about its having been written by Ibn Nubātah, but these doubts are unfounded.[5]

So far, I have managed to identify five autograph manuscripts.[6] The principal facts are given in Table 1.

Only one manuscript is dated and provided with a carefully produced title page. The other four manuscripts are undated. Two of them lack a colophon altogether. We may attribute this lack to Ibn Nubātah's loathing of long prefaces, or conclude that these manuscripts were either created as Ibn Nubātah's personal records (though they seem not to be *musawwadāt*), or meant as presents for his friends and colleagues, who knew their writer anyway. As we will see, the text of most of these autograph manuscripts is not identical with the *textus receptus* of the corresponding works. This is due to Ibn Nubātah's habit of constantly revising and restructuring his own works. This working method of Ibn Nubātah causes major problems for the editors of his works, but it also gives us a singular opportunity to closely observe the creative process of a Mamluk artist. In some cases, passages of poems can even be compared in two different autograph versions. The next section will show how the existence of different versions of Ibn Nubātah's poems had an influence on the history of his *Dīwān*.

5. A Work in Progress

There are few pre-modern authors whose work can be observed as closely as that of Ibn Nubātah. Thanks to the wealth of sources and the number of autograph manuscripts, the process of creating many poems and prose texts can be

[5]See *Dīwān Ibn al-Rūmī*, ed. Ḥusayn Naṣṣār, 3rd ed. (Cairo, 1424/2003), 1:33–35 and the plates on pages 51 and 53.

[6]In addition, three leaves at the end of the *Dīwān* manuscript Köprülü MS 1249 (fols. 165–67) were doubtlessly written by Ibn Nubātah himself. Their presence in this (quite old) manuscript remains to be explained.

Table 1
Manuscripts Written by Ibn Nubātah

Manuscript	Work	Folios	Lines per page	Title	Colophon	Identification as Autograph
Istanbul, Ayasofya MS 4045	*Sajʿ al-Muṭawwaq* [3]	77	11	كتاب/سَجع المُطوَّق/من قبل الإنشاء/ تصنيف العَبد الفقِير الى الله تعالى محمد بن الخطيب ابن نباته (written by the author himself)	وَنجز الكتابُ في سنه تسع عشره وسبعمايه وصَلى الله على سيدنا محمد/ وآله وصحبه الطيبين الطاهرين وسَلم تسليما كثيرا	title page, written by a third hand: بخط مؤلفه رحمة الله عليه

reconstructed in great detail. For these reasons, we are able to gain considerable insight into the history of Ibn Nubātah's works. The most important conclusion of such an inquiry is that Ibn Nubātah considered his poems and prose texts as "works in progress," which underwent constant revision and reworking. He reused verses in other poems, adapted texts dedicated to one person to another, reworded verses or passages in his *rasāʾil,* exchanged parts of his works, shortened or expanded texts in order to accommodate them to a new purpose, and so on.

As interesting as such findings are, they obviously make the editing of Ibn Nubātah's works more difficult. How do we deal, for example, with the fact that the autograph manuscript of *Sajʿ al-Muṭawwaq* [3][7] contains a poem in praise of Kamāl al-Dīn Ibn al-Zamlakānī different from all other manuscripts of the work? This poem, an *ʿaynīyah* that comprises 56 lines, appears in Ibn Nubātah's own early compilation of his *Dīwān* in a revised and shortened version of 27 lines.[8] Obviously, only after Ibn Nubātah realized that another poem, a *tāʾīyah* he had sent to Kamāl al-Dīn in the same year, had become a striking success, did he substitute this one for the *ʿaynīyah.* The new *qaṣīdah,* a poem of the extraordinary length of a hundred lines, is introduced with the words:

كتبتُ إليه هذه القصيدة التي كثر نظم شعراء العصر في رويّها ووزنها

"I sent him this *qaṣīdah,* which the poets of this time often imitated in its rhyme and meter."[9] Needless to say, Ibn Nubātah again revised the poem and included a shortened version of 64 lines in his early *Dīwān.*[10]

The first victim of this situation was al-Bashtakī, the compiler of Ibn Nubātah's *Dīwān* after the latter's death. The modern redactor of the printed version further aggravated this situation by several editorial decisions.

The first poem of the *Dīwān (khafīf/-āʾī)* after the initial poem in praise of the Prophet may serve as an illustration of the problem. In fact, this poem must have caused Ibn Nubātah many a headache, since he did not subject many others to such drastic revision. The reason for Ibn Nubātah's permanent discontent with the poem may be found in the fact that it is of an experimental nature. Obviously, it was one of Ibn Nubātah's first attempts to develop his *tawriyah* style, which he

[7]Numbers in brackets refer to the chart of the works of Ibn Nubātah found in part I of this article, pp. 4–5.

[8]See *Sajʿ al-Muṭawwaq,* Ayasofya MS 4045, fols. 33v–36r; *Proto-Dīwān,* Berlin MS 7861, fol. 119r–v; *Dīwān,* 297–99.

[9]Cairo, Dār al-Kutub MS 170 *adab,* fol. 28r. See also al-Subkī, *Ṭabaqāt al-Shāfiʿīyah,* 5:108–11 (article on Ibn al-Zamlakānī).

[10]Berlin MS 7861, fols. 44v–46v; the version in *Dīwān,* 67–71, is a pastiche between the version in *Sajʿ al-Muṭawwaq* and that in the *Proto-Dīwān.*

perfected only in the later phases of his life, especially in his poems dedicated to ʿAlāʾ al-Dīn Ibn Faḍl Allāh. But among his poems dedicated to the Ayyubid prince of Ḥamāh, the *Muʾayyadīyāt,* it is not typical and may create the impression of being somewhat contrived. His main artistic goal seems to have been to compose a poem that treats only a few themes that evoke many associations by a technique based on *tawriyah* (double entendre) and *ṭibāq* (antithesis). We will limit our investigation to the *nasīb,* which comprises 14 of 33 lines altogether (a remarkably high percentage) in the printed *Dīwān*. Line 15 is the *takhalluṣ* that leads from the *nasīb* to praise of Abū al-Fidāʾ, the Ayyubid prince. The *madīḥ* focuses nearly exclusively on the subject of generosity. The *nasīb* and the *takhalluṣ* are given in the *Dīwān* (p. 4) as in the left column of the following chart:

Table 2 Text according to *Dīwān,* p. 4 (meter *khafīf*)	(2) MH	(3) PD	(4) SR	(5) Bash
١ قام يرنُو بمقلةٍ كحلاء عَلَّمَتني الجُنُونَ بالسَوْداءِ	x	x	x	x
٢ رَشَأٌ دبَّ في سوالفه النملُ فهامت خواطرُ الشُعراءِ	x	x	x	x

٤ جائرُ الحُكْمِ قلبه لي صخرٌ وبكائي له بكى الخنساء			x	x
٥ عَذَلوني على هواه فأغرَوا فهواهُ نصبٌ على الإغراءِ	x	x	x	x
٦ مَن مُعِيني على رشاً صرت من ماء دموعي عليه مثل الرشاء			x	x
٧ مَن مُعِيني على لواعج حبّ تتلظّى مِن أدمُعي بالماء	x	x		x
٨ وحبيبٍ إليّ يفعل بالقلبِ فعال الأعداء بالأعداء	x	x		x
٩ ضيق العين إن رَنا واسنمحنا وعناء تسمّح البخلاء			x	x
٠١ ليت أعطافه ولو في منامٍ وعدتْ باستراقةٍ للقاء			x	x
١١ يتثنّى كقامة الغُصنِ اللدن ويعطو كالظبية الأدماءِ	x	x		x
٢١ يا شبيهَ الغُصون رفقا بصبٍّ نائح في الهوى مع الورقاء	x	x	x	x
٣١ يذكرُ العهدَ بالعقيق فيبكي لهواهُ بدمعةٍ حمراءِ	x	x	x	x
٤١ يا لها دمعةٌ على الخدّ حمراء بدت من سوداء في صفراء	x	x	x	x
٥١ فكأني حملتُ رنك ابن أيُّوب على وجنتي لفرط ولاء	x	x	x	x

As a matter of fact, the text given in the *Dīwān* does not contain a single word that is not by Ibn Nubātah himself, and there are only two clear mistakes in it, for in line 10, instead of *istirāqatin* one has to read *istirāqihī*, and in line 14 instead of *yā lahā damʿatun* one must read *yā lahā damʿatan*, as Ibn Nubātah clearly noted in both of his autograph manuscripts. Nevertheless, the text of the *Dīwān* is not

an authentic text, since the poem never existed in this form during the lifetime of Ibn Nubātah. Lines 3, 7, 8, and 11 never occurred together with lines 4, 6, 9, and 10, and in none of Ibn Nubātah's versions did the *nasīb* take such a large portion of the whole poem. Instead, Ibn Nubātah obviously cancelled line 3 and replaced lines 7, 8, and 11 with three other lines. In the chart above, the lines occurring in *Muntakhab al-Hadīyah* (= MH), the *Proto-Dīwān* (PD), and *Sūq al-Raqīq* (SR) are marked in columns 2 to 4 with an X. These are the three major versions that can be established to have existed during the poet's lifetime. The recension of al-Bashtakī (column 5) is nothing but a pastiche of all these versions. Line 3 is only reintroduced in a very late version of this recension. To reconstruct the history of the text, we must therefore have recourse to the manuscript material.

The earliest version of the poem available to us is found in the *Muntakhab al-Hadīyah* [5], Ibn Nubātah's collection of poems in praise of al-Malik al-Muʾayyad. The book was completed before 729, perhaps around the year 725, and is preserved in a number of manuscripts and early printed editions. The earliest document is an autograph manuscript (Köprülü MS 1397) the text of which is not always identical with the version presented by all other known sources (which, nevertheless, must also present an authentic version going back to the author himself). In the case of our *nasīb,* there are only a few variant readings between the two recensions. Therefore, I will give the version of the autograph manuscript (fols. 15v–16r), which is as authentic as a text can be:[11]

١ قامِ يرنُو بمقلةٍ كحلاء   عَلَّمَتني الجُنُونَ بالسَوْداءِ
٢ رَشأٌ دبَّ في سوالفه النملُ فحارتْ خواطرُ الشُعراءِ
٣ روضُ حُسنٍ غَنىَّ على قدّه الحلْيُ فأهلاً بالروضةِ الغنّاءِ
٤ عَذلوني علىَّ هواه فأغرَوا فهواهُ نصبٌ على الإغراءِ
٥ مَن مُعِيني على لواعج حبٍّ تتلظّى مِن أدمُعي بالماء
٦ وحبيبٍ لديّ يفعل بالقلبِ فعال الأعداء بالأعداء
٧ يتثنّى كقامة الغُصن الرطب ويعطو كالظبية الأدماءِ
٨ يا شِبيهَ الغُصون رفقا بصبٍّ نائح في الهوى مع الورقاء
٩ يذكُرُ العهدَ بالعقيق فيبكي من هواهُ بدمعةٍ حمراءِ
١٠ يا لها دمعةً على الخدّ حمراء بدت من سوداء في صفراء
١١ فكأني حملتُ رنك ابن أيُّوب على وجنتي لفرط ولائي

(1) He stood, gazing with dark eyes that taught me madness in consequence of *black (eyes)*/melancholia,[12]

[11]Since the poem is in the meter *khafīf,* in which the caesura between the hemistichs is less important than with other meters and often runs across single words, we will not mark it here.

[12]A *tawriyah* is noted in the translations in the following way: The primarily intended meaning is

(2) a young gazelle on the temples of whom ants were crawling so that the poets' minds were confounded.

(3) He is a garden of beauty; the jewelry on his body sings—welcome to the lush garden full of rustling/*garden of the singer!*

(4) They blamed me for my love for him and incited desire, so that the love for him became a banner/*accusative* marking incitement.

(5) Who can aid me against the ardor of a love that is aflame even in the water of my tears,

(6) and against a beloved who inflicts on my heart things that only enemies are used to inflicting on each other?

(7) He sways in the form of a tender bough and stretches his neck like a light-brown gazelle.

(8) O you, who resemble boughs: Have mercy on an ardent lover who, in his passion, moans with the dark gray doves,

(9) while he remembers the days of intimacy with al-ʿAqīq/*the cornelian,* so that he weeps a red tear out of love.

(10) Oh what a tear on the cheek: Red that appeared from the black [eyes] [and runs down] on a yellow cheek!

(11) It is as if I would bear the emblem of Ayyūb's scion on my cheek, so great is my devotion!

Let us try an interpretation of the *nasīb* in this form. The first observation is that the *nasīb* has to be interpreted from the perspective of the *takhalluṣ* (line 11). This line leads from the subject of love to the subject of praise by means of the emblem of the prince. Considering the small number of literary references to the *rank,*[13] the line is also not without historic interest. As we learn from lines 10 and 11, the *rank* of al-Muʾayyad was a tricolor bearing the same colors as

underlined, the secondarily suggested meaning written in italics. In reading aloud, the words in italics should be omitted.

[13]N. Rabbat, "Rank," *Encyclopaedia of Islam,* 2nd ed., 8:431.

the Belgian or the German flag (in whatever sequence). These three colors are now introduced through themes of love poetry, until they serve as a very neat and astonishing *takhalluṣ* to the *madīḥ.* This is carried out in three steps, each comprising three lines.

The first step, lines 1–3, is to give an idea about the fascination felt by the lover for the beloved. One of the three colors, black, is already introduced in the first line. This is done in a complex way in the form of a *tawriyah* and by making "blackness" the rhyme word. In this way the subject of color is on the stage from the very beginning. One may also note that the very first rhyme word, i.e., the rhyme word at the end of the first hemistich *(kaḥlāʾ)* is also a color term, but a term only applicable to eyes. The sequence: (a) special color term *(akḥal)* → (b) generally applicable color term *(aswad)* given in the first line is echoed in an expanded form in lines 7–10: (a) special color terms in the rhymes of lines 7–8 (*admāʾ, awraq*) → general color terms in the rhymes of lines 9–10 *(aḥmar, aṣfar)*.

The second step, lines 4–6, can be read as an antithesis of the first one. Now the enemies of love, the faultfinders, enter the stage in line 4. As a consequence, the lover's love turns into a "banner." This motif anticipates the idea of the *rank,* but without mentioning any color. Further lines illustrate the reluctance and the cruelty of the beloved that are the reason for the lover's despair and will eventually engender the two colors red and yellow, which are not yet mentioned in the colorless passage. The theme of "color" now is the point of the third step presented in lines 7–9. The beloved is compared to a red-brown gazelle. He resembles a bough, and on boughs we find doves whose sad cooing is one of the most time-honored motifs of love poetry. A common word for doves is *warqāʾ*, which originally means "dark gray". So we have two lines that end with rhyme words that designate colors, *admāʾ* and *warqāʾ*. But they are not pure colors, but only color terms that can be applied to special categories of objects. As a climax, the third line of the passage concludes with a rhyme word which designates a pure color, i.e., red *(ḥamrāʾ),* which is introduced again in the complex way of a *tawriyah,* just as the color black had been in the first line. The color yellow is represented by the sallow cheeks of the pain-stricken lover as a natural consequence of what has been said in the second passage. This is a conventional topos of love poetry and need not be introduced separately to complete the tricolor. Instead, it forms the rhyme word of line 10, in which all three colors are now assembled. These are the colors of the *rank* of the sultan al-Muʾayyad, which the poet acquires through love just as the sultan had acquired them by rank and descent.

A few words may be in order to explain the rather dense stylistic construction, especially of the first section. Each of its three lines contains a *tawriyah,* the form of double entendre that was so popular in Ayyubid and Mamluk times that Ibn

Ḥijjah even called the whole period the "age of the *tawriyah,*" and Ibn Nubātah was unanimously considered the chief master of the *tawriyah* in his time. The *tawriyah* makes use of the fact that many words have more than one meaning, and it must be constructed in such a way that, though only one of its meanings is primarily intended, the hearer/reader is made aware of the other, non-intended meaning of the word. In the case of these three lines, we have no less than three different kinds of *tawriyah.* In the first line, the lyrical I is going mad on account of the black eyes of the beloved. However, *sawdāʾ* means also "black bile, melancholia," which enables a medical interpretation of the line. Since the context points to the primarily-intended meaning, we have a *tawriyah mubayyanah* before us. The situation in the next line is more complex. The "ants" that are creeping up the beloved's cheek are a simile for the downy beard, one of the main subjects of Arabic love poetry from the time of Abū Tammām onwards until the middle of the nineteenth century.[14] The comparison is not new at all, but Ibn Nubātah adds a *tawriyah* by stating that the downy beard "seizes the minds of the poets." By mentioning the word *shuʿarāʾ* the hearer becomes aware of the fact that *al-naml,* just like *al-shuʿarāʾ*, is the name of a *sūrah* of the Holy Quran. This form of *tawriyah,* which only becomes conspicuous by means of another *tawriyah,* is called *tawriyah muhayyaʾah.* The third line adds the acoustic dimension to the optic one. The beloved's face is a garden (a common image), but a garden is only perfect when birds sing in it. Instead of birds, the beloved's garden here is filled with the rustling of his adornment (probably his earring); therefore it is a *rawḍah ghannāʾ* which one can interpret as "a garden, a singer." But the intended meaning of *ghannāʾ* is not that derived from the root *gh-n-y*, but that from the root *gh-n-n. Ghannāʾ* can also be the feminine of *aghann* and means as an epithet a garden "abounding with herbs . . . in which the winds [murmur] by reason of the denseness of its . . . herbage."[15] It is an old Arabic expression for a *locus amoenus* just as is al-ʿAqīq in line 9. The *tawriyah* in this case is a *tawriyah murashshaḥah,* in which the context ("singing") points to the not-intended meaning ("singer").

The next three lines (lines 4–6) are stylistically less complicated. Line 4, which brings in society in the form of the faultfinders, takes up the old motif of blame that incites the lover even further. Its classical formulation is by Abū Nuwās.[16] The motif is turned into another *tawriyah,* which fits the profanation of love by the faultfinders, since *naṣb ʿalá al-ighrāʾ* (accusative of incitement) is simply a

[14]See Thomas Bauer, *Liebe und Liebesdichtung in der arabischen Welt des 9. und 10. Jahrhunderts* (Wiesbaden, 1998), 225–80; on 264–65, references to further comparisons between the beard and ants in the love poetry of the ninth and tenth centuries.

[16]See *Dīwān Abī Nuwās,* 3rd part, ed. Ewald Wagner (Stuttgart, 1408/1988), 2: دَعْ عَنْكَ لَوْمي فإنّ اللَّوْمَ إغْرَاء

common grammatical term.[17] Lines 5 and 6 are marked by antitheses (fire-water; beloved-enemy) instead of *tawriyāt*. It is only in line 9 in the third section that the art of the *tawriyah* is perfected in the form of an *istikhdām*. It is presented by the word al-ʿAqīq, the name of a wadi in the Ḥijāz (and of several other places in the region), which at first seems out of place in Ibn Nubātah's poem. But its geographical place is completely irrelevant since in Arabic poetry it is not so much a real place as a motif, and as such "part of the poetic idea embodied in that peculiarly suggestive landscape that may be called pastoral, idyllic, or, in an archetypical way, a vestige of man's dream of the earth when it was good. It is a metaphor of sweetness, joy, and garden surroundings, too."[18] As such, it is in perfect harmony with the references to the Quran and the garden in lines 2 and 3. But at the same time the word *ʿaqīq* has to be taken to mean "cornelian" in order to serve as an object of comparison for the red (i.e., bloody) tears of the lover. If both significations of a word have to be actualized, theorists speak of an *istikhdām,* which, nevertheless, may be considered a type of *tawriyah*. Though Ibn Nubātah left theory to al-Ṣafadī,[19] it is quite clear that he was very well aware of the different kinds of *tawriyah,* and it is certainly no accident that he tried to assemble them in this very passage, each fulfilling a specific task in its specific place. Further, it is also striking to see how Ibn Nubātah combines motifs of the traditional form of the *nasīb* (for this is rather a *nasīb,* not a *ghazal*)[20] with "modern" content, for no doubt it is a homoerotic love poem. In the same way as Ibn Nubātah offers modernized tradition (conventional *nasīb* motifs in modern style and content), the Ayyubid prince combines a glorious dynastic past with his generous activities in modern Mamluk society.

Given the two poles, "crafted" *(maṣnūʿ)* and "natural" *(maṭbūʿ),* there is no doubt that Ibn Nubātah's lines are to be located at the very end of the "crafted" pole. A text containing a maximum of allusions and associations will inevitably end up on this side of the scale. Nevertheless, Ibn Nubātah must have felt a certain unease about his lines, or about some of them, and therefore decided to revise the poem.

Such changes had taken place already in the text of *Muntakhab al-Hadīyah*. The text of the other manuscripts and the nineteenth-century printed text of this work is not identical with the text of the autograph. Apparently, most differences go back to Ibn Nubātah himself, as the drastic changes (such as the exchange of whole poems) and the corroboration of some of these changes through later

autograph sources show. In our case, there are only minor alterations. We find *hāmat* instead of *ḥārat* in line 2 (a variant reading corroborated by the autograph of *Sūq al-Raqīq*) and *ilayya* instead of *ladayya* in line 6. More important is Ibn Nubātah's attempt to improve line 3. The phrase *ʿalá qaddihī* "above his stature" must have disturbed Ibn Nubātah, perhaps as not being very precise. Therefore he replaced it with the phrase *lahū fawqahū* "for which above it." The reading of the printed *Dīwān*, *lanā fawqahū*, has no textual basis whatsoever. It owes its existence to the fact that the writer of the manuscript that forms the basis for the printed text, had omitted *lahū*. The word *lanā* was only later added above the line, perhaps by another hand and as a conjecture. There is no senseless "for us" in Ibn Nubātah's text and no "we" is addressed in the whole passage.

Another step of his revisions is represented by what I call Ibn Nubātah's "Proto-Dīwān." It is a collection of Ibn Nubātah's poetry, compiled by the poet himself, with which he answered requests for a *Dīwān* of his poetry during his Syrian years and which forms the basis for the *Dīwān al-Aṣl*. An early version of the *Proto-Dīwān* is included in Shihāb al-Dīn Ibn Faḍl Allāh's *Masālik al-Abṣār* and therefore must be dated before 749. Further sources for the *Proto-Dīwān* are four manuscripts, one of which was written before Ibn Nubātah's death. Though the manuscripts do not depend upon each other, all five sources give an identical text of the poem, which differs in a few respects from the text given above. This version must be considered as another authentic version that can be traced back to Ibn Nubātah himself. It presents a text virtually identical with the autograph version of the *Muntakhab*. It still has *ḥārat* (line 2) and *ladayya* (line 6), but it reads *al-ghuṣn al-ladn* instead of *al-ghuṣn al-raṭb* in line 7 and *li-hawāhu* instead of *min hawāhu* in line 9. The most important change again concerns line 3, which is now entirely deleted. The poet had already marked it with a line in the autograph. The exact chronology of these modifications cannot be established. Perhaps Ibn Nubātah deleted the line first and tried to save it later for the *Muntakhab* by reformulating it in part, or he considered his attempt to improve it a failure and deleted it once and for all. As a matter of fact, the line does not turn up again in later versions of the poem, and it was not even included in the pastiche text compiled by al-Bashtakī. Copyists only added it subsequently, almost certainly from the *Muntakhab*.

Ibn Nubātah occupied himself with the poem for many years, as we see from the preceding, before he finally decided to rework it fundamentally. This new version is again preserved in an autograph manuscript. This is a manuscript of Ibn Nubātah's late work *Sūq al-Raqīq* [29], in which the author assembled a selection of the *nasīb* sections of his *qaṣīdah*s to create a work of love poetry. The *nasīb* is now not part of a longer poem, but stands alone. Nevertheless, in all probability the text was not changed on the occasion of its inclusion in *Sūq al-Raqīq*. Rather it

represents the form the *nasīb* had taken in the meantime in Ibn Nubātah's *Dīwān al-Aṣl,* i.e., in a revised and enlarged version of the *Proto-Dīwān*. This is corroborated by the Paris manuscript Bibliothèque Nationale MS 3362, which contains excerpts of Ibn Nubātah's *Dīwān* in a pre-Bashtakī recension (most certainly from the *Dīwān al-Aṣl*), and in which on fol. 98v a shortened version of our poem is given, which corresponds to the version given below. Further, the modifications made in this stage are obviously made to align the *nasīb* more closely to the main topic of the *madīḥ* instead of making it more erotic as one would expect from modifications undertaken for an anthology of love poetry.

This is the complete text of the poem in the autograph copy of *Sūq al-Raqīq* (Escorial MS árabe 449, fols. 2r–v):

١ قامِ يِرنُو بمقلةٍ كحلاء   أنِا منها المجنونُ بالسَوْداءِ
٢ رَشأٌ دبَّ فِي سوالفه النملُ فهامت خواطرُ الشُعراءِ
٣ جائِرُ الحُكْمِ قلبه لِيَ صَخْرٌ وبكائي له بكا الخنساءِ
٤ عَذَلوني على هواه فأغرَوا فهواهُ نصبٌ على الإغراءِ
٥ مَن مُعِيني على رشاً صرت من ماء دموعي عليه مثل الرَشاء
٦ ضيق العين إن رَنا واستمحنا وعناء تسمّح البخلاء
٧ ليت أعطافه ولو في منام وعدتْ باستراقه للقاء
٨ يا شبيهَ الغُصون رفقا بصَبٍّ نائح في الهوى مع الورقاء
٩ يذكرُ العهدَ بالعقيق وأهليه فيبكي بدمعةٍ حمراءِ
١٠ يا لها دمعةً على الخدّ حمراء بدت من سوداء في صفراء
١١ فكأني حملتُ رنك ابن أيُّوب على وجنتي لفرط ولائي

(1) He stood, gazing with dark eyes that left me mad with *black (eyes)*/melancholia,

(2) a young gazelle on the temples of whom ants were crawling so that the poets' minds were seized by the raptures of love.

(3) A tyrant, his heart is (hard as) stone/*Ṣakhr* to me, and my weeping for him is like the weeping of al-Khansāʾ!

(4) They blamed me for my love for him and incited desire, so that the love for him became a banner/*accusative* marking incitement.

(5) Who can aid me against a fawn that made me seem a well-rope, for so many tears did I weep for him,

(6) a fawn that gazes with small eyes when we ask a favor of him—
but it is distress to expect favors from misers!

(7) Would that his inclinations promised—and if only in a dream—
that he could be stolen away for a rendezvous!

(8) O you, who resemble boughs: Have mercy on an ardent lover
who, in his passion, moans with the dark gray doves,

(9) while he remembers the days of intimacy with al-ʿAqīq/*the cornelian* and its inhabitants, so that he weeps a red tear.

(10) Oh what a tear on the cheek: Red that appeared in consequence
of black on yellow!

(11) It is as if I would bear the emblem of Ayyūb's scion on my
cheek, so great is my devotion!

If we compare these lines with the corresponding lines in *Muntakhab al-Hadīyah,* we see that only four lines survived without change (lines 4, 8, 10, 11), four were replaced by completely different lines (lines 3, 5–7), and three lines were modified in a more moderate way (lines 1, 2, 9). The length of the poem and the sequence of the lines remain unchanged. This is clear evidence of the fact that the new lines were not meant as an addition, as it appears from the printed *Dīwān,* but as replacements for earlier verses.

Line 3 is a substitute for the "singing jewelry" line that had proven resistant to all attempts at improvement. Instead of stressing the beloved's beauty (to which little space is devoted in this revised version of the *nasīb*), the line complains about the reluctance and harshness of the beloved whose "heart is of stone *(ṣakhr),*" a very common theme of love poetry. As a result, the lover must weep, and the poet compares his weeping to that of the pre-Islamic poetess al-Khansāʾ who, according to tradition, spent many years composing elegies on the death of her beloved brother, whose name was Ṣakhr. Since the brother's name is clearly not intended by the word *ṣakhr* in the first hemistich, this is a *tawriyah murashshaḥah.*[21] The new line therefore provides for exactly the same type of *tawriyah* as the line it was meant to replace. Despite the many changes, the number of *tawriyāt* representing

[21] Instead of *wa-bukāʾī lahū bukā al-Khansāʾī,* the Paris MS reads *wa-bukāʾī ʿalayhi ka-al-Khansāʾī,* which should be considered an authentic and plausible alternative reading of the line, since it avoids the contrast between *bukāʾ* and *bukan,* and *bakā ʿalá* is the normal construction of the verb.

four different types remains unchanged. With Ṣakhr and al-Khansāʾ, two historical figures from old Arabic tradition have been introduced. As we have already seen, the confrontation between Arabic tradition and modern style and content is a specific trait of this poem. This tendency is underscored by the introduction of two additional figures of this kind. This helps to explain the transformation of line 1. While I do not think *ana minhā al-majnūnu* is necessarily better than *ʿallamatnī al-junūna,* through the word *majnūn* another figure of old Arabic lore is brought to the awareness of the hearer. In addition, juxtaposed to the word *al-majnūn,* the rhyme word *al-sawdāʾ* "black" strongly suggests the name of Laylá, the beloved of al-Majnūn, and thus completes the pair. This association was absent from the first version. By means of this transformation, the four *tawriyah* lines give the following sequence of historical allusions: Line 1 reminds the hearer of al-Majnūn, the hero of unrequited love in the *ʿudhrī* tradition, and his beloved Laylá. Line 2 recalls the Quran, and line 3 mentions in a more direct way another old Arabic hero and his sister, a model of sisterly love. The fourth *tawriyah* line, which introduces the "colors of the banner" passage, is line 9. In the original version, this line mentions al-ʿAqīq as a *locus amoenus* in the Arabian Peninsula and thus leads back to the scene of the first three verses. But there are no people in it. But by replacing *fa-yabkī min hawāhū* with *wa-ahlīhi fa-yabkī,* the place becomes populated and the line is in closer harmony with the first three lines. One may note also that in the first part of the *madīḥ* several historical figures are mentioned (al-Ayyūb, Kaʿb, Ismāʿīl). The allusion to figures and stories of the past, which is called *ʿunwān* in *badīʿ* theory, is thus a stylistic device that unites *nasīb* and *madīḥ*. This becomes much more obvious in the second version than in the first, though the new versions of the lines are not necessarily better than the old versions (with the exception of line 3, which is clearly improved in the second version).

Another attempt to thematically unify the poem was to strengthen the notion of avarice and refusal as opposed to generosity and liberality, which form the focus of the *madīḥ*. For this purpose, the beauty of the beloved was no longer signalled by the image of the bough, but by his "small eyes." In a time when the male beloved is often a Turkish soldier, small eyes were considered a mark of beauty. Whereas the ancients used to write love poems on those with wide eyes *(al-ʿuyūn al-nujalāʾ)* "the modern poets often write love poems on the small eyes *(al-ʿuyūn al-ḍayyiqah),* that is, the eyes of the Turks."[22] But in line 6 of our poem, the small eyes are not so much a mark of beauty, but rather a sign of the beloved's reticence. The only favor that can be hoped for from such a stingy beloved is a theft committed in a dream. This idea of line 7 forms the climax of the middle passage of the revised *nasīb,* which can now be structured in the

[22] Al-Ṣafadī, *Al-Ghayth al-Musajjam fī Sharḥ Lāmīyat al-ʿAjam* (Beirut, 1411/1990), 2:19; see also Bauer, *Liebe,* 285–86.

following way: Lines 1–3: The beloved, who has to be conceived in a "modern" way as a young man, evokes memories of old Arabic and Islamic heritage. This ambiguous experience is expressed in the form of three *tawriyāt* of three different types. The stylistic device of the *tawriyah* is not only the device of ambiguity *par excellence,* but also the *modern* stylistic device *par excellence*. The reader is left with several associations and contradictions after this section. Line 4 brings in the poet's contemporaries who make him a banner of love parallel to the banner of the Ayyubid prince that has to be introduced in the course of this *nasīb,* as has been explained above. But at first the beloved is portrayed as the antipode of the prince, as the embodiment of avarice, just as the prince will be shown to be the embodiment of generosity. This is accomplished in the revised middle part, which starts with a line featuring the traditional stylistic device of the *jinās* (line 5: *rashan - rishāʾ*). A last part follows, in which the *tawriyah* style and the historic recollections of the first part are taken up again in line 9 and the poet's sufferings of the middle part in line 10, only to bring about a synthesis in the form of the colors of the *rank* of the Ayyubid prince, who turns out to be the antipode of the beloved.

This last revision was made several decades after al-Malik al-Muʾayyad's death in 732/1332 and even after the end of the Ayyubid dynasty of Ḥamāh (742/1341). No Ayyubid prince ever read the poem in this form. Obviously the poet's revisions were not made for the addressee, but for the general public. The same procedure of revising and polishing his texts can be observed with Ibn Nubātah's prose texts. In winter 716, Jalāl al-Dīn al-Qazwīnī received a letter from Ibn Nubātah, in which he complained about the cold and snow. The text that al-Qazwīnī received must have been more or less identical with that of the autograph manuscript El Escorial MS árabe 548, fols. 91r–92r. But already a few years later, when Ibn Nubātah compiled his *Sajʿ al-Muṭawwaq* [3], he included a polished version, in which several cola were substituted for others. This new version is also documented in an autograph manuscript.[23] The new text was modified again, and a shortened version was prepared for its inclusion in *Zahr al-Manthūr*.[24] Al-Qazwīnī probably never read one of these revised versions of the letter that had once been addressed to him.

This process of revision demonstrates that Ibn Nubātah's poems and prose texts were occasional texts in so far as they were induced by certain circumstances, which also became part of their thematic content. As works of art, however, their communicative potential was not limited to the occasion. Their author considered them artistic creations the value of which was not bound to the circumstances of

[23] Ayasofya MS 4045, fols. 29r–30r.

[24] See Chester Beatty MS 5161, fol. 24r–v.

their creation or to the person to whom they were first addressed. Therefore, the process of creation did not end with the occasion or the death of the addressee, but only with the author's decision to consider his work finished.

The effort expended by the poet must be reciprocated by the modern interpreter devoting a comparable amount of care and attention to Ibn Nubātah's text. It is quite clear that the text of the poem discussed above as it is given in the printed version does not allow for an adequate interpretation of the lines. Whereas both the early and the late version of the *nasīb* make perfect sense, each in their own way, the pastiche given in the printed text is marred by senseless repetitions (esp. lines 6 and 7), thematic breaks and inconsistencies, and an unbalanced proportion between *nasīb* and *madīḥ*. One who reads only this text does not know Ibn Nubātah's poem. It was al-Bashtakī's ambition to collect every line ever written by Ibn Nubātah as completely as possible. He had no critical edition in mind. Ibn Nubātah's method of working, however, is exactly the kind that calls for a critical edition that elucidates the different stages of Ibn Nubātah's creations.

It is true that only a few of Ibn Nubātah's poems were subjected to a comparably fundamental revision as the poem discussed above. An impression of the degree of re-working may be given by a comparison between Ibn Nubātah's poems quoted in Shihāb al-Dīn Ibn Faḍl Allāh's *Masālik al-Abṣār* and their counterparts in the printed *Dīwān*. As will be shown later, Ibn Faḍl Allāh simply copied Ibn Nubātah's *Proto-Dīwān* to compile his section on the poet in his encyclopaedia, without bothering with an introduction and without making any textual changes. This is corroborated by four additional manuscripts of this version of Ibn Nubātah's *Dīwān*. Whenever the number of lines of a poem in Ibn Faḍl Allāh's *Masālik* differs from the number of its lines in the printed *Dīwān,* this is not due to an abridgement carried out by Ibn Faḍl Allāh. Instead, the additional lines were either added by the poet later or they are the result of a blend between lines from different stages of revision, as was the case in the *nasīb* discussed above. In the *Masālik,* Ibn Faḍl Allāh included 37 poems by Ibn Nubātah that comprise more than twenty lines. Of these poems, only 14 contain the same number of lines in the *Dīwān* as they do in the *Masālik*. In one case the *Masālik* version is longer. In all other cases, the *Dīwān* provides more lines than the *Masālik,* i.e., Ibn Nubātah's *Proto-Dīwān*. As a whole, the difference is 204 lines. This means an average difference of 5.6 lines, or of 14.6 lines if we only regard the poems with different lengths. In most cases, the difference is one or two lines (six cases each), but in other cases the difference amounts to 18 (no. 694 in the *Masālik*), 42 (no. 685), 45 (no. 747), and 51 (no. 703) lines, respectively. These figures only capture the different lengths of the poems, but not the numerous variant readings. As we saw above, most variants have to be traced back to the poet himself and are not scribal errors. An example is the introductory line of no. 678, which is completely different in the *Dīwān* (p.

483). Our statistics do not capture, either, the many cases in which poems were trimmed to become two-line epigrams or expanded to become seven-liners to be included in *Al-Sabʿah al-Sayyārah* [31], and many similar cases. To mention only two examples, the congratulatory poem on p. 47 of the *Dīwān (mutaqārib/3bū)* comprises 9 lines. It has 6 lines in the *Proto-Dīwān* and was shortened to 4 in *Al-Qaṭr al-Nubātī* [6]. The two lines of no. 894 in the *Masālik* are the beginning of a poem of 24 lines in the *Proto-Dīwān,* which appears in the printed *Dīwān* with 41 lines (p. 448).

The situation is similar with Ibn Nubātah's prose texts. The *Mufākharah bayna al-Sayf wa-al-Qalam* [10] appears in several sources, but never in an identical form. Further, it was dedicated to two different persons at two different times. As we have seen above, letters were also revised and reworked, even after they had long fulfilled their immediate purpose, and even after the death of their addressee.

The story of Ibn Nubātah's works, therefore, is complicated and requires meticulous reconstruction. But it offers singular insight into the creative process of one of the major literary figures of the eighth/fourteenth century and the intellectual life of the period in general.

6. The *Dīwān Ibn Nubātah*

We are accustomed to accessing the works of the great poets, beginning with the Abbasid period, through their *dīwān*s. A *dīwān* in this sense is a more or less comprehensive collection of the poetic work of a poet. From the Umayyad poet Dhū al-Rummah onwards, many poets compiled their own *dīwān*. Many a *dīwān* was also arranged by philologists shortly after the death of a poet. The most famous case is that of Abū Bakr al-Ṣūlī (d. ca. 335/946), who not only compiled the *dīwān* of Abū Nuwās, but also the *dīwān*s of Abū Tammām, Ibn al-Rūmī, and others. In principle, this practice was still common in the Mamluk period. Poets like Ṣafī al-Dīn al-Ḥillī still compiled their own *dīwān*s, and a person like al-Bashtakī collected the *dīwān* of his teacher, Ibn Nubātah, whereas Shihāb al-Dīn al-Ḥijāzī collected that of al-Bashtakī. Nevertheless, to a certain extent, the *dīwān* had lost its former character as the central work of an *adīb*. Many *udabāʾ* such as al-Ṣafadī never had their poems collected in the form of a single *dīwān*. Other *dawāwīn* of this period present only selections of a person's poetry. Such "best ofs" may have been compiled by the poet himself (as in the case of Ibn Ḥajar al-ʿAsqalānī) or again by another person (for example, Ibn Ḥijjah's selection of the *dīwān* of Burhān al-Dīn al-Qīrāṭī, entitled *Taḥrīr al-Qīrāṭī*). Often poems that were composed for a certain occasion, or poems of a certain form or treating a specific subject, were compiled in the form of a small or medium-size book. Collections of this kind are also often called *dīwāns.* An example of a *dīwān* of this kind is Ibn Nubātah's

Muntakhab al-Hadīyah [5], which is often referred to as *Dīwān Ibn Nubātah* or *Al-Dīwān al-Ṣaghīr*. In a period when it was common to produce several smaller books, the compilation of a single, comprehensive *dīwān* was less common than it had been in the Abbasid period. Another factor that contributed to a decrease in importance of the traditional *dīwān* or to a modification of its form was the fact that many, if not most, *udabāʾ* of the Mamluk period gave as much weight to their prose texts as to their poems. Consequently, a *dīwān* of poetry represents only one facet of an *adīb*'s output in this period and is therefore less central than it was before. Alternatively, an *adīb* may compile a *dīwān* consisting of both poetry and prose. It seems as if this development occurred only in the generation after Ibn Nubātah. Ibn Nubātah's *dīwān* is still confined to poetry despite the overwhelming importance of his prose. From *udabāʾ* of the generations after Ibn Nubātah, several *dawāwīn* of the mixed kind have been preserved, for example the *dīwān*s of al-Qīrāṭī, Ibn Makānis, and Ibn Ḥijjah al-Ḥamawī.

Accordingly, we can say that whereas the *Dīwān al-Mutanabbī* is al-Mutanabbī's life work, and to know the *Dīwān al-Mutanabbī* means to know all of his verse, to know the *Dīwān Ibn Nubātah* gives only a limited view of the literary universe of Ibn Nubātah, which should be accessed first through the works Ibn Nubātah intended for publication. The *Dīwān* contains neither Ibn Nubātah's copious production in prose, nor does it present the poems in their original context, when Ibn Nubātah first published them. Nevertheless, the *Dīwān* remains an indispensable source for our knowledge of Ibn Nubātah's poetic work since it contains many poems from collections otherwise lost (such as *Al-Sabʿah al-Sayyārah* [31]) as well as poems that were probably never part of a separate collection (such as the poems in praise of ʿAlāʾ al-Dīn Ibn Faḍl Allāh).

In the printed version at our disposal, the *Dīwān* can fulfill these functions only in a very limited way. The printed *Dīwān* represents one of al-Bashtakī's recensions of Ibn Nubātah's poetry, but it is marred by a number of arbitrary and capricious interventions so that we have to conclude that still no reliable text—much less a critical edition—of the *Dīwān Ibn Nubātah* is available. Several factors contributed to this unsatisfactory situation. First, the poet himself had the habit of constantly revising his own works so that even he could not arrive at definitive versions of his poems. Second, the compiler al-Bashtakī lacked the perseverance and diligence necessary to undertake a task like this. As a result, he did not compile a single, definitive version of the *Dīwān*. And third, the modern editor lacked philological training and did more harm than good by his whimsical approach to the text. Therefore, the printed *Dīwān* is the result of a sum of unfortunate circumstances and a rather entangled history, which we will try to unravel in this section.

The most interesting result of this research is, however, that we are able to reconstruct the pre-Bashtakī history of the *Dīwān*. As will be shown, we are in

possession of two different recensions of Ibn Nubātah's *Dīwān* that were compiled by the poet himself in two different periods of his life. The exploitation of these sources, together with the sources for the other poetic works of Ibn Nubātah, will allow us to reconstruct the history of many of his great poems in a more detailed way than is possible for the works of any other Arabic author. We will also be able to date many of Ibn Nubātah's poetic works quite exactly and to understand them in their specific biographical and historical contexts. This will also enhance our understanding of the history of this period and the personalities of the time.

(1) THE *PROTO-DĪWĀN*

The longest section in al-Ṣafadī's *Alḥān al-Sawājiʿ* treats his correspondence with Ibn Nubātah. In this chapter, al-Ṣafadī tells us about all the works of Ibn Nubātah he had heard from him or for which he had received Ibn Nubātah's *ijāzah*. But still there was a source that did not fall into one of these categories, since he once mentions two lines Ibn Nubātah had written *ʿalá juzʾ ahdāhu min shiʿrihī* "on a fascicle of his poetry that he presented to me."[25] It is obvious that this *juzʾ* is not one of Ibn Nubātah's works provided with a title and preface and intended for a wider public, but a compilation of poetry that Ibn Nubātah used to hand out to his close friends when he was asked to do so, perhaps in exchange for other texts.

Another friend of Ibn Nubātah was Shihāb al-Dīn Ibn Faḍl Allāh, who eventually brought Ibn Nubātah into the chancellery of Damascus. Ibn Nubātah's texts addressed to Shihāb al-Dīn (a dozen *qaṣīdahs* and a number of epigrams and letters) far outnumber those addressed to al-Ṣafadī. Given the close relationship between Shihāb al-Dīn and Ibn Nubātah and the latter's importance as a poet, it is only natural that Ibn Nubātah was accorded a privileged place in Shihāb al-Dīn's encyclopedia *Masālik al-Abṣār*. Volume 19 of the *Masālik* is dedicated to the younger Egyptian poets, among them Ibn Nubātah.[26] It is interesting that Ibn Nubātah, who lived in Syria for quite a long time, who had no family in Egypt after his father had moved to Damascus, and who was proud of his Syrian ancestors Ibn Nubātah al-Khaṭīb and Ibn Nubātah al-Saʿdī, still appears as an Egyptian. Most of the 24 poets from this volume are granted only a few pages. Two exceptions are Ibn Dāniyāl, given 27 pages in the printed edition, and al-ʿAzāzī, given 35. The first poet in the volume is Sirāj al-Dīn al-Warrāq (615–95/1218–96), the most popular late Ayyubid/early Mamluk poet of Egypt, who churned out poems in large quantities of uneven quality. Ibn Faḍl Allāh produced only a selection of his *dīwān* that still filled 292 pages.[27] Shihāb al-Dīn's *tarjamah* and *mukhtār*

[25] Al-Ṣafadī, *Alḥān al-Sawājiʿ*, 2:192.

[26] Shihāb al-Dīn Aḥmad ibn Faḍl Allāh al-ʿUmarī, *Masālik al-Abṣār fī Mamālik al-Amṣār*, vol. 19, *Baqīyat Shuʿarāʾ Miṣr,* ed. Yūnis Aḥmad al-Sāmarrāʾī (Abu Dhabi, 1424/2003).

[27] Ibid., 15–306.

are so far our most important sources on this man. The counterpart at the end of the volume is the article on Ibn Nubātah that comprises 256 pages.[28] Taken together, the articles on al-Warrāq and Ibn Nubātah fill more than three quarters of the volume and obviously are its *raison d'être,* presenting the beginning of Mamluk Egyptian poetry and its contemporary end (however questionable Ibn Nubātah's Egyptianness may be). But there is one remarkable difference between the entries. Whereas the entry on al-Warrāq starts with the obligatory *tarjamah,* informing the reader about his life and praising his literary achievements, such a *tarjamah* is completely lacking in the case of Ibn Nubātah. The entry simply starts by mentioning his name and introduces the first poem by the formula *wa-qawluhū*. We are not informed about who chose the poems of this entry, either. But nothing suggests that Shihāb al-Dīn was responsible for the selection. Its first part consists of *qaṣīdah*s and epigrams on al-Malik al-Muʾayyad, followed by numerous epigrams on different subjects, interspersed with a few *qaṣīdah*s such as one on the *ʿālim* Ibn al-Zamlakānī and Ibn Nubātah's famous elegy on the death of his son. Most conspicuously, we find none of the poems that Ibn Nubātah had dedicated to the author of the encyclopedia. Obviously, the text was not adapted by Ibn Nubātah to be part of the *Masālik al-Abṣār,* and, considering the total absence of a *tarjamah* of Ibn Nubātah, we can only conclude that Shihāb al-Dīn had had no time to polish this entry before his premature death, at which time the *Masālik* was not yet finished. Therefore, it is most probable that the Ibn Nubātah entry in the *Masālik* is not more than, as al-Ṣafadī calls it, a *juzʾ ahdāhu min shiʿrihī,* a collection of his poetry that Ibn Nubātah used to give to his friends.

different manuscripts corroborate this, each of them representing a different line of transmission. They all bear the title *Dīwān Ibn Nubātah* and present a text that is virtually identical with that of the Ibn Nubātah section in *Masālik al-Abṣār*. In the first part, they contain the same poems, each poem comprising the same number of lines and the same version of each verse (usual variants apart). In the second part, most long *qaṣīdah*s that appear in the three manuscripts are missing in the *Masālik,* but the epigrams in between are all present in the same sequence. Whether it was Ibn Nubātah who had not yet included these *qaṣīdah*s in his collection, or if he had left them out purposely in his copy for Shihāb al-Dīn, or if Shihāb al-Dīn omitted them, cannot be ascertained and is of little importance for our purpose. More important is the fact that one of the three manuscripts—the Berlin manuscript—is dated in the year 761, but is not an autograph. Accordingly, it corroborates the existence of a pre-Bashtakī *dīwān* and shows that the *Masālik* version represents a compilation made by Ibn Nubātah himself that was circulated during the poet's lifetime. A comparison between this version of Ibn Nubātah's

[28]Ibid., 433–688.

poetry and autograph manuscripts of *Muntakhab al-Hadīyah* and *Sajʿ al-Muṭawwaq* on one hand, and the Bashtakī recensions on the other, show that differences between the printed *Dīwān* and the text in the *Masālik* are nearly always due to later revisions by Ibn Nubātah himself and a subsequent amalgamation of different versions by al-Bashtakī or even later redactors. This discovery gives a value to the *Masālik* section on Ibn Nubātah that the editor could hardly have foreseen. In fact, the version of the poems presented in this encyclopedia represent the only doubtlessly authentic poetic texts by Ibn Nubātah critically edited so far! Therefore, any scholar who desires to work on the early poetry of Ibn Nubātah, especially his *Muʾayyadīyāt,* without having recourse to manuscripts, should start with the text in the *Masālik*.

However, the text of this version was not meant by Ibn Nubātah to be a definitive version of his poetry. As we will see, it is not identical with what Ibn Nubātah called his *Dīwān al-Aṣl,* which is of a later date. Therefore, I will call it Ibn Nubātah's *Proto-Dīwān,* because it forms a preliminary stage of what would become the *Dīwān al-Aṣl*. Despite its preliminary character, the *Proto-Dīwān* survived long after al-Bashtakī's compilation had come to dominate the market. There is a sumptuous manuscript from the fifteenth century, in which the text is fully vocalized and the headings written in gold. There is a copy from the seventeenth century, which is carefully produced and must be considered a textual source of relevance despite its late date. The five sources are closely related to each other, but none of them is the immediate copy of one of the others. It seems as if quite a number of manuscripts of the *Proto-Dīwān* must have been in circulation during the poet's lifetime. The following chart summarizes the sources for the *Proto-Dīwān* that are known to me:

Table 3
Ibn Nubātah: *Proto-Dīwān*

Source	Date	Observations
Shihāb al-Dīn Ibn Faḍl Allāh, *Masālik al-Abṣār,* 19:433–688	before 749/1349 (death of Shihāb al-Dīn)	many *qaṣīdah*s in the second half missing; no *arājīz* and *muwashshaḥāt*
Berlin MS 7861	12 Rajab 761/29 May 1360	one of the most important Ibn Nubātah manuscripts

Istanbul, Köprülü Kütüphanesi MS 1249	acquired by Ḥasan ibn Ibrāhīm ibn Ḥusayn al-Makhzūmī,[29] 845/1441–42	a beautiful and carefully written manuscript; several folios in disorder; a most important source
Istanbul, Ayasofya MS 2292	end of Dhū al-Ḥijjah 854/January 1452	lavishly decorated *khizānah* manuscript; several additions at the end
Cairo, Dār al-Kutub MS 558 *adab*	29 Jumādá I 1064/17 April 1654	a fine, carefully produced manuscript

Though the *Proto-Dīwān* does not represent a fixed text, as additional poems at the end of the Berlin manuscript show, the text as it is represented by the five sources mentioned above can be dated with some precision. First, we observe that the *Muʾayyadīyāt* are represented in an even more complete form than in *Muntakhab al-Hadīyah.* There is also the famous ode composed after the death of al-Muʾayyad, in which Ibn Nubātah both expressed condolence to the prince al-Afḍal on the death of his father and at the same time congratulated him on his succession to the throne.[30] But most of Ibn Nubātah's eulogies on al-Afḍal are conspicuously missing. Therefore, the *Proto-Dīwān* must have been composed after 733, but several years before the death of al-Afḍal in 742, because, as we have seen, the prince was no longer interested in poetry during the last years of his reign. Consequently, the *qaṣīdah*s on al-Afḍal, which we find in other recensions of Ibn Nubātah's *Dīwān,* must have been composed before 740 or even earlier, which means that the *Proto-Dīwān* still must have been compiled some years before them. Further dates are furnished by elegies on *ʿulamāʾ*. Such elegies can be dated quite exactly. None of the elegies in the *Proto-Dīwān* date from the second half of the thirties or later. There are two poems, however, that were sent to ʿAlāʾ al-Dīn Ibn Faḍl Allāh, obviously immediately after his departure for Egypt and the beginning of his employment in the chancellery of Cairo.[31] ʿAlāʾ al-Dīn came to Cairo in 737 as a deputy for his father and became *kātib al-sirr* in 738. As far as I can tell, this date supplies the latest *terminus post quem.* We can conclude therefore that the *Proto-Dīwān,* as represented by the above-mentioned sources, assumed its final shape in the years 738 or 739, and, in any case, not later than 740.

Having established this date, we have at our disposal a tool to approximately date the many epigrams and *qaṣīdah*s in the *Proto-Dīwān* that do not give any further

[29] See al-Sakhāwī, *Ḍawʾ,* 3:91.

[30] *Dīwān,* 429; Ibn Ḥijjah, *Khizānat al-Adab,* 2:43–45.

[31] See *Dīwān,* 30–32.

clue about the circumstances of their creation. An example will demonstrate the usefulness of such knowledge.

Among the *qaṣīdah*s of the *Proto-Dīwān* is a comparatively short panegyric, which bears the heading "*Kāmilīyah*" in the printed *Dīwān* (p. 397), but no heading in the manuscripts of the *Proto-Dīwān*. The eulogized person is addressed as *malik* and as *al-kāmil*. It is therefore natural to identify the addressee as the sultan al-Malik al-Kāmil Shaʿbān. This conclusion seems to be corroborated by the fact that Ibn Nubātah composed a two-line epigram on the occasion of al-Kāmil Shaʿbān's accession to the throne in Rabīʿ II 746/August 1345, making a pun on the words "Rabīʿ" and "Shaʿbān."[32] ʿUmar Mūsá Bāshā took this identification for granted and dedicated a short chapter to the relationship between Ibn Nubātah and al-Kāmil Shaʿbān.[33] However, there was no such relationship besides the epigram, which must not necessarily have been sent to the sultan himself.

The first fact that ought to have aroused suspicion is the brevity of the poem. Why did Ibn Nubātah send a poem to the sultan that was shorter and less ambitious than the poems he usually sent to the prince of Ḥamāh? Further, there are several allusions in the poem that do not readily correspond to the Cairene monarch. The addressee is praised for his great ancestors and for the fact that, thanks to him, the poet finds all that he hoped for from Syria more than fulfilled. Further, the last line lacks an understandable point. It reads: *lā jawra fī dahrin wa-fīhi mumaddaḥun washajat manābituhū bi-nabti al-ʿādilī*[34] "There can be no tyranny at a time in which we can praise a man whose roots are entangled with the sprouts of the Just." Ibn Nubātah, the master of lexical ambiguity, was not the poet to choose a word like *al-ʿādil* in such a prominent position of the poem without intending more than a simple, not very well-fitting meaning. We can be sure that not any just man is meant, but an ancestor who bore the name or title al-ʿĀdil. But there is no probable candidate in the sultan's ancestry. And finally, the poem is part of the *Proto-Dīwān* and must therefore have been written before 740, if our theory is right. But al-Kāmil Shaʿbān came to the throne only six years later. Therefore, we have to look for another al-Malik al-Kāmil.

Such a person does indeed exist. He is al-Malik al-Kāmil Nāṣir al-Dīn ibn al-Malik al-Saʿīd ibn al-Malik al-Ṣāliḥ Ismāʿīl ibn al-Malik al-ʿĀdil ibn Najm al-Dīn

[32] *Dīwān,* 320; al-Ṣafadī found it charming and quotes it in *Aʿyān,* 2:523.

[33] ʿUmar Mūsá Bāshā, *Ibn Nubātah,* 211–12.

[34] The reading *washaḥat* of *Dīwān,* 398 must be corrected to *washajat,* as all MSS read. There are a number of further variants; all MSS of the *Proto-Dīwān* suggest that the original reading of the last words of the line is *manāsibuhū bi-bayti al-ʿādilī*—see Berlin MS 7861, fol. 104v (slightly corrupted text); Ayasofya MS 2292, fol. 120v; Cairo, Dār al-Kutub MS 558 *adab,* p. 184. This reading points even more obviously to an ancestor named al-ʿĀdil.

Ayyūb,[35] an Ayyubid prince, who had served as an *amīr ṭablkhānāh* in Damascus. He was a distant relative of al-Muʾayyad and spent many years in Ḥamāh. His closest friend among the *ʿulamāʾ* was Kamāl al-Dīn Ibn al-Zamlakānī, in his turn an elder friend of Ibn Nubātah. This al-Malik al-Kāmil was born in 653/1255 and died in 727/1327. All these facts fit perfectly with the person addressed in Ibn Nubātah's poem and its inclusion in the *Proto-Dīwān*. We can now understand the references to the glorious (Ayyubid) ancestors, the poet's gratitude for helping to make him a home in Syria, and the reference to the "sprout (or: house) of the Just," the "Just" being al-Malik al-ʿĀdil, the brother of Saladin and al-Kāmil's great-grandfather. If still another proof for the identity of this Ayyubid prince with the addressee of Ibn Nubātah's *qaṣīdah* should be needed, one could refer to the manuscripts of the recension *Bashtakī* α*,* where the prince is mentioned with full name and title.[36]

This example shows how important it is to follow a poem through its different recensions in order to avoid false conclusions. In this case, we can establish a connection between Ibn Nubātah and an elderly Ayyubid scion, who was an old man when Ibn Nubātah met him. Ibn Nubātah's poem may have been hardly more than a gesture of politeness and respect towards an old relative of his venerated patron, which gives a new starting point for an interpretation of the poem. Further, we learn that Ibn Nubātah, indeed, never directed a *qaṣīdah* to a Mamluk sultan prior to al-Nāṣir Ḥasan.

(2) The *Dīwān al-Aṣl*

A *Dīwān al-Aṣl* is mentioned as one of the sources of al-Bashtakī in the printed *Dīwān*. But we learn more about it in the longer preface of al-Bashtakī's recension (*Bashtakī* α*,* see below). In this version, instead of *wa-jamaʿtuhū min Dīwān al-Aṣl . . .,* we read: . . . *min dīwānihī alladhī sammāhu Dīwān al-Aṣl wa-huwa bi-khaṭṭ yadihī fī mujalladayn . . . mablaghuhū min hādhā al-Dīwān qadar al-thulth* "I collected it from his *Dīwān,* to which he had given the title *Dīwān al-Aṣl,* and which, in his own hand, fills two volumes. It amounts to about one third of the present collection." As we see from this formulation, *Dīwān al-Aṣl* is a title that was given by Ibn Nubātah himself to a compilation of his poetry. We also learn that it was of considerable size and therefore a "real" *dīwān* and more than an occasional collection. The *Proto-Dīwān* is not divided into two volumes, and none of the four sources makes any reference to the title *Dīwān al-Aṣl*. Further, it had been completed about thirty years before Ibn Nubātah's death. Too many poems must have been missing, therefore, to make it the main source for al-Bashtakī's

[35] Al-Ṣafadī, *Aʿyān,* 4:550–55.

[36] Ayasofya MS 2352, fol. 141v; Cairo, Dār al-Kutub MS *adab Ṭalʿat* 4658, fol. 172v.

compilation.

There is a manuscript, however, that bears the title *Dīwān al-Aṣl*. The writer of the manuscript Oxford MS Marsh 273 informs us on the first page that the volume is "the second part of the poetry of Ibn Nubātah, the one that is called the *Dīwān al-Aṣl*." The beautiful volume is not the only copy written by the copyist, who must have been a proficient and professional scribe. A manuscript in the Ayasofya was written by the same copyist. The handwriting and the way in which verses are distributed on the page is absolutely identical. The Ayasofya manuscript is nearly complete. Only a few pages at the beginning and in the second part are missing. Consequently, we lack the title page, the preface, the first poem, which certainly was the poem in praise of the Prophet with which the Bashtakī version starts, and a few other poems, among them the poem on al-Muʾayyad we treated above. The second part, which starts with Ibn Nubātah's *munāẓarah* on Kaʿb's *Burdah,*[37] does not bear a heading, but the text is identical with that of the Oxford manuscript. Both manuscripts are undated and the copyist remains anonymous. There can be no doubt that these manuscripts represent a nearly complete text of the *Dīwān al-Aṣl*. Moreover, the style of the writing suggests a date not too long after the death of the poet.

Table 4
Ibn Nubātah: *Dīwān al-Aṣl*

Source	Date	Observations
Ayasofya MS 3891	undated	vol. 1 and 2; beginning missing; right order: fols. 1, 317–35, 2–316, 336–38; omission of 61 poems in vol. 2 (see fol. 292v and MS Marsh 273, fols. 74v–90v)
Oxford MS Marsh 273	undated; same hand	vol. 2 only; fol. 1r, by the copyist's hand: *al-juzʾ al-thānī min shiʿr Ibn Nubātah al-Miṣrī wa-huwa al-musammá bi-Dīwān al-Aṣl;* lacunae after fols. 8, 28, 102.

It is tempting to see a connection between Ibn Nubātah's compilation of the *Dīwān al-Aṣl* and the order of Sultan al-Nāṣir Ḥasan to produce a copy of Ibn Nubātah's *Dīwān* (probably for his *khizānah*). Ibn Nubātah commemorates this event in one of his miniature *qaṣīdah*s that constitute his late *Al-Sabʿah al-Sayyārah* [31].[38] The poem, however, is not part of the *Dīwān al-Aṣl,* and neither are the four long odes on Sultan al-Nāṣir Ḥasan,[39] nor are most of the seven-liners that

[37] See *Dīwān,* 428–29.

[38] *Dīwān,* 519; see also ʿUmar Mūsá Bāshā, *Ibn Nubātah,* 224.

[39] See *Dīwān,* 195, 380, 381, 491.

would become *Al-Sabʿah al-Sayyārah*. Most of these poems are even lacking in the recension *Bashtakī* α. The *rāʾīyah* on al-Ḥasan, probably Ibn Nubātah's first Cairene poem, found its way into *Bashtakī* α*,* but not into the *Dīwān al-Aṣl.* Thus we can conclude that the *Dīwān al-Aṣl* was composed in Damascus before Ibn Nubātah's departure for Cairo. This means that a great part of the many poems on ʿAlāʾ al-Dīn Ibn Faḍl Allāh were not written in Cairo, but sent to him from Damascus just as were the two poems already in the *Proto-Dīwān*. On the other hand, the great number of poems on al-ʿAlāʾ Ibn Faḍl Allāh shows that the *Dīwān al-Aṣl* cannot have been composed long before Ibn Nubātah's departure for Cairo in 761/1360. It is a good guess, therefore, that the *Dīwān al-Aṣl* was composed around 760 and contains the greatest part of Ibn Nubātah's Syrian production.

The *Dīwān al-Aṣl* is obviously an expanded and revised version of the *Proto-Dīwān*, about twice its size. Its structure is a consequent development of the structure of the *Proto-Dīwān*. The *Proto-Dīwān* starts with a poem in praise of the Prophet, followed by the 37 *qaṣīdah*s on al-Malik al-Muʾayyad, followed by 27 epigrams on the same patron. After a dirge on al-Muʾayyad's death, there is an absence of any detectable principle of order. *Qaṣīdah*s and epigrams follow without chronological or alphabetical order, and poems directed to a certain addressee are no longer put together. The author never placed more than three *qaṣīdah*s next to each other without interrupting the sequence with some epigrams, and the number of epigrams following each other without an interrupting *qaṣīdah* rarely exceed ten. But any regular pattern is absent.

The revision of the *Proto-Dīwān* in the form of the *Dīwān al-Aṣl* proves that this was done consciously. In the *Dīwān al-Aṣl,* the principle of avoiding any detectable pattern of order is carried even further. Three poems on the Prophet are used to frame the text. There is one at the beginning of the first part, one at the beginning of the second part, and a third at the end of the *qarīḍ* poems. These are the only poems that owe their place to the person of their addressee. Most importantly, Ibn Nubātah saw no reason to uphold the special position given to al-Muʾayyad in the *Proto-Dīwān* any longer. Consequently he had to dissolve the cluster of *Muʾayyadīyāt* at its beginning. This was done by distributing the *Muʾayyadīyāt* between the two volumes. Most of them can now be found in the beginnings of the first and of the second volumes. Sometimes epigrams have been put between them. Occasionally, sequences of a few poems that display the same rhyme consonant appear. Since a similar phenomenon is encountered in the revised version of *Al-Qaṭr al-Nubātī* [6], we may conclude that Ibn Nubātah by now used to archive his poems in alphabetical order. He also applied the alphabetical principle to his late collection of the *nasīb*s of his *qaṣīdah*s, *Sūq al-Raqīq* [29], but for his *Dīwān al-Aṣl* he still chose the principle of avoiding monotony by eschewing order. Since al-Ṣafadī advocates a similar idea in his preface to *Al-Ghayth al-Musajjam* with direct

reference to al-Jāḥiẓ,[40] Ibn Nubātah seems to have been following conventions that were current during these years, though I know of no other *Dīwān* ordered (or rather disordered) in a similar way.

After having distributed his *Muʾayyadīyāt* to different parts of the *Dīwān,* he next added his new poems, i.e., the poems that were created after his *Proto-Dīwān,* in an order similar to that of the *Proto-Dīwān*. Here the high percentage of poems on al-ʿAlāʾ Ibn Faḍl Allāh and on members of the Subkī family is remarkable. As in the *Proto-Dīwān, qaṣīdah*s and epigrams alternate freely. The second volume of the *Dīwān al-Aṣl* starts with a poem in praise of the Prophet, followed by several *Muʾayyadīyāt,* interspersed with epigrams and *qaṣīdah*s of a later production. The greater part of the second volume is occupied by the *Proto-Dīwān*.[41] Besides a few transpositions of larger groups of poems, its text is put here without any remarkable changes. In a few cases, the poet himself fell victim to his conscious construction of disorder, since at least two poems appear twice.

The *Dīwān al-Aṣl* does not represent Ibn Nubātah's last word on his poems. Some of them were revised later, as becomes clear from *Sūq al-Raqīq* [29] and the Bashtakī recensions. Some of the poems already display their later forms, while others are as they were in the *Proto-Dīwān*. Remarkably, many of the *qaṣīdah*s are shorter than they were in the *Proto-Dīwān,* if only by one or two lines. If these abridgements were not made by the copyist (which is rather improbable), they display an increasingly critical attitude by Ibn Nubātah towards his own creations. In revising his *Dīwān,* he began to consider several of his lines dispensable. This approach of Ibn Nubātah towards his own poetry is fundamentally different from al-Bashtakī's method of accumulating as many verses as possible.

(3) THE BASHTAKĪ RECENSIONS

The Cairene *adīb* Badr al-Dīn Muḥammad ibn Ibrāhīm ibn Muḥammad al-Bashtakī was born in the Khānqāh Bashtak (hence his *nisbah*) in 748/1347 and died eighty years later (830/1427) in the pool of a bathhouse.[42] He kept company with many famous poets and *udabāʾ* of his time, among them Ibn Abī Ḥajalah, Ibn al-Ṣāʾigh, Ibn Makānis, and al-Qīrāṭī. As soon as Ibn Nubātah came to Cairo, al-Bashtakī joined him and heard his *Dīwān*. Al-Bashtakī earned his livelihood as a copyist, and his ability in this profession was highly praised. He could write both quickly and accurately and used to spend the whole day and part of the night copying books with only a lunch break. When he was tired, he lay down on his side without interrupting his work. On Mondays and Thursdays he used to sell his manuscripts

[40] Al-Ṣafadī, *Al-Ghayth al-Musajjam fī Sharḥ Lāmīyat al-ʿAjam* (Beirut, 1411/1990), 1:11–12.

[41] Ayasofya MS 3891, fols. 162–287.

[42] See Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr,* 8:132–33; idem, *Dhayl al-Durar,* ed. ʿAdnān Darwīsh (Cairo, 1412/1992), no. 608; al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 6:277–79.

in the market. Later at night he went home to meet other *udabāʾ* to hear and recite poetry. He was a clever, quick-witted, and sharp-tongued man, but "the extensive copy work had a stupefying effect on his intellect."[43] He composed a lot of poetry himself, but did not collect it in a *dīwān*.

In the year 773/1371–72, al-Bashtakī could offer a new commodity on the book market, the *dīwān* of his master Ibn Nubātah, who had died five years before. As becomes obvious through a comparison of different manuscripts, al-Bashtakī produced not just one recension of the *Dīwān Ibn Nubātah,* but two. They not only differ in the arrangement of the poems, but also in their preface and in their content. Two manuscripts of the recension which I call *Bashtakī* α start with a preface that is considerably longer than the preface of the other recension. The shorter preface can be found in the printed *Dīwān*. Since it is unlikely that the *Bashtakī* α recension will ever be published separately, it seems appropriate to present the longer preface here based on the Cairo manuscript (Dār al-Kutub MS 4658 *adab Ṭalʿat*):

بسم الله الحمن الرحيم
أما بعد حمد الله المنفرد بالجمال * والصلاة والسلام على سيدنا محمد جامع محاسن الكمال * وعلى آله وصحبه أفصح صحب وأفصح آل * وسلم ومجد وكرم * فيقول العبد الفقير إلى الله تعالى المستغني به عن من سواه محمد ابن ابراهيم ابن محمّد البشتكي تجاوز الله تعالى عن خطاه وعمده * وتداركه برحمة من عنده * إنني كنت في سنة ٧٧٣ جمعت شعر شيخنا ـــ القاضي الفاضل الإمام الحافظ جمال الدين محمد بن محمد بن محمد بن حسن بن الحسن بن صالح بن على بن يحيى بن طاهر بن محمد بن الخطيب بن عبد الرحيم بن نباتة ومولده في سنة ٦٨٦ بزقاق القناديل بمصر ووفاته بالبيمارستان المنصوري صبيحة يوم الثلاثاء من صفر سنة ٧٦٨ ودفن بمقبرة الصوفية خارج باب النصر بتربة الصوفية رحمه الله تعالى ورضي عنه ـــ من ديوانه الذي سماه ديوان الأصل وهو بخط يده في مجلدين ونسبته المنسوبة سعيد السعداء رضي الله عنه ورحم مبلغه من هذا الديوان قدر الثلث وطرائف الزيادة والمدائح المؤيدية والسوق الرقيق وديوان الخاص بالسبعة السيارة والقطر النباتي وجلاسة القطر وغالبها بخطه وأرجو أن لا يفوتني من شعره إلا النادر أو ما أسقطه هو ولا أدّعي الإحاطة فمن صحّ عنده شيء من شعره فليلحقه بتوفيته ونقلت من مسوداته ومبيضاته كل ما وقفت عليه من شعره مرتبا لكل ذلك على حروف المعجم ثم كتبت نسخة ثانية قدمت فيها القصائد المطولات على السباعيات ثم المثالث على المثاني[44] وكتب الناس من كل منهما عدة من النسخ هي فذلكة ذلك الجمع ومن ألذّ ما يقرع السمع ولا أدّعي الإحاطة بكل ما قال رحمه الله تعالى ولا يعرف قدر هذه النسخة إلا من طالع ما طالعتُ وجمع من كلامه ما جمعتُ والله تعالى بحسن الخاتمة كفيل * وهو حسبي ونعم الوكيل.

In this foreword, al-Bashtakī tells the whole story of his compiling of the *Dīwān Ibn Nubātah* and his revising his own compilation. Remarkably, this longer foreword is attached to the non-revised version of the compilation, i.e., *Bashtakī* α. We will have to solve the enigma of why al-Bashtakī tells the story of his revision in the preface to the non-revised edition, whereas it cannot be found in

[43] Ibn Ḥajar, *Inbāʾ,* 8:133.

[44] Both MSS (Cairo, Vienna) erroneously: الثالث على الثاني, correct in Tunis MS 8717.

most manuscripts of the revised edition.

In the version presented above, al-Bashtakī mentions the date of his compilation. The short account of Ibn Nubātah's life is part of both versions of the preface. Then al-Bashtakī mentions his sources. We learn that his main source was the *Dīwān al-Aṣl* in an autograph manuscript. The reference to the Khānqāh Saʿīd al-Suʿadāʾ[45] is enigmatic. In all probability, the passage from *nisbatuhū* to *raḥima* has to be deleted here. In the other versions of the preface, Saʿīd al-Suʿadāʾ is given as the place of Ibn Nubātah's burial. According to al-Bashtakī, the size of the *Dīwān al-Aṣl* "is a third of the present *Dīwān.*" This is a gross exaggeration. After all, al-Bashtakī earned his living by selling his manuscripts, and since other versions of Ibn Nubātah's *Dīwān* were still being sold, al-Bashtakī obviously expected to increase sales by this sort of advertising. According to my estimation, the *Dīwān al-Aṣl* is not one third, but rather three-quarters of the size of al-Bashtakī's recension. As a sample, I counted the longer poems (more than ten lines) in the section of poems with a rhyme on *lām* or *lām-alif* in the printed *Dīwān,* which represents *Bashtakī* β. In the printed *Dīwān* there are 30 long *lāmīyāt,* 22 of which had already found their way into the *Dīwān al-Aṣl* and 15 of which were already included in the *Proto-Dīwān*.

Al-Bashtakī then enumerates other works of Ibn Nubātah that he used as a source. This enumeration is of great value for our purpose. But al-Bashtakī's knowledge of most of these works did not contribute much to his recension of the *Dīwān*. All *Muʾayyadīyāt* and all (or at least most of) the epigrams of *Al-Qaṭr al-Nubātī* (and probably those of *Julāsat al-Qaṭr*) are already part of the *Dīwān al-Aṣl*. The same is true for *Sūq al-Raqīq,* which, however, displays later versions of many texts. Again, al-Bashtakī's main intention with this passage may have been to show off his intimate knowledge of the work of his master.

Al-Bashtakī then admits that his recension cannot claim to be exhaustive. This is a topos of modesty, but it may also reflect an uneasy feeling of the author, since the phrase is repeated a few lines later. This overtly apologetic tone is absent in the preface of *Bashtakī* β and provides an important hint to the understanding of the story of the recension. Al-Bashtakī closes his introduction with another bit of advertising, saying that nobody who does not share his extensive knowledge of Ibn Nubātah's poetry can properly assess his achievement.

As we see, al-Bashtakī did the following: (1) He rearranged the *Dīwān al-Aṣl* in alphabetical order; (2) he added poems from a few later books (perhaps *Ṭarāʾif al-Ziyādah* [32] was an important one); and (3) he inserted lines from different versions of a poem into the *Dīwān al-Aṣl* version. All in all, he contributed much less than he claimed in his preface, and not everything he did was to the benefit

[45] See S. Denoix, "Saʿīd al-Suʿadāʾ," *EI*², 8:861.

of the poems.

At first, it may seem rather strange that al-Bashtakī compiled two different versions. As he says, he first compiled an alphabetically arranged version, which he copied again, this time arranging the poems also according to their length: "First the long poems *(al-muṭawwalāt),* then the seven-liners, then the three-liners, and finally the two-liners. People copied numerous manuscripts from both versions." So far, I have been able to identify three manuscripts that represent the first recension, which I call *Bashtakī* α. They are presented in Table 5.

Table 5
Dīwān Ibn Nubātah: Bashtakī α

Source	Date	Observations
Istanbul, Ayasofya MS 2352	3 Rajab 878/24 November 1473	no preface; fol. 208v end of the *Dīwān* and beginning of a section of additions (the same as in 4658 *adab Ṭalʿat*). A very faulty manuscript.
Cairo, Dār al-Kutub MS 4658 *adab Ṭalʿat*	6 Jumādá I 1233/ 13 March 1818	long preface; fol. 239v end of the *Dīwān* and beginning of the additions
Vienna MS 483[46]	10 Muḥarram 1236/18 October 1820	long preface, no section of additions

As far as I can judge, the manuscripts in the following table represent the recension *Bashtakī* β. I have not had the opportunity to examine all of them, and the list is not complete:

[46] See Gustav Flügel, *Die arabischen, persischen und türkischen Handschriften der Kaiserlich-Königlichen Hofbibliothek zu Wien* (Vienna, 1865–67), 1:472–74.

Table 6
Dīwān Ibn Nubātah: Bashtakī β

Source	Date	Observations
Dublin, Chester Beatty MS 3831	20 Shawwāl 803/3 June 1401	written during al-Bashtakī's lifetime by the *adīb* and historian Ibn Duqmāq; one of the most important MSS of the β recension; several additions by Ibn Duqmāq; second half only (from *fāʾ* onwards)
Berlin MS 7862	19 Ramaḍān 812/25 January 1410	another manuscript from al-Bashtakī's lifetime; unvoweled, sparingly dotted; second half only (from *ʿayn* onwards)
Istanbul, Nuruosmaniye MS 3802	date unreadable	written by a certain Aḥmad ibn Mubārakshāh al-Ḥanafī
Tunis MS 8717	Ṣafar 1174/ September 1760	lavishly decorated manuscript in Maghribī script, copied from a "very faulty" Bashtakī manuscript
Cairo, Dār al-Kutub MS 1018 *adab*	Rajab 1291 / Aug.–Nov. 1874	see the following entry
Cairo, Dār al-Kutub MS 2125 *adab*	11 Shaʿbān 1314/15 January 1897	copied from Dār al-Kutub MS 1018 *adab,* basis for the printed edition
Maṭbaʿat al-Tamaddun, ʿAbidīn, Cairo	1323/1905	printed under the direction of Muḥammad al-Qalqīlī on the basis of Dār al-Kutub MS 1018 *adab;* several additions, a few omissions, deliberate combination of readings that belong to different versions of a poem; many transpositions. The 1905 edition has been reprinted several times and forms the only basis for all studies on the poetry of Ibn Nubātah carried out so far.
further MSS		Cairo, Dār al-Kutub MS 30 *Muḥammad ʿAbduh zāy;* MS 923 *Shiʿr Taymūr;* MS 1264 *adab;* El Escorial MS 449; Gotha MS 2304; Leiden MS 734; London, Br. Museum MS 1086; Upsala MS 144; see also Brockelmann II, 11, Brockelmann Supplement II, 4.

As far as the arrangement of the poems is concerned, the main difference between the two recensions is not so much the separation between long and short poems, but the arrangement of epigrams according to length. Even in *Bashtakī* α, in general, the long odes precede the short poems, though there are a number of exceptions that were eliminated in *Bashtakī* β. In *Bashtakī* α, there is no further order as far as the epigrams are concerned. In his preface, al-Bashtakī mentions seven-liners because Ibn Nubātah had composed numerous miniature *qaṣīdah*s of seven lines, which he collected in his *Al-Sabʿah al-Sayyārah* [31]. The bulk of Ibn Nubātah's epigrams comprise two or three lines, as do most epigrams in this period. This is the reason why al-Bashtakī mentions three- and two-liners, but not four- or five-liners. The term *al-mathālith wa-al-mathānī* (or vice versa) had become a near synonym for "epigram" in this time.[47] Of course, poems of four, five, or six lines also exist, but only in comparatively small quantity. In all manuscripts of *Bashtakī* β, the epigrams are strictly sorted according to the number of lines. Exceptions are due to later additions or to al-Qalqīlī's re-arrangement in the printed text.

But these are not the only differences. In *Bashtakī* β, the long poems are again arranged in a certain order. Every chapter begins with (a) poems in praise of the Prophet (if there are any), then follows (b) poems on al-Malik al-Muʾayyad, (c) poems on al-Malik al-Afḍal and other *umarāʾ* (including the sultan), (d) poems on *ʿulamāʾ,* and (e) elegies. There is no such order in *Bashtakī* α. A further modification concerns poems with the rhyme *-lā*. Whereas in *Bashtakī* α they are included in the chapter of poems rhyming in *lām,* in *Bashtakī* β a separate chapter of poems rhyming in *-lā* is inserted between *wāw* and *yāʾ*. The idea is to define rhyme on the basis of rhyme *letters,* and since the ligature *lām-alif* was often counted as a letter of its own, one could argue that poems ending with the graphic sequence *lām-alif* form a separate category. This idea is incompatible with the Arabic rhyme system, and it is contrary to Ibn Nubātah's own perception of rhyme. Whenever Ibn Nubātah arranged poems alphabetically according to the rhyme consonant (in *Sūq al-Raqīq* [29] and some of his anthologies [21, 25]), poems rhyming in *-lā* are always grouped with the other *lāmīyāt*.

A closer comparison between *Bashtakī* α and early manuscripts of *Bashtakī* β is necessary to establish the extent to which al-Bashtakī added additional texts to his second version. The *nūnīyah* on Sultan Ḥasan,[48] to mention one example, is missing in *Bashtakī* α, whereas it can be found in Ibn Duqmāq's manuscript of *Bashtakī* β from the year 803. In any case, al-Bashtakī's achievement as a collector of Ibn Nubātah's poems is not very impressive, judging from the *Bashtakī* α manuscripts.

[47] Ṣafī al-Dīn al-Ḥillī entitled his collection of epigrams *Dīwān al-Mathālith wa-al-Mathānī fī al-Maʿālī wa-al-Maʿānī;* see Paris, Bibliothèque Nationale MS 3341; the edition by Muḥammad Ṭāhir al-Ḥimṣī (Damascus, 1419/1998) is insufficient.

[48] See *Dīwān,* 491.

Again, I checked the *qaṣīdah*s with the rhyme *lām,* and found only a single *qaṣīdah,* a poem on al-Afḍal,[49] which is neither in the *Proto-Dīwān* nor in the *Dīwān al-Aṣl*. A poem on al-ʿAlāʾ ibn Faḍl Allāh, which was included in the *Dīwān al-Aṣl,* can only be found in the additions to the *Dīwān* in the *Bashtakī* α recension. The existence of an appendix of this kind is disturbing anyway. This appendix follows after a full-fledged colophon and is identical in two of the three manuscripts (which are not dependant upon each other), but missing in the third. Therefore, I presume that these additions are the work of al-Bashtakī himself, who must have known the ʿAlāʾ al-Dīn poem from the *Dīwān al-Aṣl*. But even considering the appendix, al-Bashtakī's omissions are considerable. Four odes included in the printed *Dīwān* and in manuscripts of *Bashtakī* β are missing in *Bashtakī* α*,*[50] among them two panegyric odes to al-Nāṣir Ḥasan. Further, Ibn Ḥajar al-ʿAsqalānī copied a *qaṣīdah* in the meter *ṭawīl* from Ibn Nubātah's autograph.[51] The poem starts with the line:

كَفَى أَلَماً أَنَّ النَسِيمَ رَسُولُ   أرُومُ شَفائي منه وهْو عَلِيلُ

This rather long ode of more than fifty lines is missing in all of al-Bashtakī's recensions and is not known from any source other than Ibn Ḥajar so far.

As this survey of the rhyme letter *lām* shows, the shortcomings of *Bashtakī* α are only too obvious. Consequently, people who already had a certain expertise on Ibn Nubātah must have started to complain (as Ibn Ḥajar actually did). Al-Bashtakī tried to meet this criticism by revising his original work. Though not everything he changed was a real improvement, he must have considered his new version better. But still the question remains as to why he continued to support his earlier version and provide it with a preface.

The key to the solution of this question is to be found in the fact that the manuscript Ayasofya MS 2352 does not have a preface (besides "this is the *Dīwān* of N."), though it is the oldest manuscript of this group and the rest of the text is the same as that of the other manuscripts of *Bashtakī* α*.* It shares not only the colophon with Dār al-Kutub MS 4658 *adab Ṭalʿat,* but also the rather large section of additions, which considerably distorts the original purpose of its composition. It is reasonable, therefore, to conclude that the copyist did *not* omit the original preface and substitute for it two short introductory lines, but that there was no longer a preface to the original version of *Bashtakī* α. Indeed, the preface given above is only understandable if it is understood as a later addition by the author

[49] Ibid., 551.

[50] Ibid., 380, 381, 389, 403.

[51] Göttingen, MS arab. 179, fols. 32r–v; see figure 5, *top*.

after he had completed the revised version of *Bashtakī* β. But why did al-Bashtakī continue to support his earlier recension, when he considered it inferior to his new one?

The only possible answer is that there were still copies of *Bashtakī* α left after he had already compiled *Bashtakī* β. Neither al-Bashtakī nor the brokers and booksellers that used to collaborate with him wanted to be left holding the manuscripts of the earlier version or to hear complaints about having sold an inferior product. Therefore al-Bashtakī had to add a preface in which he explains the differences between the two versions and states that the earlier version is still valid in its own right. This also explains the apologetic character of the text. After all, al-Bashtakī's compilation was first and foremost a commercial enterprise and not made for philological reasons as was Ibn Ḥajar's volume of additions to the *Dīwān*.

The manuscript that was the basis for the Tunis manuscript (Tunis MS 8717) was obviously written after al-Bashtakī had provided the manuscripts of *Bashtakī* α with a preface, since its preface corresponds to the short preface of the other manuscripts of *Bashtakī* β in the first part, but adds the story of the compilation and the concluding apologetic phrases from the longer preface. The story of the prefaces may thus be reconstructed as follows: Al-Bashtakī's first manuscripts of the *Dīwān Ibn Nubātah* had no preface at all. Complaints about the deficiencies of these manuscripts induced al-Bashtakī to produce a new, more complete recension. These manuscripts were introduced by a preface, the "short" preface. A longer, more apologetic preface was then added to the remaining copies of the first recension *(Bashtakī* α*)* to make them easier to sell. As a final step, parts of the longer preface were added to the old "short" preface in new manuscripts of *Bashtakī* β. At that time, al-Bashtakī must have sold a considerable number of manuscripts of Ibn Nubātah's *Dīwān* in two different recensions and with several versions of the preface. His manuscripts were not always of good quality. The writer of the Tunis manuscript complains about the many mistakes in the Bashtakī manuscript from which he had to copy his own manuscript. When we consider the profit al-Bashtakī must have made from selling copies of Ibn Nubātah's *Dīwān* under the pretense of being the greatest authority on his master's poetry, and his rather mediocre achievements in establishing a complete and correct text, we can hardly avoid characterizing al-Bashtakī's relationship to Ibn Nubātah as parasitic. But since a considerable part of the poetry of Ibn Nubātah is only accessible through the filter of al-Bashtakī, it is necessary to study carefully the different versions produced by Ibn Nubātah's business-minded disciple.

For the reconstruction of al-Bashtakī's efforts, the manuscripts of *Bashtakī* α are still important, since they represent a text that carries no signs of later modifications or additions. Therefore, they can be of help in assessing the amount

of al-Bashtakī's interference in the text of Ibn Nubātah. Manuscripts of *Bashtakī* β far outnumber manuscripts of *Bashtakī* α. For obvious reasons, *Bashtakī* β soon gained wider currency than *Bashtakī* α and it formed the basis for the printed text. Since al-Bashtakī's invitation to add further lines and poems by Ibn Nubātah did not go unheard, it is not always easy to determine the exact form of al-Bashtakī's original text. This can only be done by a careful comparison between its manuscripts and the other versions of Ibn Nubātah's poetry.

One of the first to make additions to the *Dīwān* was Ṣārim al-Dīn Ibn Duqmāq (b. between 740 and 750, d. 809/1496), who is mainly known as a historian today, but who was also a proficient *adīb*.[52] He wrote his manuscript of Ibn Nubātah's *Dīwān* thirty years after al-Bashtakī had compiled it. Al-Bashtakī was still alive then. Several poems in his manuscript, of which only the second part has been preserved, are not in the printed *Dīwān*, and a remark by Ibn Duqmāq shows that he was in possession of autograph drafts *(musawwadāt)* by Ibn Nubātah. He was certainly not the only one who could add to the corpus assembled by al-Bashtakī, and perhaps al-Bashtakī himself added newly discovered poems in different copies of his *Dīwān Ibn Nubātah*. Hence the story of *Bashtakī* β is a rather complicated one, and it cannot be reconstructed in complete detail on the basis of the manuscripts that are at my disposal.

(4) Ibn Ḥajar's Additions to the Bashtakī Recension

Whereas Ibn Duqmāq and others inserted their additions in their manuscripts of the recension *Bashtakī* β, others compiled separate volumes with their additions to the *Dīwān*. The most important supplement of this kind was written by Ibn Ḥajar al-ʿAsqalānī. A second collection of this kind from the eleventh/seventeenth century was unavailable to me:

Table 7
Supplements to the *Dīwān Ibn Nubātah*

What motivated the greatest hadith scholar of post-formative Islam to assemble a supplement to the *dīwān* of the greatest post-Mutanabbian Arabic poet? Ibn Ḥajar's relationship to Ibn Nubātah was threefold. First, there was an indirect personal relationship between them; second, Ibn Nubātah was also a hadith transmitter; and third, Ibn Nubātah was Ibn Ḥajar's model in the field of *adab* to such an extent that Ibn Ḥajar even emulated Ibn Nubātah's handwriting.

Shihāb al-Dīn Ibn Ḥajar al-ʿAsqalānī (773–852/1372–1449) was born five years after the death of Ibn Nubātah. But his father, Nūr al-Dīn ʿAlī Ibn Ḥajar (d. Rajab 777/December 1375), a productive poet and trained *faqīh,* was a close acquaintance of Ibn Nubātah during Ibn Nubātah's last years. In those days, Ibn Nubātah lived in a house that Nūr al-Dīn had lent him. For some reason, a quarrel arose between them and Nūr al-Dīn asked for the key to the house back. Ibn Nubātah complained to ʿAlāʾ al-Dīn Ibn Faḍl Allāh about "a man of stone *(ḥajar)* in his descent and in his wrath."[54] The poet al-Qīrāṭī was asked to mediate between them. The story left a trace in a number of poems preserved in Ibn Nubātah's *Dīwān*. Most of them are miniature *qaṣīdah*s of seven lines.[55] Ibn Ḥajar junior ascribes the break-up of their friendship to Ibn Nubātah, who, according to him, used to behave in a whimsical manner in his friendships.[56] Shihāb al-Dīn cannot have heard this story directly from his father, nor can he have heard transmissions of Ibn Nubātah's poems by him, because Nūr al-Dīn died when his son was a boy of only four years. But he may have inherited a number of Ibn Nubātah autographs, which form the basis of his supplement to the *Dīwān*.

Another connection between the hadith scholar Ibn Ḥajar and Ibn Nubātah was the result of Ibn Nubātah's activities as a transmitter of hadith. Ibn Ḥajar had heard some of Ibn Nubātah's transmissions by one of Ibn Nubātah's transmitters. Therefore, Ibn Nubātah appears in Ibn Ḥajar's *Fahrasah*.[57]

A more important bond, however, was Ibn Ḥajar's interest in *adab*. Ibn Ḥajar was a poet of major importance himself and left a *dīwān* in different recensions.[58]

Niedersächsischen Staats- und Universitätsbibliothek Göttingen (Stuttgart, 2005), 154–57.

Muḥammad Shakkūr al-Mayādīnī (Beirut, 1418/1998), nos. 191 *(Sīrat Ibn Isḥāq-Ibn Hishām),* 356 (Abū ʿUbayd, *Faḍāʾil al-Qurʾān*), and 1942 (the *Dīwān*); the editor is unable to distinguish between Jamāl al-Dīn Ibn Nubātah and his father Shams al-Dīn; most references in the index, p. 541, refer to Shams al-Dīn.

[58] See *Mamlūk Studies Review* 6 (2002): 219–24, and Thomas Bauer, "Ibn Ḥajar and the Arabic Ghazal of the Mamluk Age," in *Ghazal as World Literature,* vol. 1, *Transformations of a Literary Genre,* ed. Th. Bauer and A. Neuwirth (Beirut, 2005), 35–55.

In his poetry, he proved himself an adherent of Ibn Nubātah's *tawriyah* style. In his youth, Ibn Ḥajar even planned a career as an *adīb* before he turned to hadith. Perhaps the thoroughness with which Ibn Nubātah covered the whole field of *adab* influenced Ibn Ḥajar's decision to specialize in the field of hadith. Here he could do exactly what Ibn Nubātah had done in *adab*. In *adab,* Ibn Nubātah had written exemplary works in nearly all of its branches, and what he left undone was covered by al-Ṣafadī. Remarkably, this is exactly what Ibn Ḥajar did in the field of hadith, covering all of its fields and sub-disciplines with at least one comprehensive and exemplary work. As an *adīb* with this ambition, Ibn Ḥajar could not have escaped the shadow of Ibn Nubātah. As hadith scholar, he could become as epochal a figure as Ibn Nubātah was as an *adīb.*

Ibn Ḥajar was in possession of a number of manuscripts of the works of Ibn Nubātah, among them several autographs, and Ibn Ḥajar knew many *udabāʾ* who had known Ibn Nubātah. One of them was al-Bashtakī, with whom Ibn Ḥajar had a close relationship for twenty years from 791 onwards.[59] Al-Bashtakī heard hadith from Ibn Ḥajar, exchanged *muṭāraḥāt* with him, and dedicated to him an entry in his biographical dictionary of the poets of the age.[60] They had a common interest in the poetry of Ibn Nubātah. Whereas al-Bashtakī had the advantage of having known Ibn Nubātah himself, Ibn Ḥajar was a more diligent worker who felt that al-Bashtakī could have achieved more than he did. The introductory words of his supplementary volume are not without reproach. Though he does not mention the name al-Bashtakī, everybody knows to whom the following words allude:

> This is what [I could assemble] from what escaped the collector of the poetry of the leading figure among the literati of the modern age *(shaykh al-udabāʾ al-mutaʾakhkhirīn),* Jamāl al-Dīn Ibn Nubātah. It includes texts that I found written by himself or by people who transmitted them from his manuscripts or who heard it from him. . . . [it is] astonishing how much it is, though he who had collected [Ibn Nubātah's poetry] before claimed comprehensiveness.[61]

This is not exactly true, since al-Bashtakī did not claim comprehensiveness but apologized for not being able to reach it. Nevertheless, Ibn Ḥajar's discontent with al-Bashtakī is certainly justified. In a similar vein, al-Sakhāwī states that al-Bashtakī "collected the poetry of his master Ibn Nubātah in two volumes. Though he had worked hard to obtain it, a portion of it escaped him in such a quantity that our master [Ibn Ḥajar] compiled a whole supplementary volume, which I have

[59] Ibn Ḥajar, *Dhayl al-Durar,* no. 608.

[60] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 1:287–88, 486–92, 2:793.

[61] Arabic text: see Seidensticker, *Handschriften,* 154–55 = fol. 21r. I follow Seidensticker's reading; the text is extremely difficult to read.

also seen."[62] Al-Sakhāwī also mentions this volume in his list of Ibn Ḥajar's works, and he adds that he had seen both the *musawwadah* as well as the *mubayyaḍah* of the book.[63]

It is an important event for the study of both Ibn Ḥajar and Ibn Nubātah that this volume has now come to light. A copy of it has been found in Göttingen and is described in the catalogue.[64] The copy is a *musawwadah,* written by Ibn Ḥajar himself, perhaps the same copy that al-Sakhāwī refers to. It is very difficult to read and it will be impossible to edit the poems without another textual basis, but it gives a good impression of what is lacking in al-Bashtakī's recension. In whatever way, some of its poems and lines have found their way into manuscripts and the printed texts of the Bashtakī recensions. For other poems, among them the only *bullayq* Ibn Nubātah ever composed, Ibn Ḥajar's supplement is the only source. Contrary to the expectation raised by al-Sakhāwī, the volume is much smaller than a volume of the *Dīwān,* but is long enough to demonstrate again the insufficiency of the Bashtakī recensions.

(5) The Printed Text

A printed book is more accessible than a manuscript copy but no longer in a dynamic state. Very few printed books are revised and adapted after their author's death. The reader is now restricted to his role as receiver, whereas in a manuscript culture he can engage the text by adding marginal jottings, and the copyist can intervene by improving the text, by introducing additional materials available to him (among them marginal jottings by other readers), or by adding comments. Thus he can, however marginally, intrude on the role of the author. In the case of Ibn Nubātah, this was the usual practice for centuries. Long after the poet's death, the *Dīwān Ibn Nubātah* existed in many different versions and was still subjected to continuous modifications. In a print culture, the diversity of voices representing the voice of the poet has to be kept alive by the philologist who produces a critical edition that allows reconstruction of the range of diversity, which is inevitably lost as a consequence of his activity. Philological work of this kind, however, is necessary.

This was exactly what happened in the case of Ibn Nubātah. A late and unimportant manuscript representing an incomplete recension of Ibn Nubātah's *Dīwān* was subjected to arbitrary abridgements and senseless transpositions before it was converted into a sparsely voweled, unsightly printed book. But as a printed text, it enjoyed an authority that it would never have enjoyed as a manuscript

[62] Al-Sakhāwī, *Ḍawʾ,* 6:277.

[63] Al-Sakhāwī, *Al-Jawāhir wa-al-Durar,* 2:695 (no. 268).

[64] See Seidensticker, *Handschriften*, 154-57, and figure 5, *top*.

(though some surviving manuscripts are superior to it). For more than a century, nobody ever doubted that the book that was printed in 1323/1905 in the Maṭbaʿat al-Tamaddun in Cairo, and has been reprinted several times since, contained an authentic text of Ibn Nubātah's poetry.

This was not the first book of Ibn Nubātah's that was printed. During the last decades of the nineteenth century, Ibn Nubātah's *Muntakhab al-Hadīyah* [5] was printed in Cairo under the title *Dīwān Ibn Nubātah.* This text was reprinted by several printing houses in Beirut. Obviously, Ibn Nubātah still guaranteed commercial success. It was only natural that after the success of Ibn Nubātah's "small *Dīwān*," as *Muntakhab al-Hadīyah* is called already in some manuscripts, the "large *Dīwān*" would find a publisher. This was the case in 1323/1905, when the book was printed "in a short time"[65] in the Maṭbaʿat al-Tamaddun. The editor was a certain Muḥammad al-Qalqīlī.

The manuscript he used as the basis for his edition can be identified. It is the Dār al-Kutub MS 2125 *adab,* a manuscript completed only a few years before the printed text. This manuscript was in turn a copy of a manuscript written in 1291/1874. The manuscript 2125 *adab* carries numerous editorial remarks so that we are able to reconstruct in detail the process by which the *Dīwān* was converted to print. We can see that al-Qalqīlī compared parts of the text to another source. This was perhaps a printed text of *Muntakhab al-Hadīyah.* Often, the editor substituted the readings of *Muntakhab al-Hadīyah* for that of *Bashtakī* β. In this way, elements of a very early version of a poem have been inserted in a very late version. The main shortcoming of the Bashtakī recensions is that they present an amalgamation of different versions of a poem. This problem is further aggravated by al-Qalqīlī's arbitrary interference with the text.

When al-Qalqīlī started his work, he first planned to shorten the *Dīwān.* In chapter *alif,* a number of poems, among them several seven-liners, are omitted. From chapter *bāʾ* onwards, the editor changed his method. Instead of leaving out poems, he assembled them in a separate subsection under the heading *wa-min muqaṭṭaʿātihī.* In this subsection, poems do not have a heading but are separated by a line. All epigrams, which do not bear a more detailed heading in the manuscript, are relegated to this subsection, along with several longer poems that did not appeal to al-Qalqīlī. Among them is a *qaṣīdah* of 33 lines addressed to Quṭb al-Dīn Mūsá Ibn Shaykh al-Salāmīyah (d. 732/1332),[66] which now appears under the heading "epigrams." The heading is al-Qalqīlī's, and of course, Ibn Nubātah had never considered a poem like this an epigram. An original heading like *qāla fī al-sabʿah al-sayyārah* means that the following seven-liners are taken

[65] *Dīwān,* iii.

[66] *Dīwān,* 330–31; on Quṭb al-Dīn see *Aʿyān,* 5:469–72.

from the book of this name. The editor left the first poem in the first section, because it bears a heading, though the heading belongs not only to this poem, but also to the following seven-liners. These seven-liners, however, were transferred to the second subsection, where they do not have any heading now. The creation of this subsection in every chapter misleads the reader and violates al-Bashtakī's principle of arrangement.

Though al-Qalqīlī gave up his plan to shorten the *Dīwān,* even in latter chapters poems, mainly epigrams, have been removed. More often, single lines were deleted. Towards the end, omissions increase. In chapter *wāw,* a long ode on al-Qazwīnī (42 lines) and three shorter poems are missing. The concluding section containing Ibn Nubātah's *muwashshaḥāt* suffered the heaviest losses. Of fifteen *muwashshaḥāt* and a *zajal* present in the manuscript used by al-Qalqīlī, only four *muwashshaḥāt* found their way into the printed *Dīwān.*[67]

It is obvious that al-Qalqīlī's printed text is not a reliable source for the poetry of Ibn Nubātah. Nevertheless, it will still be used for a long time, since a new edition is unlikely. Therefore, it is necessary for every user to know the shortcomings of the printed text and to be aware of the changes made by its editor. Despite all the deficiencies of the printed text, I do not consider it a most urgent task to re-edit the Bashtakī version of Ibn Nubātah's poetry. Rather, the *Dīwān al-Aṣl* should be made the basis for a new edition, to which should be added the poems not in the *Dīwān al-Aṣl* in the form of a supplement, and the different texts of each poem when different versions exist should be carefully presented. But even more important is an edition of all those works which Ibn Nubātah himself considered worthy of publication. In this way, a great portion of the poems of the *Dīwān* will appear in their authentic context. These works will be the subject of the next part of this survey.

To be continued

[67] I know of eighteen *muwashshaḥāt* composed by Ibn Nubātah. Fourteen of them are edited in Aḥmad Muḥammad ʿAṭā, *Dīwān al-Muwashshaḥāt al-Mamlūkīyah fī Miṣr wa-al-Shām (al-Dawlah al-Ūlá* (Cairo, 1419/1999).

Sultans with Horns: The Political Significance of Headgear in the Mamluk Empire

Introduction

> When the number of Ottomans increased in Cairo [after the Ottoman conquest in Muḥarram 923/February 1517] they started to ask the *awlād al-nās*[1] whom they saw wearing the red *zamṭ* or the *takhfīfah* [both were distinctive Mamluk hats]: Are you a Circassian? And then they cut their heads off. Thereafter all the *awlād al-nās,* even the sons of the [high ranking] amirs and the sons of former sultans, quit wearing the *takhāfīf* and the *zumūṭ* in Egypt.[2]

Mamluks were apprehended by the Ottomans throughout Egypt in these early days of Ottoman rule and they were easily recognizable by their headgear. Therefore many of them and their sons got rid of their hats as they represented a potential threat to their lives. However, after the first impetus of the conquest had slowed down, Mamluks were allowed to wear the red *zamṭ* again for a while by the new Ottoman governor of Egypt, Khāyrbak, a former Mamluk amir himself. In the summer of 924/1518 this practice was then finally forbidden, but some Circassian Mamluks disobeyed the order and the governor reinstituted it in Shawwāl 927/September 1521, saying that anyone still wearing the red *zamṭ* after the announcement, whether Mamluk, son of a Mamluk, or even Ottoman, would be hanged without mercy.[3] Mamluk headgear thereafter disappeared from Egyptian heads as did the specific Turkish names of the Mamluks, which had marked their elite status for centuries. From now on, it was Ottoman turbans and Arabic names for the remaining Mamluks.[4]

One has to keep in mind, though, that the hats which disappeared at the end of the Mamluk Empire in the early sixteenth century bore little resemblance to

[1] "The sons of the people," i.e., the descendants of the Mamluk soldiers.

[2] Ibn Iyās (d. ca. 930/1524), *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Wiesbaden, 1961), 5:150.

the ones Mamluk officials had on their heads at the beginning of their reign in the mid-thirteenth century. The world of fashion has always been somehow fickle, and the *haute couture* of the Mamluk Empire was no exception to this rule. New trends concerning color, shape, and size of headgear were set in general by sultans or amirs. The latest fashion then travelled down the Mamluk hierarchy.

The aim of this article is to present the changing fashions of headgear of the ruling elite in the Mamluk Empire throughout their reign in Egypt and Syria, and to show how fashion and headgear functioned as markers of social differences in a medieval Islamic society. The emphasis lies therefore on official representative headgear and not on military helmets or veils for women.

The main historical sources for the article are the usual suspects of Mamluk historiography like al-Maqrīzī (d. 845/1442)[5] and Ibn Iyās (d. ca. 930/1524).[6] In these sources, the topic of headgear fashion is only a minor concern and consequently one must piece information together from several places. Only seldom has an author devoted a passage of his work especially to aspects of clothing like al-Qalqashandī (d. 821/1418) does in his well-known secretarial manual *Ṣubḥ al-Aʿshá,* in which he describes the garments of Mamluk officials and ulama.[7] The secondary literature concerning Mamluk headgear is scarce. To my knowledge no books or articles have been devoted so far to this aspect of Mamluk history. Nevertheless, considerable information can be drawn from Mayer's general work on Mamluk costume and from Dozy's *Dictionaire détaillé des noms des vêtements chez les Arabes*.[8]

In addition to these works, the institutions of *tashrīf* and *khilʿah,* i.e., the receiving of robes and other apparel of honor by rulers, in the Islamic and Mamluk context has been the subject of two recent publications by Diem and Springberg-Hinsen, where information on ceremonial headgear is to be found.[9]

Besides written sources we possess images of Mamluk garments in contemporary Mamluk and Ottoman manuscripts. Unfortunately, there are not many of these and they do not provide much detail concerning the headgear of Mamluk dignitaries. Besides the manuscripts there are also images of Mamluk costume on metalwork.[10]

Especially during the second half of the fifteenth century, an increasing number of European pilgrims, merchants, diplomats, and artists traveled to the Mamluk Empire and some of their drawings provide us with a realistic impression of court scenes in the Mamluk context. As for the actual textiles, we have little left. There was apparently no tradition of keeping ceremonial or everyday clothing in the Mamluk Empire. The Ottoman invasion and the prohibition of Mamluk garments which accompanied it surely did not encourage the survival of Mamluk textiles. According to Mayer, all that has come down to us from Mamluk times are an undercoat, two pairs of trousers, a hat, and a few caps.[11]

THE MAMLUKS AND TEXTILES

It seems that, especially since Abbasid times and the introduction of a monumental court culture in Baghdad after 145/762, clothing, and more specifically luxury clothing, became increasingly popular. Early Islamic aversions to silks and satins, evidence of which can be found in the hadith literature, were consistently ignored by all but a pious few.[12] Clothes had been, even before that date and now even more so, a clear marker of social differences. Under the Fatimids, a costume supply house known as *dār al-kiswah* oversaw the supply of ceremonial costumes for public occasions from the caliph down to government clerks. The most striking fashion item of the caliph's attire was the so-called "noble crown" *(al-tāj al-sharīf)*. It consisted of an enormous turban, in which a headscarf *(mandīl)* was wound around a cap *(shāshīyah)* in a very unique manner in the shape of a myrobalan (cherry plum/*ihlīlajah*).[13] Therefore, it seems that oversized headdresses for rulers were not a Mamluk innovation.

The mode of dress of the military elite in the Middle East changed with the arrival of the Turks and the establishment of Turkish dynasties, starting with the Saljuq Empire in the eleventh century. The typical outer garment of this period is represented by their shirts. The Saljuqs and Ayyubids wore the "Turkish shirt" *(al-aqbīyah al-turkīyah),* in which the hem crossed the chest from right to left, whereas

the Mamluks preferred the "Tartar shirt" *(al-aqbīyah al-tatarīyah)* with the hem crossing the other way around. Over this shirt, Mamluk dress consisted of the so-called *takalāwāt,* of which we know little. The Mamluks then wore the so-called *qabāʾ al-islāmī* ("Islamic shirt") as the last layer. This was tailored in the Arab style. Metal plaquettes *(ḥiyāsah)* or sashes *(band)* were worn over the garment. The sleeves of the coats were often indicative of rank and social status. Higher status was shown through longer and more ample sleeves.[14] In Circassian times, the Tartar coat with its tight sleeves was replaced by the *mallūṭah* loose shirt with broad sleeves, which became the standard fashion in the fifteenth century.[15]

In the Mamluk Empire social class was evident by one's outer appearance. Riding horses as well was almost exclusively limited to members of the ruling military elite.[16] The ulama had to content themselves with mules, although according to al-Qalqashandī, high ranking ulama rode mules of such quality that their price equaled that of horses.[17] Christians and Jews were only allowed to ride donkeys. Headgear also marked religious differences. A sultan's decree *(marsūm)* of the year 755/1354, which was announced in Damascus and reinforced the so-called regulations of the caliph ʿUmar (r. 12–22/634–44) *(al-shurūṭ al-ʿUmarīyah),* insisted that Christians had to wear blue and Jews yellow linen. Moreover, Christians had to wear one white and one black shoe. The turban of Christians and Jews was not to exceed 10 ells, which must be a reference to the length of the cloth taken to bind the turban, as otherwise the term restriction acquires a totally new sense.[18] Other surviving decrees of Mamluk officials hint at the fact that the color regulation applied only to the cloth of the turbans, i.e., blue for Christians and yellow for Jews, the rest of their clothes being the same as those of other Mamluk subjects[19] (fig. 1).

The frequent repetition of these discriminatory rules in Mamluk sources indicates that they were not enforced. It seems that Christians and Jews had the same tendency to enlarge their turbans as did the members of the Mamluk military and learned elite with their respective headgear.

The ulama were apparently distinguished by the size of their turban *(ʿimāmah)*

and therefore as a class were named *arbāb al-ʿamāʾim,* masters of the turbans. The wearing of turbans was not limited exclusively to the ulama, but for them it was much bigger, sometimes reaching abnormal sizes.[20] The expression "to enlarge one's turban" became a synonym for showing off.[21] The practice encountered criticism even among the ulama. When the eminent scholar of thirteenth-century Cairo, al-Sulamī, also known as *sulṭān al-ʿulamāʾ,* was asked if the wearing of an enlarged turban was an heretical innovation *(bidʿah)* he responded in a fatwa (legal opinion) that all kinds of exaggerations were to be condemned and that people should follow in general the example of the Prophet concerning their dress. Nevertheless, he saw nothing wrong in the idea that ulama should wear distinctive dress in order to be easily recognizable in case of the need to answer questions for the faithful.[22]

Forms of Official Headgear in the Mamluk Empire

Headgear of the Caliph: Ideally, the caliph would bestow ceremonial clothing on the sultan, but in the case of the Abbasid shadow caliph of Cairo it was in practice the other way around. Ibn Taghrībirdī reports a striking episode that illustrates this fact: "On Monday, 1 Shaʿbān [808/22 January 1406] Sultan al-Malik al-Nāṣir sent for Abū al-Faḍl al-ʿAbbās, son of the caliph al-Mutawakkil ʿalá Allāh Abū ʿAbd Allāh Muḥammad, and recognized him as caliph after the death of his father. The former then put on the *tashrīf* [ceremonial clothing], received the title of al-Mustaʿīn billāh and went back to his home."[23]

An integral part of the ceremonial clothing of the caliph was his turban. He sported a fine round specimen with a trailing two-feet-long and one-foot-wide endpiece at the back which covered the entire back of the turban.[24] The usual color of the caliph's clothes was black and so was his turban, over which was worn a black embroidered head shawl.[25] The reason for the black color was due to the fact that it always had been the color of the Abbasids. Unfortunately, there is no surviving image of a Mamluk caliph from Cairo. Their shadowy existence meant that caliphs were not in the public eye and therefore they neither figure in manuscript illustrations nor in drawings of European visitors, who would have

[25] Mayer, *Mamluk Costume,* 13.

hardly recognized their function anyway.

Headgear of the Sultan: During the ceremony of accession to office the Mamluk sultan received his official insignia: a black turban, a black robe, and a sword.[26] The black turban Sultan Baybars I (r. 658–76/1260–77) received for his coronation was apparently woven of gold material.[27] As already mentioned above, black represented the color of the Abbasids. The Mamluk sultans, having installed the Abbasid puppet caliph at the citadel, still upheld nominally the idea of an Abbasid caliphate. Mayer argues that the sultans wore these kinds of clothes exclusively for their inauguration ceremony, and that these clothes had more of an ecclesiastic character, as turbans of this type would not be worn by a Mamluk amir, and the black robe was usually observed only on shaykhs.[28]

On other public occasions Mamluk sultans would wear different kinds of headgear. In the early days of the Mamluk sultanate this could be the *sharbūsh,* a headgear that resembled, according to al-Maqrīzī, a triangular-shaped crown put on the head without a kerchief around it. In the early Mamluk period it was often bestowed on Mamluk amirs as well.[29] The *sharbūsh* seems to have been quite popular with Turkish rulers of the tenth to thirteenth centuries, and seems to have come with the Turks from the east (figs. 2 and 3).

In Egypt the *sharbūsh* was apparently introduced by the Ayyubids and its existence is confirmed until the time of the Bahri Mamluks. On the so-called Baptistère de Saint Louis, a large brass basin inlaid with silver and gold from the early Mamluk period, we can identify enthroned figures of a ruler apparently wearing the *sharbūsh.* Behrens-Abouseif has convincingly made the case that these figures represent Sultan Baybars, the great Mamluk hero and victor over the Mongols and Crusaders[30] (figs. 4 and 5).

Finally we learn from al-Maqrīzī (who does not provide us with any reason for this) that the wearing of the *sharbūsh* was abolished by the Circassian sultans.[31] Maybe the *sharbūsh* was too Turkish or Mongolian for them.

Since Ayyubid times, the alternative as official headgear had been the so-called *kallawtah or kallaftah* caps. These were small yellow caps that were worn without a turban wrapped around them (figs. 3 and 6).

The hair of the Mamluks at that time was worn long and fell down loosely on

[26] Al-Maqrīzī, *Khiṭaṭ,* 3:668.

their necks. Sultan al-Ashraf Khalīl (r. 689–93/1290–93) then had the color of the *kallawtah* changed from yellow to red and ordered that a turban be wrapped around it. This remained the practice until his brother Sultan al-Nāṣir Muḥammad ibn Qalāwūn (r. 693, 698–708, 709–41/1293, 1299–1309, 1310–41) had his head completely shaved after he went on a pilgrimage in 732/1332. This new skinhead look was then immediately copied by his entourage. The loss of hair was compensated for by the fact that the *kallawtah* cap arrangement with the turban grew much bigger in size and of better quality in the second half of the fourteenth century.[32]

However, the most spectacular headgear of the Mamluk sultans ever has to be the so-called *takhfīfah,* i.e., the "lighter one." As the *kallawtah* caps with the wrapped turban around them grew larger and were hard to handle, on some occasions the Mamluks started to wear only a small, light turban, the *takhfīfah ṣaghīrah*. The first mention of it can be found in the writings of Ibn Iyās. Sultan Barqūq (r. 784–91, 792–801/1382–89, 1390–99) had a *takhfīfah ṣaghīrah* on his head when he appeared in public in the year 796/1394.[33] But this incidence did not trigger a completely new fashion wave. Apparently the *takhfīfah* started to become increasingly popular only after the mid-fifteenth century, as we do not find any mention of a *takhfīfah* in al-Maqrīzī's *Khiṭaṭ*, which usually mentions all aspects of contemporary dress.

After the episode with Sultan Barqūq, Ibn Iyās does not mention another public sighting of the *takhfīfah ṣaghīrah* until the year 872/1467, when the *atābak* Yalbāy wore one at the gathering of amirs after the death of Sultan Khushqadam (r. 865–72/1461–67).[34] After the year 872/1467, the *takhfīfah ṣaghīrah* is mentioned on a more regular basis, and by the end of the fifteenth century it seems clearly established that it could be worn by Mamluk amirs at certain public outings, but it was not acceptable to wear it at very official occasions. When Sultan al-Nāṣir Muḥammad (r. 901–4/1496–98), son of Sultan Qāytbāy (r. 872–901/1468–96), appeared in Muḥarram 902/September 1496 at the Friday prayer with a *takhfīfah ṣaghīrah* on his head instead of a *kallawtah (kallaftah),* Ibn Iyās disparaged it as a sort of youthful mindlessness. Al-Nāṣir Muḥammad was harshly criticized for this by leading amirs.[35]

On a woodcut that was made by the German pilgrim Arnold von Harff, Sultan al-Nāṣir Muḥammad is depicted with a round turban, which might be identified as the *takhfīfah ṣaghīrah,* and no *kallawtah* cap is to be seen. The Mamluk dignitary to

[33] Ibn Iyās, *Badāʾiʿ,* 1:2 :467.

[34] Ibid., 2:455.

[35] Ibid., 3:339.

his left, called "Thodar" *(dawādār)* by von Harff, seems clearly to wear a *kallawtah* cap with a turban wrapped around it [36] (fig. 7). It seems that there were two kinds of the *takhfīfah ṣaghīrah*, i.e., the round one *(mudawwarah)* and the smooth one *(mumallasah)*. [37] Needless to say, these too started to increase in size over time.

At the end of the fifteenth century another type of *takhfīfah* increased in popularity among the fashion mavens of the Mamluk military elite, the *takhfīfah kabīrah* (the big *takhfīfah* turban). This kind of *takhfīfah,* worn for special occasions, was the result of the ongoing enlargement of the *takhfīfah ṣaghīrah.* The amirs even started to put horns on it. The largest version of this type was called *nāʿūrah* (waterwheel) and the Mamluk sultan wore it as a crown. Apparently it reached very impressive sizes. The Venetian ambassador Domenico Trevisan, who was received by Sultan Qānṣawh al-Ghawrī (r. 906– 22/1501–16) in 1512, recalls that the sultan was sitting on his richly-decorated bench *(masṭabah)* wearing a great turban ("fez") with two horns which were the length of half an arm. [38]

The question remains why the Mamluks would put horns on their turbans after more than 200 years of rule. Ibn Iyās has the following story about the first appearance of the horned *takhfīfah kabīrah:* "And in this month [Ṣafar 902/ October 1496] the wearing of the *takhāfīf* with long horns by the amirs started and they exceeded any boundary. And this incident was commented on by some poets: 'Our amir told us why he started [wearing it]: "I was in the war and Dhū al-Qarnayn was calling me: 'I am a ram. When the sheep pass me by and try to go out then I push them with my horns.'"' [39] In another passage of his work Ibn Iyās explains the historical background of the *takhfīfah kabīrah* as follows: "It [the *nāʿūrah*] nowadays takes the place of the crown of the kings of Egypt; with it the Turks show their might. It was worn by the Persian kings before." [40]

If we take a close look at both of these quotations from Ibn Iyās, the reason the Mamluk amirs chose horns as a sign of legitimacy and power becomes quite evident. Dhū al-Qarnayn, the two-horned hero from the Quran (Surah 18:83–98),

[36] Arnold von Harff, *Die Pilgerfahrt des Ritters Arnold von Harff von Cöln durch Italien, Syrien, Aegypten, Arabien, Aethiopien, Nubien, Palästina, die Türkei, Frankreich und Spanien, wie er sie in den Jahren 1496 bis 1499 vollendet, beschrieben und durch Zeichnungen erläutert hat,* ed. Eberhard von Groote (Hildesheim, 2004), 90. Sometimes this image is incorrectly identified as Sultan Qāytbāy (r. 872–901/1468–96), which is quite impossible as Harff left Cologne in November of 1496 and Qāytbāy had died in August of the same year. Harff even mentions the death of the former sultan (ibid., 87).

[40] Ibid., 4:332.

is clearly to be identified as Iskandar[41] or Alexander the Great in the Muslim tradition.[42] Especially through the popular reception of the Alexander romance *(Iskandar Nāmah)* throughout the Muslim world, Alexander became "the model of the Muslim hero, the Iranian knight, through his own merits worthy of acceding to the rank of prophet of the One God."[43]

Alexander the Great was clearly seen as the prototype of a Muslim ruler. Therefore, he served as a role model for the Mamluk amirs when they took horns and affixed them on their turbans. Moreover, in the Egyptian context, Alexander the Great enjoys another connection with horns. He is said to have once visited the Oasis of Siwa in Western Egypt, home of a famous oracle in antiquity. Here Alexander was declared son of Zeus-Amun. The god Amun is often depicted as a ram-headed deity. Additional evidence for the fact that the Mamluks wore ram horns is that Ibn Iyās mentions on at least two occasions the word *kabash* (ram) in poems about the *takhfīfah kabīrah.*[44] This argumentation provides us with an insight as to the emotional motivation to choose horns as a sign of power, but let us now have a look at the political side of the emergence of the longhorn *takhfīfah kabīrah.*

We have to go back to the historical context of the year 901/1496. Sultan Qāytbāy died in Dhū al-Qaʿdah 901/August 1496. His fourteen-year-old son al-Nāṣir Muḥammad ascended the throne and he seemed determined to keep it. He seemed unwilling to stand idly by and wait for one of the powerful old amirs of his father to replace him and become the new sultan as was always the case in the history of Mamluk successions in the fifteenth century. *Al-mulk ʿaqīm* they say.[45] Regency has no children. Al-Nāṣir Muḥammad tried to change this pattern and wanted to be the exception. We remember that al-Nāṣir Muḥammad appeared one month after the death of his father in Muḥarram of 902/September 1496 at the Friday prayer wearing only a *takhfīfah ṣaghīrah* on his head instead of the more official *kallawtah (kallaftah)* despite receiving harsh criticism[46] (fig. 7). Apparently he wanted to introduce a new order by making a clear political statement to the established powerful amirs. Their reaction was soon to follow. One month later in Ṣafar 902/October 1496 the amirs started wearing the *takhāfīf* with long

horns.[47] This gesture indicated that they were the ones entitled to power. They had more established rights than the young sultan, rights to power that went back to Alexander the Great.

The uneasy relationship between the two sides was to remain. Al-Nāṣir Muḥammad endured a somewhat difficult reign over the next two years with frequent uprisings against him. He even tried to create a new military basis for his authority by the inauguration of a force of black slaves with firearms to get rid of the old amirs, only they got rid of him first. He was assassinated near Giza on 15 Rabīʿ I 904/31 October 1498. The ensuing power struggle went on among the high-ranking amirs until Qānṣawh al-Ghawrī emerged finally as sultan in 906/1501. With the victory of the old elite their political symbol, the *takhfīfah kabīrah* with long horns, became the official headgear of the sultan and the high-ranking Mamluks. Because of its peculiar shape, the *takhfīfah kabīrah* was nicknamed *nāʿūrah* (waterwheel). According to the Meccan author of the sixteenth century, Qutb al-Dīn al-Nahrawālī (d. 990/1582), one's position in the Mamluk hierarchy was shown by the number of horns one was entitled to wear on his turban. The sultan had six horns, while the high ranking amirs of one hundred *(amīr miʾah wa-muqaddam alf)* wore four horns and the amirs of ten were permitted two horns.[48] The six-horn version was attested by contemporary European witnesses. In 1512 Jean Thenaud, the guardian of the Franciscan monastery of Angoulême, describes the clothing of Sultan Qānṣawh al-Ghawrī during an official reception with the following statement: "Sa robe estoit de tafetas jaulne et avoit en sa teste une faciolle de fine toille d'Ynde moult haulte, laquelle faisoit six longues et larges cornes dont deux estoient sur le front, aultres deux à dextre, aultre à senestre."[49]

Fortunately we posses images of the *nāʿūrah* in European paintings. The most spectacular and seemingly the most realistic of these paintings is the so-called *Reception of the Ambassadors* by an anonymous painter, housed in the Louvre in Paris (fig. 8). According to the analysis of Raby, many details, such as the accurate drawing of the Umayyad mosque[50] and heraldic emblems,[51] give evidence that the artist must have visited Damascus, "taking his view of mosque and bath-house from an upper story of the Venetian *fondaco* which was situated inside the *suq*

[47] Ibid., 340.

[50] In 1488 the western minaret of the Umayyad Mosque was built and it appears on the extreme left of the painting.

[51] The emblem depicted in the *Reception* strikingly resembles the emblem of Qāytbāy; see Julian Raby, *Venice, Dürer and the Oriental Mode* (London, 1982), 53.

to the south of the Great Mosque."[52] Apparently the painting arrived in Venice between 1496, the date high-ranking Mamluk amirs started to wear the *takhfīfah kabīrah* with long horns, and 1499, a date when other painters had already started to copy elements from the *Reception*.[53]

Therefore, the central Mamluk dignitary of the painting, sitting to the right of the city gate on a podium, might be a governor of Damascus, as he was high-ranking enough to wear the *takhfīfah kabīrah.* It is quite obvious how this headgear got its nickname "waterwheel" (fig. 8). It seems that the two persons beside him and the gentleman riding on a horse to the left wear as well forms of the *takhfīfah,* but without horns.

Another contemporary European image of Qānṣawh al-Ghawrī with the *nāʿūrah* on his head seems not as realistic as the reception but it clearly shows the horns (fig. 9). As can easily be guessed this headgear seems to be extremely heavy and was certainly not very comfortable. For example, in 917/1511 Sultan Qānṣawh al-Ghawrī suffered from an abscess on his head and therefore he had to wear the light *takhfīfah* instead.[54]

We do possess as well a European image of the last Mamluk sultan, Ṭūmān Bāy (r. 922–23/1516–17). Here he does not wear the *takhfīfah kabīrah* (fig. 10). But it seems that the origin of this image dates back to the time when Ṭūmān Bāy still held the important office of *dawādār* ("bearer of the inkwell"), as that is how he is named on the drawing. It seems that he wears either a lighter form of the *takhfīfah* or, what is more likely, a special form of the *kallawtah,* as since the days of al-Maqrīzī the kerchief was wound around the *kallawtah* caps in order to form bumps *(ʿiwaj),* the so-called Circassian *kallawtah* hats which were introduced by Sultan Barqūq at the end of the fourteenth century.[55] But as we do not know how realistic this image is in its details, the question of which hat it is exactly is not easy to answer.

To conclude the discussion about the *takhfīfah kabīrah,* perhaps a voice from the common people from the year 914/1508 should be heard, which is reported by Ibn Iyās. The common people commented on the exclusive headgear of high-ranking Mamluks like this: "Every ram is wearing wool and also horns, and what horns! And I am happy to be in peace, without wool, without horns."[56]

Headgear of amirs: Many kinds of headgear that the Mamluk amirs were entitled to wear have already been dealt with in the context of the caps and turbans of the sultans. The *sharbūsh* was apparently worn by amirs as well until it was abandoned by the Circassian Mamluks altogether. The early Mamluk sultans would ceremoniously bestow a *sharbūsh* upon amirs.[57] Circassian sultans would instead put an expensive *kallawtah* on the heads of their amirs to show their gratitude.[58] The *kallawtah* cap represents the constant factor in Mamluk headgear, although it changed color and size and a kerchief was wrapped around it during Mamluk times. It remains the only headgear which was worn by Mamluk officials throughout the more than 250 years of Mamluk rule in Egypt and Syria. Other headgear like the *takhfīfah ṣaghīrah* or the *takhfīfah kabīrah* with horns were latecomers compared to the *kallawtah.*

Another headgear that apparently gained popularity in the fifteenth century among ordinary Mamluks was the so-called *ṭāqīyah,* which was a cylindrical hat with a flat top. It used to be made in several sizes and colors and was one-sixth of an ell high. At the beginning of the fifteenth century it grew taller until it reached two-thirds of an ell and the upper part took the shape of a small dome. In this form it then became well known as the so-called "Circassian." At the end of the fifteenth century it was manufactured in a two-colored version. The lower part was apparently green and the upper part black.[59] In this form it appears in the *Reception* painting in the Louvre, where it is worn by the Mamluks standing on the porch (fig. 8).

During the late Circassian period the so-called *zamṭ* hat witnessed a breakthrough in Mamluk fashion. Originally it seems that it had been a headgear of the lower classes.[60] Then the Mamluks adopted it and made it exclusively theirs. In the year 840/1436 Sultan Barsbāy (r. 825–41/1422–38) forbade every *fallāh* (peasant) and every slave from wearing the red *zamṭ.*[61] But this decree apparently did not guarantee the necessary exclusivity for the Mamluks with respect to the red *zamṭ*. Therefore Mamluks rode through Cairo in 868/1464 beating everyone not entitled to wear the red *zamṭ,* especially eunuchs and servants.[62] Finally it became such a common and distinctive marker for an ordinary Mamluk soldier that the Ottomans pursued everyone wearing a red *zamṭ* on his head when they conquered Cairo, rightly thinking that only members of the Mamluk military elite would

[62] Mayer, *Mamluk Costume,* 32.

wear such a headgear.[63] We are quite well informed about what the red *zamṭ* looked like. We have the eyewitness account of Dietrich von Schachten, a German traveller who journeyed to the Near East in 1491. He described it as red with finger-long tufts and with kerchiefs wrapped around them. Apparently he liked the arrangement, as he calls it beautiful. Then he states that no heathen [Arab] was allowed to wear it, but only a Mamluk.[64]

Another German visitor, Arnold von Harff, provides us with a good picture of the red *zamṭ* (fig. 11). Most people on the right-hand side of the Louvre *Reception* seem to wear it and fortunately we even have a surviving *zamṭ* hat in the Coptic Museum in Cairo (figs. 8 and 12).

CONCLUSION

Fashion is a social marker and headgear, with its very prominent position on the human body, even more so. Nevertheless, the present contribution has shown that even in a medieval society like Mamluk Egypt and Syria fashion set its own trends. New colors, new sizes, new shapes became en vogue, older styles had to go. When the Mamluk military upper class began to wear the red *zamṭ,* for example, the peasants and servants were forced to give up their headgear. A general trend that can be noted is the tendency to enlarge the size of the latest models almost to the point of being unwearable. When the maximum size is reached, then one starts with a new model all over again. This happened with the *takhfīfah,* which started off as the "lighter one" until someone put horns on it and transformed it into an immense "waterwheel." Putting on a distinctive hat could also be a clear political statement in Mamluk times, as could be seen during the struggle of Sultan al-Nāṣir Muḥammad with his opponents among the established amirs.

After the Ottoman conquest it was apparently difficult for the Mamluks to give up their specific dress and with it most of their former exclusive social status. After learning of the death of the Ottoman sultan Selīm in 926/1520, the Ottoman governor of Damascus, al-Ghazālī, a former Mamluk, revolted immediately. "And then the governor entered the Citadel and the Circassian dress appeared once again: the *takhfīfāt* and *kallawtāt.* The wearing of Ottoman turbans and kaftans was abolished," reports the contemporary author Ibn Ṭūlūn.[65] Nevertheless, the time of the old hats was definitely over, and the revolt was crushed only three months after it started in Ṣafar 927/February 1521. The bare heads of al-Ghazalī and his companions were cut off and sent to Istanbul[66] (fig. 13).

The Formation of the Civilian Elite in the Syrian Province: The Case of Ayyubid and Early Mamluk Ḥamāh

Introduction

In recent decades our knowledge of urban history in northern Mesopotamia, Syria, and Egypt during the post-formative period has continuously increased.[1] Studies such as those by Douglas Patton on Zangid Mosul, Anne-Marie Eddé on Ayyubid Aleppo, Louis Pouzet on thirteenth-century Damascus, Michael Chamberlain on thirteenth- and fourteenth-century Damascus, Carl Petry on fifteenth-century Cairo, Bernadette Martel-Thoumian on the fifteenth-century Mamluk state, and others have added significantly to our knowledge of pre-modern Middle Eastern society.[2] A particular concern of these studies has been the section of the population that Petry termed the "civilian elite," i.e., the ulama and the non-military administrative personnel whom biographers regarded as notables.[3]

The present article further extends this stream of research by discussing the

[1] An early version of this paper was presented at the 15th Colloquium on the History of Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras, Leuven 2006. I wish to thank those present, especially Michael Brett (London), for their helpful comments. I would like to thank furthermore Stefan Heidemann (Jena) for commenting on a draft version of this article, and Stefan Conermann (Bonn) for the invitation to contribute to this volume.

[2] Douglas L. Patton, "A History of the Atabegs of Mosul and their Relations with the Ulama A.H. 521–660/A.D. 1127–1262" (Ph.D. diss., New York University, 1983); Anne-Marie Eddé, *La principauté Ayyoubide d'Alep (579/1183–658/1260)* (Stuttgart, 1999); Louis Pouzet, *Damas au VIIe/XIIIe siècle: Vie et structures religieuses dans une métropole islamique,* 2nd ed. (Beirut, 1991); Michael Chamberlain, *Knowledge and Social Practice in Medieval Damascus, 1190–1350* (Cambridge, 1994); Carl F. Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981); Bernadette Martel-Thoumian, *Les civils et l'administration dans l'état militaire Mamlūk (IXe/XVe siècle)* (Damascus, 1992).

[3] Petry, *Civilian Elite,* 4 and 312–25. There are a number of individuals who crossed the boundary between the military and the civilian elite who do not fit into this simple differentiation. In the case of Ḥamāh this is illustrated by Shihāb al-Dīn al-Bulāʿī, who turned to the military profession after a career as religious scholar (Ibn Wāṣil, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb*, ed. Jamāl al-Dīn al-Shayyāl, Ḥasanayn al-Rabīʿ, and Saʿīd ʿĀshūr [Cairo, 1953–77], and for years 646–59 Bibliothèque Nationale MSS Arabe nos. 1702 and 1703; here published edition, 3:163), and the case of Shihāb al-Dīn ibn al-Quṭub, which is discussed below. For a detailed discussion of the vocabulary employed during this period for the different groups within the civilian elite cf. Bernadette Martel-Thoumian, "Les élites urbaines sous les Mamlouks Circassiens: quelques éléments de réflexion," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras III,* ed. U. Vermeulen and J. Van Steenbergen (Leuven, 2001), 271–308.

example of the middle-sized north Syrian town of Ḥamāh during the period from the late sixth/twelfth to the eighth/fourteenth centuries. This urban settlement, situated on the banks of the Orontes River and with a population of some 7,000[4] during the period considered here, tended to stand in the shadow of neighboring Aleppo and Damascus. In the late fourth/tenth century it was included within the Aleppan realms of the Hamdanid ruler Sayf al-Dawlah (d. 356/967). In the following century this status of dependency continued with Ḥamāh either in the Fatimid sphere of influence or subject to Bedouin, especially Mirdasid, domination typical of this period in northern Syria. With the Saljuq conquest of Aleppo in 479/1086 Ḥamāh became a bone of contention in conflicts between the autonomous Saljuq rulers in the Syrian lands. It changed hands repeatedly until the founder of the Burid dynasty in Damascus, Ṭughtigin (d. 522/1128), incorporated it into his realm in 517/1123.[5] This period ended with the conquest by the Zangids who in 530/1135 included the town in their emerging empire, which gradually extended into Syria and al-Jazīrah. During the Ayyubid period the princes of Ḥamāh gained some degree of independence within the Ayyubid family confederation after Ṣalāḥ al-Dīn had handed over the town to his nephew al-Malik al-Muẓaffar I ʿUmar (r. 574–87/1178–91). Al-Muẓaffar's descendants and other members of the Ayyubid family were able to rule the town, with short interruptions, well into the early Mamluk period when this last Syrian Ayyubid principality was finally absorbed into the Mamluk administrative system in the 730s/1330s.

From an economic perspective, Ḥamāh could draw on the fertile soil of the surrounding lands, ample water supplies, and its location on the main north-south trade axis linking Aleppo and Damascus.[6] However, while Egypt experienced economic prosperity during the fifth/eleventh century,[7] the northern Syrian towns, like their north Mesopotamian and Iraqi counterparts, experienced a period of urban stagnation or even decline. The weakening of fiscal institutions and the near-complete absence of building activities during this period was

---

[4] According to Josiah C. Russel, "The Population of the Crusader States," in *A History of the Crusades,* ed. Kenneth M. Setton (Madison, 1985), 5:295–314, the population of the town was 6,750 in the beginning of the seventh/thirteenth century.

[5] For the pre-Zangid political history of northern Syria, cf. Thierry Bianquis, *Damas et la Syrie sous la domination fatimide (359–468/969–1076): Essai d'interprétation de chroniques arabes médiévales* (Damascus, 1989), and specifically for Aleppo cf. Suhayl Zakkar, *The Emirate of Aleppo, 1004–1094* (Beirut, 1971).

[7] Cf. Paula A. Sanders, "The Fāṭimid State, 969–1171," in *The Cambridge History of Egypt,* vol. 1, *Islamic Egypt, 640–1517,* ed. Carl F. Petry (Cambridge, 1998), 151–74.

characteristic of this decline. The predominant Bedouin rulers of northern Syria did little to support the region's urban network. With the establishment of Saljuq rule the towns of the region experienced a renaissance that continued during the Zangid, Ayyubid, and Mamluk periods. The Saljuqs' measures, especially those of the regional Atabeg dynasties, aimed at supporting their urban basis, most importantly through a reorganization of the fiscal system, and were accompanied by increased building activities.[8]

The disastrous Syrian earthquake in the year 552/1157 was a setback in the case of Ḥamāh's ascendancy. The epicenter was close to the town and further seismic shocks followed in subsequent months.[9] The destruction of the infrastructure must have been massive and the loss of human life considerable. The estimation of an Andalusian traveller who visited the town some fifteen years after the catastrophe, that of the purportedly 25,000 inhabitants of the town only 70 men survived, is certainly exaggerated.[10] However, the chronicles show that this earthquake was estimated to be among the most disastrous catastrophes in the Syrian lands during the sixth/twelfth and seventh/thirteenth century. Anecdotes played, as is typical in premodern historiography, a crucial role in structuring the earthquake narrative. For instance, the Zangid chronicler Ibn al-Athīr included a report on a teacher leaving the teaching premises shortly before the earthquake. Not only did all of his students perish, but their relatives who might have inquired in the following days about the children's fate also did not survive.[11] In the same vein, later topographical descriptions of Ḥamāh are centered on this event. The only diachronic passage in Ibn al-ʿAdīm's seventh/thirteenth-century description of the town, for instance, sets the earthquake at center stage, and mentions the castle's

destruction and the following efforts at refortification.[12] The consequences for the civilian elite are reflected in references to scholars who either perished in the earthquake or left the town in its aftermath.[13] However, Ḥamāh soon recovered and continued to enjoy "[i]n the Ayyūbid period, and during the governorship of Abū 'l-Fidāʾ, . . . true prosperity."[14] This prosperity can be seen here, as elsewhere, in increased building activities, especially with regard to madrasahs, which will be discussed below.

The present article traces this urban renaissance in more detail by focusing on the civilian elite. The construction of a high number of endowed madrasahs provided the financial basis for a variety of civilian careers.[15] However, the source material currently available precludes a systematic examination of career patterns based on endowments in the case of a middle-sized town such as Ḥamāh. Consequently, the following discussion will focus on holders of judgeships and will be subsequently supplemented by the fragmentary material available on *khaṭīb*s, secretaries, and posts in madrasahs. This discussion will show the gradual formation of an indigenous civilian elite during this period that was increasingly able to monopolize the crucial civilian posts in the town.

The purpose of the present article in engaging with the case of the civilian elite in Ḥamāh is twofold. Firstly, it has a descriptive outlook, namely to give an overview of those names that appear repeatedly when studying the civilian elite of the town. In the course of the description it will become evident that the basic unit of the civilian elite organization was the elite household. In this sense the article describes how such families established themselves in a provincial town. Secondly, it puts forth the argument that the urban renaissance in northern Syria set the framework for the development of a strong civilian elite from the second half of the sixth/twelfth century onwards. Furthermore, this urban elite took on a

Jh.) und ihre Grundlagen," in *Alltagsleben und materielle Kultur in der arabischen Sprache und Literatur: Festschrift für Heinz Grotzfeld zum 70. Geburtstag,* ed. Thomas Bauer and Ulrike Stheli-Werbeck (Wiesbaden, 2005), 233–50.

decisively local character during the seventh/thirteenth century and the first half of the eighth/fourteenth century.

Owing to the historiographical nature of the available sources, the focus is on chronicles and biographical dictionaries. The rise of historical writing from the seventh/thirteenth century allows the formation of the civilian elite, even in considering the case of a middle-sized town such as Ḥamāh, to be traced in some detail. This is because the prosperity enjoyed by the town also encouraged the publication of a multitude of historical works. Not only two rulers of the town, al-Malik al-Manṣūr I Muḥammad and Abū al-Fidāʾ, but also a number of scholars or administrators from the town, such as Ibn al-Naẓīf (d. after 634/1236–37), Ibn Abī al-Dam (d. 642/1244), the latter's relative Ibn Wāṣil (d. 697/1298), and ʿAlī al-Muẓaffarī Ibn al-Mughayzil (d. 701/1302), composed chronicles. Despite the fact that the royal chronicles are of rather limited interest for any inquiry into a field beyond politics, Ibn al-Naẓīf's work[16] is rather focused on the neighboring town of Homs, and most of Ibn Abī al-Dam's chronicle is lost,[17] these works, especially the chronicle of Ibn Wāṣil and its supplement by Ibn al-Mughayzil, allow insights into the town's development. Although these insights cannot be compared with those gained for major urban centers, such as Cairo, Damascus, and Aleppo, the focus on this middle-sized town is a crucial addition to our understanding of urban society in the Syrian lands during the seventh/thirteenth and eighth/fourteenth centuries.

Ḥamāh's Growing Prosperity: Madrasahs and the Civilian Elite

The considerable ascent of Ḥamāh after the earthquake setback in 552/1157 can be traced by turning to the building activities within the town, which are well illustrated by the number of endowed madrasahs. These testify to the dynamic development of the urban infrastructure during the late Zangid, Ayyubid, and early Mamluk periods. The starting point of this development in Ḥamāh was in the late Zangid period under the Sultan Nūr al-Dīn (d. 569/1174). Nūr al-Dīn initiated a considerable building project encompassing representative and functional buildings, not only in the major towns of his realms such as Damascus

[16] On the author and his work cf. Angelika Hartmann, "A Unique Manuscript in the Asian Museum, St. Petersburg: the Syrian Chronicle *al-Taʾrīḫ al-Manṣūrī* by Ibn Naẓīf al-Ḥamawī, from the 7th/13th Century," in *Egypt and Syria,* ed. Vermeulen and van Steenbergen, 89–100. Edition by Abū al-ʿĪd Dūdū (Damascus, 1981).

[17] The first part, covering the period from the Prophet Muḥammad until the late Umayyad era, has been edited by Ḥāmid Ziyān Ghānim Ziyān as *Al-Tārīkh al-Islāmī al-Maʿrūf bi-Ism al-Tārīkh al-Muẓaffarī* (Cairo, 1989). Passages from the final surviving part of the chronicle ending in 628/1230–31 have been edited and translated by Donald S. Richards, "The Crusade of Frederic II and the Ḥamāh Succession: Extracts from the Chronicle of Ibn Abī al-Damm," *Bulletin d'études orientales* 45 (1993): 183–206.

and Aleppo but also in middle-sized towns such as Baalbek and Ḥamāh.[18] In Ḥamāh he built two madrasahs, one Shafiʿi and one Hanafi, in addition to the mosque in the lower town with a hospital next to it.[19] The Shafiʿi madrasah, the ʿAṣrūnīyah, was built for Sharaf al-Dīn Ibn Abī ʿAṣrūn (d. 585/1189), who indeed taught there at least once.[20] It was situated, similarly to the Hanafi madrasah, in the market area of the lower town. Eminent scholars of the indigenous civilian elite, such as the town's *shaykh al-shuyūkh* Tāj al-Dīn Aḥmad Ibn al-Mughayzil (d. 687/1288)[21] and the town's judge ʿImād al-Dīn Abū al-Qāsim (d. 652/1254), taught there.[22]

In the following century, members of the ruling Ayyubid family endowed additional madrasahs. Al-Malik al-Manṣūr I Muḥammad (d. 617/1221) founded the Shafiʿi Madrasah al-Manṣūrīyah.[23] This madrasah proved attractive even to a prominent scholar from outside the town, Sayf al-Dīn al-Āmidī (d. 631/1233), its first teacher.[24] In the later Ayyubid period Muʾnisah Khātūn bint al-Malik al-Muẓaffar II Maḥmūd (d. 703/1303) endowed the Madrasah al-Khātūnīyah. She was the paternal aunt of the town's last Ayyubid ruler during the Mamluk period, Abū al-Fidāʾ (r. 710–32/1310–32). Having acted herself as attending authority *(musmiʿah)* in scholarly readings she provided this school with a generous endowment.[25] Abū al-Fidāʾ himself endowed the Madrasah al-Muʾayyadīyah (also known as al-Khaṭībīyah), in which members of grand Hamawian families such as ʿAbd al-Laṭīf Ibn al-Mughayzil (d. 690/1291) and Ṣadr al-Dīn Muḥammad Ibn al-Bārizī (d. 875/1470)[26] taught.

The military elite formed the second group of madrasah founders. Sayf al-Dīn ʿAlī Ibn al-Mashṭūb (d. 588/1192), one of Ṣalāḥ al-Dīn's amirs, founded Madrasat Ibn al-Mashṭūb. A freedman of the town's first Ayyubid ruler, al-Malik al-Muẓaffar I ʿUmar, Abū Manṣūr Jaldak al-Muẓaffarī al-Taqawī (d. 628/1231), endowed the Madrasah al-Jaldakīyah.[27] Shujāʿ al-Dīn Murshid al-Ṭawāshī (d. 669/1270–71),

a freedman of al-Malik al-Muẓaffar II Maḥmūd, set up the Hanafi Madrasah al-Ṭawāshīyah.[28] Finally, members of the civilian elite endowed a number of madrasahs, which illustrates the wealth of these families of notables. Among these civilian founders were Najm al-Dīn ʿAbd al-Ghuffār Ibn al-Mughayzil (d. 688/1289–90),[29] Zayn al-Dīn ʿAbd al-Raḥmān (d. 659/1261), *khaṭīb* of the Great/Upper Mosque,[30] and Mukhliṣ al-Dīn Ibrāhīm Ibn Qarnāṣ (d. 648/1248).[31]

This rise of the madrasah as an urban institution from the mid-sixth/twelfth century onwards was paralleled by the formation of an urban elite that was firmly entrenched within the town itself. In contrast, the sources are almost completely silent, typically for northern Syria, with regard to the civilian elite in Ḥamāh in the preceding period. This might be explained as a result of chronological distance in the case of the works composed during the seventh/thirteenth century, such as the chronicle *Mirʾāt al-Zamān* by Sibṭ ibn al-Jawzī (d. 654/1256) or the biographical dictionaries *Wafayāt al-Aʿyān* by Ibn Khallikān (d. 681/1281–82), *Muʿjam al-Udabāʾ* by Yāqūt al-Ḥamawī (d. 626/1229), and *Bughyat al-Ṭalab* by Ibn al-ʿAdīm (d. 660/1262), which rendered the events or persons linked to minor towns of limited significance.[32] However, even a contemporary work such as Ibn ʿAsākir's (d. 571/1176) *Tārīkh Madīnat Dimashq,* which covers the Syrian scholars well beyond the borders of the town of Damascus, has little to say about scholars originating from or being active in Ḥamāh—in contrast to those linked, for example, to neighboring Homs.[33] Even appointments to the most eminent position, the chief judgeship, can only be traced systematically starting with the late sixth/twelfth century.[34] This picture is not altered when taking into account

[28] ʿAlī ibn ʿAbd al-Raḥīm Nūr al-Dīn Ibn al-Mughayzil, *Dhayl Mufarrij al-Kurūb fī Akhbār Banī Ayyūb,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 2004), 74; al-Dhahabī, *Tārīkh,* vol. 661–70:297.

[29] Ibn al-Mughayzil, *Dhayl Mufarrij al-Kurūb,* 124.

[30] Ibn Wāṣil, "Mufarrij," BN MS 1703, fol. 170r–v; al-Yūnīnī, *Dhayl Mirʾāt al-Zamān* (Hyderabad, 1954–61), 2:129; al-Dhahabī, *Tārīkh,* vol. 651–60:389.

[31] Mentioned in al-Yūnīnī, *Dhayl Mirʾāt al-Zamān,* 2:127–28. Further madrasahs founded by members of the civilian elite included, for example, the Madrasah al-Ṣihyawnīyah, founded by Muḥammad ibn Muḥammad al-Khaṭīb Ibn Ṣihyawn. Among its teachers was Ibrāhīm ibn ʿAbd Allāh al-Ḥamawī al-Shāfiʿī (d. 649/1251) (cf. al-Dhahabī, *Tārīkh,* vol. 641–50:413).

[32] In Ibn al-ʿAdīm's biographical dictionary of Aleppo *(Bughyat al-Ṭalab),* for instance, nineteen entries refer to individuals linked to Ḥamāh, of which five persons are only superficially connected to the town. Of the remaining fourteen, eight lived partly or mostly in the seventh/thirteenth century and only four in the sixth/twelfth century.

[33] In the only complete edition of the work (the commercial Dār al-Fikr edition) Ḥamāh is referred to 17 times, while neighboring Homs has some 700 entries. These numbers match my impression gained from the published volumes of the scholarly Majmaʿ al-Lughah edition.

[34] Similar to the case of al-Raqqah, where the names of the chief judges are only known from the mid-sixth/twelfth century onwards (Heidemann, *Renaissance,* 284–85).

the works produced in Ḥamāh: while chronicles such as those by Abū al-Fidāʾ or Ibn Wāṣil are indispensable in order to trace the civilian elite starting with the second half of the sixth/twelfth century, they have little to say about earlier periods.

Considering the civilian elite, a striking feature becomes apparent that parallels the rise of the madrasah and which hints again at the mid-late sixth/twelfth century as a decisive turning point in the urban history of the Syrian lands: the first relevant persons, in a sense the "founding fathers," of those families that came to dominate the civilian elite in the Ayyubid and Mamluk periods in Ḥamāh were active during this period (Banū Rawāḥah, Banū al-Bahrānī, Banū Qarnāṣ) or in the following decades of the early seventh/thirteenth century (Banū al-Bārizī, Banū al-Mughayzil). The formation of this civilian elite, particularly the indigenous civilian elite, will be discussed in the following in three sections: First, appointments to the Shafiʿi judgeship, the crucial position in the town, are considered. This is followed by an analysis of the *khaṭīb*s, secretaries, and non-Shafiʿi judges. Finally, those grand scholarly families of the town that did not hold a large number of civilian posts will be discussed.

The Shafiʿi Judgeship: Locals and Cosmopolitans

Ḥamāh became, as was typical for the region, dominated by the Shafiʿi school of law and affiliation with it became one of the prerequisites for attaining prestigious religious posts during the Zangid and subsequent periods. All the grand local households discussed below were Shafiʿi. This *madhhab* was sponsored by the political elite, which furthered its dominant role. For instance, the town's last Ayyubid ruler, Abū al-Fidāʾ, and its Mamluk governor Sanjar were both themselves Shafiʿi jurisprudents[35] who supported the *madhhab*. This dominance is evident in the appointments to the town's judgeship during the early phase of the period considered here. The judgeship of Ḥamāh had initially not been explicitly restricted to any specific school of law. It was only with the introduction of the other *madhhab*s' judgeships in the late seventh/thirteenth and eighth/fourteenth centuries that this judgeship became to be nominally attached to the Shafiʿi community. However, despite the theoretical possibility that a non-Shafiʿi scholar might be appointed before this introduction of *madhhab*-affiliated posts, the Shafiʿis were able, owing to their dominance, to monopolise the post entirely.

Appointments to the Shafiʿi judgeship (cf. fig. 1) followed, with regard to the geographical origin of the post holders, distinctively different patterns during the period considered here. While individuals from outside the town prevailed in the first stage until the early seventh/thirteenth century, the local elite dominated

[35] Heinz Halm, *Die Ausbreitung der šāfiʿitischen Rechtsschule von den Anfängen bis zum 8./14. Jahrhundert* (Wiesbaden, 1974), 228.

this post in the following 150 years until the mid-eighth/fourteenth century. Thereupon, the post holders' provenance became significantly more varied and the dominance of the local elite started to vanish. These different patterns indicate two alternative career patterns—that changed in importance over time—which led to the post.

In the first and third phase, a "cosmopolitan" profile was decisive for the candidate's appointment.[36] It was crucial to belong to trans-regional networks of learning and/or political power. Many of the post holders, especially during the first phase, were distinguished scholars who had the prestige of having studied with the grand scholars of their time. In the third phase candidates belonged more often to the trans-regional Mamluk civilian elite. Owing to the integration of trans-regional networks, judges who left the post voluntarily or involuntarily during both phases frequently moved on to take up positions in other towns and regions.

In the second phase, in contrast, post holders typically had a "local" profile, i.e., they were closely integrated into the local network of influential families. Generally, they were born into one of the grand families and followed a career centered on the town, especially holding other (minor) posts before attaining the judgeship. In contrast to the preceding and following phases, judges often held the post until an advanced age or death. Those who left the post voluntarily or involuntarily tended to remain within the town, as it was here that they had networks that had been—and often continued to be—crucial for their career.

The Shafiʿi Judgeship from 559/1164 to 616/1219: The Cosmopolitans' Period

During the first sixty years of the period under discussion cosmopolitan scholars from outside the town played an important role in appointments to the judgeship. Initially these scholars originated in particular from the eastern lands, more specifically Mosul, the Zangid dynasty's first stronghold. In a sense the Zangids "imported" prestigious scholars from their possessions in the East to newly conquered towns such as Ḥamāh. These scholars tended to hold the post—typical for the cosmopolitan career pattern—only for a limited period and soon moved on to other urban centers.

The first judge, Muḥammad ibn ʿAlī al-Anṣārī (d. 600/1203),[37] came from Mosul under the Zangid Nūr al-Dīn. He stayed in the post for eight years, but then moved on further west in order to settle in Egypt, where he was appointed

[36] The differentiation between "cosmopolitans" and "locals" is based on Merton's terminology; cf. his "Patterns of Influence: Local and Cosmopolitan Influentials," in Robert K. Merton, *Social Theory and Social Structure,* 3rd ed. (New York, 1968), 441–74.

[37] Al-Dhahabī, *Tārīkh,* vol. 591–600:477–78; al-Ṣafadī, *Al-Wāfī,* 4:171; al-Asnawī, *Ṭabaqāt al-Shāfiʿīyah,* ed. ʿAbd Allāh al-Jubūrī (Baghdad, 1971), 2:443; Sourdel, "Traditionnistes," 354.

to the judgeship of the Upper Egyptian town of Asyūṭ. The second judge, Ḍiyāʾ al-Dīn al-Qāsim Ibn al-Shahrazūrī (d. 599/1203), held the judgeship twice: he had left Ḥamāh after his first appointment in order to move to Baghdad, where he was also appointed judge. However, after his deposition in Baghdad he had to return to Ḥamāh, where he filled the post again for some months until his death. Ibn al-Shahrazūrī belonged to a family which held high offices throughout the sixth/twelfth and seventh/thirteenth centuries in Syria and Iraq.[38] His paternal uncle, Kamāl al-Dīn Muḥammad (d. 576/1176), like al-Anṣārī, came from Mosul and had been appointed by Nūr al-Dīn to the judgeships of Damascus and Aleppo simultaneously.

That this family originated from Mosul and subsequently gained a great reputation within Syria parallels the shift of the Zangids' power base from the East westwards. This shift also became apparent in the nominations to the judgeship in Ḥamāh: after the first decades of Zangid rule, post holders were increasingly recruited from the Syrian lands. The early seventh/thirteenth-century judge Najm al-Dīn ʿAbd al-Raḥīm Ibn Abī ʿAṣrūn (d. 622/1225),[39] for instance, was the son of the aforementioned Sharaf al-Dīn Ibn Abī ʿAṣrūn, for whom Nūr al-Dīn had built the Shafiʿi madrasah of the town. Sharaf al-Dīn had succeeded Kamāl al-Dīn al-Shahrazūrī in the position of the most eminent Shafiʿi scholar in the Syrian lands and more specifically he had taken over the judgeship in Damascus. It was the family's cosmopolitan prestige that allowed his son to hold office in Aleppo and Ḥamāh, where he was twice judge and also vizier. Najm al-Dīn is in this sense representative of a transition period: his family still had hardly any connections to the local elite of Ḥamāh, but it was already well-placed within the civilian elite of the Syrian lands.

In this early period there are already three cases which hint at the developing local elite, most importantly two judges belonging to the al-Bahrānī family (cf. fig. 2 with sources), Amīn al-Dawlah/Dīn al-Ḥusayn (d. 587/1191) and Aḥmad ibn Mudrak (d. 590/1194 or 591/1195). This family also continued to play a remarkable role in the following seventh/thirteenth century. Two additional members of the family, Muḥyī al-Dīn Ḥamzah (d. 663/1264–65)[40] and Muwaffaq al-Dīn Muḥammad (d. 699/1300), were appointed judges in 642/1244–45 and

[38] On the al-Shahrazūrī family, cf. Eddé, *Alep,* 381–82. It seems that al-Anṣārī and al-Shahrazūrī for some time held the judgeship in Ḥamāh simultaneously (cf. Abū Shāmah, *Al-Rawḍatayn,* 2:158, and al-Dhahabī, *Tārīkh,* vol. 571–80:105). On al-Qāsim cf. Ibn Wāṣil, *Mufarrij,* 4:79; al-Dhahabī, *Tārīkh,* vol. 591–600:407–8.

[39] Al-Dhahabī, *Tārīkh,* vol. 621–30:63 and 115; al-Ṣafadī, *Al-Wāfī,* 18:164; Eddé, *Alep,* 382–83. On Ibn Abī ʿAṣrūn as judge cf. Ibn Naẓīf, *Al-Manṣūrī,* 6 and 8.

[40] On the dates of Muḥyī al-Dīn's judgeship cf. Ibn Wāṣil, *Mufarrij,* 5:347, and idem, "Mufarrij," fol. 111r.

697/1298 respectively. Other members of the family focused on scholarship without attaining formal positions of importance, such as Muḥyī al-Dīn's wife Ṣafiyat (d. 646/1248), one of the grand female hadith scholars of her time; Muwaffaq al-Dīn Nabā/Muḥammad (d. 665/1267), a hadith scholar who was at least appointed repetitor *(muʿīd)* in Cairo; as well as ʿUmar ibn Muḥammad (d. 654/1256) and Muḥyī al-Dīn ʿAbd al-Wahhāb (d. 688/1289), son and grandson of Ṣafiyat respectively.

The third relevant case—although he only briefly held office—is Zayn al-Dīn Muḥammad Ibn al-Raffāʾ (d. 617/1220), who originated from Kafarṭāb (some 40 km to the north of the town).[41] He moved on to take the judgeship of neighboring Bārīn (some 40 km southwest of the town). His son ʿAbd al-ʿAzīz (d. 662/1263)[42] was to become the *shaykh al-shuyūkh* of Ḥamāh and entered the networks of the Hamawian civilian elite by marrying his daughters to members of the influential al-Mughayzil family. However, it is significant that neither the indigenous al-Bahrānī family nor Ibn al-Raffāʾ were yet able to control the post more tightly. Both lost it to Ibn Abī ʿAṣrūn, the outsider who was twice appointed to the post.

Tellingly, Ibn Abī ʿAṣrūn's second office—the last of the cosmopolitan period—came to an end owing to his involvement in an event that had implications well beyond the confines of the town: the Ibn al-Mashṭūb revolt of 616–17/1219–20. ʿImād al-Dīn Aḥmad ibn al-Mashṭūb (d. 619/1225), a high-ranking Kurdish amir and son of the aforementioned madrasah founder Sayf al-Dīn Ibn al-Mashṭūb, had been exiled from Egypt after an attempted revolt against the sultan al-Malik al-Kāmil (r. 615–35/1218–38). He found refuge in Ḥamāh and subsequently entered the service of the strongman in northern Syria, al-Malik al-Ashraf Mūsá (r. 607–17/1210–20 in Diyarbakr), whom he challenged soon after. Al-Malik al-Manṣūr I Muḥammad of Ḥamāh supported him financially and provided armed men. Furthermore, he authorised Ibn Abī ʿAṣrūn, to whom Ibn al-Mashṭūb had promised an appointment as judge in the lands that were to be brought under his control, to resign and to participate in the endeavour.[43]

Ibn Abī ʿAṣrūn was arrested after Ibn al-Mashṭūb's defeat and the entire correspondence with rulers of the region as well as copies of the oath of allegiance to be sworn by those allied with Ibn al-Mashṭūb were found in his possession. Nevertheless, in contrast to Ibn al-Mashṭūb, who perished in al-Ashraf's captivity, Ibn Abī ʿAṣrūn was liberated owing to his family connections, which went well

[43] The most detailed account of this revolt is in Ibn Wāṣil, *Mufarrij,* 4:28–31 and 70–77. For his biography cf. al-Dhahabī, *Tārīkh,* vol. 611–20:442 (with further sources). On him cf. also Eddé, *Alep,* 92–93, 383.

beyond Ḥamāh. It was Fakhr al-Dīn ibn Shaykh al-Shuyūkh (d. 647/1250), the influential member of the Damascene Ḥamawayh family, which had intermarried with the Banū Abī ʿAṣrūn, who came as Egyptian envoy to al-Ashraf's court. He convinced al-Ashraf to release Ibn Abī ʿAṣrūn, who returned to Ḥamāh without regaining a formal position of influence.[44]

The Shafiʿi Judgeship from 616/1219 to 764/1363: The Dominance of the Locals

With Ibn Abī ʿAṣrūn's resignation in the early seventh/thirteenth century the second period in the recruitment pattern for the judgeship began. For some 150 years the judgeship was entirely monopolized by local scholars while cosmopolitan outsiders, be they from the neighboring large towns of Aleppo and Damascus or from Mosul, ceased to play an important role in Ḥamāh. In this period the urban renaissance began to bear fruit and a strong local civilian elite was able to gain complete control over the post. Particularly notable with regard to the judgeship were three of the town's grand families, the Banū Wāṣil, the Banū al-Bahrānī discussed above, and the Banū al-Bārizī.

The al-Bārizī family (cf. fig. 3)[45] was at the very core of the Hamawian civilian elite. It was able to monopolise the judgeship for some 120 years during the late seventh/thirteenth and eighth/fourteenth centuries with only one interruption. The first notable individual of this family, Shams al-Dīn Ibrāhīm I (d. 669/1270),[46] specialised in jurisprudence, and taught and studied in various Syrian towns until he settled in his hometown. Here he taught, composed works, issued fatwas, and was finally appointed as the town's judge. He bequeathed this position upon his death to his deputy and son Najm al-Dīn ʿAbd al-Raḥīm I (d. 683/1284),[47] a multidisciplinary scholar. Najm al-Dīn was deposed after some ten years of holding office in favour of Jamāl al-Dīn Muḥammad Ibn Wāṣil (see below), but this did not loosen the grip of the Banū al-Bārizī on the post. A member of the clan

[44] Ibn Wāṣil, *Mufarrij,* 4:76–77.

[45] This family has been treated comprehensively by Martel-Thoumian, *Civils,* 249–66. The following remarks, centered on Ḥamāh, draw on the results of her study. The following individuals who are mentioned in figure 3 will not be discussed in the present section: Kamāl al-Dīn Muḥammad II (d. 776/1374–75) (mentioned in biography of his son Nāṣir al-Dīn Muḥammad II: al-Sakhāwī, *Al-Ḍawʾ,* 9:137–38); Shams al-Dīn Ibrāhīm II (d. before 738/1337–38) (al-Dhahabī, *Tārīkh,* vol. 671–80:145; Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. Muḥammad Sayyid Jād al-Ḥaqq [Cairo, n.d., reprint of 1966–67 edition], 1:77 and 2:461–62); Shihāb al-Dīn Aḥmad II (d. 755/1354) (Ibn Ḥajar, *Al-Durar,* 1:188–89).

[46] Al-Dhahabī, *Tārīkh,* vol. 571–80:324 and vol. 661–670:276; al-Ṣafadī, *Al-Wāfī,* 6:146. On the dates of his judgeship cf. Ibn Wāṣil, "Mufarrij," BN MS 1703, fol. 111r.

[47] Al-Dhahabī, *Tārīkh,* vol. 681–90:149–52; al-Ṣafadī, *Al-Wāfī,* 18:317–20; al-Ḥasan ibn ʿUmar Ibn Ḥabīb, *Tadhkirat al-Nabīh fī Ayyām al-Manṣūr wa-Banīh,* ed. Muḥammad Amīn and Saʿīd ʿĀshūr (Cairo, 1976–86), 1:92–94. He is named "ʿAbd al-Raḥmān" in some sources.

was reappointed two years after Ibn Wāṣil's death and a short interlude by one of the Banū al-Bahrānī, Muwaffaq al-Dīn Muḥammad (d. 699/1300).

This member was Sharaf al-Dīn Hibat Allāh I (d. 738/1338),[48] Najm al-Dīn's son, who was the most famous member of his family. He not only held the judgeship for forty years, but was also wealthy enough to dispense with the salary. Although he was offered the judgeship in Egypt, he preferred to stay within the confines of his hometown where he was embedded via his family into a tight network with members of the civilian elite. He passed the post on to his grandson and deputy Najm al-Dīn ʿAbd al-Raḥīm II (d. 764/1363),[49] whose death marked the end of the Banū al-Bārizī's grip on the judgeship. However, the influence of the family extended beyond the judgeship to other posts so that it was able to retain crucial influence in the town despite having lost control of the judgeship. Further civilian posts held by this family in Ḥamāh included the deputyship of the judge,[50] teaching positions,[51] and administrative positions (*kātib al-sirr*,[52] *wakīl bayt al-māl,*[53] and vizier[54]).

Members of the family were still appointed in the following decades to the judgeship. Now it was the second main line of al-Bārizīs in Ḥamāh—going back to Sharaf al-Dīn's brother Kamāl al-Dīn Muḥammad I (d. 698/1299)—that started to play a more prominent role.[55] However, the careers of Kamāl al-Dīn's descendants show that the al-Bārizīs had been transformed from a typical local family of Ḥamāh into one with a cosmopolitan outlook. Nāṣir al-Dīn Muḥammad II (d. 823/1420),[56] Kamāl al-Dīn's great-grandson, quickly abandoned the judgeship in

[48] Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:124–27; al-Ṣafadī, *Al-Wāfī,* 27:290–91; Ibn Ḥajar, *Al-Durar,* 5:174–76.

[49] Ibn Ḥajar, *Al-Durar,* 2:461–62.

[50] Besides those who later became judge themselves, such as Najm al-Din ʿAbd al-Raḥīm I and Najm al-Dīn ʿAbd al-Raḥīm II, other members of the family remained deputies, such as Zayn al-Dīn ʿUmar (mentioned in the biography of his grandson Nāṣir al-Dīn Muḥammad III [d. 847/1443–44]: al-Sakhāwī, *Al-Ḍawʾ,* 10:69). Zayn al-Dīn deputized for his brother Najm al-Dīn ʿAbd al-Raḥīm II and for Fakhr al-Dīn ʿUthmān (d. 730/1330), who became judge in Aleppo and *khaṭīb* in Ḥamāh (Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:100–1; al-Dhahabī, *Tārīkh,* vol. 661–70:274; idem, *Dhayl Tārīkh al-Islām wa-Wafayāt al-Mashāhīr wa-al-Aʿlām,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 2004), 275; al-Ṣafadī, *Al-Wāfī,* 19:466; Ibn Ḥajar, *Al-Durar,* 3:50).

[51] Besides several judges of the family who obviously taught in addition to their juridical tasks, mention can be made of Kamāl al-Dīn Muḥammad I.

[52] Cf. Sharaf al-Dīn Hibat Allāh II (mentioned in the biography of his son Nāṣir al-Dīn Muḥammad III: al-Sakhāwī, *Al-Ḍawʾ,* 10:69) and the aforementioned Sirāj al-Dīn ʿUmar.

[53] Cf. Ṣadr al-Dīn ʿAbd al-Raḥmān (d. 733/1333) (Ibn Ḥajar, *Al-Durar,* 2:445–46).

[54] Cf. Shihāb al-Dīn Aḥmad II.

[55] Al-Dhahabī, *Tārīkh,* vol. 691–700:364–65; al-Ṣafadī, *Al-Wāfī,* 3:248.

order to become secretary of the chancellery in Ḥamāh, judge in Aleppo, and finally secretary of the chancellery in Egypt. Here, his descendants attained positions in the Mamluk military and administrative elite.[57] His son Shihāb al-Dīn Aḥmad I (d. 822/1419),[58] who opted for a military career, rose to such high rank that the sultan al-Malik al-Muʾayyad (815–24/1412–21) attended his funeral. The other son, Kamāl al-Dīn Muḥammad III (d. 856/1452), succeeded his father in the post of *kātib al-sirr* in Egypt, which he held alternately with the same post in Damascus where he was also appointed chief judge for a while. He married into the sultan's family and the reigning sultan, al-Malik al-Ẓāhir Jaqmaq (842–57/1438–53), was present at his funeral.[59]

Back in Ḥamāh, Sharaf al-Dīn's great grandson Nāṣir al-Dīn Muḥammad I (d. 812/1409–10)[60] reinstated the pivotal role of his family in the town's judgeship. Although the family was no longer able to monopolize the post, two more al-Bārizī judges in the ninth/fifteenth century, Ṣadr al-Dīn Muḥammad (d. 875/1470)[61] and Sirāj al-Dīn ʿUmar (b. 844/1440),[62] are evidence of continuing influence. However, these appointments hint again at the transformation of the al-Bārizīs from a local to a cosmopolitan family. Appointments of family members in Ḥamāh now depended less on a local network than on the influence of the developing Egyptian al-Bārizī branch. For instance, it was Kamāl al-Dīn Muḥammad III who interceded with Sultan Jaqmaq in Egypt for the appointment of Ṣadr al-Dīn Muḥammad to the judgeship of Ḥamāh.[63]

Another family, besides the Banū al-Bārizī and the Banū al-Bahrānī, that was of some importance for the judgeship was the Banū Wāṣil. This clan played a role in the civilian elite of Ḥamāh throughout the seventh/thirteenth century. Three members of the family were appointed judges: Sālim (d. 629/1232),[64] the

Qāḍī Shuhbah, *Ṭabaqāt al-Shāfiʿīyah,* ed. ʿAbd al-ʿAlīm Khān (Hyderabad, 1978–79), 4:137–41; Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah,* ed. Fahīm M. Shaltūt et al. (Cairo, 1963–72), 14:161; al-Sakhāwī, *Al-Ḍawʾ,* 9:137–38. On his judgeship cf. Ibn Qāḍī Shuhbah, *Al-Iʿlām bi-Tārīkh Ahl al-Islām,* ed. ʿAdnān Darwīsh (Damascus, 1977–97), 1:504, 588, 613.

[57] Their integration into the Egyptian civilian and military elite is also evident in marriage patterns: such relations were established with the crucial civilian and military households. In the mid-ninth/fifteenth century the al-Bārizīs were one of the families with whom such alliances were regularly sought (cf. Martel-Thoumian, *Civils,* 258–60).

[58] Ibn Taghrībirdī, *Al-Nujūm,* 14:159.

[59] Ibid., 16:13–18.

[60] Al-Sakhāwī, *Al-Ḍawʾ,* 8:236.

[61] Ibid., 10:24–25. Ṣadr al-Dīn taught also in the Madrasah al-Mukhliṣīyah that had been endowed by Mukhliṣ al-Dīn Ibrāhīm Ibn Qarnāṣ (d. 648/1248).

[62] Ibid., 6:131.

[63] Ibid., 10:24–25.

[64] On the dates of Sālim's judgeship cf. Ibn Wāṣil, *Mufarrij,* 4:118.

historian Jamāl al-Dīn Muḥammad (deputized by his brother),[65] and Shihāb al-Dīn Ibrāhīm Ibn Abī al-Dam,[66] who was linked to the Banū Wāṣil clan via Sālim's wife. Another son of Sālim was an intimate of the Hamawian ruler al-Malik al-Manṣūr II Muḥammad (d. 683/1284) and one of his nephews was physician at the Hamawian court. Jamāl al-Dīn's appointment shows that even during the period of local recruitment trans-regional networks were of benefit. The reasons for the deposition of his predecessor Najm al-Dīn al-Bārizī are not known, but one might assume that Jamāl al-Dīn's tight network within the military and civilian elite of late Ayyubid and early Mamluk society was instrumental in his appointment.[67] However, the influence of this family was in sum rather limited, as it was not able to monopolize specific posts and only rose to some prominence for two generations.

During the period of local recruitment to the judgeship in Ḥamāh some individuals who did not belong to the grand families of the town were appointed. These individuals were nevertheless part of the civilian networks of the town and had the local background that was typical of this period of recruitment. ʿImād al-Dīn Abū al-Qāsim (d. 652/1254) held the judgeship twice but had to flee owing to the conflicts of his brother, Shihāb al-Dīn ibn al-Quṭub, with the town's ruler.[68] Shihāb al-Dīn had initially embarked on a civilian career, acting for example as Sayf al-Dīn al-Āmidī's repetitor *(muʿīd)* in the Madrasah al-Manṣūrīyah. However, he turned later to a military career and became an amir.[69] Although their family

[65] This brother was ʿAbd al-Raḥmān (d. 692/1293) (al-Dhahabī, *Tārīkh,* vol. 691–700:158).

[66] Ibn Naẓīf, *Al-Manṣūrī,* 39; Ibn Wāṣil, *Mufarrij,* 4:174 and 5:346; al-Dhahabī, *Tārīkh,* vol. 641–50:112.

[67] On Ibn Wāṣil's network and the Banū Wāṣil in general cf. Konrad Hirschler, *Medieval Arabic Historiography: Authors as Actors* (London, 2006), 18–28. The exact date of Ibn Wāṣil's appointment is curiously not identifiable as his nomination and Ibn al-Bārizī's deposition are not exactly dated. It is on al-Yūnīnī's statement (*Dhayl Mirʾāt al-Zamān,* 4:218–23) that the latter was deposed "a few years" before his death, that my estimation "late 670s" is based.

[68] Ibn Naẓīf, *Al-Manṣūrī,* 39; Ibn al-ʿAdīm, *Bughyat,* 10:4581–82; Ibn Wāṣil, *Mufarrij,* 4:87, 119, 173–74; idem, "Mufarrij," BN MS 1703, fols. 111v–112r; al-Dhahabī, *Tārīkh,* vol. 651–60:132 [ʿImād al-Dīn]; al-Dhahabī, *Tārīkh,* vol. 651–60:168–69 [Shihāb al-Dīn].

[69] This change from a civilian to a military career pattern was a consequence of Shihāb al-Dīn's close alliance with the younger son of Ḥamāh's ruler, al-Malik al-Nāṣir Qilij Arslan (r. 617–26/1221–29), who was to be installed on the throne against the explicit will of his father. Qilij Arslan granted Shihāb al-Dīn a considerable *iqṭāʿ,* so that he "took off the turban from his head, put on the *sharbūsh,* and wore the soldiers' garments. Al-Malik al-Nāṣir appointed him as governor of al-Maʿarrah [Maʿarrat al-Nuʿmān]. He acted there just as the kings act in their lands." (Ibn Wāṣil, *Mufarrij,* 4:87–88) (The *sharbūsh* was the distinct headgear of the amirs; cf. R. Dozy, *Supplément aux dictionnaires arabes* [Leiden, 1881], 1:742.)

was of no great importance within the civilian elite,[70] their marriage connections secured them the necessary local backing. ʿImād al-Dīn's wife, for instance, was the daughter of a prominent member of the Banū Qarnāṣ, Mukhliṣ al-Dīn Ibrāhīm (d. 648/1248), discussed below.

ʿImād al-Dīn's predecessor, Ḥujjat al-Dīn Ibn Marājil (d. 617/1220),[71] also did not belong to one of the grand families. Nevertheless, his family, which was at least described as "a renowned household in Ḥamāh," had a somewhat prominent standing,[72] particularly due to its holding of administrative positions. Ḥujjat al-Dīn's nephew, ʿAfīf al-Dīn ʿAbd Allāh, acted as envoy for the Ayyubid rulers of the town.[73] Isḥāq ibn ʿAlī Ibn Marājil (d. after 658/1260) was secretary of the chancellery under al-Malik al-Muẓaffar II Maḥmūd, before moving on to Cairo where he held the same position.[74] Members of the family also held administrative posts in other Syrian towns, such as Damascus and Aleppo.[75]

The dwindling grip of the indigenous elite on the Shafiʿi judgeship in the third period, that is from the death of Najm al-Dīn ʿAbd al-Raḥīm II in 764/1363 onwards, is evident in the much more varied background of those appointed to the post. Most importantly, judges tended to be recruited from cosmopolitan individuals who had, just like the judges in the first period of the judgeship, hardly any connections to the town. A case in point is Najm al-Dīn ʿUmar ibn al-Ḥijjī (d. 830/1427). During his career Najm al-Dīn was secretary of the chancellery in Egypt and judge in Damascus, Tripoli, and Ḥamāh without being linked to the local elite of the town.[76] This trend of cosmopolitan candidates

---

[70] Their father was a rather minor jurisprudent. Although Ibn Wāṣil describes him as "eminent in scholarship and fatwas" (Ibn Wāṣil, *Mufarrij,* 4:87), biographical dictionaries refer to him only briefly (e.g., al-Dhahabī, *Tārīkh,* vol. 611–20:98).

[71] Ibn Wāṣil, *Mufarrij,* 4:118–19, who refers to him as "Ibn Marāḥil."

[72] Al-Maqrīzī, *Al-Muqaffá,* 6:359, in the biography of Muḥammad ibn ʿAlī Ibn Marājil (d. 663/1264); cf. also al-Dhahabī, *Tārīkh,* vol. 661–70:155.

[73] Ibn Wāṣil, *Mufarrij,* 4:128 and 141.

[74] Ibn al-ʿAdīm, *Bughyat,* 3:1489.

[75] ʿAlī ibn ʿAbd al-Raḥīm Ibn Marājil (d. 703/1304) was secretary (in Ḥamāh?) and held further unspecified administrative posts (al-Ṣafadī, *Al-Wāfī,* 21:234–35; Ibn Ḥajar, *Al-Durar,* 3:131). His father Shihāb al-Dīn ʿAbd al-Raḥīm had been secretary in different functions in Aleppo and Damascus (al-Ṣafadī, *Al-Wāfī,* 21:234–35). His son Taqī al-Dīn Sulaymān ibn ʿAlī (d. 764/1363) was employed in several *dīwāns*, held the trusteeship in the Umayyad Mosque in Damascus, and moved on to Egypt to become vizier (Ibn Ḥajar, *Al-Durar,* 2:254–55; Ibn Taghrībirdī, *Al-Nujūm,* 11:18).

[76] On him cf. al-Sakhāwī, *Al-Ḍawʾ,* 6:78; Ibn Qāḍī Shuhbah, *Ṭabaqāt,* 4:122–27; Martel-Thoumian, *Civils,* 61, 88, 96, 452. On his judgeship in Ḥamāh: Ibn Qāḍī Shuhbah, *Tārīkh,* 2:23; 4:258, 269, and 311. The only traceable connections are marriage alliances that this family concluded with the Egyptian al-Bārizī branch (Martel-Thoumian, *Civils,* 367).

was accompanied by a significantly enhanced turnover. The average length for holding the judgeship now halved to under seven years, compared with more than thirteen years in the preceding period of local dominance. There were still some local scholars appointed to the post, such as Shihāb al-Dīn Aḥmad al-Ḥamawī (d. 776/1374–75).[77] However, the example of the Bārizī family—which could retain some influence over the judgeship only because it became a cosmopolitan family—shows that the period of the local scholars had definitely come to an end by the mid-eighth/fourteenth century.[78]

THE NON-SHAFIʿI JUDGESHIPS, *KHAṬĪB*S, AND OTHER POSTS

The case of the Shafiʿi judgeship exemplifies the rise of the local civilian elite during the Ayyubid period and its continuing influence well into the Mamluk Sultanate until it lost its monopoly to candidates with a more cosmopolitan background. A consideration of appointments to other judgeships presents nevertheless a more complex picture. The Hanafi judgeship was established in Ḥamāh during the rule of the Mamluk sultan al-Malik al-Ẓāhir Baybars (r. 658–76/1260–77). In the 660s/1260s Baybars introduced the ruling according to which—at least theoretically—each *madhhab* was to be represented by a judge in the empire's major centers. With regard to the judgeships for the other two *madhhab*s, Ḥamāh followed the normal course of affairs in provincial Syrian towns that only introduced them hesitantly:[79] both the first Maliki judge and the first Hanbali judge in Ḥamāh would be appointed only about a century after Baybars' decree.

THE HANAFI, MALIKI, AND HANBALI JUDGESHIPS

The Hanafi judgeship (cf. fig. 4) was monopolized after its introduction[80] for

[78] Sources for those judges in figure 1 who are not discussed in the present section are as follows: no. 19: Ibn Qāḍī Shuhbah, *Tārīkh,* 1:244; no. 20: Ibn Qāḍī Shuhbah, *Tārīkh,* 1:216, Ibn Ḥajar, *Al-Durar,* 3:417–18 (d. 764/1363 [*sic*]); no. 21: Ibn Qāḍī Shuhbah, *Tārīkh,* 1:473 and 504; no. 23: Ibn Qāḍī Shuhbah, *Tārīkh,* 1:613 and 4:258; no. 26: Ibn Qāḍī Shuhbah, *Ṭabaqāt,* 4:141–42; al-Sakhāwī, *Al-Ḍawʾ,* 10:129–31; no. 27: al-Sakhāwī, *Al-Ḍawʾ,* 10:129–31 (biography of no. 26); no. 28: al-Nuʿaymī, *Al-Dāris fī Tārīkh al-Madāris* (Beirut, 1990), 1:249 (al-Madrasah al-Ṣārimīyah); no. 29: al-Sakhāwī, *Al-Ḍawʾ,* 10:24–25 (biography of no. 30).

[79] Cf. Huda Lutfi, *Al-Quds al-Mamlûkiyya: A History of Mamlûk Jerusalem Based on the Ḥaram Documents* (Berlin, 1985), 192, for the case of Jerusalem where even the Hanafi judgeship was introduced only in 784/1382. Al-Qalqashandī describes for his time the status quo that had developed in the preceding periods: in Ḥamāh judges for each *madhhab,* in addition to a Hanafi *qāḍī ʿaskar,* were nominated (al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* [Cairo, 1913–19], 4:238).

[80] Halm, *Ausbreitung,* 227, mentions Najm al-Dīn al-Khalīl ibn ʿAlī al-Ḥanafī (d. 641/1243) as an

some eighty years by the Banū al-ʿAdīm. The Hamawian Banū al-ʿAdīm branch retained its close links to Aleppo, where the Banū al-ʿAdīm were one of the most influential families within the civilian elite. For example, the deputy of the Hanafi judge Jamāl al-Dīn ʿAbd Allāh[81] was sent to Ḥamāh from Aleppo by order of the Aleppan Hanafi judge, Kamāl al-Dīn Muḥammad ibn ʿUmar Ibn al-ʿAdīm (fl. 738/1337–38).[82] However, the period of the Banū al-ʿAdīm in the Hamawian office had, parallel to the development of the Shafiʿi judgeship, a distinctive local character. The first Hanafi judge in Ḥamāh, Jamāl al-Dīn Muḥammad Ibn al-ʿAdīm (d. 694/1295), not only settled in the town but became part of the local elite. He was buried in his *turbah* in the cemetery in ʿAqabah Naqīrīn, a village close to Ḥamāh where other Hamawian notables such as the Shafiʿi judge Jamāl al-Dīn Ibn Wāṣil had their *turbahs* built.[83] Furthermore, he was able to establish a kind of indigenous Hamawian line of succession as his son and grandson, Najm al-Dīn ʿUmar (d. 734/1333)[84] and Jamāl al-Dīn ʿAbd Allāh, held the post too. ʿIzz al-Dīn ʿAbd al-ʿAzīz Ibn al-ʿAdīm (d. 711/1311), the second Hanafi judge of the town, was appointed as an outsider, but remained in the office for some forty years and died in Ḥamāh.[85] The local tradition established by the Banū al-ʿAdīm was continued by Taqī al-Dīn Maḥmūd Ibn al-Ḥakīm (d. 760/1359),[86] who belonged to a Hamawian family that had a *zāwiyah* in the town and a *muḥtasib* among its members.[87] With Taqī al-Dīn's death in 760/1359 this local tradition came to an

earlier judge, but I was not able to find evidence for a judgeship for this individual in Ḥamāh. Sibṭ ibn al-Jawzī, *Mirʾāt al-Zamān fī Tārīkh al-Aʿyān* (Hyderabad, 1951–52), 8:2:743; Ibn al-ʿAdīm, *Bughyat,* 7:3379–80; al-Dhahabī, *Tārīkh,* vol. 641–50:76; al-Ṣafadī, *Al-Wāfī,* 13:397; al-Qurashī, *Al-Jawāhir al-Muḍīyah fī Ṭabaqāt al-Ḥanafīyah* (Hyderabad, n.d.), vol. 1, no. 596; al-Maqrīzī, *Al-Muqaffá,* 3:769; Ibn Taghrībirdī, *Al-Nujūm,* 6:348.

[81] Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:123, 136.

[82] The deputy was Shihāb al-Dīn Aḥmad ibn ʿAbd Allāh Ibn al-Muhājir (d. 739/1338–39). On him cf. Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:129; al-Ṣafadī, *Al-Wāfī,* 7:136–38; Ibn Ḥajar, *Al-Durar,* 1:194–95. His son Shams al-Dīn Muḥammad (d. 794/1391–92) turned Shafiʿi and became judge in Ḥamāh for a period not further defined (Ibn Ḥajar, *Al-Durar,* 3:417–18).

[83] Al-Dhahabī, *Tārīkh,* vol. 691–700:227–28; al-Ṣafadī, *Al-Wāfī,* 4:263; al-Qurashī, *Al-Jawāhir,* vol. 2, no. 300; Ibn Ḥabīb, *Tadhkirah,* 1:181; Eddé, *Alep,* 366f.

[84] Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:110; al-Qurashī, *Al-Jawāhir,* vol. 1, no. 1098; Ibn Ḥajar, *Al-Durar,* 3:265–66; Ibn Taghrībirdī, *Al-Nujūm,* 9:302.

[85] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 111; al-Qurashī, *Al-Jawāhir,* vol. 1, no. 857; Ibn Ḥajar, *Al-Durar,* 2:492.

[86] His *shuhrah* is sometimes given as "Ibn al-Ḥakam." Abū al-Fidāʾ, *Al-Mukhtaṣar,* 4:123, 136; Ibn Ḥajar, *Al-Durar,* 5:105; Ibn Taghrībirdī, *Al-Nujūm,* 10:332.

[87] For the *zāwiyah* cf. the entry on Najm al-Dīn ʿAbd Allāh Ibn al-Ḥakīm (d. 678/1279) in al-Dhahabī, *Tārīkh,* vol. 671–80:305, and al-Ṣafadī, *Al-Wāfī,* 17:583. The *muḥtasib* was Sharaf al-Dīn ʿAbd al-Karīm Ibn al-Ḥakīm (d. 711/1311–12), cf. al-Dhahabī, *Dhayl Tārīkh al-Islām,* 114, and Ibn Ḥajar, *Al-Durar,* 3:15.

end. For instance, Amīn al-Dīn ʿAbd al-Wahhāb ibn Aḥmad (d. 768/1367), one of the subsequent judges, had no background in the town.[88] Thus, the role of the local background in appointments to the Hanafi judgeship started to disappear, similar to the Shafiʿi case, in the second half of the eighth/fourteenth century.

In this same period both the Maliki and the Hanbali judgeships were introduced. It is striking that in both cases local scholars from the outset played hardly any role, but that individuals with a cosmopolitan background dominated the list of post holders. The first Maliki judge in Ḥamāh (cf. fig. 5), Sharaf al-Dīn Ismāʿīl al-Gharnāṭī (d. 771/1369),[89] originated—as was typical for this *madhhab*—from the western Islamic lands. This predominance of post holders originating from the Maghrib or al-Andalus remained unchanged in the following decades: among them were Jamāl al-Dīn Muḥammad al-Maghribī (d. 795/1392),[90] Shams al-Dīn Muḥammad al-Maghribī (d. 840/1437),[91] and, indirectly, Sharaf al-Dīn's son Nāṣir al-Dīn Muḥammad (d. 828/1424).[92] Equally important was Damascus, with which the Maliki community of Ḥamāh entertained close links, as illustrated by Shihāb al-Dīn Aḥmad al-Dimashqī (d. 796/1394)[93] and ʿAlam al-Dīn Muḥammad ibn Nāṣir al-Dīn (d. 805/1402).[94] The latter was deposed and reappointed some ten times as judge in Damascus and filled some of the resulting intervals with appointments to the judgeship of Ḥamāh.

The same is valid for the Hanbali judgeship, which was introduced roughly in the same period as the Maliki post. Its first holder, Aḥmad ibn ʿAbd al-Raḥmān al-Mardāwī (d. 787/1385–86),[95] was born in Mardā, a village close to Nablus which produced a number of Hanbali scholars active in Syria and Egypt.[96] He moved first to Damascus and then to Ḥamāh, where he was appointed to the judgeship and

[88] Ibn Ḥajar, *Al-Durar,* 3:37; Ibn Taghrībirdī, *Al-Nujūm,* 11:92. A similar case of an outsider in the Hanafi judgeship is Aḥmad ibn Muḥammad Ibn ʿArab Shāh (d. 854/1450), who held a number of offices in Persia, Anatolia, Syria, and Egypt (J. Pedersen, "Ibn ʿArabshāh," *EI²* [CD-ROM]; Ibn Taghrībirdī, *Al-Nujūm,* 15:549). Badr al-Dīn Ḥasan ibn Muḥammad ibn Aḥmad (d. 868/1463) descended from a Hamawian trader family and took for a while the Hanafi judgeship of the town, but moved on to Cairo where he was also appointed to the judgeship (Ibn Taghrībirdī, *Al-Nujūm,* 16:326).

[89] Ibn Ḥajar, *Al-Durar,* 1:406–7; Ibn Qāḍī Shuhbah, *Tārīkh,* 3:368.

[94] Ibn Ḥajar, *Inbāʾ,* 5:122–23; Ibn Qāḍī Shuhbah, *Tārīkh,* 1:516, 4:334.

[95] Ibn Ḥajar, *Al-Durar,* 1:179.

[96] In Damascus the Mardāwīyūn cemetery was favored by the Hanafi milieu of the town (Pouzet, *Damas,* 235).

taught.[97] He was followed by his brother Taqī al-Dīn ʿAbd Allāh,[98] and among the post holders of the following decades, such as ʿAlāʾ al-Dīn ʿAlī Ibn al-Maghlī (d. 828/1424–25),[99] Shihāb al-Dīn Aḥmad Ibn al-Rassām (d. 844/1441),[100] Shihāb al-Dīn Aḥmad al-ʿAbbāsī (d. 869/1464),[101] his grandson Muḥyī al-Dīn ʿAbd al-Qādir,[102] and ʿAbd al-Raḥmān ibn al-Kāzarūnī (d. 895/1489–90),[103] rarely can any specific link to Ḥamāh be detected.

This salience of outsiders in the case of the Maliki and the Hanbali judgeships cannot be directly linked to the shift from local to cosmopolitan post holders that was evident in the Shafiʿi case and to some degree also in the Hanafi case. Certainly, the introduction of the two former judgeships coincided with the period when the local elite also lost control over the Shafiʿi and the Hanafi judgeships to the benefit of individuals with a cosmopolitan background. However, the weak role of local families in appointments to the Maliki and the Hanbali judgeships can to a large degree be explained, as was the case in other towns,[104] by the quantitative weakness of these *madhhab*s in Ḥamāh. Arguably a similar quantitative weakness also explains the "importation" of the Hanafi Banū al-ʿAdīm judges from Aleppo. These *madhhab*s' weaknesses are apparent in the source material. The biographical dictionary by al-Dhahabī, *Tārīkh al-Islām,* for instance, shows hardly any entries for Hanafi, Maliki, and Hanbali scholars linked to Ḥamāh until the end of the seventh/thirteenth century. Similarly, *madhhab*-focused works, such as al-Qurashī's (d. 775/1373) biographical dictionary of Hanafi scholars *Al-Jawāhir al-Muḍīyah* and Ibn Rajab's (d. 795/1392) biographical dictionary of Hanbali scholars *Al-Dhayl ʿalá Ṭabaqāt al-Ḥanābilah,*[105] are rather silent on Ḥamāh.

Similarly, no Maliki or Hanbali madrasah is mentioned with regard to Ḥamāh, while the Hanafis were represented by two madrasahs, one founded by Nūr al-Dīn and the Madrasah al-Ṭawāshīyah. However, the teaching staff in Nūr al-Dīn's madrasah was to a large extent comprised of scholars from outside the town. Shams al-Dīn Muḥammad Ibn al-Abyaḍ (d. 614/1217), for example, descended—

[104] Cf. Petry, *Civilian Elite,* 315, for the example of Cairo, where many judges of the three "minority" *madhhab*s (Hanafi, Maliki, and Hanbali), possibly most of them, were outsiders to the town.

[105] Ibn Rajab, *Al-Dhayl ʿalá Ṭabaqāt al-Ḥanābilah,* ed. ʿAbd al-Raḥmān al-ʿUthaymīn (Riyadh, 2005).

just like the Banū al-ʿAdīm—from an Aleppan Hanafi family. He had left Aleppo owing to conflicts with the central figure of the town's *madhhab,* Iftikhār al-Dīn al-Hāshimī, and taught in Ḥamāh in 609/1212–13 but then returned to his teaching post in Aleppo.[106] Another teacher in this school was ʿAlam al-Dīn Qayṣar (d. 649/1251),[107] who had to leave Egypt owing to misconduct in his administrative post.[108] The relatively weak stature of the *madhhab* in the town certainly contributed to al-Malik al-Muẓaffar II Maḥmūd's (r. 626–42/1229–44) decision to have this madrasah destroyed in 630/1232–33 during fortification works.[109]

*KHAṬĪB*S AND OTHER POSTS: THE RISE OF THE BANŪ AL-MUGHAYZIL

Turning to those positions that are less well-documented in the sources, i.e., *khaṭīb*ships and other civilian posts, a development similar to that illustrated above for the Shafiʿi and the Hanafi judgeships emerges: from the mid-sixth/late twelfth century onwards the number of post holders rose distinctively; these post holders were generally Shafiʿis and the majority belonged to the indigenous civilian elite. The *khaṭīb*ship especially, throughout the various locations (see fig. 6 with sources), was dominated by members of grand Hamawian families. Among these were names of families introduced previously such as the Banū al-Bahrānī and the Banū al-Bārizī.

Another name emerging from the list are the Banū al-Mughayzil (cf. fig. 7), a "grand household"[110] of the town whose members reappear frequently as *khaṭīb*s, especially in the central mosque of the upper town, the Great or Upper Mosque (*al-jāmiʿ al-kabīr/al-aʿlá*). The origins of this family are not clear, as they did not attract the interest of the authors of contemporary chronicles or biographical dictionaries. However, it is obvious that it was—or had recently become—an indigenous Hamawian family by the mid-seventh/thirteenth century. Family members rarely rose to prominence in other Syrian towns and focused their career patterns typically on Ḥamāh. The family's head, Muḥammad ibn Muḥammad ibn Naṣr Allāh, was seemingly the *muḥtasib* of the town, although he is only mentioned in the biographies of his sons.[111] His sons started to rise to prominence in the late Ayyubid and early Mamluk period and Badr al-Dīn ʿAbd al-Laṭīf[112] (d. 690/1291),

[106] On him cf. al-Mundhirī, *Al-Takmilah li-Wafayāt al-Naqalah,* ed. Bashshār ʿAwwād Maʿrūf, 4th ed. (Beirut, 1988), 2:408–9; al-Maqrīzī, *Al-Muqaffá,* 7:495–96; Eddé, *Alep,* 369.

[108] Al-Dhahabī, *Tārīkh,* vol. 641–50:429–30.

[109] Ibn Naẓīf, *Al-Manṣūrī,* 80.

[110] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 229.

[111] Cf. the entry on his son ʿAbd al-Ghuffār in al-Ṣafadī, *Al-Wāfī,* 19:27.

[112] Al-Dhahabī, *Tārīkh,* vol. 681–90:418–19; al-Ṣafadī, *Al-Wāfī,* 19:117; Ibn Ḥabīb, *Tadhkirah,* 1:148.

for instance, was nominated *khaṭīb* in the Upper Mosque. His two sons Muʿīn al-Dīn Abū Bakr[113] (d. 724/1324) and Bahāʾ al-Dīn ʿAbd al-Ṣamad[114] (d. 725/1325) followed respectively. Further *khaṭībs* emanating from this family are Badr al-Dīn's grandson Ṣalāḥ al-Dīn Yūsuf[115] (d. 719/1319), who was attached to a place that is not specified, and his nephew Zayn al-Dīn Muḥammad (d. 699/1299)[116] in the Lower Mosque (*al-jāmiʿ al-asfal*), the central mosque of the lower town. Together with Badr al-Dīn's three brothers, the family was able to fill religious posts and offices in different branches of the town's civil administration to an impressive extent.

Tāj al-Dīn Aḥmad (d. 687/1288),[117] the eldest of the four brothers, became the town's *shaykh al-shuyūkh*, i.e., the head of the mystical milieu of the town who represented its interests vis-à-vis the political elite. In general the *shaykh al-shuyūkh* was chosen from the grand families of a town (in Aleppo, for instance, the Banū al-ʿAjamī and in Damascus the Banū Ḥamawayh)[118] because his influence transcended the mystical milieu considerably. Tāj al-Dīn was able to pass the post on to his sons, which reflected also the active marriage policy of the al-Mughayzil family: his son Nāṣir al-Dīn ʿAbd al-Raḥīm[119] (d. 707/1307) had been married to a daughter of Tāj al-Dīn's predecessor in this post, Sharaf al-Dīn ʿAbd al-ʿAzīz al-Anṣārī (d. 662/1263),[120] the son of Ibn al-Raffāʾ, the town's previous Shafiʿi judge, who is mentioned above.

Two other brothers of Badr al-Dīn chose careers in the town's civil administration. Najm al-Dīn ʿAbd al-Ghuffār[121] (d. 688/1289–90) became *kātib al-darj*, working for both al-Malik al-Manṣūr II Muḥammad and his son al-Malik al-Muẓaffar III Maḥmūd (d. 698/1299), and acquired sufficient wealth to set up

[113] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 229; Ibn Ḥajar, *Al-Durar,* 1:478.

[114] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 229; Ibn Ḥajar, *Al-Durar,* 2:477.

[115] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 167; al-Ṣafadī, *Al-Wāfī,* 29:339; Ibn Ḥajar, *Al-Durar,* 5:245: born 668.

[116] Al-Dhahabī, *Tārīkh,* 691–700:407 and 440; al-Ṣafadī, *Al-Wāfī,* 8:124 ("Aḥmad ibn Muḥammad").

[117] Al-Dhahabī, *Tārīkh,* vol. 681–90:290–91; Ibn Ḥabīb, *Tadhkirah,* 1:119.

[118] For Aleppo cf. Eddé, *Alep,* 427–28, and for Damascus cf. Pouzet, *Damas*, 213–14.

[119] Ibn al-Mughayzil, *Dhayl Mufarrij al-Kurūb,* editor's introduction, 20.

[120] Abū al-Fidāʾ, *Al-Mukhtaṣar,* 3:215; al-Dhahabī, *Tārīkh,* vol. 661–70:101-4; al-Ṣafadī, *Al-Wāfī,* 18:546–56. The political role of the *shaykh al-shuyūkh* in Ḥamāh is clearly reflected in his involvement in local and regional affairs: Ibn Wāṣil, *Mufarrij,* 4:273–74, 293, 303; 5:30, 69, 84, 94, 124, 307, 345, 383) as well as idem, "Mufarrij," BN MS 1703, fols. 98v, 102r, 157r.

[121] Al-Dhahabī, *Tārīkh,* vol. 681–90:333; al-Ṣafadī, *Al-Wāfī,* 19:27; Ibn Ḥabīb, *Tadhkirah,* 1:124–25.

several endowments. Sharaf al-Dīn ʿAbd al-Karīm[122] (d. 697/1297) was appointed assistant to the treasurer (*wakīl bayt al-māl*). The administrative role of the family was continued by two individuals mentioned above: Badr al-Dīn's son Bahāʾ al-Dīn ʿAbd al-Ṣamad, who was the vizier of the town and Nāṣir al-Dīn's son Nūr al-Dīn ʿAlī al-Muẓaffarī (d. 701/1301),[123] the author of the supplement to Ibn Wāṣil's *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb*, who was appointed as *kātib al-dīwān* in 682/1283–4. After the early eighth/fourteenth century no member of the Banū al-Mughayzil held any further positions of importance in Ḥamāh and this local family ceased to play a prominent role.

Local Elite Families beyond Formal Positions

Not all the grand families that emerged in Ḥamāh during the late sixth/twelfth century and flourished from the early seventh/thirteenth century onwards necessarily occupied civilian posts in great number. However, the rise of these families was also a consequence of the urban renaissance that provided a framework for alternative ways to acquire a standing in the town. These alternatives were based on the usage of cultural and/or economic capital. In comparison to the families discussed hitherto, social capital in the sense of activating the networks of the town's civilian elite in order to acquire posts played only a secondary role.[124] A typical example of this are the Shafiʿi Banū Qarnāṣ (cf. fig. 8 with sources), a "renowned family,"[125] which possessed its *zāwiyah*[126] and whose members are called "grandee"[127] or "notable"[128] of the town. A number of them were renowned scholars, especially in the field of hadith, who never took any formal positions, such as Ṣafī al-Dīn Aḥmad (b. 510/1117), Muḥammad ibn Hibat Allāh (d. 637/1239), Sharaf al-Dīn ʿAbd al-ʿAzīz (d. 654/1256–57), Nāṣir al-Dīn Muḥammad (d. 662/1264), Muwaffaq al-Dīn Muḥammad (fl. 678/1279–80), and Shihāb al-Dīn ʿAbd al-Raḥīm (d. 700/1300–1). Only a few members held religious/civilian posts, such as Mukhliṣ al-Dīn Ismāʿīl (d. 659/1261), a teacher

both in the "Jāmiʿ Ḥamāh" and the Madrasah al-Mukhliṣīyah, and Fatḥ al-Dīn (d. 730/1329–30), who held the trusteeship *(naẓr)* in the central mosque of Ḥamāh.

The main exception to the family's focus on scholarly activities was Mukhliṣ al-Dīn Ibrāhīm (d. 648/1248), the founder of the Madrasah al-Mukhliṣīyah. He later played an active political role in Homs, which started in a somewhat unfortunate manner as he was imprisoned by the town's ruler al-Malik al-Mujāhid Asad al-Dīn (r. 581–637/1186–1240). The imprisonment of both him and other members of the Banū Qarnāṣ was a consequence of the aborted ruse by Sayf al-Dīn ʿAlī al-Hadhabānī, the strongman of Ḥamāh under al-Malik al-Muẓaffar II Maḥmūd. Al-Hadhabānī undertook with a number of Hamawian notables a feigned flight from Ḥamāh to Homs on the pretence of seeking the support of Asad al-Dīn. Asad al-Dīn saw through the stratagem and imprisoned al-Hadhabānī and his companions on the spot.[129] Nevertheless, Mukhliṣ al-Dīn was more fortunate than al-Hadhabānī and a number of notables who perished in captivity. Released by Asad al-Dīn's successor, al-Malik al-Manṣūr Ibrāhīm (r. 637–44/1240–46), he made a career in the town's administration. He became vizier and de facto regent of al-Manṣūr's son, al-Malik al-Ashraf Mūsá (r. 644–62/1246–63).[130]

The Banū Qarnāṣ did not base their role within the civilian elite exclusively on intensive scholarly activities, i.e., the activation of cultural capital, and occasional political involvement. Rather, they are a typical example of the families who also profited from the economic development of the town from the late sixth/twelfth century onwards. Jamāl al-Dīn ʿAbd al-Raḥmān (d. 673/1274), for instance, was only described as a "notable of his town" because he had an outstanding fortune at his disposal.[131] Owing to this wealth of the family, Zayn al-Dīn Ismāʿīl (d. between 635/1238 and 642/1244), one of the town's grand estate owners, played a central role in the conflict between the town's landed elite and its ruler al-Malik al-Nāṣir Qilij Arslān. When the latter came to power in 617/1221 he obliged the inhabitants of Ḥamāh to buy overpriced wheat. Zayn al-Dīn refused and fled to Egypt and al-Nāṣir had his house destroyed and his estates confiscated. Seemingly his family had, owing to weak integration into the town's administration, insufficient standing to settle the affair through local mechanisms of conflict resolution. Zayn al-Dīn was only able to recover his estates when al-Malik al-Kāmil of Egypt enthroned his candidate in the town, al-Nāṣir's brother al-Malik al-Muẓaffar II Maḥmūd. However, after al-Kāmil's death in 635/1238 Zayn al-Dīn

was imprisoned, where he died.[132]

A second example of a grand family of the town that did not hold civilian posts in considerable number is the Banū Rawāḥah (cf. fig. 9),[133] who gained in strength starting in the mid-sixth/twelfth century. This family originated from Ḥamāh, but its members appear in a number of different Syrian and Egyptian towns. They display a focus on scholarship mixed with some commercial activities and involvement in administrative posts comparable to the profile of the Banū Qarnāṣ. The family started to rise to prominence with ʿAbd Allāh ibn al-Ḥusayn ibn Rawāḥah (d. 561/1165), the renowned *khaṭīb* of Ḥamāh.[134] His son Jamāl al-Dīn al-Ḥusayn (d. 585/1189–90) left the town for Damascus and Egypt where he studied hadith, was imprisoned for an extended period in Sicily, and finally died a martyr below the walls of Frankish Acre.[135] Jamāl al-Dīn's sons, ʿIzz al-Dīn ʿAbd Allāh (d. 646/1248)[136] and Nafīs al-Dīn Muḥammad (d. 642/1245),[137] both dwelled in Ḥamāh and were hadith scholars who were renowned well beyond the confines of their hometown. Nafīs al-Dīn's daughter Fāṭimah (d. 716/1316–17), who played a crucial role among the town's hadith scholars, subsequently continued this tradition of hadith scholarship.[138] Jamāl al-Dīn's brother Muḥammad (d. 631/1233)[139] and their nephew Zakī al-Dīn Hibat Allāh (d. 622/1225) exemplify the trading activities of the family.[140] Both seem to have left Ḥamāh and were active in Aleppo and Damascus where Zakī al-Dīn endowed madrasahs.[141] Mainly remembered for holding civil posts are Nūr al-Dīn Aḥmad (d. 712/1312), *kātib al-inshāʾ* in Tripoli, who only returned to Ḥamāh shortly before his death,[142] and Zayn al-Dīn ʿAbd al-Raḥmān (d. 722/1322–3), secretary in the Upper Egyptian

town of Asyūṭ.[143]

From the sixth/twelfth century onwards, the Banū Qarnāṣ and especially the Banū Rawāḥah rose beyond the confines of the town to a considerably larger extent than the families discussed above. Focusing on scholarly and trading activities they had to seek contacts in the Egyptian and Syrian lands. A middle-sized town such as Ḥamāh did not offer the family members sufficient opportunity to pursue their careers. As these families did not seek civilian posts—or were not able to attain them—they chose the more promising cosmopolitan outlook. Nevertheless, they were firmly grounded in the town that offered, owing to its cultural and economic development, ample resources from which they could draw. In this sense they complete the picture of the town's local elite during the Ayyubid and Mamluk periods.

Conclusion

Two principal points emerge from the analysis of the Hamawian civilian elite in comparison with the development of the civilian elite in other towns during the period: the importance of the household in structuring the civilian elite and the ability of the Hamawian families to close their social universe to outsiders until the mid-eighth/fourteenth century.

Starting with Lapidus, the household has been increasingly defined as the basic unit for exercising power during the Ayyubid and Mamluk periods.[144] Chamberlain in particular has stressed the household's role in the post-Saljuq states, which were characterized by a low number of state agencies and autonomous corporate or religious bodies in both rural regions and urban centers.[145] Military and civilian households alike took charge of most of the administrative functions that were still hardly specialized and often applied on an ad-hoc basis. The Hamawian civilian elite discussed in this article was, similar to that in the region's large cities, structured according to such households. Only those functions that were at the very core of political power, such as the vizierate, were generally beyond the reach of these households.[146] The Hamawian families tended to some kind of

[143] Al-Dhahabī, *Dhayl Tārīkh al-Islām,* 201–2; al-Ṣafadī, *Al-Wāfī,* 18:145–46.

[146] Viziers in Ḥamāh who were not attached to the grand families of the town include for example: Shihāb al-Dīn Asʿad ibn Yaḥyá (d. 614/1217) (al-Dhahabī, *Tārīkh,* vol. 621–30:101–2 and 183–84; al-Ṣafadī, *Al-Wāfī,* 9:32–34); ʿAlāʾ al-Dīn ʿAlī ibn Muḥammad (d. 674/1275) (al-Dhahabī, *Tārīkh,* vol. 671–80:164); Abū al-Ḥasan al-Ḥalabī, vizier under al-Malik al-Manṣūr II Muḥammad (d. 683/1284) (al-Yūnīnī, *Dhayl Mirʾāt al-Zamān,* 3:147–48); Ṣafī al-Dīn Naṣr Allāh ibn Muḥammad (d. 683/1284) (al-Dhahabī, *Tārīkh,* vol. 681–90:173 and al-Yūnīnī, *Dhayl Mirʾāt*

division of labor: the judgeship was largely the domain of the Banū al-Bahrānī, Wāṣil, and al-Bārizī; the Banū al-Mughayzil played a salient role in the *khaṭīb*ship; administrative posts that went to the grand families were dominated by the Banū al-Mughayzil and al-Bārizī; and finally the Banū Qarnāṣ and Rawāḥah were main actors in the transmission of knowledge.

It is not evident how these families put this division of labor into practice or, in other words, in which ways or by what means they conducted the struggle over posts and influence. The only indicators available to us are appointments to the judgeship. It has been shown above that the turnover in the post was relatively low during the period of the local elite. Also of relevance is whether new judges were appointed upon the death of the previous post holder or whether their predecessor was deposed. Between 617/1220 and 764/1363, i.e., the period of the local elite, the large majority of judges died in office and deposition was a rather rare occurrence. These two characteristics of appointments to the judgeship indicate that, compared with a town such as Damascus, the division of labor among the grand households secured a larger degree of social stability within the civilian elite.[147] Thus, we encounter in Ḥamāh the household as the typical basic unit of social organization, but the tight networks of this middle-sized town seem to have prevented social strife to a considerable extent.

The second point emerging from the comparison of Ḥamāh with other cities was the ability of the Hamawian families to close their social universe to outsiders during the period of the local elite. Studies of Cairo and Damascus have shown that scholars from outside the respective town played a considerable role within the civilian elites.[148] Yet in Ḥamāh cosmopolitans ceased to take a prominent position within the social fabric during the hegemony of the town's households in the local period. One explanation for the salience of local scholars is that a post in such a minor town was simply not prestigious enough for cosmopolitan scholars, especially those of greater standing. The case of the aforementioned judge Muḥammad ibn ʿAlī al-Anṣārī, who later moved on to Egypt, shows that the judgeship of Ḥamāh was not necessarily perceived as the climax of one's

al-Zamān, 4:238); Ḍiyāʾ al-Dīn Muḥammad ibn Muḥammad (d. 696/1297) (al-Dhahabī, *Tārīkh,* vol. 691–700:310–11).

[147] On the *fitnah* among the civilian households in Damascus cf. Chamberlain, *Knowledge.* In Ḥamāh in the above-mentioned period Shafiʿi judges died in office on eight occasions (nos. 7a, 9a, 10, 12, 14, 15, 16, and 17 in fig. 1) and were deposed on three occasions (nos. 9, 11, and 13 in fig. 1).

[148] Joan E. Gilbert, "The ʿUlamaʾ of Medieval Damascus and the International World of Islamic Scholarship" (Ph.D. diss., University of California, Berkeley, 1977), 40–42, estimates that about 50% of the senior religious scholars up to 1260 were outsiders. Petry, *Civilian Elite,* 313, shows for the case of Cairo that especially the jurist scholars were recruited from a wide variety of regional backgrounds.

career. His successor al-Qāsim Ibn al-Shahrazūrī was even criticized for "lack of ambition" for taking up a post in such a minor town.[149] Like the renowned Damascene scholar Ibn ʿAbd al-Salām (d. 660/1262), who refused the invitation of al-Malik al-Nāṣir (d. 656/1258) of al-Karak to join him at his court somewhat indignantly with the words "Your lands are too small for my knowledge" and moved on to Egypt,[150] many scholars from inside and outside the town preferred not to continue their careers in the province.[151] Whenever scholars of greater standing came to reside in the town for a longer period, they were mostly scholars of the rational sciences. These scholars found a particularly receptive climate for pursuing their careers in the town during the seventh/thirteenth century.[152]

However, while the comparatively low reputation of Ḥamāh might have facilitated the control of the town's posts by the local elite, this did not entirely exclude outside scholars, who played a role before and after this local period. In order to understand the local elite's capacity to dominate the distribution of the town's positions a further characteristic of Ḥamāh is of relevance: its prolonged status as a semi-autonomous principality, first within the Ayyubid family confederation and subsequently within the Mamluk Empire. The local elite flourished some decades after the town's first Ayyubid ruler al-Malik al-Muẓaffar I ʿUmar came to power in 574/1178. The economic ascent of the region, which was a prerequisite for the development of the local elite, took a decisively local turn with the consolidation of the town's autonomy. It was the following period of some 150 years of nearly uninterrupted autonomy that offered the local elite the political framework necessary for its development. The end of this local period followed the political development again with some delay: after the absorption of the Hamawian principality within the Mamluk Empire in the 730s/1330s, it took further decades until the dominance of the local elite on the town's posts was weakened. The local families either changed their profile to a cosmopolitan

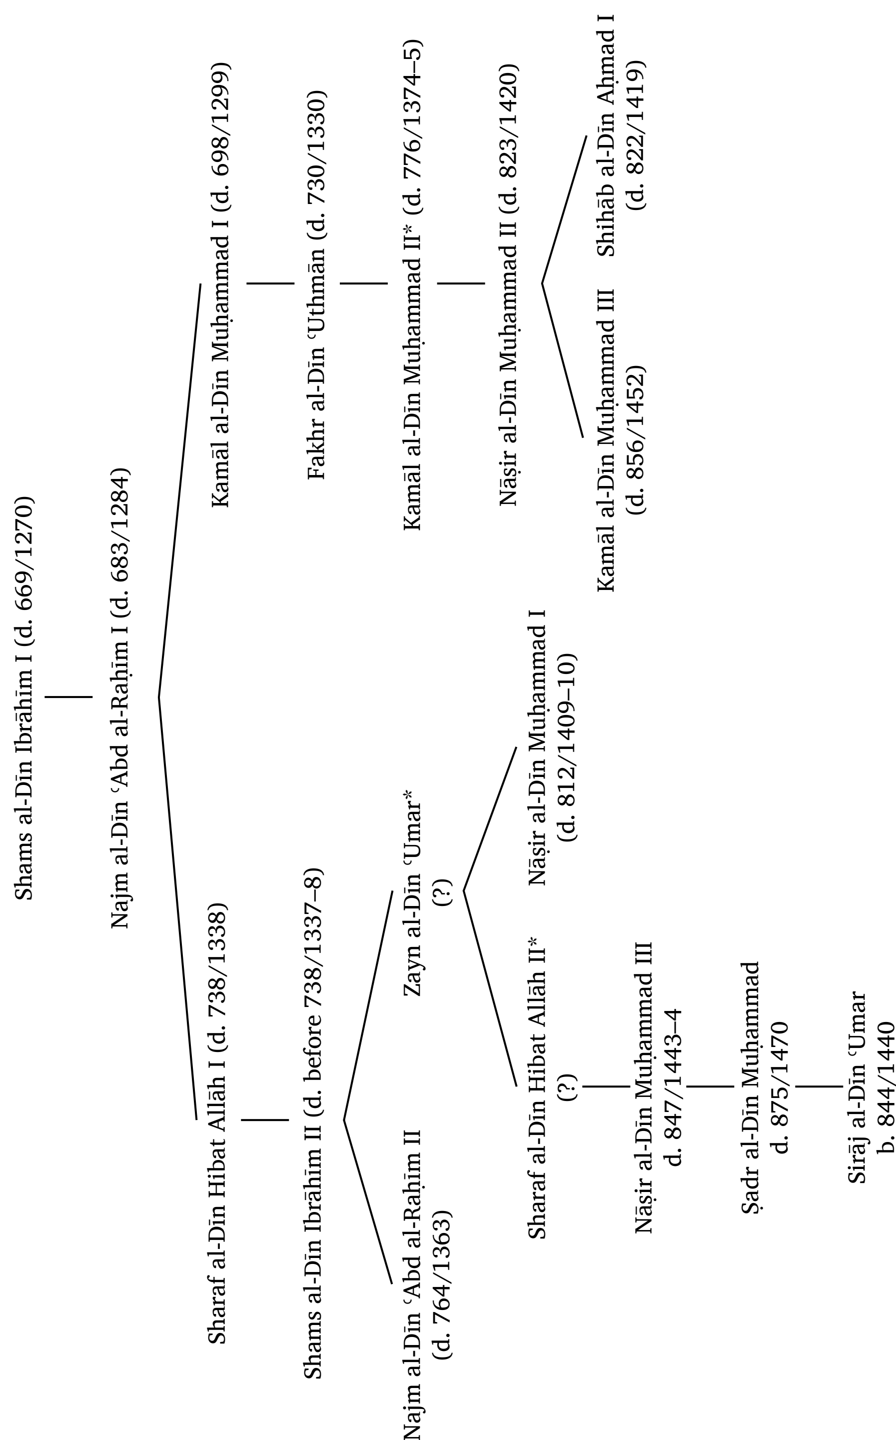
[150] Al-Subkī, *Ṭabaqāt al-Shāfiʿīyah al-Kubrá,* ed. Muḥammad al-Ṭanāḥī and ʿAbd al-Fattāḥ al-Ḥilw (Cairo, 1964–76), 8:210.

[151] A typical example of this is Taqī al-Dīn Muḥammad al-ʿĀmirī al-Ḥamawī (d. 680/1281) who excelled in his hometown at the age of 18 years, was appointed professor in the Ashrafīyah in Damascus, and finally as chief judge in Cairo (al-Dhahabī, *Tārīkh,* vol. 671–80:365–67; al-Ṣafadī, *Al-Wāfī,* 3:18–19).

[152] On rational scholars in Ḥamāh (and al-Karak) cf. Hirschler, *Historiography*, 59–60. Typical examples of such scholars are ʿAlī ibn Aḥmad ibn al-Ḥasan al-Andalusī (d. 637/1239–40), an Andalusian scholar of rational sciences who, although criticized for his beliefs, stayed in Ḥamāh with the Banū al-Bārizī (al-Dhahabī, *Tārīkh,* vol. 631–40:336–37; Ibn Taghrībirdī, *Al-Nujūm,* 6:317) and the above-mentioned Sayf al-Dīn al-Āmidī, the first teacher in the Madrasah al-Manṣūrīyah. Al-Āmidī was a theologian with a brilliant reputation in the rational sciences who had to flee Egypt due to accusations of heresy (Ibn Wāṣil, *Mufarrij,* 4:78 and 80).



outlook during this gradual weakening of their position or they disappeared from the social fabric of the town, which came to be dominated by the trans-regional Mamluk civilian elite.

The Ayyubid and Mamluk Revaluation of the Hinterland and Western Historical Cartography

Considering that a "boom" has taken place in Mamluk studies particularly during the past three decades,[1] research on the spatial conditions of the Sultanate—society, economy, culture, and science—is markedly lagging behind. Contributions both to the geographical and cartographic sources, as well as to the historical geography and cartography of the period, date mostly from the nineteenth and early twentieth centuries, as the *Chicago Online Bibliography of Mamluk Studies* shows.[2] Moreover, the lack of research reviews on these subjects shows that little has been added since.[3] Although the general efflorescence of Mamluk studies has coincided temporally with a refinement of the notions of spatiality, map, and landscape in the social and cultural sciences,[4] that development has not been responded to in a significant way.

This deficiency is even more conspicuous when we consider that the period of the

This article results from a project in the framework of the Collaborative Research Center "Difference and Integration" (see n. 5), which is conducted by the Universities of Halle and Leipzig and funded by the Deutsche Forschungsgemeinschaft (DFG, German Research Foundation). For various forms of aid I should like to thank Stephan Conermann, Stefan Leder, Bruce D. Craig, Ildikó Bellér-Hann, David Tucker, Stefan R. Hauser, Marlis J. Saleh, Thomas Eich, and Jens Kamlah.

[4]A text of seminal importance to the recent discussion of socially constructed spaces is Edward W. Soja's *Postmodern Geographies: The Reassertion of Space in Critical Social Theory* (London, 1988). Criticism of geo-deterministic ideas, however, was practiced before, notably by French historians. See for example Fernand Braudel, *La Méditerranée et le Monde méditerranéen à l'époque de Philippe II* (Paris, 1949), 295–304; Henri Lefebvre, *La production de l'espace* (Paris, 1974), 39–53.

Mamluks and, to a lesser degree, their Ayyubid predecessors holds a considerable potential for analysis in these regards. Following the Crusaders' and Mongols' intrusions, the Sultanate saw a rise in military, political, and infrastructural action which pertained to its spatial cohesion and operability. At the same time, men of letters created a more substantial body of space-related literature than was produced in Arabic either before or after. It may be asked which actions these were and to what extent they connected to each other, or perhaps even answered to an overarching scheme; how factual developments bore on space perceptions; and how the course of Mamluk history was in turn affected by modifications of spatial thinking.

Today this subject is almost a blank—and a challenge to the historian to whom the narrative, geographical, and administrative sources in particular provide a fair point of departure. To begin with, I will address space relations and perceptions in a certain field, viz. nomad-state interaction. I will argue that the Mamluks, on the shoulders of the Ayyubids, pursued a policy intended to lend territorial depth to their rule, for which purpose some sort of expansion into the Bedouin areas in the long-neglected hinterland was of prime importance. While such a policy should be well-suited to mapping, the under-development of historical geography and cartography in Mamluk studies requires that some consideration of its causes and its consequences be examined first. In fact these prolegomena occupy most of this article. The discussion will be concluded by looking ahead to an attempt of mine at historical cartography on this subject.[5]

A Grip on the Steppe

The Frankish state-building in the Levant prompted changes in Muslim territory, inter-regional communications, and the spatial pattern of government. While the reactions of the two subsequent sultanates are well known, they are not yet understood in terms of potential alignment. I dare say that they signify a change in the attitude toward the spatial extension of rule, adopted by the Ayyubids and continued in an intensified manner by the Kipchak Mamluks.

Particularly overturning the existing geographic order was the fact that the land bridge between the African and Asian hemispheres of Islam, the Sinai Peninsula, was successively sealed by the Kingdom of Jerusalem. First, the northern route

[5]The ongoing project "Bedouin Groups in Syria and Egypt: Interplays between Nomads and the Ayyūbid and Mamlūk State Systems" is part of the Collaborative Research Center "Difference and Integration." See http://www.nomadsed.de. My interest in nomad-state interaction is informed by my previous research in the center's framework, the results of which are included in my *Vom Beutezug zur Territorialherrschaft: Das lange Jahrhundert des Aufstiegs von Nomaden zur Vormacht in Syrien und Mesopotamien 286–420/889–1029: Beduinische Gruppen in mittelislamischer Zeit I* (Wiesbaden, 2007).

across the coastal desert through al-Jifār fell out of use. Second, expansion southward into the Bilād al-Sharāh under King Baldwin I led in 510/1116 to the seizure of ʿAqabat Aylah. Elim, or Helim as the Crusaders called it thereafter, was fortified, as was the close-by Jazīrat Firʿawn (then Île de Graye) off the Sinai coast. These were the final links in a chain of castles which connected Latin Palestine by the Lordship of Oultrejourdain to the Red Sea. Consequently the Syrian lands were cordoned off from Egypt.[6] The overland routes that had previously run through al-ʿAqabah were now altered to circumvent the Frankish reach. They were shifted up-country or replaced by maritime routes, which was conducive to Muslim sea transport.

In terms of perceived spaces, the century-old cultural designation of Bilād al-Shām, Greater Syria, was invalidated both as a basic constituent of the realm of Islam and as an entire framework of reference in itself (although that had been a reminiscence rather than a reality following the Ikhshidid-Hamdanid partition agreement some 180 years earlier). Muslim rule was reduced to a narrow strip of land between the Latin principalities to the west and south and the zone of Bedouin tribal domination to the east. Now that much of the arable land of Syria belonged to the Franks, the steppe areas in the hinterland deserved new attention. In fact, the term Bādiyat al-Shām (or Bādiyat al-Samāwah) had always signified that the area of predominantly nomadic use was adjacent to Syria (or to al-ʿIrāq) rather than forming part of it. Virtually squeezed in between the Latin principalities and the Bādiyah, the width of that strip was now, for the most part, only one day's journey on horseback, and access to Egypt and the Hijaz depended perforce more than before on transit through the autonomous sphere of the Bedouin.

The situation of al-ʿAqabah at the junction of the Egypt-to-Syria and Syria-to-Hijaz roads was of strategic value to Ṣalāḥ al-Dīn when shaping a Syro-Egyptian polity. In fact, he occupied the town in 566/1170, i.e., the very year after he had seized power in Cairo. Thus, in the moment of its creation the Ayyubid Sultanate put an end to more than half a century of an exceptionally disjointed situation and restored the territorial continuity of Egypt, Syria, and the Hijaz. It was reasserted, after a Frankish interlude in the town, in 578/1183. The approximate synchronicity of political and territorial change suggests a background on which to conceive several measures of a new space-constituting quality not only in a rough chronological sequence, but also as causally related. At least six sets of actions come to mind. Since all of these are well known, I limit myself here to a brief outline.

1. Stress on the Bedouin population resulted in efforts to stabilize relations with

[6]On this fact and the eventual countermeasures, see Andrew S. Ehrenkreutz, *Saladin* (Albany, 1972), 82–83, 100; Jean-Michel Mouton, "Saladin et les Bédouins du Sinaï," in *Le Sinaï de la conquête arabe à nos jours*, ed. idem (Cairo, 2001), 197–206.

them instead of reiterating the policy of general neglect and sporadic repression to which all settled powers following the Umayyads had resorted. Shortly after Ṣalāḥ al-Dīn's reign, the institution of the *amīr al-ʿarab* or "Shaykh Superior of the (Syrian) Bedouin" was introduced.[7] Conceptually, the amir was to serve as an addressee to the government and as an arbitrator in cases of conflict. Practically, he was to ensure adequate levels of military service by his people in the sultan's army, as well as the safeguarding of the roads of the interior. As this arrangement was accompanied by subsidies and land grants for the amir, it produced frictions among competing tribal groups, which may have been a welcome side-effect. The Āl Faḍl ibn Rabīʿ of the Banū Ṭayyiʾ emerged as the dominant family under this system and further consolidated their position during Mamluk times. Although the institutionalization of the amirate could not secure the Bedouins' good conduct at all times, it largely fulfilled the objective of providing an interface with them. The impression that both dynasties pursued a systematic policy towards the Bedouin is further supported by the fact that the office of *mihmindār* was established at the court in Cairo.[8] Serving as counterpart to the *amīr al-ʿarab,* this official was responsible for receiving Bedouin representatives and regulating the Bedouin-state relations. For the first time in four centuries, the Bedouin were involved to some degree in state administration, and the Bādiyah became more closely linked to Syria proper (though in a still rudimentary way), thus essentially extending the territory of the Sultanate. The importance of the Bedouin even increased when the Mongols' first invasion of Syria in 657/1259 turned the Bādiyah into a buffer zone between Mamluk Syria and Il-Khanid al-ʿIrāq for three-quarters of a century—the Bedouins' supremacy over the steppe allowed them to adopt the role of the Mamluks' indispensable confederates, albeit rather unreliable ones.

2. A system of governmental postal communications, the *barīd,* was set up by Baybars I to serve again as the backbone of an all-regional intelligence network that had been defunct since the early Buyid period.[9] By means of this institution,

Richards, "The Mamluk Barīd: Some Evidence from the Haram Documents," in *Studies in the History and Archaeology of Jordan*, vol. 3,

Egypt and Syria moved closer together than ever before. This instrument was particularly helpful in informing and enforcing governmental decisions and lent greater effectiveness to centralized rule. To say that the territorial extension of the Sultanate was made operable is to imply that the issue of space had been identified and properly addressed. The most precarious *barīd* routes passed through areas over which Bedouin groups held sway. Bridging these stretches—namely between Cairo and Gaza through al-Jifār, between Damascus and al-Raḥbah across the Palmyrena, and between al-Karak and al-Shawbak through al-Sharāh—was of utmost importance for the proper functioning of the system. There the Bedouins' influence was to be encountered, and their areas could not be allowed to remain extra-territorial, as they had been since the early Abbasid period. Securing the postal service called for the political appeasement of the Bedouin, if not control of them, or in other words, for an extension of state authority into the Bedouin habitat.

3. Already one century earlier the pigeon post *(ḥamām)* had been set up, or rather revitalized, by Nūr al-Dīn Maḥmūd ibn Zangī, and an optical signaling system by means of beacons *(manāwir)* was now also employed.[10] It may be presumed that these networks improved as the new postal service coincided with their routes for the most part, notably including the crossing of the Palmyrena towards al-Raḥbah. They were altogether instrumental for coping with the dimensions of the empire and allowed news to travel quickly. Although the pigeon post and the signaling system did not depend to the same extent on control of the terrain as did the postal system, the possibility of interference by the Bedouin could not be ruled out.

4. Another reiteration of Umayyad policies consisted in fortification works in a number of strategic places within the Bedouin sphere or within the zone of the nomads' contact with the agricultural area. Most notable among these are the constructions of Ṣalāḥ al-Dīn's uncle, Shirkūh I, and the Ayyubid prince of Hims, Shirkūh II, at Qalʿat Shirkūh above Palmyra (only in the eleventh/seventeenth century renamed Qalʿat Ibn Maʿn),[11] Qalʿat Shumaymis near Salamīyah,[12] and

ed. Adnan Hadidi (Amman, 1987), 205–9. The recent study by Adam J. Silverstein, *Postal Systems in the Pre-Modern Islamic World* (Cambridge, 2007), 165–85, especially 169–70, convincingly argues that Baybars' introduction of the *barīd* was informed by its potential to strengthen the Mamluks' horse-based military system and to allow affiliation of the Sultanate to the Abbasid caliphate, but little mention is made of its bearing on geopolitics.

[12]It is not yet comprehensively studied, but see now Janusz Bylinski, "Exploratory Mission to

Qalʿat al-Raḥbah on the Euphrates.[13] These were still used or had been rebuilt in the time of the Kipchak Mamluks, namely by Baybars I. They belonged to an innovative sort of fortification (possibly adapted from the Crusaders), the free-standing hilltop castle, which is most significantly present in the Levantine coastal mountains.[14] These elevated structures were better suited to the supervision of their surroundings than the previous Islamic ground-level building traditions of the *qaṣr* (as a citadel and refuge inside a settlement) and the Umayyad "desert castles" (as hybrid structures with military functions and functions for agriculture and livestock breeding). Each new fortification occupied a position of strategic value above an important town in or at the fringe of the Bedouin habitat; this allowed the authorities to exercise control over Bedouin movement in a considerable radius. Furthermore, some caravanserais of the *barīd* were fortified[15] and, as a more general trend in architectural style, pseudo-fortification elements were applied to many non-military buildings.[16]

5. A number of Bedouin groups whose territory extended deep into the steppe or desert and was transected by a long-distance communication route were assigned the surveillance of the area along that route *(darak)*.[17] In such a precinct they acted as legitimate deputies of the sovereign and became agents of the state's expanded territorial authority.

6. Bedouin military service was a widespread practice, loyal groups being collectively referred to as "the obedient Bedouin" *(ʿarab al-ṭāʿah)*.[18] Moreover, the groups that inhabited Egypt's Western Desert and the Sinai Peninsula had a

share in maintaining the postal system on a regular basis with mounts, fodder, and personnel, and they were thus called the "horse unit of the monthly service" (*khayl al-shihārah*).[19] In Egypt the Bedouin were more closely drawn into state interaction than in Syria, due to their greater dependence on agriculture and to the government's particularly tight control of the country.[20] The largest part of the nomadic population was compelled to seek the immediate proximity of the Nile Valley or the oases because the interior was considerably more inhospitable than the Syrian Bādiyah. It is clear from Jean-Claude Garcin's study of Qūṣ and its zone of influence that Bedouin involvement was a function of confined provincial locales.[21] However, no permanent pacification was accomplished, the political rationale of tribalism remaining largely intact in spite of the state's attempt to supersede it. At times the Bedouin even gained the upper hand.

Summing up these measures, it appears that in combination they contributed to an overarching trend in Ayyubid and Mamluk governance. Both sultanates surpassed the older pattern of a state that is content with rule over urban-rural continua within the sedentary sphere. Instead, they also aimed at controlling the sparsely inhabited hinterland which was the sphere of nomadic groups. Seen against the background of state conduct following the Umayyad period, this revaluation of the steppe areas and its Bedouin population is strikingly different from previous practice. We may refer to it as a change in the perception and organization of space towards a new characteristic of extensiveness and cohesion. This shift was effective by the time of the early Ayyubids, supposedly as a remedy to the experience of territorial disconnection during the Fatimid/Börid/Zangid period, and it became a continuous trend that was sustained and pushed still further under the Mamluks. It seems to harmonize with another, though negative, trend in their attitude towards space, i.e., the renunciation and even willful degradation of the coastal space and of maritime connections, which Albrecht Fuess has elucidated in his study on the Levantine "burnt shore."[22] Both trends indicate that the Mamluks were more at ease with controlling the interior, even a vast hinterland, than they were with controlling its contested borders.[23]

[22] Albrecht Fuess, *Verbranntes Ufer: Auswirkungen mamlukischer Seepolitik auf Beirut und die syro-palästinensische Küste (1250–1517)* (Leiden, 2001).

[23] A parallel process of spatial restructuring took place in Egypt alone, where an individual Egyptian totality had assumed shape since the fifth/eleventh century. It discontinued in the mid-eighth/fourteenth century (remarkably for some of the same reasons that undermined the permeation of

However, the Mamluk attempts at involving the Bādiyah waned from the early eighth/fourteenth century onward, when they abandoned the Syrian beacon and pigeon services, seemingly due to the cessation of Mamluk–Mongol hostilities in about 720/1320, and the *barīd* went into decline. Moreover, they reduced their presence in Upper Egypt, owing to the outbreak of the Black Death in 748/1347. Half a century later, the intelligence network in Syria finally collapsed under Tīmūr's invasion, and after his retreat in 803/1401 no attempt at renewing those mechanisms was made.[24]

These six sets of actions should have helped to generate and perpetuate a new sort of spatial organization. More evidence of development could be collected, but some reservations will better inform the upcoming discussion of the subject. While the *barīd,* the amirate of the Bedouin, and other elements are clearly highlighted in the sources, the grip on the steppe as such is hidden between the lines. It is yet to be determined whether the alignment of these elements worked with or without a deliberate plan. For the moment it seems appropriate to assume a confluence of various measures that were nonetheless effective as if having been designed to work together. With regard to the Bedouin as pivotal actors, it is evident that the amirate emerged from a decidedly invasive governmental scheme. It affected them deeply enough to be perpetuated as a mode of inter-tribal organization and representation to the outside well into the first century of Ottoman rule.

Another difficulty of interpretation arises from our insufficient understanding of spatial thinking in this period. Unfortunately, there is no work comparable to André Miquel's *Géographie humaine* (which ends a century before the rise of the Ayyubids).[25] Even central categories are rarely broached. Ralph W. Brauer's exposition of how boundaries and frontiers were conceived by geographers also centers on pre-Mamluk times. However, his finding, for instance, that they were inclined to measure a given area of land by its width and length but disregard

the steppe). See Jean-Claude Garcin's "Pour un recours à l'histoire de l'espace vécu dans l'étude de l'Égypte arabe," *Annales E. S. C.* 35 (1980), reprinted in his *Éspaces, pouvoirs et idéologies de l'Égypte médiévale* (London, 1987), pt. iii, 438, 442–45.

[24]Silverstein, *Postal Systems,* 179–85, also shows that the decline of the *barīd* ensued from its demilitarization and bureaucratization in the course of al-Nāṣir Muḥammad's reforms. A late effort to reorganize the *barīd* seems to be indicated by the construction of the *khāns* at Inqirātā (north of Maʿarrat al-Nuʿmān) and Dannūn (south of Damascus) in the 770s/1370s. See Sauvaget, "Un relais du barîd mamelouk," 48. surface areas and square measures[26] brings to mind the potential otherness of historical spatial notions and sheds light on the difficulty of reconstruction. While we must consider mental maps a historically embedded phenomenon, we still have to tease out how the Ayyubids and Mamluks "mapped" their dominion.[27]

NOTES ON HISTORICAL GEOGRAPHY AND CARTOGRAPHY

Knowledge of spatial contexts is critical to the historian. In the process of making an argument, multiple references are inevitably made to places, routes, landscapes, and bodies of water, as well as to distances and proximities. It is not surprising, therefore, that many studies are accompanied by one or more maps, which usually display a number of labeled dots for cities, battles, etc., as well as some lines for coasts and streams, communications and borders, plus perhaps shadings which represent mountains or some other feature. Yet more often than not, there is no such visual aid. We are then required to recollect locations and regional settings from previous knowledge. Obviously, it is expected that each reader should have a mental map, and not just an individual but a generally shared one. Such an implicit requirement is in part acceptable, as we ought to be grateful each and every story does not begin with Adam and Eve—or a "Cairo" dot and a "Damascus" dot in a largely unvarying sort of base map. On the other hand, the lack of a detailed map in any given study is painfully felt as soon as either minor or remote places or complex formations are mentioned. All too often in such cases, that presumed mental map will prove deficient in both topographical and thematic respects. One must return after all to previous works of historical geography and cartographic materials.[28]

[26]Ralph W. Brauer, *Boundaries and Frontiers in Medieval Muslim Geography* (Philadelphia, 1995), 36.

[27]Compare the term "géographie de l'attention" in Garcin, "Pour un recours à l'histoire de l'espace vécue," 438.

[28]Cartography as we know it, and as it was prefigured for the most part by medieval Islamic authors in growing contrast to Ptolemaic standards, postulates a central problem. The surface of a spherical/ellipsoid body—technically speaking, a topology of geographic features that have coordinates in a curved graticule of meridians and parallels—must be transferred on a plane according to one of many possible procedures of geometric projection. This implies that some distortion of the real is unavoidable, while the rules of each projection determine which particular properties of the three-dimensional body are preserved on the plane. The achievement may pertain to the equal representation of angle, distance, and/or area, but cannot possibly reconcile the three of them at the same time. Compliance to modern standards is signified to the map reader in three definite ways: one, through a verbal projection statement; two, through a scale statement, either numerical, verbal, or in the shape of a bar graph; and three, through a grid which is referenced to a prime meridian (not necessarily the circle of longitude of Greenwich) and a prime parallel (not necessarily the equator). It will be shown why maps that do not comply with these principles may rather be termed sketch maps.

Mamluk studies are not only short on such helpful works, but there is also no review of what has already been produced. The following attempt to outline the development of historical geography and cartography of the Middle East so far is certainly preliminary, for it must not claim to bridge the gap at once. Yet, in the absence of a better alternative,[29] it may be helpful for the time being to acknowledge certain gaps and possible future tasks. Therefore, the scarcity of Mamlukist contributions requires adopting a more general point of view than one of strict chronological periodization. I should also point out that this article relates primarily to Western mapping activities. While Arab and Ottoman specialists had been at the vanguard since the early Middle Ages,[30] they lagged behind the advancement of cartography which some European countries experienced during the eighteenth century. At the heart of this progress was geodetic triangulation, i.e., the measurement of distances between positioned points with the objective of forming a network of triangles, practiced first in France in the 1740s by César François Cassini de Thury. Beyond scientific and technical progress, I believe that the reversal of leadership was an outcome of the Europeans' increasingly practical application of cartography to governance, administration, warfare, and commerce, whereas the Arab-Ottoman tradition of cartography was hardly challenged. With Asia Minor attracting the greatest Ottoman attention, the Sublime Porte neglected the mapping of its Arab provinces. This subject merits a closer look which is beyond the scope of the present article. Here I rather wish to keep to Western mapping of the Middle East, arguing that it has seen four more or less sequential stages which have affected the opportunities of historical mapping in specific ways. The technical side of mapping will not be considered to the same extent as the relationship between historians—formerly, "Orientalists"—on the one hand and cartographers on the other.

1. Napoleon and After

During the opening stage of this cartographic advancement, the time of European exploration and colonial expansion, mapping was firmly tied to geodesy and served to document primary topographical stock-taking. For the first time, the terrain was to undergo systematic surveying so that points and linear objects, as a start, could

[29]Since 2006, the carto-bibliography of the region is being addressed country by country on a website under the direction of Jean-Luc Arnaud, *La cartothèque méditerranéenne,* http://cartomed.mmsh.univ-aix.fr. The focus is on French and British topographical map series produced after 1900. The site will soon expand its range and be renamed *CartoMundi.*

[30]This is demonstrated throughout the massive work of Fuat Sezgin, *Geschichte des arabischen Schrifttums,* vols. 10–12, *Mathematische Geographie und Kartographie im Islam und ihr Fortleben im Abendland* (Frankfurt am Main, 2000). For a starting point, see the introduction to the map volume, vi–xiii.

be positioned on geo-referenced gridded maps. The initial and most important single scheme was carried out by a colonial body *par excellence,* a detachment of the Napoleonic Egyptian expeditionary forces. Formed on the spot in 1798, the Service topographique de l'armée d'Égypte worked as a veritable survey authority, although understaffed and obstructed by many external imperfections. By 1801 it had achieved the first triangulation of some parts of the region. The survey resulted in the first map of the Middle East along modern principles. Forming part of the *Description de l'Égypte,* 47 sheets were printed on a scale of 1:100,000 showing the settled areas along the Nile, the Mediterranean coast of Sinai, and the Levant up to Sidon in great detail and expressive graphic style.[31]

This pioneering work was recommenced in Egypt only after the establishment of the Egyptian Survey Authority in 1878—the very year the British and French disempowered the Khedive.[32] Western Palestine saw an interlude from 1871 to 1878, when British military personnel mapped most of the area on behalf of the—specially founded—Palestine Exploration Fund (PEF),[33] before finally, in 1920, the British established the Survey of Palestine.[34] In Syria and Lebanon, large-

---

[31]Field work was conducted from 1798 to 1801, and the engraving of the plates in Paris was completed in 1803. Put to press in 1808, the map was guarded as a state secret and published only ten years later, then entitled "Carte topographique de l'Égypte et de plusieurs parties des pays limitrophes levée pendant l'expédition de l'armée française . . . à l'échelle de 1 millimètre pour 1000 mètres." Together with a three-sheet version on a reduced scale, it constituted the *Atlas géographique,* ed. Pierre Jacotin (Paris, 1818), being part of the *Description de l'Égypte, ou Recueil des observations et des recherches qui ont été faites en Égypte pendant l'expédition de l'armée française*, édition impériale. The reprint of the atlas (Paris, 1826) within the 2nd ed. or édition royale is now also accessible through the DVD edition of the corpus by the Bibliotheca Alexandrina (Alexandria, 2004). This includes Jacotin's "Mémoire sur la construction de la carte de l'Égypte," *Description de l'Égypte: État moderne,* 1st ed., vol. 2.2 (1822), 1–118 (=2nd ed., vol. 17 [1824], 436–652), and the "Index géographique, ou Liste générale des noms de lieux de l'Égypte . . .," in ibid., 787–846 (=2nd ed., vol. 18.3 [1830], 35–266). See Anne Godlewska, *The Napoleonic Survey of Egypt: A Masterpiece of Cartographic Compilation and Early Nineteenth-Century Fieldwork* (Toronto, 1988) = *Cartographica* 25 (1988), 1/2; Ghislaine Alleaume, "Entre l'inventaire du territoire et la construction de la mémoire: L'œuvre cartographique de l'expédition d'Égypte," in *L'expédition d'Égypte: Une entreprise des lumières 1798–1801,* ed. Patrice Bret ([Paris], 1999), 279–94.

[32]Its major mission to produce a cadastral survey did not progress well. Replaced by the Survey Department in 1898, activities regained momentum and resulted in a cadastral map series of more than 30,000 sheets on a scale of first 1:4,000, later 1:2,500 (Cairo, 1892–1918). See *La cartothèque méditerranéenne,* http://cartomed.mmsh.univ-aix.fr/mmsh/Egypte/series/G16.swf and ~/G98.swf.

[33]Claude Conder and Horatio Herbert Kitchener, *Map of Western Palestine in 26 Sheets from Surveys Conducted for the Committee of the Palestine Exploration Fund . . . during the Years 1872–1877,* scale 1:63,360, one inch to the mile (London, 1880), indexed by *Arabic and English Name Lists,* ed. Edward Henry Palmer (London, 1881).

scale[35] mapping languished until in 1918 the same rush for mandatory institution-building impelled France to set up the Bureau topographique de l'Armée française du Levant.[36] One need not be a Foucauldian to notice that the cartography of the Middle East was thus deeply rooted in the European struggle for domination.

In the meantime, the agents of mapping projects were individuals, or at most tiny companies of scholars and/or adventurers, who traveled on behalf of an inquiring princely Maecenas, an academic society, or on their own behalf. Following the example of Carsten Niebuhr, most traveler-explorers in the Orient were trained in the use of astronomic and geodetic devices, as well as the scrutiny of textual sources. They supplemented the positioning of sites by asking how historical place names preserved in ancient and medieval literature ought to be identified against the background of recent toponymy. Consequently, large-scale maps of selected small regions were often produced together with an onomastic commentary and tentative historical geography.

The better of these mapping projects not only appealed to the Orientalist but were on the cutting edge of geography and cartography. Hence, it is not surprising that researchers and professional cartographers encouraged and supported each other. Alois Musil's map "Northern Arabia"—companion to his four volumes of topographical itinerary—lent the crowning glory to that map-cum-text genre,[37] but even though he was a highly-trained and untiring map maker,[38] he had the map drawn by the Militärkartographisches Institut in Vienna, one of the most advanced institutions of its kind at that time. Probably the most productive liaison

Remote Sensing (abbr. *PE&RS*) 66 (2000): 915b; Dov Gavish, *A Survey of Palestine under the British Mandate, 1920–1948* (London, 2005), based on his *Qarqaʿ u-mapah: Me-hesder qarqaʿot le-mapat Erets Yisraʾel, 1920–1948* (Jerusalem, 1991).

[35] Even cartographers get confused once in a while about what is termed large and small. Thus it may be helpful to mention that scales are fractions; hence a scale of 1:10,000 (one ten-thousandth) is larger than a scale of 1:1,000,000 (one millionth).

[36] Clifford J. Mugnier, "Grids and Datums: The Syrian Arab Republic," *PE&RS* 67 (2001): 1000–3.

[37] Alois Musil, *Northern Arabia*, scale 1:1,000,000, on four sheets (New York, 1926), accompanying four of his monographs in the American Geographical Society's Oriental Explorations and Studies series, vols. 2–5 (previously published as *Karte von Nordarabien, nach eigenen Aufnahmen,* same scale [Vienna, no date]). Along the course of the Euphrates it adjoins the map "Southern Mesopotamia" on the same scale, attached to his *The Middle Euphrates: A Topographical Itinerary,* vol. 3 of the series (New York, 1927), while the southwestern sheet is elaborated by the map on a scale of 1:500,000 which is attached to his *The Northern Ḥeǧâz: A Topographical Itinerary,* vol. 1 of the series (New York, 1926).

[38] E.g., his journey of 1908–9 yielded no less than 61 manuscript maps on a scale of 1:300,000 of 37 × 35.5 cm each with an approximate 3,000 place names. See Musil's communication in the Viennese *Anzeiger der Kaiserlichen Akademie der Wissenschaften: Philos.-hist. Kl.* 47 (1910): 188–89. The series merged in the map *Northern Arabia* (see n. 37).

across the disciplines was established between the distinguished geographers and cartographers Heinrich Kiepert (1818–99) and Richard Kiepert (1846–1915) and several scholarly explorers, among them Edward Robinson and Eli Smith, L. M. A. Linant de Bellefonds, Richard Lepsius, Johann Gottfried Wetzstein, Eduard Sachau, Carl Humann, and Max Freiherr von Oppenheim.[39] While the Kieperts regarded their reports and drafts as full-fledged sources, the ensuing maps of the Middle East helped define the state of the art in regional cartography and in return cleared the way for other explorers to come. Despite many inevitable shortcomings, the best of these maps remained in use for decades and served as a basis for later topographical studies until World War I.[40]

Understanding the contemporary topography was considered such an essential prerequisite to historical understanding that historiographic mapping itself was discouraged for most of the nineteenth century. As long as the determination of coordinates was the focus, stock-taking implied a tendency to absorb the remnants and toponymic substrata of different eras and blend them into area-specific maps. This has been demonstrated in the case of the Napoleonic scholars whose policy on toponymy was directed towards standardization.[41] Although mapping seemed urgent enough to leave nothing undone, several regions remained difficult to access and therefore survey, and were thus even more aptly subjected to historical reconstructions. Such conditions prevailed beyond the Nile Valley and the Fertile Crescent. It is for this reason that Ferdinand Wüstenfeld, who had neither been to the region nor considered doing so, could dare to combine a tentative geographical outline with place names derived from medieval Arabic historians and geographers. The first such map was lent credence by having been

---

[39]E.g., Heinrich Kiepert, "A New Map of Palestine Including also Phœnicia and Cœlesyria," scale 1:600,000, on two sheets in Edward Robinson, Eli Smith, et al., *Later Biblical Researches in Palestine and the Adjacent Regions: A Journal of Travels in the Year 1852* (London, 1856), following 664; H. Kiepert, eight maps on various scales in Richard Lepsius, *Denkmaeler aus Aegypten und Aethiopien,* plate vol. 1 (Berlin, [1859]), pls. i–vi, some based on Linant de Bellefonds and Lepsius himself; H. Kiepert, "Die Landschaften im Osten von Damaskus (Ḥaurân und Trachonen)," scale 1:400,000, in Johann Gottfried Wetzstein, *Reisebericht über Hauran und die Trachonen nebst einem Anhange über die sabäischen Denkmäler in Ostsyrien* (Berlin, 1860), preceding p. i; H. Kiepert, two maps on a scale of 1:750,000, attached to Eduard Sachau, *Reise in Syrien und Mesopotamien* (Leipzig, 1883); H. Kiepert, "Karte des nördlichsten Theiles von Syrien," scale 1:300,000, in Carl Humann and Otto Puchstein, *Reisen in Kleinasien und Nordsyrien,* atlas (Berlin, 1890), preceding pl. i; Richard Kiepert, map on a scale of 1:850,000 on two sheets, attached to Max Freiherr von Oppenheim, *Vom Mittelmeer zum Persischen Golf durch den Ḥaurān, die Syrische Wüste und Mesopotamien* (Berlin, 1899/1900), also separately published (Berlin, [1915]).

[40]E.g., see Gavish, *A Survey of Palestine,* 12, 14–15.

[41]Alleaume, "Entre l'inventaire du territoire et la construction de la mémoire," 282–85.

executed by Heinrich Kiepert,[42] but as the successive maps bear only Wüstenfeld's name it is conceivable that the venture had proven unrewarding to the specialist.[43] After all, intense and fruitful cooperation between cartographers and historians, philologists, and others lasted only as long as the political situation on the ground did not allow for regular surveying along technical lines.

2. Diverging Paths

The turning point in the relationship between topography and historiographic mapping was reached when the example of Egypt was followed in the establishment of survey authorities all over the region at the beginning of the British and French mandatory administrations. A bifurcation took place. On the one hand, hosts of professional engineers, geodesists, and cartographers took up work in a field which was now pacified. At the same time, the heterogeneous national or mandatory mapping activities in the region began to adapt—due to the first internationally agreed-upon mapping scheme, the *Carte internationale du monde/International Map of the World*[44]—to a system of divisible metric scales and sheet lines.[45] The cartographers applied ever better scales and more sophisticated techniques to the areas previously mapped and set about filling in the blanks. Only part of the interior of the Arabian Peninsula retained for some time the air of

[42]Heinrich Kiepert, map on a scale of 6 cm to 150 *mīl* or 50 *farsakh* (i.e., ca. 1:5,000,000) in Ferdinand Wüstenfeld, "Die Strasse von Baçra nach Mekka mit der Landschaft Dharîja, nach arabischen Quellen bearbeitet," *Abhandlungen der Königlichen Gesellschaft der Wissenschaften zu Göttingen: Hist.-philol. Cl.* (abbr. *AGWG*) 16 (1871): following 89.

[43]Ferdinand Wüstenfeld, map on a scale of 6.7 cm to 140 *mīl* (i.e., ca. 1:4,000,000) in his "Das Gebiet von Medina, nach arabischen Geographen beschrieben," *AGWG* 18 (1873): facing 86; idem, map not to scale in his "Baḥrein und Jemâma, nach arabischen Geographen beschrieben," *AGWG* 19 (1874): facing 222. Both maps as well as that in n. 42 were also included in the monographic offprints (Göttingen, 1871, 1873, and 1874).

[44]The framework of the World series on the millionth scale, published from 1913 on, sprung from a proposal of 1891 and was agreed upon by international conferences at London 1909, Paris 1913, and Cambridge 1928. It was projected under the combined aegis of national, colonial, and mandatory survey authorities and published accordingly by a multiplicity of bodies. The Middle East was the responsibility of Great Britain's Ordnance Survey, Southampton, except for Egypt which was covered by the Survey Department, later Survey of Egypt, Giza. Collaboration broke off during World War II at a state of about a sixth of the planned number of sheets; it was resumed in 1945 and continued from 1953 on under the auspices of the United Nations until it petered out in the mid-1980s while still less than half of the sheets had been achieved. The relative importance which was attributed to Egypt, Palestine, Syria, and Iraq is illustrated by the fact that they counted among the well covered areas of the World series even before World War II.

[45]As the pace of integration was slow, the various grids (Egyptian quadrant/standard and kilometric/normal grids, Palestine grid, Lambert Levant grid, etc.) remained in use well into the mid-twentieth century.

terra incognita to the Western observer.[46] As now even many remote and sparsely settled areas could be surveyed, it became possible to expand the representation of the topography beyond the river valleys and densely populated areas onto the entire region. Only then did maps attain a fully two-dimensional quality. Furthermore, the replacement of old-style provisional hachures, form lines, and hillshades by contour lines and elevation coloring allowed map-makers for the first time to shape a consistent and reliable overall picture of the region's three-dimensionality. In the case of Egypt, coverage had proceeded so far as to allow the compilation of atlases.[47] As professional cartography outgrew its dependence on the contribution of semi-skilled enthusiasts, the physical aspect became dissociated from the historical.

On the other hand, specialization, as well as technical and organizational progress, could not leave the mapping activity of men of letters untouched. In fact, it suffered badly. The publication of Musil's map of Northern Arabia in 1926, though marking the apogee of the older one-man business, was belated, the basic inquiries having been conducted between one and almost two decades earlier. Consequently, it was also anachronistic in that it mirrored pre-World War I requirements of primary exploration.[48] Only in the field of historical geographies and gazetteers could advantage be taken of the European preeminence over the region in the period until the end of World War II. Several works of lasting value were compiled on that background, e.g., by René Dussaud on Syria and Lebanon[49] and by the British Naval Intelligence—for official use only—in its geographical handbook series on most of the region.[50] The way had been paved in pre-1900 Egypt by ʿAlī Bāshā Mubārak's geographical lexicon and the country's surveyors.[51]

[46]The first modern map series superior to the millionth scale, a work of collaboration between the U.S. Geological Survey and the Arabian American Oil Company, was executed only from the late 1950s on: *Geographic Map . . ., Kingdom of Saudi-Arabia,* scale 1:500,000, 21 maps (Washington, D.C., 1956–62), accompanied by *Arabian Peninsula: Official Standard Names Approved by the United States Board on Geographic Names* (Washington, D.C., 1961).

[47]*Atlas of Egypt*, scale 1:50,000, 2 vols. (Cairo, 1914); *Atlas of Egypt: A Series of Maps and Diagrams with Descriptive Text Illustrating the Orography, Geology, Meteorology and Economic Conditions,* scales 1:500,000 to 1:7,500,000 (Giza, 1928).

[48]For an exemplary description of his mapping method that also concedes various sources of inaccuracy see Alois Musil, *Arabia Deserta: A Topographical Itinerary* (New York, 1927), xiii–xvi.

[49]René Dussaud, *Topographie historique de la Syrie antique et médiévale* (Paris, 1927).

[50]Originally, only a few classified copies were sent to press. They are now accessible through two series of reprints: *A Collection of First World War Military Handbooks of Arabia, 1913–1917,* 9 vols. (Farnham Common, 1988), and *The Middle East Intelligence Handbooks 1943–1946,* 5 vols. (Gerrards Cross, 1992).

[51]ʿAlī Bāshā Mubārak, *Al-Khiṭaṭ al-Tawfīqīyah al-Jadīdah li-Miṣr al-Qāhirah wa-Mudunihā wa-Bilādihā al-Qadīmah wa-al-Shahīrah,* 20 vols. (Būlāq, 1887–89). A selection of the older Orientalist research

There, historical geography flourished so much that a voluminous special bibliography could be compiled as early as 1929.[52]

A special point must be made about Palestine as the initial focus of Western Middle East mapping. The country's special place as the Holy Land has nourished a prolific mutual relationship between men of letters and cartographers ever since the Middle Ages. Recalling that Palestine already formed part of the Napoleonic survey and that the 1880 PEF map of Western Palestine marked another ground-breaking step, it became virtually over-mapped in both topographical and historical regards, although Muslim affairs were dealt with far less than Biblical and Crusader matters. Accordingly, Palestine was also the first and only part of the region that attracted continuous carto-bibliography.[53]

Aside from the Holy Land, however, the individual scholarship of Orientalists could not maintain its importance opposite the advancement of surveys on a regional scale. The interest of Orientalists in mapping declined and simultaneously focused *nolens volens* on historical matters. As the status of cartography sank to the point that it was deemed an ancillary science, that which remained to be done was taken over by non-cartographers—a fact which proved detrimental to quality. It is not necessary to focus on any particular specimen of Orientalist (not to mention Mamlukist) research to illustrate this point, nor would it be fair to do

has been assembled in *Texts and Studies on the Historical Geography and Topography of Egypt,* 5 vols., ed. Fuat Sezgin (Frankfurt am Main, 1992). Besides, the constriction of Egypt to the banks of the Nile together with the intensity of cultivation there conditioned a cadastral—and thus chiefly contemporary—approach to geography. See *Dictionnaire des villes, villages, hameaux, etc. de l'Égypte* (Būlāq, 1881); [Albert Boinet], *Dictionnaire géographique de l'Égypte,* and its Arabic version, *Qāmūs Jughrāfī lil-Quṭr al-Miṣrī* (both Cairo, 1899); [idem], *Géographie économique et administrative de l'Égypte,* vol. 1 (Cairo, 1902, no more published). See also, in the historical field, Jean Maspero and Gaston Wiet, *Matériaux pour servir à la géographie de l'Égypte,* vol. 1 (Cairo, 1919, no more published).

[52]Henri Munier, *Bibliographie géographique de l'Égypte,* vol. 2, ed. Henri Lorin (Cairo, 1929). Carto-bibliography was as well restricted for a long time to either Palestine or Egypt. See n. 53 and Alfred L. Fontaine, *Monographie cartographique de l'isthme de Suez, de la péninsule du Sinaï, du nord de la Chaîne Arabique, suivi d'un catalogue raisonné sur les cartes de ces régions* (Cairo, 1955).

[53]Reinhold Röhricht, *Bibliotheca geographica Palaestina: Chronologisches Verzeichniss der auf die Geographie des Heiligen Landes bezüglichen Literatur von 333 bis 1878 und Versuch einer Cartographie* (Berlin, 1890), 2nd ed. procured by David H. K. Amiran (Jerusalem, 1963), especially 598–662. Materials published between 1878 and 1945 were recorded by Peter Thomsen, *Die Palästina-Literatur: Eine internationale Bibliographie in systematischer Ordnung mit Autoren- und Sachregister*, 5 vols. (Leipzig and Berlin, 1908–38), sections 4 and 5, and three posthumous supplementary volumes (Berlin, 1956–72). The quarterly Jewish (later, Israeli) national bibliography *Qiryat Sefer* has continued the report (Jerusalem, 1924/25–2003), first without a special rubric, later in section 14. It now works as an online resource, http://aleph500.huji.ac.il/F/?func=file&file_name=find-b&local_base=nnlqrs&con_lng=eng.

so, as any choice of cartography would display similar mapping tendencies.

As a rule, a map of Egypt or the Levant in a historical context was a monochrome line-drawing in an unskilled hand. Most probably it was page-sized and contained in a book. Owing to regular octavo and quarto formats, such a page-size map, if we use that term for the moment, typically would have a very small scale.[54] Moreover, it would have displayed a limited sample of features and a rudimentary symbology and legend, if any at all; it would have no relief, no grid,[55] and no mathematical descriptors. Only a scale statement or graph bar would usually maintain the map's geometrical foundation. Given projective distortion, neither of these two features alone allows for the satisfactory determination of distances and location of places. Hence, any two maps of this kind tend to be incompatible by cartographic standards. This does not mean that such maps are dysfunctional; it may be rightly assumed that the observer is able to perceive topologic constellations and to recognize them on another map thanks to spatial thinking. But a map that is vague enough to demand this ability and to evoke a variety of personal understandings casts doubts on whether or not it actually deserves to be called a map. Instead, it is advisable to speak of a sketch map whenever the extrinsic aspect of a cartographic specimen prevails over the intrinsic. Sketch maps, thus understood, work as diagrams rather than as maps.

The first general historical atlases of Islam, published in 1951, 1957, ca. 1960, and 1969, were drawn up with the help of cartographers and represented true maps, but they did little to improve the situation with regard to our period of concern. Although their broad claim made it inevitable that the Mamluk realm be treated, a look at the relevant plates—at best two or three per atlas[56]—betrays the perfunctory attitude towards the Mamluks which was so common before David

---

[54]The elongated shape of both Egypt and the Levant, as well as the perpendicular axis of each—in the tradition of north-south oriented maps—seems to demand an upright map face such as would fit in an ordinary single-page layout. Thereby an unsatisfactory five millionth scale is suggested (1 cm to 50 km). An even more limited area such as the Sinai Peninsula allows at best for a two millionth scale. The larger formats of fold-outs and independently published map sheets could have resolved the inconvenience, but have been rarely utilized.

[55]Sometimes the grid is not shown but indicated by border ticks only. This method basically suits projections that represent the graticule in an orthogonal way. Yet, in contrast most maps of that kind are evidently based on a projection which produces a curved grid, so that figuring the position of some place without fully plotted grid lines relies on guesswork.

[56]Harry Williams Hazard, *Atlas of Islamic History* (Princeton, 1951), 21, 23, 25; Roelof Roolvink, *Historical Atlas of the Muslim Peoples* (Amsterdam, 1957), 21[a], 26[b], 27; ʿAbd al-Munʿim Mājid, *Al-Aṭlas al-Tārīkhī lil-ʿĀlam al-Islāmī fī al-ʿUṣūr al-Wusṭá* (Cairo, [ca. 1960], 2nd ed. 1967); Rolf Reichert, *Atlas histórico regional do mundo árabe (Mapas e resumo cronológico)/A Historical and Regional Atlas of the Arabic World (Maps and Chronological Survey)* (Salvador da Bahia, 1969), 82 map 26, 84 map 27.

Ayalon's time. Moreover, the map contents deserve criticism. While topographical minima were included, the relief and the composition of historical landscapes were left out. This, it seems, is due to a uniform preoccupation with the delineation of political entities on the state level (though not even the drawing of boundaries was consistently achieved).

Another characteristic of both the atlases and the maps contained in books and articles was—and still is—a disregard of the fact that natural environments change and are mutable under human influence. Almost as a rule, historical settlements are placed within recent topography and hydrography as borrowed tacitly from present-day cartography. The findings of earlier generations of scholars, regarding for example the hydrography of the Nile as studied by Prince Omar Toussoun,[57] are not always appropriately taken into account. A look into any of the more recently produced general atlases on Islamic history shows that the issue has not been addressed. Likewise, the majority of (sketch) maps in books and articles continue to be produced today along modest lines.

A last point shall be made about the distinction between maps and plans, as it answers to a prominent strand of Mamlukist research. For the sake of clarity, cartographic materials that show the ground-plan of a locality like a city, an archaeological site, or a battlefield may best be termed plans. Because they are drawn on a very large scale, say of 1:5,000, plans do not require a format beyond the regular page-size and still allow the depiction of a medieval city, for example, with expedient resolution. It is not surprising that these premises have favored the drawing up of a considerable number of city plans, given the fact that urban research, connected to the history of architecture, is prominent in Mamluk studies. Cairo, of course, figures first. Many of these plans depict certain historical issues, be they, for instance, shifts in demography and topography, professional and social composition, fortification and the architectural representation of power, or the distribution of religious institutions, thus counting among the best cartographic materials that we possess for the period.[58] However, disparities between plans and maps are such that more plans will not necessarily aid the progress of mapping on a more expanded topographical basis. This is again due to the implications of large scales. Plans, first of all, are in practice not subject to

[57]Omar Toussoun, *Mémoire sur les anciennes branches du Nil,* 2 pts. (Cairo, 1922/23); idem, *Mémoire sur l'histoire du Nil,* 3 pts. (Cairo, 1925); idem, *La géographie de l'Égypte à l'époque arabe,* pt. 1 (Cairo, 1926–36, no more published).

[58]E.g., see the plans in Susan Jane Staffa, *Conquest and Fusion: The Social Evolution of Cairo A.D. 642–1850* (Leiden, 1977), facing 12, 100, and 228; reworked in *An Historical Atlas of Islam/ Atlas historique de l'islam,* ed. Hugh Kennedy (Leiden, 2001), 30–31. On Damascus, Jerusalem, and Aleppo, plus Middle Eastern cities outside the Mamluk Empire (ibid., 17, 19, 26–28), see Kennedy's notes on map sources, xiv–xv.

projective distortion and thus do not require mathematical descriptors. Secondly, there is neither a need nor an opportunity to plot the graticule, lest the reader go astray amongst meaningless infinitesimal calculations. Thirdly, representation of the relief is mostly dispensed with. Only a scale statement reminds one of geometry. Notwithstanding the sound geometric sub-construction that is inherent in a good plan, plans as a genre facilitate comparatively quick production and forgive one technical flaw or another. As plans resemble sketch maps in these respects, it shows that, and explains why, historical maps take a middle position in between the extremes of either minimum-scale sketch maps or maximum-scale plans.

3. A Reconciliation

The next stage was initiated by the *Tübinger Atlas des Vorderen Orients,* an unrivalled corpus of regional maps acknowledged as a standard reference in many fields. Being a multidisciplinary research program conducted from 1969 to 1989 by the University of Tübingen, the *TAVO* constitutes a loose-leaf atlas, in German and English, that finally comprised 121 sheets in series A, natural sciences, and another 174 sheets in series B, humanities. This tremendous work met the most exacting technical standards of the time and is a study in aesthetic balance.[59] Among its historical maps, those on Islamic subjects figure prominently and provide the most sophisticated and variegated set of cartographic materials we have in the field of Islamic Studies. Leaving aside for a moment the achievements of any individual *TAVO* map, the main general improvements observed in the atlas are that, first, cartography was brought back into the purview of historians of Islam and collaboration with fully trained cartographers was reestablished. Second, thoroughly georeferenced topographical mapping and thematic mapping could thus be reconciled. As a result, the conventional limitation to cities and polities was overcome and attention was drawn to spatial formations such as confessional distribution, fortification patterns, juridical institutionalization, rural settlement, etc. Third, an unprecedented precision of content was achieved by manifold symbologies, carefully arranged legends, and the clear delimitation of each map's

[59]The atlas proper (Wiesbaden, 1977–93) is accompanied by two monograph series: *Beihefte zum Tübinger Atlas des Vorderen Orients* (abbr. Beihefte), series A and B, of hitherto 28 plus 98 volumes in altogether 161 parts (Wiesbaden, 1972 to date), and by the *Register zu den Karten/General Index,* ed. Horst Kopp and Wolfgang Röllig (Wiesbaden, 1994). The concluding volume *Von der Quelle zur Karte: Abschlußbuch des Sonderforschungsbereichs. . .*, ed. Wolfgang Röllig (Weinheim, 1991), 252–82, records the maps and volumes published until that year. The maps on Biblical history were recollected in an extra series as *Tübinger Bibelatlas, auf der Grundlage des Tübinger Atlas des Vorderen Orients (TAVO/Tübingen Bible Atlas,* ed. Siegfried Mittmann and Götz Schmitt (Stuttgart and Wiesbaden, 2001). A comprehensive list of publications may be obtained from Reichert publishers.

temporal range. Of course, the comparatively large sheet format and thus large scale of the maps (here, up to a millionth) was critical to these achievements. Fourth, the premise of undertaking only such research as suits the objective of mapping effected, in some cases, the spelling out of methodology.[60] Moreover, the technical aspects of atlas cartography were explained.[61]

Although it must be said with regret that the Mamluk period does not constitute a focal concern of the atlas, two maps in particular touch upon the Ayyubid and Mamluk Sultanates. Heinz Halm mapped the distribution of Islamic law schools until the end of the Kipchak Mamluks[62] and, more relevant to the readership of this journal, the record of fiefdoms in Egypt as registered in 777/1376 by the military *dīwān* and preserved in the *Kitāb al-Tuḥfah al-Sanīyah bi-Asmāʾ al-Bilād al-Miṣrīyah* of Ibn al-Jīʿān (d. 885/1480).[63] The latter map also reflects the administrative divisions and the density of settlement and agriculture in the Nile Valley and the Delta during the time of al-Malik al-Ashraf Shaʿbān. Together with Halm's two-volume companion and the fifty basic location maps contained therein, the work can serve as a historical gazetteer of Egypt in the period of the Kipchak sultans in general and as a master index to its medieval and nineteenth-century sources.[64] Otherwise, Egypt and Syria are but superficially touched upon,[65]

[60] E.g., Heinz Gaube, "Die Quellen zur Karte B VII 6: 'Die Kernländer des ʿAbbāsidenreiches' und ihre Auswertung," in *Von der Quelle zur Karte,* 199–216.

[61] Wolfgang Denk, *Atlaskartographie: Theoretische und praktische Probleme dargestellt am Beispiel des "Tübinger Atlas des Vorderen Orients (TAVO)"* (Wiesbaden, 1990).

[62] *TAVO* B VIII 16 = Heinz Halm, *Die islamischen Rechtsschulen: Palästina, Syrien und Ägypten/ Islamic Law Schools: Palestine, Syria and Egypt,* scale 1:4,000,000 (Wiesbaden, 1977).

[63] *TAVO* B VIII 13 = Heinz Halm, *Ägypten unter den Mamlūken/Egypt under the Mamlūks,* scale 1:1,000,000 (Wiesbaden, 1984).

[64] Heinz Halm, *Ägypten nach den mamlukischen Lehensregistern,* 2 vols. (Wiesbaden, 1979), including 50 monochrome maps on a scale of 1:200,000; see 1:35–36. Another convenient key to identify one of the anonymous smaller settlements of the map—and a proof of toponymic continuity—is his map of Egypt in an earlier period, based on the name list of Ibn Mammātī (d. 606/1209): *TAVO* B VII 13 = Heinz Halm, *Ägypten unter den Fāṭimiden (969–1171)/Egypt under the Fāṭimids (969–1171),* scale 1:1,000,000 (Wiesbaden, 1984).

[65] *TAVO* B VIII 1 = Heinz Halm and Verena Klemm, *Der Vordere Orient um 1200/The Middle East around 1200,* scale 1:8,000,000 (Wiesbaden, 1985), is an overview map of the wider region's political setting and must not be expected to offer local detail. *TAVO* B VIII 15 = Dorothea Krawulsky, *Īrān: Das Reich der Īlḫāne 656–736 h/1258–1336 n. Chr. (Westteil)/Īrān: The Īlḫānid Empire 656–736 h/1258–1336 A.C.,* scale 1:4,000,000, two sheets (Wiesbaden, 1984), also shows the itineraries of Ibn Baṭṭūṭah in Syria, Egypt, and the Hijaz with a fair number of cities and villages he passed through, but hardly anything beyond his path. As a gazetteer to the map including its Middle Eastern reaches, see idem, *Īrān–das Reich der Īlḫāne: Eine topographisch-historische Studie* (Wiesbaden, 1978), containing 11 monochrome location maps mostly on a scale of 7.1 cm to 100 km (i.e., ca. 1:1,400,000).

while maps of Oriental Christendom and of conflict with the Latin principalities and the Mongols are preponderant.[66] As these foci show, little is to be learned from the maps about the interior of the two sultanates.

While the factual results and appraisal of the *TAVO* are tremendous, it is noteworthy that it did not reverse the general attitude towards mapping. Since its newly established technical and heuristic standards have been difficult to meet, the *TAVO* has remained an exceptional case instead of encouraging further mapping activities in the field. For the most part, the drawing of piecemeal sketch maps, which was induced by the transition from the first to the second stage of development, is still going on. It is likely that there will be no cartographic endeavor of comparable magnitude and variety with relevance to Islamic studies for quite some time to come.

4. Recent Developments

Since the 1980s, the sciences and humanities have seen an intensification of spatial thinking and mapping activities which place Islamic and Mamluk studies in a changed intellectual environment. On the one hand, new concepts of social space, space perceptions, and mental maps are emanating from geography, sociology, cognitive psychology, and other fields.[67] Whether or not one is inclined to subscribe to the voguish labeling of a "spatial turn," it is apparent that these concepts have heralded a renunciation of the older, basically topographical, understanding of space and have instead promoted notions of a socially and culturally encoded space. This is illustrated for instance by a shift in archaeology from site towards landscape archaeology, part of which is *nota bene* a growing regard for the embedding of urban cultures in nomadic contexts.[68]

On the other hand, the information revolution since the 1990s has promoted spatial issues. Researchers are now confronted with an ever-expanding field of electronic spatial data, information retrieval and mapping tools, and opportunities

[66] On Christendom, see *TAVO* B VIII 2 and 5; on conflict with the Franks, B VIII 6, 8, 10, and 12; and on the invasion of Tīmūr, B VIII 6, 19.1, and 19.2.

[67] In addition to n. 4, special mention may be made of the collective volume *Image and Environment: Cognitive Mapping and Spatial Behavior,* ed. Roger M. Downs and David Stea (Chicago, 1973), and of Pierre Bourdieu, "Espace social et genèse de 'classe,'" *Actes de la recherche en sciences sociales* 52/53 (1984): 3–14.

[68] Kurt F. Anschuetz, Richard H. Wilshusen, and Cherie L. Scheick, "An Archaeology of Landscapes: Perspectives and Directions," *Journal of Archaeological Research* 9 (2001): 157–211; Stefan R. Hauser, "Archaeological Approaches to Nomadism," in *The Visibility of Nomads and Seasonal Occupation in the Archaeological Record: Multi-Disciplinary Approaches to a Methodological Problem,* ed. idem (Wiesbaden, forthcoming) (for the time being, see his introduction to *Die Sichtbarkeit von Nomaden und saisonaler Besiedlung in der Archäologie: Multidisziplinäre Annäherungen an ein methodisches Problem,* ed. idem (Halle, 2006), 1–26).

to discuss, collaborate, and publish. Mainly for extra-scientific reasons, spatial data has become virtually ubiquitous because a plethora of maps, aerial photography, and space imagery that had been patronized for decades by the military and by military-associated companies was disclosed to the public, for the most part via the internet and other channels of electronic distribution.[69] Taking advantage of this, online 3-D-mapping earth viewers make topographical information available on both the global and local scale in previously unseen quantity and quality.[70] This has the effect, among others, that governments in the region can no longer hope to protect their territory from outsiders' eyes by concealing maps and survey data, now that access to georeferenced high-resolution imagery of any location from above has become technical child's play.[71] Hence, habits of spatial thinking and expectations in printed materials have undergone a radical change in all areas. Responding to this, specialized library map collections have begun to grant online access to their catalogues and holdings.

Rather than dwelling on the overwhelming range of services and tools, one may note that a basic operation such as determining the geographical location of some given place or learning which place names exist in the vicinity of a particular location meant considerable hardship one generation ago—whereas now online gazetteers, remote sensing data, and some historical maps allow one to check coordinates and toponymy in a short time. With regard to Egypt, for instance, one official U.S. online database alone puts 42,759 place names (including variants) plus coordinates at one's fingertips.[72]

Certainly, the technical side of innovation must not be overstressed, as it is not

---

[69] Crucial to this is high-resolution space imagery generated through international cooperation on the basis of public funds which is therefore distributed freely, e.g., via NASA's *Global Land Cover Facility,* http://glcf.umiacs.umd.edu. Another source of "new" information is the dissemination of Soviet military maps some time after the end of the Cold War. By this, topographical maps on scales of 1:1,000,000 up to 1:50,000 that were quite timely, having been compiled mainly during the 1970s and 1980s, became available for almost the entire Middle East, be it in the print version or as electronic resources. Now the tide has ebbed away and libraries have reduced online access to these maps.

[70] *Google Earth,* http://earth.google.com; *NASA World Wind,* http://worldwind.arc.nasa.gov; *Microsoft Virtual Earth,* http://local.live.com.

[71] The Middle Eastern national survey and mapping authorities are still adapting to this change after a long period of secrecy, the forerunners being the Survey of Israel/ha-Merkaz le-Mipuy Yisraʾel and the Royal Jordanian Geographic Center/al-Markaz al-Jughrāfī al-Malikī al-Urdunnī.

[72] *Geographic Names Server,* hosted by the United States National Geospatial-Intelligence Agency, http://earth-info.nga.mil/gns/html. It incorporates and refreshes the inventories which before were furnished in the Gazetteer series of the United States Board on Geographic Names (Washington, D.C., 1955–97). The country file on Egypt referred to above was last modified in February 2007, ~/namefiles.htm. Note also the *Getty Thesaurus of Geographic Names Online* at http://www.getty.edu/research/conducting_research/vocabularies/tgn.

sufficient in itself. The abundance of new spatial data and methods of processing them could create a maelstrom unless appropriate research designs make use of them. Fortunately, this is what seems to have happened most recently. A multitude of electronic and often web-based scientific initiatives in the field of space relations are springing up everywhere. The *Chicago Online Encyclopedia of Mamluk Studies* is scheduled to be supplemented by a set of high-resolution "interactive online and freely printable maps of the Mamluk Sultanate and the wider region during the Mamluk period"—an intent which proves that a need for such material exists.[73] I understand that these will not be static but account for diachronic shifts in trade routes, etc. However, this is not yet nearing completion.

Besides, relevant activities may for the most part be found in neighboring branches of research. A few may be named here, without any criticism of the many that are omitted. A newly posted website on the anonymous fourth/tenth-century *Kitāb Gharāʾib al-Funūn wa-Mulaḥ al-ʿUyūn,* which surfaced only in 2000, is a study in the online presentation of a manuscript source that pertains through both maps and text to astronomy, cartography, and geography[74]—similar source digitizations of just a few years back prove to be comparatively unwieldy.[75] Classical scholars have recently published the *Historischer Atlas der antiken Welt,* English edition forthcoming.[76] Biblical scholars are collaborating on a *Digital Archaeology Atlas of the Holy Land,*[77] and in Central Asian studies an *Archaeological Information System of Central Asia* is being undertaken.[78] The *Electronic Cultural Atlas Initiative* aims to serve as a clearing house for projects that range, so far, between China and Egypt.[79] As already mentioned, *La cartothèque méditerranéenne* (soon becoming *CartoMundi*) explores the modern regional carto-bibliography,[80] and a promising attempt is now being made to register the modern literature

[80]See n. 29.

on Islamic cartography.[81] Research in the scientific traditions of both Western and Islamic cartography is vital to an understanding of medieval perceptions of space and physical space relations and of how these may account for present-day biases.

Initiatives of this kind would equally hold that the visual items they produce are not mere reworkings of previous results. Instead, mapping is conceived as a heuristic means that allows one to address issues, if spatially related, along more suitable lines than textual treatment could. This is because maps can best take advantage of that potential which is specific to the visual sense, namely the perception of a multitude of distributed contents synoptically. Hence, maps may serve not only as a secondary visualization but as a clue to historical understanding in its own right. The requirements of mapping even modify the foregoing study of the sources. It is inherent in the two-dimensional nature of maps that they reveal their contents at once and betray blanks and inconsistencies to the observant reader in a pitiless manner. The observer of a map beholds its positive contents and at the same time interprets the vacant stretches in between, which impose themselves on him much more than gaps within a text would. Map-makers therefore need to exercise exhaustive and unequivocal criticism of content. They share the experience of having to decide whether a matter is appropriate to mapping at all, i.e., whether it is possible to represent it in all parts of the mapped area with similar meaningfulness—and to refrain from mapping when source evidence is too scant or too confined to one place. This caution is imperative in order for historical mapping to attain the value of cartography in showing the spatial condition of a certain matter. We should demand this care all the more as the necessities of localization and identification are widely realized, and as the way is open for considering more complex spatial issues.

A Thematic Atlas

The above notes are the prolegomena to a substantial undertaking: the making of a series of maps that shed light on the interaction of nomads and sedentary people in Syria and Egypt during the Ayyubid and Kipchak Mamluk periods. They are part of a study in the textual sources in progress.[82] This combined work aims at expounding the development, possible structure, and impact of that mutual relationship, thus highlighting a hitherto little-known period in the history of

[81] Tarek Kahlaoui, *Islamic Cartography: A Bibliography of Modern Literature,* http://islamic-cartography.blogspot.com, an offshoot of the author's still ongoing doctoral thesis, having proceeded to date to the letter *B*.

[82] See n. 5. The maps are drawn up by the cartographer Martin Grosch with the collaboration of the Institute for Geo Research (geo3) of the University of Applied Sciences, Berlin, and the Leibniz Institute for Regional Geography, Leipzig.

Middle Eastern nomadic-sedentary relations. It will perhaps also help in assessing the initial suggestion that both dynasties devised a new attitude toward space and adequately engaged in a heightened spatial organization that should have expanded over the hinterland and brought the Bedouin population under state supervision.

Drawing on lessons to be learned from the course of historical cartography, the work is characterized by the following properties. First, the separation of topographical and historical mapping has proven detrimental to the latter, and here they are merged again. Placing historical content on a topographical background will reveal the visual properties of the map. As the relief, bodies of water, etc., help to envision the setting of some historical matter on the ground, they moreover provide a yardstick as to whether there is relevance to space and thus whether it is appropriate to map a particular object. This is best achieved with large-scale colored maps which suggest folio size, except for the smallest regions.

Second, thematic mapping is needed, which takes the conventional geography of settlement and large political entities as a starting point and proceeds to focus on more specific issues. While some contexts require the static exposure of aspects in multiple synchronic maps, sequences of maps on a diachronic scale better highlight developments and changes over time. At the same time, relevant efforts of an older date, now often difficult to access or sunk into oblivion, deserve reassessment and mapping according to present-day standards, including historical topography and hydrography.

Third, a historico-critical approach is to be reintroduced after a long time in which mapping activity has failed to explicate its methodological foundations. This also basically holds true for those maps which accompany historical gazetteers, since even the most accurate reference to textual sources does not make it clear why some item was placed on a particular spot on the map. The two Kieperts, already mentioned, may serve as an example in that they often made detailed references to their source materials. They evaluated them, discussed their subtle decisions closely, and pointed out uncertainties.[83] This way, the reader's attention is drawn to the fact that maps are not bearers of positive facts to which they are secondary, but rather are constructs of the map-maker.

Last but not least, the profound change in cartographic techniques since the making of the *TAVO* seems to lend itself to thematic cartography, as it has an immediate impact on which spatial issues may be addressed and how. In

[83]E.g., H. Kiepert, "Zu den Karten," in Humann and Puchstein, *Reisen in Kleinasien und Nordsyrien,* text volume, 407–12; R. Kiepert, "Zu den Karten," in Max von Oppenheim, *Vom Mittelmeer zum Persischen Golf,* 2:389–414. See also, though to a lesser extent, *An Historical Atlas of Islam,* ed. Kennedy, xi–xix.

fact, electronic mapping on the basis of georeferenced remote sensing data is invaluable for the achievement of a precise topography in which history can be embedded soundly. Speaking in general, combination with a digital elevation model (DEM) allows for a three-dimensional impression with a vast potential to fuel one's spatial imagination and is yet technically impeccable. Furthermore, the integration of electronic maps in a geographical information system (GIS) opens up unforeseen possibilities of thematic analysis, interpretation, and presentation.[84] Finally, distribution of the results in electronic form is a welcome opportunity to advance the recognition and further study of spatial contexts in history.

The ʿAṭṭār Mosque in Tripoli

In the year 1112/1700 the scholar ʿAbd al-Ghanī al-Nābulusī[1] visited Tripoli in present-day Lebanon. In his travelogue *Al-Riḥlah al-Ṭarābulusīyah* he gives brief notices of the ʿAṭṭār Mosque,[2] reporting that the mosque is said to have been a church originally and that a perfume merchant had secretly paid to have it rebuilt as a mosque.[3] With this brief passage, al-Nābulusī is the first author to posit a connection between the ʿAṭṭār Mosque and a church. He can thus be seen as the originator of an idea that has influenced treatises on the architecture of the ʿAṭṭār Mosque ever since. Although al-Nābulusī did not supply any references for his statement that the ʿAṭṭār Mosque was formerly a church, the preponderance of research on the mosque is based upon this assumption, even though it is not confirmed by any other written source nor have investigations of the building itself specifically examined this question. The following article aims to take a closer look at this hypothesis by analyzing the ʿAṭṭār Mosque's integration into the urban and social spheres as well as its decorative scheme, and by suggesting

---

This article is a summary of the results of my master's thesis, completed under Dr. Martina Müller-Wiener and Professor Dr. Stephan Conermann at the Rheinische Friedrich-Wilhelms-University in Bonn, 2004. I would like to thank the Orient-Institut in Beirut (OIB), who provided me with institutional assistance, accommodation, and access to their library and archives during my fieldwork in Lebanon in April/May 2004. I am indebted to them for their permission to publish photographs and drawings which evolved out of the Tripoli project which is hosted and financed by them. My special gratitude is extended to Dr. Stefan Weber of the OIB, who made my research in Beirut and Tripoli possible, and to Nathalie Chahine, who assisted me in Tripoli. I am especially grateful to Emily Schalk for her helping hand in translating this article into English and to Ulrike Siegel for her suggestions concerning questions about architectural research. Lastly, I would like to thank Dr. Robert Saliba, American University of Beirut, Department of Architecture and Design, for granting me permission to publish figure 1.

[1] ʿAbd al-Ghanī al-Nābulusī, *Al-Tuhfah al-Nābulusīyah fī al-Riḥlah al-Ṭarābulusīyah (Die Reise des ʿAbd al-Ġanī al-Nābulusī durch den Libanon),* ed. Heribert Busse (Wiesbaden, 1971), 72–73.

[2] Michael Meinecke, *Die mamlukische Architektur in Ägypten und Syrien (648/1250 bis 923/1517)* (Glückstadt, 1992), 2:165, 9C/320, and 215, 19A/30, listed as "Moschee des Badr ad-Dīn al-ʿAṭṭār." In this article, in contrast, I shall use the designation "ʿAṭṭār Mosque," for the following reasons: the lack of a definite determination of the commissioner's name, the earliest reference to the mosque as the "jāmiʿ al-ʿAṭṭār," and the mention of the mosque by this name in Ottoman travelogues.

[3] "Qīla inna aṣlahu kanīsah, wa-qad ʿamarahu rajul kāna ʿaṭṭāran, wa-kāna yunfiqu ʿalayhi min al-ghayb fa-nusiba ilayhi" (al-Nābulusī, *al-Riḥlah al-Ṭarābulusīyah,* 72–73).

other interpretations for its special architectural features.

Description of the Building

The ʿAṭṭār Mosque was built during the eighth/fourteenth century in the middle of today's old city of Tripoli, which is still relatively well preserved. The nucleus of the mosque consists of a prayer hall, a vestibule in the east, and a minaret.[4] The prayer hall is situated longitudinally from south to north (fig. 1). A barrel vault takes up this axis and is interrupted in the northern section by a dome. To the north, west, and east of the area of the dome are the three entrances to the mosque.

Whereas the portal in the west opens directly into the prayer hall, the portal in the east opens into a vestibule leading to this room. The vestibule is flanked by a room for ablution in the north and by a further adjoining room in the south. Altogether, this group of rooms forms an eastern annex. To the east of the northern entrance arises the minaret.

The prayer hall is bordered to the south by the qiblah wall, which is distinguished by the minbar in the center and the mihrab in the east (fig. 2). Starting at the qiblah wall and extending as far as the dome, the east and west sides of the southern prayer hall are divided by three large niches, each of different size (fig. 3). The barrel vault and the wall division with niches[5] continue to the north of the area of the dome. Today this area is encompassed by a gallery (fig. 4).

Altogether, with the longitudinal direction of the prayer hall, the position of the mihrab in the east and the minbar in the middle of the qiblah wall,[6] the domed area, and the arrangement of the entrance and the annex in the east, the ʿAṭṭār Mosque displays architectural elements that do not permit a simple correlation

[4] In this article I shall focus primarily on the core structure of the ʿAṭṭār Mosque. The latrine, the inaccessible adjoining room F, the blocked up niche C 1, and a room adjoining A 2 are not the immediate subjects of this study.

[5] Whereas the eastern niche (C 2) is fully shaped, the western niche (C 1) seems to have been blocked up. This is indicated, on the one hand, by alterations in the course of the masonry and, on the other, by the similar front walls that are in both cases located above the gallery. A window blocks up the opening in the west (C 1), while the front wall continues in the vaulting of the niche in the east (C 2).

[6] In addition, it is noteworthy that the present-day direction of the qiblah does not correspond with the original qiblah and is modified by means of lines spanned across the floor. Basing his calculations on Mamluk astronomical writings, King is able to determine a qiblah-orientation of ca. 30 degrees southeast in Tripoli. Yet he notes that the direction of the qiblah in Mamluk mosques in Tripoli actually ranges from 15 degrees southeast to 10 degrees southwest (David A. King, "The Astronomy of the Mamluks: A Brief Overview," *Muqarnas* 2 [1984]: 82). Thus, the ʿAṭṭār Mosque does not present an exception in Tripoli with the "inexact" orientation of the qiblah.

with the otherwise common typology of mosques.[7]

A Crusader Church as Predecessor?

Various scholars have attempted to explain the peculiarities in the elevation and ground plan of the ʿAṭṭār Mosque with the hypothesis of a predecessor structure (often suggested to have been a church) located at the same site of the present-day mosque.[8] The aforementioned passage in al-Nābulusī's text and the history of the city of Tripoli are essential pieces of evidence used in the development of this hypothesis. The present-day old city of Tripoli emerged as a new creation of the Mamluks in the late seventh/thirteenth century, following Sultan al-Manṣur Qalāwūn's[9] conquest of and complete destruction of the old port city of Tripoli in 688/1289, which had been under Crusader rule since 1109. The new city, given the same name, was built a few kilometers farther inland[10] on the banks of the Abū ʿAlī river, at the site of a suburb *(mons peregrinus)*. The latter had already developed after the building of the citadel at the beginning of the twelfth century[11] and thus has given rise to speculation about possible previous structures from Crusader times that might still have been preserved.[12]

The first suggestion of a church as predecessor to the ʿAṭṭār Mosque is found in al-Nābulusī's writings, as mentioned above. This hypothesis was initially taken up by the scholar Kurd ʿAlī, who surmised that the ʿAṭṭār Mosque was preceded by a Crusader church.[13] Two lines of argument have developed in research, which

[11] Salam-Liebich, *The Architecture,* 6.

[12] Cf. for example, the Great Mosque: Max van Berchem and Edmond Fatio, *Voyage en Syrie* (Cairo, 1914), 1:118–19; Camille Enlart, *Les monuments des croisés dans le royaume de Jérusalem: Architecture religieuse et civile,* vol. 2 (Paris, 1928), 434; and the mosque of the governor Ṭaynāl al-Ashrafī: Nina Jidejian, *Tripoli through the Ages* (Beirut, 1980), 86–87; Berchem and Fatio, *Voyage en Syrie*, 1:120–21. In order to attain substantiated information about Crusader structures that still exist in the city, more archaeological investigations are necessary. Until now excavations have been conducted only by Salamé-Sarkis in the area of the citadel and in al-Mīna (Ḥassān Salamé-Sarkis, "Chronique archéologique du Liban-Nord II: 1973-1974," *Bulletin du Musée de Beyrouth* 26 [1973]: 91–102; idem, "Tripoli: Textes et Fouilles," *Berytus* 31 [1983]: 129–49). Cf. Gunnar Lehmann, *Bibliographie der Archäologischen Fundstellen und Surveys in Syrien und Libanon* (Rahden/Westfalen, 2002), 561.

[13] Kurd ʿAlī notes that it was well known among the inhabitants of Tripoli that during the time of

unlike Kurd ʿAlī, maintain explicitly that a Crusader church is still evidenced in the structure of the ʿAṭṭār Mosque of today.[14] Whereas one view proposes that an original Crusader church was simply converted into a mosque,[15] the other has developed the theory of an original Crusader church that was destroyed, whereupon a mosque was built in the same place, making use of parts of the predecessor structure.[16]

The main proponent of this second theory is Tadmurī. He augments the remarks of al-Nābulusī and Kurd ʿAlī with the assertion that the southern part of the Crusader church remained standing, while the newly erected mosque was adjoined to the northern part.[17] Thereby Tadmurī makes the first attempt to support Kurd ʿAlī's reference to the common opinion of Tripoli's inhabitants about the mosque by providing arguments which he, however, presents only in the form of assertions without further facts or data; hence, his assumption of a cemetery[18] or the existence of objects from Crusader times (now missing).[19] Further, Tadmurī does not supply any arguments or references for his assumption that the former baptismal font forms the cupola of the present-day minbar.[20] Tadmurī's assertion

the Crusaders the ʿAṭṭār Mosque was a church and that after the conquest of Islam it was changed into a congregational mosque. Allegedly, after the structure had deteriorated, it was reconstructed (Muḥammad Kurd ʿAlī, *Khiṭaṭ al-Shām* [Damascus, 1928], 6:54).

[14] Al-Nābulusī uses the phrase *wa-qad ʿamarahu,* which could be understood in this way if Herzfeld's reading of "ʿamara, ʿammara" is followed: "reconstruire, en conservant une assez grande partie de ce qui existait avant, et, dans la plupart des cas, moins que cel: reparer" (Ernst Herzfeld, *Matériaux pour un Corpus Inscriptionum Arabicarum: Deuxième Partie: Syrie du Nord: Inscriptions et Monuments d'Alep* [Cairo, 1954–55], 162).

[15] Al-Sayyid ʿAbd al-ʿAzīz Sālim, *Ṭarābulus al-Shām fī al-Tārīkh al-Islāmī* (Alexandria, 1967), 414; Samīḥ Wajīh al-Zayn, *Tārīkh Ṭarābulus Qadīman wa-Ḥadīthan* (Beirut, 1969), 423; Salam-Liebich, *The Architecture,* 78; Dick Doughty, "Tripoli: Lebanon's Mamluk monument," *Aramco World* 51, no. 3 (2000): 9.

[16] ʿUmar ʿAbd al-Salām Tadmurī, *Tārīkh wa-Āthār Masājid wa-Madāris Ṭarābulus fī ʿAṣr al-Mamālīk: Min al-Fatḥ al-Manṣūrī ḥattá al-Ān (688–1394H/1289-1974M)* (Tripoli, 1974), 194.

[17] Ibid., 194; idem, "Al-Āthār al-Islāmīyah fī Ṭarābulus al-Shām," *Al-Fikr al-ʿArabī* 9, no. 52 (1988): 212.

[18] Tadmurī, "Al-Āthār al-Islāmīyah," 212. Here he refers solely to the mosque keeper. With the lack of a thorough investigation in the area of the courtyard, which is paved with marble slabs, it can only be stated that today there are no signs of a cemetery.

[19] ʿUmar ʿAbd al-Salām Tadmurī, *Tārīkh Ṭarābulus al-Siyāsī wa-al-Ḥaḍārī ʿabra al-ʿUṣūr: ʿAṣr Dawlat al-Mamālīk,* vol. 2, *Min al-Fatḥ al-Manṣūrī 688h/1289m ḥattá Suqūṭ Dawlat al-Mamālīk 922h/1516m* (Tripoli, 1981), 291.

[20] Here in comparison reference should be made to two baptismal fonts from Crusader times in Lebanon, which Enlart presents: one in the cathedral in Byblos and one in the monastery church in Belmont. They do not display any similarity with the cupola of the minbar (Enlart, *Les monuments des croisés,* vol. 1, atlas [Paris, 1926], pl. 38, fig. 128; ibid., vol. 1 [Paris, 1925], 163). On the

that the southern part of the roof does not look like an "Islamic building"[21] cannot be accepted due to the lack of any details.

The arguments made by Salam-Liebich in favor of a converted church, which are supported by Doughty,[22] al-Zayn, and Sālim,[23] are, however, based upon observations of the building. Salam-Liebich views the disposition of the ground plan (fig. 1), the later addition of an ablution room, and the mihrab set in the east of the qiblah wall as decisive arguments in support of the prior use of the ʿAṭṭār Mosque as a church.[24]

Salam-Liebich's observation that the ground plan of the ʿAṭṭār Mosque cannot be assigned to any known classification of mosque can be affirmed. Yet, neither does the plan correspond with a Crusader church which has been converted but still basically preserved in its original structure. Whereas the core structure of the ʿAṭṭār Mosque is in a north-south direction, that of the typical Crusader church was orientated towards the east.[25] Furthermore, the mihrab contradicts Salam-Liebich's argument in favor of a church. That is, the mihrab was integrated from the start into the present qiblah wall, as attested by the continuous masonry within the mihrab niche and the surrounding wall surface (fig. 5). Therefore, it must be seen as an original as well as fundamental endorsement of the building as a mosque. Even though accord must be given Salam-Liebich's note that an ablution room is essential for a mosque, its later addition is not a compelling

---

contrary, the material, decoration, and technique of the minbar's cupola are comparable to other contemporary minbars, as will be dealt with in detail below.

[21] Tadmurī, *Tārīkh wa-Āthār,* 194.

[22] Doughty, "Tripoli," 9.

[23] Although Sālim also refers to Kurd ʿAlī, he nevertheless reaches the conclusion—contrary to Tadmurī—that the ʿAṭṭār Mosque was converted from a church (Sālim, *Ṭarābulus al-Shām,* 414). Al-Zayn shares this opinion, with reference to Kurd ʿAlī (al-Zayn, *Tārīkh Ṭarābulus,* 423).

[24] Salam-Liebich, *The Architecture,* 78.

[25] Cf. for example Denys Pringle, *The Crusader Kingdom of Jerusalem: A Corpus*, vol. 2 (Cambridge, 1998); Enlart, *Les monuments des croisés,* vol. 1, atlas; and Santino Langè, *Architettura delle crociate in Palestina* (Como, 1965), 129–74. Enlart emphasizes the orientation to the east again expressly (Enlart, *Les monuments des croisés*, 1:41–42). The possibility that a church might have stood there that was not built by the Crusaders can be dismissed, as both Maronite as well as early Christian churches in Syria are situated with the sanctuary towards the east (for Maronite churches, see Youhanna Sader, *Peintures murales dans des églises maronites médiévales* [Beirut, 1987]; for early Christian churches see Howard Crosby Butler, *Early Churches in Syria: Fourth to Seventh Centuries: Edited and Completed by E. Baldwin Smith: Part One: History,* ed. E. Baldwin Smith [1929; repr., Amsterdam, 1969], 182; for churches of the Byzantine, Armenian, and Syrian rites see Raymond Janin, *Les églises orientaux et les rites orientaux: Cinquième édition avec compléments bibliographiques par Sandrine Lerou et Philippe Escolan: Préface par Etienne Fouilloux* [Paris, 1997], 28, 313, 366).

argument for the building's former use as a church.[26]

Meinecke assumes as well that there was an "original structure," but, on the contrary, dates it to the Mamluk period; according to his theory, a predecessor structure was erected before 735/1334–35, to which the west portal might have belonged. Later, the eastern portal and the marble minbar, both dated through an inscription to 751/1350–51, were added to this complex.[27] This sequence in building phases, which is implied in Salam-Liebich's and Meinecke's assertion that the ablution room or the portal was added at a later time to a building that was already present (Crusader church, "original structure"), will be discussed in the following.

Relative Chronology of the Building Phases of the Core Structure

Clearly recognizable in the masonry are joints which a recent restoration of the ʿAṭṭār Mosque brought to light from beneath the plaster of the interior room.[28] These joints have made it possible to formulate a relative chronology of several building phases (fig. 1). Construction of the ʿAṭṭār Mosque began in the south (I), continued in the north (II), and culminated in the construction of an annex consisting of the ablution room, vestibule, and adjoining room in the east.

One distinct joint is located to the south of niches A3 and A6 and runs on both sides from the top of the vault down to the floor (fig. 5). The course of the stone layers to the south and to the north of the joint differ. Moreover, great differences are noticeable in the composition of the vaulting on both sides. Whereas in the south the stones are almost ashlar-like and the vertical and horizontal masonry relatively flat and more tightly applied, in the north the stones resemble quarry stones and the joints appear to be deeper and more spacious, so that the surface seems to be essentially more uneven. The vaulting in the entire prayer hall of the ʿAṭṭār Mosque was constructed in *Kufverband* (one horizontal row at a time) (fig. 3). This construction technique is characterized by regular horizontal layers with an uninterrupted course of horizontal joints and alternating vertical joints from the base to the top of the vaulting throughout its entire length.[29] This, however,

[26] There is a possibility that there were temporary facilities for washing; however, this must remain a hypothesis at present.

[27] Meinecke, *Mamlukische Architektur,* 2:165 and 215.

[28] My hypotheses on the relative chronology of the building phases are based on observations of the masonry which I documented photographically during my field trip in preparation of my Master's thesis in April and May 2004. The exact date of restoration is unknown to me, but on older photographs, the plastered wall surface is still to be seen.

[29] For the construction technique of vaulting with the use of scaffolds and *Kufverband,* see Franz Hart, *Kunst und Technik der Wölbung* (Munich, 1965), 16; Otto Warth, *Die Konstruktionen in Stein* (1903; repr., Hannover, 1981), 177–78. For the technique of vaulting using the runner (German:

is not the case in the vaulting under study here; thus, it must have been built in two stages.

As the vaulting to the north of the joint is lower than that to the south, it may be deduced that the section in the north (II) was built after the section to the south (I) (fig. 4). The continuation of the vault was first adjusted towards the height of the older, already settled, part of the vault and ultimately was lower after the setting of the masonry upon completion.[30] The hypothesis of a later erection of the northern section is supported by the observation that despite the otherwise even course of masonry, this section is joined denticulately in the southern section.[31]

The later northern section (II) also displays an uneven surface in the vaulting to the north, east, and west of the dome (fig. 4). Building phase II is distinguished from building phase I through the molding on the front of the pillars that does not continue in building phase II and a pointed form of the front wall of the niches (II) instead of a round one (I) (figs. 3 and 4). Yet, structural characteristics such as the direction and the approximate height of the vaulting are maintained.

In a further building phase (III) the annex consisting of an ablution room, vestibule, and adjoining room was set before the prayer hall (I, II). The mostly uniform course of the masonry on the portal, the exterior wall of the ablution room,[32] and the adjoining room suggest that this building unit was erected all at one time.[33]

In the interior, this annex (III) is clearly separate from the interior of the prayer hall (I, II). The presumption that it is a later addition is supported by the fact that the west wall of the ablution room seems to be just superimposed to the east wall of the prayer hall (fig. 6).[34] Furthermore, a joint is quite distinct on the north

---

Kufe), see Hans Koepf and Günther Binding, *Bildwörterbuch der Architektur* (Stuttgart, 1999), 291.

[30] I thank Dr. Stefan Weber for inviting me to the two international workshops of the German Lebanese Tripoli Project in 2002 and 2003 in Beirut/Tripoli, where this idea arose out of the discussion with different architectural historians.

[31] Cf. Warth, *Die Konstruktionen,* 56–57. The corbelling can be ascribed to the northern section; it was incorporated into the south masonry at a later time.

[32] In the lower area on the façade of the ablution room, the course of the masonry of the portal continues on the level of the window sill. Only beyond does the uncovered ashlar masonry begin.

[33] In addition, a corbelling of the portal frame extends into the façade of the ablution room, which would not have had a function without a planned adjoining building.

[34] This is suggested, on the one hand, by the stout jamb of the northern window and the door below in the west wall of the ablution room and east wall of the prayer hall. On the other, at this point a different course in the horizontal masonry can be recognized. Besides this, the arrangement of the west wall of the ablution room is adjusted to meet the features of the east wall of the prayer hall: the windows and the door in the back wall of the northern-most niche of the prayer hall (C 2) are integrated into the wall arrangement of the ablution room (fig. 6).

corner of the passage between the prayer hall (II) and the vestibule (III) (fig. 7),[35] and the eastern supporting pillar for the dome had to be modified (fig. 8) in order to permit access to the ablution room.

Thus, Salam-Liebich's and Meinecke's assumption of the later annexation of the ablution room or eastern portal is confirmed and can be expanded to include the south room as constituting building phase III. However, the possibility that the building (I, II), which was enlarged through the addition of the east complex (III), was originally a Crusader church is not supported, either typologically or by my analysis of the masonry. Instead, dating inscriptions and historiographic sources provide clues that the ʿAṭṭār Mosque was first erected in the seventh/fourteenth century and thus cannot be a Crusader church.

The Dating

The single inscription that dates the ʿAṭṭār Mosque is located above the entrance in the eastern portal[36] and denotes the year 751/1350–51.[37] Yet, another date

[35] One building joint is formed on the northern corner of the passage between the prayer hall (II) and vestibule (III), which the wall of the ablution room adjoins. The joint runs from the floor to the beginning of the vaulting of the vestibule (fig. 7).

[36] The building inscription in the western portal does not display a date, but rather the signature of a craftsman: *ʿamala Abū Bakr ibn al-Ṣīṣ.* The name of a craftsman is mentioned here, yet Tadmurī must refer to the *Tārīkh Bayrūt* of Ṣāliḥ ibn Yaḥyá so that he can date the craftsman, and with him the portal as well, to the middle of the eighth/fourteenth century. In drawing upon Ṣāliḥ ibn Yaḥyá, he does not read the latter's name as "Abū Bakr ibn al-Ṣīṣ," but as "Abū Bakr ibn al-Baṣīṣ (Tadmurī, *Tārīkh wa-Āthār,* 195). Tadmurī presents the inscription in the first rendition in writing, but maintains that the "correct" name should be "Abū Bakr ibn al-Baṣīṣ" (Tadmurī, *Tārīkh wa-Āthār,* 195, n. 1). This name is mentioned by Ṣāliḥ ibn Yaḥyá, who writes about Abū Bakr ibn al-Baṣīṣ al-Baʿlabakī, an experienced engineer *(muhandis)* in coastal works who rebuilt a bridge over the Nahr al-Kalb and who undertook other important tasks in the region of Tripoli (Ṣāliḥ ibn Yaḥyá, *Tārīkh Bayrūt: Récits des anciens de la famille de Buḥtur b. ʿAlī, Emir du Gharb de Beyrouth*, ed. Francis Hours and Kamal Salibi [Beirut, 1969], 103; L. A. Mayer, *Islamic Architects and Their Works* [Geneva, 1956], 37). Secondary literature since 1974 follows Tadmurī's reading of the craftsman's signature as "Abū Bakr ibn al-Baṣīṣ al-Baʿlabakī" (cf. for example Salam-Liebich, *The Architecture,* 71; Robert Saliba, ed., *Tripoli: The Old City: Monument Survey: Mosques and Madrasahs: A Sourcebook of Maps and Architectural Drawings* [Beirut, 1994], Monument Number 13; Muḥammad ʿAlī Ḍinnāwī, *ʿAwdat al-Dhākirah ilá Tārīkh Ṭarābulus wa-al-Minṭaqah* [Tripoli, 1998], 256 [Abū Bakr ibn Āl al-Balaʿbakī]; Muḥammad Kāmil Bābā, *Ṭarābulus fī al-Tārīkh* [Tripoli, 1995], 358). By contrast, only Meinecke takes into account the difference between the signature present on the structure and the name as interpreted by Tadmurī; he presents the name of the craftsman as "Abū Bakr ibn al-[Ba]ṣīṣ" (Meinecke, *Mamlukische Architektur,* 2:165).

[37] "Bismillāh al-raḥmān al-raḥīm hādhā al-bāb al-mubārak wa-al-minbar ʿamal al-muʿallim Muḥammad ibn Ibrāhīm al-muhandis fī sanat iḥdá wa-khamsīn wa-sabʿi miʾah." Moritz Sobernheim, *Matériaux pour un Corpus Inscriptionum Arabicarum: Deuxième Partie: Syrie du Nord I: ʿAkkâr, Ḥiṣn al-Akrād, Tripoli* (Cairo, 1909), 105; Nikita Elisséeff, David Storm Rice, and Gaston

can be gained from the chronicle of Ibn al-Dawādārī,[38] *Kanz al-Durar.*[39] In his list of construction works during the reign of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn, Ibn al-Dawādārī mentions the foundation or beginning of the building of a mosque *(jāmiʿ anshaʾahu)* by one Badr al-Dīn ibn al-ʿAṭṭār in Tripoli. However, he does not supply an exact date for this undertaking. Thus, Ibn al-Dawādārī's information opens up a broad scope of interpretation regarding the date of the mosque's construction. On the basis of the chronicle, which ends with the year 735/1334–35 and the actual writing of which was completed in 736/1335–36,[40] the event described can be dated prior to 735–36/1334–36, during the reign of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn (first regnal period: 693–94/1293–94; second regnal period: 698–708/1299–1309; third regnal period: 709–41/1310–41). The verb "*anshaʾa*" that Ibn al-Dawādārī used in this reference implies a formal act of founding, that is, the foundation of a *waqf,* but also the actual beginning of construction of the ʿAṭṭār Mosque itself.[41]

Wiet, *Répertoire Chronologique d'Epigraphie Arabe,* vol. 16 (Cairo, 1964), 106, no. 6158; Amine Bizri, ed., *La calligraphie Arabe dans l'architecture: Les inscriptions dans les monument Islamiques de la ville de Tripoli à l'epoque mamelouke* (s.l., 1999), 99. The building inscription is engraved on a stone in the back wall of the portal; the stone is integrated into the masonry so that its coevalness with the portal can be assumed.

[38] Ibn al-Dawādārī, *Kanz al-Durar wa-Jāmiʿ al-Ghurar,* pt. 9, *Al-Durr al-Fākhir fī Sīrat al-Malik al-Nāṣir,* ed. Hans Robert Roemer (Wiesbaden, 1960), 391.

[39] Until Tadmurī's study in 1974, which introduces Ibn al-Dawādārī, the dating of the ʿAṭṭār Mosque was based primarily upon the building inscription in the eastern portal. Sobernheim first published the inscription on the eastern portal, noting that this inscribed date of 751/1350–51 could refer either to the foundation or to a restoration of the mosque (Sobernheim, *Matériaux,* 105). Sālim had already drawn upon Ibn al-Dawādārī's chronicle and, relying thereupon, arrived at the date of 751/1350 for the mosque, a date that Tadmurī explicitly contradicts (Sālim, *Ṭarābulus al-Shām,* 413). Tadmurī rejects the date 751/1350–51 with reference to Abū al-Fidāʾ and Ibn al-Wardī, according to whom the donor of the mosque had already died in 749/1348–49 (Tadmurī, *Tārīkh wa-Āthār,* 190–91). While al-Qaṭṭār (Ilyās al-Qaṭṭār, *Niyābat Ṭarābulus fī ʿAhd al-Mamālīk [688–922 H/1289–1516 M]* [Beirut, 1998], 490) and Sharīf (Ḥikmat Bik Sharīf, *Tārīkh Ṭarābulus al-Shām* [Tripoli, 1987], 184–85) follow Tadmurī in his opinion about the date 735/1334–35, Ḥimṣī (Nahdī Ṣubḥī Ḥimṣī, *Tārīkh Ṭarābulus min khilāl Wathāʾiq al-Maḥkamah al-Sharʿīyah fī al-Niṣf al-Thānī min al-Qarn al-Sābiʿ ʿAshar al-Mīlādī* [Beirut, 1986], 68), al-Bakhīt (in Yaḥyá ibn Abī al-Ṣafāʾ Ibn Maḥāsin, *Al-Manāzil al-Maḥāsinīyah fī al-Riḥlah al-Ṭarābulusīyah,* ed. Muḥammad ʿAdnān al-Bakhīt [Beirut, 1981], 67), and Salam-Liebich (*The Architecture,* 69) support Sālim's date of 751/1350–51.

[40] From Ibn al-Dawādārī's introduction to the first volume, Roemer infers that the chronicle was begun in 709/1309–10, and, in view of the colophon in the ninth volume, that it was completed in 736/1335–36 (Roemer, ed., *Kanz al-Durar,* 14).

[41] See, for instance, Lane, who explains one of the meanings of "*anshaʾa*" as: "he founded or began to build a house." (q.v., E. W. Lane, *Arabic-English Lexicon*). Cf. Herzfeld, *Matériaux,* 119, and Sheila Blair, *Islamic Inscriptions* (New York, 1998), 32.

Hence, this results in two possibilities for the dating of the construction of the ʿAṭṭār Mosque. If Herzfeld's reading of the word "*anshaʾa*" as a formal founding act ("l'institution abstraite du sanctuaire") is followed,[42] then merely a *waqf* was established during the reign of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn before 735–36/1334–36 and the actual construction began later. For this interpretation, attention should be drawn to Abū al-Fidāʾ and Ibn al-Wardī, who are to be dated before 749/1348–49, and who mention an endowment and do not refer expressly to the erection of a mosque.[43] Therefore, only the building inscription of 751/1350–51 can be viewed as a fixed date for the actual construction work.

On the contrary, if the verb "*anshaʾa*" is understood to denote the actual beginning of construction, then based upon the dates at hand the construction began during the reign of al-Malik al-Nāṣir Muḥammad ibn Qalāwūn, yet before 735–36/1334–36, and was still going in 751/1350–51.[44] This relatively long time span can be viewed in association with the three phases of building. However, their precise temporal fixation and the duration of possible interruptions in building cannot be determined on the basis of the sources at hand and my analysis of the masonry. The postulated erection of the southern part of the prayer hall (I) prior to 735–36/1334–36 would, nevertheless, confirm the designation of the eastern annex with its inscribed date of 751/1350–51 as the latest section of the building. Therefore, Meinecke's assumption of an original structure that comprised the entire prayer hall that was erected before 735/1334–35 and that was later enlarged with an annex (III) can be expanded through the identification of a third building phase (II), so that the prayer hall was not erected in one single building phase, but in two (I, II).[45]

Following the theory that the southern part is the oldest section of the ʿAṭṭār Mosque, that its erection took place before or after 735–36/1334–36, and that the mihrab was originally integrated into the qiblah wall, it can be maintained that the building was initially a mosque. This is further supported by the chronicles of Ibn al-Dawādārī and Ibn al-Wardī and the travelogue of Ibn Maḥāsin, which are contemporaneous, and which in contrast to al-Nābulusī do not mention a

[42] Herzfeld, *Matériaux,* 119.

[43] Abū al-Fidāʾ Ismāʿīl ibn ʿAlī, *Kitāb al-Mukhtaṣar fī Akhbār al-Bashar* (Cairo, 1325/1907), 153; Zayn al-Dīn ʿUmar ibn al-Muẓaffar Ibn al-Wardī, *Tatimmat al-Mukhtaṣar fī Akhbār al-Bashar (Tārīkh Ibn al-Wardī),* ed. Aḥmad Rifʿat al-Badrāwī (Beirut, 1970), 2:500.

[44] This seems unusually long when compared to other structures such as, for example, the madrasah of al-Nāṣir Ḥasan in Cairo, the construction of which began in 757/1356 and was completed after 761/1360, and which was considered to be exceedingly laborious and expensive (cf. Mayer, *Islamic Architects,* 23; Doris Behrens-Abouseif, "Muhandis, shad, muʿallim—Note on the Building Craft in the Mamluk Period," *Der Islam* 72, no. 2 (1995): 305.

[45] Meinecke, *Mamlukische Architektur,* 2:165 and 215.

previous structure or a church as predecessor. All in all, they weaken Salam-Liebich's argument that the mosque is a converted Crusader church with the later addition of an ablution room, and also Tadmurī's suggestion that the southern part is the remnant of a Crusader church.

The Architecture of the ʿAṭṭār Mosque in Its Urban Setting

Since the analysis of the building of the ʿAṭṭār Mosque does not confirm the hypothesis of a present-day structure in which a (preceding) Crusader church can be recognized, al-Nābulusī can be assumed to be the creator of this particular topos. Yet, the "unusual" disposition of this mosque still remains unresolved. As an alternative hypothesis for explaining its atypical layout, the relationship of the mosque to its urban setting[46] will be considered here.[47] Thereby attention should be directed to other architectural features of the ʿAṭṭār Mosque that have not yet been noted, namely the incorporation of the dome and the remarkable situation of the passageways (fig. 1).

The ʿAṭṭār Mosque lies north of the citadel of Tripoli on the left bank of the Abū ʿAlī river.[48] It is located in the Bāb al-Ḥadīd quarter and enclosed by the Sūq al-Bāzirkān to the east and the Sūq al-Jadīd to the north.[49]

The immediate urban surroundings (fig. 9) seem to have developed at about the same time as the ʿAṭṭār Mosque. Both the Khān al-Miṣrīyīn to the south of the mosque and the Khān al-Khayyāṭīn adjoining in the east date from the eighth/fourteenth century.[50]

---

[46] To date, the immediate urban environs of the ʿAṭṭār Mosque have not been investigated in detail, or the results have not been published. With all necessary caution, here an attempt will be made, departing from the present town's structure and by means of individual datable buildings, to determine the urban situation in the eighth/fourteenth century. Thereby, the possible interdependence of the mosque's architecture and the urban setting should be seen as a reciprocal interaction.

[47] Cf. in this regard Howayda Al-Harithy, "The Concept of Space in Mamluk Architecture," *Muqarnas* 18 (2001): 73–93. Hillenbrand points to the interaction of external and internal space in mosques, using the inward shift of the façade in the form of the qiblah as an example (Robert Hillenbrand, "Some Observations on the Use of Space in Medieval Islamic Buildings," in *Studies in Medieval Islamic Architecture* [London, 2001], 1:165). This interaction of the ʿAṭṭār Mosque with its urban setting can be seen as the example of an exception, if its ground plan and its integration into the urban landscape are compared to the Great Mosque, for instance. In its design as a court mosque, the latter interacts less with its surroundings; it displays a regular rectangular ground plan and no through passageways.

[48] Cf. a plan of the city in Paul Collart, Maurice Chehab, and Armando Dillon, *Liban: Aménagement de la Ville de Tripoli et du Site de Baalbek*: *Rapport de la mission envoyée par l'UNESCO en 1953, Paul Collart, Chef de Mission, Emir Maurice Chehab et Armando Dillon* (Paris, 1954), 11.

[49] Cf. Tadmurī, "Al-Āthār al-Islāmīyah," 212; Jidejian, *Tripoli,* 93.

[50] Nonetheless, the date of both khans is controversial. Luz views the Khān al-Miṣrīyīn and the

The ʿAṭṭār Mosque is closely integrated into this urban setting through the neighboring houses, surrounding passageways, and the course of streets. A street leads to each of the three entrances of the mosque. Thus, the northern portal of the mosque[51] is connected to the Zuqāq al-Tarbīʿah and the western portal to the Khān al-Jāwīsh.[52] In the east a small street leads on a slightly divergent line to the eastern portal of the ʿAṭṭār Mosque, so that all in all there is a distinct east-west axis in the network of streets.[53]

Likewise, the ʿAṭṭār Mosque interacts with its urban setting, especially with regard to the course of streets, through its architectural design and its decorative scheme. The streets running from the east, west, and north directly towards the entrances converge in the mosque's interior in the area of the dome (fig. 4). The dome distinctly marks this "intersection of streets" and "thoroughfare" situation in the interior and exterior of the mosque. This might be an explanation for the off-center position of the dome within the mosque, for which there are no parallels, either in Tripoli or in other cities. Domes of madrasahs and mosques in Tripoli emphasize the liturgically central places in front of the mihrab and the qiblah wall,[54] and in such buildings which vary the multi-*iwān* scheme, they mark the

---

Khān al-Khayyāṭīn as endowments established prior to 750–51/1350 (Nimrod Luz, "Tripoli Reinvented: A Case of Mamluk Urbanization," *Towns and Material Culture in the Medieval Middle East,* ed. Yaacov Lev [Leiden, 2002], 66, map 5). This date for the Khān al-Khayyāṭīn can also be found in Salam-Liebich (Salam-Liebich, *The Architecture,* 178), Jidejian (Jidejian, *Tripoli*, 92), and Ḍinnāwī (Ḍinnāwī, *ʿAwdat al-Dhākirah,* 255), whereas Meinecke does not list it among the Mamluk structures. On the contrary, he agrees with the date of the Khān al-Miṣrīyīn to the mid-eight/fourteenth century (Meinecke, *Mamlukische Architektur,* 2:226). This view is also held by Salam-Liebich (Salam-Liebich, *The Architecture,* 175) and Tadmurī (ʿUmar ʿAbd al-Salām Tadmurī, *Wathāʾiq Nādirah min Sijillāt al-Maḥkamah al-Sharʿīyah bi-Ṭarābulus: Dirāsah Taḥlīlīyah li-Ahamm al-Nuṣūṣ al-Tārīkhīyah [1666–1780m]* [Beirut, 2002], 39), while Scharabi dates the building to the sixteenth century (Mohamed Scharabi, *Der Bazar: Das traditionelle Stadtzentrum im Nahen Osten und seine Handelseinrichtungen* [Tübingen, 1985], 203).

[51] Tadmurī notes that the north entrance is of recent date (Tadmurī, *Tārīkh wa-Āthār,* 195); Salam-Liebich makes no mention of this portal. My analysis of the masonry in the area of the northern entrance did indeed reveal irregularities there, which makes the later addition of this entrance a possibility.

[52] Tadmurī dates the building to the Ottoman period (Tadmurī, *Tārīkh Ṭarābulus,* 290; idem, "Al-Āthār al-Islāmīyah," 212; idem, *Wathāʾiq,* 40. Cf. Jidejian, *Tripoli*, 92).

[53] At the eastern end of this small street there is a building with an inscription dating to Mamluk times, in which an Amir Sayf al-Dīn Ṭanṭash/Ṭunṭash is named (cf. Tadmurī, *Tārīkh Ṭarābulus,* 290; Bizri, *La calligraphie Arabe,* 165–66, nos. 56–58).

[54] Examples to mention here are the Great Mosque, the Tawbah Mosque, the Madrasat al-Burṭāsī, the Ṭaynāl Mosque, the Madrasat Qarāṭāy al-Manṣūrī, and the Madrasah al-Khātūnīyah. For the use of the dome as a designation of central places, cf. Hillenbrand, *Islamic Architecture,* 53–54.

center.[55]

While the line of the street leading to the northern entrance ends at the qiblah wall in the prayer hall, the street from the west towards the portal diverges slightly from its course in the east. This "external" east-west axis in the street network is incorporated architecturally into the plan of the ʿAṭṭār Mosque through both of the opposite portals and the area of the dome as an "internal" east-west axis. Whereas the massiveness and verticality of the face of the barrel vault of the prayer hall to the north and south of the dome pose a boundary in these directions, the cap-like parts of the vault to the east and west of the dome (B 1, B 2) emphasize this way through the axis.

The entrances as crossing points between interior and exterior space likewise emphasize the way through the east-west axis. Correspondingly, the eastern and western portals are distinguished by ornamentation, while the northern entrance is not decorated. Thus, in contrast to the western portal, the eastern portal, with its essentially larger decorative scheme and size, is clearly marked as the main portal (figs. 10 and 11).[56] The prominence of the main portal is augmented by the integration of the entrance in the north and the portal in the west into (likely, formerly existing) vaulted passageways, so that there was no distant effect.[57]

The fact that the eastern entrance is distinguished with a free-standing high

[55] Examples are again the Madrasat al-Burṭāsī, the Ṭaynāl Mosque, the Madrasat Qarāṭāy al-Manṣūrī, and the Madrasah al-Qadirīyah. In addition, sepulchres can also be covered by a dome. Examples in Tripoli include the sepulchres of the Madrasat al-Burṭāsī, the Ṭaynāl Mosque, the Madrasah al-Nūrīyah, the Madrasah al-Khātūnīyah, and the Madrasah al-Qadirīyah, among others. For domes in sepulchres, cf. R. Stephen Humphreys, "The Expressive Intent of the Mamluk Architecture of Cairo: A Preliminary Essay," *Studia Islamica* 35 (1972): 113–14.

[56] The eastern portal can be divided into four zones, one above the other, of which the lowest two display *ablaq*. The first zone is defined by a door in the center of the back wall of the portal, which is flanked by two stone benches that fill almost the whole width of the portal. Above this is the second zone: above the relieving beam of the door is a lintel decorated with stylized lily motifs in marble incrustation. This zone is followed by the third zone: the aforementioned panel with the inscription and above this a square field with marble incrustation. The fourth zone is constituted by a section of four levels of *muqarnas,* which lead to the concluding calotte of the eastern portal. The design of the portal extends beyond the jamb and is incorporated into an encompassing framework. The decoration of the western portal is less elaborate. It is distinct from the accompanying masonry not through its height, but through its projection and the uncovered ashlary. The door is situated in the middle of the portal, and above it rises a three zoned frieze of *muqarnas*.

[57] The continuation of the roofing above the northern portal in a northerly direction is suggested by the consoles that are still preserved on both sides of the small street. Regarding the western portal, bases of vaults to the north and south indicate that this portal was vaulted. Furthermore, the western portal displays a rather flat *muqarnas* frieze, whose smaller size might be on account of the above vaulting (fig. 11).

portal and extensive decoration, as well as the fact that it draws attention to the east-west axis through the mosque, supports the reconstruction of the major street network in Mamluk Tripoli presented by Salamé-Sarkis.[58] In this reconstruction, he assumes the existence of a main street that runs south to north through the entire city, supposedly also passing by the ʿAṭṭār Mosque in the east.[59] The main street passed by the Great Mosque, the Khān al-Ṣābūn, the Khān al-Miṣrīyīn, and the Khān al-Khayyāṭīn to the ʿAṭṭār Mosque, farther to the Sūq al-Ḥarāj and the Khān al-ʿAskar, and ultimately led out of the city via the Jisr al-Jadīd or Jisr al-ʿAtīq.[60] The north-south direction of the ʿAṭṭār Mosque corresponds approximately with the course of this main street to its east and thereby blocks direct access to the street that leads to the Khān al-Jāwīsh (fig. 9) to its west. Nonetheless, a direct connection between the khan and the main street is provided by the portals of the mosque that lie opposite each other to the east and west and by the continuation of the street's course through the interior, which is emphasized by the architecturally distinct axis.[61]

Finally, the main street's course, which has not yet been ascertained conclusively, might help to explain the divergent position—in view of the setting of the entire mosque—of the eastern annex. Possibly the axis with the divergence in relation to the prayer hall was made in order to adjust the east part of the mosque to the main street's course and thus enable the outer façade to be clearly visible and as large as possible.[62]

[58] However, caution is advised when following this theory. Salamé-Sarkis reconstructs the network of streets based upon important buildings, so that the network deduced from a building might actually be the result of circular logic (Ḥassān Salamé-Sarkis, *Contribution à l'histoire de Tripoli et de sa région a l'époque des croisades: Problèmes d'histoires, d'architecture et de céramique* [Paris, 1980], map no. 4, legend).

[59] This assumption might possibly be confirmed if one accepts Al-Harithy's argument that the vestibules served as "transitional space" that provide a transition to the more "private" zone of the mosque, especially in the case of busy streets (Al-Harithy, "The Concept of Space," 85–86). By contrast, in the north and west there is no vestibule, but instead a direct entrance to the prayer hall.

[60] Thereby, the course of this street resembles that of the ancient street network, which was supposedly retained by the Crusaders (cf. Salamé-Sarkis' reconstruction of streets at the time of the Crusaders [Salamé-Sarkis, *Contribution à l'histoire de Tripoli,* 4, and map no. 3]; also Guy Le Strange, *Palestine under the Moslems: A Description of Syria and the Holy Land from A.D. 650 to 1500: Translated from the Works of Medieval Arab Geographers* [1890; repr., Beirut, 1965], 350–51).

[61] A further example of a dominant east-west axis is found in the nearby Khān al-Miṣrīyīn, whose entrances lie only in the east and west.

[62] Cf. also Humphreys, "The Expressive Intent," 98, and Al-Harithy "The Concept of Space," 87. Comparable examples of this can be found in Cairo as well as in Tripoli. In Cairo, cf. for instance the mosque of Amir Shaykhu (Doris Behrens-Abouseif, *Islamic Architecture in Cairo: An Introduction* [Leiden, 1989], 117) and the Mosque of Amir Aqsunqur al-Nāṣirī (Meinecke, *Mamlukische*

THE JĀMIʿ AL-ʿAṬṬĀR: ITS POSITION BETWEEN FUNCTION AND INTENT

Yet another architectural peculiarity which led Salam-Liebich to presume a converted Crusader church is the placement of the mihrab in the east section and not in the center of the qiblah wall (fig. 2).[63] As could be discerned above, this positioning took place during the construction of the qiblah wall and, therefore, cannot be ascribed to a facility built at a later time, which for instance might have been necessary when converting a church into a mosque. Instead, the minbar is obviously interjoined in the center of the qiblah wall. In order to explicate this peculiarity, here the edifice will be examined according to its social and religious function as "*jāmiʿ al-ʿAṭṭār,*" which was built by a non-Mamluk person.

THE MOSQUE AND ITS COMMISSIONER

In determining the commissioner of the ʿAṭṭār Mosque, reference can be made to the name of the mosque, "*jāmiʿ al-ʿAṭṭār,*" as well as to the Mamluk chronicles and descriptions in Ottoman travelogues. The decree of 821/1418 inscribed in the northern jamb of the eastern portal confirms the historicity of the mosque's name of "*jāmiʿ al-ʿAṭṭār*." Although contemporary sources[64] report that the mosque was named after its donor, the absence of a name in any inscription on the building[65]

Architektur, 1:108, fig. 67). In Tripoli, cf. the Madrasat al-Burṭāsī, along whose northern façade the street via the Jisr al-ʿAtīq (today demolished) once ran (Meinecke, *Mamlukische Architektur,* 1:75).

[63] Salam-Liebich, *The Architecture,* 78. Of almost the same age is the mausoleum of Amir Arāq al-Silāḥdār in Damascus (750/1349–50), where the mihrab was likewise built in the east of the qiblah wall (Meinecke, *Mamlukische Architektur,* 2:213–14). The reason for the position of the mihrab seems be that a window (Karl Wulzinger and Carl Watzinger, *Damaskus, die islamische Stadt* [Berlin, 1924], 100, fig. 22) or a passageway (Meinecke, *Mamlukische Architektur,* 1:111, fig. 71) was built into the qiblah wall instead of a mihrab.

[64] Abū al-Fidāʾ, *Kitāb al-Mukhtaṣar,* 153; Ibn al-Wardī, *Tatimmat al-Mukhtaṣar,* 2:500.

[65] Herzfeld and Allen suggest that the absence of a founder inscription is possibly due to the premature death of the founder (Herzfeld, *Matériaux,* 275). Allen points out that buildings often remained "uninscribed" at the time of death of the founder; further, it was the obligation of the founder's descendants not only to put the donated structure to use, but also to complete the decorative scheme with an inscription of the *waqfīyah.* This, however, was not always carried out (Terry Allen, "Madrasah al-Farrûkhshâhîyah," chap. 3 in *Ayyûbid Architecture,* 6th ed. [Occidental, CA, 1999], http://sonic.net/~tallen/palmtree/ayyarch/index.htm. See especially the sub-section entitled "Missing Inscriptions and Blank Places"). There Allen refers in particular to uninscribed *tabula-ansata* cartouches and lintels in Ayyubid architecture. Thus, the absence of an inscription naming the commissioner might be explained by the mention of the death of the commissioner in 749/1348–49, as reported by Ibn al-Wardī and Abū al-Fidāʾ. The death would have occurred two years before the erection of the eastern portal, which would have been the most appropriate place for the placement of his name (Abū al-Fidāʾ, *Kitāb al-Mukhtaṣar,* 153; Ibn al-Wardī, *Tatimmat al-Mukhtaṣar,* 2:500). Cf. the location of such inscriptions in the Great Mosque, the Madrasat al-

might help to explain al-Nābulusī's assumption that it was endowed in secret (*min al-ghayb*[66]). As far as the structure itself is concerned, only the name "*al-ʿAṭṭār*" in the inscription can be presumed to be a reference to a commissioner. Thus, the designation *al-ʿAṭṭār* affords several interpretative possibilities: literally "*al-ʿAṭṭār*" denotes the occupation of a perfume merchant and pharmacist.[67] As a component of the name *(laqab)* of a person, *al-ʿAṭṭār*—aside from the actual occupational designation of its bearer—can also be understood as a name which no longer connotes its original meaning.[68]

Sobernheim and Condé point to the first reading of "*al-ʿAṭṭār*" as solely an occupational designation and suggest the interpretation of the mosque's name according to the urban context that they reconstructed. Whereas the present-day ʿAṭṭār Sūq is in the vicinity of the Qarāṭāy al-Manṣūrī madrasah,[69] Sobernheim views its location in Mamluk times as being confirmed by inscriptions in the ʿAṭṭār Mosque and a nearby house.[70] Therefore, Sobernheim understands the ʿAṭṭār Mosque as the "mosque of the perfume merchant" (Mosqué du Parfumeur), and "*al-ʿAṭṭār*" not as the specific *laqab* of the commissioner.[71] Condé's translation of the mosque's name as "Perfumers' Mosque" corresponds with this theory as well.[72] Ibn Maḥāsin's travelogue confirms the theory of Sobernheim and Condé,

Burṭāsī, and the Ṭaynāl Mosque in Tripoli (for inscriptions, see Bizri, *La calligraphie arabe*).

[66] Al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 72–73.

[67] Cf. the dictionary entries in Lane, *Arabic-English Lexicon,* and Dozy, *Supplément aux dictionnaires arabes;* and A. Dietrich, "al-ʿAṭṭār," *Encyclopaedia of Islam, CD-ROM,* edition v. 1.0 (Leiden, 1999), 1:751b–752b.

[68] Annemarie Schimmel, *Islamic Names* (Edinburgh, 1989), 54.

[69] Cf. Salam-Liebich, *The Architecture,* 117.

[70] Sobernheim, *Matériaux,* 107; cf. Gaston Wiet, "Répertoire des décrets mamlouks de Syrie," *Mélanges syriens offerts à Monsieur René Dussaud par ses amis et ses élèves,* vol. 2 (Paris, 1939), 524; Tadmurī, *Tārīkh wa-Āthār,* 197–200. Tadmurī considers this assumption as being confirmed by Ottoman court documents (Tadmurī, *Wathāʾiq Nādirah,* 152, n. 4).

[71] Sobernheim further assumes that the mosque was a gathering place for the guild of the perfume merchants (Sobernheim, *Matériaux,* 104, n. 2).

[72] Condé (Bruce Condé, *Tripoli of Lebanon* [Beirut, 1961], 92–93) apparently considers that the ʿAṭṭār Mosque was the kind of mosque meant for a specific quarter in the city. The fact that "*al-ʿAṭṭār*" is a singular form argues against his translation of the mosque's name and its interpretation. An example of a mosque whose name is in the plural form ("*al-ʿAṭṭārīn,*" meaning "mosque of the perfume merchants"), and which is read by Müller-Wiener as "Moschee (des Viertel) der Drogisten" (mosque in the pharmacists' quarter), can be found in Alexandria (Martina Müller-Wiener, *Eine Stadtgeschichte Alexandrias von 564/1169 bis in die Mitte des 9./15. Jahrhunderts: Verwaltung und innerstädtische Organisationsformen* [Berlin, 1992], 269; cf. Meinecke, *Mamlukische Architektur,* 2:182). Salam-Liebich argues against the location in the perfumers' suq as well as against Sobernheim's interpretation of the edifice as a mosque of the perfumers' guild and implicitly also Condé's interpretation of a mosque for an urban quarter. She instead propounds

insofar as the mosque must have stood in the perfume merchants' suq, at least in the eleventh/seventeenth century *(fī nafs sūq al-buzūriyīna),* yet Ibn Maḥāsin makes explicit mention of the person Shaykh al-ʿAṭṭār as commissioner.[73]

Nevertheless, the earliest chronicles pertaining to the ʿAṭṭār Mosque imply an association between the name of the mosque "Jāmiʿ al-ʿAṭṭār" and a commissioner with the *laqab* "al-ʿAṭṭār." Whereas Ibn al-Dawādārī mentions a person by the name of "Badr al-Dīn ibn al-ʿAṭṭār," who supposedly founded a mosque in Tripoli, Abū al-Fidāʾ and Ibn al-Wardī confirm a direct tie between a "Shaykh Nāṣir al-Dīn al-ʿAṭṭār," who endowed a congregational mosque in Tripoli, and the mosque's name, as this edifice had been named after him *(wa-huwa wāqifu al-jāmiʿ al-maʿrūf bihi bihā).*[74]

The mention by name of a commissioner with the *laqab* "al-ʿAṭṭār" in chronicles written around the time of the mosque's erection is supportive of the existence of a person known by name who endowed the ʿAṭṭār Mosque. Due to the limitations of the available written sources, this still does not answer the question as to whether the name of the commissioner was "Badr al-Dīn ibn al-ʿAṭṭār" or "Nāṣir al-Dīn al-ʿAṭṭār."[75] Nevertheless, the component of the mosque's name, "*al-ʿAṭṭār,*"

---

that the name of the mosque should be ascribed to the *laqab* of a person named as commissioner in the chronicles. The person's name was al-ʿAṭṭār, who merely by coincidence was a perfume merchant, and the mosque was named after him (Salam-Liebich, *The Architecture,* 69). She thereby refers to Ibn al-Dawādārī's introduction in Sālim (Sālim, *Ṭarābulus al-Shām,* 413. Al-Zayn, *Tārīkh Ṭarābulus,* 422, follows the passage almost precisely).

[73] Ibn Maḥāsin, *Al-Manāzil,* 82.

[74] Abū al-Fidāʾ, *Kitāb al-Mukhtaṣar,* 153; Ibn al-Wardī, *Tatimmat al-Mukhtaṣar,* 2:500.

[75] Various deliberations about the commissioner of the ʿAṭṭār Mosque, which are based upon these three Mamluk chronicles, have appeared in the secondary literature. One group of scholars maintain that either Shaykh Nāṣir al-Dīn al-ʿAṭṭār, mentioned by Ibn al-Wardī and Abū al-Fidāʾ (Bābā, *Ṭarābulus fī al-Tārīkh,* 358), or Shaykh Nāṣir al-Dīn ibn al-ʿAṭṭār (Sulaymān ʿAbd al-ʿAbd Allāh al-Kharābishah, *Niyābat Ṭarābulus fī al-ʿAṣr al-Mamlūkī* [Amman, 1993], 156), or Badr al-Dīn ibn al-ʿAṭṭār, traceable to Ibn al-Dawādārī (Ḥimṣī, *Tārīkh Ṭarābulus,* 200, n. 2; Sharīf, *Tārīkh Ṭarābulus,* 174; al-Bakhīt, *Al-Manāzil al-Maḥāsinīyah,* 67; Ḍinnāwī, *ʿAwdat al-Dhākirah,* 256), is the commissioner. Other scholars prefer the reading of Badr al-Dīn al-ʿAṭṭār as found in Ibn al-Dawādārī, which is not documented and is presumably wrongly bequeathed. Whereas Salam-Liebich mentions both Badr al-Dīn al-ʿAṭṭār and Badr al-Dīn ibn al-ʿAṭṭār as commissioner (Salam-Liebich, *The Architecture,* 68–69), Meinecke and Saliba decided in favour of Badr al-Dīn al-ʿAṭṭār (Meinecke, *Mamlukische Architektur,* 2:215, and 1:76; Saliba, *Tripoli*, Monument No. 13). Referring to three different variations, Tadmurī reflects the broadest scope of interpretations of the commissioner's name: Badr al-Dīn ibn al-ʿAṭṭār (Tadmurī, *Tārīkh wa-Āthār,* 191–92), Badr al-Dīn al-ʿAṭṭār (idem, *Wathāʾiq Nādirah,* 105; idem, "Al-Āthār al-Islāmīyah," 212; idem, "The Plans of Tripoli Alsham and its Mamluk Architecture," *ARAM* 9–10 (1997–98): 476) and "undecided," Badr al-Dīn al-ʿAṭṭār, and Nāṣir al-Dīn al-ʿAṭṭār (idem, *Tārīkh Ṭarābulus,* 291. Cf. also al-Qaṭṭār, *Niyābat Ṭarābulus,* 490).

is so closely tied to the specific personage of a commissioner that still in the eleventh/seventeenth century al-Nābulusī reported that the mosque was named after its commissioner, without supplying this person's full name.[76] Instead, he goes beyond the information of his contemporaries and identifies the person as a wealthy perfume merchant and therefore views the *laqab* "al-ʿAṭṭār" as denoting the person's occupation as well.[77]

Whether the commissioner was actually a merchant in perfumes, as the *laqab* and al-Nābulusī maintain, cannot be ascertained on the basis of the available source material. It can, however, be assumed that the person was likely wealthy in order to be able to endow the building of a mosque.[78] The first explicit reference to the endowment of the mosque *(waqf)* occurs in the mid-eighth/fourteenth century in the writings of Abū al-Fidāʾ and Ibn al-Wardī,[79] but the kind and extent of the *waqf* are not specified.[80] A *waqf* is also mentioned in the decree on the eastern portal of the ʿAṭṭār Mosque, so that an endowment can likewise be assumed in the ninth/fifteenth century. Al-Nābulusī writes in more detail about a *waqf* during the

[76] Al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 72–73.

[77] "Wa-qad ʿamarahu [jāmiʿ] rajul kāna ʿaṭṭāran, wa-kāna yunfiqu ʿalayhi min al-ghayb fa-nusiba ilayhi" (al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 72 f).

[78] Fernandes ascertained that anyone, regardless whether a member of the civil or military elite, could be a commissioner (Leonor Fernandes, "Mamluk Architecture and the Question of Patronage," *Mamlūk Studies Review* 1 [1997]: 108). The sole decisive criterion was the person's financial standing. Thus, Fernandes explicitly includes women and merchants in the group of commissioners.

[79] Abū al-Fidāʾ, *Kitāb al-Mukhtaṣar,* 153; Ibn al-Wardī, *Tatimmat al-Mukhtaṣar,* 2:500.

[80] Tadmurī attempts to connect the Madrasat Sibṭ al-ʿAṭṭār and a Ḥamām al-ʿAṭṭār and the commissioner of the mosque (Tadmurī, *Tārīkh wa-Āthār,* 309; idem, *Tārīkh Ṭarābulus,* 287–88; idem, "The Plans of Tripoli," 476–77; idem, *Wathāʾiq Nādirah,* 181). Although an inscription dated to 862/1457 has been documented in the Madrasat Sibṭ al-ʿAṭṭār (Sobernheim, *Matériaux,* 124–25; Meinecke, *Mamlukische Architektur,* 2:381), and although both structures are named in Ottoman sources (cf. al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 73; *Sijillāt Maḥkamat Ṭarābulus al-Shām al-Sharīʿīyah, sijill* 2, p. 135 [Ḥimṣī, *Tārīkh Ṭarābulus,* 271–73; Tadmurī, *Wathāʾiq Nādirah,* 112 ff.]), Tadmurī's assignment of this data to supposedly extant buildings as well as the relationship of the respective commissioners to the commissioner of the ʿAṭṭār Mosque—which Tadmurī assumes—must nevertheless be carefully thought about. Whereas at first view the inference of a connection between mosque, *ḥamām,* and madrasah by means of a name may seem reasonable, the subsequent assumption that therefore a connection must have existed between the commissioners is unfounded, based upon the sources at hand. Only one single tie can be reconstructed between the Ḥamām al-ʿAṭṭār and the Madrasat Sibṭ al-ʿAṭṭār: an Ottoman court document from the year 1079/1668 mentions that the Ḥamām al-ʿAṭṭār was connected with the madrasah through a *waqf* and located in its vicinity (*Sijillāt Maḥkamat Ṭarābulus al-Shām al-Sharīʿīyah, sijill* 2, p. 135; dated to the beginning of Rabīʿ II 1079/September–October 1668 [Ḥimṣī, *Tārīkh Ṭarābulus,* 271–73; Tadmurī, *Wathāʾiq Nādirah,* 112 ff.]).

Ottoman period, naming teachers as beneficiaries for the first time.[81]

The mention of the ʿAṭṭār Mosque and the commissioner in chronicles and travelogues emphasizes the commissioner's performing a devout act in endowing a *jāmiʿ*. The mention of the name of the commissioner of the ʿAṭṭār Mosque in supra-regional Mamluk chronicles leads to the conclusion that the name seems to have been widely known, or it was meant to designate an important personage in the city. As an inscription containing his name is absent on the mosque itself, the chronicles serve to preserve his *memoria*. Thereby the chronicles determine the personage of al-ʿAṭṭār primarily as commissioner and founder of the ʿAṭṭār Mosque. The construction of the *jāmiʿ* is then cited as an attribute of the commissioner as a person, which underscores his outstanding achievement, his service and—over and above that—his devoutness.[82] At the same time the ʿAṭṭār Mosque gains widespread renown. In a list of construction projects carried out during the reign of al-Nāṣir Muḥammad,[83] Ibn al-Dawādārī cites the mosque, along with the madrasah of Qarāṭāy al-Manṣūrī (716–26/1316–26),[84] as the only *jāmiʿ* and the solitary edifice erected by a non-Mamluk in Tripoli.[85] This in turn could lead to deductions regarding the mosque's local prominence as a *jāmiʿ* and to the social status of its commissioner.

THE ʿAṬṬĀR MOSQUE AS *JĀMIʿ*

The ʿAṭṭār Mosque's function as a congregational mosque or *jāmiʿ* is documented in

---

[81] Al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 72–73. That instruction was held in the ʿAṭṭār Mosque during the Ottoman period is confirmed by published court documents of the sixteenth and seventeenth centuries in Tripoli (cf. Ḥimṣī, *Tārīkh Ṭarābulus,* 200, with reference to *sijill* 1, p. 4 [from 1077/1667], in which the pay for a teacher in the *jāmiʿ al-ʿAṭṭār* is mentioned).

[82] Cf. Adam Sabra, *Poverty and Charity in Medieval Islam: Mamluk Egypt, 1250–1517* (Cambridge, 2000). Cf. also the religious as well as social significance of a *jāmiʿ* in Fernandes, "Mamluk Architecture," 113.

[83] Ibn al-Dawādārī, *Kanz al-Durar*, 9:391.

[84] Salam-Liebich, *The Architecture,* 107. Ibn al-Dawādārī refers to the Madrasat Qarāṭāy al-Manṣūrī as a *jāmiʿ,* but its use as such is unknown. The latter might be explained by the madrasah's location directly next to the Great Mosque.

[85] If the importance of the ʿAṭṭār Mosque during the Ottoman period were to be judged by its place in the sequence of Tripoli's mosques named in travelogues, then the picture becomes less clear. Accordingly, al-ʿUṭayfī mentions only the Great Mosque, the madrasah/mosque of al-Burṭāṣī, and the Tawbah and the Ṭaynāl Mosques (al-ʿUṭayfī, *Riḥlah min Dimashq al-Shām ilá Ṭarābulus al-Shām,* in *Riḥlatān ilá Lubnān, Taʾlīf ʿAbd al-Ghanī ibn Ismāʿīl al-Nābulusī wa-Ramaḍān ibn Mūsá al-ʿUṭayfī,* ed. Stefan Wild and Ṣalāḥ al-Dīn al-Munajjid [Wiesbaden, 1979], 21). Al-Nābulusī and Ibn Maḥāsin, on the other hand, deal with the ʿAṭṭār Mosque extensively. Ibn Maḥāsin lists it in fourth place (Ibn Maḥāsin, *Al-Manāzil,* 82). Although the mosque is only eighth in al-Nābulusī's sequence, compared with the other mosques mentioned it receives a relatively detailed description (al-Nābulusī, *Al-Riḥlah al-Ṭarābulusīyah,* 72–73).

the inscription on the building itself and further verified through its designation as "*jāmiʿ*" in Ottoman travelogues as well as through its name today. Contemporary chronicles and the building inscription on the eastern portal indicate this function as being the original one. Although the building inscription above the entrance in the eastern portal does not explicitly designate the ʿAṭṭār Mosque as a *jāmiʿ,* this function can be deduced indirectly through the allusion to the minbar, erected by Muḥammad ibn Ibrāhīm in 751/1350–51 (fig. 10). The Friday sermon *(khuṭbah),* part of the Friday prayers *(ṣalāt al-jumʿah)* conducted in a mosque and obligatory for every adult male Muslim, is delivered from the minbar. Thus, the minbar also serves as a characterizing element of the *jāmiʿ* as a mosque in which the Friday prayers are held.[86]

In addition to the inscription on the main portal that refers to the minbar, the minbar becomes the liturgical center of the prayer hall through its decorative presence in the otherwise (present-day) plain interior room as well as its placement in the middle of the qiblah wall (fig. 2). The role of the minbar as the place for the *khaṭīb* and the *mawʿiẓah* is declared by the inscription on the minbar.[87]

A hypothetical interpretation for this emphasis on the ʿAṭṭār Mosque as a *jāmiʿ* might be gained from the urban setting and the social position of the commissioner. Here it should be emphasized that the ʿAṭṭār Mosque is the only structure in the immediate vicinity that is designated expressly (by a decree) on the building as being a *jāmiʿ*. The Madrasat al-Burṭāsī, which is used for the Friday prayers, lies farther to the southeast;[88] the Tawbah Mosque *(jāmiʿ)* lies to the north.[89] Thus, in this developing economic center,[90] the ʿAṭṭār Mosque takes on a supportive function both ritually as well as socially for the population that lives and works there. It is the place where the congregation can attend daily prayers and Friday prayers, and hear the *khuṭbah.*[91]

The function of the ʿAṭṭār Mosque as the only *jāmiʿ* in the immediate urban

[86] J. Pedersen, "Masdjid," *EI, CD-ROM,* edition v. 1.0, 6:655.

[87] The inscription panel on the east flank of the minbar reads as follows: "Anā maraḍ li-khaṭīb wa-muʿadd lil-mawāʿiẓ" (I am the base for a *khaṭīb* and intended for sermons). Cf. Bizri's translation: "I am the threshhold [sic] for a speaker and a deviser of preachement [sic]" (Bizri, *La calligraphie arabe,* 102, no. 12). The inscription on the west flank reads: "Fa-iʿtabir fīya wa-fīnafsik talaqqá kull wāʿiẓ" (Contemplate upon me, and accept every preacher unto yourself). Cf. translation: "Take advice from me and in yourself consider every preacher" (Bizri, *La calligraphie arabe*, 102, no. 13).

[88] Cf. the building inscription that alludes to the building's twofold function as madrasah and place for Friday prayers (Salam-Liebich, *The Architecture,* 35).

[89] The exact date is unknown, but Tadmurī and Salam-Liebich reckon an approximate date between 693 and 715/1293–94 and 1315–16 (Salam-Liebich, *The Architecture,* 97).

[90] Cf. Luz, "Tripoli Reinvented," 56.

[91] Fernandes, "Mamluk Architecture," 109.

environs[92] is corroborated by its architectural layout, which is designed to enable easy access. This is provided in the first place by the three entrances and their interaction with the course of the streets. Further, the portals, the minaret, and the dome of the almost completely enclosed ʿAṭṭār Mosque serve as distinguishing features of the mosque in general[93] and of the entrances in particular. They thus act as a kind of guide in the urban setting.[94] While the east portal draws the attention of passers-by with its extensive decoration and its high visibility on the main street as reconstructed, and is thus easy to find, the minaret directs attention towards the adjacent northern portal. The minaret's function as a guide to the mosque relies upon its visibility from afar, as is shown in the decorative plan, which only begins in the third storey.[95]

Finally, the building of a *jāmiʿ* is likewise of political significance. On the one hand, the construction of a *jāmiʿ* in a certain area encourages further urban development.[96] In the case of the Mamluk reestablishment of Tripoli, this means of urbanization was applied by al-Ashraf Khalīl and al-Nāṣir Muḥammad—among others—with the Great Mosque in the city's center, and by Amir Ṭaynāl

[92] Cf. Baybars al-Manṣūrī's description, furnished by Fernandes, of the erection of the *jāmiʿ al-jadīd al-Nāṣirī* by al-Nāṣir Muḥammad on the island of al-Rawda in Cairo. The *jāmiʿ* was built for the inhabitants of this *maḥallah,* who did not have their own *jāmiʿ* and who wanted one so that they would not have to attend Friday prayers in another mosque (Baybars al-Manṣūri, *Al-Tuḥfah al-Mulūkīyah,* quoted in Fernandes, "Mamluk Architecture," 113).

[93] For the significance of these structural components and their effect upon the urban environment, see also Al-Harithy, "The Concept of Space," 89, who studied the effect of the dome and the minaret from near and afar, using the building complex of al-Manṣūr Qalāwūn as an example. Humphreys, "The Expressive Intent," 111–12, notes that minarets would assume a kind of "advertising" function in an environment in which many smaller and anonymous buildings attempted to attract attention. Hillenbrand points in general to the association between densely populated urban areas, the lack of space, and the resultant limited size of mosques, which consequently led to an elaborate design of façades in order to attract the attention of passers-by (Hillenbrand, *Islamic Architecture,* 99).

[94] For the function of main portals, domes, and minarets as distinguishing signs of mosques, see Al-Harithy, "The Concept of Space," 87 ff.

[95] Although the lowest zone of the minaret (floors 1–2) takes up the largest surface, the minaret's emphasis through decoration starts only in the third floor with columns in the corners and twin arcades in the balcony above in the fourth floor. Correspondingly, the mouldings that separate the floors into the first and second stories are in a simple design, while the cornice between the second and third stories is decorated with tongued leaves and between the third and fourth floors—the balcony of the minaret—is supported by an expanding *muqarnas* cornice in two zones.

[96] Doris Behrens-Abouseif, "Al-Nāṣir Muḥammad and al-Ašraf Qāytbāy—Patrons of Urbanism," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras: Proceedings of the 1st, 2nd and 3rd International Colloquium organized at the Katholike Universiteit Leuven, May 92/93/94,* ed. Urbain Vermeulen and D. De Smet (Leuven, 1995), 268.

(736/1336) with the Ṭaynāl Mosque in the south of Tripoli.[97] On the other hand, the Friday prayers are held in the *jāmiʿ* in the name of the ruler, for which reason the erection of the *jāmiʿ* must be viewed as a privilege granted by the sultan and confirmed by religious scholars.[98] As can be seen from the examples above, this privilege was allotted foremost to members of the military elite at this time.[99] In this respect, no information could be gained from the available sources concerning the identification of the commissioner of the ʿAṭṭār Mosque, that is, whether or not he was a member of the Mamluk military elite.[100] Instead, it seems that the person was a civilian, whose influential position and/or wealth permitted him the privilege[101] of erecting the *jāmiʿ* and thus also of making a significant contribution towards the development of the infrastructure of the city.[102]

The Decorative Scheme of the ʿAṭṭār Mosque

The decorative scheme of the ʿAṭṭār Mosque proves to be a cosmopolitan assemblage. The form of the portal, the minbar, and the minaret have parallels in contemporary structures in Cairo, Jerusalem, Damascus, and Gaza. The question thus arises as to the mastermind(s) behind these decorative elements in the ʿAṭṭār Mosque. Meinecke explains the phenomenon of the appearance of the same decorative forms in different places based on his concept of itinerant craftsmen or workshops,[103] which he maintains were responsible for the exchange of forms in architecture and ornamentation between Cairo, the provinces of the Mamluk empire, and other dominions.[104] He follows the theory that itinerant craftsmen adopted formal and decorative elements characteristic of one locale and then carried them to new locales. Thus, the presumed "itinerant craftsmen" can be deduced on the basis of the appearance of similar design characteristics

[97] Cf. Luz, "Tripoli Reinvented," 56.

[98] Fernandes, "Mamluk Architecture," 109.

[99] The madrasat/*jāmiʿ* al-Burṭāsī was likewise donated by a member of the military elite, whose death date, 725/1325, provides an *ante quem* date for the mosque: ʿĪsá ibn ʿUmar ibn ʿĪsá, al-Amīr Sharaf al-Dīn ibn al-Burṭāsī al-Kurdī (cf. Salam-Liebich, *The Architecture,* 39). The Tawbah Mosque is associated with the Great Mosque by a *waqf;* Salam-Liebich and Tadmurī consider its commissioner to be one of the ruling elite (Tadmurī, *Tārīkh wa-Āthār,* 135–38; Salam-Liebich, *The Architecture,* 97). Yet Meinecke does not list it among the Mamluk buildings.

[100] For names of Mamluks, see Schimmel, *Islamic Names,* 70–72.

[101] Cf. Fernandes, "Mamluk Architecture," 116.

[102] The position and prosperity of these commissioners, however, cannot be determined on the basis of the sources at hand.

[103] Cf. for example Meinecke, *Mamlukische Architektur,* vol. 1, and idem, *Patterns of Stylistic Changes in Islamic Architecture: Local Traditions versus Migrating Artists* (New York, 1996).

[104] Cf. Michael Meinecke, "Mamluk Architecture: Regional Architectural Traditions: Evolution and Interrelations," *Damaszener Mitteilungen* 2 (1985): 174–75.

in different localities. Meinecke sees an example of this in the signature of the craftsman, Muḥammad ibn Ibrāhīm, on the eastern portal, whose workmanship he (Meinecke) attempts to discern, to the limited extent that his overview of Mamluk architecture permits, through the comparison of decorations and motifs. However, Meinecke has no larger preliminary works on the stylistic assessment of the ʿAṭṭār Mosque within the local tradition in Tripoli and the Mamluk realm to which he can refer.[105] He sees parallels to the use of *ablaq* and the variations in the polychrome marble panel on the eastern portal of the ʿAṭṭār Mosque (fig. 10) in the madrasah of the merchant Afrīdūn al-ʿAjamī (744/1343–44) in Damascus.[106] Further, he considers the design of the minbar in the ʿAṭṭār Mosque as having been influenced by the minbars in Aleppo.

Meinecke's concept of itinerant craftsmen makes it possible for him to postulate an itinerary. Accordingly, the marble minbar of the ʿAṭṭār Mosque, "inspired" by Aleppo, would indicate that Muḥammad ibn Ibrāhīm originally belonged to a workshop in Aleppo. From there via Cairo he could have joined the workshops of the Madrasat al-ʿAjamī in Damascus,[107] which Meinecke attempts to prove with a comparison of the portal of the ʿAṭṭār Mosque and the Madrasat al-ʿAjamī.[108]

Meinecke's comparison of decoration and motifs found in the polychrome marble panel on the portal of the ʿAṭṭār Mosque and the Madrasat al-ʿAjamī[109] seems conclusive, but only at first glance. The number of parallels observed in

---

[105] Stylistic comparisons of prominent decorative elements such as the eastern portal, the minaret, and the minbar are only implied and refer solely to Tripoli. Thus, Sālim, al-Zayn, and Ḍinnāwī merely make note of the similarity between the decorative scheme of the eastern portal and the Madrasat Qarāṭāy al-Manṣūrī (Sālim, *Ṭarābulus al-Shām,* 414; al-Zayn, *Tārīkh Ṭarābulus,* 423; Ḍinnāwī, *ʿAwdat al-Dhākirah,* 256). Regarding the minaret, note is only made that it can be considered as one of the most important and magnificent minarets in Tripoli (Salam-Liebich, *The Architecture,* 75; Tadmurī, *Tārīkh wa-Āthār,* 201; Sālim, *Ṭarābulus al-Shām,* 414; Condé, *Tripoli,* 94). The minbar has also received little attention. Tadmurī notes at least that it is the only marble minbar in Tripoli from the Mamluk period (Tadmurī, *Tārīkh wa-Āthār,* 200).

[106] Cf. Meinecke, *Mamlukische Architektur,* 1:109.

[107] Ibid., 112, n. 208.

[108] Ibid., 112.

[109] Both are square and display knots radiating out from a central circle and stylized lilies as well as colored marble incrustation. Whereas the center of the zone of patterns in the ʿAṭṭār Mosque is inscribed in three octagons, of which the outermost forms in parts the frame, the central circle of the panel of the Madrasat al-ʿAjamī is encircled by two squares standing on end, which are knotted with the frame by trefoils at the corners. Furthermore, as a whole the work on the portal of the Madrasat al-ʿAjamī displays finer workmanship. The vines have an additional darker framework and the lilies in the corners are clearly distinguished from the other blossoms. By contrast, compared with the vines, the blossoms in the panel on the ʿAṭṭār Mosque are not placed in the foreground. Finally, the ornamentation of the Madrasat al-ʿAjamī does not present the predominant triangular elements in decorative patterns as found in the ʿAṭṭār Mosque.

motifs and materials in the panels of the Madrasat al-ʿAjamī and the ʿAṭṭār Mosque, which initially seem so similar to one another, diminish when they are compared to other structures. For instance, the structure and motifs in panels found in the gate room of the northern portal of al-ʿUmarī congregational mosque in Gaza, built under al-Nāṣir Muḥammad, show greater parallels to the ʿAṭṭār Mosque than does the Madrasat al-ʿAjamī.[110]

The Madrasat al-ʿAjamī may not be viewed as the sole example of the use of a particular model of polychrome marble panel and the *ablaq* technique at the same time.[111] This scheme can also be seen in the southern portal niche of the mosque of Aṣlam al-Bahāʾī al-Silāḥdār (746/1345)[112] in Cairo, where aside from the *ablaq,* a variation of the square panel—with a motif of knots and blossoms—is carried out in marble incrustation. Finally, with regard to the design of frames around entrances,[113] a fine example is offered in the portal of the *turbah* of Turkān Khātūn in Jerusalem (753/1352–53),[114] not the Madrasat al-ʿAjamī. When attempting to explain the motifs of the panel of marble incrustation and the simultaneous use of *ablaq* in the ʿAṭṭār Mosque, these examples indicate even more that in his works Muḥammad ibn Ibrāhīm was not oriented exclusively towards the Madrasat al-ʿAjamī nor was he necessarily employed there.

Likewise, the marble minbars in Aleppo need not have been the sole "inspiration"[115] for the design of the marble minbar in the ʿAṭṭār Mosque.[116] The

[110] Like the panel in the ʿAṭṭār Mosque, this field is organized around an octafoil, which however resembles a form of blossom and is not inscribed within a circle, as in the ʿAṭṭār Mosque, but in an octagon. As in the ʿAṭṭār Mosque, the three encircling octagons are formed by "triangular elements" with a central lily blossom (Mohamed-Moain Sadek, *Die mamlukische Architektur der Stadt Gaza* [Berlin, 1991], 54). Two later examples consist of ornamental panels on the exterior of the minbar in the mosque of Kātib Wilāyah, erected in the mid-fifteenth century (ibid., 133–34) and on the façade of the prayer hall of the congregational mosque al-Zufurdimrī, dated to 762/1360 (ibid., 152).

[111] The portal of the Madrasat Qarāṭāy al-Manṣūrī can be viewed as a local comparison displaying the use of both the knot pattern and *ablaq* at the same time.

[112] Chahinda Fahmi Karim, "The Mosque of Aṣlam al-Bahāʾī al-Silāḥdār (746/1345)," *Annales islamologiques* 24 (1988): 233.

[113] The frame of the portal of the ʿAṭṭār Mosque is decorated with a border composed of an astragal between two grooves, which is accompanied on the inner zone by a frieze. The latter consists of alternating positive and negative forms in relief that swell in volume below and gradually run out above; the crown is pointed.

[114] Michael Hamilton Burgoyne, *Mamluk Jerusalem: An Architectural Study* (Buckhurst, 1987), 321.

[115] Meinecke, *Mamlukische Architektur,* 112, n. 208.

[116] A local tradition of the marble minbar in the ʿAṭṭār Mosque can be ruled out on the basis of the Mamluk minbars preserved today. As Tadmurī ascertains (*Tārīkh wa-Āthār,* 200), the ʿAṭṭār Mosque's minbar represents a singular case among the Mamluk minbars found in Tripoli. The

decoration on Aleppo's minbars[117] differs essentially from that on the ʿAṭṭār Mosque's minbar. Compared to the latter, the minbars in Aleppo display marble incrustation over a greater surface area. The marble minbar[118] of the *jāmiʿ* Alṭunbughā al-ʿAlāʾī, which was erected in 718/1318, corresponds somewhat to this tendency.[119] Although this minbar may be the earliest preserved example in marble,[120] marble minbars are not a phenomenon that is restricted to Aleppo alone in the mid-eighth/fourteenth century. On the contrary, many examples that are similar in decoration, design, and technique are found outside of Aleppo.

The marble incrustation, used primarily on the cupola of the minbar in the ʿAṭṭār Mosque, can be compared with the fragmentary marble minbar of the Khaṭīrī Mosque[121] in Cairo (built in 736/1336), specifically with respect to the small-sized, geometrical decorative patterns. The minbar in the ʿAṭṭār Mosque, however, shares the same kind of small-sized, extensive decorative stone cutting

---

other two examples that are of earlier date, the minbar in the Great Mosque (726/1326) and that in the Ṭaynāl Mosque (736/1336), are made of wood.

[117] Meinecke does not supply any concrete examples to support this idea, but only mentions Aleppo's minbars.

[118] Michael Meinecke, "Die Moschee des Amīrs Āqsunqur an-Nāṣirī in Kairo," *Mitteilungen des Deutschen Archäologischen Instituts in Kairo* 29, no. 1 (1973): 33.

[119] Jean Sauvaget, "Inventaire des monuments musulmans de la ville d'Alep," *Revue des études islamiques* 5 (1931): 88; cf. also Herzfeld, *Matériaux,* 1:324–25. The sides are taken up by a capacious marble incrustation, which displays a triangle composed of dark marble; this is encircled by a lighter-colored border and again by a darker stone. This generous use of marble incrustation technique differs decisively from the moderate marble incrustation in the ʿAṭṭār Mosque, for instance on the cupola of the minbar. Later examples of expansive use of marble incrustation are found on the minbar in the Mankalībughā al-Shamsī Mosque, founded in 763/1393–94 (Jean Sauvaget, *«Les Trésors d'or» de Sibṭ ibn al-ʿAjami: Matériaux pour servir à l'histoire de la ville d'Alep* [Beirut, 1950], 40), and in the Jāmiʿ Taghrībirdī (796/1393–94) (Herzfeld, *Matériaux,* 1:355). They as well exhibit the central triangle enclosed by more triangles, some in different colors, on the staircase.

[120] Meinecke, "Die Moschee des Amīrs Āqsunqur," 33.

[121] Islamic Museum in Cairo, Inv. No. 2983 (Gloria S. Karnouk, "Form and Ornament of the Cairene Baḥrī Minbar," *Annales islamologiques* 17 [1981]: 138). Only the sides of the minbar are preserved. They display a pattern that is based upon a star with twelve rays, which is made of stones of diverse colors and set in marble (ibid., 136; idem, "Cairene Bahri Mamluk Minbars: With a Provisional Typology and a Catalogue" [M.A. thesis, American University of Cairo, 1977], 125–27). Although other stars and geometric forms are also used here, it should be noted that the decorative pattern found in the ʿAṭṭār Mosque's minbar appears to be more clearly organized geometrically through its more angular forms than that of the minbar fragments in Cairo. The latter also contains round forms, in addition to the star-pattern and polygons. Karnouk therefore has doubts about the early date of the fragment. Round decorative elements do not appear on wooden minbars before the fifteenth century (ibid., 125–26).

as the minbar in the Mosque of Āqsunqur (dated 748/1347) in Cairo.[122] The cupola, baldachin, and banister of the Āqsunqur minbar exhibit decorative stone cutting; this technique is present on the portal and flanks of the minbar in the ʿAṭṭār Mosque. On the other hand, close parallels in the structure can be observed on the minbar in the Jāmiʿ Ibn Marwān in Gaza.[123]

Meinecke's concept of itinerant craftsmen as a medium for the transfer of different forms, insofar as it is applied to the ʿAṭṭār Mosque, must therefore be called into question. This model does not suffice to explain all of the similarities in decoration and motif found in the "work" of Muḥammad ibn Ibrāhīm or in reconstructing stations in his travels.[124] Only in the case of a very unlikely "itinerary" via Aleppo, Gaza, Cairo, Jerusalem, and Damascus, which could be enlarged with other stations, would further comparisons be found. The attempt to personalize the motifs and decorations as representing the signature of the craftsman is not sufficient for an understanding of the forms used to ornament the ʿAṭṭār Mosque.

Instead, here the function of the ʿAṭṭār Mosque as a *jāmiʿ* and the decisive role of its commissioner in the choice and objective of the decorative scheme should be asserted. This assertion concentrates on both central elements of the mosque within the townscape: the portal and the minaret. In the mosque's interior the marble minbar, which distinguishes the ʿAṭṭār Mosque as *jāmiʿ,* is accentuated by its decorative scheme. This restricted use of decoration only on exposed and significant elements might imply a purposeful choice of ornamental forms.

The ʿAṭṭār Mosque thus takes on both local and supra-regional features from buildings which were erected by Mamluk as well as non-Mamluk commissioners.[125]

---

[122] Karnouk "Form and Ornament," 137; cf. also idem, "Cairene Bahri Mamluk Minbars," 41.

[123] Sadek dates it to the beginning of the eighth/fourteenth century on the basis of a donation inscription (Sadek, *Gaza*, 113). It resembles the squat form of the ʿAṭṭār Mosque's minbar. The baldachin of the Jāmiʿ Ibn Marwān is similar to that of the 'Attar Mosque, in that they both share octagonal and relatively thick columns, a hemispherical cupola, a similar proportional relationship between cupola and baldachin, and openings formed by round arches. Here, as in the minbar of the ʿAṭṭār Mosque, the baldachin and the cupola appear to have been well understood architecturally: the cupola is carried by pendentives and supported by arcades. A later example of this understanding of the construction of cupolas can be seen in the minbar in the Madrasah of al-Nāṣir Ḥasan (Karnouk, "Cairene Bahri Mamluk Minbars," 27).

[124] The exclusive comparison of the minbar in the ʿAṭṭār Mosque with marble minbars in Aleppo does not suffice for its stylistic attribution, especially since both the decoration and the technique do not appear alone in a tradition that is restricted to Aleppo. Thus, the assignment of Muḥammad ibn Ibrāhīm to an "Aleppan workshop" based solely upon formal criteria of the minbar cannot be assumed.

[125] For instance, a Mamluk commissioner: Aṣlam al-Bahāʾī al-Silāḥdār; a non-Mamluk commissioner: the merchant Afrīdūn al-ʿAjamī.

The employment of similar decorative motifs might be viewed as the claim for equivalence in rank between these buildings and their commissioners.[126] The claim of the ʿAṭṭār Mosque can thus be based upon its being the first *jāmiʿ* in Tripoli that was commissioned by a non-Mamluk.

The Sultan al-Nāṣir Muḥammad Madrasah in Cairo: Restoration and Archaeological Investigation

> Cairene architecture reached its heyday during the reign of al-Nāṣir Muḥammad Ibn Qalāwūn. . . . A man of strict morals, keen intelligence, iron willpower, and boundless energy, yet vengeful and dishonest, al-Nāṣir was also a man of taste and culture, a patron of scholars, and friend of the historian Abu al-Fidā'.[1]

Sultan al-Nāṣir Muḥammad had three reigns altogether: as a child from 1293 to 1294, as an adolescent from 1299 to 1309, and, finally, as an adult from 1310 to 1341. The sultan's reigns were characterized less by warfare than by frenetic building activity; Michael Meinecke attributes no fewer than seventy-seven new buildings and renovations to his second reign. His third reign, which lasted for thirty-one years, saw four hundred and fifty new buildings and renovations. In the capital alone, for instance, the sultan endowed a madrasah, a mosque on the Nile (of which all traces have vanished), and the mosque named after him in the citadel.[2]

The Sultan al-Nāṣir Muḥammad Madrasah was the first building the ruler had anything to do with.[3] Begun sometime between 694/1294 and 696/1296 by Sultan al-ʿĀdil Kitbughā, it was finished in 703/1303 by al-Nāṣir Muḥammad during his second reign.[4]

Madrasah and Mausoleum of al-Nāṣir Muḥammad

On the western side of Shāriʿ Muʿizz li-Dīn Allāh at Bayn al-Qasrayn, the al-Nāṣir Muḥammad Madrasah (694–96/1284–96, 703/1303, Index no. 44) occupies a roughly rectangular site sandwiched between two other Mamluk monuments, the slightly earlier Qalāwūn complex (683–84/1284–85, Index no. 43) and the later Barqūq complex (786–88/1384–86, Index no. 187).[5] Its façade on the main entrance side, overlooking Shāriʿ Muʿizz li-Dīn Allāh, is aligned with the street and is thus oriented more or less north-south. It consists of an ashlar wall some ten meters high and twenty-one meters long, defined at the top by horizontal molding and stepped crenellation. A little over half-way up this wall, a wide horizontal inscription band running the full length of the façade gives the names and titles of Kitbughā, who began the building, and al-Nāṣir Muḥammad, during whose second reign it was completed.

This inscription band is interrupted by the building's famous entrance portal, which divides the ashlar wall into two unequal segments. The southern segment, to the left as one faces the portal, measures 6.6 meters in length, and the northern segment, to the right, measures roughly ten meters. The portal is built around a marble doorway that formerly belonged to the church of St. Agnes in the Crusader-occupied town of Acre and was brought to Cairo by order of Sultan Ashraf Khalīl ibn Qalāwūn, an elder brother of al-Nāṣir Muḥammad, after the Mamluk recovery of Acre in 1291.[6] The portal thus consists of concentric Gothic arches, echoing this doorway, framed by a rectangular molding which is a Mamluk addition, which rises to stop just short of the horizontal molding at the top of the wall. The doorway allows equal entrance to both the mausoleum and the madrasah.

Immediately on either side of the portal are tall vertical recesses, both of which have barred fenestration on the ground-floor level. Above the inscription band, these vertical recesses enter oblong spaces or panels created by molding that merges with the horizontal molding along the top of the ashlar wall. The recess on the left (south-eastern) side of the portal rises the full height of the wall and culminates in two lobes with carved decoration, which terminate with the horizontal molding at the top of the wall. The recess on the right (north-western)

Orientalistentag, vom 28. September bis 4. Oktober 1975 in Freiburg im Breisgau, ed. W. Voigt, *ZDMG* Suppl. 3, no. 1 (Wiesbaden, 1977), 538–50.

[5] The monument number refers to the *Index to Mohammedan Monuments in Cairo* (Cairo, 1952 and 1980), including a map of Cairo in two sheets (Cairo, 1950; Arabic version, Cairo, 1948).

[6] On the gate see Mayer, Nogara, and Speiser, "Archäologische Untersuchungen," 232–38, pls. 35–37*;* Viktoria Meinecke-Berg, "Spolien in der mittelalterlichen Architektur von Kairo," in *Ägytpen: Dauer und Wandel: Symposium anlässlich des 75 jährigen Bestehens des Deutschen archäologischen Instituts Kairo*, *MDAIK* Sonderschrift 18 (Mainz, 1985), 131–42, pls. 11–13.

side is slightly shorter. It is topped with three carved lobes, which stop short in the middle of the terminal oblong; and it makes a pair not with its taller companion on the left portal, but with a third recess five meters to the right at the far end of the façade. This third recess has a slightly narrower panel at the top, but is of the same height, two-lobed, and identically fenestrated. The windows set in both these two recesses open into the monument's mausoleum chamber.

Above a medallion in the inscription band midway between these two shorter vertical recesses is a deep round-arched niche. It makes a symmetrical pair with another round-arched niche above a medallion in the inscription band on the opposite side of the portal. Whatever their other purposes, these niches combine with the placement and scale of other elements to give the façade an air of noble and uncluttered mathematical balance, an effect achieved despite difficulties imposed by the site and by canonical requirements.

Above and behind the portal is the building's extraordinary minaret, which is built of fired brick with stucco decoration and girdled by two tiers of balconies; round faience elements are set into the upper part. Its base stands 15.2 meters tall and is topped by an octagonal segment of 8.5 meters and a wooden tip of Ottoman style. Immediately behind the portal, a passage with a high-coffered ceiling leads to the inner courtyard, at the center of which stands a rectangular water basin one meter in height.

At the south-east end of the court is the main *īwān* with a prayer niche; its semi-dome and the wall above it also boast elaborate stucco decoration. Across from it, the north-west side of the inner courtyard is taken up by an *īwān* of virtually identical dimensions, the back wall of which displays a very fine stucco relief. Two shallow niches finished at the top with pointed arches made of brick are set into the south-western outer wall (of the *īwān*) made of ashlar masonry. Their form and position suggest that the existing corridor was adorned with niches on either side, as exemplified by the Manṣūr Qalāwūn Madrasah.[7] Aligned with the central axis of the two long sides are two lateral *īwāns*, one on each side, with dormitory cells to the left and right of each; these are reconstructions dating from 1985–89, which were erected on existing foundations. The alignment of the inside rooms adjacent to the open courtyard and the *īwān*s is determined by the direction of Mecca, whereas the outer façade follows the course of the street or the site. This is a feature encountered particularly often in Cairo.

Function and Management

The al-Nāṣir Madrasah is regarded by Creswell as the earliest structure in Egypt

[7] The question arises as to whether they were matched on the opposite side originally, which might well have been the case because the present-day wall dates from the nineteenth or twentieth century.

with four *īwāns*.[8] According to the Mamluk historian al-Maqrīzī, a different law school taught in each of the *īwāns*: Maliki law in the main *īwān,* Hanbali in the south-western *īwān,* Hanafi in the north-eastern side *īwān,* and Shafiʿi in the rear *īwān.*[9] There was also a library in the madrasah, possibly between the main *īwān* and the mausoleum of Qalāwūn.[10] Al-Maqrīzī goes on to report that in the heyday of the complex, several eunuchs were stationed in the large entry passage to ensure that no unauthorized persons gained admittance. Sugar was distributed monthly to students, Quran readers, and other officials. The function of the building as a boarding school affected the architecture in that, in addition to the classrooms and the above-mentioned *īwāns*, accommodations for teachers and pupils as well as sanitary facilities fed by cisterns had to be provided on a sufficiently large scale. The cisterns were probably for the most part below the inner courtyard and the mausoleum, as well as behind the rear *īwān*. The living quarters were primarily housed in the upper floors, which disappeared long ago, with only a few on the ground floor, which were not reconstructed until 1987. It is not clear whether the madrasah also had a kitchen; no archaeological evidence for one has come to light.

Since the madrasah was expected to continue functioning after the sultan's death, it was endowed, according to al-Maqrīzī, by several *waqf*s, not from agricultural yields but from the revenue earned from rents paid for a storehouse, a *qaysārīyah,* and the apartment (Arabic: *rab*ʿ) above it, a complex known as al-Dahishah.[11] This complex originally belonged to one Amīn ʿAlī and was situated in the street of the makers of head-dresses *(sharībīshīyīn)*. He also endowed some shops located in the Bāb al-Zuhūmah street in Cairo and with the Dār Tam outside Damascus.[12] When his son Ānūk died in 1340, he was buried in the mausoleum and Amīn ʿAlī created a special endowment dedicated for readers of the Quran.[13]

Condition of the Monument before 1985

Before restoration work began on the madrasah in 1985, it was in poor condition. The elegant architectural ornament was full of gaps; most parts of the complex were damaged and only partially preserved, and the rooms grouped several storeys high along the long sides of the inner courtyard had for the most part vanished. The condition of the building as of 1985 was the result of gradual decay and is

documented by a ground-plan (fig. 2) published by Creswell in 1959.[14] Julius Franz, who is known as the father of Egyptian Islamic monument conservation, described the madrasah as long ago as 1900 with the following words:

> As is also the case in the Māristān [of Sultan Qalāwūn], the mausoleum of the donor and the prayer hall lie on either side of the entrance along the eastern façade; both are in a bleak state of dilapidation. The dome above the tomb has long since collapsed, and we had not expected to find well-preserved characteristic plaster sculpture, reminiscent of the delicate ornamentation of Alhambra, in the decrepit prayer hall. In the background of the extensive complex, important remains of the walls with fragments of their erstwhile beautiful plaster sculpture still stand, between which storehouses, workshops, and run-down dwellings have been wedged.[15]

In fact three dwellings, which have in the meantime been demolished, were built on the ruined site in the nineteenth century. Interestingly, an illustration (in the work written by Franz) depicts a minbar (pulpit) next to the prayer niche. This must surely indicate that the complex, despite the dilapidation described, was still being used for religious purposes. That this was indeed the case in the first half of the nineteenth century is attested in a drawing by Prisse d'Avennes; he was in Egypt from 1827 until 1844. In it several worshippers are depicted in front of the prayer niche and below a metal chandelier.[16]

At the end of nineteenth and the first half of the twentieth centuries, the Comité de Conservation des Monuments de l'Art Arabe undertook fairly extensive reinforcement and reconstruction measures.[17] The ceiling beams of the two main *īwāns* were replaced and, although discussion about its original form ensued, the missing dome above the mausoleum was not reconstructed; instead, the opening was boarded up. The elevation of the rear *īwān* was reconstructed with red brick.

Restoration from 1985 to 1987

In 1985 the German Archaeological Institute in Cairo began the restoration of

16 In 2003 the Ministry of Culture ordered a replica of the chandelier; see Prisse d'Avennes, *L'art arabe d'après les monuments du Caire depuis le VIIe jusqu'au XVIIIe siècles* (Paris, 1877), 235, pl. XIII.

17 Comité de conservation des monuments de l'art arabe, exercice 1890, 45–46.

the madrasah. The work was finished to a large extent in 1987.[18] Following a careful survey of the complex and mapping of damage, a restoration program was developed. It focused on three areas of construction and undecorated sections:

1. Securing the masonry and replacing damaged and missing parts: this affected most parts of the complex and especially the south-west wall of the qiblah *īwān,* the street façade with its unrendered ashlar masonry, and the mausoleum masonry. The crown molding of the walls and some of the crenellation on the street side had to be rebuilt.

2. Repairing and replacing roofs and ceilings: all roofs had to be made watertight. The original coffered passage ceiling, which had only survived below the minaret, and the *muqarnas* cornices below it had to be reconstructed.

3. Reinforcing and replacing both fixed and movable parts of wood and metal: existing door panels were worked over and missing ones replaced. The same held for the inside shutters on the street side. The railings of the two-tiered balconies of the minaret, as well as the spiral staircase within it and the tip of the minaret (which dated from the Ottoman period) were all replaced. The missing metal grills across the windows were also replaced.

As has already been mentioned, the madrasah boasted particularly elegant architectural decoration of stucco, wood, and marble. Here, too, securing and cleaning what was left took priority. Replacement was only undertaken where it could be verified. The most important replacements are listed below:

• Stucco decoration: undoubtedly the largest decorated surfaces (covering many square meters) are on the minaret. In addition to very careful and time-consuming cleaning, removing later layers of plaster and securing the original structure, some parts had to be replaced. The restoration work that was carried out on the upper semi-dome of the prayer niche in the main *īwān* was particularly elaborate, since the semi-dome is clad with a complex relief in the repoussé technique. At the same time, the decorated field above the niche as well as an Ottoman decorative window were restored. Other elements of decoration that were preserved and restored are the mausoleum pendentives and the grills of high windows. The stucco rendering was also restored and completed in four window niches on the main *īwān* façade overlooking the courtyard.

• Wooden decoration: the complex boasts numerous ornamental appointments of carved and partially polychromed wood, for instance in the mausoleum and the entry passage. In the passage, the carved coffered ceiling had to be replaced (save for three sections) in addition to the wall moldings.[19] The wooden decoration of

[18] Under the auspices of the Historic Cairo restoration project carried out by the German Institute of Archaeology jointly with the Egyptian Antiquities Organization, restoration work funded by the Kulturhilfe des Auswärtigen Amtes der Bundesrepublik.

[19] Three original elements of the ceiling were preserved because they are located below the

the mausoleum was still largely intact; it was carefully cleaned and in some cases refitted.

Reconstruction

Since only part of the madrasah had survived, and especially since all the rooms grouped along the long sides were either in a fragmentary state or non-existent, the question arose as to whether reconstruction should be undertaken in part of the complex to at least give visitors some idea of what the original structure, as well as the archaeological remains, looked like. As archaeological investigation furnished reliable information on the course of the foundations of the rooms abutting the inner courtyard, we opted for rebuilding one *īwān* on each side with the adjacent single-storey dormitory cells, since survey measurements can be vouched for up to that level. Similarly, the water basin uncovered at the center of the inner courtyard was put in again as a significant element of the design.

The original entrance to the mausoleum is on the courtyard façade. From the standpoint of statics, it had been subjected to stresses at some unknown time, since one of the two marble columns supporting the lintel had broken below the capital. After the column was repaired, the doorway, which virtually corresponds to that of the roughly contemporary Qalāwūn Madrasah, was closed with a door of turned bobbins. All these measures were intended to secure the historic architecture and elements of decoration and, through restoration of part of the complex, make the fragmentary sequence of rooms more intelligible.

Archaeological Investigations

In the course of the restoration work already discussed, archaeological investigations were carried out in several places by means of trial trenches dug to shed light on the original ground-plan and on buildings that had previously existed at the site, and to gain general insights into the architectural history of the various sites. Five areas were studied: trial trenches A–D were made during restoration work in 1985–87 and 1989. Considerably more extensive investigations were conducted on the western corner (zone E) of the al-Nāṣir Muḥammad Madrasah site. They were made possible by generous funding from the Max Van Berchem Foundation (Geneva) in 1998, 1999, 2003, and 2004. The opportunity to excavate in Historic Cairo on this site, or at least near the Fatimid Western Palace, made the project particularly enticing. Unfortunately, however, it was soon discovered that groundwater and drainage seepage made it impossible to dig deeper than 1.5 meters below street level, so that the Fatimid strata could only be uncovered to a very limited extent.

---

minaret.

Trial Trench A

It was hoped that excavating what had existed on the site before the mausoleum would uncover remains of a forecourt enclosed by arcades—as was indeed the case with the nearby Qalāwūn Mausoleum—especially since traces of stucco-clad niches are discernible on the exterior wall.[20] However, no remains of foundations were found. All that was encountered was the partly collapsed brick vault of a water cistern some 0.8 meters below the level of the forecourt.[21] The cistern is presumably Mamluk, since part of it lies beneath the mausoleum. Remains of floor flags, presumably from the above mentioned forecourt, were found immediately below the first visible course of the masonry of the outer wall of the adjacent Barqūq Madrasah. This same wall intersects with several barrel vaults from the side rooms of the al-Nāṣir Muḥammad Madrasah. Both circumstances indicate that by the time the Barqūq complex was built, nearly a century after the al-Nāṣir Muḥammad Madrasah, not much attention was being paid to the latter. This might mean that maintenance of the facility was considerably scaled down not long after the sultan's death in 1341 and that attempts at repair were not undertaken until the Ottoman period (from 1516). This conjecture is supported by al-Maqrīzī, who wrote in 1404: "All this is past and the mosque has lost its lustre, but it is still flourishing as one of the finest madrasas."[22]

Trial Trench B

This trial trench affects the part of the site immediately to the north-west of trial trench A, in which wall remains had been shown by an earlier investigation to be parts of the *īwān* on the north side. A modern storeroom abutted the north-west side, enclosed in the inner courtyard by a stretch of façade with two door apertures. On the north-east side is a cell with barrel vaulting, which, intriguingly, had an opening for ascending to the (now vanished) upper floor. The conclusion to be drawn from the unity of foundation and superstructure is that they most likely date from the Mamluk period. Their north-west wall, which is also the wall of the side *īwān,* still retains the historic spring of the vault in situ, which made it possible to reconstruct the pointed arch and barrel vaulting. When the side *īwān* foundation was uncovered, it was revealed that a wall niche had been set into its back wall. The two door openings mentioned above were slightly recessed from the uncovered threshold substructure, a clear indication that this was a historic reconstruction.

[20] For the floorplan of the Qalāwūn Mausoleum, see Creswell, *MAE,* vol. 2, fig. 108.

[21] According to Supreme Council of Antiquities (SCA) inspectors, several cisterns as well as a corridor were found below ground level. So far no plans or photos are available.

[22] Quoted in Creswell, *MAE,* 2:234.

TRIAL TRENCH C

After the removal of a layer of rubble more than one meter high in the inner courtyard, the remains of a rectangular water basin (3.75 by 2.9 meters) were revealed at its center.[23] The inner corners of the basin were rounded, a feature characteristic of the basins found in Fatimid layers in Fustat. The basin has a rim approximately one meter high of bonded brick, which was rendered inside with a water-resistant or waterproof lime mortar (an aggregate of brick dust or charcoal ash). It was finished off at the top with limestone slabs, of which, however, only a few pieces were found. At some time, the basin had been partly filled in with bricks. The fresh water needed to fill it was probably brought from one or more subterranean cisterns via a lined shaft sunk several meters deep under the courtyard. Since there are no traces of individual places for ablution with the usual drains, the water basin is unlikely to have been used originally for ablutions. Instead, the reflecting surface of the water was perhaps a design feature of the courtyard.[24] There are similar basins in the Nūr al-Dīn Madrasah and Māristān (built 567/1162) and the ʿĀdilīyah Madrasah (built 623/1219), both in Damascus.[25]

TRIAL TRENCH D

The south-west side of the inner courtyard was cleared of later additions, which were all in a precarious state, and partly excavated. This excavation made it possible to ascertain the Mamluk ground-plan to a large extent from the alignment of its foundations. It contained a side *īwān,* identical to the one on the opposite side, with three small rooms, most likely dormitory cells, on its left side. On the site of a demolished house, adjacent to the right (north-west) of the side *īwān,* the foundations of three more dormitory cells were uncovered, as well as remains of a linking passage running behind them, in which some of the limestone flag flooring has survived. Beneath two of the cells two sewage shafts were found, which are in part aligned with the inner courtyard. These shafts belong to a pre-Mamluk building phase and are part of an elaborate drainage system centered at some distance to the south-west.[26]

Zone E

In the late 1990s the city government had another decrepit house demolished, and its removal made possible the excavation of a wider area (177 square meters) in the western corner of the site. The site is bounded on the south-west towards the Qalāwūn Madrasah by a modern brick wall, on the south-east by the reconstructed side *īwān* and dormitory cells, on the north-east by the rear *īwān,* and on the north-west by a neighboring building. This site is part of the area in which the Fatimid Western Palace is thought to have stood, although pottery finds have hitherto failed to furnish evidence for it.[27]

Within a jumble of wall remains (spoils from several damaged Mamluk and Ottoman structures which are beyond the scope of this work), a continuous, slightly trapezoidal complex showed up clearly. On each of three sides it has the remains of four identical cells or cubicles, all of which open on to what was probably an open courtyard measuring 5.5 by 5.5 meters.

The above-mentioned twelve cubicles are almost identical in form, and all have a surface area of almost 1.5 square meters. At the back, each has a seat built of two blocks of limestone. Between the two blocks of limestone is an opening that drains into the sewage system below. Each of the cubicles, most likely covered at one time by a vault or dome, enters onto the courtyard through a simple wooden door. Along the right-hand side wall of each cubicle runs an open water channel, which has a brickwork rim up to 0.4 meters high. It is unclear how the fresh-water channel was fed, since there are no indications of a cistern nearby; perhaps it was filled at its highest point from skin water bags or buckets. In two cubicles, remains of a floor from an earlier building phase were found about 0.3 meters deeper. An even earlier building phase was found beneath the north-eastern row of cubicles, where at least three cubicles were built on the demolished masonry superstructure of identical structures dating from the time the madrasah was built.[28]

The south-east side, the fourth side of the courtyard, sustained considerably more damage; all that remains is the substructure of three toilet cubicles on top of another sewer.[29] The approach, now vanished, to the small courtyard with its water basin must also have been on this side. Incidentally, a similar facility was found several years ago in the nearby Sultan al-Kāmil (626/1229) Madrasah, mentioned above.

[27] Viktoria Meinecke-Berg, "Historische Topographie des Viertels," in *Die Restaurierung der Madrasa des Amīrs Sāqad-Din [sic] Mitqāl al-Ānūkī und die Sanierung des Darb Qirmiz in Kairo,* ed. Michael Meinecke (Mainz, 1980), 18–28, especially 24, nn. 58 and 59, figs. 1 and 2.

[28] The frequent rebuilding of sanitary installations is not surprising, due to the destructive effects of water.

[29] It seems logical to place toilets after washrooms, using their waste water to keep the sewers clean.

Virtually at the center of the courtyard, but one meter deeper than the level of the cubicles, is an octagonal water basin whose nine parts were later adapted to fit into a square rim. This represents an example of recycling, perhaps of an element from the Fatimid Western Palace. A coin that was found dates the recycling of the basin to the Ayyubid era. The structure was undoubtedly a sanitary facility. The presence of a continuous freshwater channel in most cubicles suggests they were used by the teachers and pupils for the purposes of physical hygiene.[30]

On the south-western outer wall of the washing facility, nine cells were excavated that were approximately 1.7 meters lower than the adjacent cubicles and were entered from the south-west. As clearly shown in a sketch from the first half of the nineteenth century, this was the outermost group of rooms in the adjacent Qalāwūn Māristān, in which the mentally ill were incarcerated and shackled under intolerable conditions in dark cells of only about four square meters.[31]

Conclusions

The excavations confirmed the conjecture that the ground-plan provided for four *īwāns*. However, stratigraphic analysis showed that cells and remains of secondary or minor *īwāns* visible before 1985 on the long side of the madrasah and marked on Creswell's plan as Mamluk likely date from the Ottoman period (1517–1798) and later.[32] The madrasah does not seem to have been properly maintained after the donor's death; to judge from the pottery finds, extensive restoration work was carried out in the sections along the long sides at a time that cannot be precisely ascertained. Further, the minaret was given a new tip and the mausoleum may have been topped with a wooden dome.

The sanitary installations featuring cubicles around an open courtyard, described above, were also rebuilt during the Ottoman period. The numerous brickwork sewers, some of which go back to the first phase of building in the Ayyubid period (564–667/1169–1249) were, interestingly, left in place despite several renovations and were simply adapted to the new conditions. Most of the sewers are probably linked with the earlier development on the site, which according to al-Maqrīzī, included a bath.[33] This might explain why there was such an elaborate sewage system.

The importance of superior hydraulic installations for architectural planning has hitherto been too little appreciated and studied. This may be due to the fact

[30] Given the absence of taps and proper drainage, except for one small hole, a system with running water seems most unlikely.

[31] See Creswell, *MAE,* vol. 2, fig. 124.

[32] Except for one Mamluk wall of the north-eastern side *īwān*.

[33] Creswell, *MAE,* 2:234.

that Cairo, unlike many other cities, did not have public water mains until well into the late nineteenth century and even today does not possess a sophisticated municipal sewage system. Nor have historic sanitary facilities in mosques and madrasahs been sufficiently studied; consequently, it is difficult to classify this unusually large facility with twelve cubicles for washing and four toilets. The introduction of public water mains into such historic facilities would have made their cisterns and cesspits obsolete.

The octagonal basin that has been dated to the Ayyubid period might well have been part of the previously mentioned bath. The theory that this might have been a room in the Fatimid Western Palace, on the other hand, is dubious, especially since its architectural connection with the adjacent Mamluk Māristān of Sultan Qalāwūn, which itself has Fatimid elements, has yet to be investigated.

Despite archaeological excavation of several ground-floor rooms or at least their foundations, the floor-plan of the al-Nāṣir Muḥammad Madrasah still has gaps. Two to three storeys can be reconstructed on the basis of the window niches in the rear façade of the main *īwān,* which faces the inner courtyard. However, it is because the vertical architectural elements such as stairwells, light shafts, etc., are missing without a trace that the madrasah remains incomplete. The only possibility, therefore, is comparison by function and ground-plan with similar facilities which still have upper floors. One example suitable for such comparison is the virtually contemporaneous Baybars al-Jāshnkīr Khānqāh (706–9/1306–10), situated nearby in the Shāriʿ al-Jamalīyah.

Conservation Measures

After the archaeological excavations had been finished, the sanitary installations and parts of the adjacent finds were preserved, and the excavated surfaces abutting the buildings of the two madrasahs were filled in with sand. The restored and partially rebuilt sanitary installations should be regarded as an "archaeological window" offering a glimpse of the earliest building stage in the Fatimid/Ayyubid era (tenth and twelfth centuries).

When Is It Possible to Call Something Beautiful?: Some Observations about Aesthetics in Islamic Literature and Art

It often happens that a teacher must occupy himself with topics that are somewhat distant from his own field of research. I have encountered this situation several times in recent years in connection with Islamic art, which I greatly admire, despite not being an expert. In the Czech Republic, this situation results from a growing interest in the art of Islamic countries, the increasing number of collectors, and the need for experts at museums, galleries, and auction houses. The need for a proper presentation and interpretation of traditional Islamic art is made all the more pressing by the fact that even experts in the field of art and artists themselves express their opinion of it with surprising superficiality and ignorance. Many factors have induced me to search for aesthetic points of view and principles valid for understanding Islamic art: the need for insight into traditional Islamic creative arts, my own particular experience with the palaeography of Arabic script (connected closely with calligraphy, as well as with heraldry and other auxiliary historical sciences), some problems that have struck me while studying sources dealing with Islamic material culture, and questions I have been asked by my students. In my search for these aesthetic principles, I have hoped to move beyond the viewpoint of the Western observer or listener steeped in an environment of Christian art, aiming instead to discover those principles which guided the creators and original viewers of Islamic art.

"Western" aesthetic points of view are well-known, but it is possible that they do not always conform to Islamic ones. To find Islamic aesthetic viewpoints, we could turn to the works of Islamic philosophers, literary critics, and other thinkers. But this does not hold true absolutely. Although literary theory, especially in the field of poetry, is worked out in detail, information about music is limited and about creative arts almost non-existent. Even the work of specialists on the Middle East says nothing about how Islamic art has been perceived by its intended audience. There are various philological studies, historical studies of literature and its individual genres, general works on creative arts or treatises on their individual kinds, classifying surveys and catalogues for collectors, as well as some treatises on individual musical forms, instruments, etc. Thus, the three most important branches of Islamic art—literature, creative arts, and music—

are naturally detached and treated separately. When looking at how the original listeners of musical works, readers of literary works, and observers of artwork and other crafts perceived aspects that were decisive for their relationship to a work of art with which they came into contact, I found that this problem has never been treated by any orientalist. This gap in the comprehension of the mutual relationship of authentic users of "Islamic" art was finally bridged by Doris Behrens-Abouseif in her recent book *Schönheit in der arabischen Kunst.*[1] On the basis of examples collected from various works of classical Arabic authors and interpreted thoroughly, she has given a clear and nuanced answer to this question.

One of the reasons for writing this article was also a question which I encountered several times during the preparation of my edition of *Qahwat al-Inshā',* the book of Ibn Ḥijjah,[2] the poet and official *(munshiʾ)* of the chancery during the Mamluk period (1366–1434). In it I found not only some metaphors referring to an authentic and not "Western" classification of art, but also the explication of a way of perceiving some of its manifestations. The problem prompted me to skate on the thin ice of art and in a few words point out the questions raised by Ibn Ḥijjah. The facts that I try to deduce from his words could complement and support the conclusions reached by Doris Behrens-Abouseif.

In our "Western" point of view, "art" is usually defined as graphic or plastic. When speaking about the Islamic world, we are used to calling it "Islamic art," and we perceive it as a material one, starting with buildings and ending with jewels. Such art can be considered visual. Arabs, Persians, and Turks have always considered the arts of the word, i.e., poetry and fine prose, a separate branch named comprehensively "literature." This, along with music, can be considered an auditory art. Visual and auditory arts are brought together in dance and theatre. As for the latter, traditional Islamic society has never considered it an art.

Muslims have been active within all these vast fields of art, and as for created works, they either accepted or refused them. The question is: what was the reason for their acceptance or refusal? Why did the users of art take up a positive or a negative position towards it? What was "beautiful" and what was not? Many students have asked me what in Islamic art was considered beautiful and according to which aesthetic criteria was a work of art—auditory, visual, material, literary, or musical—evaluated. I have also asked my colleagues which criteria the critics apply or have applied for the evaluation of aesthetic and artistic aspects that make it possible to call any creation "a work of art." The result was not too satisfactory

[1]Doris Behrens-Abouseif, *Schönheit in der arabischen Kunst* (Munich, 1998). Also available in an English translation, *Beauty in Arabic Culture* (Princeton, 1999).

[2]Taqī al-Dīn Abū Bakr ibn ʿAlī Ibn Ḥijjah al-Ḥamawī, *Das Rauschgetränk der Stilkunst, oder Qahwat al-inšā',* ed. Rudolf Veselý (Beirut, 2005).

and related mostly to literature, especially poetry. I did not learn much about visual art, to say nothing of music.

There is a hadith that refers to the meaning of "the beautiful": *Inna Allāh jamīl wa-yuḥibb al-jamāl* (or *al-jamīl*) (God is beautiful and he loves the beautiful).[3] It could be a matter of principle for the Muslims. But it is known that in spite of this principle's existence, the Islamic thinkers—philosophers and theologians—have never drawn up any aesthetics, any comprehensive theory of the beautiful for which they could find a clue in the works of the philosophers of the classical and post-classical eras. It could be admitted that a Muslim should look for, find, and admire beauty because the beautiful and beauty-loving God had created the world in accordance with his will. That is why the world must be beautiful, and with respect to this fact it can be assumed that some criterion could be determined for its beauty. As far as I know, this has not happened—and if so, it has been very limited at best. Was it because nobody dared it, or because man had to respect the beauty of the world created by God as an indisputable fact without any clue for its evaluation? He could find the beautiful in his surroundings and use it for his own good. He found it useful and named it "beautiful." This related above all to material resources that were necessary for life and were therefore useful—either provided by nature or created by man. It is probable that Ibn Sīnā had these godsends and human creations in mind when he wanted a "beautiful" thing to be good, useful, and also usable.[4] To this effect he at least conceded man his right to evaluate the beautiful.

Did a Muslim who created anything multiply the beauty created by God? Was he entitled to do so? Was any human creation merely an act of rivalry with God? On the one hand, man could be charged with trying to imitate the creation of the "jealous" God, which he could consider an audacity or even a blasphemy that could result in his deserved retribution. On the other hand, one could argue that man has a chance to discover the perfect beauty of the creation of God and God himself by means of the imperfection of his own creation. Thus, the work of man can be considered a means to a more perfect comprehension of God, a form of worshiping him, an act of piety, and even—with some exaggeration—a divine

[3]A. J. Wensinck, *Concordance et Indices de la Tradition Musulmane* (Leiden, 1933–38), 1:373. This hadith is found in Ibn Ḥanbal and Ibn Mājah, not al-Bukhārī or other canonical compendia of hadiths. The fact that this hadith is included in the oldest collection of hadiths, i.e., *Al-Musnad* by Ibn Ḥanbal (which does not belong to the six "canonical" collections), as well as in Ibn Mājah's work, which was the last hadith collection to be declared "canonical" due to its inclusion of many "weak" hadiths (see Carl Brocklemann, *Geschichte der arabischen Litteratur* [Weimar, 1898–1902], 1:163), arouses a suspicion that this particular hadith is also "weak." Nevertheless, its contingent "weakness" has not influenced its importance as a hadith that supported the necessity to create "the beautiful."

[4]S. Kahwaji, "ʿIlm al-Djamāl," *Encyclopédie de l'Islam,* 2nd ed., 3:1162–63.

service. Man should comprehend that when he works, he utilizes both material and spiritual means with which he was provided by God.

It is well-known that this quandary, as well as the fear of idolatry, resulted in the fact that traditional Islamic arts—with the exception of some works from the first century—did not include the three-dimensional representation of human beings or animals, although no explicit prohibition ever existed. Also, the two-dimensional portrayal of human beings and animals was very limited. It was applied at most as a part of the decoration of objects assigned to private life, such as utensils and books. The decoration of public premises, i.e., buildings and their interior, consisted exclusively of a combination of calligraphy, geometry, and floral motifs. These ideological factors and practical considerations laid for creative or visual arts the foundations of a generally accepted tradition that was not defined by any clear rule or norm.

The position of auditory art—the art of the word and music—was different. It was Arabic poetry that followed up fully and continuously on its pre-Islamic ideal pattern. It is not necessary to remind us that on the one hand Arabic poetry influenced the poetries of non-Arabic Islamic countries and on the other was influenced by them. It is important that some innovations *(badāʾiʿ)* in the field of form, content, and lexicon have been applied as a reflection of the aesthetic demands of individual eras. As opposed to creative arts, poetry also formulated the aesthetics of physical beauty, especially female beauty.

In contrast to visual art, where the individuality of the creator was almost indistinguishable, every poetic work reflected the personality of its author. Musicians and singers expressed not only their skill, but also their immediate frame of mind and relation to a performed work. The freedom of poets and musicians was incomparably greater than that of graphic or plastic artists because they were not at risk of idolatry. At most, they had to satisfy the expectations of their readers and listeners.

Another important aspect of the different conception of visual and auditory art was the fact that visual art was connected inseparably with matter, while auditory art related to sound. A work made of matter—from a large mosque to a delicate piece of jewelry—can be perceived and admired at any time and is unchangeable because it was created once and for all. On the contrary, every sound of a work made of tones dies away after being heard, so that it was possible to call recitation, singing, or playing an instrument "the art of the moment." At the same time, it was possible to change any auditory—and especially musical—work as desired. Every presentation depended on a soloist, an instrumentalist or a singer. For example, in *Kitāb al-Aghānī* we find some remarks, headed by the word "*ṣawt*" ("voice, tune"), below the verses of poems, indicating that these verses were assigned for singing; these notes usually represent fingering for playing a lute. A composer determined

only a basic key in which the respective song and its accompaniment were to be performed. A melody depended on the singer. Players who accompanied him on musical instruments had to adapt themselves to him. Thus one song—or even one of its verses—could be presented again and again with a new melody and its corresponding accompaniment. This art necessitated a listener's concentration and experience, enabling him to identify and appreciate such variations. During the impromptu recitation of his verses, a poet could improvise freely like a musician or a singer. This variability of auditory art was practically unlimited. On the contrary, visual art made it possible to change a theme only within the artistic trends of the respective era. This can be compared to a gem that begins to glow with a new color when it is turned half-circle.

Changing these possibilities into reality required an active approach of a recipient to a given work of art, whether visual or auditory. At the same time, a reaction to a work of art was an individual act. The effect of a "seen" or "heard" work of art upon its recipient has always depended on his readiness to perceive it. The importance of this inward experience during the perception of a work of art was realized by al-Ghazālī, who stressed the close connection between a perceived object and a perceiving subject. The evaluation of an object depends on the sympathy of a subject for it. The spiritual perception of the beauty of an object that need not be perceived necessarily by sight has a much stronger effect than impressions formed during its observation.

Now, let us see which of these theories and assumptions are confirmed by Ibn Ḥijjah. In his *Qahwat al-Inshāʾ* a combination of two words occurs seven times. As usual in Ibn Ḥijjah's work, it is a metaphor: *al-mathānī wa-al-mathālith.* The first word of this pair is also used in connection with the number "seven."[5] There is no doubt that it is a metaphor for the Quran, or the seven verses of the surah *al-Fātiḥah,* or even other surahs. Nevertheless, in connection with the word "*al-mathālith*" this metaphor has no meaning. The dictionaries say that the word "*al-mathná*" (pl. *al-mathānī*) has inter alia the same meaning as the Persian word "*daw-baytī*" (distich), i.e., something that consists of two parts. With more imagination, which is a precondition for explicating the *tawriyāt*[6] of Ibn Ḥijjah, "*sabʿat mathānin*" could also mean "the seven Muʿallaqāt." The meaning of this word will become clear if we solve the problem of the word "*mathālith.*" The dictionary of Biberstein-Kazimirski says that "*mithlath*" (pl. *mathālith*) means "the third string on a lute."[7] It can be deduced from this that Ibn Ḥijjah applied the word "*al-mathānī*"—i.e., "distichs"—to a poem or to poetry as such, and the word

[5] "*Unzilat fī al-sabʿ al-mathānī*" (Ibn Ḥijjah, *Qahwah,* 131, line 6); "*ʿAwwadhat'hu al-raʿāyā bi-al-sabʿ al-mathānī*" (ibid., 207, line 3); "*ʿAwwadhat'hu bi-al-sabʿ al-mathānī*" (ibid., 385, lines 4–5).

[6] S. A. Bonebakker, "Tauriya," *EI*², 10:395.

[7] Albert de Biberstein-Kazimirski, *Dictionnaire Arabe-Français,* s.v. *mithlath.*

"*mathālith*" analogously to music.[8] It seems as if Ibn Ḥijjah presented music and poetry—i.e., auditory arts—as some special artistic form. The first of these arts, i.e., music, invites dancing *(raqṣ)* and is therefore *murqiṣ;* the second, i.e., poetry, along with the first brings a man into a state of exultation *(ṭarab)* and is therefore *muṭrib*. *Ṭarab* is an exultation that arises from a man's heart and is experienced by him.[9] This way of perceiving auditory art accords fully with al-Ghazālī's calling for individual inward experience with a work of art.

An impressive declaration of the love of poetry and music, as well as a remarkable summary of the objectives of art and how to achieve them, can also be found in the *taḥmīd* in the preface to Ibn Ḥijjah's *Dīwān*[10] which closes his *Qahwat al-Inshā*ʾ and, as one should say, crowns it. Here he thanks God, who riveted the attention of admirers of poetry and music *(ahl al-mathālith wa-al-maghānī)* and made accessible to their ears all that invites dancing *(murqiṣ)* and is emotionally moving *(muṭrib)*. He points out that the instruments for both arts have a common origin *(nasab)* because they both are made from reed *(qalam):* a pen is "a lute for words" *(mizmār al-maʿānī)* which "inflames hearts" *(yūliʿu bi-al-albāb),* while a musical instrument is a "lute for melody" *(mizmār al-maghānī)* that "entertains ears" *(yalʿabu bi-al-asmāʿ)*. Both arouse their listeners' exultation *(ṭarab).* Ibn Ḥijjah names both arts "*adab*" that he considers "a godsend" and "a good mediated by angels" *(hibah ilāhīyah wa-malkah malakīyah).* In his view, an art that can be declared "beautiful" is "an art of the moment," i.e., an art of changeable spoken or recited words and its musical accompaniment that every listener must perceive individually and allow to "penetrate to his heart." He himself says: "I have not heard yet any valuable work that would not have fascinated my inward mind and stricken my heart."[11] This declaration culminates with an aphorism that summarizes what has been said:

---

[8]For instance: "*tughnī ʿan al-mathānī wa-al-mathālith*" (Ibn Ḥijjah, *Qahwah,* 45, lines 18–19); "*aghnat bishāratuhā ʿan ṭīb al-mathānī wa-al-mathālith*" (ibid., 251, line 4); "*yuṭribu tarjīʿu waṣfihā al-mufrad ʿalá al-mathānī wa-al-mathālith*" (ibid., 280, line 19); "*fa-aghná ʿan al-mathānī wa-al-mathālith*" (ibid., 332, line 13); "*wa-baṭula tashbīh hādhā al-yarāʿ ʿalá al-mathālith min sajaʿātihi wa-al-mathānī*" (ibid., 419, lines 8–9); "*ʿawwadhat'hā rabāʿīyatan bi-al-mathālith wa-al-mathānī*" (ibid., 487, line 14); "*ahl al-mathānī wa-al-mathālith*" (ibid., 497, line 16).

[9]J. Lambert, "Ṭarab," *EI²,* 10:210; Behrens-Abouseif, *Schönheit,* 81. As Yaseen Nourani proved recently, *ṭarab* was not always considered positive from the social point of view, because it could be connected with "*jahl*" (violent emotion in opposition to self-control), which could consequently lead to a sin (Yaseen Nourani, "Heterotopia and the Wine Poem," *International Journal of Middle East Studies* 36 [2004]: 348).

[10]Ibn Ḥijjah, *Qahwah,* 497 ff.

[11]"*Wallāh uqsimu: mā samiʿtu shayʾan min ṭayyib al-adab illā khalaba lubbī wa-akhadha bi-majāmiʿ qalbī*" (ibid., 498, lines 3–4).

Wa-man ḥaḍara al-samāʿa bi-ghayri qalbin
Wa-lam yaṭrab fa-lā yalumi al-mughannī

(You won't be moved by music if your hearing is deaf,
This is but your mistake and not that singer's you now blame)

What more could we add to Ibn Ḥijjah's words? Probably only that he gives an intelligible answer to our initial question. He evidently prefers auditory over visual art because it arouses a listener's "*ṭarab*" resulting from his experience with the beautiful. In his view, this is the only mission of "genuine" art. On the other hand, for those Western observers—either professionals or amateurs—who become familiar with Islamic art and culture, it is material culture (i.e., visual art) that in accordance with their aesthetic criteria deserves to be named "Islamic art." For those whom this material culture served, it was no more than the products of handicrafts, the effect of which has never been comparable with that of the products of *adab*. These different attitudes of domestic and foreign creators and recipients towards auditory and visual art are an example of cultural variability. What some admired, others considered an integral part of everyday life, and it can be said with some sarcasm that what brought some to exultation—i.e., poetry and music—for others was often but a source for philological research or a simple sound track for "oriental" dances.

Book Reviews

Timothy May, *The Mongol Art of War: Chinggis Khan and the Mongol Military System* (Yardley: Westholme, 2007). Pp. 214. Includes maps, illustrations, photographs, and glossary.

Reviewed by Patrick Wing, University of Redlands

Warfare and military conquest have long been associated with the Mongol Empire of Chinggis Khan in historical literature. We need only to consider the titles of works such as Juvaynī's "History of the World Conqueror," or Grigor of Akanc''s "History of the Nation of Archers" to realize that the earliest encounters between the Mongols and their Eurasian neighbors were essentially encounters with the Mongol army. In our own time, books such as J. J. Saunders' *The History of the Mongol Conquests* and, more recently, Stephen Turnbull's *Genghis Khan and the Mongol Conquests, 1190-1400* have addressed the military aspects of the foundation and expansion of the Mongol Empire. However, for all the attention given to the Mongols as conquerors, there have been fewer attempts to provide a systematic and comprehensive overview of Mongol military organization, training, tactics, and leadership.[1] This is the goal of Timothy May's *The Mongol Art of War,* a valuable contribution to our understanding of the structure of the Mongol military and the reasons for the Mongols' success against almost all of their adversaries in the thirteenth century. For the readers of this journal, perhaps an even more pertinent question is why the Mongols were unable to conquer the Mamluk Sultanate, one for which May provides some insightful suggestions.

After an introductory chapter providing a general overview of Chinggis Khan's early life and career, as well as a narrative of the dynastic and political history of the Mongol Empire until the 1260s, May addresses several themes relating to the structure of the Mongol army. These include recruitment and organization, training and equipment, logistics and supply, espionage, tactics and strategy, and leadership. Two chapters discuss the Mongols' major military opponents, including the Jürchen Chin, the empire of the Khwarazmshah, and the Mamluks, as well as detailed accounts of specific campaigns and battles. A final chapter on the military legacy of the Mongols offers an assessment of the major strengths and weaknesses of the Mongol army, as well as an interesting summary of the ways in which Mongol tactics and strategy have impacted the history of warfare down to

[1] A general overview of Mongol military organization is provided by H. Desmond Martin, "The Mongol Army," *Journal of the Royal Asiatic Society* (1943): 46–85.

the twentieth century.

For the specialist, there are few new revelations about the details of the Mongols' campaigns. May relies on standard contemporary sources, including the *Secret History of the Mongols,* Juvaynī's *Tārīkh-i Jahān-gushāy,* Nasawī's *Sīrat al-Sulṭān Jalāl al-Dīn Mankuburnī,* Rashīd al-Dīn's *Jāmiʿ al-Tavārīkh,* accounts of travelers from the Latin West, including Marco Polo, and many others. The value of this work is in the synthesis of the enormous amount of material relating to military matters in these sources, which enables the reader to comprehend the high degree of planning, organization, and strategy that accompanied the Mongols' campaigns of conquest. Of particular value is the way in which the author illustrates the correlation between military organization, leadership, and mobility, a combination which accounts for the Mongols' often overwhelming success on the battlefield. May illustrates how the *keshik,* the royal bodyguard of the khan, provided both a kind of military academy for Mongol commanders, as well as a proving ground where they could demonstrate their skill in the field while still under the control of the khan. Here May acknowledges the work of Thomas Allsen on the *keshik* as an institution of social control within the Mongol military and political system.[2] The experience gained in the *keshik* meant that when generals were given command of a mission, they came having had experience coordinating their actions with other units on the battlefield. Unlike many of their European enemies, Mongol commanders did not lead personal contingents, based on their own noble status. Instead, Mongol leadership was based on merit proven within the context of the royal bodyguard.

The quality of leadership that the *keshik* provided became most valuable when it was translated into coordinated movement. Superior mobility combined with discipline were the major strengths of the Mongol army, according to May. Coordinated maneuvers of the Mongol horse archers made them deadly against armies in the field. Mongol weapons technology was also developed to enhance the advantages of the mounted archer. May provides a fascinating discussion of the superiority of the Mongol composite bow, which had a range far greater than the Frankish Crusader crossbow. The Mongols preferred to shoot their enemies at a distance, and to avoid close combat if possible. However, Mongolian practices like the *nerge,* or group hunt, could be employed to take advantage of coordinated cavalry movement. The enemy would be surrounded and forced to the center of a gradually contracting circle of warriors, in the same way that wild game on the steppe would be corralled during a hunt.

May does address the Mamluk army, one of the few adversaries the Mongols could not conquer. The main reason for this was that the Mamluks fought like

[2] Thomas T. Allsen, "Guard and Government in the Reign of the Grand Qan Möngke, 1251-1259," *Harvard Journal of Asiatic Studies* 46 (1986): 495–521.

the Mongols did, and, man for man, they did it better. The Mamluks represented an elite warrior caste, in which every individual was specifically chosen for specialized training and combat. The Mongols, on the other hand, while effective as a group, were individually not as talented as the Mamluks in all areas of warfare. In a compelling analysis, May compares the Mamluks to the Japanese samurai. Both the Mamluks and the samurai were elite warriors who, unlike the knights of Europe, had mastered archery, a major strength of the Mongols. The Mamluks' main weakness was that they did not have as many horses as the Mongols, and thus could not compete with the Mongols' mobility. However, the Mamluks compensated for this by carrying out scorched earth measures on the Syrian frontier, thus denying the invading Mongols adequate pasture for their usual number of horses. With the mobility of the Mongols restricted, the Mamluks' discipline and archery skill left little advantage to the Mongols in Syria.

In the final chapter on the long-term legacy of Mongol warfare, the impact of the Mongols on the development of Muscovite and Russian tactics and organization is analyzed. The princes of Moscow emulated the Mongols, and borrowed institutions like the postal system *(yam)*. May illustrates how enduring this experience was, pointing out that Mikhail Ivanin's 1846 publication *The Art of War of the Mongols and Central Asian Peoples* continued to be part of Russian and Soviet military academy curriculum until World War II. May also discusses the relationship between Mongol tactics and the use of gunpowder weapons. Although the impact of the Mongols on the diffusion of gunpowder technology has been discussed before, May argues that the degree to which gunpowder weapons were developed in Eurasia was related to the degree of conflict particular states and societies had with the Mongols and other steppe nomads. Early cannons and firearms were effective against heavy artillery and infantry, as was widespread in Central and Western Europe, in a way they were not against steppe nomads. For this reason, May suggests, states sharing frontiers with the steppe saw less development in gunpowder weapons before the seventeenth century, when field artillery became mobile enough to counter the movements of nomad armies.

The Mongol Art of War does not offer new interpretations of individual campaigns or battles, nor does it provide new perspectives on the familiar sources on which it relies. However, by providing a thorough, systematic analysis of several issues relating to the organization and projection of Mongol military power, Timothy May has produced a valuable contribution to our understanding of the Mongol Empire, its encounters with its neighbors and adversaries, and military history in general. For scholars of the Mamluk Sultanate, May's treatment of the Mamluks' military success against the Mongols is sure to stimulate positive discussion and debate within the field.

History and Historiography of Post-Mongol Central Asia and the Middle East: Studies in Honor of John E. Woods. Edited by Judith Pfeiffer and Sholeh A. Quinn in collaboration with Ernest Tucker (Wiesbaden: Harrassowitz, 2006). Pp. 604, tables and index.

Reviewed by Thomas T. Allsen

Like all such tributes to distinguished scholars, this volume collects essays from colleagues and former students, but unlike most endeavors of this sort, it has a "shape" which it sustains to a surprising degree. Thus, while many *Festschriften* are best described as "miscellanies," covering diverse and disconnected topics, this celebration of Woods' scholarly career takes on many of the attributes of a symposium volume arising from a research conference organized around a central theme, in this instance, Islamic historiography. The editors, contributors, and, ultimately, the honoree, deserve much credit for this uncommon result.

Grouped under a variety of chronological and geographical headings, the first set of essays, despite the title, is devoted to "The Mongol World Empire." Peter Jackson investigates their concept of a heavenly mandated universal dominion and concludes that it probably arose in the later stages of Chinggis Qan's life as the unprecedented success of their imperial venture became apparent. He also makes the important point that alongside their claims of world dominion, the Mongols frequently tried to trick or cajole foes into submission and often downplayed their ideological pretensions in order to gain allies, divide enemies, or make temporary peace. To this end, they used a host of intermediaries-—subordinate princes, merchants, and translators—recruited from across Eurasia. All this is persuasively argued on the basis of both Muslim and Latin sources, of which the latter are particularly enlightening on the Mongols' little-studied diplomatic techniques.

In his contribution, Devin DeWeese notes that while the Mongols visited great destruction on the Islamic world, Sufi orders adapted well to the new order and extended their influence. While many Sufi narratives explain these gains through conversion tales involving shaykhs and qans, others put forward the rather unexpected claim that it was Sufi leaders' guidance of Chinggis Qan that account for the success of the Mongols conquests, that is, God provided these alien forces with spiritual guides as a manifestation of his divine wrath, his disappointment with the failings of Muslim society. DeWeese points out, too, that such a narrative accords nicely with the Mongols' strong attraction to "holy men" of all stripes.

The early history of the Qongrat is carefully reconstructed by İsenbike Togan through a close analysis of Chinese and Persian sources and later tribal oral traditions. She finds that the Qongrat were divided into two major lineages, one in northeast Mongolia and another in the southeast abutting the agricultural lands

of the North China plain. The former, and most famous grouping, became allies and the consort clan of the Chinggisids, while the latter were later subdued by force. Her findings demonstrate the great potential of this kind of ethno-historical research for illuminating the past of the steppe zone.

The next three offerings focus on Anatolia. The late Zeki Validi Togan explores the correspondence of Rashīd al-Dīn as a source of data on the region, noting that it contains statistics on all kinds of products and commodities, agricultural lands, and a variety of building projects. In his introduction, Gary Leiser, who translated the article from Turkish, succinctly summarizes the ongoing controversy concerning the authenticity of these letters and argues that some of their purely economic information might still be of value if handled critically. Hopefully, Togan's article will stimulate further attempts to authenticate and retrieve specific categories of data embedded in the letters.

Halil İnalcik takes a long view of "Autonomous Enclaves in Islamic States," arguing that grants of royal land and immunity were characteristic of Muslim polities from the Abbasids to the Ottomans. Such enclaves originated in a number of bestowals—*mulk, vaqf, soyurgal,* etc.—that not only transferred land to favored retainers, officials, and commanders, but also granted freedom from administrative interference and from taxes, the highly desirable *tarkhan* status. Over time, he concludes, these grants constituted a persistent force for political decentralization.

Charles Melville investigates the principal Persian chronicles prepared in Anatolia during the late thirteenth and early fourteenth centuries, those of Ibn Bībī, Karīm al Dīn and the anonymous *Tārīkh Āl-i Saljūq*. He characterizes each, its sources, literary style, principles of organization, didactic purposes, and political allegiances. Lastly, he deftly situates these three sources into the larger framework of Ilkhanid historiography.

The second letter of the Ilkhan Amad Tegüder to the Mamluk sultan Qalāwūn in 1283 is examined in Judith Pfeiffer's article. She offers a detailed analysis of the context of their diplomatic exchanges and the first full translation and commentary on the letter in question. In so doing, she makes a substantial contribution to the interstate relations of the Mongolian era, which involved a multitude of players, and at the same time furthers our understanding of the internal history of Tegüder's reign.

The next section, "The Age of Timur," the field most closely associated with Woods' own interests and work, is well represented. Robert McChesney gives us an informative biographical study of Ibn ʿArabshāh, a major historian of the period, that reveals the sources of the author's extreme dislike of the famed conqueror. At the same time his treatment of Ibn ʿArabshāh's career richly illustrates the cosmopolitan and peripatetic nature of Muslim intellectual and cultural life in the

fifteenth century.

Surprisingly, there are still parts of Babur's manifold literary activities largely unexplored. Eiji Mano studies and compares Babur's Chaghatay Turkish translation of the *Vālidīyah,* a Persian mystical text composed by Khwājah Aḥrār, the famed Naqshbandīyah shaykh. This affords an opportunity for an informative discussion of other extant works of the Sufi leader long thought lost.

In another historiographical study, Beatrice Manz surveys fifteenth-century local chronicles of southern Iran, all by authors based in Yazd. She places the individual texts in their appropriate local and regional contexts, and identifies their sources of information, intended audiences, and ideological perspectives. Most impressively, she compares the chronicles written at Timurid courts with those from the south and shows that their discrepancies, no less than their areas of agreement, tell us much about the political dynamics between the center and the provinces.

Paul Losensky presents a convincing case that although overshadowed by the literary fame of Timurid Herat, the Aqquyunlu court at Tabriz also collected its own luminaries in the fifteenth century. He focuses on the highly esteemed poetry of Shahīdī of Qum, who, so characteristic of his age, began his career in Herat, moved on to Tabriz, and ended his days in India.

The next section, "The Safavids and their Legacy," has a pronounced historiographical emphasis. One of the more important sources on the origins of this dynasty is *Ṣafvat al-Ṣafā,* a history of the eponymous founder of the Safavid Sufi order written by a lieutenant, Ibn-i Bazzāz. Michel Mazzaoui discusses the available manuscripts and the complicated history surrounding attempts to produce a critical edition, and gives an evaluation, largely positive, to a newly published (1995) edition from Ardabil. Sholeh Quinn traces the evolution of Safavid coronation ceremonies from their austere beginnings to their more elaborate manifestations in the seventeenth century. By comparing the differing emphases of the chronicles, she charts the changing notions of kingship and legitimacy, and identifies the mix of Islamic and Iranian elements in the ceremony. Camron Michael Amin looks at the coverage of Safavid history in official textbooks and public discussion in twentieth-century Iran. He finds that although the rhetorical and ideological contexts differed, both the Pahlavi regime and the Islamic Republic extolled the Safavids for their creation of a "modern" Iranian national identity and for fending off the encroachments of foreign invaders.

In a somewhat different vein, Ernest Tucker studies the efforts of Nādir Shāh, the all-powerful Safavid general and founder of the Afshārid dynasty, to associate himself with Timur, who, faced with a similar situation, initially ruled through a series of Chinggisid figureheads. Nādir Shāh followed suit, found Safavid puppets and tried, unsuccessfully, to emulate Timur's vast conquests. This is an intriguing

example of historical memory and of the role of "models" in empire building, for Timur himself took Chinggis Qan as his model and, like Nādir Shāh, was unable in the end to duplicate his predecessor's record of expansion.

The section on "Mamlūk Studies" begins with Anne Broadbridge's revealing examination of the numerous apostasy trials held in Cairo in the late thirteenth and early fourteenth centuries, proceedings that shed considerable light on the relationship between the military and scholarly elites and on the Mamluk sultans' quest for legitimacy.

Li Guo pursues the interesting theme of the use of verse in chronicle writing, particularly that of Ibn Dāniyāl, whose poems were widely cited and presented as accurate descriptions of contemporary events. This he did with some regularity, but his satirical verses on Mamluk anti-vice campaigns, as Guo demonstrates, were recycled and placed in differing chronological frameworks and in different literary forms. This recycling, he argues cogently, is in itself a useful source for cultural history.

The annual *maḥmal* festival, held in Cairo during the month of Rajab, formally opened the Mamluks' pilgrimage to Mecca. But as John Meloy shows in his study of its origins and development, there was a sharp contrast between the institution's "solemn intent" and its public reception, which transformed the event into a carnival-like celebration. The resultant tension provides a useful window on the dynamic relationship between governmental policy and popular culture.

The famous pilgrimage of Mansa Mūsá, the ruler of Mali who passed through Cairo in 1324, is the subject of Warren Schultz's contribution, which compares the depiction of this event in the Arabic sources with its conventional treatment in world history texts. He convincingly shows that the textbook perception that the Malian ruler's gifts of gold were so vast that they depressed gold prices for decades is simply not true. What the sources do show is that his largesse produced one of the many short-term variations in the money market of medieval Cairo.

In the shortest section, "Historical Geography," the noted Persian scholar Īraj Afshār employs a close textual-philological approach to questions connected with the name and location of Damadan, a mountain mentioned in various sources from pre-Islamic times down to the Mongols. By way of methodological contrast, two Mongolian scholars, D. Bazargur and D. Enkhbayar, investigate, on the basis of toponymics and modern environmental studies, the geographical and natural worlds of the *Secret History*. Among their more interesting findings is that many migratory routes have been in continuous use since the days of Chinggis Qan.

In the final section, "Interregional Contacts and Cross-cultural Transmission," Abolala Soudavar examines the historiographical and publication activities of the Yuan Hanlin Academy, which he connects to similar efforts in the Ilkhan capital of Tabriz and to the rise of illustrated manuscript production in Iran. The Chinese

antecedents of this activity, expressed in official portraiture and book illustration, are well worth pursuing; such an investigation will need to take into account the vital importance of visual representation and its reproduction in the political culture of the Mongols and other steppe peoples.

Muzaffar Alam and Sanjay Subrahmanyam analyze the variable views of two seventeenth-century Safavid travelers on India and the Indians. While some of their differences, they argue, are attributable to personal characteristics, a full explanation of their divergent images must also take into consideration internal developments within Mughal India.

The spread of Persianate art to Istanbul is investigated by Fariba Zarinebaf-Shahr, who documents the importance of Tabriz as a cultural center and its influence on the Ottomans. This was exercised, in her view, through the forced removal of Tabrizi artists and artisans in the fifteenth and sixteenth centuries following successful Ottoman military operations. This fine study points up again the significance of this kind of "technician transfer" in the circulation of culture.

The concluding essay by Douglas Streusand forcefully challenges H. A. R. Gibb's view that Islam alone engendered Islamic civilization, thereby ignoring and minimizing its composite character, which drew upon both ancient Near Eastern, mainly Old Iranian, and Greek-Byzantine elements.

Viewing the volume as a whole, and from the perspective of my own research interests, several other recurrent themes, besides that of historiography, emerge from this collective endeavor. First, is the peripatetic lives of so many artists and intellectuals; Muslim culture was highly mobile during the Chinggisid and Timurid eras. A second, and related, connecting thread is the importance of Tabriz, whose ample cultural resources were eagerly appropriated throughout this period by neighbors near and far.

This brings us back to the honoree, whose first major contribution to the field dealt with the Aqquyunlu and their capital, Tabriz. Indeed this collection nicely mirrors Woods' own research interests chronologically, geographically, and thematically, and many articles build upon and elaborate his work.

Lastly, the overall quality of the papers is uniformly high; there are no learned notes here, only carefully argued papers based on primary research of a kind one would normally expect to find in a serious professional journal. And, as an added bonus, there is an extensive analytical index! In all respects, this is an uncommon *Festschrift,* one well earned.

ADAM SILVERSTEIN, *Postal Systems in the Pre-Modern Islamic World* (Cambridge: Cambridge University Press, 2007). Pp. 190.

REVIEWED BY ELIZABETH URBAN, University of Chicago

This impressive book is easily the most comprehensive work on the Islamic *barīd* to date. Temporally, it ends with the arrival of modern postal techniques, namely the telegraph and the privatization of postal systems in the sixteenth century. Spatially, it is confined to "those regions that were 'Islamic' throughout the formative and classical periods of Islamic history" (p. 3), which excludes most of Africa, southeast Asia, and Europe. Within these expansive parameters, the book is divided into three parts. Part One, "The pre-Islamic background," deals mainly with the Roman *cursus publicus,* Persian postal systems as far back as the Achaemenid period, and the postal practices of pre-Islamic Arabia. Part Two, "Conquest and centralisation—the Arabs," covers the Umayyads, the Abbasids along with several of their autonomous successor states, and the Fatimids. Finally, Part Three, "Conquest and centralisation—the Mongols," includes the Il-Khan *yām* and Mamluk *barīd.* Throughout the book, Silverstein utilizes a staggering amount of primary and secondary source material, from Herodotus and the Babylonian Talmud to Islamic-era Greek papyri and studies on Chinese administrative history (though he of course did not consult every conceivable source, and this reviewer particularly noted the absence of such Syrian Islamic historians as Ibn ʿAsākir and Ibn al-Adīm).

More crucial than the impressive amount of material that Silverstein has collected in this book, however, are the insightful questions he asks and useful analysis he provides. That is, the purpose of the book is not merely to amass data and dryly describe the minutiae of the *barīd* institution, but rather to provide answers to such questions as, "What (if anything) makes an Islamic postal system 'Islamic'?" (p. 4). Indeed, the greatest strength of this book lies in its examination of the way various dynasties adapted the *barīd* to their particular circumstances; instead of focusing on one dynasty, geographical area, or time period, Silverstein traces the developments of the *barīd* institution across various times and places. As he eloquently puts it, the relatively simple idea of the *barīd* "was expressed and elaborated upon in manifestly different ways throughout Islamic history. The idiosyncratic ways in which different states chose to interpret the basic postal formula offer us rare insights into the political traditions of particular dynasties and rulers" (p. 188). For example, Silverstein describes the changes that occurred within the Abbasid *barīd* network in the turbulent periods of Zanj and Qarāmiṭah revolts (pp. 111–21), and how both the Samanids and Ghaznavids simultaneously preserved and altered parts of the Abbasid *barīd* model (pp. 125–31). He does not

frame these changes in terms of Abbasid "decline," but in terms of adapting to new circumstances.

The readership of this journal will be most interested in the book's fifth and shortest (at 22 pages) chapter, entitled "The Mamluk *barīd.*" Silverstein points out that the Mamluk *barīd* has received more scholarly attention than other Islamic postal systems, tipping his hat in particular to Jean Sauvaget's masterpiece *Poste aux cheveaux dans l'empire des Mamelouks*. Silverstein's work improves upon *Poste aux cheveaux* in two ways. First, he draws upon sources that were unavailable to Sauvaget, such as Baybars al-Manṣūrī al-Dawādār's *Zubdat al-Fikrah fī Tārīkh al-Hijrah* and ʻUmar ibn Ibrāhīm al-Anṣarī's *Tafrīj al-Kurūb fī Tadbīr al-Ḥurūb*. Secondly and more importantly, rather than attempting to supersede Sauvaget's work in detail, Silverstein aims to "contextualise the Mamluk *Barīd* in relation to previous and contemporary postal systems, a subject in which Sauvaget was uninterested" (p. 167, n. 12). He achieves this goal through a discerning comparison of the postal systems in Mamluk, Abbasid, Fatimid, and Il-Khan domains. First, he analyzes the very origins of the Mamluk *barīd,* asking why Baybars would have wanted to create a *barīd* given that the Fatimids and Ayyubids before him had thrived without one. Then, while acknowledging the significant impact of the Il-Khan *yām* on the Mamluk postal system (an idea first noted by Sauvaget and taken up by other scholars such as Gazagnadou), Silverstein also examines the ways the Mamluk *barīd* drew on models other than the *yām*. He notes that the Mamluk system differed from the Il-Khan system in several important ways, that the Mamluks inherited political traditions from many sources aside from the Mongols, and that the Mamluks themselves consciously (or self-consciously) attributed their *barīd* to the Abbasid caliphal model. Examining this claim of Abbasid legitimacy, Silverstein also details how the Mamluk *barīd* was distinct from the Abbasid model. Finally, Silverstein sees the decline of the Mamluk *barīd* in light of the peace achieved between the Mamluks and Mongols in the fourteenth century, as well as the reforms instituted by al-Nāṣir Muḥammad. As a whole, Silverstein's assessment of the Mamluk *barīd* is enlightening and carefully argued. However, he does very occasionally verge on oversimplification or even cultural bias; a superficial reading of the book might lead some readers to think the Mamluks were military machines who could not maintain a purely bureaucratic institution, or that ethnic Turks were better suited to horsemanship than anything else (see especially p. 169). In the end, his analysis of the Mamluk *barīd* is actually much more nuanced than any pre-conditioned understanding of the Mamluks would permit, and these seemingly biased statements are often the result of blithe phrasing rather than misconception.

Unfortunately, there is one noticeable gap in the book's attempt to contextualize the Mamluk postal system. Silverstein mentions that the Mamluk *barīd* may have

been influenced by the Golden Horde (p. 185), a statement which he cannot elaborate upon because he does not include the Golden Horde's postal system in this book. This is partially justifiable, as the Golden Horde falls outside the parameters set in the Introduction; however, in this case the chosen parameters seem more cumbersome than helpful. It is understandable that Silverstein had to draw his limits somewhere, but to cover the Il-Khans and the Mamluks but not the Golden Horde seems unwise given the close (if not always friendly) contact between those three states.

As a final note, readers will be pleased with the book's flowing style and engaging mixture of primary source quotation and ensuing analysis. However, it does occasionally suffer from lack of clarity. For instance, when Silverstein claims that the Il-Khan *barīd* "became an 'Islamic' postal system" within a few decades of Hülegü's conquering Iran and Iraq (p. 153), he gives no immediate indication of what he means by this. This omission is especially frustrating as one of the stated goals in the Introduction is to discover what makes an Islamic postal system "Islamic." Eventually, Silverstein does explain the meaning of this statement, but it is not until the Conclusion of the book more than thirty pages later. Other examples of unclear writing could be cited, but in general his narrative is quite lively and readable. In the end, no amount of nitpicking about the occasional missed source or unclear sentence can decrease the importance of this book. Students of Islamic administrative history, whether or not they focus on the Mamluk period, will benefit greatly from Silverstein's perceptive analysis and fruitful comparisons of Islamic *barīd* systems throughout the pre-Modern period.

Arabic Transliteration System

Romanized Arabic in *Mamlūk Studies Review* follows the Library of Congress conventions, briefly outlined below. A more thorough discussion may be found in *American Library Association-Library of Congress Romanization Tables* (Washington, D.C.: Library of Congress, 1991).

ء	ʾ	خ	kh	ش	sh	غ	gh	م	m
ب	b	د	d	ص	ṣ	ف	f	ن	n
ت	t	ذ	dh	ض	ḍ	ق	q	ه	h
ث	th	ر	r	ط	ṭ	ك	k	و	w
ج	j	ز	z	ظ	ẓ	ل	l	ي	y
ح	ḥ	س	s	ع	ʿ				
		ة	h, t (in construct)			ال	al-		

ـَ	a	ـُ	u	ـِ	i
ـً	an	ـٌ	un	ـٍ	in
آ	ā	ُو	ū	ِي	ī
ٰا	ā	ُوّ	ūw	ـِيّـ	īy (medial), ī (final)
ى	á	َو	aw	َي	ay
				َيّ	ayy

Avoid using apostrophes or single quotation marks for ʿ*ayn* and *hamzah*. Instead use the Unicode characters ʿ (02BF) and ʾ (02BE).

Capitalization in romanized Arabic follows the conventions of American English; the definite article is always lower case, except when it is the first word in an English sentence. The *hamzah* is not represented when beginning a word, following a prefixed preposition or conjunction, or following the definite article. Assimilation of the *lām* of the definite article before "sun" letters is disregarded. Final inflections of verbs are retained, except in pausal form; final inflections of nouns and adjectives are not represented, except preceding suffixes and except when verse is romanized. Vocalic endings of pronouns, demonstratives, prepositions, and conjunctions are represented. The hyphen is used with the definite article, conjunctions, inseparable prepositions, and other prefixes. Note the exceptional treatment of the preposition *li-* followed by the article, as in *lil-sulṭān*. Note also the following exceptional spellings: Allāh, billāh, lillāh, bismillāh, miʾah, and ibn (for both initial and medial forms). Words not requiring diacritical marks, though following the conventions outlined above, include all Islamic dynasties, as well as the following terms: Quran, sultan, amir, imam, shaykh, Sunni, Shiʿi, and Sufi. Common place-names should take the common spelling in American English. Names of archaeological sites should follow the convention of the excavator.

MAMLŪK STUDIES
REVIEW

PUBLISHED BY THE MIDDLE EAST DOCUMENTATION CENTER (MEDOC)
THE UNIVERSITY OF CHICAGO

Mamlūk Studies Review is a biannual refereed journal devoted to the study of the Mamluk Sultanate of Egypt and Syria (648–922/1250–1517). It appears in January and July. Beginning with volume XIII, no. 1, *Mamlūk Studies Review* will no longer appear in conventional print format, but will continue as an open-access online publication. The goals of *Mamlūk Studies Review* are to take stock of scholarship devoted to the Mamluk era, nurture communication within the field, and promote further research by encouraging the critical discussion of all aspects of this important medieval Islamic polity. The journal includes both articles and reviews of recent books. Submissions of original work on any aspect of the field are welcome, although the editorial board will periodically issue volumes devoted to specific topics and themes. *Mamlūk Studies Review* also solicits edited texts and translations of shorter Arabic source materials (*waqf* deeds, letters, *fatāwá* and the like), and encourages discussions of Mamluk era artifacts (pottery, coins, etc.) that place these resources in wider contexts. Transliterated Middle Eastern languages should conform to the system utilized by the Library of Congress. All questions regarding style should be resolved through reference to *The Chicago Manual of Style*, 14th edition. Submissions should be composed with current word-processing software, and if possible should use a Unicode font, such as Charis SIL (see the website below for further information). Submissions may be made via email, but authors must also send a printed copy and a labeled CD-ROM which includes the article, all figures and illustrations, and any special fonts used. Articles which diverge widely from format and style guidelines may not be accepted, and illustrations which do not meet the requirements set forth by the editors may not be usable.

Readers of *Mamlūk Studies Review* are encouraged to visit MEDOC's websites, including http://www.lib.uchicago.edu/e/su/mideast and http://mamluk.uchicago.edu. These sites provide links to The Chicago Online Bibliography of Mamluk Studies, a fully searchable database of thousands of primary and secondary sources, and The Chicago Online Encyclopedia of Mamluk Studies, as well as other resources created and maintained by MEDOC. The *Mamlūk Studies Review* page provides authors with editorial and style guidelines, instructions for creating and submitting illustrations, and information on using Unicode fonts for composition. The site also has information about subscribing to the Mamluk listserv, an open forum for discussing all aspects of the history and culture of the Mamluk Sultanate. The Editors of *Mamlūk Studies Review* encourage readers to use the listserv to comment upon and discuss issues raised in the Review.

The logo that appears on the cover and title page was created by John E. Woods.
Olaf Nelson and Gregg Reynolds are providing valuable technical and conceptual assistance in the journal's transition to online format.

All communications should be sent to: The Editor, *Mamlūk Studies Review*, 5828 South University Avenue, 201 Pick Hall, Chicago, Illinois 60637, USA. The editor can be contacted by email at brcr@uchicago.edu.

MAMLŪK STUDIES
REVIEW

The Bruce D. Craig
Prize for Mamluk Studies

The Bruce D. Craig Prize, carrying a cash award of $1,000, is given annually by *Mamlūk Studies Review* for the best dissertation on a topic related to the Mamluk Sultanate submitted to an American or Canadian university during the preceding calendar year. In the event no dissertations are submitted, or none is deemed to merit the prize, no prize will be awarded. To be considered for the 2008 Prize, dissertations must be defended by December 31, 2008, and submitted to the Prize Committee by January 31, 2009. Submissions should be sent to:

Chair, Prize Committee
Mamlūk Studies Review
The University of Chicago
Pick Hall 201
5828 S. University Avenue
Chicago, IL 60637

Previous Prize Winners:
2004: Tamer el-Leithy, Princeton University, "Coptic Culture and Conversion in Medieval Cairo: 1293-1524."

2005: Zayde G. Antrim, Harvard University, "Place and Belonging in Medieval Syria, 6th/12th to 8th/14th Centuries."

2006: Nahyan A. G. Fancy, University of Notre Dame, "Pulmonary Transit and Bodily Resurrection: The Interaction of Medicine, Philosophy and Religion in the Works of Ibn al-Nafīs (d. 1288)."

2007: No prize was awarded.

Symbiotic Relations: Ulama and the Mamluk Sultans

Introduction: Issues and Methodology

The ulama played a vital role in the political and social life of the Mamluk state. Ira Marvin Lapidus, for example, makes the following observation about the urban society of the Mamluk period:

> In Mamlūk cities no central agency for coordination or administration of the affairs of the whole existed. There were no municipalities, nor communes, nor state bureaucracies for urban affairs. Rather the cohesion of the city depended not on any particular institutions but on patterns of social activity and organization which served to create a more broadly based community, and this community was built around the religious elites.

The "religious elites" referred to above are identified by Lapidus as ulama who, in his words, "were that part of the Muslim community learned in the literature, laws, and doctrines of Islam. They were judges, jurists, prayer-leaders, scholars, teachers, readers of Koran, reciters of traditions, Sufis, functionaries of mosques, and so on." The whole aim of the somewhat awkward phrase "that part of the Muslim community learned in" is to avoid the term "class" when referring to the ulama. Lapidus is very explicit about his perception of the ulama: "the *ʿulamāʾ* were not a distinct class, but a category of persons overlapping other classes and social divisions, permeating the whole of society."[1] I would argue that the ulama must be perceived as a class and not as a category. What distinguished ulama from other classes was their religious learning but, like other classes, they were divided according to wealth, status, and occupation. If we speak about merchants, administrators or the military in term of classes the same must be applied to the ulama.

Another approach has been adopted by Carl F. Petry, who perceives the social structure of Cairo, and by extension that of the Mamluk state, as based on a threefold division: the ruling military caste, "a civilian administrative elite, the majority of whom were designated *ʿulamāʾ*," and the masses. The term "civilian elite" is broader than ulama and also contains notables who were not necessarily ulama.[2] Petry's administrative elite, or "le milieu des administrateurs civils," is at

[1] Ira Lapidus, *Muslim Cities in the Later Middle Ages* (Cambridge, Mass., 1967), 107.

[2] Carl F. Petry, *The Civilian Elite of Cairo in the Later Middle Ages* (Princeton, 1981), 3–4.

the heart of Bernadette Martel-Thoumian's study of the Mamluk administration of the fourteenth and fifteenth centuries. The professional administrators as typified by the *kātib* are extensively discussed by Martel-Thoumian, who makes the following observation: "Nous avons parlé de milieu civil par opposition aux milieux militaires et religieux. Ce sont donc essentiellement les personnages ayant fait carrière dans l'administration qui sont l'objet de cette étude, même s'il est arrivé à certains d'entre eux d'exercer des fonctions classées, par les recueils de chancellerie, comme militaires ou religieuses."[3] However, a neat distinction between ulama and people employed in the administration *(kuttāb)* is rather difficult to make.

With respect to the Mamluk political system, Petry poses three pertinent questions: were civilians able to exert influence on the rulers, and secondly, "did the *ʿulamāʾ* serve primarily as mediators between the Mamlūks and the general population . . . ?" Petry goes on by asking "does the concept of mediation fail to do justice to the complexities of civilian elite status during this period?"[4] The notion that the ulama acted as mediators between the Mamluk rulers and the population has gained wide acceptance among scholars.[5] However, in her study of Zangid-Ayyubid Syria, Daniella Talmon-Heller takes a step beyond the notion of ulama as mediators. She writes: "Rulers cooperated closely with ʿulamāʾ, bolstering their role as guardians of the religious law, and as propagators of Islamic norms in wider social circles."[6] I would like to go even farther by arguing that the relations between rulers and ulama were symbiotic.

Ulama and Rulers: A Short Historical Survey

During the two first centuries of Islam, as has been convincingly shown by Patricia Crone and Martin Hinds, the tendency for religious legitimization of political power was strong and persistent, and the Umayyad and early Abbasid caliphs adopted the evocative title *khalīfat Allāh* (deputy of God).[7] The full ramifications

of the doctrine that the caliphs are God's deputies are discussed by Wadād al-Qāḍī.[8] On the practical level, it endowed the caliphs with a paramount role in the religious life of the state and implied that obedience to caliphal rule is God's command. The first three centuries of Islam also saw the emergence of the so-called "Arabic sciences," including jurisprudence, and the formation of the ulama class.[9] The jurists *(fuqahāʾ)* were an integral part of the ulama class, but they developed a professional distinction as experts in the intricacies of the law.[10] The relations between rulers and ulama were complex, and the issue of whether the ulama divested the caliphs of religious authority and left them with only political power is beyond the scope of the present article. Lapidus, for example, has argued that since the *miḥnah* of the ninth century religious and political life in medieval Islam developed separately.[11] In my discussion, I follow Muhammad Qasim Zaman's view that there was no separation between politics and religion in the early Abbasid period and that: "A difference of function between the caliphs and the *ʿulamāʾ* in and by itself does not necessarily signify a separation of state and religion." He, however, leaves open the question whether there was ever "a divorce of religion and the state."[12]

The basic meaning of the term *ʿilm* is knowledge. The ulama, therefore, were the possessors of *ʿilm*. The broad meaning of the term must not obscure the fact that when we speak about ulama of the Mamluk period we mean people versed in the Arabic religious sciences. When the political relations between the ulama and rulers are examined, not all groups of the ulama class are equally important.

[8]Wadād al-Qāḍī, "The Religious Foundation of Late Umayyad Ideology and Practice," in *Saber Religioso y Poder Político en el Islam* (Madrid, 1994), 231–73, esp. 241–56.

[9] By "Arabic sciences" I mean Arabic language-oriented sciences such as grammar, *tafsīr,* and jurisprudence, in contrast to medicine, which is referred to as the "science of the ancients" (i.e., the Greeks) and is written in both Arabic and Persian.

[10] The literature on these topics is vast, and my references go only to some of the most recent publications. Although the following references focus on *mawālī,* they also offer valuable insights into the development of the Arabic sciences. See John Nawas, "The Emergence of Fiqh as a Distinct Discipline and the Ethnic Identity of the Fuqahāʾ in Early and Classical Islam," in *Studies in Arabic and Islam,* ed. Stefan Leder and others (Leuven, 2002), 491–501; Monique Bernards, "The Contribution of Mawālī to the Arabic Linguistic Tradition," in *Patronate and Patronage in Early and Classical Islam,* ed. Monique Bernards and John Nawas (Leiden, 2005), 426–53; John Nawas, "A Profile of the Mawālī ʿUlamāʾ," in ibid., 454–85.

[11] Ira Lapidus "The Separation of State and Religion in the Development of Early Islamic Society," *International Journal of Middle East Studies* 6 (1975): 364, 383. For a more complex approach, see Crone and Hinds, *God's Caliph,* 97.

[12] Muhammad Qasim Zaman, "The Caliphs, the ʿUlamāʾ, and the Law: Defining the Role and Function of the Caliph in the Early Abbasid Period," *Islamic Law and Society* 4 (1997): 36; idem, *Religion and Politics Under the Early Abbasids* (Leiden, 1997), 213.

Quite obviously, grammarians, for example, were a more marginal group than jurists, while qadis, in contrast to what might be called academic jurists, stood at the very focal point of these relations. The relations between qadis and rulers were unique from the beginning, due to the centrality of law in all aspects of the private and communal life of medieval Muslims. The appointment of judges preceded the development of Muslim schools of law; early qadis implemented caliphal law and relied on their own judgment (*raʾy*).[13] From the early days of the Muslim state, it was clear that qadis were appointed, paid, and dismissed by the state. The development of Muslim sacred law (shariʿah) only enhanced the communal role of the qadis. Judging from the judicial history of eighth- and ninth-century Egypt, some of the qadis displayed great zeal in executing their task and greatly expanded the sphere of their responsibilities. For instance, the qadi ʿAbd al-Raḥmān ibn Muʿāwiyah, appointed as qadi in 86/705 in Fusṭāṭ, was the first to take over the control of orphans' money. He supplanted the tribal *ʿarīf*s as the managers of this sort of funds. Orphans' money also attracted the attention of the authorities, and the qadi Khayr ibn Nuʿaym yielded to the demand of the caliph al-Manṣūr (754–75) to transfer orphans' money to the Treasury. This intervention, however, set no precedent and failed. Qadis continue to play a key role in the management of orphans' money. In 118/736, another Egyptian qadi, Tawbah ibn Nimr, was the first to assume supervision of the revenues of pious endowments. He created a powerful and lasting precedent and, in many cases, qadis were responsible for the supervision of *waqf*s.[14] The definition of the qadi's sphere of judicial and managerial responsibilities was a two-way process. It came from below as a result of actions by some assertive qadis and from above in the form of letters of appointment issued by the rulers. The most powerful precedents were created during the Fatimid period when Ismaʿili qadis of the Nuʿmān family received wide judicial powers combined with administrative responsibilities and supervision over religious rites. The Fatimids envisaged the qadi as an official with executive authority, and this was symbolized by the sword a qadi carried during the investiture ceremony. During the Fatimid period another precedent was also created: the melding of judicial and vizierial authority. The Fatimids also paid the ulama. In 406/1015–16, jurists, Quran reciters, muezzins, and probably others as well received a total of 71,733 dinars. The Fatimid payroll included both Cairo and Fusṭāṭ, meaning Ismaʿili and Sunni ulama. The Fatimid imam al-Ḥākim abolished these payments, but his policies were idiosyncratic and it must have been only a temporary nullification.[15]

[13] For *raʾy,* see Muḥammad ibn Yūsuf al-Kindī, *The Governors and Judges of Egypt,* ed. Rhuvon Guest (Leiden, 1912), 312–13. For caliphal law, see Crone and Hinds, *God's Caliph,* 44–45.

[14] Al-Kindī, *Governors and Judges,* 325, 346, 350, 383, 394–95.

[15] Aḥmad ibn ʿAlī al-Maqrīzī, *Ittiʿāẓ al-Ḥunafāʾ bi-Akhbār al-Aʾimmah al-Fāṭimīyīn al-Khulafāʾ,* ed.

The impact of the Fatimid precedents on the Zangid, Ayyubid, and Mamluk periods is visible, though in an unsystematic way. Under Nūr al-Dīn members of the Shahruzūrī family occupied the key judicial posts in the state. Kamāl al-Dīn served as qadi of Damascus while his son served in Aleppo and other relatives served as qadis in Ḥamāh and Homs.[16] In a quite similar fashion, relations of trust and cooperation evolved between Saladin and the Kurdish qadi ʿĪsá ibn Dirbās (d. 605/1209). His first appointment as qadi took place in 566/1170–71 in Egypt. After 1174, as Saladin extended his rule over Syria and beyond, he was nominated as qadi of the Syrian towns and was responsible for the management of pious endowments; he executed his responsibilities by appointing many deputies. ʿĪsá ibn Dirbās' career under al-Malik al-ʿAzīz, Saladin's son, was marked by many ups and downs. However, when appointed, he was entrusted with supervisory responsibilities over the markets and the mint, as well as preaching at the mosques.[17] These appointments typified Fatimid policies. Whether all these cumulative precedents guided Baybars when he appointed Ibn Khallikān as the qadi of Syria in 659/1260–61 remains an open question. Ibn Khallikān (1211–82), the author of a famous biographical dictionary, was appointed as the qadi of Syria with responsibility stretching from the town of al-ʿArīsh in southern Palestine to Salamyah in the north. He was authorized to nominate deputies as he pleased, and he controlled the pious endowments of many mosques, charitable institutions, and law colleges. In addition, he was charged with teaching law in seven law colleges.[18] It remains unclear whether he was expected to teach in them or simply authorized to appoint teachers on his behalf. Whether guided by precedents or not, Baybars' nomination was in line with the traditional view of the qadi and his role in society. Long before the Mamluk period, the qadi came to be perceived as more than just a judge. He became responsible for the administration of various trust funds unconnected with state administration and, occasionally, was entrusted with additional supervisory powers.

Inevitably, there was also a political dimension to the relations between qadis and rulers, and critique of a regime by a qadi was taken seriously. Ibrāhīm ibn

[18] Abū Shāmah, *Tarājim Rijāl al-Qarnayn al-Sādis wa-al-Sābiʿ* (Beirut, n.d.). He was dismissed from his post in 609/1212–13. See ʿIzz al-Dīn ibn Shaddād, *Tārīkh al-Malik al-Ẓāhir*, ed. Aḥmad Ḥuṭayṭ (Beirut, 1983), 236.

Isḥāq was an outspoken critic of the authorities. In 204/819, he was appointed as qadi with the responsibility for preaching by Sarī ibn al-Ḥakam, the governor of Egypt. Ibrāhīm ibn Isḥāq used to reprove the authorities by saying: "You punish for illicit sex while you yourself indulge in it, you execute a thief while you yourself steal, you put (people) to death because of wine while you yourself consume it." He was a severe judge who relinquished his post because of Sarī ibn al-Ḥakam's attempt to influence his judicial decisions. The governor asked him to resume his duties, but he refused by saying: "no intercession (is allowed) in the judicial process."[19] Any criticism of the authorities had political implications, but that of Ibrāhīm ibn Isḥāq was unfocused and couched in moral terms. The defiance of other qadis was overtly and unmistakably political. In 217/832, the Abbasid caliph al-Maʾmūn came to Egypt to suppress rural rebellions and to launch an investigation into their causes. The hearings took place in Fusṭāṭ at the Ancient Mosque where the qadi Ḥārith ibn Miskīn referred to the two tax collectors in Egypt as oppressors, using the strong term *ẓulm*. The hearing broke into an uproar and al-Maʾmūn, who was told that the qadi enjoyed popular support and that his view reflected that of the people, invited Ḥārith ibn Miskīn to a private session. The qadi was asked whether he had been in any way wronged by these two tax collectors and he said no. Then he was asked how he could accuse them of oppression. His answer touched at the very core of the debate about legitimization of political power. Ḥārith ibn Miskīn said that he had never met al-Maʾmūn but nevertheless testifies that he is the caliph; he had not participated in his raids (meaning apparently the summer raids on Byzantium), but he bears witness that they took place. He was immediately imprisoned and later exiled to Baghdad. The case of Ḥārith ibn Miskīn implies that when a regime presents itself as legitimate and pretends to rule properly it bears the burden of evidence. Legitimacy is not accorded but won, and a regime must earn it for itself in order to be beyond reproach. Rather surprisingly, in 237/851, the Abbasid caliph al-Mutawakkil re-appointed Ḥārith ibn Miskīn as judge in Fusṭāṭ. He proved to be as strict and unyielding as ever, even when the personal economic interests of the Abbasid family in Egypt were at stake. Eventually, he was dismissed for the second time.[20] Al-Mutawakkil's nomination of Ḥārith ibn Miskīn reflected a permanent dilemma of rulers as to whom to appoint to judgeships. On the one hand, the regime was interested in people of integrity who would be respected both personally and as

[19] Al-Kindī, *Governors and Judges,* 427; Ibn Ḥajar, *Rafʿ al-Iṣr,* 1:22.

[20] Ḥārith ibn Miskīn was also known for his extensive non-judicial activities. He was involved in the building of a congregational mosque, digging a water canal, and supervision of religious rites. Al-Kindī, *Governors and Judges,* 469–70, 472–73; Ibn Ḥajar, *Rafʿ al-Iṣr,* 1:168–69, 171–72. For the wider context of the ninth century rebellions and the Abbasid response, see Kosei Morimoto, *The Fiscal Administration of Egypt in the Early Islamic Period* (Kyoto, 1981), 158–63.

representatives of the regime. An honest judge meant an honest government, since such people were not easily manipulated.

Aḥmad ibn Ṭūlūn (868–84), the semi-independent ruler of Egypt, was faced with open defiance of his policies and political ambitions by the qadi Bakkār ibn Kutaybah. In 882, Aḥmad ibn Ṭūlūn suggested to the caliph al-Muʿtamid that he relocate the caliphate to Egypt in order to be free of the tutelage of his brother al-Muwaffaq. Aḥmad ibn Ṭūlūn ordered that al-Muwaffaq be cursed publicly and sought the approval of the qadis of Damascus and Fusṭāṭ who, with the exception of Bakkār ibn Kutaybah, yielded to his demand. Aḥmad ibn Ṭūlūn dismissed and imprisoned Bakkār ibn Kutaybah, but the conditions of his imprisonment were rather soft. By demanding that the qadi return the salary he had been paid, Aḥmad ibn Ṭūlūn revealed his complete lack of understanding of the complex relations between qadis and rulers. He received back 16,000 dinars, since the qadi had not used the 1,000 dinars paid to him annually as salary.[21] Aḥmad ibn Ṭūlūn should have known better. Among the ulama an ethos of independence from the corruptive powers of the government had evolved, and qadis of Ḥārith ibn Miskīn's or Bakkār ibn Kutaybah's stature could not be bought with money. This overview has direct relevance for the relations between the ulama and the rulers. I will argue that patterns typifying these relations had evolved long before the Mamluk period. For example, Mamluk sultans of the fourteenth century had many difficulties with the chief Shafiʿi qadi Burhān al-Dīn ibn Jamāʿah (d. 1388) and, in 1382, Barqūq dismissed him. No one, however, attempted to buy him off.[22] The evidence suggests that the Mamluk sultans had to come to terms with the ulama more than the ulama had to come to terms with the sultans.

The fusion between politics and religion brought about two parallel developments within the ulama class, one that advocated estrangement from the state and another that sought cooperation with it.[23] Although state intervention in

For other aspects of jurists' relations with the rulers, see B. Jokisch, "Socio-Political Factor of Qaḍāʾ in Eight/Fourteenth Century Syria," *Al-Qanṭara* 20 (1999): 503–30, esp. 512–13.

[23] The literature dealing with the *miḥnah* is extensive. Nimrud Hurvitz, for example, perceives the *miḥnah* as a culmination of the struggle between the *mutakallimūn* and *muḥaddithūn*. See his "Who is the Accused? The Interrogation of Aḥmad Ibn Ḥanbal," *Al-Qanṭara* 22 (2001): 359–73. For other views, see Michael Cooperson, "Two Abbasid Trials: Aḥmad b. Ḥanbal and Ḥunayn Ibn Isḥāq," *Al-Qanṭara* 22 (2001): 375–93; Tayeb el-Hibri, "The Image of the Caliph al-Wāthiq: A Riddle of Religious and Historical Significance," *Quaderni di Studi Arabi* 19 (2001): 41–60; John N. Nawas, "The Moral Imperative in Contemporary Islamic Movements: An Early Expression in the Structure of al-Maʾmūn's Inquisition (Miḥna), 833 C.E.," in *Strategies of Medieval Communal Identity: Judaism, Christianity and Islam,* ed. Wout J. van Bekkum and Paul M. Cobb (Leuven,

doctrinal disputes as it took place during the *miḥnah* was rare,[24] various Sunni and Shiʿi regimes declared certain doctrines as official creeds and conferred patronage on a chosen school of law. Furthermore, the ulama involved the state in their doctrinal disputes and expected the rulers to take firm action against those whom they labeled as deviating from orthodoxy or as heretics. People considered to be heretics were executed, but rulers, at the behest of the ulama, also intervened in disputes concerning religious rites and practices.

The emergence of the law college (madrasah) as a major educational institution also played a role in the creation of close relations between the state and the ulama. The role of the Seljuk vizier Niẓām al-Mulk (1040–92) in the spread of the madrasah as the educational institution that enjoyed the highest patronage was crucial and manifold. Niẓām al-Mulk established the Niẓāmīyah network of endowed law colleges, which were dedicated to the teaching of the Shafiʿi school of law. Niẓām al-Mulk's deeds were emulated by Nūr al-Dīn, who established many law colleges (if not an actual network thereof) in the Syrian towns under his rule.[25]

The spread of the madrasah in the Muslim Middle East from the eleventh century onwards was phenomenal. It opened many employment opportunities, especially for the jurists and transmitters of Prophetic traditions. Law colleges also offered teaching positions in the field of Arabic language, as well as other posts for religious functionaries such as prayer leaders, preachers, and Quran reciters. Students received stipends and food rations, and some law colleges became large institutions with hundreds of affiliated people, including manual workers, administrative staff, religious functionaries, teachers, and students. Joan E. Gilbert, who has studied medieval Damascus, points out that 121 religious-educational institutions, offering 400 positions, were set up in the town between 1076 and 1260. She perceives the years of Zangid-Ayyubid rule as the period when the integration of the ulama into the fabric of the state took place.[26] Michael

2004), 75–87. For the persecution of heretics in the Abbasid period, see Zaman, *Religion and Politics,* 63–69. Chamberlain makes the following observation: "By founding *madrasa*s, powerful households could insert themselves into the cultural, political, and social life of the city and turn existing practices and relationships to their own benefit. This was how charitable foundations became instruments of politics."[27]

Early madrasahs were built for one particular *madhhab,* but later on, madrasahs were built for two and eventually all four Sunni schools of law. The spread of the madrasah did not undermine the fact that the medieval Muslim world of learning, in and outside the madrasah system, was independent both in terms of its subject matter and in the fact that the ulama acted as a self-governing body. The topics that were at the heart of Muslim learning, such as the Quran and its exegeses, the transmission of Prophetic traditions, law, and Arabic language and poetry, embodied the development of a culture that was shared by the ulama and the rulers who acted as their patrons and of the literati. Even non-Arab rulers such as Nūr al-Dīn and Saladin adapted themselves to the culture of the ulama.[28]

Recently, Devin Stewart, elaborating upon earlier works by George Makdisi, has shown that the ulama of the Mamluk period regulated their academic affairs entirely independently of the regime. Academic certificates issued by them, especially the *ijāzat al-futyā wa-al-tadrīs* served "as a credential that established qualification for employment in judicial and teaching posts."[29] Stewart's findings tally with those of Leonor Fernandes and must be seen in the wider context of the ulama as a body that regulated its own affairs.[30] This phenomenon has a long history in medieval Islam. The debate about the qualifications of the mufti and who can serve as a mufti, for instance, began prior to the Mamluks and continued into the Mamluk period. To take another example, jurists of the Mamluk period discussed and defined their internal hierarchy, which was based on the scope

of the jurist's legal education.[31] Furthermore, in some cases during the Mamluk period, the ulama were those who defined the parameters of orthodoxy. Quite independently of the regime, they initiated hearings against heretics and sentenced them to death.[32]

The issue of whether madrasahs served as the institution for training administrative staff or, rather, madrasah graduates sought employment in state administration, is much debated. Although during the Zangid-Ayyubid period the career patterns of the ulama and bureaucrats remained largely separate, both classes, as has been pointed out by R. Stephen Humphreys, shared a common set of values.[33] The readiness of the ulama of the Zangid-Ayyubid period to unhesitatingly serve sultans such as Nūr al-Dīn and Saladin was a result of the convergence of attitudes between rulers and ulama. Both sultans are depicted as the embodiment of the Sunni orthodoxy of the age and defenders of Islam against external enemies and, therefore, rulers whom one could serve without demur. The realities of the Zangid-Ayyubid period have a direct relevance for our discussion, since they set the parameters of the relations between the ulama and rulers during the Mamluk period. Twelfth- and thirteenth-century ulama expected the rulers to defend Islam as a territorial and political entity *(dār al-Islām)* and as a social organism *(ummah)* and to adhere to the principles of Sunni Islam.

Sultan Baybars and the Ulama

The Ulama and the Islamic Content of the Mamluk State

The relations between the ulama and the early Mamluk sultans evolved in a period dominated by the Mamluk-Mongol war, when a vigorous defense of Islam was much needed. Following the Mamluk victory at the Battle of ʿAyn Jālūt, the ulama, typified by the qadis and chief qadi, played a crucial role in both providing legitimacy for Baybars' rule and shaping the Islamic identity of the Mamluk regime. Ibn Wāṣil (1208–98) was at that time on a diplomatic mission to Sicily, and his account is of limited value. More important is Muḥyī al-Dīn ibn ʿAbd al-Ẓāhir (1223–92) who, from 1259, served in the chancery and gained the confidence of Baybars. During 1263–64, he wrote several official letters on behalf of Baybars, and his history of Baybars' reign is considered to be an official biography. Some

[33] See R. Stephen Humphreys, *From Saladin to the Mongols* (Albany, 1977), 377–81.

of the documents quoted by Ibn ʿAbd al-Ẓāhir are also reproduced by Baybars al-Manṣūrī (1247–1325).

The first report to be discussed deals with the arrival of Abū al-ʿAbbās Aḥmad, the future caliph al-Mustanṣir billāh, on 9 Rajab 659/8 June 1261, from Iraq to Cairo. The reasons behind Sultan Baybars' re-establishment of the Abbasid caliphate in Cairo are well known and need no elaboration. I would like to focus on the caliph's investiture ceremony and its meanings. After the arrival of Abū al-ʿAbbās Aḥmad in Cairo, the leading military commanders, the vizier, the chief qadi and other judges, the jurists and ulama, the righteous, the leading mystics, the merchants, and civilians *(al-nās)* were assembled at the citadel for the verification of Abū al-ʿAbbās Aḥmad's pedigree. This verification was necessary, as Baybars was eager to re-establish the caliphate, believing that prophetic qualities were perpetually passed on among the Abbasid offspring. Baybars' beliefs tallied well with the popular esteem for the caliphate. The question of whether Baybars was driven only by political considerations or whether his attitude reflected the mood of his time or was even directly inspired by it, remains unsolvable.[34]

The investiture ceremony took place after the identity of Abū al-ʿAbbās Aḥmad was satisfactorily established and approved by the chief qadi. He was invested as caliph and designated Imām Aḥmad al-Mustanṣir billāh, and Baybars pledged his allegiance to him, stating his commitment to the Quran, the Prophetic tradition *(sunnah), al-amr bi-al-maʿrūf,* holy war, and the lawful collection of God's money and its expenditure among those entitled to it. Following Baybars' pledge of allegiance to the caliph, the latter appointed Baybars to rule the Muslim lands held by him and those he would conquer in the future from the unbelievers, with God's help. The ceremony was concluded with the people swearing allegiance to the caliph.[35]

The accounts dealing with Baybars' oath to the caliph reveal the Islamic content of the regime established by him. Although these accounts deal with the declarative level only, the oath was entirely in line with the political norms and ethical values of the Middle Eastern Muslim world of the high Middle Ages. The

[34] The popular admiration for the caliphate is epitomized by the account of Abū Shāmah (1203–68). Abū Shāmah lived in Damascus when the news about the re-establishment of the caliphate by Baybars was proclaimed in the city. He writes that the people rejoiced, and thank God for that (*Tarājim,* 213–14). There are a number of studies dealing with the establishment of the Abbasid caliphate in Mamluk Egypt. See, for example, Stefan Heidemann, *Das Aleppiner Kalifat (A.D. 1261)* (Leiden, 1994), esp. 91–104.

[35] Baybars al-Manṣūrī, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. Donald S. Richard (Beirut, 1998), 60–61; Ibn Muḥyī al-Dīn Ibn ʿAbd al-Ẓāhir, *Sīrat al-Malik al-Ẓāhir,* ed. and translated into English by Fatima Sadeque, *Baybars I of Egypt* (Dacca, 1956), 35–36; Muḥammad ibn Sālim Ibn Wāṣil, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb,* vol. 6, ed. ʿUmar ʿAbd al-Salām al-Tadmurī (Beirut, 2004), 312–13.

references to the Quran and *sunnah* are self-explanatory and have a long tradition as political slogans in medieval Islam. Equally obvious is the reference to holy war, which must be seen against a twofold background. During the twelfth century the issue of holy war against the Franks came to dominate the political life of the Zangid and Ayyubid states, and the destruction of Baghdad by the Mongols added a new dimension to it. Baybars' achievements in fighting the Mongols were well known, and all were aware that the ceremony at the citadel was possible only thanks to the victory at ʿAyn Jālūt.

As the work of Michael Cook has shown, the maxim *al-amr bi-al-maʿrūf wa-al-nahy ʿan al-munkar,* commanding right and forbidding wrong, evolved into a doctrine that became deeply ingrained into Islamic thought and ethics. It was the great sage al-Ghazālī (d. 1111) who equated the doctrine of *al-amr bi-al-maʿrūf* and its implementation with the institution of *ḥisbah*. Ibn Tūmart (d. 1130), the founder of the Almohad state, personally practiced *al-amr bi-al-maʿrūf,* and it became part of the ideological make-up of the state.[36] In the words of Mercedes Garcia-Arenal, the adoption of the doctrine by the state meant that "the precept is no longer the engine of social reform, but acts as a mere reminder of prohibitions on wine, gambling, or musical instruments, suggesting that the *hisba* loses its radical character when it is exercised, or rather appropriated by the powerful. . . ."[37] The same can be argued for the Mamluk state and its adoption of *al-amr bi-al-maʿrūf* as a political manifesto.

The somewhat awkward phrase: "The lawful collection of God's money and its expenditure among those entitled to it" must be understood as referring to the issue of legal taxation. Abbasid caliphs and Zangid and Ayyubid sultans frequently abolished illegal taxes, and Baybars, so it seems, committed himself to the collection solely of taxes allowed by the law. The reference to the expenditure of the money "among those entitled to it" remains enigmatic. This aspect of the financial policy of medieval Muslim states was never fully clarified.

Whatever the Islamic education acquired by the young Mamluk cadets during their military training was, the shaping of their Muslim identity took place later in their lives when they lived within Muslim society and were exposed to its values and ethos.[38] Baybars' career before becoming a sultan was in the service of the Ayyubid rulers of Syria, where the notion of caliphal suzerainty was at the center of the political system. Ayyubid sultans, like their Zangid predecessors,

[36] Michael Cook, *Commanding Right and Forbidding Wrong in Islamic Thought* (Cambridge, 2000), 427–50, esp. 447–50.

[37] Mercedes García-Arenal, *Messianism and Puritanical Reform,* translated into English by Martin Beagles (Leiden, 2006), 176.

acknowledged Abbasid caliphs as their overall lords and sought letters of appointment from them. These letters were an essential element in a broader system of political legitimization that the Zangid and Ayyubid sultans created for themselves. Baybars' allegiance to the caliph is well attested by his title and the epigraphic evidence studied by Reuven Amitai.[39]

The events that followed the ceremony at the citadel were a conscious attempt to re-enact the Zangid-Ayyubid system of political legitimization. The name of the caliph was publicly proclaimed and inscribed on coins. On Friday 17 Rajab 659/16 June 1261, the caliph delivered a sermon at the congregational mosque in the citadel and, on 24 Shaʿbān/23 July, another ceremony took place at the Bustān al-Kabīr outside the citadel. Baybars, clad in the black Abbasid insignia, held a public audience and bestowed robes of honor on the amirs, the vizier, the chief qadi, and the chief of the chancery, and the caliphal letter of appointment *(taqlīd)* was publicly read. The ceremony at the Bustān al-Kabīr was concluded by a procession through the town with the *taqlīd* being publicly displayed. The *taqlīd* is a fascinating document but outside the scope of this article. It adds two significant points to Baybars' public pledge of allegiance to the caliph. The document states Baybars' commitment to *ʿadl,* justice, and *iḥsān,* good moral deeds or, in the narrower sense, charity. The *taqlīd* was written by ʿAlāʾ al-Dīn ibn ʿAbd al-Ṭāhir, a professional *kātib* entitled as *rāʾis* and the author of a number of official letters. He was not an *ʿālim* in the strict sense of the term, and his religious education is dismissed in a disparaging remark about his insufficient study of Prophetic tradition. Although he exemplifies the administrators studied by Martel-Thoumian, he also epitomizes Humphreys' observation that administrators and ulama shared a common set of values.[40] The significance of *ʿadl* and *iḥsān* as components of what constitutes good government was as clear to him as to any other *ʿālim.*[41]

On 2 Muḥarram 661/16 November 1262, following the killing of the caliph al-Mustanṣir during an expedition to Iraq, a new caliph, al-Ḥākim bi-Amr Allāh, was installed. In this case, Ibn Wāṣil's account of these events proves to be detailed and valuable. Baybars swore to the caliph, expressing his commitment to the Quran, the *sunnah, al-amr bi-al-maʿrūf,* holy war, the lawful collection of God's money and its expenditure among those entitled to it, the execution of the penalties laid

[39] See Reuven Amitai, "Some Remarks on the Inscription of Baybars at Maqām Nabi Musa," in *Mamlūks and Ottomans*: *Studies in Honour of Michael Winter,* ed. David J. Wasserstein and Ami Ayalon (London, 2006), 47–48, 50–51.

[40] See nn. 3 and 31 for these references.

[41] Baybars al-Manṣūrī, *Zubdat al-Fikrah,* 61–63; Ibn ʿAbd al-Ẓāhir, *Sīrat al-Malik al-Ẓāhir,* 36–41, esp. 38; Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. ʿAbd al-Wārith ʿAlī (Beirut, 1997), 3:64–65.

down by God *(ḥudūd),* the implementation of religious policy to which the imam is obliged, and the protection of Muslims.[42] This document shows a conscious evolution in defining the Islamic content of Baybars' state. ʿAlāʾ al-Dīn inserted the commitment to *ʿadl* and *iḥsān* into the *taqlīd* document of 659/1261, while somebody else added the commitment to the holy law (shariʿah), meaning the implementation of the *ḥudūd,* and the protection of Muslims to Baybars' oath of allegiance to the caliph al-Ḥākim bi-Amr Allāh. The accounts dealing with the investiture of the caliphs al-Mustanṣir and al-Ḥākim are invaluable for the topic under discussion, as they show that ulama were integrated into the fabric of the state and endowed it with its Islamic content, and having done so, they could serve the state without hesitation.

The Reform of the Judicial System

In 663/1264–65, Baybars introduced a major change in the administration of justice by appointing four chief qadis. This change is extensively discussed by both medieval chroniclers and modern scholars. Joseph H. Escovitz, for example, perceives Baybars' deed as the culmination of a process of change toward the recognition of the four Sunni schools of law as equal.[43] In Jorgen S. Nielsen's view, Baybars' action aimed at creating a better balance in the way the different legal schools were represented in the judicial system.[44] Sherman A. Jackson explains Baybars' deed as a response "to the exclusivist policies (i.e. Shāfiʿī preferences) of chief justice Ibn Bint al-Aʿazz." He also points out that Baybars secured the support of jurists of the other legal schools and that his policy tallied with their interests. Baybars, in his words, "showed himself to be the consummate Mamlūk politician."[45] Recently a significant contribution to the ongoing discussion of Baybars' judicial reforms has been made by Yossef Rapoport. He points out that, beginning with the twelfth century, the doctrine of *taqlīd* insisted that qadis belonging to a certain *madhhab* should adhere to the precedents of their school rather than exercise their own independent judgment *(ijtihād)*. Therefore, from the point of view of the public, the appointment of four chief qadis added flexibility to the judicial system and was welcomed by both the jurists and the people. Rapoport's conclusion is

[45] Sherman A. Jackson, "The Primacy of Domestic Politics: Ibn Bint al-Aʿazz and the Establishment of the Four Chief Judgeships in Mamlūk Egypt," *JAOS* 115 (1995): 57, 65.

powerfully stated: "The state and its jurists shared a common vision of the social good."[46]

One can agree with Jackson that the confrontation between Baybars and Ibn Bint al-Aʿazz was also a clash of personalities between a powerful sultan who was no stranger to violence and a stern self-made jurist. Ibn Bint al-Aʿazz came from a highly respected provincial ulama family. He lost his father at a young age and devoted his boyhood to study. Ibn Ḥajar al-ʿAsqalānī (1372–1449) characterizes him as a loner who had missed his childhood. He studied with the luminaries of his age and was certified to teach law and to issue legal opinions. Rather surprisingly for a scholar trained in the traditional sciences, Ibn Bint al-Aʿazz also studied the art of administrative writing *(kitābah)* and accounting *(ḥisāb)*. Ibn Bint al-Aʿazz was very much the product of the Ayyubid age and the cooperation between the ulama and the rulers. He owed his first appointment as a witness in the Treasury to his reputation as a person of integrity and, probably, to his study of accounting. Ibn Ḥajar claims that he tried to avoid this appointment, but this sounds like an unconvincing cliché. The sultan al-Ṣāliḥ Ayyūb (1240–49) appointed him supervisor *(nāẓir)* of governmental offices *(dawāwīn)* and, in 654/1256, during the sultanate of Aybak, he received his first nomination as qadi. A year later, he was appointed vizier while the former vizier took over his judicial position. In 657/1259, Sultan Quṭuz dismissed him from his post, but Baybars re-appointed him (659/1261).

There was nothing exceptional in Ibn Bint al-Aʿazz's career. He was a local man who earned a name for himself and moved between judicial and administrative appointments, epitomizing the interdependence between the ulama and rulers. Ibn Bint al-Aʿazz is described as a just qadi who extended the authority of the shariʿah, firmly controlled the court witnesses, and successfully managed the pious endowments under his authority. A just and efficient qadi was an asset for the ruler who appointed him. As the glory of the qadi was projected onto the ruler, Baybars might have been very satisfied with the way Ibn Bint al-Aʿazz executed his office. However, the latter was an unyielding person who adhered strictly to the letter of the law and refused to give preferential treatment to either local notables *(akābir)* or Mamluk amirs. He also appeared to be a kind of protector of the local population against financial extortion by the rulers. As vizier he abolished the practice of taking the revenues of two months from property owners, which was done under the pretext that this money was needed to face the Mongol menace. But, from the point of view of the sultan, perhaps the greatest trouble with Ibn Bint al-Aʿazz was that he was a Shafiʿi zealot. Although the terms *mutaʿaṣṣib* (bigot) and *taʿaṣṣub* (fanatical adherence to one's legal school) are not mentioned

[46] Yossef Rapoport, "Legal Diversity in the Age of Taqlīd: The Four Chief Qadis Under the Mamlūks," *Islamic Law and Society* 10 (2003): 210–28, esp. 227.

when referring to Ibn Bint al-Aʿazz, he was in fact a Shafiʿi zealot who displayed disregard for other legal schools. *Taʿaṣṣub* and adherence to *taqlīd* of one's legal school were different manifestations of the same phenomenon which had a long history.[47]

In the Iranian world and the Middle East of the high and late Middle Ages, regimes favored the legal school of their choice. The Ghaznavids, for example, preferred the Shafiʿi school, while the Seljuk rulers adhered to the Hanafi *madhhab* and Ashʿari theology. In line with Seljuk policies, the Hanafis enjoyed preponderance under Nūr al-Dīn. This policy was reversed by Saladin, who backed the Shafiʿi school but continued to adhere to the Ashʿari doctrine. Saladin's policies, however, were far more balanced than those of the Seljuk rulers, including Nūr al-Dīn. Some Hanafi scholars maintained their positions, and Saladin also established law colleges for the Malikis and Hanafis. The Ayyubid rulers, with the exception of al-Malik al-Muʿaẓẓam (1218–27), adhered to the Shafiʿi legal school. Al-Malik al-Muʿaẓẓam was a Hanafi zealot who systematically favored the Hanafis. However, as the only Hanafi of the Ayyubid ruling family, he had to compromise to some extent. In Damascus he built two law colleges: one for the Hanafi *madhhab,* which also served as his family burial shrine, and one for the Shafiʿis, where his paternal grandmother was buried.[48]

In Egypt, al-Ṣāliḥ Ayyūb adopted a different approach: the law college he established in 641/1243–44 in Cairo was dedicated to the teaching of the four Sunni schools of law. To what extent he was influenced by the establishment of al-Mustanṣirīyah law college in 1233 in Baghdad remains unknown—in al-Mustanṣirīyah all four schools of law were taught. On the other hand, one can regard al-Ṣāliḥ Ayyūb's act as a culmination of a local tradition that began with Saladin, who built law colleges not only for the Shafiʿis but also for the Hanafis and Malikis, and continued with al-Qāḍī al-Fāḍil, who built a law college for both the Shafiʿis and Malikis in 580/1184–85. Al-Qāḍī al-Fāḍil, a former Fatimid administrator and a member of Saladin's inner circle, was an Egyptian in the full sense of the term who acknowledged the Maliki presence in Egypt and their role in the religious life of the country. During Aybak's reign, al-Ṣāliḥ Ayyūb's law college served as the seat for the court of complaints *(al-nāẓir fī maẓālim)*. More significantly, in 677/1278–79, during his short reign (1277–79), Baybars' son Berke Khān provided the madrasah with a rich endowment that supported

[47] Al-Subkī writing about the muftis is critical of both *taʿaṣṣub* and lack of commitment to any legal school. See Daniella Talmon-Heller, "Fidelity, Cohesion, and Conformity Within Madhhabs in Zangid and Ayyubid Syria," in *The Islamic School of Law: Evolution, Devolution, and Progress,* ed. Peri Bearman and others (Cambridge, Mass., 2005), 107.

[48] Ibn Wāṣil, *Mufarrij al-Kurūb fī Akhbār Banī Ayyūb,* vol. 5, ed. Ḥasanayn Muḥammad Rabīʿ (Cairo, 1977), 211–12, 219–20; Lev, *Saladin,* 4, 131–32.

the four teachers of law and their assistants and students. Other beneficiaries of the endowment were the muezzins and imams of the law college. The overall supervision over Berke Khān's *waqf* was entrusted to the Shafiʿi chief qadi, but he appointed the Maliki chief qadi to be the actual manager of the endowment.[49] On the symbolic level, Berke Khān's deed meant to convey his commitment to continuing his father's ecumenical policies which, in the world of learning, had Ayyubid precedents.

Ibn Ḥajar writes that it was Baybars' prerogative to appoint a Hanafi, Maliki, and Hanbali qadi to serve as Ibn Bint al-Aʿazz's deputies. Eventually, Baybars nominated four chief qadis but maintained the privileged position of the Shafiʿi chief qadi, who supervised pious endowments and various funds and ratified legacies and pious endowment deeds. Ibn Ḥajar's remark highlights a completely different context against which Baybars' policy must be examined. Jonathan P. Berkey has dealt extensively with the question of the Muslim identity of the Mamluks and made the following observation: "There was nothing to prevent the Mamlūks, as well as any other social group, from participating in the dynamic process of constructing and reconstructing Islam."[50] When one argues that the ulama endowed Baybars' regime with Islamic content, one must not forget the power of the sultan—a foreign military slave—to define Islam and the way it was practiced. The appointment of four chief qadis was more than just a procedural innovation. It shaped intra-*fuqahāʾ* relations and the relations of the jurists and ulama with the state. In conclusion, Rapoport's statement that "the state and its jurists shared a common vision of the social good" reflects the fact that, as much as the ulama shaped the Islamic identity of the Mamluk state, it was also shaped by the deeds of the rulers.

Ulama as Spiritual Guides

In the Shadow of the Plague

The outbreak of the plague cast its grim shadow over the people's lives in the year 833/1429–30. On 4 Jumādá I/28 January 1430, the daily death toll in Cairo was as high as 1,200 people. In the second half of Jumādá II/March, as the plague intensified, Barsbāy convened a meeting with the ulama and asked for their opinions on how to ward off the plague. Earlier attempts had failed. These had

For law colleges in Ayyubid Egypt, see Gary La Viere Leiser, "The Restoration of Sunnism in Egypt: Madrasas and Mudarrisūn 495–647/1101–1249 (Ph.D. diss., University of Pennsylvania, 1976), 187–405, esp. 334–61.

[50] See "The Mamlūks as Muslims: The Military Elite and the Construction of Islam in Medieval Egypt," in *The Mamlūks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 173.

involved a three-day fast followed by public prayers in the desert on the fourth day. At the meeting, the sultan asked what kind of supplication prayers, *qunūt* or *duʿāʾ,* should be performed to end the plague, and what had been prescribed by the ulama of the earlier generations. They all agreed that *duʿāʾ* prayers, imploring of God, and repentance are legally suitable means for putting an end to the plague. However, repentance, the cessation of oppression *(maẓālim),* and the implementation of the dictum *al-amr bi-al-maʿrūf* take precedence over supplication prayers. They were divided, according to *madhhab* lines, about the *qunūt* prayers. The sultan, to whom the fatwa issued by the ulama was read, inquired about the reference to *maẓālim* and its meaning. Several grievances against government policy were mentioned, and the sultan declared that he would abolish innovations introduced after Barqūq's reign. At this point the meeting took an unexpected turn when the chief Shafiʿi qadi specifically referred to policies introduced by Barsbāy in 833/1429–30. He mentioned the compulsion of the Kārimī merchants to sell spices only to the sultan, the forced purchase *(ṭarḥ)* of natron, and the edict permitting the growing of sugar cane only on the lands of the sultan. Barsbāy, who was notorious for his monopolies, chose to ignore this remark but instructed the qadis and amirs to command people to repent and refrain from sinning. The meeting ended with one practical decision: to forbid women from appearing on the streets, on pain of death.

In 841/1437, a new outbreak of the plague took place, and Barsbāy again consulted the ulama, some of whom suggested that it was due to the spread of *zinā'*. Usually, the term refers to illicit sex, but in this context, it means the presence of women in the public space. The ulama explained that women adorn themselves and frequent the streets and markets day and night. In the ensuing discussion, it was hotly debated whether all women should be banned or just those who offend public morals by adorning themselves, and the sultan became obsessed with the idea that a total ban should be issued. Some exceptions were allowed: elderly women and maids and slave girls on urgent errands were allowed to use the streets. Ibn Shāhīn (1440–1514) writes that the ban was taken seriously by the women and obeyed.[51]

There is no church structure in Islam, and the ulama were not clergy able to grant absolution to sinners, but clearly their advice was sought on religious matters. In the cases discussed above, the ulama appear as interpreters of the spiritual dimension behind a cataclysm that had befallen humanity. In contrast to this approach stands Barsbāy's spurning of their advice concerning *maẓālim.* The evidence is too flimsy to discuss Barsbāy's inner religious world, but he was not irreligious. Quite the contrary, his religiosity reflected the mood of the time.

[51] See Abd al-Bāsiṭ ibn Khalīl Ibn Shāhīn, *Nayl al-Amal fī Dhayl al-Duwal,* ed. ʿUmar ʿAbd al-Salām Tadmurī (Beirut, 2002), 5:28.

In 833/1429–30, prior to his meeting with the ulama, Barsbāy distributed pure silver coins as charity for the recovery of his son. The notion that charity delivers one from death was deeply embedded in the minds of medieval people, and distribution of charity during sickness was widely practiced. In 841/1437–38, the sultan himself was sick (he suffered from colic), and he tried to cure himself by distributing charity and visiting holy sites in the Qarāfah cemetery. The sultan's sickness coincided with the outbreak of the plague, and it is possible that in his perception, the public calamity merged with his personal affliction. Probably his obsession with the need to ban women from the streets reflected his understanding that a moral reorientation was required both for his personal salvation and the well-being of the public. Barsbāy's conduct was not irreligious but pietistic. He, in contrast to the ulama, perceived no link between his economic policies and the plague. His world view differed only in details from that of the ulama. His thinking was dominated by the need to restore public morals and pietism or, to put it differently, by *al-amr bi-al-maʿrūf*. This was the proper response to afflictions at both the communal and personal level.[52]

Harmonizing Theology and Social Practice

When faced with calamities, rulers and ulama acted in unison. In 822/1419, two events took place: a solar eclipse and an outbreak of the plague. The solar eclipse occurred on 29 Ṣafar/27 March, and special prayers for its termination were performed at Azhar. The ulama knew exactly what should be done, and the prayers were conducted by the mosque's preacher, who admonished the people and mentioned the name of God. The *muḥtasib* (market supervisor, a post held in the Mamluk period by jurists) was responsible for bringing the people to the mosque to attend prayers. Al-Maqrīzī (1364–1442), who narrates these events, is quick to offer his own observation, commenting that when people came to the mosque in a state of humility and implored God for forgiveness, their prayers were answered. This was an affair handled solely by the ulama, though; in the fight against the plague, the involvement of the regime was necessary.

The efforts to stave off the plague took the form of a great public spectacle in which the *muḥtasib* was most instrumental. He proclaimed that the people should fast for three days and go with the sultan to perform supplication prayers in the desert on the fourth day. The call was obeyed, and on the fourth day a great crowd, led by the ulama, the jurists, the heads of the Sufi *khānqāhs*, and mystics, went to the mausoleum of Barqūq. The vizier and the *ustādār* made the preparations for the arrival of the sultan, who came dressed in woolen garments riding a horse with simple riding gear with no gold or silk adornments. The sultan

[52] Ibid., 5:19–20, 24–25.

was accompanied by the chief qadi, notables, ulama, and the caliph. He performed the supplication prayers and implored God for forgiveness. The high point of the event was the offering of sacrifices to God by the sultan, who slaughtered the animals himself. The sacrificial meat and bread were divided among mosques, Sufi *khānqāhs*, mausoleums, and the poor. Supplication prayers led by leading ulama were also performed in these places.

The three-day fast and the offering of sacrifices were preceded by the attempts of the *muḥtasib* to impose moral behavior in Cairo. Although al-Maqrīzī makes no connection between these two events, his account is highly suggestive. The *muḥtasib* was personally engaged in these actions: he destroyed jars of wine and forbade women to weep over the dead. Public consumption of hashish was prohibited, and prostitutes were banned from soliciting customers in the markets. Other steps were taken against non-Muslims, who were obliged to wear distinctive signs as prescribed by law. One cannot escape the impression that these deeds aimed at bringing society in line with a moralistic outlook of how society should conduct itself. Moral reorientation was a prerequisite for meaningful repentance and solicitation of God for the termination of the plague. Since the Mamluk state officially adopted the doctrine of *al-amr bi-al-maʿrūf,* the responsibility for imposing morals in the public domain fell on the regime. The sources are always evasive about the motives behind the attempts to impose morals in the public domain. In 664/1265–66, Baybars ordered a ban on alcohol and prostitution, but whether it was somehow related to his campaign against the Franks in Syria and Palestine remains unknown.[53]

Al-Maqrīzī refers to the supplication prayers and the sacrifices performed by the sultan as a memorable event, but he adds that it was in contrast to the conduct of the righteous ancestors. They perceived the plague as mercy from God and those who died in it as martyrs. Al-Maqrīzī refers to the famous tradition about the ʿAmawās plague which asserts that the plague was God's mercy, and he ends his account with a mild criticism of his contemporaries whose conduct was unlike that of the ancestors. Although he refrains from describing the events that took place as a *bidʿah,* a reprehensible innovation, his allusion to what appears to be a dissonance between theology and social practice is fascinating.[54]

For Ibn Dāniyāl's influence on how these events were depicted by fifteenth-century Mamluk historiography, see Amila Buturović, "'Truly, This Land is Triumphant and its Accomplishment Evident!' Baybars's Cairo in Ibn Dāniyāl's Shadow Play," in *Writers and Rulers,* ed. Beatrice Gruendler and Louise Marlow (Wiesbaden, 2004), 149–69, esp. 157.

[54] For the tradition concerning the ʿAmawās plague, see Josef van Ess, "Text and Contexts: Heroes of the Plague," in *Text and Context in Islamic Societies,* ed. Irene A. Bierman (Reading, 2004),

The gap between theology and social practice was bridged by the ulama. As has been pointed out by Michael W. Dols, the notion that plague is a punishment from God was prevalent in Muslim thinking, but the social response at the personal and communal level was channeled toward pietistic behavior. The ulama shaped social conduct and co-opted the rulers to fall in with their vision of what should be done under such circumstances. The cooperation between the ulama and the rulers turned into a truly symbiotic relationship in which the ulama served as guides to both the rulers and people by interpreting the meaning of events and guiding the social response.[55]

Consultations Between Sultans and Ulama

In the Face of the Mongol Menace

Although relations between the ulama and the state were symbiotic, friction did occur, and such incidents are reported by the sources, especially in the context of consultations between the sultans and ulama. The first recorded consultation between a sultan and the ulama took place early in the history of the Mamluk state. In 657/1259, an emissary of the Ayyubid sultan of Damascus, al-Malik al-Nāṣir Yūsuf, arrived in Cairo, asking for help against the Mongols. Quṭuz consulted the jurists, qadis, and *aʿyān* (civilian notables) about the Mongol menace and the permissibility of taking money from the population for the "holy war against God's enemies." The two leading ulama present at the consultation were ʿIzz al-Dīn ibn ʿAbd al-Salām and the chief qadi of Egypt, Badr al-Dīn Yūsuf. ʿIzz al-Dīn presented a legal opinion that was supported by the ulama which permitted the taking of people's money, provided that the Treasury was exhausted and the rulers had sold their gold and luxury items. The same was demanded of the troops; they needed to sell their luxury items and to keep only their gear and arms. The troops and people had to share the financial burden of the holy war equally, and only then was the taking of people's money allowed.

ʿIzz al-Dīn's legal opinion is what one might have expected: cooperation with the regime in the face of grave external danger. What is more surprising is that it was a conditional cooperation. The language of the legal opinion holds the key to understanding the approach of the ulama. The text begins by saying: "When the enemy attacks Muslim territory, then it is the duty of every *ʿālim* to fight the enemy, and you are allowed to take the money of the people for your holy war. . . ."[56] ʿIzz al-Dīn's departure point is the legal injunction that when Muslim

1–13.

[56] Ibn Wāṣil, *Mufarrij al-Kurūb,* ed. Tadmurī, 262.

territory is attacked, the participation in the holy war becomes a personal duty and the ulama are not exempt. The most striking aspect of the text is, however, the dichotomy between "you," meaning "you the rulers," and the "people" (referred to in the text as *al-ʿāmmah* and *al-raʿīyah*), meaning "we the subjects." The ulama were part of "we the subjects," and their conditional cooperation was an outcome of their self-image as to which segment of society they belonged. Even if one might argue that the text is not a direct quotation but a paraphrase, it eloquently captures the deeply rooted distinction between rulers and subjects. Although this distinction evolved prior to the Mamluk period, it remained relevant and powerful throughout the whole span of the late Middle Ages. The division between rulers and subjects, and the ulama's perception of themselves as belonging to the subjects, did not preclude symbiotic relations between ulama and rulers, but it put much strain on them.[57]

The Struggle Over Pious Endowments

In 780/1379, the amir Barqūq, before becoming sultan, convened a meeting attended by qadis, ulama, and civilian notables and asked them about the possibility of nullifying the pious endowments of mosques, law colleges, and Sufi institutions and those dedicated to the sons of sultans and amirs. He also mentioned *al-rizaq al-aḥbāsīyah* and asked why it was legal to buy the tax-yielding agricultural lands of Egypt and Syria from the Treasury. In the course of the meeting, the deeds of *waqf*-supported institutions in Egypt and Syria were presented, and it became clear that vast revenues were tied up in these foundations. According to Ibn Ḥajar, Barqūq said: "The weakness of the Muslim army is only because of these pious endowments, and it is right to reclaim them." Akmal al-Dīn spoke with Barqūq and the amir Barakah in Turkish, and they got angry with him; Sirāj al-Dīn was asked for his opinion. His view was uncompromising: under no circumstances could the pious endowments for mosques, law colleges, and the Sufi institutions that benefit the ulama, the jurists, the muezzins, and the leaders of prayer be dissolved. Furthermore he claimed that: "If the rights (*ḥaqq*, meaning financial rights) of Muslims are not paid them, you should establish an office that will pay our rights until it will become clear to you that what we deserve exceeds what is endowed for us." Concerning the pious endowments of Fāṭimah and ʿĀ'ishah, Sirāj al-Dīn claimed that it must be established whether the endowed properties were bought legally from the Treasury and that nullification would be permitted only in case of illegal acquisition of properties from the Treasury.

Three sayings are attributed to the chief qadi Badr al-Dīn al-Biqāʿī, and they

---

[57] For another perception of the relations between the ulama and rulers, based on a different type of sources, see Louis Marlow, "Kings, Prophets and the ʿUlamāʾ in the Mediaeval Islamic Advice Literature," *Studia Islamica* 81 (1995): 101–21.

reflect a completely different mood. He is quoted as saying: "O amirs, you have the power and authority," and: "The land belongs to the sultan and he can do with it whatever he wishes." Although he was sharply rebuked by Sirāj al-Dīn, he had his reasons and drew from experience to make the following observation: "O amirs, you appoint the qadis, and if they do not do what you instruct them, you dismiss them. So it was with Sharf al-Dīn ibn Manṣūr and al-Malik al-Ashraf (1363–77), who removed him when he did not do what he wanted." The meeting ended with no dramatic results, and only a few pious endowments were dissolved and the vacant land distributed as *iqṭāʿ* among the soldiers.[58]

In the Face of the Ottoman Menace

Following a humiliating defeat of the Mamluk army in 872/1468 by Shāh Suwār, the sultan convened an assembly that was attended by the caliph, the four chief qadis, Shaykh al-Islām Amīn al-Dīn al-Afṣarī, leading ulama, and the amirs. The sultan was represented by his *kātib al-sirr* (confidential secretary), who explained at length that the Treasury was empty. He referred to Shāh Suwār as an oppressor who conquered lands and killed the worshippers, emphasizing that an army must be sent to protect "the lands of the sultan," and that money was needed for this purpose. He pointed out that many people *(al-nās)* had surplus incomes and that pious endowments for mosques had multiplied. The *kātib al-sirr* said that the sultan was determined to leave enough funds for the proper running of the mosques but to transfer any surplus income to the Treasury. The qadis and the caliph, who earlier had been divested of some of his *iqṭāʿ* lands by the sultan, were inclined to approve this proposal, but Amīn al-Dīn strongly objected. He said that the sultan was allowed to take money from the people *(al-nās)* only by legal means and, in a case like this, money should be collected from the amirs, the troops, and women, who should give their jewelry (he meant apparently women of the Mamluk class i.e., daughters and wives of the Mamluks). Only if this collection were insufficient would the people *(al-muslimūn)* be assessed according to what the law allowed. Amīn al-Dīn went on by saying that this was God's religion *(dīn Allāh)* and, if the sultan obeyed, he would be rewarded by God. If not, the sultan could do whatever pleased him. In a somewhat defensive tone, Amīn al-Dīn declared that he was afraid of God asking him on the Day of Judgment why he neither forbade this nor explained to the sultan what was right. This semi-apologetic utterance was followed by the much more assertive question of why the sultan bothered

[58] Ibn Ḥajar al-ʿAsqalānī, *Inbāʾ al-Ghumr bi-Anbāʾ al-ʿUmr,* ed. Ḥasan Ḥabashī (Cairo, 1969), 1:178–79; al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. ʿAbd al-Fattāḥ ʿĀshūr (Cairo, n.d.) 3:1:345–46. For other attempts to seize pious endowments, see Kosei Morimoto, "What Ibn Khaldūn Saw: The Judiciary of Mamluk Egypt," *MSR* 6 (2002): 114–19; Joseph H. Escovitz, *The Office of Qāḍī al-Quḍāt in Cairo Under the Baḥrī Mamlūks* (Berlin, 1984), 149–53.

to assemble them at all if he intended to act against the law. Amīn al-Dīn went on by declaring that God would protect them from this calamity through the supplication prayers of a humble, righteous man (Amīn al-Dīn was apparently referring to himself). The assembly dispersed, accomplishing nothing, but the people, including the amirs, were very grateful to Amīn al-Dīn.

In a meeting between the sultan and the qadis that took place in 873/1468, Qāytbāy informed them about his intention to stop paying salaries to old soldiers and women. The sultan complained sorely about the lack of funds, the destruction of the provinces, and his personal distress because of the situation. The possible causes for the deteriorating situation were discussed at length, but no practical conclusions were reached. In any case, the sultan carried out his intentions and arbitrarily stopped paying salaries to old soldiers, orphans, and women. It is quite clear that the sultan aimed his policy at the weaker segments of the Mamluk military society and, therefore, met no opposition from the qadis. They, it appears, regarded themselves as the protectors of the indigenous Muslim population and, of course, their own class interests.[59]

In a meeting that took place in 896/1491 between Qāytbāy and the qadis, he bitterly complained about hostile Ottoman intentions, the destruction of the Aleppo region, merchants abstaining from trading with Egypt, and the need to pay the *julbān* to avoid their violence in the capital. He emphasized that the army, which was to be dispatched to Aleppo, needed to be paid while the Treasury stood empty. Qāytbāy declared that he would take the yearly income generated by pious endowments and the income from properties such as bathhouses and mills, including ships in the capital. Following a discussion with the qadis, it was decided that income of only five months would be collected, since two months' income had already been taken by the state. In any case, during 896/1491, pious endowments and property owners lost seven months' income.[60]

Conclusions

The description of the ulama as mediators between the Mamluk regime and the local population is too narrow and diminishes their role. The relations between the state and the ulama were symbiotic. This symbiosis enabled the Mamluks to rule and endowed their regime with its Islamic content. To put it differently, the Mamluk rulers acculturated themselves to the religious-cultural world of the ulama, and having done so, they won the acceptance and cooperation of the ulama. The gains of the ulama were enormous. They preserved their position as the class that embodied Islam and defined and protected its values. The qadis

[59] Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Cairo, 1960–75), 3:12–14, 24.

[60] Ibid., 3:278–79.

applied Islamic law and maintained their position as judges and administrators of funds and pious endowments. The narrow class gains of the ulama preserved and perpetuated the Islamic identity of the society. On the other hand, the ulama were those who empowered the Mamluks to rule, and the ulama-Mamluk symbiosis made Mamluk rule religiously and culturally meaningful to the subjects.

The ulama-Mamluk symbiosis did not mean the obliteration of the separate identity of the ulama or of the frictions between ulama and rulers. These frictions concerned economic issues: taxation and control of pious endowments. The events of 657/1259 and 872/1468 indicate that, in issues pertaining to taxation, the ulama played the role of advocates/protectors of the subjects. The cases discussed in this article are too few to allow any sweeping conclusions as to what extent the ulama were successful in their endeavors. This issue needs further study, but it is clear that the ulama were unable to influence broad economic policies of the Mamluk rulers such as the monopoly system.

The issue of pious endowments was quite different. Here the narrow class interests of the ulama were involved, and their professional integrity was at stake too. Due to the phenomenal spread and success of the pious endowment system, many ulama and many religious and charitable institutions came to be dependent on the system. The Mamluk ruling establishment, sultans and amirs, created *waqf*s on a massive scale and, in order to procure land for new endowments, old *waqf*s had to be nullified. To do so, the laws of the *waqf* were bent, and the qadis and jurists found themselves in an impossible situation. Many qadis and jurists, but by no means all of them, cooperated with the rulers in the nullification and expropriation of old pious endowments and the creation of new ones. Undoubtedly, the jurists who cooperated were somehow rewarded for their efforts. These were simple cases in which the self-interests of both the Mamluk ruling establishment and the jurists tallied, and what was demanded from the jurists was some legal flexibility.

Far more serious were the cases when the jurists were asked to nullify pious endowments for the distribution of these lands as *iqṭāʿ* among the troops. Here state interests, and not just the narrow interests of the ruling establishment, were at stake. Ostensibly, the jurists had every reason to be sympathetic to these requests, since state interests tallied with those of society as a whole. However, matters were never that simple. The jurists had every reason to be suspicious of the rulers and their motives. Furthermore, the political interests of the Mamluk rulers did not always correspond to those of the subject population. I doubt if we can speak about a typical ulama response in such cases. It seems that it was a matter of circumstances and, to some extent at least, the personalities of the people involved.

The qadis, because of the social network within which they operated, were

able, if they so chose, to resist the rulers. The dismissal of a qadi did not mean the end of his career. Qadis also occupied other posts, and cases of reappointment of qadis took place frequently. Within the overall symbiotic scheme, the balance of power between Mamluks and ulama heavily tilted in favor of the rulers, but the ulama were not entirely powerless.

The Financial Reforms of Sultan Qāytbāy

The expansion of the Ottoman Empire from the middle of the ninth/fifteenth century redrew the power map in northern Syria and eastern Anatolia, threatening the hegemony of the Mamluk sultanate over the region. It also threatened the security of the sultanate, which had traditionally employed a defensive strategy of subordinating local rulers under its authority to protect its border areas. Because of frequent military conflicts with the Dulkadir (Dhū al-Qādir), Aqquyunlu, and the Ottomans which arose after 870/1455–56, the Mamluk sultanate suffered from a massive manpower and fiscal burden. Accordingly, combined with the dysfunction of the superannuated governmental machinery, the Mamluk sultanate entered a period of profound crisis wherein constant structural, political, and economic instability ensued for half a century until the Ottoman conquest of Egypt in 922/1517.[1]

Under these circumstances, al-Ashraf Qāytbāy (r. 872–901/1468–96) and al-Ashraf Qānṣūh al-Ghawrī (r. 906–22/1501–16), two prominent sultans in the late Mamluk era, made persistent efforts to bolster the regime throughout their long reigns. They took two courses of action—reconstruction of the existing state machinery and adoption of new military and financial measures to overcome the crisis. Carl F. Petry's works have revealed the military innovation of introducing firearms and establishing *waqf*s (religious endowments) as financial resources sustaining the policy.[2] Miura Toru, who has studied Damascus in this period, suggests that the adoption of a new financial policy imposing taxes on private

and *waqf* properties in urban areas and the formation of a new army comprising non-Mamluk infantry equipped with firearms were characteristic features of the late Mamluks.[3]

Incidentally, as I have made clear in my previous articles, the financial history of the Circassian Mamluks before the enthronement of Qāytbāy can best be understood from the perspective of the constant financial difficulties caused mainly by the alienation of state lands *(amlāk bayt al-māl)* and the sultans' responses to this problem, which showed two major trends. The first resulted from the reorganization of government finances which followed upon the establishment of al-Dīwān al-Mufrad (the independent bureau) by al-Ẓāhir Barqūq, the first sultan of the Circassian Mamluks (r. 784–91, 792–801/1382–89, 1390–99), and the second resulted from the development of the sultanic fisc following Barqūq's establishment of the Dīwān al-Amlāk (the bureau of the sultan's private real estate).[4] I believe that the financial history of the late Mamluk era after Qāytbāy's enthronement should be reconsidered from the perspective of these two trends affecting the financial structure of the sultanate.

From this perspective, I approach the financial policies of Qāytbāy from two angles: first, the reconstruction of the state's finances initiated just after his enthronement in 872/1468; and second, his efforts, especially from around 880/1475, to accumulate money and property under his control, and the consequent expansion of the role of the sultanic fisc in the sphere of administration. Through this analysis, I will show that the financial system of the period followed the two aforementioned trends throughout the Circassian Mamluk period, and that the regime of the Mamluk sultanate itself was maintained based on the sultanic fisc, the relative importance of which was increasing in the period under consideration. I believe that this investigation can provide a new perspective on the overall picture of "decline" in this period, as well as illuminate the process by which the Mamluk regime was brought to an end.

The Financial Situation at the Time of Qāytbāy's Enthronement

In 788/1386, Sultan Barqūq established al-Dīwān al-Mufrad, a special bureau responsible for providing monthly wages *(jāmakīyah),* fodder *(ʿalīq),* clothing allowances *(kiswah),* and other essentials to the Royal Mamluks *(al-mamālīk al-sulṭānīyah)* from income derived from the *iqṭāʿ* land he had gained as an amir.

Because of the increased importance of the Royal Mamluks, the payment of their stipends had been one of the most important ways for the rulers to maintain their regimes since the late Bahri Mamluk period (648–784/1250–1382). At the same time, the traditional state machinery based on state landholdings and the *iqṭāʿ* system was becoming dysfunctional because of the alienation of state lands through their sale as *milk* (private property) and the conversion of these lands into *waqf*s. Under such circumstances—giving priority to providing stipends to the Royal Mamluks—al-Dīwān al-Mufrad, a special bureau with an income separate from the state treasury, was established. Later, this *dīwān* grew in importance following the acquisition of large agricultural lands which provided its revenue. The state structure as a whole was reorganized around the newly established *dīwān*. Consequently, the financial affairs of the state that had hitherto been under the control of the vizier were divided among three independent *dīwān*s—Dīwān al-Wizārah (headed by the vizier), Dīwān al-Khāṣṣ (headed by the *nāẓir al-khāṣṣ*), and al-Dīwān al-Mufrad (headed by the *ustādār al-sulṭān/ʿāliyah*). Each of them performed their functions with their own source of revenue, and al-Dīwān al-Mufrad, which became the most important financial bureau among them, acquired the greater portion of Egyptian *khāṣṣ* land (land in the government's domain) as its revenue source.[5]

On the one hand, a reorganization of the state's financial machinery was progressing in this way; on the other hand, the scale of financial resources put under the direct control of the sultan—independent of the state treasury—was gradually growing. In order to accumulate funds for a large purchase of slaves to replenish the sultan's power base and for rewards or gifts for acquiring and securing his political supporters, Barqūq made efforts to acquire private property and accumulated a huge amount of real estate as *milk* and *waqf* properties. Further, through the establishment of the Dīwān al-Amlāk in 797/1395 and its subsequent transformation into the Dīwān al-Amlāk wa-al-Awqāf wa-al-Dhakhīrah (the bureau of the sultan's *milk* and *waqf* properties and treasures), the sultan's private and *waqf* properties were managed more systematically as his personal revenue source. To secure resources and increase money entering directly into their own hands, the sultans after Barqūq also strove to accumulate agricultural lands in such forms as *milk, waqf,* and leased property *(mustaʾjarāt)*. Further, they applied more energy to the intervention and direct participation in the spice trade and other commercial activities in order to raise even more money.[6]

Incidentally, after the death of Sultan al-Ẓāhir Jaqmaq in 857/1453, the financial situation took a sharp turn for the worse. The financial bureaus were

[5]Igarashi, "Al-Dīwān al-Mufrad," 118–30.

[6]Igarashi, "Private Property and *Awqāf*."

confronted with enormous difficulties, and the delay of *jāmakīyah* payments and daily meat supplies caused frequent riots among the Royal Mamluks demanding them. The political instability of the times also accelerated this financial crisis. Especially following the death of Sultan al-Ẓāhir Khushqadam in 872/1467, three sultans (al-Ẓāhir Yalbāy, al-Ẓāhir Timurbughā, Qāytbāy) came and went in rapid succession in one year. Without sufficient countermeasures, the financial situation was deteriorating significantly.

Let us now look closely at the causes of the financial difficulties at the time of Qāytbāy's accession to the sultanate. The first factor was the abnormal increase of regular and informal recipients of *jāmakīyah* and other remuneration distributed from al-Dīwān al-Mufrad and of meat distributed from Dīwān al-Wizārah beyond the *dīwāns*' capacity. Because the continuous process of the alienation, privatization, and "waqfization" of state lands reduced the amount of land that could be assigned as *iqṭāʿ*s, the *ḥalqah* troopers, especially the *awlād al-nās* (the sons of mamluks) who were affected most directly by the problem, came to be allotted *jāmakīyah*s instead of *iqṭāʿ*s. In addition, the number of mamluks who received *jāmakīyah*s instead of *iqṭāʿ*s was steadily increasing. Moreover, various groups became recipients of funds from the *dīwān*s because powerful amirs added their mamluks and other well-connected individuals to the *dīwān* register. In addition, the purchase and sale of status became widespread.[7]

The second problem was in the sphere of revenue. Various problems had arisen in rural areas, the main source of revenue for the state. The alienation of state lands, which decreased the government's taxable lands as well as the number of *iqṭāʿ*s, caused chronic financial difficulty for the government. Therefore, the *ustādār* (the chief of al-Dīwān al-Mufrad) who also held the viceroyalties of Lower and Upper Egypt and was invested with the authority to appoint and dismiss local governors *(wālī, kāshif),* started demanding large amounts of money from newly appointed local governors to cover the loss of income. Further, he obliged them to pay monthly tributes to the *dīwān*. These policies forced local governors to impose heavy taxes in their jurisdictions and thus impoverished the villages. As a result, Bedouin tribes hostile to the government grew in power in these areas, weakening the local administration represented by local governors and amirs of the Arabs *(amīr al-ʿarab)*.[8] Especially in 872/1467–68, along with the political instability

[7]Igarashi, "Al-Dīwān al-Mufrad," 132–37. On the alienation of state lands, see: ʿImād Badr al-Dīn Abū Ghāzī, *Taṭawwur al-Ḥiyāzah al-Zirāʿīyah Zaman al-Mamālīk al-Jarākisah: Dirāsah fī Bayʿ Amlāk Bayt al-Māl* (Cairo, 2000). Cf. [8]Ibn Taghrībirdī, *Ḥawādith al-Duhūr fī Madá al-Ayyām wa-al-Shuhūr,* ed. William Popper (Berkeley, 1930–42), 691–92 (hereafter cited as *Ḥawādith*). On the *ustādār*'s holding of the viceroyalties of Upper and Lower Egypt, see: Igarashi, "Al-Dīwān al-Mufrad," 128–29.

of the central government, disorder in rural areas grew more serious, caused by successive rebellions by Bedouin tribes and a subsequent decline in agricultural production and tax revenues.[9] In Dhū al-Qaʿdah 872/May–June 1468, all Bedouin shaykhs in the province of Buḥayrah in Lower Egypt rebelled against Mamluk rule. In an effort to suppress these rebellions, seven amirs of one hundred *(amīr miʾah muqaddam alf)* were dispatched to these regions.[10]

The issue directly relating to such an unstable situation in rural areas was that of *ḥimāyah* (private protection). To resist the oppression of local governors and disorder in local areas, *muqṭaʿ*s (*iqṭāʿ* holders) and peasants demanded protection from representatives of the central government in return for their payment of tribute. The expansion of *ḥimāyah* over rural areas further weakened the local administration and prevented tax collection from these areas.[11] These problems in the two spheres of income and expenditure contributed to the failure of the state's financial system. Consequently, after around 860/1442–43, the financial *dīwāns* of the state could not function properly without financial support from the sultanic resources (*dhakhīrah:* this is a question to be considered later).[12]

In addition to these domestic problems, a very tense international situation confronted Qāytbāy. In 870/1465, Shāh Budāgh, a monarch of Dulkadir whose enthronement was supported by the Mamluk government, was deposed by his brother Shāh Suwār with the help of the Ottomans. The new monarch extended his power over northern Syria, threatening the hegemony of the Mamluk sultanate in the area. At that time, a military conflict between Dulkadir and the Mamluk sultanate was unavoidable. However, because the dispatch of Egyptian troops was postponed due to the deteriorating health of the reigning sultan Khushqadam, in Rabīʿ I 872/October 1467, the Mamluk army, comprising the armies of the Syrian provinces and led by the viceroys of these provinces, was shamefully defeated by Dulkadir. Therefore, Qāytbāy began preparations for war as soon as he acceded to the sultanate in Rajab 872/February 1468. The next month, Shaʿbān/March, he dispatched the first expeditionary force against Dulkadir under the command of the *atābak al-ʿasākir* (commander-in-chief) Jānībak Qulqsīz.[13] However, in Dhū

[13]This expeditionary force was composed of four amirs of one hundred, one amir of forty *(amīr*

al-Qaʿdah/June, the army was crushed in battle near Aintab. Many amirs and soldiers were killed, and the commander Jānībak Qulqsīz was taken prisoner.[14] This military defeat shook the Mamluk government severely. To recover its hegemony over the border area, the reconstruction of the army and raising of funds for expeditions became a matter of the greatest urgency.

Incidentally, a military expedition at that time was more costly than it had been previously because, in addition to bonuses *(nafaqah)* for going on expeditions, regular stipends such as *jāmakīyah, kiswah,* and *ʿalīq* were to be paid in advance to the mamluks joining the expedition.[15] The first prepayment of these regular stipends, to my knowledge, was made during the preparation of Qāytbāy's first expedition;[16] thereafter the prepayment of four-month *jāmakīyah* and *ʿalīq* and one-year *kiswah* was followed as a matter of regular practice for military expeditions. The establishment of the practice of prepayment shows that the soldiers' dependence on the stipends was growing. As a rule, although *nafaqah*s were distributed when a military expedition was undertaken, the soldiers were required to pay their own expenses with income from their *iqṭāʿ*s because military service *(khidmah)* was the primary duty of military men and the *iqṭāʿ*s were given as compensation for this duty. Nevertheless, as we have already seen, soldiers of relatively low rank, such as *ḥalqah* troopers and rank-and-file mamluks, relied increasingly on the stipends paid from the government *dīwān*s because of the reduction of *iqṭāʿ* lands, their original source of income. For that reason, if the soldiers joining an expedition could not receive these stipends when they were absent from Cairo during the campaign, their lives would be difficult. Therefore, the prepayment of the stipends became indispensable for dispatching an expeditionary force.[17]

To sum up, Qāytbāy was confronted with two urgent tasks: first, reorganization

al-ṭablkhānāh), nineteen amirs of ten *(amīr ʿasharah),* and a thousand mamluk soldiers (anon., "Tārīkh al-Malik al-Ashraf Qāytbāy," British Library MS Or 3028, fol. 6r–v [hereafter cited as *Tārīkh Qāytbāy*]). This source has detailed information about the military expeditions in the early years of Qāytbāy's reign. Cf. David Ayalon, "The System of Payment in Mamluk Military Society," *JESHO* 1, nos. 1, 3 (1958): 292–94.

[14] *Ḥawādith,* 633–34; *Nayl,* 6:323–26; *Rawḍ,* fol. 182r–v; Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr* (Wiesbaden, 1960–75), 3:12 (hereafter cited as *Badāʾiʿ*); idem, *Jawāhir al-Sulūk fī Amr al-Khulafāʾ wa-al-Mulūk* (Cairo, 2006), 354 (hereafter cited as *Jawāhir al-Sulūk*).

[15] Ayalon, "The System of Payment," 54, 58.

[16] *Ḥawādith,* 623, 625; *Rawḍ,* fol. 178v. The total amount of *nafaqah* paid on the expedition was 141,700 dinars, except the expenditures for prepaid *jāmakīyah*s, *kiswah*s, *ʿalīq*s, and costs for horses and camels (*Tārīkh Qāytbāy,* fol. 7r).

[17] In some cases, these stipends were distributed to expeditionary armies in towns where they were stationed [Ibn Ajā, *Tārīkh al-Amīr Yashbak al-Ẓāhirī* [Cairo, 1973], 72, 152). On the growing dependence of military men on the stipends, see: Igarashi, "Al-Dīwān al-Mufrad," 134–35, 137–38.

of the regular payment system that had collapsed because of structural problems in the financial and military systems; and second, raising funds for military expeditions in the midst of a tense international situation. We shall now examine how Qāytbāy tackled these problems.

THE FINANCIAL REORGANIZATION OF 873/1468–69

In Dhū al-Qaʿdah 872/June 1468, as soon as he received a report on the defeat of the first expeditionary army, Qāytbāy convened a conference *(majlis)* to discuss countermeasures. In this *majlis,* he argued the need for dispatching another military expedition and simultaneously brought up the obvious lack of funds for it. However, his plan for confiscating *milk* and *waqf* properties was blocked by strong opposition from the ulama;[18] thus, he explored other measures for raising money. In Ṣafar 873/August–September 1468, Qāytbāy suspended payment of *jāmakīyah*s to non-mamluks such as the *awlād al-nās, fuqahāʾ* (legal scholars), *mutaʿammimūn* (ulama, civilians), and "the people connected with influential men in the state *(muḍāfī kibār al-dawlah)*." At this point in time, he calmed their protests with a promise to provide them with the suspended wages until the following month, after the fulfillment of payments to the Royal Mamluks.[19] However, this was the starting point for further drastic reforms of the payment system. The next month, on 11 Rabīʿ I/28 September 1468, Qāytbāy tested the *awlād al-nās* on their military ability in the courtyard *(ḥawsh)* of the Citadel of Cairo *(qalʿat al-jabal)*. Although the *awlād al-nās*, who were originally military men belonging to the *ḥalqah* troops, had been enrolled in al-Dīwān al-Mufrad and had received, like the mamluks, *jāmakīyah*s and other remuneration since the reign of Jaqmaq, a large number of people with little military ability, such as women and children, were included among them. On this occasion, Qāytbāy prepared three bows, each with different string tensions, called out the names from the list of recipients one after another, and made them draw the bows. The names of the people who could draw the bows were entered in the list of soldiers joining the new expedition. The people who could not draw them were excused from the expedition in exchange for payment to the sultanic treasury *(khizānah)* according to the amount of *jāmakīyah*s they received—100 dinars for the recipients of 2,000 dirhams, 75 dinars for those who received 1,500 dirhams, and 50 dinars for those who received 1,000 dirhams. Judging from the fact that the disqualified people did not lose their rights to receive *jāmakīyah* but were only obliged to pay money as compensation, it is clear that Qāytbāy's primary intention with this test was to collect funds for the military expedition rather than to reorganize al-Dīwān al-Mufrad itself. Given

[18] *Ḥawādith,* 635–37; *Rawḍ,* fols. 182v–183v; *Nayl,* 6:328; *Badāʾiʿ,* 3:13–14.

[19] *Ḥawādith,* 678; al-Ṣayrafī, *Inbāʾ al-Haṣr bi-Abnāʾ al-ʿAṣr* (Cairo, 1970), 16 (hereafter cited as *Inbāʾ al-Haṣr*); *Nayl,* 6:345; *Rawḍ,* fols. 203v–204r. Cf. *Badāʾiʿ,* 3:20–21.

that many people waived their rights to receive *jāmakīyah* to avoid the obligation to pay the money, Qāytbāy may have had another intention—to lead those who received the *jāmakīyah*s as a kind of "public assistance payment" into abandoning these rights by themselves. Through the test, Qāytbāy reminded those present that the original purpose of the *jāmakīyah*s was to reward military service.[20] In any case, this made it possible for Qāytbāy to distribute *nafaqah*s of 100 dinars per capita and four-month *jāmakīyah*s to the mamluks taking part in the campaign. In the next month, Rabīʿ II, he dispatched the second expeditionary force with 500 mamluks under the command of Amir Uzdamur al-Ībrāhīmī al-Ṭawīl.[21]

As its size shows, this expeditionary force was an advance party to defend Aleppo, which was exposed to imminent danger due to the previous defeat. In order to organize and dispatch a larger main force, a radical reform of the payment system was essential. Under the circumstances, a reconstruction of the system of meat supply was initiated prior to the *jāmakīyah* reforms. Similar to the payment of *jāmakīyah* from al-Dīwān al-Mufrad, the provision of daily meat supplies to mamluks and others—the responsibility of the Dīwān al-Wizārah—was in arrears. On 15 Rabīʿ I/2 October 1468, just after the military fitness test was implemented, Qāytbāy granted Yashbak min Mahdī, the *dawādār kabīr* (the executive secretary), a *khilʿah* (robe of honor) "that was equivalent to that of the *atābak al-ʿasākir*," and appointed him to additional posts as vizier and viceroy of all the Egyptian provinces (*kāshif al-kushshāf*). Qāytbāy's intention was to entrust the reform of the Dīwān al-Wizārah to Yashbak, whose position was strengthened by the fact that he held the rank just below the sultan, equivalent to the *atābak al-ʿasākir*, while Qāytbāy himself initiated a reform in the payment of *jāmakīyah* from al-Dīwān al-Mufrad. In other words, a total reconstruction of the overall payment system was intended through cooperation between the two. In consequence, Yashbak succeeded in cutting the supply of meat for everyone except the mamluks, such as the *awlād al-nās*, *mutaʿammimūn*, and women.[22] With this as the starting point, they embarked on a sweeping reform of the payment system for mamluks.

On 16 Rabīʿ II/2 November, just after the departure of the second expedition on the 6th of that month/23 October, Qāytbāy again summoned high government officials and the ulama to a second *majlis*. He complained in the *majlis* that the government was on the brink of total bankruptcy because of the enormous number of stipends. Nevertheless, the strong opposition of the ulama forced him to abandon

[20] *Ḥawādith,* 681–82; *Inbāʾ al-Haṣr,* 20–21; *Rawḍ,* fol. 205r, v; *Nayl,* 6:348; *Badāʾiʿ,* 3:22. Cf. Igarashi, "Al-Dīwān al-Mufrad," 135.

[21] *Ḥawādith,* 679, 685, 687; *Inbāʾ al-Haṣr,* 30–31; *Nayl,* 6:347, 352; *Rawḍ,* fols. 204r, 208v; *Badāʾiʿ,* 3:21, 24. The total cost of expenditures for this expedition was 87,000 dinars (*Tārīkh Qāytbāy,* fol. 7r–v).

[22] *Ḥawādith,* 682–83; *Inbāʾ al-Haṣr,* 23–24; *Rawḍ,* fol. 205v; *Nayl,* 6:349; *Badāʾiʿ,* 3:22–23.

his attempt to levy extraordinary taxes on *milk* and *waqf* properties yet again. He finally initiated reform of the payment system. Qāytbāy, together with Yashbak, mobilized the entire financial staff, such as *kātib al-mamālīk, muqaddam al-mamālīk,* and the scribes in charge of fodder or warehouses. Then, at the courtyard of the Citadel, Qāytbāy and Yashbak called out the recipients one by one according to the roster in order to review the provision of *jāmakīyah, ʿalīq,* and meat. Two reforms were undertaken as a result of the review. The first was the cutting of payments to those unqualified for military service, which was determined by another test on military ability. The test was carried out using bows, as in the previous month. The previous test had been mainly to select soldiers to join the expedition and to collect money from the people exempted from it; however, the second test was to cut the stipends of the people who were judged unfit for military service. Accordingly, a great number of the *mutaʿammimūn,* women, and children, for example, became subject to the stipend cut. Under the second reform, limiting payments to the specified amount was strictly observed. Because stipend-receiving status could be bought and sold, some powerful mamluks had received more than the specified stipend amount through purchase of additional stipend-receiving status. Through an inspection, if a mamluk had received more than the specified amount, i.e., a *jāmakīyah* of 2,000 dirhams, *ʿalīq* of three bowls, and daily meat of three *raṭls* for each rank-and-file mamluk (as for the *khāṣṣakīyah* [sing. *khāṣṣakī;* bodyguard],[23] the regular amount of *ʿalīq* was five bowls), the excess was eliminated. If a mamluk had received more than the specified amount through the purchase of others' stipend-receiving status, he was obliged to return it to the sellers.[24] Although preceding sultans who tried to reform the payment system had been forced to abandon their attempts because of strong opposition from amirs and mamluks, Qāytbāy succeeded by taking advantage of the terrible shock of the military defeat immediately after his enthronement. As a matter of course, some protests against his policy and interventions were made by powerful figures, but these did not develop into a movement to overthrow Qāytbāy.

As a result of the reform, al-Dīwān al-Mufrad and Dīwān al-Wizārah were revitalized to some extent. Because the sultans had hitherto met the deficit of the two *dīwān*s from the *Khizānah,* the revitalization of the *dīwān*s probably enabled Qāytbāy to use the money to support military expeditions. In addition, through the reduction of the amount paid as *jāmakīyah*s and the strict observance of its correct allotment, the total expenditure for a four-month prepaid salary was reduced. Furthermore, when the troops were reviewed for the third expedition in Jumādá

[23]On the *khāṣṣakīyah,* see: David Ayalon, "Studies on the Structure of the Mamluk Army 1," *Bulletin of the School of Oriental and African Studies (BSOAS)* 15, no. 2 (1953): 213–16.

[24]*Ḥawādith,* 689–95; *Inbāʾ al-Haṣr,* 33–43; *Nayl,* 6:353–54; *Rawḍ,* fols. 209r–211v; *Badāʾiʿ,* 3:24. Cf. Igarashi, "Al-Dīwān al-Mufrad," 136–37.

II/January 1469, all the men exempted from the expedition, including the Royal Mamluks, were obliged to pay a fixed amount to the *Khizānah*—100 dinars in the case of *iqṭāʿ* holders or 20 dinars in the case of *jāmakīyah* recipients.[25] As a result of these policies, the problem of the shortfall in the military budget was resolved for the moment. On 24 Rajab/7 February, the four-month *jāmakīyahs* and one-year *kiswahs* were prepaid to the soldiers joining the third expedition, in addition to supplying draft camels.[26] Then the third expedition, comprising 1,500 mamluk cavalry, commanded by the *atābak al-ʿasākir* Uzbak min Ṭuṭukh, was dispatched on 9 Shaʿbān/22 February.

Incidentally, on 4 Shaʿbān/17 February, just after the completion of *nafaqah* payments to the third expeditionary army, Qāytbāy again appointed Yashbak to an additional post as *ustādār*. Yashbak was now serving concurrently as *dawādār,* vizier, *ustādār,* and viceroy of all the Egyptian provinces.[27] Accordingly, Yashbak assumed sole responsibility for a series of financial tasks, from collecting taxes on lands in the Egyptian provinces to providing all kinds of stipends for mamluks and other recipients, as a major part of the governmental domain in Egypt was assigned to al-Dīwān al-Mufrad and lands of some provinces were assigned to the Dīwān al-Wizārah. It seems reasonable to suppose that after succeeding in reducing *jāmakīyahs* for military men, which had been the hardest task, Qāytbāy transferred the management of al-Dīwān al-Mufrad to his confidant Yashbak and let him exercise direct and strict control over the system of payments. However, there is no doubt that the sultan exercised close supervision over the qualifications of recipients and the payment of correct amounts in view of the fact that he regularly attended the payment inspections of troops.[28] Rather than addressing the problems of disbursements, the appointment of Yashbak as *ustādār* was to address the following two problems having to do with the collection of revenue.

First, because the *dawādār,* one of the high-ranking military men who could mobilize their own mamluk soldiers, assumed the responsibility for the two *dīwāns* and the post of viceroy of all the Egyptian provinces, it became possible for him to collect taxes by force from rural areas, which had previously been subject to delay due to the aforementioned chaotic situation in these areas. He was also expected to suppress rebellious Bedouins by force and to restore order in the rural areas. From 873/1468–69 until 874/1469–70, Yashbak made repeated expeditions to various regions of Egypt. With the expedition to Upper Egypt in Jumādá I 873/November

[28]*Badāʾiʿ,* 3:331–32.

1468 as the start, he mounted expeditions against Buḥayrah from Shawwāl of that year until Muḥarram of the following year, and again against Upper Egypt as soon as he returned from Buḥayrah.[29] As is evident from the fact that Yashbak requisitioned crops and livestock from villages in addition to the suppression of Bedouin revolts, these expeditions were made not only for the restoration of order in the rural areas but also for the collection of overdue taxes in order to fund al-Dīwān al-Mufrad and Dīwān al-Wizārah.

Second, we should regard Yashbak's holding of such additional posts as a measure against *ḥimāyah,* which was another factor obstructing the government's tax collection in rural areas. The impact of *ḥimāyah* over a region was dependent on the patron's position in the central government, through which he could influence the *ustādār* or the vizier, i.e., the regional governor's superior officer.[30] Because al-Dīwān al-Mufrad and Dīwān al-Wizārah were put under the authority of Yashbak who was the *de facto* second-in-command in the government at that time, it became possible for these *dīwāns* to collect taxes from villages, even if they were under the *ḥimāyah* of powerful amirs, irrespective of their interventions. Accordingly, the collection of revenue and the overall financial situation were revitalized to some extent by virtue of these reforms; they enabled Qāytbāy to focus on the war against the Dulkadir. After a series of military campaigns, Shāh Suwār was finally captured and executed in 877/1472, and the Mamluk sultanate regained its hegemony over the area.[31]

Nevertheless, although these policies achieved a measure of success in resolving the current financial and military difficulties, it is hard to say that they brought about an ultimate solution to the problems. While Qāytbāy certainly reduced the total amount of payments more than the preceding sultans, interference from powerful figures and the enrollment of irregular recipients in the *dīwān* ledgers was not completely eliminated.[32] The external menace also continued; the military campaign against the Aqquyunlu was launched in 877/1472, just a few months after the victory over Shāh Suwār.[33] Furthermore, ʿAlāʾ al-Dawlah (ʿAlī Dawlāt), a

[32]In 903/1498, two years after the death of Qāytbāy, the enrollment of a large number of amirs' mamluks as recipients of payments was regarded as a problem again (Ibn al-Ḥimṣī, *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān* [Sidon and Beirut, 1999], 2:47 [hereafter cited as *Ḥawādith al-Zamān*]).

[33]*Nayl,* 7:49–50, 54; *Badāʾiʿ,* 3:80–82; *Inbāʾ al-Haṣr,* 483. Cf. Petry, *Protectors or Praetorians?,* 44–

prince of Dulkadir, revolted against the Mamluks with the support of the Ottomans. The war between the Mamluks and Dulkadir, which raged from 889/1484 until 896/1491, escalated into a direct conflict between the Mamluks and Ottomans.[34] Thus, sixteen military campaigns were undertaken during Qāytbāy's reign, and the total expenditures for *nafaqah* ran as high as 7,065,000 dinars.[35] Furthermore, the financial *dīwān*s of the government again fell into arrears with the *jāmakīyah* payments and meat supply after about 877/1472.[36] Although Yashbak resigned from the offices of *ustādār* and vizier[37] because he was often obliged to stay away from Egypt as commander on campaign, which interfered with his supervision over the two *dīwāns*, he ultimately continued to exercise general supervision over them.[38] Moreover, he was appointed to an additional post as *amīr silāḥ* (master of arms), one of the high-level military posts occupied by amirs of one hundred, enhancing his position even more and adding the *iqṭāʿ* belonging to its position as an additional income source to fund programs according to his own discretion.[39] The *dawādār*'s holding of offices such as *amīr silāḥ, ustādār,* vizier, and viceroy of all the Egyptian provinces, as well as his taking charge of the state's financial affairs and local administration in Egypt, continued under governments until the end of the Mamluk sultanate.[40]

[35]*Badāʾiʿ,* 3:325. According to *Nayl,* the total amount of *nafaqah*s paid for the expeditionary armies during the period from Qāytbāy's enthronement until Rabīʿ II 894/February–March 1489 reached 7,165,000 dinars (*Nayl,* 8:149). According to *Tārīkh Qāytbāy,* the total expenditures for seven expeditions made during the period from Qāytbāy's enthronement to Shaʿbān 877/January 1473 amounted to 1,753,700 dinars (*Tārīkh Qāytbāy,* fols. 7r–v, 8v, 9v, 10v, 12v; Ayalon, "The System of Payment," 293–94).

[36]For examples of riots of the mamluks against Yashbak or his agents performing the works of *ustādār* and vizier, see the case in 877/1473: *Nayl,* 7:54; *Badāʾiʿ,* 3:82. In 878/1474: *Nayl,* 7:90, 91. In 879/1474: *Nayl,* 7:100; *Badāʾiʿ,* 3:96.

The Sultanic Fisc: Measures to Increase Income for the Sultan's Exclusive Use

While Qāytbāy made efforts to rationalize the financial affairs of the government as we have seen, he also strove to increase his personal income, leading to an expansion of the role of the sultanic fisc in state affairs. As for his *waqf* properties, which formed part of his own revenue sources, his madrasah and primary *waqf* were established on 24 Jumādá II 879/5 November 1474.[41] This date corresponds with the time when the state's finances were worsening again. Additionally, especially during his reign, the sale of official offices and the confiscation of dismissed or deceased officials' property became widespread, and the money collected in this way seems to have been considered a kind of fine imposed upon all candidates for the posts.[42] Qāytbāy also enforced new tax policies in rural and urban areas, especially in the 890s/1485–94. On the principle that all tax revenues from an *iqṭāʿ* land were assigned to a mamluk or an amir holding the *iqṭāʿ,* in 893/1488 and 895/1490, he collected a fifth of the annual *kharāj* (land tax) from *iqṭāʿ* lands in al-Sharqīyah province through the governor of the province *(kāshif al-Sharqīyah)*.[43] In 894/1489, the cash equivalent of two months' rent was collected from the owners of *milk* and *waqf* properties in Fustat and Cairo, including amirs.[44] Similarly, five months' rent was collected in 896/1491.[45] He also charged Cairene merchants 40,000 dinars in 892/1487,[46] and confiscated the *dhimmīs*' properties twice during his reign.[47] Such circumstances were described by Ibn Ṭawq (in 894/1489) as follows: "All [the subjects of] the sultan's kingdom were under severe tyranny and the [yoke of] confiscation of the people's property."[48]

Qāytbāy's extra taxation policies, some of which he was forced to abandon in

[48] Ibn Ṭawq, *Al-Taʿlīq: Yawmīyāt Shihāb al-Dīn Aḥmad ibn Ṭawq* (Damascus, 2000–4), 845 (hereafter cited as *Taʿlīq*).

the early days of his reign, show that his efforts to revitalize the state's finances eventually proved abortive. Although these taxes were imposed on the pretext of being temporary emergency measures, the sultans succeeding Qāytbāy also imposed them and frequently imposed them especially as bonuses for amirs and mamluks for joining military campaigns or for pronouncing the *bayʿah* (oath of allegiance) to a newly enthroned sultan.

A key to understanding the sultanic finances of the times is the function of the *dhakhīrah*. *Al-dhakhīrah,* which originally meant "treasure" in Arabic, changed its meaning with the development of the sultanic fisc throughout the Circassian Mamluk period, and finally during Qāytbāy's reign, this term came to include various kinds of financial resources placed under the direct control of the sultan.[49] For instance, according to the sources, *al-Dhakhīrah* was considered the place where confiscated properties or the money paid for offices were to be delivered (in the same meaning as *khizānah*),[50] or as an agency taking charge of the spice trade.[51] In addition, "the lands of *al-Dhakhīrah (bilād al-dhakhīrah)*" meant the sultanic domains, i.e., lands designated as the sultan's exclusive financial resources.

The table below lists the tax districts *(nāḥiyah)* in Egypt belonging to *al-Dhakhīrah* around 885/1480 during the reign of Qāytbāy (according to *Tuḥfah*).[52] This table shows that the agricultural land of *al-Dhakhīrah* in Egypt was composed of forty-eight districts with annual revenues (*ʿibrah*) estimated at 208,193.2 *jayshī* dinars. These districts were, on the whole, spread across various parts of Egypt, although ten of them were concentrated in al-Sharqīyah province. Successive sultans tried to add various kinds of land (such as *milk*, *waqf*, and leased land) throughout Egypt and Syria to *al-Dhakhīrah* for the purpose of increasing their own property.[53] In addition, *iqṭāʿ* lands were also targeted for this purpose.[54] Finally,

* All figures were rounded off to one decimal place.

** If *al-Dhakhīrah* shared a *nāḥiyah* with other uses, the *ʿibrah* of *al-Dhakhīrah* was calculated by dividing the *ʿibrah* of the *nāḥiyah* under consideration equally, except in a case wherein the *ʿibrah* of each was specified.

by the time of Qāytbāy's death in 901/1496, the number of *iqṭāʿ*s included in *al-Dhakhīrah* had reached approximately one thousand.[55]

Qāytbāy tried to manage administrative and financial affairs by using his own money acquired through such financial policies.[56] In order to make this policy work, he systematized the sultanic financial management and organized a special staff for the service. The executive responsibility for the sultanic fisc usually rested with the chief *(ustādār)* of Dīwān al-Amlāk wa-al-Awqāf wa-al-Dhakhīrah in the period from the reign of Barqūq until that of al-Muʾayyad Shaykh (815–24/1412–21), and then with the *zimām–khāzindār* (the chief-eunuch who acted as the sultan's treasurer) in the period from the reign of al-Ashraf Barsbāy (825–42/1422–38) until that of al-Ashraf Īnāl (857–65/1453–60).[57] Responsibility for the sultanic fisc seems to have been divided among people who were of relatively low rank in the government hierarchy but who had personal connections with the sultan, as we shall see in what follows. Such a manner of management suggests that Qāytbāy tightened his direct supervision and control over the sultanic fisc because of its growing size and importance.

One of the changes in the governmental bureaucracy caused by the development of the sultanic fisc was the functional metamorphosis of *wakīl bayt al-māl* (the agent of the public treasury) into an independent financial agent for the sultan. This was originally a religious post occupied by one of the ulama. Its function was to conduct sales of the state's property, which was unrelated to the financial administration itself.[58] However, during Qāytbāy's reign, the post assumed a new role as an official agent for the sultan's financial affairs, independent of the financial *dīwān*s of the government, and was regarded in the same light as *wakīl al-sulṭān,* the sultan's personal agent.[59] The case of Burhān al-Dīn Ibrāhīm al-

---

However, when the government was unsettled, the sultan was often obliged to distribute *iqṭāʿ*s from *al-Dhakhīrah* to attract support from mamluks and amirs. In 865/1461: Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1963–72), 16:258 (hereafter cited as *Nujūm*); *Nayl,* 6:118–19; *Badāʾiʿ,* 2:383. In 872/1467: *Nujūm*, 16:381. In 874/1470: *Inbāʾ al-Haṣr,* 159–60. In 897/1492: *Badāʾiʿ,* 3:292. In 901/1496: *Badāʾiʿ,* 3:335; Ibn al-Shiḥnah, *Al-Badr al-Zāhir fī Nuṣrat al-Malik al-Nāṣir Muḥammad ibn Qāytbāy* (Beirut, 1983), 51 (hereafter cited as *al-Badr al-Zāhir*). Cf. ʿĀmir Najīb Mūsá Nāṣir, *Al-Ḥayāh al-Iqtiṣādīyah fī Miṣr fī al-ʿAṣr al-Mamlūkī* (Amman, 2003), 116.

[55] *Badāʾiʿ,* 3:335; *al-Badr al-Zāhir,* 51.

[56] The total amount of expenditures disbursed from his *khizānah* for military expeditions, the purchase of mamluk slaves, weapons, and horses, buildings and repairs, charities and donations reached 3,770,000 dinars during the period from his enthronement to Shaʿbān 877/January 1473 (*Tārīkh Qāytbāy,* fol. 15r–v).

[57] Igarashi, "A Study on *al-Dhakhīra*," 140–42.

[58] Al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1913–22), 4:36–37 (hereafter cited as *Ṣubḥ*).

[59] In the sources of the period, the appointees to the post of *wakīl bayt al-māl* were often referred

Nābulusī[60] and his son Shihāb al-Dīn Aḥmad is a good example of the role of the *wakīl* at the time. Burhān al-Dīn was appointed as *wakīl* of Damascus in 874/1469 and was engaged in collecting money, especially relating to the sale of offices and confiscation of officials' property.[61] Later, he was transferred to the post of *wakīl* of Egypt and took a more active political role.[62] He was often dispatched to the Syrian provinces, being assigned tasks relating to financial affairs such as the confiscation of estates. In 880/1475, he was sent to Tripoli and seized properties estimated at over 120,000 dinars from the viceroy of Tripoli, his *dawādār*, and the *nāẓir al-jaysh* (the chief of the Dīwān al-Jaysh; i.e., the bureau of military affairs).[63] Then he arrived in Damascus and collected 8,000 dinars from the *ḥājib* (chamberlain), Dawlātbāy al-Najmī, confiscated the *ḥājib*'s house, arrested the *nāẓir al-jaysh* and the Maliki judge (perhaps in order to seize their properties), and confiscated the Shafiʿi judge's property.[64] Burhān al-Dīn's son, Shihāb al-Dīn, arrived at Damascus in Shawwāl 880/February 1476, taking over his father's post as *wakīl* of Damascus with the additional posts of *nāẓir al-jaysh* and *nāẓir al-qalʿah* (the superintendent of the citadel; this will be discussed in detail later).[65] He collected a huge amount of money during his tenure.[66] Ibn al-Ḥimṣī describes him as follows:

> He ordered the seizure of the people's properties through [various] pretexts *(bi-al-ḥiyal)*. . . . He does not respect the viceroy, judges, ulama, or anyone. If it was said to a person "al-Nābulusī demanded you [to pay money]," he would die of fear.[67]

Qāytbāy also entrusted vassals and attendants close to him, especially low-ranking military men (such as the rank-and-file mamluks and amirs of ten), with the tasks of his financial affairs. The case of al-Ḥājj Ramaḍān, who was a courtier

[66] *Ḍawʾ,* 1:191–92.

[67] *Ḥawādith al-Zamān,* 1:212. A popular uprising against Shihāb al-Dīn surfaced in 881/776 because of his ruthless methods of money collection (*Majmaʿ al-Mufannan,* fol. 61r).

serving as *mihtār al-ṭashtkhānāh* (the keeper of the sultan's wardrobe,[68] a minor office of the royal court), is a notable example. He had served Qāytbāy since he was still a member of the *khāṣṣakīyah,* and then acquired power with his master's enthronement and assumed charge of "the sultan's resources *(jihāt al-sulṭān)*" in addition to the posts of *mihtār* and *nāẓir al-kiswah* (the controller of the Kiswah). He acted as an intermediary between applicants for offices and the sultan, taking advantage of his closeness to the sultan, and it was said that most appointments were made through his mediation.[69] As for Qāytbāy's *waqf*s, which formed a large part of his financial resources, the following military men close to Qāytbāy served as proxy for the official *waqf* administrator *(nāẓir),* i.e., Qāytbāy himself: Jānībak al-Ashqar, amir of ten, a member of the *dawādārīyah* (pen-box holders), and the *shādd* (rent-collector) of Qāytbāy's *waqf*. He was one of the sultan's favorites *(khawāṣṣ)* and was often dispatched by him to various regions on important missions.[70] He was followed by Barsbāy al-Maḥmūdī al-Ashrafī, amir of ten and *khāzindār thālith* (the third treasurer). He succeeded Jānībak (who died in Shaʿbān 880/December 1475) as the proxy of the *nāẓir* of Qāytbāy's *waqf* "because of his [Qāytbāy's] favor [to him]." He was also appointed as *ustādār al-amlāk* (the manager of the sultan's private land) and the keeper of Qāytbāy's warehouse *(ustādh al-shūnah al-Ashrafī),* taking charge of Qāytbāy's various resources in addition to his *milk* and *waqf* properties.[71] Finally there was Barsbāy al-Khāṣṣakī, a member of the *khāzindārīyah* (treasurers) and one of the favorites of Qāytbāy. He took over the management of a large part of the resources that had been the responsibility of Barsbāy al-Maḥmūdī after his death on 1 Ramaḍān 890/11 September 1485 in addition to the management of *waqf* properties dedicated to Medina.[72]

These measures were also applied to the financial administration of the government. Khushqadam al-Aḥmadī, a eunuch serving in the royal court as *raʾs nawbat al-suqāh* (the head of cup-bearers) and in other roles, was appointed to the vizierate in 879/1468 when Yashbak resigned from it. He increased his power when he was appointed to the posts of *zimām* and *khāzindār* in addition to the

vizierate in 882/1477.[73] Given that the *zimām–khāzindār* was the top officer of the royal court in charge of the *khizānah,* although this office had lost its former function as chief supervisor of the sultanic fisc, it seems reasonable to suppose that Dīwān al-Wizārah was put under the auspices of the sultanic fisc and was managed with its support. These measures of Qāytbāy also affected the power structure within the government, and as a result, some of these low-ranking individuals, as typified by al-Ḥājj Ramaḍān, acquired political importance.

THE FINANCIAL POLICY IN THE SYRIAN PROVINCES: THE CASE OF DAMASCUS

Such a financial policy was also applied to the Syrian provinces, and the consequence was the establishment of a new system for effectively concentrating wealth in Syria in the hands of the sultan in Egypt. Here I limit the discussion to the case of Damascus, the most important province in Syria. Similar to the *wakīl* of Egypt, the *wakīl* of Damascus developed into an independent financial officer directly involved with the sultanic fisc. We have already seen that the al-Nābulusī family, occupying the posts of *wakīl* in both Egypt and Damascus, played an important role in financial affairs during Qāytbāy's reign. The successive *wakīl*s of Damascus after the downfall of the al-Nābulusī family (in Ṣafar 882/May 1477) also participated in sultanic financial affairs, such as assisting in the confiscation of senior officials' estates,[74] and bearing witness to the audits of the Damascene citadel's coffers[75] (this will be discussed later). In view of the further fact that the *wakīl*s of Damascus had jurisdiction over the affairs concerning *al-Dhakhīrah* in the province,[76] we can say with fair certainty that most of the sultanic financial resources in the province were under the *wakīl*'s control.

In addition, the extra taxes that were frequently imposed in Egypt after 890/1485, as we have already seen, were also introduced in the Syrian provinces. As an example, when a tax was levied on merchants in Damascus in Jumādá I 896/March 1491 for the purpose of raising money for a military expedition, the same tax was also levied in Cairo, Alexandria, and Damietta.[77] Although Egyptian chronicles mention only a few remarkable cases of the extra taxations in Syria,[78] we can gather from Damascene sources that the sultan's decrees *(marsūm)* concerning the extra taxation frequently came from Cairo during the 880s/1475–84, and especially after 890/1485. These taxations were usually carried out by

[73] *Ḍawʾ,* 3:176–77; *Badāʾiʿ,* 3:99, 130, 207, 267; *Nayl,* 7:107, 189, 374–75; 8:160–61.

[78] For example: *Badāʾiʿ,* 3:110–11.

the *khāṣṣakī*s on assignment from the sultan, acting under the authority of decrees authorizing the collection of the taxes. Taxes on *waqf*s, which were collected through the official audit *(kashf)* of *waqf*-financed institutions, were more frequently imposed in Damascus than in Cairo.[79] For instance, when a *khāṣṣakī* arrived in Damascus with the sultan's decree authorizing an audit of *waqf*s for *jāmiʿ*s, *masjid*s, madrasahs, and other institutions in Ramaḍān 892/August 1487, three chief judges and the ulama conferred and came to an agreement to pay 4,000 dinars from the *waqf*s to him.[80] However, it seems that this was not the only money he collected. Ibn Ṭūlūn relates that:

> He engaged in corruption *(ẓulm)* that cannot be expressed. He grabbed money from each *masjid* even though it was poor, and similarly from each mausoleum *(turbah)* and madrasah. He did not take the condition or welfare *(maṣāliḥ)* of these institutions into consideration, but [was only concerned about] his interests and those of the sultan.[81]

The *khāṣṣakī*s were also dispatched from Cairo to collect money from Damascene citizens, merchants, and *dhimmī*s.[82] Such taxations were sometimes carried out by the provincial viceroys according to the sultan's decrees, but were usually carried out by the *khāṣṣakī*s themselves.

It seems that the collection of money from the sale of offices and the confiscation of dismissed officials' estates was generally performed by the *wakīl* (mentioned earlier) or the governor of the citadel (*nāʾib al-qalʿah;* this will be discussed later); however, in some special cases, such as confiscations targeting several officials simultaneously, the *khāṣṣakī*s were assigned to Damascus for the task. On 6 Ṣafar 891/11 February 1486, Māmāy, a *khāṣṣakī,* arrived in Damascus for "collecting the money [being confiscated] from officials and others for the sultan" after confiscating the officials' estates in Jerusalem. He accosted Ṣalāḥ al-Dīn Muḥammad al-ʿAdawī, the *wakīl* of Damascus who had been obliged to pay 2,000 dinars to the

sultan every year. Because he had been remiss in fulfilling this obligation, Māmāy confined him to the citadel *(qalʿah)* and confiscated 10,000 dinars from him to repay the sultan.[83] In Rabīʿ II/April, Māmāy confined ʿImād al-Dīn al-Nāṣirī, the Hanafi chief judge of Damascus, to the citadel and forced him to choose between paying 6,000 dinars or being sent to Cairo.[84] The *khāṣṣakī*s (or low-ranking amirs) were also appointed as estate collectors, referred to as *ḥawwāṭ,* in the event of the death of high officials. For example, when Qijmās al-Isḥāqī, the viceroy of Damascus, died in Shawwāl 892/September 1487, Qāytbāy dispatched Qānṣūh al-Alfī, *dawādār thānī* (the second executive secretary) of Egypt, to Damascus to collect his estate. On arrival in Damascus, he confined Qijmās's private staff to the citadel for the audit and confiscation of his estate.[85] Because the appointment and dismissal of most officials in the Syrian provinces were within the sultan's authority (especially in the case of high-ranking officers), the sale of offices and confiscations targeting them were the most lucrative sources of his income. In other words, through the appointment and dismissal of Syrian officials, the wealth accumulated by them in Syria would be funneled to the sultan in Cairo.[86]

The citadel of Damascus played an important role in such financial policies of the sultan. In each of the provincial capitals in Syria, a governor *(nāʾib)* was assigned directly by the sultan to the citadel, which was located in a corner of the provincial capital city as a stronghold for the city's defense, separate from the provincial viceroy *(nāʾib al-salṭanah)* who was head of the provincial administration.[87] Backed by his independence, military power, and direct connection with the sultan, the governor of the citadel kept an eye on the viceroy's activity to prevent him from revolting against the sultan; in fact, there were some instances when a governor of the citadel arrested the provincial viceroy in accordance with the sultan's

[83] *Tārīkh al-Buṣrawī,* 110; *Taʿlīq,* 591–92, 594; *Ḥawādith al-Zamān,* 1:305–6. On the confiscation he performed in Jerusalem, see: *Uns,* 2:335.

[86] According to Martel-Thoumian, among the sales of office concluded in the late Mamluk period, the most numerous were the cases in Damascus (Martel-Thoumian, "The Sale of Office," 54). On the sales of office and confiscations in Damascus, see: Taha Thalji Tarawneh, "The Province of Damascus during the Second Mamluk Period (784/1382–922/1516)" (Ph.D. diss., Indiana University, 1987), 190–204.

[87] *Ṣubḥ,* 4:184–85. ʿAbd al-Qādir Rayḥāwī, *Qalʿat Dimashq: Tārīkh al-Qalʿah wa-Āthārhā wa-Funūnhā al-Miʿmārīyah* (Damascus, 1979), 103–4; Muḥammad Aḥmad Dahmān, *Wulāt Dimashq fī ʿAṣr al-Mamālīk* (Damascus, 1984), 24. The provincial government house, referred to as *Dār al-Saʿādah* or *Dār al-Niyābah,* was located outside the citadel.

secret order.[88] In other words, the citadels served as extensions of the sultan's authority in Syria. The citadel of Damascus assumed a new role in the sultanic finances during the period under consideration. As for the collection of money through confiscations and the sale of offices, the appointments to Damascene government posts—especially in the case of civilians and judicial officers—were frequently made in Cairo, and at that time, the appointees paid money for the posts to the sultan.[89] On the other hand, most confiscations of dismissed officials' estates were performed while they were confined in the citadel of Damascus.[90] The citadel was also involved in the seizure of deceased officials' estates. During the seizure of Qijmās's estate in 892/1487 (mentioned earlier), the clerk of his private treasury *(kātib khizānat al-nāʾib)* and his *dīwān*'s official were confined to the citadel.[91] Another example that can be cited is the confiscation of property left by a deceased official of the Dīwān al-Jaysh by the governor of the citadel in Muḥarram 897/September 1491.[92] Although the citadel had played such a role since the days before the enthronement of Qāytbāy, it grew in importance as its role in the collection of money for the sultanic fisc increased. The money that had been collected was removed from the jurisdiction of the provincial government as the sultan's money *(māl al-sulṭān)* and was kept in the citadel's coffers, referred to as *ṣundūq*.[93] This money was disbursed for the sultan's official or private use (such as the cost of repairs of mosques and financial assistance for the hajj caravans),[94] or was conveyed from the citadel to Cairo by the garrison troops.[95] As an illustration, in Muḥarram 902/September 1496, just after the death of Qāytbāy, 100,000 dinars in cash were conveyed from the citadel of Damascus to Cairo by one hundred cavalrymen and the governor of the citadel.[96]

[88]Dahmān, *Wulāt Dimashq,* 36; Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah* (Damascus, 1977–97), 1:27, 330; *Iʿlām,* 80–83. For examples of the intervention of the governors of the citadel in the viceroys' activities: *Taʿlīq,* 1351; *Tārīkh al-Buṣrawī,* 161; *Mufākahah,* 1:164, 298–99. Accordingly, the provincial viceroy's unlawful occupation of the citadel by force was regarded as high treason (cf. Rayḥāwī, *Qalʿat Dimashq,* 114–19).

[89]For example: *Mufākahah,* 1:36–37, 39; *Badāʾiʿ,* 3:119, 308–9.

[94]*Ḥawādith al-Zamān,* 1:237, 355; *Taʿlīq,* 197; *Mufākahah,* 1:121.

[95]*Taʿlīq,* 656, 1435. For an example of the provincial viceroy's misappropriation of money preserved in the *ṣundūq,* see: *Taʿlīq,* 1008.

[96]*Tārīkh al-Buṣrawī,* 187, 191; *Mufākahah,* 1:170; *Taʿlīq,* 1444.

As a matter of course, the citadel was required to have its own bureaucracy executing such financial tasks in addition to the military functionaries originally stationed there, such as the governor and his adjutant, *naqīb al-qalʿah.*[97] We can say with fair certainty that among the various civilian officials who are frequently mentioned in the sources in connection with the citadel, the *nāẓir al-qalʿah* was the chief financial administrator.[98] The first reference to the post, to my knowledge, was in 847/1443–44.[99] It seems reasonable to suppose that as a result of the citadel's growing importance in financial affairs from the mid-ninth/fifteenth century resulting from a systematization of the sultanic fisc and frequent sales of offices and confiscations, the post of *nāẓir al-qalʿah* was newly established or began to attract the chroniclers' attention for the first time. In view of the fact that many *wakīls* served concurrently as *nāẓir al-qalʿah* in Qāytbāy's reign, these two posts were closely related to each other as offices involved in sultanic financial affairs in Damascus.[100] In addition to the *nāẓir,* various civilian officials attached to the citadel are mentioned in the Damascene sources of the late Mamluk period, such as *dīwān al-qalʿah, ṣayrafī al-qalʿah,* and *ustādār al-qalʿah.*[101] It is not far from the truth to say that these officials composed a *dīwān* in the citadel and administered the sultanic fisc independently of the provincial government. Moreover, the fact that Qāytbāy often appointed "his own mamluk" or "his relative *(qarīb)*" as the governor of the citadel instead of Damascene amirs clearly indicates his intention of maintaining control over the citadel through the appointment of people close to him.[102]

CONCLUSION

To surmount the financial failure of the government and the urgency for military funds, Qāytbāy made various efforts to construct an effective mechanism for concentrating cash from all over Egypt and Syria in his own hands, as well as to

reorganize the state's finances. Although his policies generally stood on a common foundation with those of his predecessors, the situation that prevailed during his reign required him to pursue these policies more radically. Consequently, the importance of the sultan's finances and the state's finances was reversed during his reign, with the former coming to play a pivotal role in the spheres of administration, finance, and military affairs in the late Mamluk period. Throughout the reign of al-Ghawrī, Qāytbāy's actual successor enthroned in 906/1501, the sultanic fisc saw substantial growth and increased importance amidst a deteriorating general financial situation. Al-Ghawrī employed various means for raising revenue—such as extra taxation, the sale of offices, and confiscation—more frequently.[103] However, as we shall see in what follows, his financial policies basically constituted an extension of those introduced by Qāytbāy.

In general, the *dawādār*'s control over the Dīwān al-Wizārah and al-Dīwān al-Mufrad continued throughout al-Ghawrī's reign. Al-Ghawrī's nephew, Ṭūmānbāy, who was the last Mamluk sultan, took the post and worked as al-Ghawrī's right-hand man. The Royal Mamluk corps often demonstrated and rioted, but until the very end of the Mamluk period their rioting seems rarely to have been caused by delays in the regular payment of *jāmakīyah* and daily meat supplies. Rather, they usually demonstrated to gain extra bonuses for participating in military expeditions or for pronouncing a *bayʿah* to a new sultan. This suggests that the regular disbursement of the two *dīwān*s was, on the whole, conducted smoothly under the supervision of the *dawādār*. Nevertheless, it should be noted that this was achieved with the help of the sultanic fisc, as well as by the maintenance of the payment system through the regularly held inspections of recipients following that of 873/1468.[104] Judging from the fact that al-Dīwān al-Mufrad, as described in 897/1492, continued to complete the payments with the financial support of *al-Dhakhīrah,*[105] which often covered the two *dīwāns*' deficits after 860/1455–56, Qāytbāy's financial restructuring made no radical change to the overall financial situation, wherein the paralysis of the state's finances was advancing and their operation was being sustained by the sultanic fisc. In addition to covering deficits, *al-Dhakhīrah* came to be used as a source of payment for the amirs. Many amirs, including some amirs of one hundred, came to receive *jāmakīyah*s and wheat supplies from *al-Dhakhīrah* instead of holding *iqṭāʿ*s.[106] *Al-Dhakhīrah* also started to

[103]For example: *Badāʾiʿ,* 4:149–50, 190, 442–43.

[105]*Wajīz,* 1232.

[106]*Badāʾiʿ,* 4:100, 181, 338, 436. Some amirs received their stipends from the revenues of the weekly tax *(mujāmaʿah)* and the monthly tax *(mushāharah)* collected by a *muḥtasib* (market inspector) from markets (*Badāʾiʿ,* 5:19). The first reference to the amir receiving stipends from

take charge of granting pensions to retired military men[107] and sheep to mamluks and amirs for sacrifice on the occasion of *ʿĪd al-Aḍḥá.*[108] The financial crisis of the government and dysfunction of the *iqṭāʿ* system remained unresolved in a situation wherein the alienation of state lands was accelerating. It was inevitable that the sultanic finances, which were originally managed for the sultan himself without any specific administrative function, assumed such functions as the financial *dīwān*s of the government came to a standstill.

The financial staff for the sultanic fisc increasingly grew in importance during al-Ghawrī's reign, and thus some of them extended their authority and acquired broader powers.[109] The emergence of the sultan's *bardadār* in 907/1502 is a good example to illustrate the change in power structure within the government. The post of *bardadār,* which had been that of a minor official, was established during Qāytbāy's reign as a new office directly relating to the sultan, probably intended to collect money for the sultan more effectively.[110] Thereafter, the sultan's *bardadār* gained political influence by taking advantage of his strong connection to the sultan, and eventually assumed jurisdiction over the three major bureaus of the government, i.e., Dīwān al-Wizārah, Dīwān al-Khāṣṣ, and al-Dīwān al-Mufrad in 908/1502, although he had no official authority over them.[111] After 920/1514, the sultan's *bardadār* assumed executive responsibilities for the management of al-Dīwān al-Mufrad.[112] Finally, the dependence of the administration of the Mamluk regime on the sultanic fisc, which increased in Qāytbāy's reign, reached the *terminus ad quem* under al-Ghawrī as a necessary consequence of the reorganization of the state's finances and the development of the sultanic fisc that had advanced throughout the Circassian Mamluk period.

The Sons of al-Nāṣir Muḥammad and the Politics of Puppets: Where Did It All Start?

بيت قلاوون سعاداته في عاجل كانت بلا آجل
حل على أملاكه للردى دين قد استوفاه بالكامل[1]

The period from al-Nāṣir Muḥammad's death (741/1341) until the emergence of the Circassian dynasty under al-Ẓāhir Barqūq (784/1382) witnessed the unbridled succession to the throne of Egypt and Syria of the scions of that sultan, who ruled for 31 years during his third reign. These eight sons, two grandsons, and two great-grandsons are generally characterized as puppets whom the amirs enthroned as they wished. Their youth is usually identified as the reason why these sultans could be deposed as easily as they were put on the throne; their lack of experience, or perhaps more exactly of proper training, may have led them to behave in inappropriate ways or to make decisions not in accordance with those expected from a ruler. The rationales which the modern historian can invoke to try to understand how and why this situation continued for such a long period of time, particularly after the very long and successful reign of al-Nāṣir Muḥammad, are numerous and can involve politics, sociology, and economics. As in many cases in history, it is probably a combination of several factors that played an undeniable role. From a historical point of view, it remains very tempting to try to generalize the whole period in that way, but the result necessarily offers a simplistic view of the events.

In the eyes of a later Mamluk historian such as al-Qalqashandī (d. 821/1418), this succession of reigns looked like a mere coincidence, albeit strange in its regularity; this is what Muslim historians called *gharāʾib al-ittifāq*.[2] On the basis of a comment made by al-Ṣūlī, who noticed that, from the beginning of Islam down to his time, every sixth holder of authority was dismissed, al-Qalqashandī completed the list provided by a predecessor (al-Ṣafadī) for the later periods, considering the

Fatimids, the Ayyubids, and the Mamluks.[3] While al-Ṣafadī stopped his assessment with al-Manṣūr Qalāwūn, the first ruler of a new series of six, al-Qalqashandī went further up to the reign of Baybars al-Jāshankīr, then started a new series with al-Manṣūr Abū Bakr (al-Nāṣir Muḥammad's first successor) up to al-Muẓaffar Ḥājjī, then from al-Nāṣir Ḥasan up to al-Ṣāliḥ Ḥājjī, and finally ending with the last series for which the first ruler was, rather opportunely, the founder of the Circassian regime, al-Ẓāhir Barqūq. Al-Qalqashandī compiled this list during the reign of Barqūq's successor, al-Nāṣir Faraj, the second ruler of this new series, and he concluded by saying: "God knows best who will be the sixth!"[4] In this rather schematic presentation, the involved historians did not bother to twist the truth (several depositions intervened in between the pattern of every sixth ruler), but it shows that they felt a need to explain the phenomenon.[5]

Modern scholarship, after having shown more interest in the reigns of great rulers, has finally felt it necessary to study the factors that could explain why and how al-Nāṣir Muḥammad's succession led to such a shift in power. Amalia Levanoni's studies have analyzed the role that the innovations and modifications introduced in the Mamluk system by al-Nāṣir Muḥammad may have played in this respect.[6] Recently, Jo Van Steenbergen focused his attention on the period that followed al-Nāṣir Muḥammad's death up to Barqūq's accession to the sultanate.[7] The work of both scholars has helped to further our understanding of the processes that were taking place during the entire period. The aim of this article is not to provide another analysis of the political role played by al-Nāṣir Muḥammad's successors; it is rather to explore al-Nāṣir Muḥammad's influence on his succession. In other words: did he prepare for his succession, and if so, in what manner? It is hoped that through the attempt to answer this question, some insight will be gained into the events that took place in the roughly forty years that followed his death before the rise of Barqūq.

[3] Al-Qalqashandī, *Ṣubḥ al-Aʿshá bi-Ṣināʿat al-Inshāʾ* (Cairo, 1913–19), 1:443–45.

[4] In his earlier work on the caliphate, *Maʾāthir al-Ināfah fī Maʿālim al-Khilāfah,* ed. ʿAbd al-Sattār Aḥmad Farrāj (Kuwait, 1985), 3:352–54, al-Qalqashandī made the same statement regarding the caliph ruling at that time, but given the subject of this book, he limited his remarks to the caliphate and made no comment on the sultanate.

[5] In one particular case, an attempt to circumvent this law of the series is documented by Ibn Nubātah. The Abbasid caliph al-Mustanṣir (r. 623–40/1226–42) received the oath of allegiance, but being the sixth of a series, he was deposed and then enthroned again for fear of this fate. See al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 1:444.

"*Al-Mulk ʿAqīm*": Paving the Way for Succession

With the words "Kingship is childless *(al-mulk ʿaqīm),*" the Abbasid caliph al-Mustakfī I indicated that the authority conferred by him upon the sultan was by no means transferable to the offspring of al-Nāṣir Muḥammad (who had just abdicated in 708/1309),[8] thus arguing that it could be bestowed on Baybars al-Jāshankīr, who had no genealogical link to the Qalāwūnids.[9] For lexicographers, this idiom represents the fact that no genealogical link is of use when it comes to political power, given that a ruler can kill his own son, brother, uncle, or the like in order to maintain his rule. In this way, authority is by no means inheritable.[10] This should have been all the more true in the case of the Mamluks, given that one's ability to rule was determined by several personal qualities.[11] Despite this factor, it remains that the hereditary, dynastic principle was strong throughout the Turkish period. Some historians have considered that dynasticism in this case was only the result of a "specious and misleading" impression: if the Qalāwūnids succeeded in monopolizing the throne, it was only for the sake of convenience, with the different sultans playing the role of under-aged puppets in the service of

---

[8]By that date, al-Nāṣir Muḥammad had at least two male children, presumably both by his wife Ardūkīn: al-Malik al-Manṣūr ʿAlāʾ al-Dīn ʿAlī, who was born in 703/1303–4 and died in 710/1310 (al-Maqrīzī, *Al-Sulūk li-Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah and Saʿīd ʿAbd al-Fattāḥ ʿĀshūr [Cairo, 1934–73], 2:91; Ibn Ḥajar al-ʿAsqalānī, *Al-Durar al-Kāminah fī Aʿyān al-Miʾah al-Thāminah,* ed. Muḥammad Sayyid Jād al-Ḥaqq [Cairo, 1966–68], 3:190 [no. 2892]), and al-Malik al-Muẓaffar, who was born in 704/1304 (Ibn al-Dawādārī, *Kanz al-Durar wa-Jāmiʿ al-Ghurar* [Cairo, 1960–92], 9:126). The date of his death is unknown, but we are told that when his brother ʿAlī died, he was al-Nāṣir's only son at that time, from which we may infer that al-Malik al-Muẓaffar died before that date. It is to be noted that this al-Malik al-Muẓaffar, whose name *(ism)* is never quoted in the sources, cannot be identified with Ḥājjī, as put forward by P. M. Holt, "The Position and Power of the Mamlūk Sultan," *Bulletin of the School of Oriental and African Studies* 38 (1975): 241, given that the latter was born in 732/1331–32 (al-Ṣafadī, *Al-Wāfī bi-al-Wafāyāt,* 11:237; al-Maqrīzī, *Al-Muqaffá,* ed. Muḥammad al-Yaʿlāwī [Beirut, 2006], 3:73).

[9]"I dismissed his predecessor [al-Nāṣir Muḥammad] after I came to know that he had abdicated. I regarded that as my duty, and the four judges delivered their judgment in favor of that. Know—may God have mercy upon you—that kingship is childless: it is not transmitted by inheritance to anyone, be it from a predecessor to a successor, or from an illustrious elder to a peer." These words are part of the deed of nomination drawn up on al-Mustakfī's behalf and meant for Baybars al-Jāshankīr. See al-Maqrīzī, *Al-Sulūk,* 2:65.

Dickson,* ed. Michel M. Mazzaoui and Vera B. Moreen (Salt Lake City, 1990), 130; Konrad Hirschler, "'He is a child and this land is a borderland of Islam': Under-age Rule and the Quest for Political Stability in the Ayyūbid Period," *Al-Masāq* 19 (2007): 39.

[11]See Muḥammad Muṣṭafá Ziyādah's comment on this in al-Maqrīzī, *Al-Sulūk,* 2:65 (n. 4).

an oligarchy of amirs.[12] More recent research has demonstrated that, at least in the case of the Qalāwūnids, "a dynastic reflex was at work";[13] when the necessity to enthrone a new sultan was felt, it was always a scion of Qalāwūn, through his son Muḥammad, who was chosen. Moreover, in the great majority of the cases, it was the eldest surviving son who was chosen, suggesting that he was expected to play a greater role than that of a puppet. In some way, primogeniture forced itself upon the amirs once a choice had to be made.[14] By that time, the above-mentioned principle of the non-hereditary character of authority had been superseded, and it took decades before it could be invoked again, with the accession of Barqūq. Even in this case, it was only by pretending that none of the surviving descendants of al-Nāṣir Muḥammad could hold legitimate power that this genealogical link could be broken and power could pass to an amir who was not considered a usurper.[15]

Given that a dynastic principle was at work, together with some sort of primogeniture—if not in favor of the eldest son, then at least one of the eldest—during the Qalāwūnid period, it is legitimate to question whether the ruling sultan was likely to prepare for his succession, and if so, how this was done. Before considering the practical aspect of this preparation in the case of al-Nāṣir Muḥammad, it is necessary to examine what was expected from a theoretical point of view. It is probably no coincidence that one of the latest treatises of the *Fürstenspiegel* genre is dated to that very period. Written by a scion of the Abbasid family, who started to compose it on Saturday 23 Shawwāl 708/5 April 1309, *The*

---

[12]Holt, "The Position and Power of the Mamlūk Sultan," 240. See also Levanoni, "The Mamluk Conception," 379.

[13]Jo Van Steenbergen, "'Is anyone my guardian . . .?' Mamlūk Under-age Rule and the Later Qalāwūnids," *Al-Masāq* 19 (2007): 55. Cf. the words pronounced by Rukn al-Dīn Baybars al-Aḥmadī while al-Nāṣir Muḥammad expressed the wish, on his deathbed, to designate his successor: "Amirs! We are the mamluks of this family, and even if there only remained from our master's offspring a blind daughter, we should obey her until her death." Al-Shujāʿī, *Tārīkh al-Malik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. Barbara Schäfer (Wiesbaden, 1977), 105.

[14]However, it must be kept in mind that the Mamluks always adopted a contradictory stance towards hereditary rule. Even though they selected an heir of al-Nāṣir Muḥammad, their aim was mainly to ensure stability among the different factions. See Levanoni, "The Mamluk Conception," 382–83.

[15]Importantly, in this context, the last Qalāwūnid sultan, al-Ṣāliḥ Ḥājjī, who had been deposed by Barqūq in 784/1382, was restored to the throne in 791/1389 on the basis that "he had been overthrown by Barḳūḳ." See Amalia Levanoni, "Al-Ṣāliḥ Ṣalāḥ al-Dīn Ḥādjdjī," *The Encyclopaedia of Islam,* 2nd ed., 9:987. Anne Broadbridge has recently established that the Qalāwūnids were fully aware that they were members of a royal ruling family, as is confirmed by some passages found in documents issued by these rulers and the frequent mention of their lineage up to their ancestor Qalāwūn on their coins. The chancellery may have played a decisive role in fostering the continuity of this ideology. See Anne Broadbridge, *Kingship and Ideology in the Islamic and Mongol Worlds* (Cambridge, 2008), 147–48.

Remains of the Past Regarding the Organization of the States[16] aims at providing the usurper of al-Nāṣir Muḥammad's throne, Baybars al-Jāshankīr, with a manual of rules and advice to administer the state. The third chapter of the third section of this book deals with the manners of children and relatives.[17] In the body of this chapter, the author touches upon the question of preparing the ruler's child to succeed him on the throne. Among its advice is that the ruler is encouraged to appoint to an office the son in whom he sees nobility and efficiency, so that he can be drilled and given practice and so that if authority should be bestowed upon him, he would thus be experienced. But the author acknowledges that, when the ruler feels that he can designate one of his sons or relatives as his heir to the throne, the decision must be taken after mature consideration and selection without neglecting the advice of others. If he is resolved in his choice, the deed of appointment should be written down and attested by those he usually consults on matters of state. Then, two options are available: either he keeps his decision secret, commanding those he consulted to act in the same way and leaving the deed of nomination in a secure place, or he reveals it and consequently enables his heir to administer freely, authorizing him to grant land tenure and money. In any case, the ruler is cautioned not to waver between these two options, for example by revealing his intention but prohibiting his heir from acting as such. This behavior could only lead to his son's resentment against him and his willingness to overthrow his father if the latter's life continues long thereafter.[18]

Despite the non-hereditary character of authority, the idea of preparing a ruler's son to succeed his father on the throne was nonetheless accepted, as is attested in this *Fürstenspiegel* which is contemporary with the events dealt with in this article. The advice provided, though theoretical, tallies with the factual elements which we will now consider.

---

[16]Al-Ḥasan ibn ʿAbd Allāh ibn Muḥammad al-ʿAbbāsī, *Āthār al-Uwal fī Tartīb al-Duwal* (Būlāq, 1878), 199. The starting date of composition (13 Shawwāl 708) is provided on the title page, on the basis of the manuscript used for preparing the edition. It appears to be erroneous, as the given date did not fall on a Saturday, but on a Wednesday. Moreover, it is established that al-Nāṣir Muḥammad left Cairo, presumably to fulfil the pilgrimage, on Sunday, 10 Shawwāl, and that Baybars al-Jāshankīr was put on the throne on Saturday, 23 Shawwāl. It is thus impossible that the author started his work for al-Nāṣir Muḥammad, who was away and already considered as having abdicated, but rather he did so in order to attract the new sultan's benevolence. In the light of this, it may be established that the author started his book on the 23rd of Shawwāl, a Saturday and the day of Baybars' enthronement (see al-Maqrīzī, *Al-Sulūk,* 2:45). In the colophon (p. 198), the author mentioned the name of the ruling sultan, Baybars al-Jāshankīr, which means that he completed his work in a very short period of time. Be that as it may, the manual was not meant for al-Nāṣir Muḥammad.

[17]Al-ʿAbbāsī, *Āthār al-Uwal,* 109–11 (*fī ādāb al-awlād wa-al-aqārib wa-ḥusn al-sīrah maʿahum*).

[18]Ibid., 110–11.

Laying Out the Family's Genealogical Tree

In order for the matter to become clear, it is crucial to understand who al-Nāṣir Muḥammad's offspring were and how many they were. Although much work has been done on this aspect of al-Nāṣir Muḥammad's life,[19] it is hard to have a clear picture of his offspring and of the marital links arranged by him, and after his death, by his sons. In this respect, a genealogical tree is clearly needed.[20] Ideally, this tree should not be limited to al-Nāṣir Muḥammad's offspring: it would rather take as its starting point the ancestor, Qalāwūn himself, and also consider the marriage policy that he developed, a policy that was continued over several decades by his scions. I have thus decided to meet this need in producing a genealogical tree of the Qalāwūnid family.[21] It must be kept in mind that this is a preliminary result of a few months of research into the sources. Indeed, to get a clearer picture of all the links, it is necessary to go through numerous contemporaneous and later sources for which indexes are not always available, meaning that some data is found either by chance, or through reading a considerable amount of material. While some of the persons considered performed an important role in the state, and were thus subjects of biographical entries in dictionaries or chronicles, it remains that the majority of them were rather unknown to historians, thus not deserving any particular mention. Data regarding these persons are found in rather unexpected places, as is the case with most women, whose names are seldom mentioned and whose existence is confirmed in the entries of their husbands. Another problem in establishing this genealogy lies in the identification of the mothers of these near-phantoms. In a genealogical tree, each person must be connected to both a father and a mother, hence the necessity to attribute all those for whom a mother is not mentioned in the sources to a unique unnamed mother. This is the case for a great number of al-Nāṣir Muḥammad's daughters, but also for some of his sons. Hence, there is an unrealistically large number of daughters who could be identified

[19] See P. M. Holt, "An-Nāṣir Muḥammad b. Qalāwūn (684–741/1285–1341): His Ancestry, Kindred and Affinity," in *Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras: Proceedings of the 1st, 2nd and 3rd International Colloquium Organized at the Katholieke Universiteit Leuven in May 1992, 1993 and 1994,* ed. Urbain Vermeulen and Daniel De Smet (Leuven, 1995), 313–24; Levanoni, *A Turning Point in Mamluk History,* 48–49; Van Steenbergen, *Order Out of Chaos,* 82–85; idem, "Mamluk Elite on the Eve of al-Nāṣir Muḥammad's Death (1341): A Look behind the Scenes of Mamluk Politics," *Mamlūk Studies Review* 9, no. 2 (2005): 192–94; Doris Behrens-Abouseif, "*Waqf* as Remuneration and the Family Affairs of al-Nasir Muhammad and Baktimur al-Saqi," in *The Cairo Heritage: Essays in Honor of Laila Ali Ibrahim,* ed. Doris Behrens-Abouseif (Cairo and New York, 2000), 58–60.

[20] A first attempt was provided by Eduard de Zambaur, *Manuel de généalogie et de chronologie pour l'histoire de l'Islam* (Hanover, 1927), 106.

[21] A preliminary version of the genealogical file on the basis of which the above-mentioned chart (see http://www.lib.uchicago.edu/e/su/mideast/qalawunids/qalawunid-pedigree.pdf) was created is available at the following address: http://www.lib.uchicago.edu/e/su/mideast/qalawunids (The Qalāwunids: a pedigree).

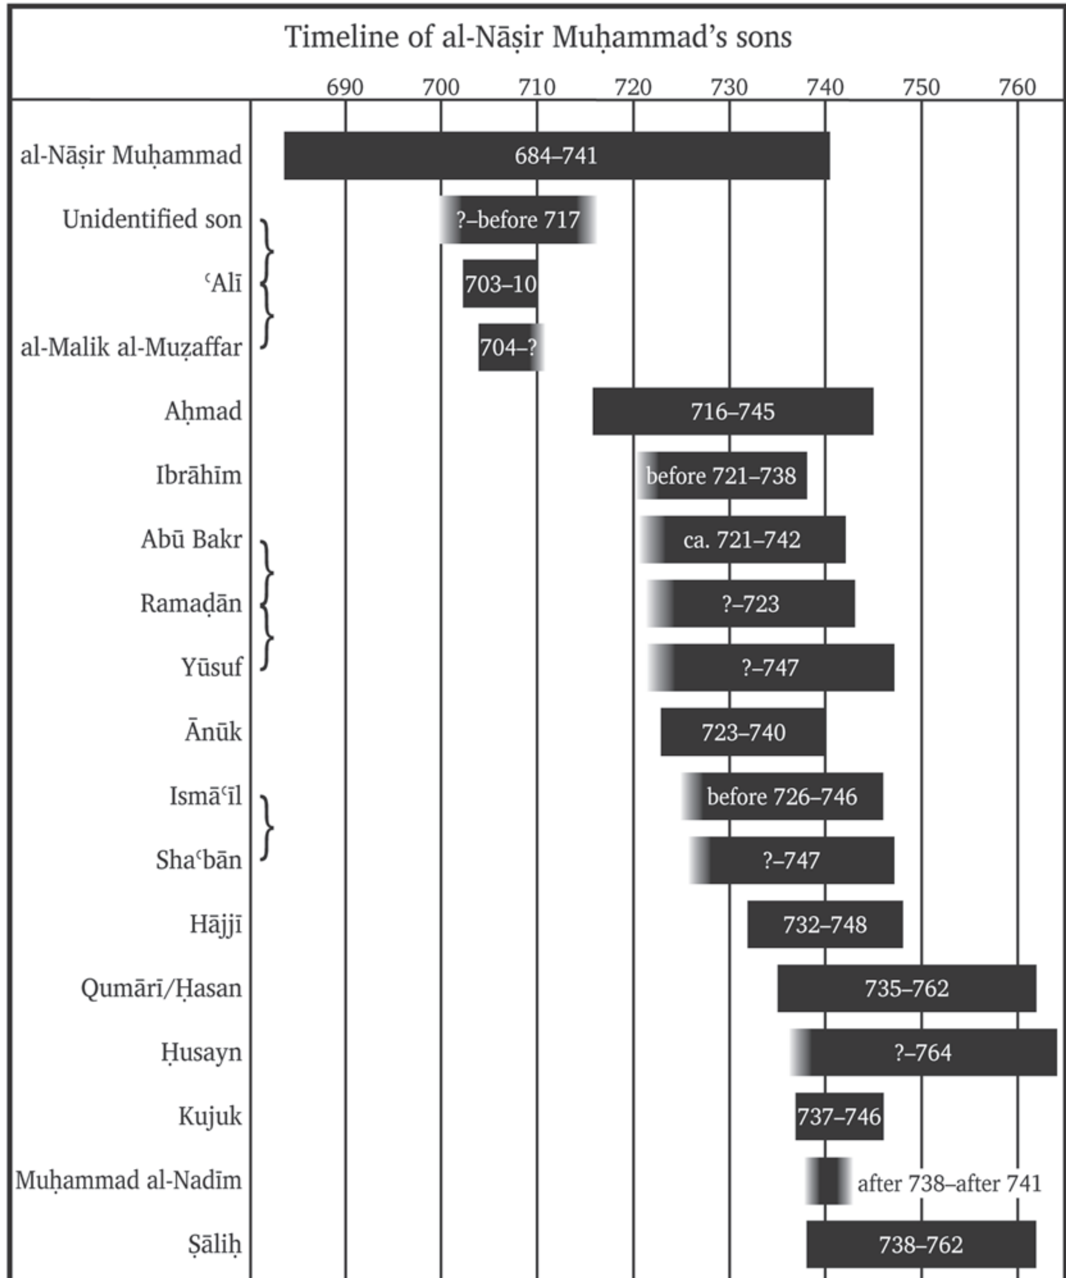
only occasionally with persons mentioned as wives. It is hoped that, in pursuing this project and the analysis of the sources, greater precision will be gained. On the other hand, the continuity of al-Nāṣir Muḥammad's lineage was ensured for more than a century: the last descendant known thus far from the sources died in 852/1448–49, but it is expected that later descendants will be discovered in the future.[22] A quite complete genealogy could thus be produced, despite the above-mentioned drawbacks, taking into account the various collateral links and the relative offspring.

Like Father, Like Son

Being himself the heir of a sultan, al-Nāṣir Muḥammad knew that advance planning for matters of succession was crucial. His father, Qalāwūn, had prepared for his own successor well in advance: he designated his favorite son, ʿAlī, as his heir to the throne and simultaneously appointed him joint sultan. ʿAlī eventually died before his father, in 687/1288, and Qalāwūn chose, rather reluctantly, his second-oldest son, Khalīl.[23] Although this designation was made public, the official deed of appointment was never signed by Qalāwūn, which demonstrates his reluctance regarding Khalīl, but the latter's accession to the throne, on his father's death, was not questioned.[24] In any case, the only other son available at that time, Muḥammad, was not of age (he was 5 when Qalāwūn died) and was still living in the harem. When, at the age of 9, he succeeded his elder brother, he was an inexperienced boy, and it was not long before a usurper removed him from the throne. His own experience with power had taught him that no ruler is able to maintain his authority unless he is prepared to do so. Setting up a dynastic principle had unexpected consequences, such as the tendency to "demilitarize" the ruler, who was unable to take part in battle or to lead an expedition. Although al-Nāṣir Muḥammad managed to impose himself in the end as an autocratic sultan, he was aware of the drawbacks of failing to prepare. The solutions he crafted were multifarious, as we will see, and regarded several of his sons.

Considering that al-Nāṣir Muḥammad could not determine with certainty which sons would survive him, such preparation had to involve several sons, but of course this did not preclude favoritism. The timeline chart below shows which sons were

---



[22] Muḥammad ibn ʿAlī ibn Shaʿbān ibn al-Nāṣir Ḥasan ibn Muḥammad ibn Qalāwūn (d. 852/1448–49). When he died, his parents were still living, and he left numerous children. He was one of Jaqmaq's courtiers. See Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī wa-al-Mustawfá baʿd al-Wāfī,* ed. Muḥammad Muḥammad Amīn (Cairo, 1984–), 2:663–64 (no. 2280); al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, 1934–36), 8:184–85 (no. 470).

likely to succeed him on the throne and thus to receive an appropriate designation (disregarding whether they were favored for the succession in actuality).

On his deathbed, al-Nāṣir Muḥammad is reported to have gathered all his sons

Estimated dates of birth or death are indicated with shading. Full brothers are joined by braces.

(except Aḥmad, who was in al-Karak), in order to designate his heir to the throne; they were, in all, twelve at that time,[25] which tallies with the data provided by most of the sources.[26] Five sons had already died: three at an early stage of al-Nāṣir Muḥammad's third reign, and two shortly before his own death. The first three were apparently the sons he had with his first wife Ardūkīn, the widow of his brother Khalīl.[27] Little is known about them except that the two named sons received a *malik* title together with a *laqab:* al-Malik al-Manṣūr ʿAlī[28] and al-Malik al-Muẓaffar.[29] In naming his sons in such a way, al-Nāṣir Muḥammad respected a tradition going back to the Ayyubid period and adopted by Qalāwūn himself. Instead of being reserved for the ruling sultan, as was the custom in Mamluk rule, the *malik* title was given to some of his sons who were, perhaps, considered as future successors. That such a title could be given simultaneously to more than one son is evidenced by the mention of his two sons, ʿAlī and Khalīl, with their royal titles in an official document dated to 684/1285. On the other hand, al-Nāṣir Muḥammad himself is said to have received his royal title upon his birth.[30] Be that as it may, if al-Nāṣir Muḥammad followed this practice with the desire to see the two sons succeed him, his hopes were soon dashed with the premature deaths of both of these sons. He apparently no longer followed this practice for his younger sons. In subsequent years, no other son is reported to have been born, hence his divorce from Ardūkīn in 717/1317.[31] It was not before 716/1316–17 that his lineage was finally guaranteed: from that date to the end of his life, no less than fourteen sons were born, their mothers being either legal wives or concubines.

[25] Al-Shujāʿī, *Al-Tārīkh,* 110. Ibn Qāḍī Shuhbah provides only eleven names (*Al-Tārīkh,* ed. ʿAdnān Darwīsh [Damascus, 1977–97], 2:133), while al-Maqrīzī, *Al-Sulūk,* 2:546, leads us to believe that when al-Nāṣir died, he left *(taraka)* fourteen boys, including Muḥammad and ʿAlī. The latter had died by that date. See below.

[26] According to a pronouncement by al-Nāṣir Muḥammad on his deathbed, he had fifteen sons. See Ibn Abī al-Faḍāʾil, *Al-Nahj al-Sadīd wa-al-Durr al-Farīd fīmā baʿd Tārīkh Ibn al-ʿAmīd,* ed. Samira Kortantamer (Freiburg, 1973), 264 = 105 (Ar. text). It might be that this figure is the result of a later reconstruction made by the author on the basis of the total number of sons al-Nāṣir had during his lifetime (seventeen in the chart).

[27] Al-Malik al-Muẓaffar is never said in the sources to have been the son of Ardūkīn, but it is highly probable that she was his mother, as at that time al-Nāṣir Muḥammad had no other official wife.

[28] He died at the age of six in 710/1310. In 709/1309, he was said to be al-Nāṣir Muḥammad's only child. Al-Ṣafadī, *Aʿyān al-ʿAṣr,* 3:512; al-Maqrīzī, *Al-Sulūk,* 2:91; Ibn Ḥajar, *Al-Durar al-Kāminah,* 3:190 (no. 2892).

[29] His *ism* is unknown. He was already dead when his brother ʿAlī died. He thus lived less than six years. See Ibn al-Dawādārī, *Kanz al-Durar,* 9:126.

[30] See Holt, "The Position and Power of the Mamlūk Sultan," 241.

[31] Al-Maqrīzī, *Al-Sulūk,* 2:177. In Rajab 719/August–September 1319, she was expelled from the citadel. Ibid., 195.

Al-Nāṣir Muḥammad had six legal wives, of course not simultaneously. Aside from Ardūkīn, he also married, in 720/1320, Ṭulunbāy/Dulanbiya, the niece of Üzbek Khān;[32] in 721/1321, Ṭughāy,[33] a Turkish slave-girl he bought from Tankiz al-Ḥusāmī, his governor in Syria;[34] then in 734/1334, Quṭlūmalik,[35] Tankiz al-Ḥusāmī's daughter and Aḥmad ibn Baktamur al-Sāqī's widow.[36] At an unknown date, but before 740/1339, he married Zādū, the sister of Ṭūlū Qurṭaqā who was married to Yalbughā al-Yaḥyāwī,[37] and, also at an unknown date, he married the sister of Qawṣūn.[38] As for concubines, his love of them was proverbial,[39] but only six are known for sure to have borne him children, and among these only four are

[32]Al-Maqrīzī, *Al-Sulūk,* 2:203–5; Ibn al-Dawādārī, *Kanz al-Durar,* 9:302; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:329–30 (no. 2052, Ṭūlū). On the question of her genealogical link to Üzbek Khān, see Broadbridge, *Kingship and Ideology,* 132. She did not bear any children and was repudiated in 728/1328. She was successively married off, by al-Nāṣir himself, to three of his amirs. See Holt, "An-Nāṣir Muḥammad b. Qalāwūn (684–741/1285–1341): His Ancestry, Kindred and Affinity," 316–17. See al-Yūsufī, *Nuzhat al-Nāẓir fī Sīrat al-Malik al-Nāṣir,* ed. Aḥmad Ḥuṭayṭ (Beirut, 1986), 235, for the attestation of a forgery written by a judge in regard to al-Nāṣir Muḥammad's declaration to Üzbek's envoy that she was dead, though she was still alive.

[33]Al-Ṣafadī, *Al-Wāfī,* 16:447–48 (no. 381); Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:322 (no. 2025). She bore him Ānūk.

[34]Al-Maqrīzī, *Al-Sulūk,* 2:232.

[35]Ibn al-Dawādārī, *Kanz al-Durar,* 9:380. She bore him Ṣāliḥ and a daughter.

[36]Al-Maqrīzī, *Al-Sulūk,* 2:289.

[37]Ibid., 473. Yalbughā's wife gave birth on that date and Zādū is referred to as al-Nāṣir Muḥammad's wife. Zādū is not reported to have given birth to any children.

[38]Al-Shujāʿī, *Al-Tārīkh,* 160. No child reported.

[39]Levanoni, *A Turning Point in Mamluk History,* 184.

named by the sources:[40] Narjis,[41] Bayāḍ,[42] Ardū,[43] and Kudā.[44]

In the end, it can be said that the sons who were the most liable to succeed him, given their dates of birth, were: Aḥmad, Abū Bakr, Ibrāhīm, Ramaḍān, Yūsuf, and Ānūk.[45] The remaining sons were born too late to be considered realistic successors by their father and, indeed, the former sons often appear in the sources regarding events that took place during their youth and linked to what could be considered education and training, while the latter sons are mainly mentioned after their father's death because it was only then that they finally played politically significant roles. The forthcoming comments will thus deal with four of the aforementioned six eldest sons, as Ramaḍān and Yūsuf are seldom mentioned in the sources with respect to events that took place during their father's lifetime.[46]

[40]The first of the two unnamed concubines was the mother of Ismāʿīl, Shaʿbān, and a daughter (married to Bahādur al-Damurdāshī). She was later married by al-Nāṣir Muḥammad to Arghūn al-ʿAlāʾī. See al-Maqrīzī, *Al-Sulūk,* 2:756. The second unnamed concubine gave birth to Ḥājjī. She was later married to Lājīn al-ʿAlāʾī. The latter was compelled by al-Kāmil Shaʿbān, during his reign (746–47/1345–46), to divorce her. See al-Maqrīzī, *Al-Muqaffá,* 3:73; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:83. Other unnamed concubines probably bore him children. These are all classified under the same mother in the pedigree for the aforementioned reasons, but it does not reflect reality.

[41]Mother of Abū Bakr, Ramaḍān, and Yūsuf. Later, al-Nāṣir Muḥammad married her to Ṭuquzdamur al-Ḥamawī (who died in 746/1345; al-Maqrīzī, *Al-Sulūk,* 2:551). After the latter's death, she was married to Arghūn al-Ismāʿīlī (still living with him in 756/1356; al-Shujāʿī, *Al-Tārīkh,* 139).

[42]Mother of Aḥmad. A slave-girl and singer, she was set free by Bahādur Āṣ, the *raʾs nawbah,* and later married to Maliktamur al-Sarjuwānī (at least before 731/1331; al-Maqrīzī, *Al-Muqaffá,* 3:384).

[43]She was a Tartar and the mother of Kujuk. After al-Nāṣir Muḥammad's death, she was married to Āqsunqur al-Nāṣirī, in 743/1343, at the latter's request (al-Maqrīzī, *Al-Sulūk,* 2:635), and finally to al-Kāmil Shaʿbān (before 746/1345; al-Maqrīzī, *Al-Sulūk,* 2:683).

[44]Mother of Qumārī/Ḥasan and Tatar. She died in Qumārī's infancy (al-Maqrīzī, *Al-Sulūk,* 2:745).

[45]The youngest, Ānūk, was 17 years old when he died almost a year before his father.

[46]Their dates of birth are unknown, but they were born after Abū Bakr. Yūsuf was married in 738/1337 by his father to a daughter of his amir Badr al-Dīn Jankalī ibn al-Bābā, which means that he was probably born between 722–25/1323–26. He died in Rabīʿ II 747/July–August 1346, perhaps murdered on order of his brother Shaʿbān. See al-Ṣafadī, *Aʿyān al-ʿAṣr,* 5:99; al-Maqrīzī, *Al-Sulūk,* 2:436, 707; Ibn Ḥajar, *Al-Durar al-Kāminah,* 5:248 (no. 5160) and 2:83 (suspicion against his brother for his killing). Ramaḍān and Yūsuf were full-brothers of Abū Bakr, who had just been put to death (Jumādá II 742/November 1341); their mother was Narjis. No marriage is reported for Ramaḍān in the sources, and this might imply that he was younger than Yūsuf. In 743/1342, after the accession of Ismāʿīl, Ramaḍān attempted to rise against him, though he had no real support among the senior amirs. He had to flee to al-Karak, where he tried to join his brother Aḥmad, but he was killed before he could reach him. See al-Ṣafadī, *Aʿyān al-ʿAṣr,* 5:99; al-Maqrīzī, *Al-Muqaffá,* 2:42; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:203 (no. 1726); Ibn Qāḍī Shuhbah, *Al-Tārīkh,* 2:326–27.

The order followed will be chronological, except that the youngest son, presented by the sources as the preferred son, will be treated first here.

The Paramount Son: Ānūk

Although the youngest of the brothers listed as the most likely to succeed their father, Ānūk[47] quite quickly began to hold an important place in his father's heart: his mother, Ṭughāy, had become his beloved and preferred wife because of her beauty, probably around 721/1321, after the dispassionate marriage to Ṭulunbāy.[48] Ānūk is also said to have been the dearest son to his father by reason of his handsomeness, in addition to his father's deep affection for his mother.[49] Once he left the harem, his father took charge of his fate. As early as 731/1331, when Ānūk was aged 8, he married him to the daughter of one of his senior amirs, Baktamur al-Sāqī:[50] the contract was concluded on 2 Ṣafar 732/4 November 1331[51] and by the end of the same month (23 Ṣafar/25 November), his father expressed the wish, in the presence of his amirs, to designate him as his heir to the throne *(walī ʿahd),* a wish to which they all adhered.[52] He consequently granted him an *imrah miʾah taqdimah alf,*[53] and it was issued by decree that a ceremony would take place to celebrate this designation; it was decreed that Ānūk would ride through the city, wearing the emblem of the sultanate *(shiʿār al-salṭanah),* surrounded by the other amirs. An unknown event made al-Nāṣir Muḥammad change his mind: he ordered that all the preparations for the ceremony of official designation be stopped and, in the end, decided that Ānūk would ride through the city just to celebrate his new function of amir of one hundred. Instead of wearing the emblem of the sultanate,

---

[47]Sources are not unanimous in giving his date of birth: either 15 Jumādá 721/12 July 1321 (al-Maqrīzī, *Al-Sulūk,* 2:242; idem, *Al-Muqaffá,* 2:175-76; Ibn Ḥajar, *Al-Durar al-Kāminah,* 2:322), or 30 Rabīʿ I 723/8 April 1323 (al-Maqrīzī, *Al-Sulūk,* 2:231–32, who did not notice that he reported two different dates) or Rajab 723/July 1323 (Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:446). One of the two later dates is more probable as a contemporaneous chronicler (Ibn al-Dāwadārī, *Kanz al-Durar,* 9:309) mentioned his birth during that year.

[48]Ṭulunbāy did not please the sultan, who went out hunting the day after the consummation, which took place on the same day as the wedding (2 Rabīʿ II 720/12 May 1320). See al-Maqrīzī, *Al-Sulūk,* 2:205.

[49]Al-Ṣafadī, *Al-Wāfī,* 9:431; al-Maqrīzī, *Al-Muqaffá,* 2:176; idem, *Al-Sulūk,* 2:176. He bore the same *laqab* as his father: Nāṣir al-Dīn, another sign of this preeminence (al-Maqrīzī, *Al-Muqaffá,* 2:175; idem, *Al-Sulūk,* 2:343).

[50]On 15 Ramaḍān/22 June. See Ibn al-Dāwadārī, *Kanz al-Durar,* 9:358.

[51]A copy of the marriage contract *(ṣadāq)* is to be found in al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 14:303.

[52]Al-Maqrīzī, *Al-Sulūk,* 2:343. One can see in this decision al-Nāṣir Muḥammad's intent, at an early date, to perpetuate the dynastic system established by his father.

[53]Al-Ṣafadī, *Al-Wāfī,* 9:431; al-Maqrīzī, *Al-Muqaffá,* 2:176.

he decided to let his son wear the one of his grandfather, Qalāwūn.[54] The effect was obviously less impressive, and although it indicated Ānūk's preeminence over his elder brothers (who were only amirs of forty),[55] al-Nāṣir Muḥammad's final intent was nevertheless clear, but not definitive. His change of mind was perhaps induced by the fact that the official designation could have led to his own premature end.[56] Despite this step backward, al-Nāṣir Muḥammad went on showing favoritism to Ānūk. In the course of the same month, he gathered the various clerks working in the ministries to select the person who would be put in charge *(khāzindār)* of Ānūk's personal purse *(dīwān)*. His new title and function *(amīr miʾah-taqdimah alf)* brought him a large amount of money:[57] his purse is said to have reached a total of six thousand dinars—not *jayshī,* but cash—without taking into account business transactions *(matjar)*. Al-Nāṣir Muḥammad's choice fell on al-Nashw. A steward *(ustādhdār),* Alṭunqush al-Jamālī, was also appointed on the same occasion.[58] A few months later, on 11 Shaʿbān 732/8 May 1332, on the occasion of Ānūk's marriage *(ʿurs),* a stupendous feast was organized.[59] The

[54]Al-Maqrīzī, *Al-Sulūk,* 2:343. Qalāwūn's mausoleum was repeatedly associated with such ceremonials dealing with the appointment of the sultan's sons to titles in the military hierarchy. See Jo Van Steenbergen's remark on its social implications, which were perhaps more symbolic than he suspects, in "'Is anyone my guardian . . .?' Mamlūk Under-age Rule and the Later Qalāwūnids," 62 (note 23). See particularly Mounira Chapoutot-Remadi, "Symbolisme et formalisme de l'élite mamluke: la cérémonie de l'accession à l'émirat," in *Genèse de l'État moderne en Méditerranée: approches anthropologiques des pratiques et des représentations,* ed. Henri Bresc (Rome, 1993), 61–79; idem, "Liens propres et identités séparées chez les Mamelouks bahrides," in *Valeur et distance: Identités et sociétés en Égypte,* ed. Christian Décobert (Paris, 2000), 181. This is confirmed by the following event: in 767/1366, amirs who received the honors of the sultan went down from the citadel to Qalāwūn's mausoleum (al-madrasah al-manṣūrīyah) where they fulfilled their oath as it was customary *(kamā hiya al-ʿādah)*. See al-Maqrīzī, *Al-Sulūk,* 3:118.

[55]This fact rather impressed the historians who reported it as they all insisted on the lower status of the elder brothers, who were consequently considered inferior to him and had to dismount before him and to be at his service. See al-Ṣafadī, *Al-Wāfī,* 2:432; al-Maqrīzī, *Al-Muqaffá,* 2:177.

[56]See al-Shujāʿī's comment (*Al-Tārīkh,* 113) regarding al-Nāṣir Muḥammad's management of the state: "*wa-law takhayyala min wuldihi ahlakahu ḥifẓan li-mulkihi*" ("If he had been suspicious about one of his children['s bad intentions], he would have put him to death to preserve his rule").

[57]He was granted, on that occasion, the *iqṭāʿ* held by the late Mughulṭāy al-Jamālī. See al-Maqrīzī, *Al-Sulūk,* 2:343.

[58]Al-Ṣafadī, *Al-Wāfī,* 9:431; al-Maqrīzī, *Al-Sulūk,* 2:343–44. Alṭunqush was also the steward of al-Nāṣir Muḥammad (al-Maqrīzī, *Al-Sulūk,* 2:674). Another person, Arghūn al-ʿAlāʾī, was Ānūk's *lālā*. See al-Maqrīzī, *Al-Sulūk,* 2:492 (Arghūn was replaced by Ṭaybughā al-Majdī in 740/1339–40). As for his purse, al-Nashw was replaced by his own brother, al-Mukhliṣ, in 739/1339–40. See al-Maqrīzī, *Al-Sulūk,* 2:469.

[59]The ceremony started at sunset on the given day, i.e., at the end of Thursday in our calendar. See al-Ṣafadī, *Al-Wāfī,* 9:431; al-Maqrīzī, *Al-Sulūk,* 2:345–46; idem, *Al-Muqaffá,* 2:176.

apex was reached when his father stood at the door of the palace with his son standing in front of him with the same bearing, while the amirs approached one-by-one according to their rank and accompanied by their mamluks, bringing the lighted candles they had presented five days earlier during a similar ceremony. Each one kissed the ground before al-Nāṣir Muḥammad, then Ānūk, until they were relieved from respecting the ceremonial towards the son.[60] Such a ceremony reinforced Ānūk's preeminence over his elder brothers and confirmed the father's good intentions towards him.

A few months later, in Shawwāl 732/July 1332, Ānūk was still closely associated with his father's activities. Al-Nāṣir Muḥammad decided to go to Mecca to perform the pilgrimage, and he took with him his beloved wife Ṭughāy and his son Ānūk. Two other sons were likely to join the convoy at al-ʿAqabah: Aḥmad and Abū Bakr were brought to the meeting point by Maliktamur al-Sarjuwānī, the governor of al-Karak, where they were both residing together with their brother Ibrāhīm. In the meantime, al-Nāṣir Muḥammad had learned of the bad intentions that Baktamur al-Sāqī, who was Ānūk's stepfather, harbored towards him, and once al-Nāṣir had reached al-ʿAqabah, he pretended Ānūk had fallen ill and sent him back with his mother and the two brothers to al-Karak under the protection of Maliktamur al-Sarjuwānī. The sultan eventually succeeded in unmasking Baktamur's conspiracy and in getting rid of him, and Ānūk was later transferred safely with his mother to Cairo.[61] The event is interesting in that it shows al-Nāṣir Muḥammad's anxiety to protect the son who was most likely his heir, putting him in the protective hands of an amir who was closely related to him.[62]

With regard to Ānūk's later years, which must have been important for his development and education, the sources are silent, at least until 740/1339. The event which took place in that year might have been insignificant if its effects had not been so dramatic. Now a young man (17 years old) and married for eight years, Ānūk did not seem to be fond of his wife.[63] He would rather spend time with a young female singer named Zuhrah, with whom he fell deeply in love, and he spent his time in a house he had built near Birkat al-Ḥabash; since he was particularly keen on animals, there was also an enclosure for birds at this

[60] Al-Maqrīzī, *Al-Muqaffá,* 2:176. More than three thousand candles were presented on that occasion, which means the etiquette should have been respected by more than that same number of persons!

[61] Al-Yūsufī, *Nuzhat al-Nāẓir,* 135–36; al-Maqrīzī, *Al-Sulūk,* 2:355.

[62] Maliktamur al-Sarjuwānī had married the sultan's concubine, Bayāḍ, who was the mother of the latter's son, Aḥmad, at an early date sometime before 731/1330–31, the date of Bayāḍ's death. See al-Maqrīzī, *Al-Muqaffá,* 3:384.

[63] When he died a few months later, she was still a virgin. See al-Maqrīzī, *Al-Sulūk,* 2:683.

place.[64] When his father heard of his fondness for this girl and, more importantly, that he neglected his wife, he took measures against the entire class of female singers. Separated from Zuhrah, Ānūk felt resentment against his father, though the latter had made every arrangement to ensure that his son would not know that these measures had been decreed by him. Ānūk's reaction demonstrated the level of his anger: with the help of one of his personal mamluks, he plotted against his father, giving him the impression that two of his senior amirs were conspiring against him. The plot was soon unmasked, and al-Nāṣir Muḥammad would have beheaded his son were it not for the intercession of his mother and his female slaves.[65] Frightened, Ānūk is said to have stayed in bed until he died on 7 Rabīʿ I 741/31 August 1340, less than a year before his father. Despite al-Nāṣir Muḥammad's reaction, his sorrow was deep[66] because his preferred son, in whom he had laid his trust, had perished and with him the plans for his succession, which had to be modified *in extremis*. We will see that, rather opportunely, al-Nāṣir Muḥammad had prepared other sons for the succession as well.

"As for Aḥmad, Who Is in Al-Karak, Do Not Let Him Cross [the Soil of] Egypt!"

As of 719/1319–20, Aḥmad, who was born the previous year, was the only son of al-Nāṣir Muḥammad. His mother, Bayāḍ, was a singer who had been set free by Bahādur Āṣ and perhaps offered to al-Nāṣir Muḥammad. She does not seem to have borne him any other children, and this might explain why (although she had not been al-Nāṣir's legal wife) she was later married to an amir, who became Aḥmad's stepfather. This kind of marriage link appears to have been a common feature of al-Nāṣir Muḥammad's Machiavellian management of the state.[67] It is unknown when the marriage took place, but Bayāḍ died in 731/1330–31. Aḥmad, in the meanwhile, had been sent to the fortress of al-Karak on 7 Jumādá I 726/11 April 1326; he was not yet 10 years old.[68] A contemporary historian considered this to be a young age,[69] but al-Nāṣir Muḥammad intended to provide the boy with a good education and a sound training both in hunting and horsemanship *(furūsīyah)* under the supervision of the new governor of al-Karak

[64] According to Ibn Abī al-Faḍāʾil, *Al-Nahj al-Sadīd,* 80–81, it was his father who had built a birdcage *(ḥawsh)* and a house *(dār)* for his son.

[65] See al-Maqrīzī, *Al-Sulūk,* 2:492; idem, *Al-Muqaffá,* 2:177.

[66] Al-Shujāʿī, *Al-Tārīkh,* 120.

[67] Providing in this way a tutor and substitute father-figure for the future. On this practice in the Mamluk political system, which led to a crossover of blood and biological ties, see Mounira Chapoutot-Remadi, "Liens propres et identités séparées," 178.

[68] Eight years old, according to al-Maqrīzī (*Al-Sulūk,* 2:272; *Al-Muqaffá,* 1:384).

[69] Al-Ṣafadī, *Al-Wāfī,* 8:86: *akhrajahu wāliduhu ilá al-Karak wa-huwa ṣaghīr laʿallahu yakūn ʿumruhu lam yablugh ʿashr sinīn.*

designated on that occasion, Bahādur al-Badrī.[70] To ensure that this plan went aright, a treasury, which had to be deposited in the fortress, accompanied the child. For the next five years, nothing is known of Aḥmad. However, in Shaʿbān 731/May 1331, he was called back to Cairo by his father who expressed the wish to see how he had grown up. On 16 Shaʿbān/25 May, he arrived at the capital brought by the governor of al-Karak, Bahādur al-Badrī, who had to be replaced by Maliktamur al-Sarjuwānī, Aḥmad's stepfather.[71] Maliktamur must have been widowed by that date, and the decision to give him the governorate of al-Karak, where al-Nāṣir Muḥammad regularly sent his sons Aḥmad, Abū Bakr, and Ibrāhīm to reside, may be seen as a consolation, or more probably, as an attempt to tie the stepfather more closely to his son Aḥmad. Two days later, at the age of 12, Aḥmad was circumcised.[72] This event, which took place rather late in the life of the boy, was to be followed by a joyful announcement: his father had decided to promote him and to grant him an amirate, a title he received on 26 Dhū al-Ḥijjah 731/30 September 1331, two months before his much younger brother Ānūk.[73] Festivities were organized to celebrate this promotion, and a retinue made up of the amirs and all the *khāṣṣakīyah* rode to Qalāwūn's mausoleum in the service of Aḥmad, who was wearing a *sharbūsh* and carrying a standard. The next day, he was sent back to al-Karak, where his stepfather welcomed him. Orders had been given to Maliktamur al-Sarjuwānī to see to his upbringing and education *(tarbiyah wa-taʾdīb)*.[74] Nothing is heard of Aḥmad until 738/1337, aside from the fact that he and his brother Abū Bakr went to al-ʿAqabah in 732/1332 to join their father, who was on his way to Mecca; al-Nāṣir Muḥammad then changed his mind and sent both of them, along with their brother Ānūk, back to al-Karak under the protection of the governor. However, in 738/1337 al-Nāṣir Muḥammad learned that Aḥmad was on intimate terms with the "riffraff" *(awbāsh)* of al-Karak and requested that he come to Cairo. His anger towards his son was tempered when he saw how handsome the boy had

[70] Al-Maqrīzī, *Al-Sulūk,* 2:272 *(li-yaqūm bi-amrihi . . . bal yumarrinahu ʿalá al-ṣayd wa-al-furūsīyah);* idem, *Al-Muqaffá,* 1:384 *(li-yurabbiyahu wa-yumarrinahu ʿalá al-furūsīyah)*.

[71] Al-Maqrīzī, *Al-Sulūk,* 2:332; idem, *Al-Muqaffá,* 1:384. Maliktamur officially received his new title and charge on 10 Ramaḍān/17 June and left for al-Karak on the same day, without Aḥmad. See idem, *Al-Sulūk,* 2:333. His deed of nomination is found in al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 12:223–25 (read Maliktamur al-Nāṣirī instead of Tuluktamur al-Nāṣirī).

[72] Al-Maqrīzī, *Al-Sulūk,* 2:333; idem, *Al-Muqaffá,* 1:384.

[73] Ibn al-Dawādārī, *Kanz al-Durar,* 9:357; al-Maqrīzī, *Al-Sulūk,* 2:334–35. Aḥmad's title at that date is not known, and from the quoted source, it might be inferred that he was made amir of ten, as al-Maqrīzī specifies that three amirs were promoted to this rank on the same day as Aḥmad. On the other hand, he was made amir of forty *(ṭablkhānah)* in 739/1339. See al-Shujāʿī, *Al-Tārīkh,* 1:49.

[74] Al-Maqrīzī, *Al-Sulūk,* 2:335.

become, a fact from which it can be inferred that he had probably not seen him for a long time.[75] In an attempt to redress Aḥmad's leaning towards men, he married him to the daughter of one of his senior amirs, Ṭāyirbughā, whose health was declining. The contract was concluded on the same day as one for his brother Ibrāhīm.[76] The consummation took place a few weeks later, unusually without any special ceremony.[77] Aḥmad was sent back to al-Karak, burdened with a wife and gifts received from his father. Eventually, Aḥmad succeeded in regaining al-Nāṣir Muḥammad's favor: he protested against his stepfather, the governor of al-Karak, which demonstrates that their relations were far from cordial, or rather, that Aḥmad was able to manipulate his entourage. Maliktamur al-Sarjuwānī was discharged from his office and al-Karak was given to Aḥmad.[78] The unique source which reports this fact is not explicit and goes on to report that an amir was appointed as the mentor of Aḥmad in al-Karak.[79] From this, it might be inferred that this amir was the new governor, but it actually seems that Aḥmad was appointed as governor of al-Karak—a fact generally ignored—with an amir who received instructions to supervise Aḥmad. This is supported by the evidence provided in the copy of the "deed of appointment to the governorate of al-Karak written down on behalf of the Sultan al-Malik al-Nāṣir Muḥammad ibn Qalāwūn for his son al-Malik al-Nāṣir Aḥmad."[80] Once stripped of its rhetorical metaphors, the text is very informative about al-Nāṣir Muḥammad's feelings towards his son. The document stresses God's blessings that favored the family

[75] Al-Maqrīzī, *Al-Sulūk,* 2:432; idem, *Al-Muqaffá,* 1:384.

[76] See al-Ṣafadī, *Al-Wāfī,* 8:86. On 20 Rabīʿ I 738/16 October 1337, according to al-Maqrīzī (*Al-Muqaffá,* 1:384), or in Rabīʿ II 738/November 1337, according to al-Shujāʿī (*Al-Tārīkh,* 18) and al-Maqrīzī (*Al-Sulūk,* 2:432, who fixes it on the same day as in *Al-Muqaffá* (20 Rabīʿ II 738/15 November 1337). Ṭāyirbughā died a short time later (28 Jumādá I 738/22 December 1337). See al-Shujāʿī, *Al-Tārīkh,* 28. Ibrāhīm was married to the daughter of Jankalī ibn al-Bābā. See al-Shujāʿī, *Al-Tārīkh,* 18.

[77] On 4 Jumādá I 738/28 November 1337. See al-Shujāʿī, *Al-Tārīkh,* 18.

[78] It is not easy to understand whether this event took place on the same occasion of the marriage or during another visit to Cairo. Al-Shujāʿī (*Al-Tārīkh,* 18) doesn't say a word about the riffraff episode, but places his nomination on the occasion of his marriage. On the contrary, al-Ṣafadī (*Aʿyān al-ʿAṣr,* 1:370–71) speaks of two visits for each event. He reports that things started to go wrong between Aḥmad and his stepfather and that they were both conveyed to Cairo. The sultan got annoyed with his son, and he let him reside in Cairo for a while until he sent him back alone to al-Karak, without any governor *(waḥdahu bi-lā nāʾib)*. This last element is in contradiction with the evidence provided in what follows.

[79] Al-Shujāʿī, *Al-Tārīkh,* 18: *wa-aʿṭá al-Karak li-Aḥmad wa-aʿṭá ʿAlāʾ al-Dīn al-Ṭaybars al-Zumurrudī arbaʿīn fāris wa-jaʿalahu nāʾib Aḥmad bi-al-Karak.* Al-Zumurrudī was in fact his steward *(ustādhdār)*. See ibid., 47.

[80] Found in al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 12:226–32. The text adds: "before he was made sultan." This is a later addition referring to his rule as sultan after the death of his father.

with rule,[81] securing it in the genealogical tree of Qalāwūn through his son Muḥammad.[82] Allusion is then made to Aḥmad through a pun on his *laqab* (Shihāb al-Dīn), where he is compared to a star *(shihāb)* equal in perfection and beauty to the moon. Al-Nāṣir Muḥammad's treatment of his son resulted from a divine order to behave kindly to the reverent son. Consequently, he decided to offer Aḥmad what God had granted al-Nāṣir himself: a place in which to rule.[83] By this act, al-Nāṣir Muḥammad was following the righteous example of Abraham, who had worked together with his son Ismāʿīl to build the Temple. God had shown the sultan how lovely and commendable this design was, and this was why he settled Aḥmad in al-Karak during that period.[84] Now, the decision was taken to make him the ruler of this place with which he was familiar and whose population showed him their affection.[85] Thus, the order was decreed that he be appointed governor of al-Karak and al-Shawbak.[86] The sultan's intuition *(firāsah)* would have to be confirmed by the results, but how could it go wrong, given that Aḥmad was the son and the grandson of noble rulers, the one on whom hopes had been pinned to perfect the rulership before he would completely take charge of it?[87] The deed then goes on with recommendations and advice addressed to Aḥmad for good ruling practices as well as for good manners (undoubtedly an allusion to his preference for boys). The document is revealing in that, at that date, al-Nāṣir Muḥammad still had trust in Aḥmad: this appointment appears to have been a test which could have been decisive in case the succession had to be modified, i.e., if the preferred son, Ānūk, were to die in al-Nāṣir Muḥammad's lifetime. It seems that Aḥmad did not seize the opportunity, either because he failed to realize the importance of this test, or because he did not want to do it. Aḥmad behaved badly, at least in the eyes of his steward, al-Zumurrudī, and consequently in the eyes of his father. Al-Zumurrudī sent a letter to al-Nāṣir Muḥammad informing him that Aḥmad had

[87] Al-Qalqashandī, *Ṣubḥ al-Aʿshá,* 12:230: "*wa-firāsatunā talmaḥ natāʾij al-khayr min hādhā al-taqdīm wa-siyāsatunā tuṣliḥ mā qaruba minnā wa-mā baʿuda bi-taʿrīf aḥkām al-taḥkīm wa-kayfa lā wa-huwa al-karīm ibn al-karīm ibn al-karīm al-muʾammal li-tamām al-suʿdud qabla an yuʿqad ʿalayhi al-tamīm.*"

fallen in love with a young Bedouin boy named Shuhayb and that he spent most of his time with him, drinking and dressing like an Arab. Aḥmad was summoned to Cairo where he arrived, together with Shuhayb, in Shaʿbān 739/March 1339. He was coldly received by his father and then sent to the palace. Orders were given to imprison Shuhayb and to recover the amount of money that he and his father had received from Aḥmad. Aḥmad's reaction was to sequester himself in his room and refuse to eat. In the meanwhile, al-Nāṣir Muḥammad had tried to dissuade his son from continuing his relationship with Shuhayb, his envoys in this delicate case being his two senior amirs Bashtāk and Qawṣūn. Both of them tried to convince the rebellious son, threatening him with warnings of his father's determination, but to no effect. Aḥmad preferred to stay with his boyfriend, even rejecting his father's proposal that he take one hundred of his own mamluks. In the end, conscious of Aḥmad's stubbornness, al-Nāṣir bowed to the arguments of his two senior amirs. Firm in his judgment that nothing good would come of this son, he decided to resign himself: Aḥmad was made an amir of forty, but he had to remain in Egypt, his brother Abū Bakr being sent to al-Karak in his place.[88]

For the next two years, Aḥmad seems to have kept a low profile, with Shuhayb still in his close entourage, until 741/1341, when the latter was involved in a conflict with a eunuch over a frivolous case of bird competition. Aḥmad championed his cause and the case reached the ears of the sultan, who confronted his son once again by means of Bashtāk and Qawṣūn. The mediation ended in the same way as in 739/1339: Aḥmad refused to abandon Shuhayb. He was thus exiled by his father to the fortress of Ṣarkhad,[89] but before he reached it, amirs, al-Nāṣir Muḥammad's wives, and the harem spoke in his favor. Aḥmad was called back to Cairo, but in the meanwhile his father had ordered that his horses be sold, and in the end he decided to send him back to al-Karak with al-Sarjuwānī as governor.[90] Clearly, in al-Nāṣir Muḥammad's mind, Aḥmad was not to play any

[88]Al-Shujāʿī, *Al-Tārīkh,* 47–48; al-Maqrīzī, *Al-Muqaffá,* 1:384–85. Although the sources remain silent about the appointment of Abū Bakr as governor of al-Karak on that occasion, it is highly probable that he took the place of Aḥmad not only as resident but also as governor. Both he and his brother Ibrāhīm had been amirs of forty since 738/1337–38, a year before Aḥmad. See below under Ibrāhīm and Abū Bakr.

[89]He was accompanied by Maliktamur al-Sarjuwānī, his stepfather, and al-Dāwūdī, his *lālā.* See al-Shujāʿī, *Al-Tārīkh,* 97; al-Maqrīzī, *Al-Muqaffá,* 1:385. In another source, it is established that his father reached this decision because of indisputable evidence *(bayyināt)* he found; one must understand this to mean documents. Unfortunately, their nature is not explicated, but the prospect of a coup should not be rejected. See al-Maqrīzī, *Al-Sulūk,* 2:515. By that time, Abū Bakr had already been nominated as heir to the throne (see below).

[90]At the beginning of 1 Ramaḍān 741/18 February 1341, according to al-Shujāʿī, *Al-Tārīkh,* 97, or in Ṣafar 741/August 1340, according to al-Maqrīzī, *Al-Muqaffá,* 1:385. Meanwhile, Abū Bakr had been called back to Cairo, hence the appointment of al-Sarjuwānī as new governor. Al-Maqrīzī,

future role, at least not in his own lifetime; the order was given not to let him make any decisions.[91] Aḥmad did not leave his place of exile, enjoying life with Shuhayb, not even when his father was at death's door.

On his deathbed, al-Nāṣir Muḥammad was urged—according to the sources—by his amirs to designate his heir to the throne, as though he had not prepared his successor. On that occasion, he is said to have rejected any solution in favor of Aḥmad, though he was his eldest surviving son:[92] "As for Aḥmad, who is in al-Karak, do not let him cross [the soil of] Egypt; do not put him in charge of anything, because he would cause the ruin of the state!"[93] Whether by intuition or paternal feeling, al-Nāṣir Muḥammad was convinced that Aḥmad would not be fit for the sultanate; on several occasions, he gave him opportunities to show his mettle and in each case he was found lacking.

Ibrāhīm the Prodigal[94]

Younger than Aḥmad and older than Abū Bakr,[95] Ibrāhīm was born between 719/1319 and 721/1320.[96] The sources remain silent on him until he reached his teens: in 731/1331, on 11 Rajab/11 July, he was sent by his father to al-Karak accompanied by some amirs, among them the newly appointed governor, Maliktamur al-Sarjuwānī.[97] Chroniclers are more laconic in his respect than with Aḥmad, as they do not explain why his father decided to send him there,[98] but it can be understood that his purpose was to provide Ibrāhīm with the same military training as Aḥmad. Ibrāhīm's younger brother, Abū Bakr, joined him some time later, and al-Ṣafadī indicates that the residence of the three brothers in al-Karak continued until they grew up *(taraʿraʿū)*.[99] In 735/1335, Ibrāhīm was

Al-Sulūk, 2:515.

[91] Al-Maqrīzī, *Al-Sulūk,* 2:515: "*wa-awṣāhu al-sulṭān allā yadaʿ li-Aḥmad ḥadīth wa-lā ḥukm bayna ithnayn.*"

[92] Ibn Qāḍī Shuhbah, *Al-Tārīkh,* 2:133. It was Bashtāk who pronounced Aḥmad's name. In some way, the competition between Bashtāk and Qawṣūn was already visible, each one having a favorite candidate.

[93] Al-Maqrīzī, *Al-Muqaffá,* 1:389: "*wa-ammā Aḥmad alladhī bi-al-Karak fa-lā tadaʿūhu yaʿbur Miṣr wa-lā tuwallūhu shayʾan fa-yakūn sabab li-kharāb al-mamlakah.*" See also Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:315. Al-Maqrīzī (ibid.) adds that the father's intuition *(firāsah)* was right and imputes to Aḥmad, when he was made sultan, the deterioration and the ruin of both the lands of Egypt and Syria.

[94] His prodigality, for which his father used to blame him, is reported by al-Shujāʿī, *Al-Tārīkh,* 34.

[95] Al-Ṣafadī, *Al-Wāfī,* 6:138.

[96] The name of his mother is ignored in the sources.

[97] Al-Maqrīzī, *Al-Sulūk,* 2:332–33.

[98] Al-Maqrīzī, ibid., uses the verb "*aqarra*" (to establish).

[99] Al-Ṣafadī, *Al-Wāfī,* 6:138; Ibn Taghrībirdī, *Al-Manhal al-Ṣāfī,* 2:159. In 732/1332, when al-Nāṣir

conveyed to Cairo at his father's request.[100] It seems that al-Nāṣir Muḥammad had decided that Ibrāhīm was to remain with him at the citadel, together with his brother Abū Bakr, who had also arrived in Cairo in the meanwhile, while Aḥmad had to remain alone in al-Karak.[101] A year later, on 9 Ramaḍān 736/21 April 1336, Ibrāhīm received the title of amir, and the two preferred amirs of al-Nāṣir Muḥammad, Qawṣūn and Bashtāk, organized the cortège and ceremony associated with such an appointment for a sultan's son.[102] In 737/1336, al-Nāṣir Muḥammad proceeded further with his policy of creating a web of relationships between his amirs and his children, both male and female. On 17 Muḥarram/26 August, a marriage contract was concluded between his son Ibrāhīm and Ṭuquzdamur al-Ḥamawī's daughter.[103] A year later, two similar contracts were made on the same day, one for his brother Aḥmad, and another for himself; this time, he was to get married to Jankalī ibn al-Bābā's daughter.[104] A few weeks after the consummation, his father decided that a third tie could be useful, and another marriage was arranged with another of Ṭāyirbughā's daughters.[105] Meanwhile, Ibrāhīm had just been promoted to the rank of amir of forty together with his brother Abū Bakr.[106] This promising career was suddenly interrupted by smallpox; isolated from his brothers for fear of contagion, and without a last visit from his father, he died on 25 Dhū al-Qaʿdah 738/14 June 1338.[107] With his death, al-Nāṣir Muḥammad lost a possible candidate to succeed him.[108]

---

stopped in al-ʿAqabah on his way to Mecca to perform the pilgrimage, Ibrāhīm is not mentioned among the sons who were brought there by al-Sarjuwānī; only Aḥmad and Abū Bakr were meant to take part in the trip. See al-Maqrīzī, *Al-Sulūk,* 2:355.

[100]Al-Yūsufī, *Nuzhat al-Nāẓir,* 272; al-Maqrīzī, *Al-Sulūk,* 2:387. According to al-Maqrīzī, Ibrāhīm arrived in Cairo on Monday 3 Dhū al-Ḥijjah/25 July 1335, but this day fell on Tuesday, not Monday.

[101]Al-Ṣafadī, *Al-Wāfī,* 6:138; al-Yūsufī, *Nuzhat al-Nāẓir,* 272; al-Maqrīzī, *Al-Sulūk,* 2:387.

[102]Al-Yūsufī, *Nuzhat al-Nāẓir,* 290; al-Maqrīzī, *Al-Sulūk,* 2:392. He was probably made amir of ten at that time, because he received the higher rank (amir of forty) later.

[103]The marriage was consummated on 1 Rabīʿ I/8 October of the same year. See al-Shujāʿī, *Al-Tārīkh,* 3.

[104]In Rabīʿ II 738/October–November 1337 (consummated on 20 Shaʿbān 738/13 March 1338). See al-Shujāʿī, *Tārīkh,* 18 and 29. For Aḥmad, see above (the dates do not really tally). It is interesting to note that another of Ibrāhīm's brothers, Yūsuf, was married during the same year to another daughter of the same amir. See al-Maqrīzī, *Al-Sulūk,* 2:436.

[105]The marriage, probably never consummated, took place just before Ibrāhīm died. See al-Shujāʿī, *Tārīkh,* 34 and 33.

[106]Ibid., 34.

[107]He was buried in his uncle al-Ashraf Khalīl's mausoleum. Ibid.; al-Ṣafadī, *Al-Wāfī,* 6:138; Ibn Ḥajar, *Al-Durar al-Kāminah,* 1:68.

[108]If the following words are to be trusted, Ibrāhīm was aware that he could have ruled at some

The Last Resort: Abū Bakr

When Abū Bakr was put on the throne, on 21 Dhū al-Ḥijjah 741/7 June 1341, it is said that he was about 20, from which it may be inferred that he was born around 721/1320. His mother, Narjis, gave her husband two other sons (Yūsuf and Ramaḍān) who were Abū Bakr's younger brothers. Nothing is known of his childhood, either in the harem or after he left it. However, in 732/1332, he was already in al-Karak with his brothers Aḥmad and Ibrāhīm, whom he probably joined in 731/1331 (the same year in which the latter arrived there). He thus left Cairo at the age of about 10 to receive the same military training as his brothers. These years are shrouded in mist; unless events that occurred there had an echo in the capital, as with Aḥmad's debacle for instance, chroniclers ignored what happened in this peripheral place. It seems that Abū Bakr's teenage years were different from those of his elder brother, as nothing is reported regarding him before 735/1334. On 4 Rabīʿ I/4 March, Abū Bakr, who like his brother Ibrāhīm had been brought back to Cairo, was granted the title of amir a year before the latter was to receive this title.[109] On that occasion, Qawṣūn led a procession from his stables up to the citadel, during which all the royal mamluks rode in attendance of Abū Bakr, who was wearing the *sharbūsh*. Apparently, Abū Bakr remained in Cairo with Ibrāhīm, at which point his father made another decision that would have an enormous impact on his career: he decided to marry him to Ṭuquzdamur al-Ḥamawī's daughter. This was indeed a profitable day for this amir, as the contract was concluded on the same day as Ibrāhīm's with Ṭuquzdamur's other daughter.[110] Incidentally, by that time, Ṭuquzdamur was probably already married to Abū Bakr's mother and one of his other wives was one of al-Nāṣir Muḥammad's daughters.[111] The place where the contract was concluded (Qawṣūn's house) demonstrates once more that these marriages between the sultan's children and his amirs and their children had implications beyond what is generally believed. A few months later (12 Ramaḍān 737/14 April 1337), Abū Bakr was poised to play a significant part in an attack against al-Nashw which could have cost the latter his life. Abū Bakr's name is mentioned as one of the potential enemies engaged in the affair, but in the end, al-Nashw was not harassed.[112]

It has been noticed that Ibrāhīm and Abū Bakr had almost parallel careers in their appointments and relationships. This was again true when Ibrāhīm was

---

time after his father: "*anā amūt qablak aw atamallak baʿdak.*" See al-Shujāʿī, *al-Tārīkh* 34.

[109]Al-Yūsufī, *Nuzhat al-Nāẓir,* 236; al-Maqrīzī, *Al-Sulūk,* 2:379.

[110]Al-Ṣafadī, *Al-Wāfī,* 10:252; al-Maqrīzī, *Al-Sulūk,* 2:407. For Ibrāhīm, see above.

[111]For the latter marriage, see al-Maqrīzī, *Al-Sulūk,* 2:698.

[112]Ibid., 422. The name provided is Abū Bakr ibn al-Nāṣirī Muḥammad. See also Levanoni, *A Turning Point in Mamluk History,* 75.

made amir of forty: Abū Bakr was promoted to the same rank in the same year (738/1337–38). During the following year (739/1339) al-Nāṣir Muḥammad lost any hope for Aḥmad; he had been called back to Cairo and admonished to abandon his boyfriend, but had refused and was ready to commit suicide if he was not left in peace. In view of this, his father made the decision not to waste any more time with this son and to send Abū Bakr in his place.[113] As had been the case with Aḥmad, this settlement in al-Karak, at a time when their father was already an old man, can be considered a test. Ānūk was still the first choice for succession, but he needed a backup. The experiment does not seem to have been concluded: in 740/1339, after his brother Ānūk had disappointed his father with his infatuation for a singing slave-girl, Abū Bakr was invited to visit al-Nāṣir Muḥammad. He brought along a gift of more than two hundred thousand dirhams, but it soon was discovered that this amount had been taken from the people of al-Karak in the form of an unrefusable loan—those who opposed it had been killed.[114] Later, Bashtāk was asked to bring Ānūk and Abū Bakr to al-ʿAbbāsah, where they all stayed a few days before coming back to the citadel: no reason is given for this retreat,[115] but in the end, Abū Bakr turned back to al-Karak, now his residence. He remained there until 20 Dhū al-Ḥijjah 740/17 July 1340, when he returned to Cairo at his father's request, and the latter gathered his amirs and asked them to take an oath in the form of a sworn covenant to support him *(ḥilf)* personally and his son Abū Bakr, after his death.[116] The oath was augmented by generous gifts of money to each amir according to his rank. The news of this official designation put the city in a state of agitation.[117] Interestingly, Ānūk was still alive at that time (he died a month and a half later), but it is reasonable to think that he was not in good health. Backed up by an official appointment, Abū Bakr rode back to his stronghold at al-Karak, expecting news of his brother's impending death. The order to present himself at the citadel of Cairo arrived in Rajab 741/January 1341; Abū Bakr's arrival, on the 24th/13th of the same month, was accompanied by another gift of one hundred thousand dirhams for his father. On that occasion, al-Nāṣir Muḥammad gave orders to bring Abū Bakr's units (his *ṭulb* and mamluks) from al-Karak to Cairo, as well as all the revenues held in al-Karak.[118] Aḥmad, on his

[113]Al-Shujāʿī, *Al-Tārīkh,* 49.

[114]Al-Maqrīzī, *Al-Sulūk,* 2:492.

[115]Ibid., 2:493.

[116]On the oath as a form of designation in the Mamluk period, see Holt, "The Position and Power of the Mamlūk Sultan," 241. The case is quite different here, as it took place before the sultan's death and in presence of the army (the amirs first, then the soldiers). Moreover, as shown by the sources, they were paid for taking that oath.

[117]Al-Maqrīzī, *Al-Sulūk,* 2:499.

[118]He also received the *iqṭāʿ* of a Mamluk whose charge had been modified (Bahāʾ al-Dīn Aṣlam

way to his exile in Ṣarkhad, was finally directed to al-Karak, where he was likely to remain quiescent under the supervision of Maliktamur al-Sarjuwānī, the newly appointed governor.[119] Clearly, Abū Bakr had to remain in residence in Cairo out of necessity, as his elder brother was not to play any role in the succession. The following months were marked by new signs of Abū Bakr's preparation to succeed his father: he was granted the fief of an amir, Bashtāk was asked to look after his interests and, consequently, the *wāfidīyah* of Aleppo were put in his service, along with other troops. The reason for all of this was clear: the old sultan wanted his son to be prepared to rule.[120] The effective nomination took place when al-Nāṣir became convinced that he would not survive his illness. On 18 Dhū al-Ḥijjah 741/4 June 1341, on his deathbed, al-Nāṣir convened his senior amirs and his royal mamluks and asked them to swear the covenant in favor of Abū Bakr. He gave him his grandfather's sword and conferred upon him the latter's *laqab* (al-Malik al-Manṣūr).[121] His last will was fulfilled three days later: the transfer of power went smoothly, to the greatest surprise of the populace.[122]

"I Am Aware That Not One of My Children Is Fit [for the Sultanate]"

The starting point of my investigation was to consider whether al-Nāṣir Muḥammad, who had a greater progeny than any other Mamluk sultan, consistently planned to prepare his sons to succeed him on the throne. Given that Qalāwūn himself was succeeded by two of his sons (without taking into account a nominated son who died well before he could rule), it is legitimate to ask whether al-Nāṣir Muḥammad ever thought of being succeeded by one of his sons, and if so, whether he did anything in order to facilitate his accession to the throne and to compel his own mamluks to accept an heir on the basis of genealogy.

Conscious of being the son of a mamluk himself, and thus a member of the *awlād al-nās* (sons of the elite), al-Nāṣir Muḥammad was fully aware that, in a self-defining non-hereditary system such as the Mamluk sultanate, where legitimacy lay more in merit than in genealogy, his desire to see one of his sons succeed him on the throne would remain a vain wish if he failed to plan carefully. Preparation, i.e., education and training (from a military point of view), but also the creation of a network of faithful supporters, could constitute a decisive element in this respect. Considering the biographical elements gleaned from what historians and

received the governorship of Ṣafad instead) on 18 Ramaḍān 741/7 March 1341. See al-Shujāʿī, *Al-Tārīkh,* 97.

chroniclers have deemed worthy of mention, we notice that several concordant elements concern the sons who received such training (Aḥmad, Ibrāhīm, and Abū Bakr): residence in al-Karak, promotion, and marriages.

Ever since it was seized by the Ayyubids, the fortress of al-Karak had been linked to the ruling sultan in Egypt. In the Mamluk sultanate, during the Turkish period, this link was not weakened; on the contrary, several members of the Qalāwūnid family resided in the fortress on several occasions and under various circumstances. Al-Nāṣir Muḥammad himself was well acquainted with it—he resided there on two occasions when his power was usurped by a rival. When he regained power the first time, he had spent most of his teens in that place, consolidating his ties with the inhabitants and the neighboring Bedouins, among others. It is thus no surprise that he decided to send the sons who were the most likely to succeed him to al-Karak, once they came out of the harem; their age was between 8 and 10 and their stay there, far from the court, the harem, and the intrigues, was meant as a formative exile during which each son must be trained in horsemanship and hunting, according to the sources, and also educated in the Mamluk way.[123] As *awlād al-nās,* they would always lack *khushdāshīyah,* the fraternal ties that characterized the mamluks raised in the barracks, but at least they could develop relationships with the mamluks put in their service. Among the three sons, the one who best succeeded in creating a network of relationships was Aḥmad. However, his network relied not on the mamluks, but on the Bedouins of the surrounding area: he dressed like them, he hunted with them, and he even loved one of them. His link with al-Karak was so strong that he even refused to leave it once he was chosen as sultan, and in the end, when he did leave it, it was for a short period of two months, before he went back to the place where he had grown up.[124] Instead of *khushdāshīyah,* Aḥmad had developed *ʿaṣabīyah*![125] This tribal network worked for several years, even after his deposition, but in this context, it was the wrong type of network.

During his long reign, al-Nāṣir Muḥammad is reputed to have introduced an innovation generally regarded as detrimental to the Mamluk system: promotion of

[123]This formative role played by al-Karak had already been noted in 1976 by Muḥammad ʿAdnān al-Bakhīt. The original work in Arabic was not available to me. The quote is from the German translation: Alexander Scheidt, *Das Königreich von al-Karak in der mamlūkischen Zeit* (Frankfurt, 1992), 84–85. On al-Karak, see now Marcus Milwright, *The Fortress of the Raven: Karak in the Middle Islamic Period (1100–1650)* (Leiden, 2008).

[124]Once deposed, he proposed to remain in al-Karak as governor, considering the fortress as a heritage received from his grandfather and father, where his brothers, sent in exile to Qūṣ by Qawṣūn, had to be sent in order to live with him. See al-Shujāʿī, *Al-Tārīkh,* 147 ("*inna hādhihi qalʿat al-Karak hiya wirāthah la-nā min abī wa-jaddī*").

[125]Al-Maqrīzī, *Al-Muqaffá,* 1:385 ("*fa-kathurat qālat al-Karakīyīn wa-tajammaʿū khawfan ʿalá Aḥmad wa-ʿaṣabīyatan ʿalayhi*").

the *awlād al-nās,* a rather new category in Mamluk society, in the army. Promotion regarding his own sons must thus not be considered an unusual practice. In each case, with the exception of his preferred son, Ānūk, who was presented as the designated heir and immediately made amir of one hundred, they started their career in the hierarchy at the lowest rank, i.e., amir of ten. They were then promoted to the intermediary rank of amir of forty, but never to the highest rank. These promotions must be seen in the light of the training mentioned earlier, but also as answering to the necessity to link the eldest sons to the army, the senior amirs, and the royal mamluks. The ceremonies that took place on each occasion were orchestrated by al-Nāṣir Muḥammad's closest amirs (Qawṣūn and Bashtāk). In every instance, the sons wore a symbol of power, albeit one associated with a previous ruler: the emblem of the grandfather, Qalāwūn, whose mausoleum was always the meeting point for the procession through the city. On the other hand, it is reported that none of these four sons received a *malik* title. As a young father, at the beginning of his reign, al-Nāṣir Muḥammad had followed his own father's practice in attributing such a title to more than one son; his first two sons were thus known to have received such titles. However, they died in infancy, and it seems that al-Nāṣir Muḥammad never applied this practice again. When a contemporary chronicler, al-Ṣafadī, mentioned that Abū Bakr and Ibrāhīm were made amirs of forty, he stressed that they received neither a *malik* title nor a *laqab*—they were just called "Sayyidī Ibrāhīm or Sayyidī Abū Bakr, the amirs."[126] From this, it may be inferred that, in the eyes of a contemporary witness who was fully acquainted with the Mamluk system by origin, a logical link existed between such a promotion and the attribution of such a title to a sultan's sons. The reason why al-Nāṣir Muḥammad no longer conferred the *malik* title is unknown, but it might be for fear of losing his own power, or out of superstition (as already stressed, two sons who received it died in infancy).

Marriages undoubtedly played another important part in preparing the way for his sons to succeed him. "Al-Malik al-Nāṣir's ingenious marriage policy, reminiscent of the dynastic manoeuvrings of the house of Habsburg in fifteenth century *Felix Austria,* created a network of dependencies and loyalties between the sultan and his sons and daughters, on the one hand, and the senior amirs and their offspring, on the other."[127] The effects of this marriage policy have been considered questionable because the fathers-in-law of his sons were "outsiders," and as such they were devoid of *khushdāshīyah* and thus unable to lead a faction

---

[126]Al-Ṣafadī, *Al-Wāfī,* 6:138: "*wa-lam yusamma aḥad minhumā bi-Malik wa-lā luqqiba bal kāna al-nās kulluhum yaqūlūna Sayyidī Ibrāhīm aw Sayyidī Abā Bakr al-umarāʾ.*"

[127]Ulrich Haarmann, "Joseph's Law—The Careers and Activities of Mamluk Descendants before the Ottoman Conquest of Egypt," in *The Mamluks in Egyptian Politics and Society,* ed. Thomas Philipp and Ulrich Haarmann (Cambridge, 1998), 66.

powerful enough to impose itself on Mamluk politics.[128] Whatever these effects might have been if they were ever weighed, it remains that they created strong ties in most cases which proved beneficial after al-Nāṣir Muḥammad's death.[129] One can take the case of Ṭuquzdamur al-Ḥamawī, who crafted numerous links with the sultan; he was not only the husband of Narjis, the former concubine of al-Nāṣir Muḥammad and mother of Abū Bakr,[130] but he later married a daughter of his master,[131] and two of his own daughters were married to the sultan's sons Abū Bakr (now his stepson),[132] and Ibrāhīm.[133] It is no wonder that he became Abū Bakr's *nāʾib al-salṭanah* when the latter was enthroned, as well as his strongest supporter. One may wonder, once again, if these ties were not created to strengthen the position of the sultan's sons and to substitute for the lack of links between these sons and the mamluks.[134]

What went wrong? On his deathbed, al-Nāṣir Muḥammad is said to have advised his mamluks to obey his designated heir Abū Bakr on the condition that he acted as a good ruler. If this proved not to be the case, they were urged to depose him and replace him with any of the surviving sons (referred to as minors, which they were), but under no circumstances should Aḥmad be brought to Egypt and put on the throne.[135] Though the historian must remain cautious with the sources, especially with alleged oral reports, it appears that in this particular case, the substance of this advice was more than likely part of al-Nāṣir Muḥammad's last will. The fact that this advice was repeatedly followed by mamluks who were present on that occasion, when one of his sons had to be deposed, even twenty years later, corroborates its historicity.[136] In pronouncing these words, al-Nāṣir Muḥammad put in the mamluks' hands a double-edged sword. They were indeed authorized to depose those sons who disrespected the mores of proper rulership, but on the other hand, they were exhorted subsequently to enthrone

another son. It would take forty years for this cycle to be broken. Aside from the various reasons that could be invoked to try to explain why one faction could not prevail over another and consequently seize power to the detriment of al-Nāṣir Muḥammad's scions, it must be acknowledged that his last decision was his most successful, the apex of a long and perhaps Machiavellian reign: he managed to keep power within his family. In most cases, when one of his descendants was deposed, whatever the reasons put forward, the mamluks routinely chose the elder rather than the younger candidate, thus demonstrating that they were hoping for a promising sultan rather than a puppet.[137] Moreover, for several decades, al-Nāṣir Muḥammad's progeny supplied an almost endless reservoir of suitable candidates to the sultanate; among the *awlād al-nās,* they constituted a separate, privileged category, the *asyād,* the descendants of a sultan, the family of a ruler, the members of a *bayt,* who not only formed a special unit inside the *ḥalqah,*[138] but also had the right to reside at the citadel.[139] It was not until almost a century later, during Barsbāy's reign (in 836/1433), that al-Nāṣir Muḥammad's scions were finally ousted from the citadel, together with the idle mamluks.[140] Even in

[137]See Van Steenbergen, "'Is anyone my guardian . . .?' Mamlūk Under-age Rule and the Later Qalāwūnids." See also, for instance, al-Shujāʿī, *Al-Tārīkh,* 140 (Baybars al-Aḥmadī's reaction at the nomination of Kujuk, still a child: "*lā yaṣluḥ illā man yakūn rajul kabīr yaʿrif tadbīr al-mulk*").

[139]See al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 3:87, regarding Ḥājjī ibn al-Ashraf Shaʿbān: "*wa-amarahu bi-iqāmatihi fī dārihi bi-qalʿat al-jabal jaryan ʿalá ʿādat banī al-asyād.*" According to al-Maqrīzī, there were more than 600 of them living in the citadel in the twenties of the ninth/fifteenth century. They got revenues from various sources (salaries from the sultan and fiefs). See al-Maqrīzī, *Durar al-ʿUqūd al-Farīdah,* ed. Maḥmūd Jalīlī (Beirut, 2002) 1:572–73 ("*wa-aqāma fīman aqāma min Banī Qalāwūn bi-qalʿat al-jabal wa-la-hum fuḍūl amwāl wa-murattabāt sulṭānīyah wa-iqṭāʿāt wa-kāna yuqāl la-hum al-asyād wa-balaghat ziyādatuhum ʿalā sitt miʾah fa-lam yazal ʿadaduhum yaqillu wa-māluhum yanquṣu wa-saʿduhum yadburu wa-jāhuhum yaḍmaḥillu ḥattá ṣārū ilá ḍīq baʿd jāh ʿarīḍ wa-dawālīb kathīrah li-iʿtiṣār qaṣab al-sukkar bi-bilād al-ṣaʿīd wa-maṭābikh lil-sukkar bi-madīnat Miṣr wa-khuddām ṭawāshīyah la-hum ʿadad kathīr wa-amwāl jammah wa-takhdimuhum ʿiddat mubāshirīn yuʿrafūn bi-mubāshirī al-asyād li-kull kabīr min al-asyād dīwān mufrad."*) Besides this, the *asyād* were awarded amirate ranks with suitable *iqṭāʿāt*. See Levanoni, "*Awlad al-nas,"* 100–1. The lands they held were reintroduced in the *iqṭāʿ* system when Barqūq instituted the *dīwān al-mufrad*. See Ulrich Haarmann, "The Sons of the Mamluks as Fief-Holders in Late Medieval Egypt," in *Land Tenure and Social Transformation in the Middle East,* ed. Tarif Khalidi (Beirut, 1984), 142–44.

[140]See al-Maqrīzī, *Al-Sulūk,* 4:889–90 : "*wa-muniʿa man baqiya min al-asyād awlād al-mulūk min dhurrīyat al-Nāṣir Muḥammad ibn Qalāwūn min sukná al-Qāhirah wa-ṭulūʿihā wa-ukhrijū min dūrihim bi-hā wa-kānū lammā muniʿū min sinīn sakana aktharuhum bi-al-Qāhirah wa-ẓawāhirihā fa-dhallū baʿd ʿizzihim wa-tabadhdhalū baʿd taḥajjubihim wa-baqiya min aʿyānihim ṭāʾifah muqīmah bi-al-Qalʿah wa-tanzil bi-al-Qāhirah li-ḥājātihā thumma taʿūd ilá dūrihā fa-ukhrijū bi-ajmaʿihim fī hādhihi al-ayyām*

801/1398–99, some of them had been granted a stipend by Barqūq on the sole basis that they were part of the late sultan's progeny.[141]

In conclusion, we have seen that the issue of succession inside the Qalāwūnid house had been considered by al-Nāṣir Muḥammad at a very early date. In order to prepare his most promising successors for the throne, he chose to adopt a series of measures that concerned most of these sons, measures mostly echoed by a "mirror for princes" written contemporarily with these events. The main motive for such preparation was the notion that, being sons of the ruler and thus *awlād al-nās,* they would lack relationships, ties, and links with the most powerful mamluks, a network of supporters, and qualities needed for rulership. If preparation was not a guarantee of success, it should have helped these sons in any case. What al-Nāṣir Muḥammad probably failed to realize was that experience was also required to be an effective ruler.

wa-muniʿū min al-qalʿah fa-tafarraqū shadhar madhar kamā faʿala abūhum al-Nāṣir Muḥammad ibn Qalāwūn bi-awlād al-mulūk Banī Ayyūb wa-kadhālik faʿala Allāh bi-Banī Ayyūb kamā faʿala abūhum al-Kāmil Muḥammad ibn al-ʿĀdil Abū Bakr ibn Ayyūb bi-awlād al-Khulafāʾ al-Fāṭimīyīn 'wa-la yaẓlim rabbuka aḥadan' [*al-Kahf*, 49]." The reference to a previous partial expulsion must be dated to the end of 825/1422, at the beginning of Barsbāy's rule. See al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* 8:184.

The Tribal Dimension in Mamluk-Jordanian Relations

A growing interest in provincial history is producing alternative understandings of Mamluk political culture, ones that recognize the contributions and influence of local actors.[1] Given the uniquely local perspective of Syrian sources, the frequency with which one encounters references to local families and their larger tribal networks is not surprising. Jordanian *nisbah*s are a staple of Syrian biographical dictionaries, *waqfīyāt,* and chronicles of the late fourteenth and fifteenth centuries, indicating the degree to which the peoples of Transjordan participated in the cultural, intellectual, economic, and indeed political life of the time in southern Syria. Malkawis, Ḥisbānīs, and Ḥubrasis made academic careers in Damascus, Jerusalem, and Cairo and were active in Sufi organizations outside their home towns; Shobakis acquired land at an early stage in the development of private estates, endowing much of it as family and charitable *awqāf* at the turn of the ninth/fifteenth century; ʿAjlūnīs controlled markets and were successful in business; Kerakis were a constant challenge to the state in the fifteenth century, playing an active role in rebellions of myriad forms.[2] These teachers, businessmen, and rebels, regardless of where they were actually born and raised, traced their

roots to Jordan, the majority maintaining close ties with kin there.[3]

There was, of course, no "Jordan" in the Mamluk period—a province (Mamlakat Karak) and the southernmost district of another (Mamlakat Dimashq) comprised the territory of what is today's Hashemite Kingdom. The region was, in short, not an administrative unit. This is not the place to postulate whether, in spite of this, a "Jordanian" identity existed then—that belongs to another study. Nonetheless, there was, as there is today, a strong tribal dimension to Transjordanian society, a social cohesion created and reinforced by tribal ties and self-reference. Contemporary sources support this anthropological understanding of tribal society, as they describe the extent to which the Mamluk state tried at times to engage, at others break through, the complex tribal networks that permeated Jordanian societies. Economic life was, in part, structured by these networks, as were the relations that bound scholars in Damascus to ʿAjlūn and Kerak and Jerusalem. Moreover, political power here was channeled through such networks, on both the local and imperial levels. The Mamluk state could not avoid encounters and confrontations with Jordanian tribes and their wide-flung and complex web of political, social, and economic ties.

While Transjordan represented the eastern frontier of the Mamluk empire, it was not peripheral to the political and strategic interests of the state. Transjordan was a linchpin in the Mamluk state's defense against foreign invasion, as well as control over the peoples of Syria. At the beginning of the Mamluk period Transjordan represented a security concern; Ayyubid princes still maintained castles there, and the principle hajj route from Damascus to Mecca ran through the middle of the region. Sultan Baybars initiated an ambitious defensive project that involved reinforcing the citadel walls and towers at former Ayyubid castles, such as Kerak and Shobak, and building new fortifications at what would become rural capitals, such as Ḥisbān and Salṭ.[4] He also built and leveled roads and reorganized the *barīd* system that would, by the eighth/fourteenth century, blossom into a comprehensive communications network of postal centers *(marākiz),* pigeon and fire towers, and caravan and pilgrim stops. Local tribesmen, who maintained tight social networks and were well armed and mobile, represented an immediate threat to this infrastructure. To secure the eastern frontier required controlling a complex tribal society that was not fully understood, culturally marginal, and never wholly incorporated into the state structure.

Recent scholarship in political anthropology and post-colonial theory have demonstrated that peoples and places normally on the geographical and cultural

[3]The complex meanings of *nisbahs* in the Mamluk period is considered in David Ayalon, "Names, Titles, and 'Nisbas' of the Mamluks," *Israel Oriental Society* 4 (1975): 189–232.

[4]Bethany Walker, "Mamluk Investment in Southern *Bilād al-Shām* in the Fourteenth Century: The Case of Ḥisbān," *Journal of Near Eastern Studies* 62, no. 3 (2003): 243.

margins of the state emerge in times of political flux as critical to its maintenance or reform.[5] The "imperial margins" described in such work are places of partial belonging that have always demonstrated some degree of autonomy or are beyond complete state control; are often subjected to irregular administrative practices, administrative or economic experimentation, and sporadic political violence; and are frequently the locus of resistance. They provide an ideal vantage point from which to observe the instability of state power and the mechanisms of its transformation. Tribal societies, which are flexible in structure and tend to move in and out of imperial systems as sociopolitical conditions change, are natural "margins" through which to evaluate political change.[6] Rather than merely impassive subjects of imperial action, they can be political agents in their own right, impacting the state in important ways.

The following offers a few thoughts on ways to evaluate the exercise of political power by the Mamluk state in Transjordan at the turn of the fifteenth century. The central point of reference is the multiple relationships between the state and local tribes, considering not only the imposition of the imperial authority on local peoples, but also the ways in which the tribes helped to shape political culture in the region. It is a provincial perspective on Mamluk politics that pulls on textual and anthropological analysis and archaeological data to evaluate the ability of local actors to transform the imperial system during periods of political instability and turmoil.

Defining Jordanian Tribalism

Before we address the question of whether the Jordanian tribes were a political force at the turn of the fifteenth century, we must define what we mean by a "tribe." The anthropological definition is a group of people that claim descent from a common ancestor. The term usually reserved for this in contemporary sources is "*ʿashīr*" (pl. *ʿushrān*). Local clans and tribal confederations are collectively referred to as *ʿushrān*.[7] The term refers to a form of social organization and is not

[5]Veena Das and Deborah Poole, eds., *Anthropology in the Margins of the State* (Oxford, 2004); Thomas Hansen and Finn Stepputat, *Sovereign Bodies: Citizens, Migrants, and States in the Postcolonial World* (Princeton, 2005).

[6]Øystein LaBianca, "Indigenous Hardiness Structures and State Formation in Jordan: Towards a History of Jordan's Resident Arab Population," in *Ethnic Encounters and Change,* ed. Muhammad Sabour and Knut Vikør (London, 1997), 143–57.

[7]A comprehensive presentation on the individual tribes of Jordan is well beyond the scope of this article. The reader should consult one of several works available on the topic. Al-Ẓāhirī describes individual Transjordanian tribes in some detail (Ghars al-Dīn Khalīl ibn Shāhīn al-Ẓāhirī, *Zoubdat kachf el-mamâlik: Tableau politique et administrative de l'Égypte, de la Syrie et du Hidjâz sous la domination des soultans mamloûks du XIII au XV siècle,* ed. Paul Ravaisse [Paris, 1894], 105ff). In the third chapter of his chancellery manual, *Kitāb Tathqīf,* Ibn Nāẓir al-Jaysh, an official of Sultan

specific to any economic strategy or settlement pattern: it can refer to peasants, herdsmen, villagers, nomads, or any combination of these.[8] The term is generally used in collective reference to the Muslims of Transjordan.[9] More often individual tribes or clans are named, in the context of specific events, such as targeted strikes on specific tribes by Mamluk amirs[10] or the hospitality shown by others towards a sultan.[11]

Among the *ʿushrān* of Jordan, Syrian sources differentiate between the *ʿurbān* and *ahl al-balad.*[12] The *ʿurbān* (s. *ʿarab*) appear with the most frequency on account of their attacks on state officials and villages and raids on trade and pilgrimage caravans.[13] The violence of this group is often cited by contemporaries as a

---

Barqūq, describes the proper address for Arab amirs and tribal leaders in formal correspondence (Taqī al-Dīn ʿAbd al-Raḥmān ibn Muḥammad al-Taymī al-Ḥalabī al-Miṣrī ibn Nāẓir al-Jaysh, *Kitāb Tathqīf al-Taʿrīf bi-al-Muṣṭalaḥ al-Sharīf,* ed. Rudolf Veselý (Cairo, 1987). Brief references to individual tribes and events, however, are found in most Arabic sources of the period. See also A. S. Tritton, "The Tribes of Syria in the Fourteenth and Fifteenth Centuries," *Bulletin of the School of Oriental and African Studies* 12 (1947): 567–73; Frederick Peake, *A History of Jordan and its Tribes* (Coral Gables, 1958); Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 135–40; and Ḥajjah, *Al-Tārīkh al-Siyāsī,* 211–17, for information regarding their political relationships to one another, territory under their control, and their impact on the local economy.

[8]For a discussion of the wide-ranging use of this term in a Jordanian context, see Ḥajjah, *Al-Tārīkh al-Siyāsī,* 211–22. For an alternative understanding of the term, as semi-nomadic or sedentarized tribes, see Robert Irwin, "Tribal Feuding and Mamluk Factions in Medieval Syria," in *Texts, Documents, and Artefacts: Islamic Studies in Honour of D. S. Richards,* ed. Chase Robinson (Leiden, 2003), 256.

[9]Jordan has a significant Christian minority, historically concentrated in the larger towns of Kerak, Shobak, and ʿAjlūn. They are generally referred to as among *ahl al-Karak, ahl al-Shawbak,* and so on (Walker, *Jordan in the Late Middle Ages,* Ch. 2).

[10]The Banū al-Maghrāwī were singled out among the *ʿurbān* of ʿAjlūn District for their insolence and independence. In 807/1404 the governor of Syria seized their homes, money, crops, and other property and demanded from every clan *(kull ṭāʾif min al-ʿarab)* a number of camels to carry the grains to ʿAdhriʿāt (Taqī al-Dīn Abī Bakr ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. ʿAdnān Darwīsh [Damascus, 1997], 4:397).

[11]For the hosting of Sultan Barqūq by the Beni Mahdi at Ḥisbān, see below.

[12]Ibn Ḥijjī occasionally differentiates villagers and farmers *(al-nās min arbāb al-qūrah wa-al-baṣaṭīn)* from the *ʿarab;* both, however are *ʿashīr* (see, for example, Shihāb al-Dīn Abū al-ʿAbbās al-Saʿīdī al-Ḥasbānī ibn Ḥijjī al-Dimashqī, *Tārīkh Ibn Ḥijjī,* ed. Abū Yaḥyá ʿAbd Allāh al-Kundarī [Beirut, 2003], 2:769, 777).

[13]The most powerful and established tribes of the *ʿurbān* were the Banū Sakhr (and their clans), the Banū ʿUqbah (and their clans), and the Banū Lām (Muḥammad al-Bakhīt, "Mamlakat al-Karak fī al-ʿAhd al-Mamlūkī," as *Das Königreich von al-Karak in der mamlukischen Zeit,* ed. Alexander Scheidt [Frankfurt am Main, 1993], 31–32; Ḥajjah, *Al-Tārīkh al-Siyāsī,* 211–30; Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 135–40). The Banū Lām were arguably the greatest of the Transjordanian tribes, as well as the most ruthless. They are best known in Mamluk sources as the tribesmen who made

factor in the economic decline of Syria and the political collapse of the Mamluk provinces.[14] They also appear as part of the state apparatus as caravan guides and guards and are appeased, temporarily, through assignments of amirships and *iqṭāʿāt*. In addition, the Jordanian *ʿurbān* provided the Mamluk state with horses for the *barīd,* camels for transport of grain, and sheep, a staple of the Mamluk diet and a specialty of local herdsmen, then as today.[15] Although the term is used to denote a local Arab elite, it is not entirely clear what specific social, political, or economic groups belonged to it.[16] It is easier, however, to define what the *ʿurbān* were not: they were not Christians, local merchants, or town dwellers.[17] They do include armed groups of Muslims that lived on the desert periphery. According to al-ʿUmarī, the *ʿurbān* included Arabs who claimed descent from the nomads of the Arabian Peninsula, regardless of whether they continued the nomadic existence or had settled in villages.[18] While largely herdsmen, it is likely that many lived at least seasonally in small villages and did some farming.[19]

The term *ahl al-balad* refers to everyone else. Ibn Qāḍī Shuhbah, one of our most important sources on Jordanian society in this period, uses the term in the broad sense of the people of a region,[20] but more frequently townsmen, villagers, and residents of dispersed hamlets, in other words people of an identifiable residence. They comprised both Muslims and Christians and included local officials and the intelligentsia, merchants, and tribal leaders who lived inside the town proper.[21]

---

a living from attacking pilgrim caravans and killing those present.

[14]According to Ḥajjah, the local *ʿurbān* were a critical factor in the financial collapse of Transjordan in the fifteenth century. Their attacks on hajj caravans did considerable damage to the businesses that supported them, and their raids on Jordanian towns and villages destroyed local trade and agriculture, leading to demographic decline (Ḥajjah, *Al-Tārīkh al-Ḥaḍarī,* 229–30).

[15]Ibn Qāḍī Shuhbah, *Tārīkh,* 4:397; Sato Tsugitaka, *State and Rural Society in Medieval Islam: Sultans, Muqtaʿs and Fallahun* (Leiden, 1997), 98.

[16]Rapoport comes to a similar conclusion regarding the *ʿurbān* of contemporary Egypt (Yossef Rapoport, "Invisible Peasants, Marauding Nomads: Taxation, Tribalism, and Rebellion in Mamluk Egypt," *Mamlūk Studies Review* 8, no. 2 [2004]: 1–22.).

[17]For a fuller discussion of this argument, see Walker, *Jordan in the Late Middle Ages,* Ch. 3.

[18]See discussion in Rapoport, "Invisible Peasants," 16–17.

[19]See note 23.

[20]In this sense, note, for example, an incident reported by Ibn Qāḍī Shuhbah: in a struggle over the governorship of Kerak in 802/1399, all the local people *(ahl al-balad)* supported the incumbent (Ibn Qāḍī Shuhbah, *Tārīkh,* 4:81).

[21]Occasionally the medieval historian will emphasize the presence of Christians among the "people" *(ahl)* of the town, particularly in cases of conflict with the local Muslim community, when their loyalty is in doubt. To cite one example, after executing his two top amirs, Alṭunbughā and Ṭashtamur, in 742/1342, Sultan al-Nāṣir Aḥmad ordered the people of Kerak *(ahl al-Karak),* "Christians and others," to take the widows and children of these amirs by force, an action strongly

Culturally, they were virtually indistinguishable from the *ʿurbān,* many of whom belonged to the same *ʿushrān*. Both groups were armed and shared the same customs, value system, and local identity: both the *ʿurbān* and *ahl al-balad* of Kerak were "Kerakis." Socially, however, *ahl al-balad* were distinguished from other tribesmen, as the Christians among them did not belong to the extensive tribal networks that comprised the *ʿushrān* proper. This is suggested, in part, by the formula "*al-ʿushrān wa-ahl al-balad,*" used by Ibn Qāḍī Shuhbah to indicate the participation of all local people in an event—Muslim and Christian.[22]

The ambiguity of these terms reflects in part an incomplete knowledge about Jordanian tribal society by the Mamluk state as well as its fluid structure and economic strategies. Traditional Jordanian society was always based on a mixed agricultural and pastoral economy. As a result, many individuals spent part of the year in permanently built stone houses in villages, while seasonally living in the fields to guard crops or tend to herds.[23] In addition, residents of large towns often owned land in the countryside, which family members tended and on which they resided seasonally.[24] We will examine this fluidity of residence, which is a survival strategy special to southern Syria, later in this article. Nonetheless, the scholars' demographic categories based on residence and subsistence may not accurately reflect the complexity and overlapping points of self-reference of Jordanians in the fourteenth and fifteenth centuries; neither did the terms used by contemporaries based in Damascus and Cairo. The terms *ʿurbān* and *ahl al-balad* reflect at best the ways state officials understood their engagement with local peoples: one of potential conflict with people in places not easily administered and one of mixed

---

condemned by contemporaries (Ibn Qāḍī Shuhbah, *Tārīkh,* 4:81).

[22]Ibn Qāḍī Shuhbah, *Tārīkh,* 3:107.

[23]A contemporary description of these village houses is reproduced from a fourteenth-century *waqfīyah* in Yūsuf Ghawānimah, "Al-Qaryah fī Junūb al-Shām (al-Urdunn wa-Filisṭīn) fī al-ʿAṣr al-Mamlūkī fī Ḍawʾ Waqfīyat Ādar," *Studies in the History and Archaeology of Jordan* 1 (1982): 363–71. For archaeological reports and architectural analyses of Mamluk-period domestic ruins, see Bāsim al-Maḥāmīd, "Ḥufriyāt Tall Dhibān al-Āthārī Mawsim 2002," *Annual of the Department of Antiquities of Jordan* 47 (2003): 71–76 (Dhibān); Alison McQuitty, "The Rural Landscape of Jordan in the Seventh-Nineteenth Centuries AD: the Kerak Plateau," *Antiquity* 79 (2005): 327–38, and idem, "Khirbat Fāris: Vernacular Architecture on the Kerak Plateau, Jordan," *Mamlūk Studies Review* 11, no. 1 (2007): 157–71 (Khirbat Fāris—Kerak Plateau); Bethany Walker and Øystein LaBianca, "Tall Ḥisbān, 2004 Season," *American Journal of Archaeology* 109, no. 3 (2005): 536–39 (Ḥisbān); Bethany Walker, "Northern Jordan Project, 2006 Season: Preliminary Report on Fieldwork in Sahm and Ḥubrāṣ," in "Archaeology in Jordan," ed. C. Tuttle and B. Porter, *American Journal of Archaeology* 111, no. 3 (2007): in print (Sahm and Ḥubrāṣ).

[24]Poliak's observation about the half-sedentary lifestyle of the *ʿurbān* reflects this phenomenon (A. N. Poliak, "Les révoltes populaires en Égypte à l'époque des Mamelouks," *Révue des études islamiques* 8 [1934]: 258).

benefit with places under direct control of the state. In short, such terms stand for two categories of place the state authorities could easily recognize and that fell into two different administrative categories: the walled town (with its village satellites and agricultural hinterland) versus the open countryside.[25]

Perceptions of "the Other"

How did the state engage local tribes and upon what assumptions? Did the cultural distance between urban Cairo and rural Transjordan contribute to misunderstandings or exacerbate political tensions? Kerak emerges from contemporary sources as the ultimate symbol of Jordanian tribalism. The language used to describe the place and its people alternates from disregard to respect and fear, reflecting the political challenges this semi-autonomous provincial capital presented to the state. While certainly unique among administrative and defensive centers in Jordan for its size and political importance, official images of the place are suggestive of the ways local society was at times tamed, at others considered a political threat.

The physical and perceived political and cultural distance of Kerak from Cairo is behind many of the derogatory literary devices used to describe life in Kerak Castle.[26] Written sources present a rather unflattering image of life in the castle, which probably reinforced the belief that the lifestyle adopted by royal exiles here was frivolous and the place politically non-threatening. Here is where a sultan's son would go to drink, meet women (and men), and waste his time; it was a land beyond the legal and cultural norms of Egyptian society; here was freedom from official duties and responsibilities. This is exactly where the perceptions of the capital failed to grasp the political realities of the province. Desert lands are not

[25]The imprecision of nomenclature in reference to local tribes is echoed in the sliding tax scale used by the Ottomans in the sixteenth century to reflect degree of control over the local population (Wolf-Dieter Hütteroth, "Ottoman Administration of the Desert Frontier in the Sixteenth Century," *Asian and African Studies* 19 (1985): 145–55). For example, the tax categories of the *mezrāʿah* were ambiguous and could refer to a hamlet, an isolated (grain) field, or a tribe (ibid., 151–52; see also use of term in the Arabic commentaries on the tax registers of Liwāʾ ʿAjlūn in Muḥammad al-Bakhīt and Noufan Hmoud, *The Detailed Defter of Liwāʾ ʿAjlūn (The District of Ajlun) Tapu Defteri No. 970* (Amman, 1989), and idem, *The Detailed Defter of Liwāʾ ʿAjlūn (The District of Ajlun) Tapu Defteri No. 185, Ankara 1005 A.H./1596 A.D.* (Amman, 1991).

[26]Under normal circumstances, the journey from Cairo to Kerak should have taken a couple of weeks. However, Sultan Baybars in 675/1276 made that trip in only eleven days (Fawzi Zayadine, "Caravan Routes Between Egypt and Nabataea and the Voyage of Sultan Baibars to Petra in 1276," *Studies in the History and Archaeology of Jordan* 2 [1985]: 171). This was an unexpectedly fast trip, as the sultan was on campaign. Sultan Aḥmad in 742/1342, anxious to return to a city to which he had a special attachment, accomplished the same in a mere six days (Joseph Drory, "The Prince Who Favored the Desert: Fragmentary Biography of al-Nāṣir Aḥmad [d. 745/1344]," in *Mamluks and Ottomans: Studies in Honour of Michael Winter,* ed. David Wasserstein and Ami Ayalon [New York, 2006], 27).

necessarily isolated or apolitical, nor are tribal societies without structure and cultural norms. Criticisms of local society and the "laxity" residence here produced in privileged exiles, such as sultans' sons, illustrate a cultural condescension that underestimated its political potential. That is not to say that local tribesmen were not paid off when needed—they certainly were—but there was never a coherent policy to fully incorporate them into the state through marriage alliances, long-term residence, or some degree of assimilation, strategies with cultural currency then and today.[27] Three notable exceptions are found in the practices of Sultans al-Nāṣir Muḥammad, his son Aḥmad, and Barqūq, who made frequent trips to, and occasionally resided in, local towns and "Bedouin" encampments and were familiar with the local culture and its norms.

Al-Nāṣir Muḥammad felt a particular obligation to the people of Kerak, who had played a critical role militarily in returning him to the throne for his third reign and in whose company the sultan often travelled when in Syria. He was exiled twice to Kerak: the first time in 697–99/1297–99 as a child (deposed by his amirs) and then again in 709–10/1309–10, a self-imposed exile, which bought him time and opportunity to build an army and regain the throne. He had developed an attachment to Kerak and had developed political and social ties with its people. This sultan had a special respect for the tribal society of Kerak and its culture. He considered Kerak a kind of wet nurse, a healthy place for future sultans to grow up and grow tough. He sent his own sons there to be trained in martial techniques, utilizing the new *maydān* there for this purpose, and to acquire *furūsīyah.*[28] His sons Aḥmad, Ibrāhīm, Abū Bakr, and Ramaḍān were, essentially, raised there, with the hope that they would acquire the best qualities of tribal culture and would gain the love and respect of the local people.

The language used in two *taqlīds* sent to the amir Maliktamur describes Kerak in terms of "homeland" and its people as the sultan's "flock." In this first document, Maliktamur is assigned the governorship of Kerak and made responsible for the well-being of the sultan's son. The text, preserved by al-Qalqashandī, expresses the sultan's sentiments towards "a land that has become for us a home, whose virtues are in our hearts from love for its people *(min ḥubb al-waṭn),* and where our sons continue to live." Not long afterwards, and shortly before his death, the sultan issued a second *taqlīd,* in which he promotes his son Aḥmad to the governorship but retains Maliktamur's services there to assist him. Here the sultan expresses a patron's care in tribal terms, as he reminds his amir that "these are

[27]While one does read of the occasional marriage between Mamluk and tribal families, they are exceptional. Note, for example, the marriage of Amir Minṭāsh to a daughter of Nuʿayr ibn Ḥayyār ibn Muhannaʾ, the great Arab amir of Barqūq's reign. The alliance meant to be solidified by this union, however, failed (Irwin, "Tribal Feuding and Mamluk Factions," 260).

[28]Ghawānimah, *Al-Tārīkh al-Siyāsī,* 195–96; Drory, "The Prince Who Favored the Desert," 19.

our dependants, in your care, and our flock, belonging to us and you. Shield them with your wings, and indulge them."[29] In these documents the sultan adopted culturally appropriate terms to describe his relationship with this province, which was pastoral and tribal.

Thus, the Jordanian *ʿushrān* were imagined simultaneously as a people of particular martial qualities and skills, a flock in need of a shepherd, and a society without structure or discipline. What were Jordanian perceptions of the Mamluk state? It is difficult to identify the particular perspective of the *ʿushrān* in Syrian sources. Such abstractions as cultural perceptions and preferences are not easily retrieved from the archaeological record, either, which is otherwise quite informative about local society—its subsistence, consumption, and standards of living. Nevertheless, formal complaints against local officials by Jordanian villages, which are recorded with greater frequency from the mid-fourteenth century, do articulate the kinds of expectations people had about the state and what practices they found the most exploitative, culturally insensitive, and short-sighted.

In his recent book on Damascus in the Circassian period, the Jordanian historian Yūsuf Ghawānimah spares no words of criticism in his evaluation of the impact of Mamluk policies on rural society. On the basis of polemics by Damascus-based historians, Ghawānimah essentially describes *iqṭāʿ* holders and local officials as exploitative colonists, who were violent and uninterested in the well-being of local people: they "were particularly tyrannical to the peasants, harsh and arbitrary in their dealings, assaulting their honor and property."[30] The critiques of villagers echo these sentiments. The people of the Jordan River Valley (the Ghūr) filed numerous complaints against officials posted there at the turn of the fifteenth century, largely in response to illegal diversion of shared water, forced labor on sugar plantations, physical violence, inability to react to local crises, and inappropriate use of the land.[31] It is in the language used to describe the reception of popular officials, however, that popular images of the state are clarified: Amir Zayn al-Dīn Zubālah (d. 784/1382), *Bāshir al-Aghwār,* "loved the people;"[32] Amir Muḥammad Nāṣir al-Dīn (d. 784/1382), another *Bāshir al-Aghwār,* was "meritorious" *(min mashkūrīn);*[33] and Amir Sayf al-Dīn Baydamar (d. 789/1388), *Bāshir al-Aghwār,* "was known for his good [administrative] practice

[29] Aḥmad ibn ʿAlī al-Qalqashandī, *Ṣubḥ al-Aʿshá fī Ṣināʿat al-Inshāʾ* (Cairo, 1963), 12:226–32; Ghawānimah, *Al-Tārīkh al-Siyāsī,* 196.

[30] Ghawānimah, *Dimashq,* 31 (translation mine).

[31] For a fuller discussion of these themes, see Walker, "The Role of Agriculture," and idem, *Jordan in the Late Middle Ages,* Ch. 2.

[32] Ibn Ḥijjī, in Ibn Qāḍī Shuhbah, *Tārīkh,* 1:97.

[33] Ibn Ḥijjī, in ibid., 102.

(ishtahara bi-ḥusn al-mubāshirah) and good reputation."[34] Expectations ran low among the people of the Ghūr, however, after surviving a series of corrupt and violent administrators, so that they cautiously awaited the arrival of each new official. This cynicism is reflected in Ibn Qāḍī Shuhbah's assessment of Amir Nāṣir al-Dīn Muḥammad ibn Tālik (d. 799/1396), *Mutakallim al-Ghūr,* of whom he claims "there is no doubt about it, he was better than most!"[35] Apathy, greed, and ineptitude were to some degree expected from local officials, who were often the only point of contact between rural communities and the state.

The ambiguities of such cultural perceptions exacerbated tensions and created irregularities in practice and in responses it elicited. In the period of intense clientage that followed the death of al-Nāṣir Muḥammad, state officials tried to manipulate local tribal networks as they did the urban networks of Cairo, but with less facility.[36] Likewise, local societies saw the state as both a necessary evil in moderating tribal conflicts, as well as a foreign, and usually unwelcome and exploitative, presence, whose ignorance about local resources and peoples caused damage in the long term. Disdain and distrust characterize the images of "the other" that occasionally emerge from the texts, modelling the ways in which both parties engaged the other. The state tried three strategies to control local tribes, each informed by assumptions about Jordanian society held by the Mamluk elite: selective cultural assimilation, clientage, and confrontation through military force. The response of Jordanian tribes to these efforts was effective at times in preventing further imperial penetration of the area but, more importantly, also transformed, in subtle ways, the Mamluks' administrative and political culture.

Assimilation

As a show of military force was financially and politically costly, and risky, the Mamluk state generally attempted first to neutralize the potential of political opposition from local tribes through co-option. The "softest" strategies involved a kind of selective assimilation, through the partial adoption of local customs for political purposes, and cultivating ties with local tribal networks, through occasional residence or repeated visitation. The irregular reign of Sultan Aḥmad best illustrates the former trend. Although the story of his residence in Kerak is well known to Mamluk historians, a review of some salient points about his cultural transformation there is relevant here.[37]

[34]Ibid., 226.

[35]Ibid., 639.

[36]For the social and political maneuvering of the Mamluk elite during this period, see Jo Van Steenbergen, *Order out of Chaos: Patronage, Conflict and Mamluk Socio-Political Culture, 1341–1382* (Leiden, 2006), Ch. 2.

[37]The following summarizes the account presented by Shams al-Dīn al-Shujāʿī, who was a

Al-Nāṣir Aḥmad spent more time at Kerak than he did in Cairo: through a complex series of events, he essentially became "Jordanian" and no longer felt comfortable in Cairene Mamluk society. Aḥmad's first trip to Kerak was in 726/1325, when his father, the reigning sultan al-Nāṣir Muḥammad, sent him there, to be joined later by his brothers, to be raised, educated, and disciplined.[38] Aḥmad was eight years old at the time. The boys were eventually called home to Cairo by their father; Aḥmad did not stay long, though, as his father sent him back to Kerak soon afterwards. In 731/1330 al-Nāṣir Muḥammad once again called his son to Cairo, this time for his circumcision; Aḥmad had the surgery and returned to Kerak. Seven years later, he was summoned home for a third time, on this occasion to marry. At this point the reason for Aḥmad's reluctance to marry and remain in Cairo for any length of time was revealed to the sultan, either as a rumor or an official report: he had fallen in love with a Keraki boy, whom he showered with gifts. Moreover, the sultan learned, his son spent his time in Kerak drinking and occasionally left the citadel wearing Keraki shoes.[39] The implication that he had "gone native" was enough to infuriate his father and insist that he stay in Cairo: the ties he was developing with Kerak smacked of rebellion and shame.

His father died later that year, and Aḥmad used the opportunity to free himself of Cairo, he believed, once and for all. He withdrew to Kerak, which he now claimed as his territory through his father's *taqlīd,* and his brother Abū Bakr, the *wālī ʿahd,* was put on the throne. After Abū Bakr's arrest and exile to (and later execution in) Qūṣ in Upper Egypt, Aḥmad was declared sultan and eventually forced to return to Cairo to take the throne, which he did in 741/1342, in the company of a small group of Keraki intimates and clad in Bedouin dress *(zayy al-ʿurbān).*[40] His return to Cairo was, however, brief, as he went back to Kerak only 51 days later, serving a mere two days in the Dār al-ʿAdl. He meant for this move to be permanent: Sultan Aḥmad took the imperial Treasury with him, along with stocks of food and various supplies; it appears he meant to move the capital to Kerak. His amirs could not comprehend such an act and sincerely feared what

contemporary of these events (as *Tārīkh al-Mālik al-Nāṣir Muḥammad ibn Qalāwūn al-Ṣāliḥī wa-Awlādihi,* ed. and tr. Barbara Schäfer [Wiesbaden, 1985], 35, 69–71, 250–53, 278–80), and Ibn Qāḍī Shuhbah, who borrows largely from al-Shujāʿī and Ibn Kathīr (Ibn Qāḍī Shuhbah, *Tārīkh,* 2:125–421).

[38] See al-Maqrīzī's account of the same, where young Aḥmad is disciplined in *furūsīyah* (Taqī al-Dīn Aḥmad al-Maqrīzī, *Kitāb al-Sulūk li-Maʿrifat Duwal al-Mulūk*, ed. Muṣṭafá Ziyādah and Saʿīd ʿĀshūr [Cairo, 1956], 2:272).

[39] Al-Shujāʿī, *Tārīkh,* 69; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:421.

[40] Drory, "The Prince Who Favored the Desert," 24, citing Ibn Taghrībirdī, *Nujūm,* and al-Maqrīzī, *Sulūk*.

such a move would do to the stability of the state.[41] Al-Shujāʿī describes this pivotal event in terms of a physical transformation of the sultan, as Aḥmad left the Cairo citadel and headed towards Kerak:

> The sultan got down [off his horse], took off his garments [of state], and put on luxurious Arab dress and was draped in two veils *(wa-daraba lahu li-thamayn)*. The Kerakis came to his side, and he mounted a camel and rode this way on the open road to Kerak.[42]

The amirs begged the sultan to return to Cairo. Once again, Sultan Aḥmad's response is indicative of his attitude towards his office, and his image of Kerak's position in the empire:

> Syria is mine, and Egypt is mine, and Kerak is mine, and any place important to me where I have resided. You don't bother to visit me, so I am under no restrictions of yours.[43]

The amirs were furious and, after repeated pleas for his return to Cairo and the return of the Treasury, put his brother on the throne. The winter of that year (743/1344), two years after Sultan Aḥmad left Cairo for good, and after seven or eight campaigns, the armies of Egypt and Syria met at Kerak, took the citadel, with the help of a *muqaddam* of local *ʿurbān* foot soldiers, Bāligh ibn Yūsuf ibn Tayyiʾ,[44] captured Aḥmad and assassinated him, decapitating him, cutting off his arms, and burying the body (minus the head) where it belonged, in the soil of Kerak.

Sultan Aḥmad's assimilation to Jordanian culture was sharply criticized by contemporaries, who cited it as an example of personal folly, suggesting that it threatened the stability of the state.[45] While I know of no comparable instances of

---

[41] One of the sultan's closest advisors tried to talk him out of this move: "O lord, what is so important that you must go [to Kerak]? Once you leave we will devour each other *(naʾkulu baʿḍunā baʿḍan),* and the crops will be destroyed, [at this time], during the harvest" (Ibn Qāḍī Shuhbah, *Tārīkh,* 2:246; in a slightly different form in al-Shujāʿī, *Tārīkh,* 250).

[42] Al-Shujāʿī, *Tārīkh,* 253; Ibn Qāḍī Shuhbah, *Tārīkh,* 2:247.

[43] Ibn Qāḍī Shuhbah, *Tārīkh,* 2:296.

[44] He is described as the "ornament of the tribes and the support of the kings and the sultans" *(zayn al-qabāʾil . . . ʿumdat al-mulūk wa-al-salāṭīn)* in a *manshūr* granting him an *iqṭāʿ* for his services to the state in this event (preserved by al-Maqrīzī and published by Frédéric Bauden, "The Recovery of Mamluk Chancery Documents in an Unsuspected Place," in *The Mamluks in Egyptian and Syrian Politics and Society*, ed. Michael Winter and Amalia Levanoni [Leiden, 2004], 59–76).

[45] Ibn Iyās called him a "crazy teacher" *(muʿallim majnūn);* al-ʿAsqalānī accused him of mismanagement and preoccupation with his own personal pleasures; for al-Ṣafadī he caused social and spiritual harm to the people; to Ibn Taghrībirdī he was frivolous and thoughtless; and to al-Maqrīzī "the ruin of the monarchy *(sabab li-kharab al-mamlakah)* (Drory, "The Prince Who

cultural assimilation among the Mamluk elite, there are hints in Syrian sources of attempts by sultans and their representatives to present themselves in culturally acceptable forms. Visiting local communities, for example, was a more subtle form of cultural engagement that required from the representative of the state some knowledge of local cultural norms and tribal structure. The visits of two sultans to the town of Ḥisbān and their temporary, and fully voluntary, residence there are suggestive of the ways targeted visitation was put to political use.

On a strategic hilltop location some 25 kilometers south of Amman, overlooking the grain fields of the Madaba Plains and the northeast corner of the Dead Sea, the town of Ḥisbān was a very old settlement of Byzantine, Roman, and Moabite foundations. Its importance in the Islamic period was tied to its location, which made it a convenient stop on the pilgrimage caravans to Mecca and Jerusalem.[46] Ḥisbān was already a substantial settlement with its own qadi, madrasah, market, citadel,[47] and extensive fields and orchards[48] and was made the capital *(wilāyah)* of the Balqā (the southernmost district of Damascus Province) for a while, likely replacing the town of Salṭ, on the eve of al-Nāṣir Muḥammad's third reign.[49] A relatively minor town from the imperial perspective, and a rural administrative center of less than fifty years, Ḥisbān was privileged with sultanic visits on three occasions: twice by al-Nāṣir Muḥammad and at least once by Barqūq. It is worth examining in some detail these visits for the light they shed on imperial-tribal relations in the fourteenth century.

The documented visits of al-Nāṣir Muḥammad took place in 709/1309, during a tour of Syria to garner support for his return to the throne, and again in 717/1317, when he visited only Ḥisbān. On the first occasion he sat in audience in the local citadel, presumably meeting with tribal leaders from the region and his amirs, bringing an "iron, Chinese throne" from Kerak for the purpose.[50] On the second

Favored the Desert," 29).

[46]Ḥisbān was a node in the interior pigeon route through Syria, was a stop on the *barīd* route, and was not far from the hajj road from Damascus.

[47]The entrance to the citadel, the upper courses of the fortification walls, and the southwestern tower (which was rebuilt at twice the scale of the other three) appear to be early Mamluk constructions. This work may be attributed to Sultan Baybars, who did similar work at Kerak and Salṭ, strengthening damaged towers by rebuilding them bigger and with higher walls (Walker, "Mamluk Investment in Southern *Bilād al-Shām*," 243; Robin Brown, "Excavation in the 14th Century AD Mamluk Palace at Kerak," *Annual of the Department of Antiquities of Jordan* 33 [1989]: 290; Peake, *A History of Jordan and its Tribes,* 80; Ghawānimah, *Al-Tārīkh al-Siyāsī,* 74, 77).

[48]It was said to have controlled an agricultural area of over 300 villages (al-Ẓāhirī, *Zoubdat Kachf el-Mamalik,* 46).

[49]According to al-ʿAynī, there was already a *walī* serving at Ḥisbān at the beginning of al-Nāṣir Muḥammad's third reign, when he visited the site (Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 48–49).

[50]Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 116, citing al-ʿAynī. The excavators believe the large, vaulted

visit, the sultan left Cairo specifically to visit Ḥisbān and check on its affairs.[51] There he met with his Syrian amirs, including the governor of Syria, thereafter returning to Cairo without traveling on to Damascus.[52] The latter trip took the sultan 12 days from Cairo, a not insignificant period to visit a single town.[53]

During Barqūq's sojourn at Ḥisbān, which in many respects resembled that of al-Nāṣir Muḥammad in 709/1309, the town was no longer the capital of the Balqā and retained no official importance.[54] Nevertheless, as part of his attempt to return to power in 791/1389, after a year's exile (and house arrest) in Kerak Castle, Barqūq stopped at Ḥisbān en route to Damascus. He stayed for a while with his mamluks and a group of Kerakis who had accompanied him there. From his temporary camp at Ḥisbān, Barqūq corresponded with the governors, qadis, and amirs in Syria, in an effort to confirm the alliances in Syria and to form a new army to march on Cairo.[55]

Where did Barqūq reside during the roughly two weeks he was in Ḥisbān?[56] Most of the citadel was in ruins, with only sporadic or seasonal occupation of individual rooms after an earthquake destroyed the citadel a generation earlier.[57] Although he left Kerak in the company of 500 mamluks and 1000

room to the west of the central courtyard of the governor's residence, the "*dīwān*," was the location of formal meetings with tribal leaders and amirs (Bethany Walker, "Mamluk Administration of Transjordan: Recent Findings from Tall Ḥisbān," *al-ʿUṣūr al-Wusṭá* 13, no. 2 [2001]: 29–33; idem, "Mamluk Investment in Southern *Bilād al-Shām*," 251; Bethany Walker and Øystein LaBianca, "The Islamic *Quṣūr* of Tall Ḥisbān: Preliminary Report on the 1998 and 2001 Seasons," *Annual of the Department of Antiquities of Jordan* 47 [2003]: 447, 449, Fig. 5).

[51] Ghawānimah, *Al-Tārīkh al-Siyāsī,* 194; full account is provided by al-Nuwayrī.

[52] As governor of Ḥamāh, Abū al-Fidāʾ should have attended this meeting and offered to do so, but the sultan excused him from the long journey, accepting a gift of horses in return (al-Mālik al-Muʾayyad ʿImād al-Dīn Abū al-Fidāʾ, *Al-Mukhtaṣar fī Akhbār al-Bashar,* as *Tārīkh Abī al-Fidāʾ,* ed. Muḥammad Dayyub [Beirut, 1997], 4:97–98).

[53] Ibid., 428.

[54] Ḥisbān remained the district capital until 757/1356, when the governor *(wālī)* was transferred to Amman. The sources are silent about the rationale for the promotion of Ḥisbān to *wilāyat Balqā,* but as for its demotion in 757/1356, there are indications that the move to Amman served the financial interests of Amir Ṣarghatmish. It is also possible that the Ḥisbān citadel was not usable at this point, as there is archaeological evidence for a mid-century earthquake at the site (Walker, "Mamluk Investment in Southern *Bilād al-Shām,* 254; Walker and LaBianca, "Tall Ḥisbān, 2004 Season," 451).

[55] Ibn Qāḍī Shuhbah, *Tārīkh,* 1:294.

[56] According to Ibn Qāḍī Shuhbah, Barqūq arrived in Ḥisbān on Thursday, 20 Shawwāl, then left and reached Adhraʿāt and then Zarqah on 3 Dhū al-Qaʿdah (Ibn Qāḍī Shuhbah, *Tārīkh,* 1:293–95).

[57] See note 54.

Kerakis,[58] he came to Ḥisbān with a small retainer.[59] Upon his arrival in Ḥisbān, he enjoyed the hospitality of the Beni Mahdi.[60] Given the relatively small number of his forces, the circumstances of his residence there, and the physical state of the citadel, he likely stayed in the plains around the citadel, in the camps of the Beni Mahdi.[61] Using modern Jordanian tribal practice as a gauge, it is likely that Barqūq was given quarter with them and shared a large and elaborate *mansef*[62] (eaten communally with the tribal elite). He would have been in the constant company of the Beni Mahdi, who would have had ample opportunity to scrutinize his behavior. There was some political risk involved in accepting hospitality of this sort. Barqūq, who had spent a lengthy exile in Kerak, had become familiar enough with Jordanian tribal customs to successfully fulfill his role as guest among them.

Mamluk culture did not, apparently, hold the same attraction for Jordanians as their tribal culture did for some sultans. I have not identified any evidence in either written or archaeological sources for an attempt to assimilate the Jordanian tribes or any process of acculturation on the part of the *ʿushrān*. There is, on the other hand, some evidence for the cultural assimilation, whether deliberate or not, of the non-Mamluk population of Cairo—a militarization of civilians that is expressed in some consumer goods, such as housewares, textiles, and dress.[63]

---

[58]Nāṣir al-Dīn Muḥammad ibn ʿAbd al-Raḥīm Ibn al-Furāt, *Tārīkh Ibn al-Furāt,* ed. Custantin Zurayq (Beirut, 1936), 9:1:125. While the numbers are likely exaggerations on the part of Ibn al-Furāt, it is clear that a large force was traveling with Barqūq, whose lodging could only be provided outside villages and towns.

[59]Ibn Qāḍī Shuhbah, *Tārīkh,* 1:294.

[60]The Benu Mahdi were one of the most important tribes of the central plateaus, together controlling, with the Beni ʿUqbah, the important hajj route to ʿAqabah and authorized, through assignment of *iqṭāʿāt,* to command a thousand horsemen (Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 137; Ḥajjah, *Al-Tārīkh al-Siyāsī,* 221). Their traditional grazing lands were the Balqā region, including the erstwhile administrative centers of Salṭ, Ḥisbān, and Amman.

[61]Citing once again Ibn Qāḍī Shuhbah, we learn that the Beni Mahdi put him up in their camp: *wa-dayyafahu ʿArab Banū Mahdī wa-anzalūhu* (*Tārīkh,* 1:294).

[62]The *mansef* is the national dish of Jordan: rice and boiled lamb (or sheep and goat) served in a heavy yoghurt sauce on a large tray. It is often mentioned in Mamluk-period sources in the context of entertaining by and for tribal shaykhs and amirs.

[63]For evidence of the "militarization" of Cairo's civilian population in matters of dress, see Bethany Walker, "The Social Implications of Textile Development in Fourteenth-Century Egypt," *Mamlūk Studies Review* 4 (2000): 167–217, and in housewares, idem, "Ceramic Evidence for Political Transformations in Early Mamluk Egypt," *Mamlūk Studies Review* 8, no. 1 (2004): 1–114. There is, as well, growing evidence for the popularization of military titles, inscriptions, and blazons in a Syrian ware, called "Glazed Relief Ware" in archaeological circles. Produced in Jerusalem, and likely elsewhere in Syria, bowls in this style are found throughout Palestine and Transjordan in fourteenth-century village sites associated with administrative centers and large

While this phenomenon may be the result of the opening up of the amiral class in the second half of the fourteenth century,[64] the granting of numerous amirships and *iqṭāʿāt* to local tribal leaders in Jordan for the purposes of pacification and road security did not produce a market for "militarized" goods there. The aping of Mamluk culture that appears in Cairo, Jerusalem, Damascus, and other large administrative centers is quite limited in Kerak, Shobak, ʿAjlūn, or any of the other district capitals. If anything, the material culture of Mamluk-period sites in Jordan suggests just the opposite: that Mamluk amirs and soldiers stationed in Transjordan adjusted to local conditions of housing, diet, and consumerism.[65]

Clientage

The immediate effect of sultanic visits was to build on and benefit from ties of clientage that had developed with local tribes. There were defensive and overtly political objectives in these personalized visits, which frequently coincided with changes in local administration. The state's overarching concern for defense (against both foreign and domestic enemies) impacted the structure of administration in the region, which in southern Bilād al-Shām was particularly fluid, with periodic shifts in administrative borders and district *(safaqah)* capitals (*niyābahs* or *wilāyahs*) and the combination or division of districts.[66] The promotion of a previously undistinguished village to a district capital, for example, served to solidify relations between the sultan and the powerful local tribes of Transjordan in the power struggles among the Mamluk elite throughout the fourteenth and fifteenth centuries.

[66]Walker, "Mamluk Investment in Southern Bilād al-Shām," 241–46.

While contemporary sources reveal little about the rationale behind the irregular administrative structure, they do intimate that rivalries among officers, uprisings and revolts, and tribal relations may have influenced a sultan's or amir's decision to promote one administrative center over another.[67] In his account of the revolt of Khadar al-Mālik al-Masʿūd, the son of Sultan Baybars, in Kerak in 678/1279, Baybars al-Dawādārī, the Mamluk officer then serving at the Kerak citadel, related that Sultan Qalāwūn temporarily promoted the capital of the Balqā at the time, Salṭ, which was formerly a *wilāyah,* to the status of a *niyābah,* appointing an *amīr jandār* to its governorship.[68] Ghawānimah suggests that the sultan may have done so for strategic reasons, to block the movement north of al-Mālik al-Masʿūd's troops;[69] the administrative promotion of Salṭ meant the assignment of a higher-ranking garrison commander and, thus, a stronger and larger garrison. Administrative restructuring could occur on the provincial level: the previously independent Province of Kerak was merged, first with the districts of ʿAjlūn and Salṭ in the third quarter of the fifteenth century, and then absorbed in its entirety by the Province of Damascus in the early sixteenth. Contemporary sources attribute this change to an attempt by the state to eliminate the independence of the Kerak governors and quell the amiral rebellions there that rocked Jordan in the late Mamluk period.[70]

While administrative restructuring was used to control local rebellions, so too was the manipulation of tribal networks. For example, through choice and coercion and as the result of inter-tribal rivalries, Kerakis (of all walks of life) were pulled into conflicts between officials throughout the Mamluk period and directly into the amiral rebellions that raged on the Kerak Plateau at the turn of the fifteenth century. Historical rivalries, such as those that existed between the Qaysis and Yemenis, could be easily exploited and turned to political advantage, although with unexpected results. This was the case during the rebellion of the governor of Kerak, Amir Sudūn, against Sultan al-Faraj in 802/1399. During this conflict, the sultan sent his official, ʿAbd al-Raḥmān, to Kerak to kill the governor. The arrival of the sultan's agent divided the tribes of Kerak, who willingly participated by

[67] On a variation of this theme, Tarawneh suggests that the complexities and vacillations of Syrian administration were due to the intramilitary patronage practices of the sultans (Tarawneh, *The Province of Damascus,* 26).

[68] Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 48. A brief survey of the uprising, from a military perspective, can be found in Rukn al-Dīn Baybars al-Manṣūrī al-Dawādārī, *Zubdat al-Fikrah fī Tārīkh al-Hijrah,* ed. D. S. Richards (Beirut, 1998), 180. Eventually becoming governor *(nāʾib)* of Kerak, for a while, and later imprisoned there, Baybars al-Dawādārī was an eyewitness to, and participant in, the vagaries of Mamluk rule in Jordan.

[69] Ghawānimah, *Al-Tārīkh al-Ḥaḍarī,* 48.

[70] Ḥajjah, *Al-Tārīkh al-Siyāsī,* 185–87.

supporting, with arms, one amir or the other: the Keraki Yemenis, led by the local *ḥājib,* defended the governor, as the Qaysis, following the *qāḍī al-quḍāh* in Kerak, threw their support behind Amir al-Muḥtār. The result was civil war, with the violence spreading even to the Ghūr.[71]

More often than not, tribal rivalries were an immediate liability to the state, as they could prevent the smooth running of official business. When Amir Batkhāṣ was named governor of Kerak later that year, he tried to enter the city in the company of members of the local Qaysi confederation. Members of the rival Yemeni clans were offended, rebelled against him, and locked the gates of the city, preventing his entry. The people of Kerak wrote a letter of complaint to the sultan, asking for Batkhāṣ's dismissal and his replacement with Amir Jarkās. Unwilling to witness further turmoil in the region, the sultan agreed, sending Batkhāṣ to Aleppo and Jarkās on to Kerak.[72] Al-Maqrīzī credits inter-tribal conflicts for the Kerakis' decision to support Barqūq in 791/1388. Tribal politics could have even greater consequences for the state. Amir Minṭāsh, then in power in Cairo, made the decision to execute Barqūq, who was imprisoned in Kerak Castle. He sent his amir, Shihāb al-Dīn al-Barīdī, to Kerak to fulfil this mission. Al-Barīdī was originally from Kerak, but he had become a *persona non gratis* there following his dishonorable divorce from the daughter of a popular judge. The people of Kerak never forgave him for slighting this family. When he arrived in Kerak, and news got out of his plan to murder Barqūq, the previously neutral population decided to help rescue Barqūq and pledge him their allegiance, because of their hatred for al-Barīdī. A group of Kerakis made their way into the citadel one night and murdered al-Barīdī before he could finish his task. The following day, the governor opened the gates of the citadel, and Barqūq walked free.[73]

In all of these cases, inadequate knowledge of tribal disputes exacerbated existing tensions between the executors of Mamluk policy and local peoples. Effectively building clientage networks is time-consuming, however, requires knowledge of current tribal alliances, and does not offer immediate results. An alternative way of garnering tribal support, and neutralizing opposition, was through awards—both cash and employment. The state knew just how restless and variable the region could be politically and was prepared to bribe local tribes for their support, or minimally, for their non-interference. This was the case in 802/1399, during a rebellion against the sultan by the governor of Kerak, described above. The sultan's agent wisely arrived with money and letters of appointment to

[72] Ibn Qāḍī Shuhbah, *Tārīkh,* 3:107.

[73] Summarized from *Kitāb al-Sulūk* in Ḥajjah, *Al-Tārīkh al-Siyāsī,* 72–73.

distribute among the ʿ*urbān,* winning the support of some.[74] In a similar fashion, after Sultan al-Nāṣir Aḥmad's return to Kerak in 741/1342, local tribesmen were paid to ravage the countryside and the leader of the Āl al-Faḍl[75] paid to block the roads in order to create disorder and force the sultan to leave his hilltop fortress.[76] The capture of Kerak Castle and arrest of Aḥmad two years later would not have been possible without the financial incentives offered to Keraki tribesmen, which included both cash and *iqṭāʿāt.*[77]

The distribution of cash awards was, however, a risky and short-term solution to local conflict; moreover, it could never guarantee tribal compliance. On the other hand, the employment of tribal leadership through state service had the benefit of merging official and local interests on the long-term, as well as co-opting tribal networks. The ʿ*urbān* penetrated Mamluk administration as amirs. In this capacity, they received titles[78] and *iqṭāʿāt* and collaborated with the state in matters of road maintenance and security, guiding and granting safe passage to the hajj caravan, providing state officials with information about rebellions, and serving militarily as auxiliary forces. The judgment of contemporaries about these tribes is mixed. On the one hand, the ʿ*urbān* of Kerak were politically loyal to the point of sacrificing their own lives; they were among the Kerakis who gave their wives their *ṣadaqah* and paid in full their debts before leaving with Barqūq for Damascus, knowing they may never see Kerak again.[79] On the other hand, they could be rapacious and cruel: in the fifteenth century, in a medieval form of "highway robbery," the ʿ*urbān* of Kerak and Shobak attacked countless hajj caravans, leaving pilgrims—without transport, money, food, or water—to die in the wilderness.[80] Collectively, they represented the greatest support locally to the state, when the state was strong, as well as one of the greatest political threats, in times of imperial weakness.[81]

[74] Ibn Qāḍī Shuhbah, *Tārīkh,* 4:81.

[75] This tribe was among the largest (according to al-Ẓāhirī, 24,000 strong) and most influential in Syria (Tritton, "The Tribes of Syria," 572).

Confrontation

The "soft" approaches of selective assimilation and clientage, however, frequently failed, particularly during times of environmental stress and political turmoil, which destroyed crops and led to the abandonment of villages. Poor administration by local officials, who put an extra strain on limited local resources (especially water),[82] made life particularly difficult for peasants and herders alike under these circumstances and was one of the most common flashpoints of conflict between Jordanians and the state.[83] Armed confrontation was usually the result. The effective, however temporary, resistance of the *ʿushrān* during these crises was due to several factors: their socioeconomic and residential flexibility, physical mobility, the unique topography of the Jordanian interior, and their martial skills and access to arms.

Flexible subsistence was one strategy for survival during droughts, wars, and times of political insecurity.[84] The opposition between the "desert and the sown" is an artificial one, as mixed farming has always been the subsistence foundation of the country: nearly everyone, regardless of where they lived, had family members engaged in both farming and herding. Ottoman tax authorities, who built on Mamluk practice in the region, recognized this sliding scale between the fully sedentary and the nomadic by assigning special categories for "Bedouin" who maintained small plots, taxing them on both harvest and flocks.[85] There has, thus, always been a range of subsistence and residential choices available, from village-based farming to nomadic pastoralism, options that allowed local communities to survive as sociopolitical conditions changed. The demographic decline and disappearance of villages in fifteenth-century Jordan so hotly debated by archaeologists today suggests that many farmers adopted a semi-sedentary or semi-nomadic lifestyle when attacks on villages made residence there untenable.

The traditional mobility of Jordanian tribes, documented archaeologically and ethnographically, functioned much the same way. For much of the Ottoman period Jordanians used the natural, and ubiquitous, caves in the limestone escarpments

in Jordan in the fourteenth and fifteenth centuries (Ḥajjah, *Al-Tārīkh al-Siyāsī,* 217).

[82]Modern Jordan is notoriously limited in natural water sources and today suffers from extreme water shortages during the summer months. Rainfall today in Jordan ranges from 600 mm a year in the northern hill country to 200 mm in the southern and eastern steppes; 300 mm annual rainfall is needed for dry farming. Because so much of the country received barely enough rain for dry farming, and because grains (the staple of Jordanian agriculture) are generally not irrigated, the wheat crop today fails on the average of once out of every five years (Carol Palmer, "'Following the Plough': The Agricultural Environment of Northern Jordan," *Levant* 30 [1998]: 132).

[83]Walker, "The Role of Agriculture."

[84]This is a central theme of LaBianca, "Indigenous Hardiness Structures."

[85]See note 25.

domestically, in the late nineteenth and early twentieth centuries adding stone structures to the entrance.[86] "Cave villages," the ruins of which dot the Jordanian countryside, often escaped the attention of Ottoman tax collectors.[87] The ability of villagers to move to the desert, of "Bedouin" to live in a village, and the use of caves by both to escape notice, would have been very effective strategies for outmaneuvering Mamluk officials, one not articulated in Mamluk-period sources but amply attested archaeologically, ethnographically, and in Ottoman-period travelers accounts.

In short, the mobility of the local *ʿushrān,* both *ʿurbān* and full-time villagers, owes much to the unique topography of Jordan. Most of Transjordan is occupied by a rough plateau dissected by deep valleys bordered by hills and mountains, with elevations ranging from 400 meters below sea level (the Dead Sea) to 1700 meters above sea level (Jebel Rūm, near Petra). In periods of political insecurity, the plains and plateaus have been abandoned for the hill country, where villages were secure from "marauding Bedouin" and, generally, the political violence of the state.[88] This is the general demographic pattern emerging from archaeological surveys and one that seems to be connected to the repeated rebellions by local people and amirs alike. The desert, as well, offered the opportunity for escape for the economically and politically persecuted. The romantic vision of the political independence of the hills and mountains[89] so lovingly painted by French social historians such as Braudel and Le Roy Ladurie for the late medieval Mediterranean resonates for fifteenth-century Jordan.[90] Here, too, hill villages suffered less from direct state violence and "feudal" control than those in the valleys and plains. The great grain fields of the Madaba Plains and the Kerak Plateau fell under the jurisdiction of *muqṭāʿ*s, while the smaller orchards of the northern hills gradually

[86]This kind of architecture has come under archaeological scrutiny in recent years. The domestic use of caves in the Mamluk period is also suggested by recent excavations at Tall Ḥisbān.

[87]The village of Shammākh near Shobak is one of these villages (L. Noca, *Smakieh: Un village de Jordanie* [Lyon, 1985]; Walker, "Militarization to Nomadization," 215). Extensive ruins can also be seen at Ḥisbān, across the Wādī Ḥisbān from the tell. Ethnographic interviews with residents at Ḥisbān document the use of caves under the oldest houses for hiding goods from tax collectors a century ago (MPP–Tall Ḥisbān Excavation project archives, 2001 and 2004).

[88]Walker, "Mamluk Investment in Southern *Bilād al-Shām,*" 248.

[89]Braudel differentiates between "hills" (which lay at an altitude of 400 meters above sea level or less) and "mountains" (which are higher than that) (Fernand Braudel, *The Mediterranean and the Mediterranean World in the Age of Philip II* [New York, 1972], 1:55). The only true mountains, by this definition, in Jordan are the seats of Crusader, Ayyubid, and Mamluk castles: Kerak, Shobak, Habis, ʿAjlūn. I am referring here to Jordan's numerous "hills" that rim the central plateaus and border Irbid in the north.

[90]Ibid., 25–60; Emmanuel Le Roy Ladurie, *Montaillou: The Promised Land of Error* (New York, 1978), 3–23, 69–88.

became, over the course of the late fourteenth and fifteenth centuries, *waqf,* communally-held land (today we would use the term *mushaʾ*), or private estates.[91] While the hill country was not entirely inaccessible physically to state officials, invading armies, and the *ʿurbān,* the longevity of these communities through the troubled fifteenth century—with their populations increasing while much of the rest of the country's declined—bears witness to the security and hope for escape that these regions offered.

Most importantly, Jordanian tribesmen were armed—on this point the sources are clear. As early as Qalāwūn's reign, there was an attempt to disarm the *ʿurbān* in the provinces.[92] Villagers and townsmen were armed, as well, and could be used as local militias or auxiliary forces when needed. This was the case, when at the conclusion of his exile and imprisonment in Kerak in 791/1388, Barqūq raised troops among both the *ʿurbān* (specifically the Beni ʿUqba, Āl Faḍl, and ʿArab Jarm) and the "troops of Kerak and Shobak" *(ahl al-Karak wa-al-Shawbak wa-ajnādihā)*.[93] Armed resistance by peasants is described in both the Syrian and Egyptian countrysides as either a collaboration with the *ʿurbān* or as occurring at the same time as "Bedouin" attacks against villages.[94] Either way, the victims were other villages and officials in transit or on patrol. Inter-village violence is also recorded: the political turmoil surrounding the rebellions against Barqūq in 801/1389 encouraged peasants to plunder crops, apparently their neighbors'.[95] The sources do not fully explain the background of rebellions or raids, but one can surmise in many cases that many were perpetrated by displaced peasants, forced to leave their villages and homes because of armed conflict or drought. Incidences of this sort increased in northern Jordan immediately after Tīmūr's

---

[91]This is addressed in Walker, *Jordan in the Late Middle Ages,* Ch. 5.

[92]Both Ibn Furāt and al-Qalqashandī reproduce a memorandum *(tadhkīrah)* that was supposed to have been written by Sultan Qalāwūn for his vice-sultan Kitbughā in 679/1281. In it, the provincial and district governors are to "notify the *ʿurbān* not to carry swords, spears and weapons of any other kind. They are to be prohibited from purchasing them in Cairo. Those who flout this order and travel with weapons from village to village will have them confiscated and will be punished." (Sato, *State and Rural Society,* 113–14).

[93]Muḥammad ibn Muḥammad Ibn Ṣaṣrā, *Al-Durrah al-Mudīʾah fī al-Dawlah al-Ẓāhirīyah,* as *A Chronicle of Damascus 1389–1397,* ed. William Brinner (Los Angeles, 1963), 25. According to a European merchant living at the time in Damascus, Bertrando de Mignanelli, Barqūq relied on armed peasants from Kerak during his march to Damascus ("*Ascensus Barcoch*: A Latin Biography of the Mamluk Sultan Barqūq of Egypt [d. 1399], Written by B. de Mignanelli," *Arabica* 6 [1959]: 155ff).

[94]For a clear example of collaboration, see Ibn Ṣaṣrā, *A Chronicle of Damascus,* 42.

[95]Ibid., 24. For parallels from Egypt, see Stuart Borsch, *The Black Death in Egypt and England: A Comparative Study* (Austin, 2005), 49.

invasion and are attested even five to six years afterwards.[96] Much of the violence of the fifteenth century in Jordan can be attributed to the arming of a wide cross-section of the population.

Conclusions

In conclusion we return to two questions introduced at the beginning of this essay: were the tribes of Jordan a political force, and if so, in what ways did they mold Mamluk political culture in the troubled period at the turn of the fifteenth century? I would suggest that the *ʿushrān* acted politically and asserted themselves through institutional, military, and diplomatic means throughout the Mamluk period. The Mamluk state was forced to take account of tribal networks and local power structures and to recognize the potential military threat the *ʿurbān,* in particular, presented to regional security. Mamluk-tribal relations in Jordan resembled in many respects the relations between post-colonial states and their "margins"—the fluid and inconsistent administration of these regions, the level of political violence, and the ability of local communities to force accommodation in policy and practice. In these terms, Mamluk political culture was molded locally by tribal structures and politics. Whether this was a uniquely Jordanian situation or characterized provincial administration as a whole is an important issue that belongs to another study.

[96] Ibn Ḥijjī, *Tārīkh,* 2:769. It is not clear whether these were actions of desperation or concerted attacks on the state, however.

An Unpublished Anthology of the Mamluk Period on Generosity and Generous Men

Scholars are aware that the amount of unpublished—and sometimes unknown—works of Arabic literature is sizeable indeed. As Thomas Bauer recently emphasized, the Mamluk period in particular, with its flourishing cultural life, is still awaiting a complete evaluation of its literary production.[1] With this article I hope to make a small contribution to the catalogue of this literature.

Among the manuscripts preserved in the library of the University of Liège, which houses still more undiscovered treasures for Arabists, a work entitled "Ḥilyat al-Kuramāʾ wa-Bahjat al-Nudamāʾ" (The ornament of generous people and the joy of the boon-companions)[2] attracted my attention. The title announced that kind of monothematic *adab* anthology dedicated to a specific theme or to a specific category of persons: in this particular case, the theme of generosity, certainly one of the most valued in the ethics of classical Arabic culture, and the category of generous people.

The sabbatical year I spent at the University of Liège allowed me to see the manuscript and to make a quick study of the text. It turned out that not only is the work still unpublished,[3] but more interestingly, that the identity of its author seemed dubious and the text itself was problematic as far as the contents of the chapters and order of the narratives contained therein are concerned. If this title is to be added to the list of the Mamluk anthologies recently compiled by Thomas Bauer,[4] the issues raised by its authorship and the form of the text preserved in

---

A first draft of this article was read at the Sixteenth Colloquium on the History of Egypt and Syria in the Fatimid, Ayyubid and Mamluk Eras (10th–15th centuries), University of Ghent (Belgium), 10–12 May 2007.

[1] Thomas Bauer, "Mamluk Literature: Misunderstandings and New Approaches," *Mamlūk Studies Review* 9, no. 2 (2005): 105–32.

[2] The catalogue of the Arabic and Oriental manuscripts of this library is still in progress. I thank Frédéric Bauden, who is preparing it, for having pointed out this title to me.

[3] It does not appear among the titles mentioned by Reinhard Weipert, *Classical Arabic Philology and Poetry: A Bibliographical Handbook of Important Editions from 1960 to 2000*, Handbook of Oriental Studies 63 (Leiden, 2002), nor in the catalogues of the most important libraries of Middle East studies.

the manuscript tradition call for a further inquiry.

Identification of the Author

The Liège manuscript of "Ḥilyat al-Kuramāʾ wa-Bahjat al-Nudamāʾ," which I took as my point of departure, made no mention of the author's name. To learn more, I looked at *Kashf al-Ẓunūn* of Ḥajjī Khalīfah: the title "Ḥilyat al-Kuramāʾ" was in fact mentioned. The work was attributed to Ibn Abī al-ʿĪd al-Mālikī.[5] He is certainly not a well-known author in the history of Arabic literature. I checked in Brockelmann's *Geschichte der arabischen Litteratur,* and the book was mentioned twice, but—to my surprise—with two different attributions. In fact, Brockelmann mentions ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī ibn Abī Muḥammad ibn ʿAbd as the writer who composed this anthology, and he refers to two manuscripts, one preserved in the library of Gotha and the second one in the Princeton University library.[6] Nevertheless, shortly thereafter, the same title is assigned to a certain al-Shaykh Isḥāq,[7] a person about whom no biographical details are known. Only a manuscript of the work, preserved in Algiers, is mentioned in relation to this quite unknown author. Up to this point I had entertained the following hypothesis: (a) two different works having the same title, but not the same author; or (b) one single work with a double attribution. But the question turned out to be still more confusing when I discovered a third possible attribution for this same title. George Vajda, in a note dated 1952 correcting some errors in the magnum opus of Brockelmann, points to the existence of another manuscript of the "Ḥilyat al-Kuramāʾ" unaccounted for in *GAL*. This "new" manuscript was preserved in the Bibliothèque Nationale de France in Paris, but the name of the author given by Vajda was not ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī ibn Abī Muḥammad ibn ʿAbd or al-Shaykh Isḥāq but instead Muḥammad ibn Ḥasan al-Khālidī. In any case, George Vajda noticed that "quoi qu'il en soit de la question de l'auteur, les deux notices de Brockelmann doivent être fondues en une seule."[8] The matter then seemed a little less nebulous, even if the issue of the authorship remained to be cleared up: apparently there was only one work entitled "Ḥilyat

easily be augmented, but it may provide a first orientation for future efforts. What we need most urgently given the present state of our knowledge are preliminary studies of as many of these anthologies as possible." ("Mamluk Literature," 124). This article is then intended as a small contribution to answer the call.

al-Kuramāʾ," but once the additional information given by Vajda was taken into account, the possibilities for the name of the author rose to three.

The only way to clarify the issue was to consult all the manuscripts mentioned in the bibliographies and the catalogues of manuscripts in connection with this title. The number of known manuscripts that I could trace amounted to seven, three dated and four undated. Apart from the Liège manuscript, I found two preserved in Princeton, one in Paris, one in Algiers, one in Gotha, and one at al-Azhar library in Cairo.[9] The perusal of six of these seven (the Algiers copy being inaccessible to me) confirmed that the matter of authorship was rather muddled. Some manuscripts mentioned the name of the writer, but in inconsistent forms, while others left it out.

Four manuscripts mention the author's name. The first one is Princeton, Yahuda Collection 847, undated (but probably copied in the eleventh/seventeenth century): at fol. 1 a certain al-Sakhāwī is mentioned, but as this was a widespread *nisbah* in Egypt in the Mamluk period, no further light is shed on the matter. The manuscript of Gotha, undated but in any case earlier than 1807 (which is the date of acquisition), at fol. 1a cites ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī as the author. A further reference in the form "Ibn Abī al-ʿĪd al-Mālikī" has been added in a different handwriting, no doubt on the basis of the attribution given by Ḥajjī Khalīfah, who is also mentioned on the same page. An analogous case is that of the manuscript of al-Azhar, recent and defective: at fol. 1b this one also mentions the attribution to Ibn Abī al-ʿĪd al-Mālikī, but in this case too we are dealing with a later addition made in a different handwriting, on the basis of the information given by Ḥajjī Khalīfah. Therefore, the al-Azhar manuscript is of no use in solving the problem of authorship.

The last manuscript which mentions the author's name is the Algiers one. Unfortunately, since it remained inaccessible to me, I had to content myself with the accurate description made by E. Fagnan in his catalogue. Following the details given by the French scholar, the name that is cited in this manuscript (undated, but copied probably in the tenth/sixteenth century) is that of al-Shaykh Isḥāq, the one related by Carl Brockelmann.

The second manuscript of Princeton (Garrett 157H) and the one preserved in Liège do not mention the name of the writer and therefore they are of no help in shedding light on the authorship of the book.

A case apart is that of the Paris manuscript, copied in Cairo in 1169/1755. In his note Vajda suggested the authorship of an unknown writer, Muḥammad ibn Ḥasan al-Khālidī, which was rather puzzling. A closer examination of the manuscript revealed that this hypothesis was based both on a mistaken reading

[9]Princeton MS Garrett 157H 1112/1700; Paris MS ar 3476(2); Liège MS 5300/1; Algiers MS 1880 (fols. 157–338r); Princeton MS Yahuda 847; Gotha MS Pertsch 1232; Azhar MS Abāẓa 7034.

and a misinterpretation. In fact the name on the colophon is that of Muḥammad Zayn al-Dīn, but this name identifies the copyist, not the author of the book as Vajda surmised.[10] So, the Paris copy must also be discarded in connection with the issue of authorship.

Obviously, in order to clear up the matter, the manuscripts bearing the author's name as a later addition based on the reference of Ḥajjī Khalīfah were to be disregarded; I could then only base my investigation on three manuscripts, namely those bearing the name of the author in the very same handwriting as the copyist. I obtained the following forms for the identity of the writer: ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī (Gotha), al-Sakhāwī (Princeton Yahuda 847) and al-Shaykh Isḥāq (Algiers). Excepting the last eccentric form, inconsistent with the others and with the data of Ḥajjī Khalīfah, I had then to deal with the following: ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī and al-Sakhāwī, for both of whom the *nisbahs* clearly reveal an Egyptian origin.

The name mentioned by Brockelmann, namely ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī al-Mālikī ibn Abī Muḥammad ibn ʿAbd, rests in fact on the combination of the forms given by the manuscript of Gotha (ʿAbd al-Fattāḥ ibn Muḥammad al-Shubrāwī) and that given by Ḥajjī Khalīfah (Ibn Abī al-ʿAbd al-Mālikī),[11] but contains a further onomastic element (ibn Abī Muḥammad) of unknown origin. It needs nevertheless a minor correction: Ibn al-ʿAbd is the form based on a misreading of the Flügel edition of *Kashf al-Ẓunūn,*[12] which gives ʿAbd instead of the correct ʿĪd. With such a nebulous description of the identity of the writer, in order to establish the authorship it was necessary to look in the biographies for more information about writers whose name could match, at least in part, the aforementioned one and whose life and intellectual activity could provide useful clues about the authorship of the "Ḥilyat al-Kuramāʾ." The works of a much better known al-Sakhāwī, the historian Muḥammad ibn ʿAbd al-Raḥmān Shams al-Dīn, are the sources that could shed some light on the matter. Two entries seemed particularly interesting in this connection, the first one contained in his *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ*[13] and the second one, a little more detailed, in his *Al-Tuḥfah al-Laṭīfah fī Tārīkh al-Madīnah al-Sharīfah.*[14]

[10]The name of both the owner and the copyist that figures on the title page is instead Muḥammad ibn al-marḥūm al-ḥājj Ḥusayn Zayn al-Dīn.

[14]Cairo n.d., vol. 3, notice n. 3647, 508–11. The author's life and the role he and his family played in Medina are also discussed in ʿAbd al-Raḥmān al-Mudayris, *Al-Madīnah al-Munawwarah fī al-ʿAṣr al-Mamlūkī (648–923 h./1250–1517 m.)*: *Dirāsah Tārīkhīyah* (Riyadh, 2001), 173 and passim, but only on the basis of the information given by al-Sakhāwī.

Bio-bibliographical Information

The author of "Ḥilyat al-Kuramāʾ" must be identified as Muḥammad ibn Aḥmad ibn Mūsá ibn Abī Bakr ibn Abī al-ʿĪd, al-Shams Abū ʿAbd Allāh al-Sakhāwī, *thumma* al-Qāhirī al-Mālikī,[15] also known as Ibn al-Qaṣabī, al-Sakhāwī, and earlier as Ibn Abī al-ʿĪd, qadi and *nazīl* of Ṭaybah, "the perfumed one," i.e., Medina. His renown is certainly not universal, and therefore it could be useful to give some details about his life, his intellectual activities, and his (scarce) bibliography.

He was born in Sakhā, in the Nile Delta, in 819/1416–17. After having studied in his native town, in 831/1427 he went to Cairo, where he stayed for more than seven years, attending the lectures of famous teachers. In 840/1436 he went on the pilgrimage and afterwards he came back to his native town, where he stayed until 859/1454. In that year, he returned to Cairo for the second time, where he dedicated himself to the study of law under the guidance of the representatives of the four legal schools, first alone and then with his son. Prior to his appointment in Medina, in order to earn his living he held the offices of witness and deputy judge. The biographies say that he was also a panegyrist and he gained his living from this activity, which also brought him wide renown. Thanks to some influential acquaintances, he was eventually appointed qadi of Medina in 860/1455, a fact to which he owes his *nisbah* of al-Madanī. There he carried out his duties with the utmost dignity and showed every virtue, much to his subjects' satisfaction. He also attained a remarkable degree of power. After more than three decades he suffered a stroke leading to partial paralysis and, due to the progressive decline in his health, in 892/1486 he was succeeded by one of his two sons, Khayr al-Dīn Muḥammad.[16] This succession was a happy one, since—as the sources tell us—his son Muḥammad was even wiser and more virtuous than his father. Ibn Abī al-ʿĪd died 5 Muḥarram 895/29 November 1489.

Muḥammad al-Sakhāwī, the author of *Al-Ḍawʾ al-Lāmiʿ,* reports that on several occasions he had been in touch with him. He first met him at Ibn Ḥajar al-ʿAsqalānī's house, referring to al-ʿAsqalānī as *shaykhunā* (our master). He then met him again in Miná and went to visit him in Medina, where Ibn Abī al-ʿĪd (already afflicted by his infirmity) showed him hospitality. Al-Sakhāwī also informs us that they shared intellectual interests and exchanged poetry: on several occasions al-Sakhāwī transmitted his poems to Ibn Abī al-ʿĪd and received his poems in return, which he copied in a quire *(kurrāsah)*. Nevertheless, al-Sakhāwī fails to mention the literary skills of our author in the field of prose, and therefore no hint of the

[15] Muḥammad ibn ʿAbd al-Raḥmān al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ li-Ahl al-Qarn al-Tāsiʿ* (Cairo, n.d.), 7:110; idem, *Al-Tuḥfah al-Laṭīfah fī Tārīkh al-Madīnah al-Sharīfah* (Cairo, n. d.), 508 has also "*thumma* al-Madanī."

[16] Muḥammad ibn Muḥammad ibn Aḥmad ibn Mūsá ibn Abī Bakr ibn Abī al-ʿĪd: al-Sakhāwī, *Ḍawʾ,* 7:47–48, notice n. 124.

writing of literary anthologies or *adab* books is to be found in relation to our qadi. On the contrary, he speaks well of both prose and poetry composed by his son Muḥammad. The little anthology that I present here is unaccounted for in the bibliography of Ibn Abī al-ʿĪd al-Mālikī as it is given in his biography.

As far as the personality of our author is concerned, the portrait sketched by his biographer is overwhelmingly positive. Al-Sakhāwī highly praises his character; in particular he expresses his appreciation for his modesty, his cheerfulness, his integrity and—more pertinent to the argument of this article—his generosity. Concerning this, he specifies that Ibn Abī al-ʿĪd gave a warm welcome to all those who came to see him and that he showed a great liberality towards all the poor people who addressed him: he gave them food and other means of subsistence.[17] These character traits, as well as his manners and behavior, are especially consistent with the choice of the subject treated in "Ḥilyat al-Kuramāʾ" and are well represented in the text of this anthology. In fact, a substantial part of the material presented in the "Ḥilyat al-Kuramāʾ" deals with hospitality and its duties, and the carrying out of charitable deeds is also stressed. As a matter of fact, one passage is especially revealing of the charitable attitude of Ibn Abī al-ʿĪd and speaks of his inclination to Sufism, if not of his open adherence to a Sufi confraternity. At the end of the first chapter, dedicated to the concept of generosity and to the characteristics of generous men, the author mentions two of his masters and recalls their acts of charity, namely the act of offering food to needy people.[18] The two masters are Muḥammad ibn ʿUmar al-Ghamrī (d. 849/1445)[19] and Muḥammad ibn Ḥasan al-Shādhilī al-Taymī (d. 847/1443).[20] The close master-disciple relationship revealed by the mention of these two personalities in the "Ḥilyat al-Kuramāʾ" and the pious words which follow their names also receives an external confirmation in the biographical sketches by al-Sakhāwī: according to this source, these two Sufis figure among the saintly men *(sādāt)* that Ibn Abī al-ʿĪd met in his life.[21] The first one, Muḥammad ibn ʿUmar

al-Ghamrī, lived a life of poverty among the poor (and was reproached for this lifestyle by Ibn Ḥajar, among others[22]) and dedicated himself to the building and restoration of mosques. The second one, Muḥammad ibn Ḥasan al-Shādhilī al-Taymī, a Hanafi, was a member of the Shādhilīyah confraternity and was known for some stories concerning him and the sultan Faraj ibn Barqūq. The tone of speech Ibn Abī al-ʿĪd uses when he mentions both of them removes any doubt about the influence they had on him; it also shows how deeply he had been marked by their teachings and the example they set when he met them during his stay in Cairo in his youth.

The Text

As far as I know, the text of "Ḥilyat al-Kuramāʾ wa-Bahjat al-Nudamāʾ" has been preserved in seven manuscripts, which testifies to the wide circulation of this work. Six of them have been copied in *naskhī* writing, and only one of them in *maghribī,* which suggests that its circulation was relatively minor in the western part of the Muslim world. Out of these six, three are closely connected with Egypt, and more specifically Cairo. They are: (a) the Paris manuscript, which was copied in Cairo in 1169/1755; (b) the Gotha manuscript, which was bought in Cairo in 1807 by Setzen; (c) the al-Azhar manuscript, which is still preserved in al-Azhar library. We can thus deduce that the book was mostly circulating in the region of origin of its author. This would entitle us to put forward a hypothesis about the place where this anthology was composed, which could have been Egypt, and most probably Cairo, before its author's departure to Medina.

As concerns the chronology, the extant manuscripts are dated between the tenth/sixteenth century and the thirteenth/nineteenth century (the al-Azhar manuscript, dated in the fourteenth/twentieth, is defective). This means that the oldest manuscript (Algiers) was probably copied one century after the death of the author.

Out of the six manuscripts I have been able to consult, two contain an incomplete text. In particular, the Liège manuscript seems to be a summarized version with some interpolations: some passages are missing, and the fifth and final chapter does not correspond at all to its counterpart in the other manuscripts. Furthermore, after this last chapter, the copyist who drew up the Liège manuscript added a completely new section with a pious tone which does not figure in any of the other manuscripts. This copy is therefore of little use for the reconstitution of the text of "Ḥilyat al-Kuramāʾ." The same goes for the al-Azhar manuscript, which stops abruptly in the middle of the fourth chapter despite the declaration made by the copyist on the title page (probably for commercial reasons) that the

[22]See Ibn Ḥajar, *Inbāʾ*, 4:243.

manuscript contains the text "in its totality" *(ʿalá al-tamām wa-al-kamāl)*.

Apart from these two cases, as far as it can be assessed on the basis of the four manuscripts which are seemingly complete, the text is far from being unequivocal. Two areas are rather problematic: the end of the second chapter and the entire fifth chapter. The end of the second chapter poses some difficulty: the three manuscripts that usually agree on the rest (Princeton Garrett, Gotha, Paris) and which constitute the most plausible basis for the edition of the text that I am preparing, present some important fluctuations in the type and order of the materials between chapter two and chapter three, while in the fourth manuscript (Princeton Yahuda) many anecdotes are simply missing. Chapter five in principle should contain some pieces of advice *(waṣāyā),* as it is announced in its title: "On the recommendations which are useful to the intelligent man and are a warning to the careless man." As a matter of fact, the chapter's content is consistent with its title only in one manuscript out of four, the Princeton Yahuda, where chapter five consists of a series of aphorisms arranged in alphabetical order. On the contrary, in the others (Princeton Garrett, Gotha, Paris) the number of aphorisms is much smaller and a short section of a zoological character is appended to the paremiological section.

Obviously the copyists tinkered with the text in more than one way and at more than one point. This is a rather common phenomenon considering the composite character of these anthologies; as they are made up of independent textual units (anecdotes, aphorisms, short narratives, poems) arranged in intermediate units (the chapters), it is easy to shift, remove, add, or replace each textual unit, and so change the text. This is also more likely when the copyist has before him a corrupted or defective copy, as could have been the case with our text: the temptation to complete the corrupted passages, to offer a better version of an anecdote, or to adapt the contents of a chapter to its title must have been very difficult, if not impossible, to overcome.

Description of the Work

Following the established conventions of the anthologies of the period, "Ḥilyat al-Kuramāʾ" is composed of miscellaneous materials, both in prose and poetry: Quranic verses, hadith, poetry, aphorisms, and a good number of anecdotes and stories, organized in five chapters preceded by an introduction. All these materials are arranged in the hierarchical order which is usual in *adab* works: both in the introduction and in the following sections Quranic verses, if present, come first, followed by traditions, pious anecdotes, and worldly anecdotes or aphorisms.

The theme of generosity has a long tradition going back to the beginnings of Arabo-Islamic literature: it was among the preferred subjects that scholars treated in both monothematic works and in specific sections of works of a more

encyclopedic nature. Among the most popular books of Arabic literature dedicated to this subject, I shall limit myself to the mention of *Al-Mustajād min Faʿālāt al-Ajwād,* which has long been attributed to al-Muḥassin al-Tanūkhī (d. 384/994). *Adab* encyclopedias also often include generosity in the range of the themes they deal with, as is the case with *Al-ʿIqd al-Farīd* by Ibn ʿAbd Rabbih (d. 328/940). Generosity (and the generous: *karam, karīm,* and the synonymous *jūd/jawād,* etc.) as well as its antonym, meanness, were then part and parcel of the range of topics treated in canonical *adab* works, which is also demonstrated by the substantial list of titles which mention a word for generosity.[23] Our anthology, "Ḥilyat al-Kuramāʾ wa-Bahjat al-Udabāʾ," is thus the heir of a long tradition, from the point of view both of theme and organizational scheme.

The following is the list of contents found in the introductory section.

Introduction: on the intellect and the legal rules that originate in it and are established on its basis

Chapter one: on generosity and its features, and on those who bear its signs

Chapter two: on doing good deeds and the assistance of those who have suffered injustice

Chapter three: on the lives of the sovereigns, the ancients, and the histories of outstanding civil servants

Chapter four: on the state of women and men, and on their habits in all conditions

Chapter five: on the recommendations which are useful to the intelligent man and are a warning to the careless man

The introduction is mostly made up of Quranic verses and hadith, but also of short poems and anecdotal material concerning the creation of the intellect *(ʿaql)* and its substance. The division of the faculty of the intellect into that which originates from experience *(al-ʿaql al-tajribī)* and that which is an innate faculty is also briefly sketched, along with a list of signs typical of the intelligent man. It is a subject which is often treated in anthologies and in *adab* encyclopedias[24] of the Arabic literary tradition, especially in their introductions, and virtually forms a kind of standard opening for this type of text. What is noticeable, on the contrary, is the absence of the lexicographical section which is so common in the literary anthologies and in the monothematic *adab* works of the Abbasid period. In fact, these normally begin with a presentation of the keyword identifying the theme of the literary composition (e.g., *karam,* as in this case) and related terms: the

[23]A catalogue for the Abbasid period, with a brief introduction to the topic and a presentation of the lexical issues, in Mohsen Zakeri, ed. and trans., *Persian Wisdom in Arabic Garb: ʿAlī b. ʿUbayda al-Rayḥānī (d. 219/834) and his* "*Jawāhir al-kilam wa-farāʾid al-ḥikam*" (Leiden, 2006), 1:285–91.

[24]See, e.g., Antonella Ghersetti, "La conception d'intellect dans le *Kitāb al-aḏkiyāʾ* par Ibn al-Ǧawzī," *Quaderni di Studi Arabi* 10 (1992): 63–73, and bibliography.

etymology, meaning, and use of each term is explained and discussed. In the case under consideration, there is no lexicographical treatment of the terms *karam, karīm,* or related ones. The substantial presence of hadith and the conceptual treatment of the subject in philosophical terms indicate a normative and dogmatic tone, which points to the ethical concerns and hortatory purposes which must have inspired the author. This can no doubt be taken as a sign of the shift of interest from the aesthetic aspect of the anthologies to their practical function and content, and to the role played by the ulama in the intellectual life of this time.[25] This one could be a typical case: the *forma mentis* of the qadi Ibn Abī al-ʿĪd was that of a man of law and a pious Muslim, and his concern was more for legal and ethical issues than for philological ones.

Chapter one, the longest of all, treats generosity and its signs. It opens with some traditions in which the Prophet praises hospitality, urges the believers to share their food, and prescribes the rules concerning meals *(ādāb al-akl)*. These, hospitality and food, are two themes so often associated with generosity and so profoundly intermingled that they constitute a kind of canonical thematic network.[26] What is clearly hinted at by the choice of the traditions related in the very beginning of the first chapter is thus the concept of generosity: to be generous means first of all to share food. This, by the way, also seems to be the essence of hospitality: hospitality substantially consists of offering food and drink.[27] This triplet (generosity, food, and hospitality) can be tracked down elsewhere in the "Ḥilyat al-Kuramāʾ"; to be more precise, almost all the contents of this anthology pivot around it. After the normative section composed by hadith, the chapter continues with many anecdotes that feature high-ranking figures such as Hārūn al-Rashīd or the Barmakids, scholars such as al-Shāfiʿī or Anas ibn Mālik, venerated personalities such as Ḥasan, Ḥusayn, and ʿAlī, but also some unknown people. The common trait is of course their exceeding generosity and their liberal behavior.

Chapter two, dedicated to the support due to needy people, clearly continues the theme of food. Strangely enough, here we find a refined man *(ẓarīf)* presenting a list of the shortcomings of the bad table companion. This would sound rather eccentric in connection with the main subject of the chapter, but can easily be

[25]The authors of Mamluk anthologies were first of all historians or jurists, and only secondly men of letters; in this sense the ulama replaced the *kuttāb* of the Abbasid period. See Bauer, "Literarische Anthologien," esp. 79ff.

[26]The fourth pillar of this thematic network being the antonym of generosity, meanness *(bukhl),* a theme which is in fact treated further in this anthology.

[27]On this concept and on the thematic network mentioned above see my "À la recherche de nourriture: étude des thèmes liés aux pique-assiettes *(ṭufayliyyūn)* dans la littérature d'adab," *Al-Qantara* 25 (2004): 433–62.

explained if we keep in mind the close association linking food and table manners. In a sense, table manners had already been hinted at in the prophetic traditions of the preceding chapter pertaining to *ādāb al-akl*. The list of epithets is followed by a section on meanness *(bukhl),* a feature that is criticized as the worst vice, in accordance once more with the encyclopedia of the ethical values of Arab civilization. This part also contains, obviously in hierarchical order, Quranic verses, traditions, and anecdotes on mean people, all aiming at criticizing this kind of behavior. The purpose of the section devoted to avarice is to emphasize the following exhortation to feed poor people, and in order to support this call, a series of exemplary stories is presented. Here, too, historical and high-ranking figures such as Muʿāwiyah, ʿAbd Allāh ibn al-Zubayr, and al-Mahdī feature in the anecdotes, as well as unknown and common people.

Chapter three, on the sovereigns, the ancients, and high-ranking officers, is fairly interesting. Moving from the assumption that men are remembered for their good deeds, the author states that if common people must practice virtue and avoid vice, sovereigns must do this all the more. Thus, intelligent people must take the stories of just and generous kings as paragons of virtue and be guided by their good example. That is why the author gives a series of anecdotes on exemplary kings. In the introductory part of the chapter, he also states that people owe obedience to the sovereign *(al-sulṭān)* because power has been given to him by God, and he reports some prophetic traditions about the proper conduct of the powerful. In this connection, the distinction between the just sovereign *(al-sulṭān al-ʿādil)* and the unjust one *(al-sulṭān al-ẓālim)* is also outlined, and it is specified that the kingdom of the latter is destined to perish. The rest of this chapter is rich in anecdotes, sometimes separated by a gnomic break, on historical personalities: Persian and Indian kings, caliphs of both the Umayyad and Abbasid periods, as well as the orthodox caliphs. ʿUmar ibn al-Khaṭṭāb, Muʿāwiyah, Hārūn al-Rashīd, al-Manṣūr, and al-Mahdī are among the most important characters. The series is closed by a story about Alexander the Great. Apart from anecdotes with a strong historical flavor coming from "high literature," some stories of clearly folkloric origin are found, such as the story of the fisher set among the Banū Isrāʾīl.

Chapter four, which treats men and women with no additional qualification, contains a fair number of anecdotes and many aphorisms, but no discursive material. The pre-eminent place, in terms of quantity, is given to stories about poetry and music, wherein the main characters are caliphs or noblemen, together with singers or poets. Thus, they feature, e.g., ʿAbd al-Malik ibn Marwān, ʿAbd Allāh ibn Jaʿfar, Hārūn al-Rashīd, or al-Maʾmūn, and talented singing-girls who often constitute the object of royal generosity. In accordance with this setting, the quantity of poetic verses mentioned in this chapter is far more substantial than that mentioned in the rest of the anthology. What is remarkable, or eccentric to

be more precise, in this section is a curious catalogue of the defects commonly attributed to women. However, the author must not be accused of misogyny: the sexes are treated equally, since immediately after this list he gives a woman leave to speak. Of course, this wise woman *(imraʾah ʿāqilah)* does not hesitate to address a list of the defects of men. Furthermore, to dispel any doubt about the gifts that distinguish cultivated ladies, a series of anecdotes on witty and eloquent women "whose mention cannot be omitted" is included. Curiously enough, in this chapter the stress seems to be laid more on eloquence and musical ability than on generosity, a theme that often remains in the background.

Chapter five is very short (between 1 and 3 folios) in all the manuscripts taken into consideration that contain it (namely Princeton Garrett, Gotha, Paris, and Liège), except in the Princeton Yahuda, where it is longer (7 folios), but where its contents are also completely different. In the three manuscripts which agree on the contents (Princeton Garrett, Gotha, and Paris, as Liège has a completely different text), it opens with some aphorisms on the most varied subjects, including women, but it suddenly continues with a list of the characteristics of certain animals.

At this point, though I am waiting to prepare a more thorough study to be published with the edition of the text, I am nevertheless in a position to make some general remarks on the "Ḥilyat al-Kuramāʾ." First of all, it is arranged in narrative units which, as is usual in *adab* anthologies, are grouped together on the basis of affinity of both contents and structure. What is more noteworthy in this case is the frequency of authorial interventions, i.e., notes revealing the author's voice that serve to clarify the affinity or relevance of the textual units or, in some cases, the differences in style and narrative effect. For instance, there are definitions such as *mā huwa fī al-maʿná qarīban wa-aqwá himmatan wa-uslūban* or *ḥikāyah tantaẓim fī silkihā wa-tandamij fī sabkihā,* obviously aiming at evaluating the significance and construction of the anecdotes. Another typical use of the author's voice is his habit of stressing the demarcation of the units composing the text: every anecdote is in fact preceded by a heading which identifies the narrative typology or the tone of the story. We thus find phrases such as: *ḥikāyah jāmiʿah wa-ḥaqīqah māniʿah*, *ḥikāyah gharībah ʿajībah*, *ḥikāyah laṭīfat al-maʿānī wa-ʿadhbat al-majānī*, *ḥikāyah laṭīfah wa-innahā khafīfah*, *ḥikāyah wajīzah wa-nuktah ʿazīzah.* The terms used to define the narrative units are *ḥikāyah, jawharah,* and *nādirah,* apparently without indicating any difference in the structure of the narrative; the word *fāʾidah* is preferred for aphorisms or sections devoid of any narrative character.

The stories and anecdotes never contain any indication of their origin, not to speak of *isnād*s, which are almost completely absent even in their most embryonic form. One exception I came across is a story in the fourth chapter, reported on the authority of Abū al-Faraj al-Iṣfahānī; it is in fact preceded by an *isnād* composed

in a proper way, which qualifies it as a "scholarly *isnād*." [28]

As to the sources of the materials assembled in this anthology, the author only very vaguely indicates the provenance of the information used in his compilation: in the introduction he confines himself to hinting at the type of sources, rather than identifying them precisely. He claims to draw his materials from the "helpful books of the scholars" *(kutub al-ʿulamāʾ al-muʿtabarah)* as well as from "their clear and well-known speeches that were preserved" *(aqwāluhum al-muḥrazah al-wāḍiḥah al-mashhūrah)*. In any case, some anecdotes can be easily traced back to well-known *adab* works of the Abbasid period such as *Murūj al-Dhahab* and *Al-ʿIqd al-Farīd*[29] or of the Mamluk period such as *Al-Mustaṭraf fī Kull Fann Mustaẓraf* of al-Ibshīhī.[30]

The author's vague statements qualifying his sources as exemplary confirm the edifying purpose of the book, which obviously had not been conceived only as a literary exercise, but also and first of all as an act of "militant charity"[31] with the aim of urging the readers to generosity, charity, and assistance of poor people, just as the author was taught by his two masters, Muḥammad al-Ghamrī and Muḥammad al-Shādhilī al-Taymī, and just as he did throughout his long life.

Conclusions

It is now time to draw some conclusions. First of all, concerning the authorship: all the identities proposed in the secondary literature must be discarded, except that of Ibn Abī al-ʿĪd. The author of "Ḥilyat al-Kuramāʾ" is definitely Muḥammad ibn [Abī] Aḥmad ibn Mūsá ibn Abī Bakr ibn Abī al-ʿĪd, al-Shams Abū ʿAbd Allāh al-Sakhāwī, *thumma* al-Qāhirī *thumma* al-Madanī al-Mālikī,[32] also known as Ibn al-Qaṣabī, al-Sakhāwī, and previously as Ibn Abī al-ʿĪd. This is demonstrated both by external elements, namely the quotation of Ḥājjī Khalīfah, and by internal

[28] As Julia Ashtiany Bray would call it (for types of *isnāds*, see her "Isnāds and Model of Heroes: Abū Zubayd al-Ṭāʾī, Tanūkhī's sundered lovers and Abū ʾl-ʿAnbas al-Ṣaymarī," *Arabic and Middle Eastern Literatures* 1 [1998]: 7–30).

[29] Among others, the anthology contains (in chapter four) a story on Ibrāhīm ibn al-Mahdī which had a wide circulation in Arabic literature and the most ancient versions of which are found in *Murūj* and *ʿIqd* (see my "L'anecdote-accordéon ou comment adapter le sens du récit au contexte narrative," in *Le répertoire narratif arabe médiéval: transmission et ouverture: Actes du colloque international qui s'est tenu à l'Université de Liège 15–17 septembre 2005,* ed. Frédéric Bauden, Aboubakr Chraïbi, and Antonella Ghersetti (Liège, 2008), 15–17.

[30] Al-Ibshihī, *Al-Mustaṭraf fī Kull Fann Mustaẓraf* (Beirut, 1986), 1:397.

[31] This was a common phenomenon in the Mamluk period since, as Bauer says ("Literarische Anthologien," 109), the structure and contents of literary anthologies so often go arm in arm with paraenesis.

[32] The form given is derived from the combination of information from al-Sakhāwī, *Al-Ḍawʾ al-Lāmiʿ,* and idem, *Al-Tuḥfah al-Laṭīfah.*

elements, namely the mention in the "Ḥilyat al-Kuramāʾ" of the two personalities (Muḥammad al-Ghamrī and Muḥammad al-Shādhilī al-Taymī) who were actually the masters of Ibn Abī al-ʿĪd. Among the internal elements, it is also worth noting a more general feature, i.e., the relevance of tone and contents of the anthology to the attitude, beliefs, and lifestyle of the author.

I can also suggest a hypothesis for the place and date of composition of this work, on the basis of the internal elements as well as of codicological ones. As for the place of composition, the area of diffusion of the manuscripts hints at Cairo, or in any case Egypt, most probably the village of Sakhā, the native town of our author where he lived for nearly twenty years after his first stay in Cairo. This assumption is corroborated by other internal elements more relevant to the date of composition, namely the mention of Ibn Abī al-ʿĪd's masters and the eulogies following their names. The terms *naffaʿanī* (or, according to a different reading, *mattaʿanā*) *Allāhu bi-ḥayātihi* (or, according to a different reading, *nafaḥātihi) wa-aʿāda ʿalaynā min barakātihi* and *adāma Allāhu qaṣdahu* are in fact used to refer to persons still alive and not to somebody who is deceased. The writing of the "Ḥilyat al-Kuramāʾ" would then have taken place before the death of the two saintly men, who died shortly thereafter (Muḥammad ibn Ḥasan al-Shādhilī al-Taymī died in 847/1443 and Muḥammad al-Ghamrī in 848/1444). As to the date of composition, I would then propose as a *terminus ante quem* the date of 847/1443, well before Ibn Abī al-ʿĪd's departure to Medina.

This anthology is an interesting example of the thematic anthologies that were such a flourishing genre in the Mamluk period. It also represents a sample, if one is needed, of the intense cultural and literary activity practiced by the scholars (ulama) of that period, even outside the circles of literati and philologists *stricto sensu,* which is a feature very typical of Mamluk cultural life. In this sense, it could even be considered an emblematic case of the shift of the primacy in the cultural debate from the *kātib* to the *ʿālim.*[33] This work also testifies to the continuity of the themes and of the organization schemes of composition of *adab* anthologies since the golden age of this genre, i.e., the Abbasid period. Notwithstanding this formal continuity, the Mamluk authors were able to express in a very effective way their own purposes. In this particular case, the main purpose of Ibn Abī al-ʿĪd no doubt corresponds to what has been defined as ethical *adab,* i.e., instructing the readers and urging them to virtuous behavior by showing them apt examples in the form of narratives. Charity was exactly that virtuous behavior which our author was taught by his masters, which he practiced all his life, and which he persistently urged upon the readers of his anthology.

Ẓulm by *Maẓālim?* The Political Implications of the Use of *Maẓālim* Jurisdiction by the Mamluk Sultans

Introduction

> "Maẓlūm, it's unfair, by the people and by God, it's unfair," the man muttered in a weak voice when he was taken away into the holding cell. A stomach pump had just brought to light a considerable piece of hashish out of his intestines. The doctor and the police officer who had brought the drug user into the hospital were clearly convinced that the poor man would be punished for this crime. Both had been annoyed at first by the incident because they had been heavily smoking hashish themselves that evening before being interrupted by the call to duty. But now the officer's pink eyes filled with joy. The crime was proven and the evidence was secured.[1]

Although this episode, taken from a short story by the modern Egyptian author Yūsuf Idrīs (d. 1991), is purely fictional and surely non-Mamluk, it clearly illustrates the ambiguity of the terms justice *(ʿadl)* and injustice *(ẓulm or maẓālim)*. Whether or not you are served and treated well often depends upon which side of the law you are standing on. Muslim societies have recognized from an early stage that there is a high probability of legal abuse by state officials. This was demonstrated by constant appeals for Muslim rulers to be just and wise. In addition to these exhortations, however, the institution of *maẓālim* courts emerged, where ideally those who were usually at the receiving end could complain about official wrongdoers. If one was prepared to take risks or was tired of life, one could even complain about the sultan himself at the *maẓālim* courts. However, the problem in the system lay in the fact that the *maẓālim* court sessions were run by public officials, i.e., the very people whose abuses one wanted to protest. Therefore legal complaints sometimes had to be carefully prepared using the rivalries between different factions at the Mamluk court. Finally, it depended on the willingness of the sultan to pursue the matter, and therefore the outcome was often unpredictable and arbitrary. In many cases, however, justice was served, and this upheld the image of Mamluk sultans as just rulers among their subjects. This was an ideal

[1] Yūsuf Idrīs, *Arkhaṣ Layālī* (Cairo, n.d., first published in 1954), 186.

image that no Mamluk ruler was prepared to give up, and the *maẓālim* court sessions became an integral part of the Mamluk approach to governance.

The Just Ruler and *Maẓālim* in the Mamluk Context

Maẓālim denotes literally unjust or oppressive actions. From an early stage in the formation of Islamic institutions it became known, as Jørgen Nielsen puts it, as "the structure through which the temporal authorities took direct responsibility for dispensing justice."[2] Initially the Prophet and the early caliphs had combined in themselves the roles of judge and ruler. Later on, the growth of the Muslim community led to the need for caliphs to delegate their judicial functions to specially appointed qadis. From the second/eighth century onwards the development of the shariʿah law system, with the qadi in the center, established the religious scholars (the ulama) as legal authorities and rivals of the Muslim rulers in judicial affairs. There are hints that even the Umayyad caliphs started to hear *maẓālim* petitions from their subjects. It is more certain, however, that the Abbasid caliphs al-Mahdī (r. 158–69/775–85) and al-Hādī (r. 169–70/785–86) did arrange for regular *maẓālim* sessions under the supervision of the vizier. However, the institution remained controversial—the ulama in particular saw it as a rival to their shariʿah jurisdiction.[3]

Nevertheless, holding these appeal sessions thereafter became a hallmark of a just ruler. The Abbasid author al-Māwardī (d. 450/1058) therefore included a long chapter on *maẓālim* jurisdiction in his book on the ordinances of government *(al-aḥkām al-sulṭānīyah)*. There he states:

> the redress of wrongs involves persuading the contending parties by the awesome presence and dignity of the person in office to accept an equitable settlement and end their dispute. The official concerned must, therefore, be majestic, authoritative, and imposing, as well as manifestly honest, free of avarice, and eminently pious. Since his office calls for a combination of the charisma of those in power with the serenity of judges, he must enjoy the qualities proper to both categories, and show by his courtliness the ability to command the obedience due to each.[4]

Subsequent treatises on the duties of *maẓālim* follow more or less the outline drawn by al-Māwardī and do not add anything substantially new. It was now

---

[2]Jørgen Nielsen, "Maẓālim," *The Encyclopaedia of Islam,* 2nd ed., 7:933.

[3]Ibid., 933–34.

[4]ʿAlī ibn Muḥammad al-Māwardī, *The Ordinances of Government: A Translation of al-Aḥkām al-Sulṭāniyya wʾ al-Wilāyāt al-Dīniyya,* trans. Wafaa H. Wahba (Reading, UK, 1996), 87; al-Māwardī, *Al-Aḥkām al-Sulṭānīyah,* ed. ʿAbd al-Raḥmān ʿUmayrah (Cairo, 1994), 1:194.

clearly established that hearing *maẓālim* cases was part of the definition of a Muslim ruler. Ibn Shaddād (d. 632/1235), the biographer of the famous Ayyubid sultan Ṣalāḥ al-Dīn (r. 567–89/1171–93), praises him with the following words regarding his *maẓālim* practice: "Everyone who had a grievance was admitted—great and small, aged women and feeble men, . . . and he always received with his own hand the petitions that were presented to him, and did his utmost to put an end to every form of oppression that was reported."[5]

Mamluk rulers continued this long-standing legacy. Their rise to power was not undisputed, as they had been slaves before. Al-Maqrīzī (d. 845/1442) quotes an Arab Bedouin shaykh who commented in the year 651/1253 about the rise to power of the Mamluks: "We are the lords of the land. We are more worthy to rule than the Mamluks. It was enough to serve the Ayyubids, who were outlaws and took the land by force, and the Mamluks are only the slaves of these outlaws."[6]

Mamluk sultans therefore had an interest in appearing as just and ideal rulers. Ibn ʿAbd al-Ẓāhir (d. 692/1292), who wrote a biography of Sultan Baybars I (r. 658–76/1260–77), describes him in several chapters as the ideal ruler who restored the *dār al-ʿadl* (Palace of Justice), abolished uncanonical taxes, and helped the oppressed. In one instance Ibn ʿAbd al-Ẓāhir reports how Baybars allowed a *maẓālim* case against himself to be heard. The background of the story was that Baybars had started the building of a well when he was still just an amir. He could not finish the work, though, because he went into exile for a time. The well was then completed by an ordinary soldier who demanded as compensation for his work the ownership of the well from Baybars, who meanwhile had risen to the office of sultan. Baybars set up a public legal process before the chief judge. When the soldier appeared, "the *atābak* [commander-in-chief] said to the sultan, 'Let my lord betake himself to the Holy Law.' So the sultan rose, ungirt his sword, and placed himself on an equal level with his opponent, standing before the chief judge, who was seated." Finally, the legal decision stated that Baybars was still the owner of the well but should pay the soldier for his efforts in the construction work.[7]

The hearing of *maẓālim* cases became an integral part of the Mamluk system

of government in the following years, and it was clear that it was the sultan's prerogative to decide how a case should be classified and that he had the last word in judicial matters. In a memorandum of Sultan Qalāwūn (r. 678–89/1279–90) for his son al-Malik al-Ṣāliḥ on how to govern Egypt during the absence of his father on campaign, it states: "The Prince knows that justice is the profitable capital of the kings and an act that brings them success. . . . If the case be of religious nature, he sends it back to the judges whom We have appointed to separate between the lawful and the forbidden. If the case concerns maliciousness, the Prince himself exacts punishment, for He is a man of pertinent thought and clever mind. . . . If a judgement is delivered on a man of importance and high rank in favour of someone weak or insignificant, let the Prince give the wronged the fullest redress against the wrongs, for the Sultan was created to make a weak one win over his oppressor and to strengthen the hand of the poor and powerless against his litigant."[8]

The Venues of *Maẓālim* Courts

In order to hear *maẓālim* cases, one needed a venue. Often this would be the place where the presiding official already conducted his general duties.[9] But sometimes special structures were built to serve this purpose. Inside the palace of the Abbasid caliphs in Samarra was situated the Dome of Complaints *(qubbat al-maẓālim),* where the caliph al-Muhtadī (r. 255–56/869–70) tried to revive older traditions of public access to the ruler in 256/870.[10] Still, it does not seem that this was common practice, and therefore it apparently was considered an innovation when Nūr al-Dīn Zankī (r. 541–69/1146–74) established a special house of justice *(dār al-ʿadl),* sometimes also known as *dār kashf al-maẓālim* (house of *maẓālim*'s inquest) around 558/1163 in Damascus in order to provide a specific setting for his bi-weekly *maẓālim* sessions.[11] The Ayyubids took this innovation further and built two additional *dār al-ʿadls*, one in Aleppo in 585/1189 by al-Ẓāhir Ghāzī, the son of Ṣalāḥ al-Dīn, and one by al-Kāmil Muḥammad at the citadel of Cairo

Rabbat, "The Ideological Significance of the Dār al-ʿAdl in the Medieval Islamic Orient," *International Journal of Middle East Studies* 27, no. 1 (1995): 3, 6, 7; for the *dār al-ʿadl* in Damascus, see also William M. Brinner, "Dar al-Saʿada and Dar al-ʿAdl in Mamluk Damascus," in *Studies in Memory of Gaston Wiet,* ed. Myriam Rosen-Ayalon (Jerusalem, 1977), 235–47.

around 603/1207.[12] Rabbat has argued that these Ayyubid *dār al-ʿadls* represented an "original innovation of an extraordinary time." He sets them in the context of the Islamic ideological revival which accompanied the counter crusade against the Franks and the threat of the Mongols in the thirteenth century. In this period rulers had to appear as just rulers who adhered to proper Islamic codes. Once the immediate threat had dissipated in the fourteenth century, th*e dar al-ʿadls* were no longer used in their primary function.[13] I might agree with the first part of his reasoning, but as we will see the *maẓālim* sessions did not stop in the fourteenth century. Only the venue of the sessions in the citadel changed, but this might have been a matter of the individual taste of the rulers rather than the end of an ideological approach to proper Islamic rule.

However, after the Ayyubids, Sultan Baybars I decided to install his own *dār al-ʿadl* just below the citadel in 662/1264. He used it for holding *maẓālim* sessions and for inspecting the Mamluk army. The structure became known later as the *dār al-ʿadl al-qadīmah* (the old *dār al-ʿadl*) and by the time of al-Maqrīzī in the fifteenth century it was used as a performance venue for the military band *(ṭablkhānah)*.[14] It seems that the successors of Baybars I found this building not representative enough, and therefore its function as *dār al-ʿadl* was apparently moved inside the citadel by Sultan Qalāwūn (r. 678–89/1279–90) to the *īwān,* a large columned room used as the principal audience hall, which he had rebuilt. His son Sultan al-Ashraf Khalīl (r. 689–93/1290–93) renovated this structure, before finally his brother, another son of Qalāwūn, Sultan al-Naṣīr Muḥammad (r. 693, 698–708, 709–41/1293, 1299–1309, 1310–41), had the building torn down and built his impressive *īwān/dār al-ʿadl* in the citadel, whose remains were still encountered by European visitors of the early nineteenth century.[15] (See figs. 2 and 3.)

At first, al-Naṣīr Muḥammad held his *maẓālim* sessions in his new *dār al-ʿadl* once a week on Mondays, before he switched to a bi-weekly scheme on Mondays and Thursdays.[16] During the time of his weak Qalāwūnid successors, the *dār al-ʿadl* retained mainly representational functions, as the real powers were with the high-ranking Mamluk amirs. Al-Shujāʿī (d. after 756/1356) reports how the amirs sat before Sultan al-Nāṣir Aḥmad (r. 742/1342) and told him what to do. He said to them: "Do things as you understand them. Whatever you think is right, I

consent."[17] However, this might have been a trick. To great general astonishment, he summoned a surprise *maẓālim* session for the first time in his reign in Dhū al-Qaʿdah 742/May 1342 in the *dār al-ʿadl,* where he heard petitions and signed documents. He then ordered the selling of some of his own cattle in order to collect the money awarded to deserving plaintiffs, before he went into exile at al-Karak some days later.[18]

By this time, however, holding *maẓālim* sessions in the *dār al-ʿadl* seems to have been exceptional; in the second half of the fourteenth century *maẓālim* sessions were usually held at the palace of the powerful viceroys, the *dār al-niyābah,* in the citadel. The viceroys had the power to administer justice among the people at a barred stand *(shubbāk)* at their palace.[19]

Once Sultan Barqūq (r. 784–91, 792–801/1382–89, 1390–99) had restored the authority of the Mamluk sultanate, it seems that at first he revived the *maẓālim* sessions in the *dār al-ʿadl īwān,* but in order to underline the uniqueness of his sultanate, he then transferred the hearing of the petitions to some place in the royal stables in 789/1387 (see fig. 4). Moreover, the bi-weekly sessions were switched to Sundays and Wednesdays and some time later changed to Tuesday, Saturday, and Friday afternoons.[20] According to Linda Darling the new setting was not degrading, as "in Turkish practice stables were often places of political sanctuary."[21]

It seems that Barqūq occasionally did administer justice on the *maydān* below the citadel, as happened in 792/1390, but the royal stable represented the usual place for the wronged to go even after Barqūq's reign.[22] The *dār al-ʿadl/īwān* was still in use, but no longer for *maẓālim* sessions. Crowds would gather there for very formal events, like the reception of foreign guests. However, some occasional judicial sessions still took place there. Sultan Barsbāy (r. 825–41/1422–38) held one there in 831/1428; Ibn Taghrībirdī (d. 874/1470) notes that that had not happened for a very long time.[23]

The royal stable apparently represented the main *maẓālim* venue before a new location was introduced in the time following Barsbāy, the so-called *dikkah* (platform) in the sultan's park *(ḥawsh)*. It was a wooden platform with an imperial

tent above it. Ibn Taghrībirdī reports for the year 871/1466: "[In this year] the sultan [Khushqadam (r. 865–72/1461–67)] began to hold Saturday and Tuesday sessions in the sultan's stable to adjudicate cases among men as had been the custom of the rulers of the past. This had not occurred since the day he became sultan; for the sultans of our time have sat on the platform of the sultan's park in the citadel and dispensed justice there among men."[24] Apparently the platform had been in use long before that date. This means that, at least from the middle of the fifteenth century onwards, it had become the usual location to hear petitions. In any case, the former locations were still held in high esteem. Sultan Qāytbāy (r. 872–901/1468–96) apparently invested a large amount of money in the restoration of the *īwān* in order to use it like in the old days.[25] It does not seem, however, that he really used it for *maẓālim* sessions. It is more probable that he continued to sit in the park, where he had a special throne erected beside the *dikkah.*[26]

Qāytbāy is also reported to have administered the usual legal hearings in the royal stable in Rajab 876/December 1471.[27] Therefore it is likely that the royal stable was used during the winter months and the *dikkah* in the park during the rest of the year in the time of Qāytbāy.

The arrangements around the *dikkah* in the park seem to have been very impressive for foreign visitors. The German pilgrim Arnold von Harff, who visited Cairo in 1496, tells us that he came through eight doors before he was brought to a large square. He saw 16,000 men standing there, all of whom had to come there three times a week with the full sun on their necks. The sultan al-Nāṣir Muḥammad (r. 901–4/1496–98) himself sat high on a platform on nice carpets and he had his legs crossed like tailors in Germany. In this manner he would sit there three times a week to hear complaints of his subjects and to dispense justice.[28] (See fig. 5.)

As one might assume, the wooden *dikkah* was not going to last. Sultan Qānṣawh al-Ghawrī (r. 906–22/1501–16) had it removed in 916/1511. Instead he erected

[24] Ibn Taghrībirdī, *Al-Nujūm,* 7:745; Popper, *History of Egypt,* 7:71.

[25] Finally the roof and the *qubbah* of the *īwān* were set on fire at the beginning of 923/1517 by the Ottomans shortly after the conquest, under the pretext that Sultan Ṭūmān Bāy had been there during the war. This led to the collapse of the *qubbah* in 928/1522, and it was never restored. Ibn Iyās (d. around 930/1524), *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. a richly decorated marble platform *(maṣṭabah)* at the same site. According to Ibn Iyās the people were sad that the *dikkah* was gone, as so many kings had sat on it—its removal was perceived as a bad omen.[29]

It seems that Qānṣawh al-Ghawrī very much liked the *maẓālim* proceedings to be public. Some of his *maẓālim* sessions were held on the racecourse *(maydān)* just underneath the citadel, maybe following the example set by Barqūq, but Qānṣawh even ordered the building of a special throne and a house on the racecourse in 909/1503 in order to administer justice there.[30]

One reason for this could be that more people could attend to witness the justice of the ruler on the *maydān*. In Shawwāl 921/November 1515 he summoned a Jewish merchant, who originally came from the lands of the Franks but had already stayed for a while in the Mamluk Empire, to the *maydān* and had him tortured right in front of him because the Jew apparently had stolen a considerable amount of money. Asked about the whereabouts of the money, the merchant would not divulge its location, but instead he recited aloud the *shahādah* to show that he had become a Muslim. The crowd started to shout *Allāhu akbar,* but the sultan ordered further torture, saying: "There are many Muslims and Islam does not need this one."[31]

After Qānṣawh al-Ghawrī had died in battle in Syria, his ill-fated nephew Sultan Ṭūmān Bāy (r. 922–23/1516–17) tried to revive flagging Mamluk spirits and, despising al-Ghawrī's theatrical opulence, he had the stone *maṣṭabah* in the park destroyed and replaced with the wooden *dikkah* of Qāytbāy. Ibn Iyās remarked: "The *dikkah* of justice came back and the *maṣṭabah* of injustice was destroyed."[32] It did not really save Ṭūmān Bāy, who was hanged after the Ottoman conquest in 923/1517.

What can be stated in general about the *maẓālim* venues is that the shifting of the locations all around the citadel throughout the Mamluk period provided an individual Mamluk sultan with the opportunity to reinvent himself in matters of representation and leave his particular stamp on the administration, while still adhering to the general notion of the just ruler who caters to the wronged in *maẓālim* sessions.

LEGAL PROCEDURES IN THE *MAẒĀLIM* COURT

The procedures of the *maẓālim* sessions were highly formalized. An account of the court ceremonies is given by Ibn Faḍl Allāh al-ʿUmarī (d. 749/1349), who served

[29] Ibn Iyās, *Badāʾiʿ,* 4:203.

as an official in the chancery of Sultan al-Nāṣir Muḥammad. This source is only slightly modified in the famous chancery manual of al-Qalqashandī. According to these descriptions, the sultan came to the *dār al-ʿadl/īwān* in the citadel on Monday mornings (except in Ramaḍān) to hear petitions. He sat on a seat so high his feet barely touched the ground, to the side of the royal throne which resembled a *minbar* (pulpit). The eschewing of the royal throne during the sessions symbolized that the sultan was almost equal to the rest of the society. The slightly higher seat, though, meant that he still had a slightly higher standing. To his right were seated the four chief judges *(quḍāt al-quḍāt)* of the four law schools, who were accompanied later in the fourteenth century by newly created officials, the special *muftī*s (legal counsellors) of the *dār al-ʿadl* for each law school. Behind the ulama sat the controller of the treasury *(wakīl bayt al-māl)* and then the market inspector *(muḥtasib)* of Cairo. To the sultan's left were seated his privy secretary *(kātib al-sirr),* followed by the army supervisor *(nāẓir al-jaysh)*. The circle was completed by the scribes of the bench *(kuttāb al-dast),* who wrote down the proceedings. If a vizier was in office he would stand between the sultan and the *kātib al-sirr*. Behind the seats of the circle on the side of the sultan there were special guards *(silāḥdārīyah)*. On the left and the right side of the hall behind the circle were places reserved for the eminent Mamluk amirs. In front of the circle stood the chamberlains *(ḥujjāb)* and the *dawādār*s (the so-called bearers of the inkwell) in order to receive written petitions *(qiṣaṣ)* from the plaintiffs among the people. The petitions then were read to the sultan and he decided who should deal with them. If he thought it should be the qadis, they received it. Matters concerning the army were brought to the attention of the chamberlains and the privy secretary, and so on.[33]

Of course, this arrangement must have impressed the ordinary citizen, and even more so as the proceedings were highly formalized and contained theatrical elements. We have already heard of the incident when Sultan Baybars I left his throne during a session in order to go down to the level of a man who complained about him.[34] In 879/1475 Sultan Qāytbāy was holding a court session in the royal stable where the petitions were being read to him by the *kātib al-sirr,* when a man entered and complained about Yashbak the *dawādār*. The sultan ordered that Yashbak should go down to the man and stand in front of him and stay there as

[34]Ibn ʿAbd al-Ẓāhir, *Al-Rawḍ,* 84–86; Holt, "Sultan," 132.

long as it would take to reach a verdict. The same happened when another man complained about another dignitary.[35]

The *maẓālim* sessions not only provided the sultan with an opportunity to excel as a just ruler, but moreover they helped him to control his entourage and to keep them busy at least twice a week. In the memorandum of Sultan Qalāwūn for his son, it therefore states that the prince should preside over the sessions, provide justice to the wronged, and especially take care that everybody who should be there was indeed there. "Nobody presents a petition directly to the Prince and nobody participates in handling the petitions, if it is not his customary duty. Nobody talks on matters that do not concern him; nobody stands in a place other than his own; and nobody stands by the Sultan's side, if it is not his customary duty. Everyone who participates in the court session performs his duties in a place and location assigned to him. Let the Prince's eyes be open for this and His thoughts concerning those important matters [be] pertinent."[36] Absentees certainly should have a good legal excuse.[37] Assembling the amirs at a certain time in the week in the *dār al-ʿadl* could come in very handy. In 786/1384 Sultan Barqūq sat in the *dar al-ʿadl* and bestowed robes of honor on some amirs while he had others taken away and imprisoned in the same session.[38]

The sultan and the amirs went to *dār al-ʿadl* sessions in public procession *(mawkib),* and after hearing the cases an official banquet *(simāṭ)* followed, and the whole ceremony became known as *khidmah* (service).[39] In a matter of time it seems that the two parts of the ceremony, i.e., the hearing of complaints and the formal audience, were sometimes separated from each other. The *dār al-ʿadl/īwān* continued to be used occasionally for formal events like receiving foreign guests, whereas the location of the *maẓālim* sessions moved to different locations within the citadel.

In contrast to the ideal, we have to observe that during the time of the Mamluk sultanate the bi-weekly aspect of the sessions was not always strictly upheld. First of all, there were of course usually no sessions in Ramaḍān*,* and in troubled times they were cancelled altogether. However, Mamluk historians clearly note the suspension of *maẓālim* sessions, for instance when they praise Sultan al-Nāṣir Muḥammad for restarting the sessions in 710/1310, after his power was firmly established.[40] In 871/1466 Sultan Khushqadam (r. 865–72/1461–67) held *maẓālim*

sessions for the first time after six years in office. Criers went through the streets to invite the wronged to come on Saturdays and Tuesdays to the citadel. Apparently people had to be reminded about the *maẓālim* session. Ibn Iyās, however, states that this was the last sign of justice displayed by this sultan, as he died a year later.[41]

In any case, sessions were held most of the time throughout the Mamluk period, and the written petition *(qiṣṣah)* played a central role.[42] Al-Qalqashandī describes six ways in which such a petition should be presented to the authorities.[43] The first way would be to come on a normal day to the citadel and leave it there. If the sultan decided on it, then the clerks would issue a decree. How successful such a "petition by chance" was, is hard to say, but sultans were given petitions on a regular basis once they descended from the citadel.[44] In the memorandum of Qalāwūn for his son it states that: "If petitions were presented to Him while riding (on processions outside the citadel), let Him help the one who presents them, treat him justly and give redress against the wrongs. He should investigate the injustice personally and not entrust the case to those who delays things."[45]

The second possibility was to address the petition to the chancery, where it would be decided if the sultan should hear the case or not. The third way was to present oneself on the *maẓālim* days in the *dār al-ʿadl* and give the petition to the *kātib al-sirr,* who would then read a selection to the sultan. The fourth way was to present it to a high representative of the sultan, called the plenipotentiary governor *(al-nāʾib al-kāfil)* by al-Qalqashandī. This might be a representative of the sultan when he was away. The fifth way consisted of the presentation of the petition to the army commander, the *atābak*. This was especially the case if the sultan was a minor. Finally, contacting a chamberlain directly constituted the last of the possibilities.

It seems quite clear that it certainly helped a request if one knew someone within the system, as the petitions seldom reached the sultan directly, and even if they did, Mamluk sultans were not exactly known for their Arabic reading skills. Therefore the assistance of government officials could certainly help even when the petitioner lived in a remote province. When in 713/1313 a new cadastral survey *(rawk)* would have meant considerable financial losses for the local family of the Buḥturids, who lived in the mountains south of Beirut, a leading representative of

the family went to Tankiz, the governor of Damascus, who intervened on behalf of the Buḥturids at the sultan's court in Cairo. There he obtained a decree of the sultan which exempted the Buḥturids from the survey because of their role in fighting the Crusaders.[46]

Another key element of the procedures of *maẓālim* jurisdiction was the relationship between the sultan and the judges of the four law schools, who had to be present at every session. As has been shown, the sultan decided whether a case should be looked at by the judges in shariʿah affairs or by other Mamluk officials if worldly matters and civil administration *(sīyāsah)* were concerned. However, the claim of al-Maqrīzī that in the latter cases the so-called Mongol Yāsa was used as the basis of the law can be discounted.[47] There is simply no evidence to substantiate such a claim. Maybe this accusation resulted from the frustration of a scholar who knew that the actual independence of the judges in the *maẓālim* court was quite limited even in matters of so-called religious affairs. In any case, the decrees which the sultan and his officials issued regarding worldly matters were certainly not meant to contradict the shariʿah. Moreover, the attendance of the judges at each session demonstrated that the sultan and his institution based their decisions on an underlying religious intent, or at least they wanted it to appear that way.

For the religious scholars, though, it was not highly recommended to disagree with the sultan on legal issues. In 723/1323 the sultan had a judge imprisoned in order to obtain his *waqf* property, but the judges would not give it to him. The sultan therefore bribed witnesses in order to achieve his goal.[48] Another event concerning *waqf* properties occurred in 780/1378. Before becoming sultan, the already powerful amir Barqūq wanted to confiscate *waqf* properties. The scholars objected and one scholar tried to explain the matter to Barqūq in Turkish until Barqūq became very angry and asked Shaykh al-Bulqīnī why he had remained silent. Al-Bulqīnī said that he had not been asked to speak, but he would rule against Barqūq. Another scholar, Ibn Abī al-Biqāʾī, then apologized for al-Bulqīnī and said to the amirs: "You are the masters of complaints; in the end, you decide." Al-Bulqīnī then remarked: "O amirs, you order us to give our legal opinion, but

if we do not carry out matters your way, you dismiss us."[49] Even worse was the outcome for the judges in the following story, which concerns a famous case of adultery. An auxiliary Hanafi judge by the name of Khalīl had a beautiful wife who betrayed him with his Shafiʿi colleague Nūr al-Dīn. Khalīl found them together in his house and went to the grand chamberlain to launch an official legal complaint. The Shafiʿi auxiliary judge Nūr al-Dīn then wrote down a written legal confession of his crime. The chamberlain had the couple taken into custody and severely beaten. Then they were seated facing backwards on donkeys and paraded through the streets. The chamberlain then wanted the wife to pay an indemnity of 100 dinars, which she could not; the chamberlain ordered the betrayed husband Khalīl to pay. He refused and was imprisoned himself. By coincidence, the son of Khalīl did know someone near to the sultan, and Qānṣawh al-Ghawrī got interested in the case. He summoned the four chief judges and together they decided that the couple should be stoned. After the decision another Shafiʿi auxiliary judge named al-Zankalūnī raised the question of whether the couple could still legally be stoned if the written confession was withdrawn. The sultan became furious and asked the judges how something could be withdrawn if it was already confessed. The judges told him that this was an existing legal concept. But the sultan replied: "Is it not up to me to decide? I have the right in this matter." He then dismissed the four *quḍāt al-quḍāt*. The Shafiʿi auxiliary judge al-Zankalūnī, who had given the legal opinion about the withdrawal of the confession, was brought to a legal session at the racecourse where the sultan told him: "O al-Zankalūnī, is it really your decision which counts and not mine?" Then the sultan had him beaten to death. The cheating couple was hanged at the door of another judge who had disobeyed the sultan.[50]

Despite this obvious case of injustice, it seems that the legal practice of the Mamluks did impress foreign visitors. The Irish friar Symonis Semeonis who visited Cairo in 1324 remarked that: "In Cairo as in all Egypt and India (Ethiopia) the administration of justice and equity is of so high a standard that nobles and peasants, youths and old men, and foreigners of whatever creed or condition, with no possibility of bribery, are subject to the infliction of the same penalties, and this especially when it is a case of capital punishment, death being inflicted by crucifixion, decapitation, or cutting in two with swords."[51] The Venetian merchant Emmanuel Piloti, who lived in Egypt at the beginning of the fifteenth century, remarked, apparently astonished, about the regular law sessions of the

Mamluks: "Quant le souldain donne l'audience, tousjours commence au femmes, et à celles donne premiers espacement."[52]

DANGER IN THE PUBLIC SPHERE: VIOLENCE DURING *MAẒĀLIM* SESSIONS

Even though many armed guards were present at *maẓālim* sessions, they still constituted a public event with accompanying dangers. In the year 664/1266 the *nāʾib al-salṭanah* amir ʿIzz al-Dīn al-Ḥullī (?) acted for a while as the deputy of Sultan Baybars in the *dār al-ʿadl* and held legal sessions. A man appeared with a written petition in his hand and was brought before the amir. The man suddenly produced a knife which was hidden under his clothes, attacked the amir and stabbed him in the throat. The amir managed to get hold of the hand of the assailant and kicked him down with his feet. In the ensuing struggle the attacker killed an amir before he himself finally succumbed to sword strokes. It was said that this madman belonged to the ones who constantly ate hashish to foster their madness.[53] When a messenger informed the absent sultan about the incident, he apparently cried out: "I could cope with the death of my son Berke but not al-Ḥullī." News finally arrived that al-Ḥullī had recovered, and the sultan was relieved.[54]

More common, though, were apparently fatal disputes among Mamluks themselves at the public sessions, as they could plot their attacks beforehand. An attempt on the life of Amīr Sayf al-Dīn Qawṣūn during the *maẓālim* sessions is reported by al-Shujāʿī for the year 742/1342. As usual, Qawṣūn led the parade *(rakaba al-mawkib)* towards the citadel, but he did not participate in the session itself because he had been warned of the coup. From a safe place he announced that the eight leading conspirators should be taken into custody. They refused and went out to fight, but finally had to admit their defeat.[55]

Another violent incident occurred in 758/1357, when the Mamluk soldier Quṭlūbughā handed a written petition to Amir Shaykhū asking for his promotion from a monthly-salaried Mamluk to that of a Mamluk holding an *iqṭāʿ*. After his promotion had been refused, Quṭlūbughā murdered Shaykhū on the spot in the *dār al-ʿadl.*[56] In 801/1398 a strange episode occurred, when a Persian dressed in Sufi garb presented a petition in the royal stables. He went up to Sultan Barqūq, grabbed his beard, and insulted him with great vehemence. By the sultan's order

he was then subjected to corporal punishment.[57] Given these incidents, it is no wonder that Sultan Qalāwūn told his son in his memorandum to watch his back carefully and never leave the prescribed route on public outings.[58]

During the period of the outdoor *maẓālim* sessions on the *dikkah* in the park in the fifteenth century some other unexpected dangers arose, as Ibn Iyās reports: "In this month [Rabīʿ II 893/March 1488] the sultan [Qāytbāy] sat on the *dikkah* in the park as usual to hold a public session. Suddenly a storm began. It was the strongest storm which had ever occurred in the park. It wounded several amirs and the grand chamberlain was hurt in the face. . . . The turbans of the scholars and the *takhfīfah* hats of the Mamluks were blown all over the place. The sultan stood up and was blown into the pond. His servants fled and left him alone; even the army fled, as they thought the day of judgement had come. And the weather really created great injustice (*wa-qad aẓlama al-jaww ẓulmatan.*)"[59]

Maẓālim in the *Dar al-ʿAdl* Period (648–789/1250–1387)

The first ninety years of this period were dominated by the more or less stable reigns of the three sultans: Baybars I (r. 658–76/1260–77), Sultan Qalāwūn (r. 678–89/1279–90), and Sultan al-Naṣīr Muḥammad (r. 693, 698–708, 709–41/1293, 1299–1309, 1310–41). Jørgen Nielsen underlines the fact that these sultans had highly formalized the procedures in the *khidmah* and *maẓālim* ceremonies in order to emphasize their role as just rulers. In doing so they had supplanted the jurisdiction of the qadis, and it had become difficult to distinguish their actual jurisdiction from other governmental functions, as everything had been centralized under them.[60] On the other hand, it might be this centralization which ensured the actual holding of these *maẓālim* sessions and the sultan's active interest in the affairs of his subjects.

Jørgen Nielsen has collected 63 *maẓālim* cases from various sources for this period. If we discount the 21 surviving decrees which were issued in favor of St. Catherine's Monastery and deal mainly with the protection of the rights of the monastery and condemn Bedouin raids against it,[61] then there are still 42 *maẓālim* cases. Out of these, 30 were directly dealt with in Cairo's *dār al-ʿadl* or adjacent institutions. Nearly 50% of them deal with matters of land/*waqf* property and inheritance. What is very remarkable for this period is that we can find at least

nine cases where complaints against abuses of power by Mamluk officials are raised.[62]

At the beginning of the period, the Mamluks restructured the organization of the legal establishment in Cairo. In the year 663/1265 Sultan Baybars ordered the creation of four chief judgeships because he had become angry with the Shafiʿi chief judge, Tāj al-Dīn Ibn Bint al-Aʿazz, who had held this position alone. According to al-Maqrīzī, this came after the complaint of the daughters of an Ayyubid prince. The women explained to the sultan that they had bought a house from the former Shafiʿi chief judge Badr al-Dīn al-Sinjārī. But now that the judge had died, the heirs of al-Sinjārī argued that the house was actually a religious endowment *(waqf)* and therefore could not have been sold in the first place. The sultan turned to Tāj al-Dīn Ibn Bint al-Aʿazz and asked why judges would act in that manner. Tāj al-Dīn ignored the issue by stating that the women should be financially compensated. "What if the heirs have no money for the compensation?" the sultan asked. The judge replied that if there was no money, there was no compensation, as the *waqf* had to remain inviolate. The sultan was not pleased with the answer, and after some other dubious rulings by Tāj al-Dīn, he decided to install four chief judges representing all four law schools to bring more legal opinions into play.[63]

During the reign of Sultan al-Naṣīr Muḥammad, complaints against officials had a good chance of success. In 739/1338 the qadi of Ḥamāh arrived in Cairo to complain about the injustice of his overlord, the governor al-Malik al-Afḍal. The sultan had al-Malik al-Afḍal come to Cairo and spoke to him in the *dār al-ʿadl*: "I have brought you here to the *dār al-ʿadl* so the judges can witness what is discussed. I have heard a lot (of evil things) about you. . . . If you do it again, you will harm your family tremendously."[64] On the other hand, the hearing of complaints against officials could also backfire against the sultan. Twice in 735/1334 and 737/1336 he successfully dismissed allegations of abuse of power against his favorite, al-Nashw, the *nāẓir al-khāṣṣ,* i.e., the inspector of the sultan's treasury, but this could not save al-Nashw in the end. Finally the sultan had to consent to al-Nashw's arrest and execution by torture because of pressure from the Mamluks and the public. This caused a week-long celebration in Cairo.[65]

For the rest of the *dār al-ʿadl* period, the time of the mostly powerless successors of Sultan al-Naṣīr Muḥammad, we notice the total absence of complaints against

abuse of power. Nielsen counts only 16 cases throughout the period 741–84/1341–82 that can be clearly linked to the *maẓālim* jurisdiction.

Recently Jo von Steenbergen has shown that in order to survive and prosper during these confusing and chaotic times, one needed functioning personal networks.[66] The legal system was certainly no exception. In 753/1352 a group of Persian merchants was thrown into prison by the Hanafi chief qadi for failing to pay import dues. The chief chamberlain had them released and gave them indemnities.[67] We might assume that money was involved to build up this network. The following legal decision, though, was certainly based on a purely male network and male complaints. In 750/1350 the vizier Manjaq and the judges met in the *dār al-ʿadl* while the minor sultan al-Nāṣir Ḥasan (748–52, 755–62/1354–61, 1347–51) was present. The legal council then decided to ban certain women's clothing. The popular long-sleeved shirt that reached the ground and fetched a price of 1000 dirhams was forbidden, as were the so-called Baghdadī silk buttons for 1000 dirhams each and expensive shoes. All agreed that this was a matter of honor and action was needed. Soldiers started to go into the brothels to confiscate the illegal apparel. Mamluks searched shops and patrolled the streets looking for this kind of clothing. When they found a woman still wearing it, they tore her clothes to pieces; some women were taken into custody. At the gates of Cairo officials erected dressed wooden puppets to show the women which kind of dress was suitable and legal. The prices of Baghdadī buttons plummeted to 80 dirhams but nobody would dare to buy one.[68]

However, more frequent than complaints against women's clothing in the *dār al-ʿadl* were allegations of misbehavior by Christians. After such complaints increased significantly in 755/1354, the *dār al-ʿadl* council issued a decree reinforcing the discriminatory legal regulations concerning the *ahl al-dhimmah*. The Christian patriarch and the leader of the Jewish community were present and had to consent. But instead of cooling down the atmosphere, the decision led to riots against Christians and Jews in Cairo which lasted for several days.[69]

Maẓālim during the Royal Stables and *Dikkah* Period 789–923/1387–1517

During this period *maẓālim* cases were mainly heard at the royal stables, but sometimes at the *maydān,* and especially after the mid-fifteenth century, cases were usually heard on the *dikkah* platform in the royal park in the citadel. This period once again witnessed stable sultanates, and complaints against abuses of

[69] Ibid., 2:921–28

power were heard again at *maẓālim* court sessions after the time of weak rule by the Qalāwūnids. Therefore, *maẓālim* sessions reappear as a sultan's regular duty at the turn of the century. It might have been to show that a traditional institution was renewed that Sultan Barqūq had the sessions transferred to the royal stables. Ibn Qāḍī Shuhbah (d. 851/1448) remarked about this re-introduction: "Everywhere in Cairo and Egypt was uttered loudly the invitation that the one who has been wronged could come to the sultan's stables. And when somebody came and said: 'Can I present my case to the judge or to the chamberlain?' and the sultan said no, then the man was beaten and thrown outside. But if the sultan said: 'Yes, the case is accepted,' then the sultan ordered the man's opponent in the legal case to present himself, and he rendered justice between the two."[70]

In 821/1418 Sultan al-Muʾayyad Shaykh (r. 816–24/1413–21) had Ibn Ṭablāwī, the *wālī* of Cairo, whipped at the regular *maẓālim* session in the stables. The reason for this had been that a poor man did not have enough money to pay for the burial of his drowned son, for which the *wālī* had imposed five dinars. The father therefore had to dump the cadaver beside the Nile, where dogs started to eat the corpse. A complaint reached the sultan who decided to punish the *wālī.*[71]

Staging regular legal sessions was upheld after the death of al-Muʾayyad. The grand amir Ṭaṭar, who was in charge of state affairs for al-Muʾayyad's two-year-old son, summoned the amirs and judges ten days after the death of al-Muʾayyad in Muḥarram 824/January 1421 to the first *maẓālim* session: "Proclamation was made that grand amir Ṭaṭar would sit for judgement among the men. When the Friday prayer was over the grand amir took his seat in the reception hall of the royal stables as al-Malik al-Muʾayyad used to sit there, except that Ṭaṭar sat at the left of the throne not upon it. He decided cases between people and settled the affairs of men most judiciously, for he was a man of outstanding ability, alert and intelligent, and had a good knowledge of jurisprudence and other subjects; he loved to study especially the teachings of the Hanafite masters, for he held them in high honor."[72]

Ṭaṭar, who might have made a very just ruler, even reached the sultanate this year but suddenly died in the same year. In times when the sultan was a minor, the *maẓālim* sessions were apparently supervised by the grand amir. Grand amir Barsbāy, who shortly thereafter became Sultan Barsbāy (r. 825–41/1422–38), held *maẓālim* sessions on a regular basis before attaining the sultanate: after some complaints from the public, he had the money changers come to the royal stables in 825/1422. There he ordered that the Muʾayyadī dirhams should be weighed

[70] Ibn Qāḍī Shuhbah, *Tārīkh Ibn Qāḍī Shuhbah,* ed. ʿAdnān Darwīsh (Damascus, 1977), 221.

[72] Ibn Taghrībirdī, *Al-Nujūm,* 6:484; Popper, *History of Egypt,* 3:126.

when accepted for payments rather than being counted, as apparently the dirhams had suffered a strong diet regime in the hands of the money changers, who had reduced their weight by almost half.[73]

Another example of a Mamluk who was actively involved in the *maẓālim* jurisdiction is found in Amir Sūdūn, who served as chamberlain during the reign of Barsbāy. He seemed to be almost obsessed with favoring the weak over the strong during *maẓālim* sessions. Even when a Mamluk had a substantial legal case against a peasant, Sūdūn would favor the peasant. No wonder he fell into disgrace and was exiled to Jerusalem.[74]

It seems that the proper functioning of the *maẓālim* system depended to a large extent on the will of the reigning sultan or other strong men of the sultanate to enforce it. It could certainly not work well when the sultan was openly corrupt. Sultan Jaqmaq (r. 842–57/1438–53) apparently had this reputation, and Petry has recently shown how the daughter of Sultan al-Muʾayyad Shaykh had waited with her legal complaint about a property dispute until after the death of Jaqmaq because the accused in the case was the sultan's favorite. When she filed her suit, presumably through the *maẓālim* jurisdiction, it came at the right time, as Sultan Īnāl (r. 857–65/1453–61) was reviewing acts of nepotism by his predecessor and she was granted a financial indemnity.[75]

This brings us near to the end of the Mamluk sultanate as a whole, to the "Twilight of Majesty."[76] This period was dominated, if we follow the contemporary sources, by the rule of the good and just sultan Qāytbāy (r. 872–901/1468–96) and the bad and unjust sultan Qānṣawh al-Ghawrī (r. 906–22/1501–16).[77] Qāytbāy was especially well known for his interventions against officials. In 876/1471 for example, he had the controller of his privy funds *(nāẓir al-khāṣṣ)* flogged for cheating three plaintiffs during a bi-weekly *maẓālim* session in the royal stables.[78] There were other similar stories about him, but often they contained a certain "show off" element and staid symbolism.[79] Carl Petry remarks in this context that "the sultan did frequently uphold the rights of legitimate petitioners. His

reputation as a defender of orphans, widows and the helpless was not without merit. Yet, adjudicating their grievances usually involved petty sums, restoration of which cost him little. Public acclamation for protection of the lowly's claims was cheaply bought."[80]

In contrast to Qāytbāy, Sultan Qānṣawh al-Ghawrī did not even bother with such symbolic gestures, but we have to acknowledge that our main historical source, Ibn Iyās, is not very friendly towards him. However, stories about his unjust behavior abound, and some have been mentioned here already. It is hard to find a positive story about him. Maybe this one will do: in 915/1509 he asked Qurqmās al-Muqrī, an amir of ten, to refund money which he had taken from the people of his quarter. Apparently 1000 dinars had been stolen from the house of al-Muqrī. As al-Muqrī could not find the thief, he forced his neighbors to pay him the sum. Finally, the real thief was caught in Mecca, but al-Muqrī still did not refund the money. His neighbors therefore went with a written petition *(qiṣṣah)* up to the sultan, who decided against al-Muqrī. But Ibn Iyās had to add that Qānṣawh al-Ghawrī did this because he already had mixed feelings towards al-Muqrī.[81]

It looks like it had been almost impossible to file a suit against a favorite of al-Ghawrī. When the murder of a young boy was committed by a man in the service of al-Ghawrī's nephew Ṭūmān Bāy, the case could not be tried, as no witnesses dared to present themselves.[82] Another instance of unjust jurisdiction occurred when Qānṣawh al-Ghawrī had the chief judges examine the family tree of the descendents of the Prophet in order to eliminate them from the state's payroll if they could not prove their ancestry.[83]

However, the worst injustice of his reign is that apparently many crimes were not examined at all, but simply ignored. This negligence on the part of the head of state frustrated the public. Therefore Qānṣawh's reign certainly constituted the heyday of the phenomenon of privatization of justice in the Mamluk period.[84] Illegal "legal platforms" *(dikak)* popped up almost all over the city in front of houses of influential persons. In this legal "black market," complaints were accepted and pursued by semi-official doormen *(nuqabāʾ)* in the service of influential people.

---

[80] Ibid., 203.

[81] Ibn Iyās, *Badāʾiʿ*, 4:162, 180.

[82] Ibid., 4:168.

[83] Ibid., 4:260.

[84] For a discussion of the phenomenon of privatization of law in the Mamluk period, see John Meloy, "The Privatization of Protection: Extortion and the State in the Circassian Mamluk Period," *Journal of the Economic and Social History of the Orient* 47/2 (2004): 195–212; Robert Irwin, "The Privatization of 'Justice' Under the Circassian Mamluks," *Mamluk Studies Review* 6 (2002): 63–70.

Especially towards the end of his reign it seems that Qānṣawh al-Ghawrī strongly disapproved of this practice, as numerous official orders were issued in 919/1513 to forbid officials from erecting these *dikak* in front of their houses and using them to dispense legal rulings.[85] Finally he re-allowed the *dikak* in Jumādá I 919/July 1513, with the restriction that the *nuqabāʾ* should not impose excessive financial penalties on the accused parties. Apparently the amirs, who naturally did not want to lose this income, had convinced the sultan by saying: "If the sultan does not provide justice and the amirs do not provide justice, then the rights of the people will be lost."[86] The people could now choose where to take their legal complaints, either to the public sector and the *dikkah* in the sultan's park or to the private sector and the *dikak* in the streets of Cairo.

Conclusion

After the fall of Mamluk Empire, the Mamluk *maẓālim* jurisdiction disappeared. The Ottoman sultan Selīm I (r. 918–26/1512–20) apparently did not wish to pursue such forms of public display. "When Ibn ʿUthmān went up to the Citadel he hid from the people and did not show himself to anyone. He did not sit for public hearings on the *dikkah* in the park in order to help the wronged against the oppressor. On the contrary, the people increasingly told stories about new injustices *(maẓlamah)* committed by him and his officials," remarked Ibn Iyās about the end of a legal institution which had shaped Egypt's and Syria's legal history throughout the Mamluk period.[87]

How can we sum up this institution? It functioned right to the very end of the Mamluk era; it was used by the sultans to enforce their images as just rulers and to fulfil the legal obligations which they had as Muslim rulers. In doing so, they followed the system which had been laid out by the Ayyubids, although the Mamluks had made some adjustments. They certainly formalized the procedure to an extent that it might be asked whether the legal decisions given during these sessions were sometimes merely a by-product of the general public representation of the sultan. Some sultans, though, took their legal obligations more seriously and apparently really tried to help the poor against the powerful. Still, there were limits to this when personal interests of the sultan or the empire were at stake.

To answer the question posed in the heading of my paper: was there *ẓulm* (injustice) done by the *maẓālim* procedure? Well, there was a lot of *ẓulm* perpetrated in and through *maẓālim* sessions, yet there was no injustice automatically built into the system. The aim of it was clearly to provide a forum for appeals against

legal decisions of state officials and to put overall control of all matters of the state, including the judiciary, into the hands of the sultan. The *maẓālim* jurisdiction enforced the image of the good ruler who, though he might have bad advisers, would stand up for his subjects if needed. Of course this was not always the case, but in times of stable rule the *maẓālim* jurisdiction could really be an effective tool against legal abuses. It was perceived by all layers of Mamluk society as an indispensable part of the legitimacy of Mamluk sultans—the institution as such was never questioned.

Awqāf in Mamluk Bilād al-Shām

The thesis of this article is that the desire for political hegemony was the primary motivation for the *awqāf* policy adopted by the Mamluk elite.

During its first century in Syria and Egypt (1516–97), the Ottoman Empire carried out several cadastral surveys. The data gathered in these surveys were recorded and catalogued. Among the items listed in the Ottoman registers of each of the provinces are religious endowments, their founders, and their property.[1] Looking some centuries backward and comparing the information provided in the Ottoman lists with the data on the Islamic religious endowments *(awqāf)* in Bilād al-Shām at the end of the Latin Kingdom (1099–1291), we can get a clear picture of the remarkable number of endowments established by Muslims in Damascus, Lebanon, Transjordan, and Palestine during the Mamluk period (1250–1517).

Considering the abundant additional information found in inscriptions,[2] legal compendia, biographical works, and chronicles, we can clearly see that the *waqf* had an unmistakable presence in Mamluk society.[3] It was represented in almost

all aspects of urban and rural society as a means for accumulating wealth and influence. This leads to the crucial question: why did the military class[4] so eagerly pursue a policy that in effect transferred a considerable portion of agricultural land and urban property from the state treasury into religious endowments,[5] a development that seriously diminished the sultanate's resources?

It is not an easy task to solve this knotty problem, particularly as we possess no sound information as to the motives of the endowers, who couched their reasoning in general statements and citations from the Quran[6] and hadith.[7] In order to advance an answer to the question posited above, the present article aims to scrutinize the information concerning endowments, donors (particularly sultans, viceroys, and officers), beneficiaries, and *waqf* property that is preserved in various sources: endowment deeds *(kitāb al-waqf; waqfīyah),* inscriptions, juridical works, biographical works, and chronicles.

These sources clearly reveal Mamluk society as a contractual society, that is to say, a society that used legal documents to articulate personal relationships.[8] The

The Ottoman policy of reincorporating decayed *awqāf* in the *kharāj* lands is another illustration of this development; see Ibn Ṭūlūn, *Ḥawādith Dimashq al-Yawmīyah,* 169.

[6]Frequently quoting Sūrat al-Tawbah (9), verse 18: "He only shall tend Allāh's sanctuaries who believes in Allāh and the Last Day and observeth proper worship and payeth the poor-due," and verse 60: "the alms are only for the poor and the needy, and those who collect them, and those whose hearts are to be reconciled, and to free the captives and the debtors, and for the cause of Allāh, and for the wayfarers; a duty imposed by Allāh." (trans. M. Pickthall).

[7]Commonly alluding to the tradition: "Only three things remain after death: a lasting charity, religious knowledge that teaches the next generations, and a righteous son that will pray for the deceased." *Ṣaḥīḥ Muslim* (Cairo, 1955), 3:1255 (no. 1631 *bāb mā yulḥaq al-insān min al-thawāb baʿd wafātihi*); ʿAbd Allāh al-Dārimī, *Sunan* (Cairo, 1398/1978), 1:139 (also printed as *Musnad al-Dārimī* [Mecca, 1421/2000], 1:462 [no. 578]); Muḥammad Bāqir al-Majlisī, *Biḥār al-Anwār* (Beirut, 1412/1992), 1:349 (no. 65) (in the 1983 edition 2:22).

[8]Norbert Rouland, *Legal Anthropology* (London, 1994).

ties between husband and wife, patron and client, or testator and inheritor were framed in legal contracts that were made public and verified by the qadi's court. In this context, a religious endowment should be seen as a contract between a benefactor and beneficiaries. In the *waqf* charter, the benefactor stipulates his intentions and the aims of the endowment. Moreover, he regulates the activities within the institution's walls, including instructions relating to accommodation, food, study, and prayer.

This aspect of the *waqf* as a legal tool in arranging financial relations among family members is well documented in the records I have studied.[9] These report on the role of *awqāf* in providing economic benefits to kin and others that the founder wished to support with cash payments,[10] salary *(jāmakīyah),*[11] food,[12] housing, etc. Administrators of *awqāf* were also beneficiaries of the endowment,[13] although it should be said that most Mamluk families varied from the ordinary civilian Muslim family in the fact that they were first generation families with no elders.[14] They thus found it difficult to claim nobility by birth.[15] Hence, by

[9]Shams al-Dīn Muḥammad ibn Ibrāhīm al-Jazarī, *Tārīkh Ibn al-Jazarī al-Musammá Ḥawādith al-Zamān wa-Anbāʾihi wa-Wafayāt al-Akābir wa-al-Aʿyān min Abnāʾihi al-Maʿrūf bi-Tārīkh Ibn al-Jazarī,* ed. ʿUmar ʿAbd al-Salām al-Tadmurī (Beirut, 1419/1998), 2:157, 200–1 (the story of Ibn al-Dajajīyah), 282; Taqī al-Dīn al-Subkī, *Fatāwá al-Subkī* (Beirut, n.d.), 1:508. This is not the place to launch a general inquiry into the link between endowment and family bonds. It is sufficient to indicate that this line of explanation reflects early source data on *ḥabs;* Ibn ʿAbd al-Ḥakam, *Futuḥ Miṣr,* ed. Charles Torrey (New Haven, 1921), 135–36.

[14]I am not arguing that sons of mamluks *(awlād al-nās)* did not join the ruling military elite. See Stephan Conermann and Suad Saghbini, "*Awlād al-Nās* as Founders of Pious Endowments: The *Waqfīyah* of Yaḥyá ibn Ṭūghān al-Ḥasanī of the Year 870/1465," *Mamlūk Studies Review* 6 (2002): 24–25. Later Mamluk sources report on sultans that sent emissaries to bring members of their families to the sultanate. See Aḥmad ibn ʿAlī al-Maqrīzī, *Kitāb al-Sulūk fī Maʿrifat Duwal al-Mulūk,* ed. Muḥammad Muṣṭafá Ziyādah (Cairo, 1934–), 4:646 (A.H. 826); Ibn Iyās, *Badāʾiʿ al-Zuhūr fī Waqāʾiʿ al-Duhūr,* ed. Muḥammad Muṣṭafá (Cairo and Wiesbaden, 1982–84), 4:88 (ll. 11–12, A.H. 911); Ibn Ṭūlūn, *Mufākahat al-Khillān fī Ḥawādith al-Zamān,* ed. Muḥammad Muṣṭafá (Cairo, 1962), 1:82.

[15]One of the stories on the emergence of Quṭuz relates that he claimed to be the offspring of a royal family. See Abū al-Maḥāsin Yūsuf Ibn Taghrībirdī, *Al-Nujūm al-Zāhirah fī Mulūk Miṣr wa-al-Qāhirah* (Cairo, 1937), 7:85.

establishing *awqāf,* these manumitted slaves could preserve their wealth and reputation, for example in buildings that bore their names.[16]

The meticulous and extremely detailed clauses of the *waqfīyah* indicate that the endowment was not a random act of charity but a carefully calculated initiative, delineated in a meticulously formulated legal document. Thus, for example, the *kitāb* of *waqf al-maghāribah* in Jerusalem says: "This charity was established in support of the Maghribis who dwell in Jerusalem and those that will arrive." During the three sacred months (Rajab, Shaʿbān and Ramaḍān), "the *waqf*'s supervisor will prepare bread and distribute it among the inhabitants of the Maghribi lodge and all North Africans living in Jerusalem."[17] Another example that supports this line of reasoning is the *waqf* deed by al-Ashraf Qāytbāy that spells out the payments to the administrator and staff at the college he had built in Jerusalem. The thirty Sufis who resided in it would receive cash payments and food.[18]

Assuming that the Mamluk governing elite considered gifts to be a kind of personal transaction also leads us to view religious endowments as contracts.[19] The philanthropist presumably had faith that by providing material assistance he would be rewarded in the afterlife. In several records we come across formulas asking for reprieve *(ʿafw)* or pardon *(ghafar)*.[20] Benefactors asked God to accept their donation *(taqabbala Allāh minhu)* and requested his closeness *(qurbah)*.[21] Frequently, a paraphrase of verses from Sūrat Yūsuf (usually 12:88 or 90) or other Quranic verses was engraved on the walls of the *waqf*.[22]

There is no reason to discount the statements of men and women who believed that donations would contribute to keeping their memories alive.[23] Donors established endowments that paid for people who would come and pray for their

souls.[24] This partially explains the existence of donations to maintain tombs,[25] as these endowments generated among donors a sense that their well-being was guaranteed not only on earth but in the hereafter as well.[26]

Religious or philanthropic motives need not be completely ruled out, and in many cases an altruistic impulse can be found. However, the pietistic formulas reflect only one element among many in this complex phenomenon.[27] In addition to philanthropic motives, the Mamluk elite certainly also had materialistic motives for establishing religious endowments. My chief argument is that we should search in the political arena for motives that drove sultans, viceroys, governors, and other officials to endow property and resources to establish *awqāf*.

This thesis, at least as a partial explanation for the vast scope of the *waqf* phenomenon, is generally agreed upon. Yet I would take this thesis a step further, advocating that the *awqāf* served the Mamluk ruling elite not merely as a tool to uphold its prestige, but as a device to establish its hegemony. Hegemony in this case was not only power over the civilian masses but total dominance of society. The rulers aspired to hold the governing power that controlled culture and shaped the organization of society.

To achieve this aim, rulers could not restrict their activity merely to policing the public sphere or monitoring society. They had to invest in buildings that embodied their position. The religious endowments functioned in the urban landscape as signs representing the lofty position of the donors. They were employed to institutionalize social hierarchy and to demonstrate the relationship between donor and recipient. As such, the *awqāf* represented the ideology of the rulers.[28] This could not be accomplished by army officers alone. Sultans and governors needed the support of a religious establishment that benefited from the *awqāf*.[29] Without securing support from other sectors of society, Mamluk rulers could not fully establish their hegemony.

[29]Shihāb al-Dīn Aḥmad ibn Muḥammad Ibn al-Ḥimṣī, *Ḥawādith al-Zamān wa-Wafayāt al-Shuyūkh wa-al-Aqrān,* ed. ʿUmar ʿAbd al-Salām al-Tadmurī (Beirut, 1419/1999), 1:80 *(kathīr al-maḥabbah li-ahl al-ʿilm wa-al-qurʾān wa-al-ṣulaḥāʾ wa-al-fuqarāʾ);* and see the description of a sultanic procession in Damascus by Ibn Ṭūlūn, *Mufākahat,* 2:15.

Waqf was probably the most prominent social and economic institution operating within the boundaries of the Mamluk sultanate. Considerable sums were invested in constructing impressive institutions and in financing their ongoing activity. The *waqf* acquired an image of an institution open to all. Theoretically, all social classes used the *awqāf,* utilizing one kind of *waqf* or another.[30] For this reason the *awqāf* conveyed the impression of being a social institution that supported the entire Islamic community without distinction, though practically speaking, most of the beneficiaries of the endowments belonged to the Mamluk elite.

Indeed, the *awqāf* may be classified in two categories. The great majority of the endowments supported a well-defined beneficiary. They were founded in order to provide family, associates, and the religious establishment with funds, assets, housing, and positions.[31] Considerably smaller was the number of *awqāf* that provided food, shelter, or money to the general public, let alone the poor and the needy. Moreover, in the *awqāf* documents, the meaning of the Quranic tags "*maskīn*" (needy; deprived) and "*faqīr*" (fakir = poor) lost its literal connotation and actually depicted a well-defined social group. The *fuqarāʾ* in Mamluk *awqāf* texts were Sufis, scholars, and other beneficiaries, not those suffering from hunger and misfortune.[32]

Looking at the religious endowments from this perspective, it seems proper to highlight two additional features of *awqāf*. First, the accommodation of Muslims at the *waqf* was supplemented by sustenance that was served ritually during the public gathering. Food was provided on a regular basis, together with lodging, to the chosen group of teachers and students that resided in the madrasahs and *zāwiyahs*. Communal consumption of food is an apparent vehicle for the diffusion of propaganda and for generating a sense of amity and community. In addition, scholars engaged in the study of law *(fiqh)* and Sufis busy with mystical rituals were supported by these *awqāf* that provided the means for payments and grants.

The economic advantage of being entitled to receive payments from the *awqāf* coffers is demonstrated by reports on people who paid to be named in endowment registers.[33] Shihāb al-Dīn Aḥmad bought his position in the Saʿīd al-Suʿadāʾ.[34] The

economic benefit of being attached to a *waqf* can also be inferred from accounts about conflicts among beneficiaries.[35] To facilitate the examination of *waqf* data on these issues, additional cases will be presented below.

Yet, before elaborating on *waqf* institutions let us make a short detour to look at how economic support for these religious endowments was provided. Substantial data on the urban and rural property endowed by the Mamluk military elite is furnished by *waqf* documents and wall inscriptions.[36] One example is the *waqf* founded by Baybars to support Ibrāhīm al-Armawī.[37] Other examples can be found above gates and windows.[38] But if early generations of Mamluk army officers could endow Latin property to support their *waqf*s, later generations of viceroys and governors seized farm lands to finance the army.

Instances of rural properties in Syria and Egypt being alienated to support *awqāf* are recorded during the pre-Mamluk period,[39] yet the use of *iqṭāʿ* property to support urban institutions acquired new characteristics during the age of the Mamluk sultanate. Although some Mamluk *fuqahāʾ* considered the endowment of the sultanate's lands *(waqf irṣād),*[40] particularly in those regions that were reconquered from the Franks and the Mongols, as illegal,[41] this ostensibly legal barrier did not prevent donors from endowing fields and gardens that were not

[41] It seems that some Muslim scholars questioned the legal status of the territories taken by the Mamluks from the Latins and the Mongols, arguing that these lands were the collective property of the Muslim community *(fayʾ)*. By designating lands as *fayʾ* these jurists opposed its endowment by private donors. See Abū al-Faraj ʿAbd al-Raḥmān ibn Aḥmad Ibn Rajab al-Ḥanbalī, *Al-Istikhrāj li-Aḥkām al-Kharaj* (Beirut, 1985), 15, 43–45, 111. their private property *(jārin fī milkihi)*[42] but rather belonged to the *iqṭāʿ* farms.[43] The growth of these endowments put pressure on the sultanate's sources of income.[44]

The economic and political importance of *waqf* impelled the Mamluk administration to establish an exclusive state bureau *(dīwān al-awqāf)*[45] staffed by inspectors and controllers *(shadd al-awqāf; mushadd al-awqāf)*.[46] Among their duties was the inspection of the *awqāf*'s receipts and expenditures.[47] Examples of this are the numerous records from Jerusalem mentioning the post of *nāẓir al-ḥaramayn al-sharīfayn*.[48] A second example is an account of a thorough inspection *(kashf)* of the schools, which took place in Damascus in spring 725/1325.[49] The religious establishment of the city, along with the administrative staff, saw to the reimbursement of jurists and students.[50] Such measures were taken because some

people attempted to use the *awqāf* for their personal benefit.[51]

The Mamluk military elite founded a range of institutions, both for the benefit of the religious establishment and the general public. The religious endowments financed their construction and everyday operations. In order to demonstrate the salient presence of the *waqf* and its significant imprint on the landscape, what follows is a list of structures that made the religious endowment a visible phenomenon that cannot be ignored even by historians writing centuries after the fall of the Mamluk sultanate.

Monumental mosques had dotted Syria's map since early Umayyad times. The Frankish and Mongol invasions did not manage to erase the Islamic presence. Thus, when Baybars conquered Damascus and Aleppo, he entered territories that were replete with places where believers could congregate. Yet the victorious sultan and his successors did not refrain from constructing new houses of prayer.

In the closing days of the Mamluk sultanate, a considerable number of mosques adorned the streets of towns and cities of Bilād al-Shām from Gaza in the south[52] to Aleppo in the north.[53] A *waqf* in the coastal town of Tripoli included two villages in central Syria and two orchards near the city, as well as shops and houses. The incomes from these properties paid the personnel that maintained the mosque and readers who prayed. Money was allocated to buy oil, water, bread, candles, and clothes.[54] Similar examples from Baalbek[55] and Damascus illustrate the situation.[56]

Mentions of Muslims' visits to sacred tombs in Syria are found in geographical and historical writings going back to the Abbasid period. Following the expulsion of the Crusaders, many new shrines emerged in the territory governed by the Mamluk sultans.[57] Near the village of Ashdod (Azdoud; Isdud), at the mausoleum of Salmān al-Fārisī, the manumitted Balaban ordered the construction of a mosque (667/1269) and endowed a garden and a water fountain. The memorial inscription concludes with the ominous warning: "cursed be the person who changes or exchanges it."[58] In Homs, at a mausoleum dedicated to Khālid ibn al-Walīd, a

long inscription narrates the deeds of Baybars, who is eulogized as the sultan of the Arabs, the Persians, and the Turks.[59] Baybars undertook a similar initiative in the Jordan valley, where he ordered the foundation of a cupola over the tomb of Abū ʿUbaydah ibn al-Jarrāḥ. To maintain the mausoleum, the "lord of the Arab and Persian kings" endowed half of the revenues of Dayr Tubin, a settlement in the province of Homs that was in a territory controlled jointly *(munāṣafat)* by the Mamluks and the Franks.[60] Additional examples are unnecessary.[61]

Tombs *(turbah)* constructed by Mamluk army officers in preparation for their own deaths were entirely new types of buildings that emerged in the streets of Syrian towns.[62] In Ṣafad, Najm al-Dīn Fayrūz (741/1340–41) built a mosque and a tomb, and he endowed half a garden and a bath to maintain the foundation and to pay ten men, among them an imam, a muezzin, a custodian, and readers of Quran and hadith.[63] The chamberlain Ak-Turak constructed a mosque and a tomb in Tripoli (760/1359). He endowed two hamlets *(mazrāʿah)* in the district of Ḥiṣn al-Akrād (Krak des Chevaliers), orchards, shops, a public oven, and a house, together with other buildings. The income from this property provided the salaries of an imam and a muezzin and compensated readers of the Quran and hadith. Sums were also allocated to provide oil, food, water, and clothing.[64] The story of the Ẓāhirīyah (Baybars' tomb in Damascus) is well known: its inscription describes the foundation that the sultan had endowed.[65]

Religious endowments financed a considerable number of educational institutions (madrasah; *maktab; dār al-qurʾān; dār al-ḥadīth*)[66] that proliferated throughout Bilād al-Shām. *Awqāf* deeds stipulated the curricula for these schools and colleges. Occasionally, the endowment document arranged for the provision of food and distribution of clothing. In the al-ʿUmarīyah madrasah, the endowment provided bread and gateaux *(ṭulmah)*. Two clerks were in charge of feeding the five hundred pupils enrolled in this institute. In winter, cooked wheat *(jashīshah)* was served in addition to a daily ration of about one thousand loaves of bread. On

Friday nights, oil and roasted chickpeas *(quḍāmah)* were supplied. During Rajab and Shaʿbān, sweets were provided,[67] and during the month of Ramaḍān, a dinner was served that included dishes of meat and wheat *(harīsah),* sweet rice, and pickled vegetables. In order to facilitate the provision of food, the sultan Qāytbāy (1468–96) ordered that Dārayyā, a village close to Damascus, provide sixty sacks of wheat flour. A ten-percent tax levied on farmers in the Lebanon Valley would pay for the sheep. On the 15th of Ramaḍān pastries were distributed, and the same was done on the 27th night (al-Qadar). During the great festival, meat was allocated to the inhabitants. Long underwear was given twice a year and a wool cloak once a year. Each house received a small rug. The *waqf* also paid for a collective circumcision banquet that was celebrated once a year. As a result of al-Ashraf Qāytbāy's initiative, a place was set up for readers to recite verses from the Quran and praise the sultan.[68]

Abū al-ʿAbbās Aḥmad ibn Zayn al-Dīn al-Khawājakī (d. 847/1443–44) built the al-Dalāmīyah madrasah in the al-Ṣāliḥīyah quarter of Damascus. The institution was designated as a school for the instruction of the Quran. According to a synopsis of the endowment document, the founder installed an imam to read verses from the Quran and prophetic traditions from *Ṣaḥīḥ al-Bukhārī* and to invoke God in favor of the donor, as well as an administrator who would serve as doorman and muezzin.[69] The institution accommodated six Sufis who arrived in Damascus from non-Arab lands, and six orphans. The Sufis' duties included ritual reading from the Quran, and their monthly stipend was 30 dirhams. The orphans received 10 dirhams. They were supervised by a shaykh who was paid 60 dirhams per month. Each Tuesday an instructor came to the school to read select books with them. Each year, money was allocated for the purchase of oil and candles, sweets, and two goats. Once a year each of the orphans was given a cotton gown, a long undershirt, and a kerchief. During the three sacred months of Rajab, Shaʿbān, and Ramaḍān, a reader was paid to read from al-Bukhārī's hadith collection. After the dawn and evening prayers, the residents of the madrasah could meditate and voice invocations on behalf of the donor.[70]

Some officers endowed schools specifically for orphans *(maktab lil-aytām)*. Thus, for example, an inkstand-holder *(dawādār)* who also served as the superintendent

[68]Ibn Ṭūlūn, *Al-Qalāʾid,* 1:226–28 (based upon a narrative by Jamāl al-Dīn Abū al-Maḥāsin Ibn Mibrad [1436–1503]).

[69]The salary of the first was 120 silver dirhams per month, and that of the second was 100. The endowment inspector earned 60 dirhams per month. The annual salary of a laborer who was in charge of maintenance was 600 dirhams.

[70]Its *kitāb al-waqf* was summarized by al-Nuʿaymī, *Al-Dāris fī Tārīkh al-Madāris,* 1:9–10; Ibn Ṭūlūn, *Al-Qalāʾid*, 1:125.

of the al-Yālbughā mosque (in Damascus) ordered the construction of such an institution, declaring that he was following the instructions of his late mother.[71] The list of institutions that housed students, teachers, and Sufis (occasionally under the same roof) is long, and it is not necessary to cite additional cases in order to demonstrate our argument.[72] We may now turn to look at the various institutions that housed Sufis.[73] The occupants of these lodges depended on endowments. Their donors took great pains to specify the distribution of food, clothing, and expenses that the Sufis and their shaykhs were to receive.[74]

The beneficiaries of *awqāf* were not confined to a narrow stratum. The ruling elite profited from the very fact that not all the religious endowments were conferred on professionals such as the jurists and Sufis. Sultans used *awqāf* to strengthen their reputation as impartial rulers. Those *awqāf* designated as institutions open to the general public surely contributed to achieving the goal of fortifying the image of the just sultan *(al-malik al-ʿādil)*.[75] Particularly instrumental were those religious endowments that provided relief services and other care for the needy, such as hospitals. Several sultans and viceroys financed the building and maintenance of hospitals *(bī-māristān; māristān),* institutions that were known in Syria prior to the victory at ʿAyn Jālūt (1260).[76] Yet the development of hospital facilities[77] in peripheral sites seems to be a new development that occurred after this turning point in the history of Syria. Examples of this development can be seen in remote places such as Gaza,[78] Ḥiṣn al-Akrād,[79] and Ḥamāh.[80]

[80] Ibid., 16:131–32 (6197 = Ḥamāh).

Even wider in scope were those endowments that provided drinking water to passersby. In Cairo, several water fountains *(sabīl)* were built by sultans and commanders. The *waqfīyah* of the endowment founded by the amir Sayf al-Dīn Qarāqujā al-Ḥasanī (d. 853/1449) contains clauses concerning a *sabīl* and payment to a water bearer *(sāqī)*.[81] Additional water fountains were constructed in Cairo by al-Nāṣir Muḥammad, Barsbāy (in Sūq al-Naḥḥāsīn), Jaqmaq, and Qāytbāy (in al-Azhar). In Jerusalem a *sabīl* was incorporated into the Ṭashtamurīyah. Qāytbāy restored a *sabīl* in the courtyard of the Dome of the Rock in 887/1482.[82] This *sabīl* would be used by every Muslim that entered the Ḥaram. The endowment of caravanserais for the benefit of travelers fulfilled a similar social function.[83] *Awqāf* also contributed to the general welfare of the Muslim community by financing the construction of bridges, renovation of fortifications and walls, and the ransoming of Muslims held in captivity by pirates *(fakk al-asīr)*.[84]

Following this partial list of *awqāf,* we can return to the primary question, i.e., what motivated the Mamluk rulers to donate sizeable properties to finance the construction and maintenance of religious endowments. Although in the following paragraphs the political dimensions of endowment will be emphasized, it should nonetheless be noted that the *waqf* was a complex phenomenon and hence there is no single answer to this question.

Sultans and governors invested considerable resources in buildings, streets, and squares *(maydān),* which helped support their claims to authority over the physical urban landscape. Absentee officers collected duties in goods and cash from villagers and city dwellers, and they funneled this income to support urban facilities.[85] *Awqāf* incomes were pooled, creating a network that bound farming communities together with the cities.[86]

Moreover, the alienated property did not finance nearby institutions exclusively. The *awqāf* supply lines stretched over thousands of miles. The Mamluks even constructed networks that linked cities and villages in Syria with *awqāf* in Cairo.[87]

This apparatus helped create the impression that the sultanate was a unifying force that brought together a vast territory and connected ports, farmland, towns, and cities with the governing centers and the heartland of Islam. The *awqāf* that supported the Islamic sacred territory (the lesser Ḥaramayn) of Jerusalem and Hebron are examples of this.[88] Numerous endowments supported the al-Aqṣá Mosque and the Patriarchs' tombs. They were run by the *nāẓir al-awqāf,* who was responsible for collecting the incomes and allocating the resources to the personnel who operated these holy shrines, which attracted visitors from afar.

Moreover, Mamluk sultans alienated villages and urban property in Bilād al-Shām and Egypt to support the two holy sites in Arabia (al-Ḥaramayn al-Sharīfayn).[89] A single example should suffice. A long *waqf* deed illustrates the policy of al-Ashraf Shaʿbān towards the Ḥaramayn and his efforts to bolster his image.[90] To this end the sultan alienated (in 777/1375) villages in Transjordan, Syria, and Palestine, as well as a bath in the vicinity of al-Karak.[91] Shaʿbān's *waqf* was intended to support several foundations: the Kaʿbah in Mecca, the Prophet's tomb in Medina, and the rulers of these cities. In return, the rulers would not tax visitors. The sultan's deed also enumerates the personnel of the endowment and their assignments: six readers would assemble every morning and evening at the Kaʿbah, read chapters from the Quran, and invoke prayers during Shaʿbān. The *waqf* also supported a hadith teacher and ten students in Mecca, four law professors and forty law students, a teacher and ten orphans, an orator who would recite verses extolling the Prophet three times a week, eight individuals who would be in charge of cleaning the shrine, and two water carriers. All the people on the payroll of the *waqf* were to pray to God and appeal to Him to have

mercy on the donor.[92]

Sultans and viceroys drew on *awqāf* as a tool to influence the territory under their control. The endeavor to transform Crusader settlements into Islamic towns and villages is another aspect of this policy[93] and the alienation of property to support covering Bilād al-Shām with Islamic shrines is yet another.[94] It seems sufficient to name several well-known locations: Waqf Abū Ḥurayrah in Jabneh[95] and Waqf Nabī Mūsá[96] in Palestine are two such cases.

A third example is the mausoleum *(mashhad)* of Khālid ibn al-Walīd in the Syrian city of Homs. The endowment inscription praises Baybars: "the exterminator of the Franks, Armenians and Mongols, the king of the two seas (the Mediterranean and the Red Sea), the holder of Mecca and Jerusalem *(qiblatayn)* and servant of the two sanctuaries," and notes that the sultan alienated the village of Farʿam in northern Palestine/Israel in perpetuity (664/1266).[97] By securing sizeable funds in Syria and Egypt for the principal Islamic shrines, the sultans appeared not only as devoted Muslims but also as a unifying force.

In order to demonstrate their power and authority, rulers are inclined to invest considerable resources. The Mamluk ruling elite was no exception. Mamluk governors used *awqāf* to finance the construction of spaces that would embody the regime's ideology and spread the image of the sultanate as an everlasting, generous, and just power.[98]

[98]Ibn Ṭūlūn, *Al-Qalāʾid,* 1:96.

One example is the inscriptions that the donors had engraved on the walls of their buildings. Muḥammad ibn Muḥammad, who served as director of the chancellery of Bilād al-Shām, instructed the builders of a minaret (in Aleppo 830/1427) to engrave the Quranic verse: "And Say: Praise be to Allāh, Who has not taken unto Himself a son, and Who has no partner in Sovereignty, nor has He any protecting friend through dependence. And magnify Him with all magnificence." From the early years of Islam, Muslim rulers maintained that this verse contained a sharp criticism of the orthodox interpretation of Jesus' personality, and they used it to send an anti-Christian message.[99]

Moreover, these structures were not static. *Awqāf* often provided for activities which would contribute to the ongoing religious life in Mamluk towns.[100] Such, for example, is the long account of an event in Damascus in 897/1492. Accompanied by an entourage of jurists, an architect *(miʿmār),* and other officials, the amir Ibn Manjak went to inspect the tomb of his grandfather. At the site he examined the endowment's deed and checked the inscription on the wall above the door. The text specified the payments to the imam and to the readers, and it stipulated which reading from the Quran they should recite. In addition, the endowment paid a teacher and ten orphan children who were to meet early in the morning. A reciter would read hadith intermittently during the three sacred months, one year from *Ṣaḥīḥ al-Bukhārī* and the next year from *Ṣaḥīḥ Muslim*. He would conclude the reading on the 27th night *(laylat al-qadar)*. During the two Islamic feasts *(ʿīd al-fiṭr; ʿīd al-aḍḥá)* money would be allocated to buy sweets.[101]

The governing elite nominated the religious personnel, who belonged to different law schools, to serve together under the same roof. This act sustained their claim that they constituted the cornerstone of the society under their charge.[102] In the madrasah al-Ṣābūnīyah, the donor stipulated that his offspring hold the position of the endowment's supervisor. This official would run the *waqf*'s budget and administration jointly with the chamberlain of Damascus and with the madrasah's imam. The imam was to be an adherent of the Hanafi school, while the preacher should adhere to the Shafiʿi *madhhab*.[103]

Many of the *waqf* institutions accommodated students of orthodox Islam as well as Sufis. They benefited from the hospitality of lodges that provided them with food and a stipend, in addition to living accommodations. The Tankizīyah in Jerusalem housed a madrasah and a Sufi lodge *(ribāṭ)*. On the ground floor

eleven rooms housed law students *(fuqahāʾ ḥanafīyah),* while an additional eleven rooms on the second floor housed the Sufis. Next to this institution stood a *ribāṭ* for women.[104]

Supplying food for visitors flocking to festivals or other social gatherings helped to establish close relationships between the donor and the crowd. This idea was not foreign to Mamluk sultans, who were keen to strengthen their image as devoted Muslims and their role as lavish hosts. Army commanders used the *awqāf* funds to benefit the religious establishment, as can be inferred from several inscriptions.[105] Many *awqāf* deeds supplemented cash payments with a ration of bread *(khubz)* and occasionally with sweets and even meat. Some endowments provided a salary to a water carrier. Religious endowments seldom paid for the accommodation of visitors who gathered at a mosque, tomb, or other location.[106] In Hebron a local tradition had developed, connecting the practice of hospitality and visitation to Abraham (Khalīl Allāh).[107] Sayf al-Dīn Bulghaq supervised the building of a mill that was alienated to support a hospital, a lodge *(ribāṭ),* and an ablution room *(ṭahārah)* in the town of Hebron in 706/1307.[108] The amir Ṭaybars provided food for the visitors at the shrine *(simāṭ).*[109] Sultan Barqūq founded a *waqf* (796/1394) for the same purpose.[110]

The religious establishment almost unanimously backed the sultanate's *awqāf* policy. One reason for this attitude might have been the very fact that Sufis and jurists were among the greatest beneficiaries of the *awqāf*. Gaining their support was a considerable advantage to the Mamluk officers who attempted to radiate power and attain supremacy. The benefits from *awqāf,* combined with government policies designed to suppress Jews and Christians, enabled the Mamluk ruling elite to win the support of the Muslim religious establishment.

It would seem that the widespread suggestion that *awqāf* were instruments ("tax shelters")[111] employed by the Mamluk elite in order to protect property from confiscation cannot withstand the numerous reports concerning the seizure and abolition of religious endowments.[112] In addition, the argument that the *awqāf*

were used to circumvent the Islamic inheritance law cannot be accepted as an adequate rationalization for the foundation of numerous institutions by rulers and army commanders.

The political reasoning presented above can provide better answers to the primary question of the motives that drove the governing Mamluk elite to endow such considerable resources. The religious endowments provided them with property through which to express their ideology. These *awqāf* were useful tools that a sultan could utilize in his efforts to present himself as the embodiment of the ideal Muslim ruler.

The alienation of urban and rural property to finance the *awqāf,* and the networks used to collect their proceeds, functioned alongside government tax collectors as a parallel system of revenue extraction. Using income from farmland, the Mamluks boosted their image as devoted Muslims and protectors of social harmony. Thus the sultanate surrounded the harsh reality of levies and corvée with the image of religious propriety. They were able to utilize *awqāf* assets as a tool in their efforts to overcome conflicts.

Endowing institutions, supplying food, and distributing gifts were among the most powerful tools at the Mamluks' disposal in their difficult quest to gain support and recognition. Obtaining the political support of the religious establishment was a crucial component in the sultans' endeavor to gain social acknowledgment and approval. By becoming generous donors, they were able to maintain control over social and religious practices and thus preserve their dominant position in society.

In a political system that distanced the second Mamluk generation *(awlād al-nās)* from the dominating central positions of the sultanate, the establishment of religious endowments gave the Mamluk elite a powerful mechanism to help them preserve their fame and memory. Within the buildings financed by the *awqāf,* worshippers, most of them men of religion, raised their voices in the invocation of God *(du'ā')* to protect the donors. Their prayers signaled that they shared with the rulers a vision of *awqāf* as the physical representation of sultanic ideology.

Book Reviews

Li Guo, *Commerce, Culture, and Community in a Red Sea Port in the Thirteenth Century: The Arabic Documents from Quseir* (Leiden and Boston: Brill, 2004). Pp. xx + 334.

Reviewed by Frédéric Bauden, Université de Liège

Our knowledge of the Red Sea trade, and consequently of the Indian Ocean trade, in the pre-modern period is hardly satisfactory. The main reason does not lie so much in the paucity of the data, provided either by historical sources or primary documents, as in the neglect of these sources. Until very recently, the documents of the Cairo Genizah had barely been studied from the point of view of maritime trade, though some scholars realized the importance of this source for this purpose.[1] The situation has changed since the appearance of Roxani Eleni Margariti's revised doctoral dissertation submitted at Princeton in 2002 (*Aden and the Indian Ocean Trade: 150 Years in the Life of a Medieval Port* [University of North Carolina Press, 2007]). As for historical sources, there is no doubt that the forthcoming publication of É. Vallet's doctoral dissertation on power, commerce, and merchants in Yemen during the Rasulid period (thirteenth–fifteenth centuries) will improve our understanding of trade in the region, too.[2]

The book under review expands our knowledge of this history, as it unveils a significant, though anecdotal, part of the history of Red Sea trade in the early thirteenth century on the basis of previously unpublished documents. These documents, mostly scraps of paper, were brought to light by the excavations carried out by the University of Chicago in 1982 in the Islamic residential complex of the site of Quseir (Quṣayr al-qadīm), a port later abandoned when ʿAydhāb

[1] Apart from Goitein's masterpiece, one can cite his articles entitled "From the Mediterranean to India: Documents on the Trade to India, South Arabia, and East Africa from the Eleventh and Twelfth Centuries," *Saeculum* 29 (1954): 181–97; "Arabic Documents on the Trade Between India and the Mediterranean Countries (11th and 12th centuries)," in *Proceedings of the Twenty-sixth International Congress of Orientalists* (New Dehli, 1970), 251–56; "From Aden to India: Specimens of the Correspondence of India Traders of the Twelfth Century," *Journal of the Economic and Social History of the Orient* 23 (1980): 43–66. Also worth a mention is the following study: H. M. Rabie, "Al-Baḥr al-Aḥmar fī al-ʿAṣr al-Ayyūbī," in *Al-Baḥr al-Aḥmar fī al-Tārīkh wa-al-Siyāsah al-Duwalīyah al-Muʿāṣirah* (Cairo, 1979), 105–23.

[2] A major source for the study of trade in this period started to appear in 2003: *Nūr al-Maʿārif fī Nuẓum wa-Qawānīn wa-Aʿrāf al-Yaman fī al-ʿAhd al-Muẓaffarī al-Wārif,* crit. ed. Muḥammad ʿAbd al-Raḥīm Jāzim (Sanaa, 2003–5), 2 vols.

superseded it. The documents were discovered in what appeared to be a merchant's house, whose name, Abū Mufarrij, is found in several of them. The dates provided by a small number of documents confirm that his business was active during the first half of the thirteenth century (earliest document dated 612/1215, latest dated 633/1235), a fact substantiated by the numismatic findings. The excavated house proved to be a warehouse *(shūnah)* which also served as a residence for the family. Should we recognize in this discovery a genizah, as Mark Cohen recently suggested?[3] In his view, the archive, together with other material not necessarily connected with the family (official documents, religious texts, charms), was probably saved from oblivion for the same reason that led to the preservation of tens of thousands of fragments in the Cairo Genizah and other genizah-like findings in the Islamic tradition (the documents of the Ḥaram in Jerusalem, the fragments of Quranic manuscripts in the Great Mosque in Sanaa, the documents of the Great Mosque in Damascus): to preserve honorably fragments of the Quran, in the first place, and secondarily documents. These would have been placed in the attic of the shaykh's house and were scattered everywhere in the room when the building collapsed. Though this is a tempting explanation, it fails to address other problems. Guo does not consider the possibility that this cache was a genizah, as he speaks of clearly discarded trash which had not been deliberately kept and was in a state of disorder, and he even notices that a letter seemed to have been "kneaded into a ball and then tossed in [a] trash bin" (p. 158). In another case, an account was found torn into several pieces (p. 41). The main characteristic of the Cairo Genizah is that manuscripts and documents, sometimes even personal archives, were placed in a specific room over quite a long period. If the shaykh's house was used in this way, how can we explain that other documents were found thanks to later excavations in another place not connected with this building and identified as a *sibākh* (organic refuse)?[4] As the archeologists put it, "no significant difference in date or character of the deposits was noted between the material from within and outside the structure, or between different levels within the deposit. This suggests that the *sebakh* is not representative of *in situ* activity but rather accumulated through the deliberate dumping or redepositing of refuse from other parts of the Islamic town."[5] If genizah-like practices were current in Quṣayr al-qadīm, there is no reason that they would not have been applied to

[4] The University of Southampton carried out excavations from 1999 to 2003 (see http://www.arch.soton.ac.uk/Projects/default.asp?ProjectID=20). Anne Regourd is in charge of the study of the Arabic documents that surfaced during this new campaign of digging (see http://www.rqad.leeds.ac.uk/).

[5] See the interim report for 2003, trench 13 at the website indicated above.

other documents such as those uncovered in trench 13, for instance. At other sites in Egypt, too, documents have been found in layers that looked like refuse. On the other hand, it is known that the recycling of paper documents was a common occurrence.[6]

The book is divided in two sections. The first one is devoted to the study of the material deciphered in the second section. Guo succeeds in making the most of scraps of paper hardly decipherable not so much because of the nature of the handwriting, but rather because of the poor state of preservation. The author manages to reconstruct the social milieu revolving around the shaykh, Abū Mufarrij (chapter I), including his family (as it seems that Abū Mufarrij's business later became a family business, with one of his sons deeply involved), the company and its employees as well as its associates, and all the other categories of persons dealing with the house (clients, suppliers, buyers, but also officials, given that documents issued by this category surfaced together with the collection of business papers). Guo asks why official documents are found among the private business documents: he suggests that Abū Mufarrij's warehouse probably served as a postal address for the official documents or that he acted as a government agent. If so, why were these official documents unearthed in his house if he was supposed to transmit them to the authorities or other recipients? Guo does not answer this question. It might be that some of these official papers were intended for reuse of the blank verso, but in the end they were not.[7]

Chapter II is devoted to the economic problems raised by the business letters, accounts, and the like. The documents provide important data about the metrology in use in this remote part of the Muslim world which barely attracted the attention of medieval historians. As such, it is an incomparable source for the study of weights and measures in the Red Sea: similar data available for the holy cities provide an interesting comparison.[8] Importantly, the author also succeeds in demonstrating that the Quseir economy was first and foremost a credit one based on paper. This is not a surprise, rather it confirms a situation prevailing in the Near East at this time.

---

[6] Either reused for the blank parts or recycled to produce new paper. See on this Jonathan M. Bloom, *Paper before Print* (New Haven, 2001), 76.

[7] For the reuse of some of the documents, see p. 110. Anne Regourd found, among the papers excavated at Quseir by the University of Southampton, a death certificate which was reused on the back to write a letter. See her article to appear in the proceedings of the Third Conference of the International Society for Arabic Papyrology held in Alexandria in 2006. This practice is also confirmed in other cases (documents of the Cairo Genizah or those excavated in Fustat).

[8] Since Guo's study was published, a book devoted to economic life in the Hejaz during the Mamluk period has appeared: Muḥammad Maḥmūd Anāqirah, *Al-Ḥayāh al-Iqtiṣādīyah fī al-Ḥijāz fī ʿAṣr Dawlat al-Mamālīk, 648–923 h., 1250–1517 m.* (Riyadh, 2006).

Among the documents excavated, some were obviously not connected to business: sermons, prayers, block-printed amulets, magical texts, and astrological dials (chapter III). These improve our knowledge of popular culture in such a remote place. A major question is: are these documents related to the business ones and, consequently, with Abū Mufarrij? If we consider that they were unearthed in the shaykh's house and that the business section belonged to Abū Mufarrij, we should, as the author did, regard them as part of the family business. As Guo noticed (p. 84), Abū Mufarrij's son, Ibrāhīm, is described as a *khaṭīb* in a document, and it is probable that the sermons and the like are to be seen as connected to this activity. The block-printed amulets constitute another group (12 fragments) of highly attractive materials. Considered as a link between Chinese and European printing activities, the block-printed texts raise more questions than they answer. A thorough study of all the specimens preserved in various collections around the world could provide a good starting point. Those found in American and European institutions have recently been published.[9] Thanks to those studied by Guo in his book, there only remain those held in Middle Eastern collections (mainly Egypt) to be analyzed. The Quseir items corroborate that block-printed texts were spread throughout the Near East.

The second part of the book contains the decipherment and philological commentary on the documents. In this part, a selection of business letters, accounts, shipping notes, funeral texts, and amulets are published. These 84 fragments were selected from among several thousand (the exact number is not provided, see p. 104) for their interest and their state of preservation. This does not mean, however, that Guo neglects to analyze in the first part of the book those documents he decided not to publish in this second part. This part is introduced by chapter IV, which deals with the material analysis. Guo provides detailed remarks on the handwriting, including a paleographical study, a survey of the abbreviations and logograms (a particular case remains unsolved, see pp. 111–12), and of the numerals. As for language, most of the items published were written in a type of language that is now referred to as Middle Arabic (in this case, Muslim Middle Arabic), though this designation is not universally accepted.[10] Truly, most of these texts feature several traits generally noticed in modern dialects and found in many documents dated to the medieval period. Guo gives an exhaustive list of the linguistic characteristics of the documents studied and usually compares them to similar features noted in the scientific literature.

The edited texts (chapter V) are organized according to the typology established by the author (pp. 101–5). Guo was not content with only studying photographs

[9] See Karl R. Schaefer, *Enigmatic Charms: Medieval Arabic Block Printed Amulets in American and European Libraries and Museums* (Leiden and Boston, 2006).

[10] See, for instance, P. Larcher, "Moyen arabe et arabe moyen," *Arabica* 48 (2001): 578–609.

of the documents: he paid a visit to the Islamic Museum, where they are now kept. Scrutiny of the actual documents made it possible for him to describe precisely the writing material (color of the paper, dimensions, actual state, and color of the ink). Each document is introduced by a summary of its contents, then the text and the translation are provided together with a commentary on the words that require clarification or those with dubious meaning. Given the state of these fragments and the cursive script with which they were written, the author is to be praised for the result he managed to achieve. The reader must realize that a fragmentary text is in itself difficult to decipher because some parts, decisive for its understanding, may be missing. In this particular case, the difficulty is magnified by the nature of the texts, the language used, and the type of script. If a criticism has to be made, it should regard the fact that the documents edited are not reproduced. Of course, this may well be due to a decision by the publisher rather than the editor. Although four plates display some examples, the reproduced documents are so small that one can hardly compare the edited text with these photographs. Under these circumstances, the reader will have to take the edited text for granted. Fortunately, in the meantime, the documents have been introduced in the Arabic Papyrology Database, and some readings have been improved because the editors had access to scans of the documents. Consequently, the edition must now be read in conjunction with the website.[11]

To conclude, answers to the many questions these documents pose obviously remain conjectural due to the fragmentary state of this "archive," but the result is a convincing reconstruction of the activities of a family business at the dawn of the thirteenth century. Given the challenge presented by the Quseir fragments, Guo must be commended for the tremendous work he has accomplished on these scraps of paper. His book is indispensable for all those interested in economic and social history, Red Sea and Indian Ocean trade, numismatics, diplomatics, and documents.

ʿAbd al-Raḥmān Mudayris al-Mudayris, *Al-Madīnah al-Munawwarah fī al-ʿAṣr al-Mamlūkī (648–923 H./1250–1517 M.): Dirāsah Tārīkhīyah* (Riyadh: Markaz al-Malik Fayṣal lil-Buḥūth wa-al-Dirāsāt al-Islāmīyah, 2001/1422). Pp. 438.

Reviewed by John L. Meloy, American University of Beirut

This book is not so much a historical study of Medina during the Mamluk period as it is a compendium of information on five aspects of the city gathered from primary sources. Readers interested in a new take on Medina or the Hijaz in the Mamluk period will not find it here. Al-Mudayris's overall approach is based on the received view that Mamluk power was the only effective force in the region, operating through direct control of Mecca.

Al-Madīnah al-Munawwarah seems to have been assembled according to a prescribed notion of what is necessary for a book to contain. Al-Mudayris divides his material into five chapters covering the fields of politics, economics, society, religion, and scholarship. These are systematically subdivided into descriptive subcategories. He rarely refers to secondary literature of any kind; the bibliography includes secondary works, mostly in Arabic along with two articles in English by Richard Mortel. The work includes a number of appendices, including three documents transcribed from al-Qalqashandī's *Ṣubḥ al-Aʿshá;* these are only briefly cited in the text, and they are not annotated. The author's including them seems to be simply because they are there. An unfortunate consequence of al-Mudayris's method is that connections between these various fields are overlooked or neglected. He does, briefly, acknowledge the importance of the connection between politics and economics (p. 106), but readers who are interested in the relationships of any of these areas will have to undertake their own analysis.

Given the author's approach and method, some of his conclusions are predictable. His view is that the political history of indigenous rulers of Medina is one of contention and weakness which allowed the Mamluks to dominate the region. The economy of the city was overshadowed by the florescence of Jedda, which is attributable to the Mamluks. Religious practice in the city shifted from Shiʿism to Sunnism as a result of Mamluk control, a topic discussed by Mortel. Some conclusions lack support. The author claims that the city's "social structure" underwent transformation as a result of the influx of scholars who settled in Medina. It is not clear that this trend started only in the second half of the thirteenth century, and the transformative impact of foreign *mujāwirūn* on local society is not altogether clear. Scholarly production increased and had an impact on the wider Islamic world; neither assertion is adequately proven.

Nevertheless, readers may find value in some of the book's descriptive information. While the chapters on politics and economics do not offer much new,

there are sections on somewhat unusual topics, such as marriage ties, customs and traditions, and even food, which may be useful to some researchers. The author's unwillingness to tackle the significance of any of the data may irritate the reader, along with the occasional judgmental comment about "bad" cultural practices, like the use of talismans (p. 158). Overall, *Al-Madīnah al-Munawwarah* is not particularly illuminating, but the selective reader may derive some value from parts of it.
